The most precious monuments of the Roman catacombs, with the exception of the tombs of the martyrs, are the inscriptions and paintings, which constitute a monumental treasury of the primitive Roman Church. Christian epigraphy had its rise as early as the 1st cent. A.D., and at first was very simple and laconic in form; the primitive formulæ of acclamation and of invocation reduced themselves to short and affectionate salutations, 'pax,' 'pax tibi,' which later on became more complex—'pax tibi cum sanctis,' 'vivas, vivas cum tuis,' and the well-known salutation, 'in pace,' etc., which became very frequent, especially after the beginning of the 3rd cent., and continued throughout the 4th and 5th centuries. The primitive inscriptions are generally distinguished by the beautiful form of the character employed, by the sobriety of their wording, by the use of the most ancient symbols, as, for example, an anchor (the sign of hope in Christ), and the sign of the cross, and by the large size of the marble slabs which shut in the *loculi*, and which, in the regions belonging to the 1st and 2nd cents., are very large indeed. Christian epigraphy was developed and transformed in the 3rd cent., during which the sad conditions of the times induced the Christians to restrict the language of the cemetery inscriptions within the most rigorous limit of the *arcani disciplina*. During this century Christian symbolism attained its most lofty expression both in form and in phraseology. The dove figures the soul of the faithful who longs for the beatitude of Paradise, and holds in its beak an olive branch, which is the symbol of peace. The palm branch and the crown recall to one's thought the victories over human passion obtained during life, and the reward reserved for the faithful in heaven. The mysterious symbol of the fish, represented by the Gr. word ΙΧΘΥΣ taken in an acrostic sense, expresses the conception: 'Jesus Christ, the Son of God, the Saviour' (Ἰησοῦς Χριστός, Θεοῦ Υἱός, Σωτήρ). Bread, marked with the cross, and a basket, are Eucharistic symbols. In the phrases 'percepit,' 'accepit (gratiam),' allusion is made to baptism and to chrism. With the beginning of the 4th cent. and with the 'peace of Constantine,' Christian epigraphy appears in a triumphal dress. The monogram ☧, at first employed as a *compendium scripturæ*, came to be engraved as a triumphal sign in Christian inscriptions, which became longer and more flowery. Eulogistic formulæ, perhaps not always merited, were ascribed to the dead, such as 'totius bonitatis,' 'totius innocentiae.' In the meantime inscriptions with consular dates, which in the first three centuries were rare, grew more frequent; these form a class of epigraphs very valuable for the study of cemetery chronology, and de Rossi used them in a masterly way in his study and restoration of the Imperial *fasti*.

In the second half of the 4th cent. the great historical inscriptions of Popes Damasus and Siricius appear, of which we have spoken above. In the 5th cent., cemetery epigraphy ceases; but, on the other hand, the inscriptions of the cemeteries above ground grow frequent, and these are distinguished from the others by the prolixity of their wording, by their more decayed style of palæography, and, above all, by the form and dimensions

of the slabs. In these cemeteries above ground, moreover, Christian sculpture makes a show, and this is chiefly represented by sarcophagi of marble. Sarcophagi are not common in the galleries and subterranean crypts, though they are found at times in the primitive *hypogea*, as in that of *Acilii Glabriones* in Priscilla, and in that called *Vestibolo dei Flavii* in Domitilla. But these cannot possibly be regarded as Christian sarcophagi, since there are represented upon them scenes from the cosmic and marine cycle, ornamental figures and representations of the vintage and of country and pastoral life—types, in a word, which the Christians had learned in the workshops from the pagans, and of which they took care to select those scenes which did not offend the principles of their faith or of Christian morals. True Christian sarcophagi are met with only in the 3rd and 4th centuries.

Christian art from the 4th to the 6th cent. is very rude. Upon the sarcophagi appear scenes referring to facts in the OT and NT, and these are, more or less, always repeated in the same way on this class of monuments. The conditions of Christian painting are much the same. In the 1st and 3rd cents. it contents itself for the most part with indifferent and ornamental subjects, drawn from contemporary classic art, to which it closely approaches in the exquisite beauty of its artistic execution; such, for example, are the paintings on the vault of the vestibule of the Flavii in Domitilla, and the paintings in the chambers of the crypts of Lucina in Callixtus. At the same time, we have, even from the 1st and 2nd cents., paintings with subjects and symbols which are really Christian, as, for instance, the very ancient Madonna in the cemetery of Priscilla, the scene of Daniel among the lions in the vestibule of the Flavii, and the Eucharistic symbols and the figure of the Good Shepherd in the crypt of Lucina. The great development of Christian painting took place in the 3rd and 4th centuries. The paintings of this age, especially those which adorn the *arcosolia* and the crypts, are formed according to the funerary conceptions of the so-called *ordo commendationis animae*, that is, the prayers which the priest pronounced by the bed of the dying one, in commending his soul to God. These wonderful prayers of the most ancient Roman liturgy are accurately reflected in the arrangement of the scenes depicted on the lunette and on the vault of the *arcosolium*. The prayers express the thought of the liberation of the soul of the dead, just as Isaac was delivered from the hand of his father Abraham, Daniel from the lions' den, and the Three Children from the fiery furnace; and, in fact, we see in the paintings of the *arcosolia* the scene of the Three Children in the furnace, that of Isaac, and that of Daniel. With the cessation of cemetery sepulture this first period of Christian art comes to an end, and it is followed by that characterized by paintings in the Byzantine style, executed by the Popes in the historical crypts from the 5th to the 9th century.

It will be useful at this point to make a very brief reference to these historical crypts. By historical crypts are to be understood chambers where martyrs, historically known to us, were buried; for it is certain that great numbers of other martyrs were buried in the Roman catacombs, either alone or in *polyandri*, i.e. tombs for several bodies, of whom it may be said, to employ a Christian phrase, 'quorum nomina Deus scit,' and to these Damasus at times makes allusion in his inscriptions. In their origin the tombs of the martyrs were in simple *cubicula*, or in the galleries which, as we have said above, were altered, embellished, and enlarged from the 4th cent. onwards; to this period the Byzantine paintings belong, as we have already remarked.

From the time when the exploration of the Roman catacombs commenced until the middle of the 19th cent., *i.e.* during the space of almost three centuries, only three historical crypts were found. Bosio, in 1619, discovered the historical crypt of SS. Abdon and Sennen in the cemetery of Pontianus, on the Via Portuensis; in 1720, Boldetti discovered that of SS. Felix and Adauctus in the cemetery of Commodilla, near the Via Ostiensis; and in 1845, Marchi discovered that of SS. Protus and Hyacinthus in the cemetery of St. Hermes, on the Via Salaria Vecchia. The attempt was discouraging: one historical crypt per century, and what is more, all discovered by mere chance.

De Rossi addressed himself, by means of a sure system, to the arduous work of discovering the historical crypts in the labyrinths of the cemeteries, making use, in the first place, of the *Itineraries of the Pilgrims*, and then of the data afforded by the monuments, as we shall now show. He searched those parts of the cemeteries where remains of constructions were visible, or where there were heaps of rubbish which had been precipitated from above, for these indicated the presence of some notable monument. It was in this way that he discovered the cemetery basilica of SS. Nereus and Achilleus on the Via Ardeatina. Another very important indication consisted in a number, more or less large, of *luminaria* arranged in series; for this was evidence that that region had been especially illuminated in order to render it accessible to the pilgrims, and was thus an indication of the existence of an historical crypt. This, in fact, he met with in the historical group of the tombs of the Popes and of St. Cecilia in the cemetery of Callixtus. Another decisive indication was found in the 'Damasan' inscriptions which were placed by Pope Damasus in the historical crypts. Finally, the presence of Byzantine paintings indicated that a crypt had been visited and frequented during the period in which ordinary sepulture there had ceased. By this happy method of divination, de Rossi was able to make numerous important discoveries in the Roman catacombs, leaving as an inheritance to his successors in these studies a wide field of scientific research.

We conclude this general exposition of the history and monuments of the Roman catacombs by expressing the fervent hope that the subterranean city of the martyrs will soon be able to hail the day in which all its monuments will come to light; they will thus constitute in their entirety the grandest collection which it is possible to desire of the primitive monuments of Christianity.[1]

[[1] While by far the most important and the best known catacombs are in or near Rome, there are a considerable number of others, not only in Italy, but also in Egypt (Alexandria), Northern Africa (Arch-Zara), Sicily (Syracuse, Palermo, Grazia di Carini, Frangapani, near Girgenti), Malta (Abbatiatad-Deyr, Tal-Liebru), Melos (near Trypiti, in the valley of Keima), Lower Italy (Sorrento, Atripalda, Cimitile, Sessa, Naples [a large number, of which the chief are those of SS. Gennaro, Gandioso, and Severo], Castellamare [the catacomb of Venosa in Apulia is most probably of Jewish origin]), Central Italy (Bazzano, Paganica, catacomb of St. Vittorino near Aquila, Monte Leone, Bolsena, Chiusi, Caere, Nepi, Sutri, Sorrino Nova, Viterbo, Vulci, catacomb of St. Entizio near Soriano, Rignano), with which must be reckoned such suburban catacombs as those at Albano, Nemi, Velletri, Gabii, and Baccano. North of the Alps there are no catacombs, properly speaking (for a full list of catacombs, with considerable description and abundant references to the literature bearing on them, see N. Müller in *PRE*[3] x. 804–813, 848–850, 852–861, 865a–866b). Many of the extra-Italian catacombs are of relatively early date, though they were formed later than those in or near Rome. The oldest portions of the catacomb of St. Maria di Gesù, near Syracuse, probably date from the 3rd cent., while that of St. Giovanni, near the same city, may be as early as 320. The catacomb of Trypiti, in Melos, dates from the 4th cent., and those in Malta mainly from the 4th and 5th centuries.

It may perhaps be worth noting that the so-called catacombs of Paris are not catacombs in the real sense of the word. They were originally merely the subterranean quarries from which building material for the city was obtained; and it was not until 1787 that they were used as receptacles for bones brought from old cemeteries.—LOUIS H. GRAY.]

GIORGIO SCHNEIDER.

CATECHISMS (Anglican, Roman Catholic, Eastern Churches).—The words 'catechism' and 'catechize' are derived from the Greek κατηχίζειν, a factitive of κατηχεῖν (κατά 'down,' ἠχεῖν 'sound'), which means 'to resound,' 'din in.' To catechize means generally to give oral instruction, as distinct from instruction through the medium of books; and as such instruction is commonly given in the form of questions and answers, the word is especially used in the sense of systematic questioning. The ecclesiastical use of the words is very early and continuous, but they are also often used of questioning of any kind. In its ecclesiastical application, the word 'catechism' is used in two principal senses: (1) of a system of oral instruction—a method of teaching; (2) of the contents of the instruction, especially of a document, generally drawn up in the form of questions and answers, either for the guidance of the teacher, or to be learnt by heart by the learners themselves.

1. Methods of teaching.—In the very early days of Christianity many persons must have been admitted to baptism after a very short instruction and examination in Christian doctrine. But it can hardly be supposed that any one can at any time have been admitted into the Church without some sort of profession of faith, and this would imply some previous instruction. It is also quite clear that at a very early period this instruction became systematic and thorough. Its substance can be gathered only indirectly; for all the documents that we possess were written for persons who had already received oral instruction, and it is not likely that they should describe it. The books of the NT were written, without exception, for instructed and baptized Christians, and were intended for their further edification in the faith. They everywhere take for granted, but naturally do not describe, the earlier oral instruction that all their readers had received. Incidentally, however, we can gather a good deal as to its nature and extent. See art. CATECHUMENATE.

There are abundant indications that this catechetical instruction was systematically conducted and gradually developed during the first three centuries, though it is not until the 4th cent. that we find it fully described. Some account of it, as far as it could be explained to heathen readers, is given by Justin Martyr (*Apol.* i. 61). The importance attached to it may be gathered from the way in which the Catechetical School at Alexandria, the great centre of the intellectual life of the Church, is spoken of. The head of this school was clearly regarded as filling one of the most important offices in the Church (Euseb. *HE* v. 10, vi. 3, 14, 15, 26, 29). In the 4th cent. we have abundant information about the catechumenate, and also specimens of the actual instruction given to catechumens. The catechumenate was recognized as a definite status; those who were admitted to it were called 'audientes,' ἀκροώμενοι, and they were already regarded as in a sense Christians, though not as 'fideles,' and were allowed to be present at the preliminary part of the Mass, the *Missa Catechumenorum*, until after the sermon. Men often remained catechumens for years, and sometimes, as in the case of the Emperor Constantine, until their deathbed, though this was regarded as an abuse. In the normal course those who were to be baptized on Easter Eve gave in their names at the beginning of Lent, and went through a final course of instruction and preparation, which included the delivery of the Gospels and the Creed, performed with great solemnity. The most notable of the actual instructions that are extant are the *Catecheses* of St. Cyril of Jerusalem (A.D. 348), and St. Augustine, *de Catech. Rudibus*, *de Fide et Symbolo*, and *Sermo ad Catechumenos* (*c.* A.D. 400). Catechizing was recognized as one of the most important functions of the Christian ministry, but there was no special order of Catechists; the name denoted a function, not a class. St. Cyril, *e.g.*, delivered his *Catecheses* partly as a deacon and partly as a priest. Nor, as a rule, were any special places set apart for the purpose of catechizing, though the Council in Trullo (97) mentions κατηχουμένεια.

As paganism gradually disappeared in Europe, and infant baptism became more general and eventually almost universal, the catechetical system was necessarily modified. The theory, however, did not keep pace with the practice. The instruction which was supposed to be given before baptism was given after it; but the baptismal Offices, even in the 8th cent., still assume that the catechumens are adults. In the course of the Middle Ages the ceremonies which preceded baptism were greatly shortened, and finally condensed into what formed practically a single service, though it was still divided into three parts, the *Ordo faciendi Catechumeni*, the *Benedictio Aquae*, and the Baptism itself. The words 'catechize' and 'catechism' were still applied to the abbreviated interrogations which formed part of the order of making a catechumen.

For instance, Matthew Paris, in the year 1239, says in his account of the baptism of Prince Edward, afterwards Edward I.: 'The bishop of Carlisle catechized the infant, the Legate baptized him, the Archbishop of Canterbury confirmed him, and by the king's desire the name of Edward was given him.' As the answers were made on the child's behalf by the sponsors, the word 'catechism' was sometimes used as equivalent to sponsorship, and it was a question much debated whether 'the catechism' were a bar to marriage (see Joannes de Janua, *ap.* Du Cange, *s.v.* 'Catechizari').

Meanwhile the substance of the actual instruction now given after baptism, and not as yet usually called the Catechism, remained much the same as it had always been. The Creed, the Lord's Prayer, and the Ten Commandments formed the nucleus of it; and the parish priest, when the parochial system became general, was the person who was made responsible for imparting it. Numerous injunctions of bishops and Councils insisted upon the performance of this duty. Bede in his letter to Egbert, the first archbishop of York, exhorts him to provide that all the priests in his diocese should most carefully teach the Creed and the Lord's Prayer to all the people, in Latin if they can understand it, and if not, in English (A.D. 734). The Council of Clovesho in A.D. 747 orders (c. 10) that priests should explain in the vulgar tongue the Creed, the Lord's Prayer, the solemn words used in the Mass and in Baptism, and also the

meaning of the Sacraments themselves. In A.D. 1281 the *Constitutions* of John Peckham, archbishop of Canterbury, order that all parish priests shall four times a year, on one or more holy days, explain in the vulgar tongue the Creed, the Ten Commandments, the Evangelical Precepts, the seven works of mercy, the seven deadly sins, and the seven sacraments. These directions are frequently referred to in the following centuries, and insisted upon by bishops and synods, *e.g.* by Thoresby and Neville, archbishops of York in 1357 and 1466, and by Langham and Arundell of Canterbury in 1364 and 1408. These, however, are only a few examples out of many that might be cited both in England and on the Continent.

The regulations of the English Church about catechizing since the 16th cent. have been even more precise and imperative than before. The rubrics of the Book of Common Prayer order all parish priests to catechize on the Creed, the Lord's Prayer, and the Ten Commandments, and the rest of the Church Catechism on every Sunday and Holy Day after the second lesson at Evening Prayer; and all persons who have the charge of the young are ordered to send them to church for this purpose. Any minister neglecting this duty is, by Canon 59, to be admonished for the first offence, suspended for the second, and excommunicated for the third. Parents and others who neglect to send their children are likewise to be suspended, and, if they persist, to be excommunicated. The exact method of instruction is not prescribed with the same precision or enforced by so severe penalties in other parts of the Western Church, but the responsibility of the parish priest is everywhere the same. The most elaborate of catechetical systems has grown up in France during the last two centuries, and it is commonly known as the Catechism according to the Method of St. Sulpice, from the church in Paris where the system has been specially elaborated. A complete course of instruction is spread over a period of about three years, and the weekly catechism consists of three main parts—the Questioning, which is recapitulatory and intended to exercise the memory; the Instruction, which is reproduced in the course of the week in written analyses; and the Gospel and Homily, which supply the moral and spiritual application of the lessons taught. This Method of the Catechism is being extensively introduced into England (see Dupanloup, *Method of St. Sulpice*, Eng. tr., Lond. 1890, and *Ministry of Catechising*, Eng. tr., Lond. 1890; S. Jones, *The Clergy and the Catechism*, Lond. 1895).

2. **Manuals of teaching.**—Until the 16th cent. the word 'catechism' meant a system of teaching, and it was most commonly applied to the questions and answers in the Baptismal services which represented the catechetical instruction of the early Church. In the 15th cent., however, the term was also applied to the further instruction of children after their baptism, and then it was an easy step to apply it to the documents used in that instruction.

Many manuals of explanation were in use in the later Middle Ages; but, as was natural at a period when reading was not a very common accomplishment, they were more used by the clergy in preparing their instructions than by the people themselves. One of the most popular was the *Speculum Christiani*, which was one of the first books printed in England (see Gasquet, *Old English Bible*, London, 1897). Similar manuals are to be found in Continental countries. The production of such works was enormously stimulated by the religious controversies of the 16th cent., which was prolific of confessions of faith. These manuals had all kinds of titles, but the general term 'Catechism' came to be applied to them, and the word quickly assumed the sense in which it is now most commonly used—that of a manual of religious teaching for the young, especially one in the form of questions and answers. One of the earliest examples of this use of the word was the 'Catechizon' drawn up by John Colet for St. Paul's School.

(1) The *Anglican Catechism* first made its appearance in the Book of Common Prayer of 1549. The way had been prepared for it by royal injunctions issued in 1536 and 1538, which ordered, as had so often been done before in episcopal and conciliar injunctions, that parish priests should teach their parishioners, sentence by sentence, the Creed, the Lord's Prayer, and the Commandments, and explain the same. Instructions in the form of dialogue also appeared, as in Marshall's Primer in 1534.

The authorship of the Catechism in the Common Prayer Book is quite uncertain. It has been ascribed, on insufficient evidence, to several persons: to Thomas Goodrich, bishop of Ely, because he had the 'Duties' inscribed on tablets in his palace; to John Ponet, bishop of Rochester and afterwards of Winchester, because he wrote another Catechism; and to Alexander Nowell, second master at Westminster School and afterwards dean of St. Paul's, because he also wrote Catechisms, and because Izaak Walton (*Compl. Angl.* i. 1) definitely states that he 'made that . . . Catechisme which is printed in our good old service books.' But this was written in 1653, and, as Nowell's catechisms were well known, he might easily have been credited wrongly with the authorship of the Church Catechism also. Walton adds that both Convocation and Parliament commissioned him to make it, which was certainly not the case. And contemporary and internal evidence is altogether adverse to Nowell's authorship. Nothing is really known about the authorship of any part of the Book of Common Prayer of 1549, except that Cranmer must have taken a principal part in it. Very probably he did almost the whole of the work himself, and, at any rate, it is quite uncertain who helped him, or how much they contributed. There is some evidence that the book was examined and approved by others, but very few details are known.

The Catechism, as it appeared in 1549, did not contain the concluding section about the Sacraments. This was added in 1604 by royal authority, in consequence of a wish expressed by the Puritans at the Hampton Court Conference; and the whole Catechism, thus enlarged, was sanctioned, with some trifling alterations, by Convocation and Parliament in 1661–62. This is the only authorized Catechism in the English Church. It was intended in the 16th cent. to supplement it by more advanced manuals. A 'Short Catechism commended to all Schoolmasters by royal authority' was published anonymously in 1553, but was believed to be the work of Ponet (*Orig. Lett.*, Parker Soc. lxxi.). The royal injunction sanctioning its use states that it had been submitted to certain bishops and others. It is reprinted in *Liturgies, etc., of Edw. VI.* (Parker Soc.). In 1561 the bishops agreed that two other catechisms should be prepared, one more advanced, and one for schools. In 1563, Nowell sent the MS of his Larger Catechism to Cecil, stating that it had been approved by the clergy in Convocation; but it does not appear to have been published until 1570, when it was also translated into English. Many editions of it appeared, and it must have been very extensively used. It was re-published by W. Jacobson, Oxford, 1835. Not long afterwards Nowell published his Middle Catechism, which also passed through many editions, and was translated into Greek and English. A third work, the *Catechismus Parvus*, the earliest extant edition of which is dated 1574, closely resembles the Church Catechism, and this is one of the grounds on which Nowell is supposed to have been the author of the latter work. But it is far more probable that he simply translated the Church Catechism into Latin, with additions of his own. Overall, dean of St. Paul's, who is believed to have prepared the section about the Sacraments in 1604, made use of these earlier works. In the latter half of the 16th cent., Continental Catechisms, such as those of Erasmus, Calvin, and Bullinger, were also much used in England.

(2) The Catechism which has the highest degree

of authority in the *Roman Church* is that which is called the Catechism of the Council of Trent, or the Roman Catechism. The Council of Trent met in 1545 and ended in 1563. It passed a great number of decrees on points of doctrine, and towards the end of its sittings it ordered a Catechism to be prepared, which was to be translated into the vulgar tongue and taught by parish priests. After the close of the Council, Pope Pius IV. appointed certain distinguished theologians to prepare such a Catechism. They were Calinius, archbishop of Zara; Foscarari, bishop of Modena; Marinus, archbishop of Lanciano; and Fureiro, a Portuguese. The last three were Dominicans. S. Carlo Borromeo also assisted in the work. The Catechism was finished in 1564, and appeared in 1566, with the title 'Catechismus Romanus ex decreto Concilii Tridentini Pii V. Pont. Max. jussu editus. Romae, in aed. Pop. Rom. ap. Ald. Manutium.' This Catechism has not the authority of the Council of Trent, for it was constructed after the close of the Council; but it was intended to embody the results of the deliberations of the Council, and it was published by the authority of the Pope. It is the most authoritative document of the kind in the Roman Church. It is divided into four parts, dealing with Faith, the Means of Grace, the Decalogue, and the Lord's Prayer. It is a large doctrinal treatise, intended to be used by parish priests in preparing their instructions, and not for the use of the children themselves. Innumerable catechisms for the use of learners have been and are in use. As a rule, each diocese, especially in France, has its own catechism, sanctioned by the bishop. This system has obvious disadvantages as well as advantages, and at the Vatican Council of 1870 it was proposed that a single catechism should be prepared and authorized for universal use. It was to be in Latin, and translations were to be made for all countries. The question was debated at considerable length, and there was a good deal of opposition to the proposal on various grounds, especially because of the different needs and circumstances of different dioceses. It was also pointed out that at least three Catechisms of different grades would be required for any complete system of teaching. A considerable majority was in favour of the principle of the scheme, but no final conclusion was arrived at before the end of the Council, and no practical steps have been taken since.

(3) In the *Eastern Churches* the catechetical systems have not developed to the same extent as in the West. This may be due partly to the fact that it is not usual in the East to defer the Confirmation and first Communion of infants who are baptized, as has come to be the practice in the West. There are, however, many catechetical works in use. In 1721 the synod of the Russian Orthodox Church ordered the composition of three small manuals for the use of the young and ignorant, and there appeared by order of the Czar Peter I. the 'First Instruction of Youth, containing a Primer, and a short exposition of the Decalogue, Lord's Prayer, and Creed.' The best known Eastern catechism is that of Jeromonach Platon, metropolitan of Moscow, which was composed in 1765 for the use of the heir to the throne, the Grand Duke Paul Petrovitch. The 'Complete Christian Catechism of the Orthodox Catholic Eastern Church,' which is now in common use, is founded upon this work of Platon. An English translation may be found in R. W. Blackmore, *Doctrine of the Russian Church*, 1845.

J. H. MAUDE.

CATECHISMS (Lutheran).—Long before Luther undertook the composition of his Catechisms of 1529, he had been active in the field of catechetical literature and practice. As early as the year 1515 we have from his pen expositions of the Decalogue and the Lord's Prayer. In 1519 he states that he was daily going over the Commandments with children and laymen ('pueris et rudibus pronuncio'). In 1520 he published a Short Form of meditation on the Ten Commandments, the Creed, and the Lord's Prayer.

'Three things,' he says, 'a man must needs know to be saved. . . . The Law shows man his disease . . . the Creed tells him where to find his medicine, the grace . . . the Lord's Prayer teaches him how to seek and to appropriate it.'

From Luther's letters to Nicol. Hausmann, of 2nd Feb. and 26th March 1525 (see Th. E. L. Enders, *Martin Luther's Briefwechsel*, v. 115, 144), it appears that the Wittenberg theologians had charged Jonas and Agricola with the preparation of a Catechism for the young. What became of their work is not known. In August 1525, Hausmann, in a letter to Stephan Roth, laments that the Catechism had not yet appeared, and wishes that Jonas may undertake it and bring it out speedily. In October 1525 the 'Little Book for Laymen and Children' appeared ('Das Büchlein für die Laien und die Kinder' [*Monumenta Germaniæ Pædagogica*, vol. xx.], which holds quite a prominent place in the catechetical literature of those times. It contains the five parts of the Catechism—Decalogue, Creed, Lord's Prayer, Baptism, Lord's Supper—almost exactly in the form found in Luther's *Enchiridion* of 1529. The author is not positively known, but may have been John Bugenhagen. About the same time, Luther had evidently made up his mind to undertake the preparation of a Catechism of his own, though he had not yet the time for it (see letter to Hausmann of 27th Sept. 1525, 'Catechismum differo, vellem enim uno opere simul omnia absolvere' [Enders, v. 246]). In his German Mass (*Deutsche Messe und Ordnung Gottesdiensts*), composed in the autumn of 1525 and published in Wittenberg in 1526, he says:

'What we need first of all is a plain, good Catechism . . . for such instruction I know no better form than those three parts which have been preserved in the Christian Church from the beginning—the Ten Commandments, the Creed, and the Lord's Prayer—which contain, in a brief summary, all that a Christian ought to know.' To these he adds Baptism and the Sacrament of the Altar, and lays it down that these five parts ought to constitute the catechetical lessons in the matin services on Mondays and Tuesdays.

In compliance with this request of Luther, here and there in the free cities of the German Empire special services were instituted for the young, and various Catechisms were published by men like Johannes Bader, Joh. Brentius, Wolfgang Capito, Conrad Sam, Wenzeslaus Linck, Althammer, Agricola, Oecolampadius, Caspar Graeter, and Caspar Löner. Most of them found only local and temporary acceptance in the churches of the Reformation. On a larger scale and more systematic are the provisions made for the religious instruction of the young in consequence of the visitations instituted by the authorities of Church and State in the territories of the German Reformation, especially in Saxony (1527, 1528). The impression made upon Luther by these visitations is set forth in his preface to the Small Catechism:

'Alas, what misery I beheld! The people, especially those that live in the villages, seem to have no knowledge whatever of Christian doctrine, and many of the pastors are ignorant and incompetent teachers. . . . They all maintain that they are Christians, that they have been baptized, and that they have received the Lord's Supper. Yet they cannot even recite the Lord's Prayer, the Creed, or the Ten Commandments; they live as if they were irrational creatures, and now that the Gospel has come to them, they grossly abuse their Christian liberty.'

There could be no further delay in Luther's own work on the Catechism. About the middle of January 1529 we find him engaged on the Large Catechism, which treats the catechetical material in the form of sermons or lectures. He writes to Martin Görlitz in Brunswick: 'Modo in parando Catechismo pro rudibus paganis versor' (Enders, vii. 43). But, while he was engaged in the composition of this larger work, he issued the Small Catechism in two sets in the form of wall charts (*tabulæ*), according to the custom of the times. The first set was ready by 20th Jan. 1529, as we learn from a letter of Diaconus Rörer in Wittenberg to Stephan Roth in Zwickau: 'Affixas parieti video tabulas complectentes brevissime simul et crasse Catechismum Lutheri pro pueris et familia.' This first set contained the Ten Commandments, the Creed, and the Lord's Prayer, together with the *Benedicite* and *Gratias*. The second set appeared about the middle of the month of March, when people were preparing for the Easter Communion. In a letter of 16th March, Rörer describes this set as 'Tabulae Confessionis, et de Sacramentis Baptismatis et Corporis et Sanguinis Christi' for the more advanced Christians. The contents of both sets of these *tabulæ* appeared first in book form in Hamburg, in the early part of April, in the Low German dialect. On 16th May 1529 the Small Catechism appeared in High German, in an edition furnished by Luther himself, and was soon followed by a second edition. No copies of these original Wittenberg editions have thus far been discovered. They are known only from reprints, issued at Erfurt and Marburg. Besides the material of the *tabulæ*, these editions contain the Preface, the Morning and Evening Prayers, the Table of Duties, and the Order of the Marriage Service. The third edition adds also the Order of Baptism (June 1529). Additional editions, superintended by Luther himself, and here and there revised by him, appeared in the years 1531 (containing for the first time the present form of instruction concerning Confession, and the explanation of the introduction to the Lord's Prayer), 1535, 1536, 1539, and 1542.

While Luther's Small Catechism, the *Enchiridion*, was at first simply one catechism among many, it very soon gained the ascendancy over all other text-books for the instruction of the young. In 1561 the Lüneburg Articles number it for the first time among the Symbolical Books of the Lutheran Church, together with the Augsburg Confession, Apology, and Schmalkald Articles. The fact that the Heidelberg Catechism by Olevianus and Ursinus (1563) was, from the beginning, recognized as one of the confessional standards of the Reformed Church may have helped to establish Luther's Catechisms as official and authoritative documents of the Lutheran Church. Both the Large and the Small Catechism of Luther were formally incorporated into the *Book of Concord* of 1580. Since then Luther's Small Catechism has formed the basis of numerous fuller expositions in questions and answers published in the different territories of the Lutheran Church.

As early as the year 1529 two Latin translations of Luther's Small Catechism appeared, the second of which, by J. Sauermann, Canonicus in Breslau, was received into the *Book of Concord*. John Mylius published a Greek translation (Basel, 1558); John Clajus prepared a polyglot edition—in German, Latin, Greek, and Hebrew—which appeared in 1572. In the Danish and Norwegian languages it was published in 1532, and officially introduced, with a preface by J. Bugenhagen, in 1538. The first Swedish translation was probably prepared by Laurentius Petri, in 1548. The earliest print that has been preserved is from the year 1572. Its official introduction followed in 1595, but not until 1686 do we find its general use in Sweden. In the Balto-Slavic territory the *Enchiridion* was published in Bartholomäus Willents' Lithuanian translation in 1547, in Abel Wills' Old Prussian translation in 1561, and in J. Rivius's Lettic version in 1586, besides a version in the non-Indo-Germanic Esthonian in 1553. In all these four languages the Small Catechism was the first literary monument, and it is practically the sole relic of the extinct Old Prussian dialect.

In the year 1548, Archbishop Cranmer prepared an English translation in his *Catechismus*, published by Gualterus Lynne, which is in reality an English version of the sermons on the Catechism (*Kinderpredigten*) attached to the Brandenburg-Nuremberg *Agenda* of 1533, summing up each sermon with the respective part of Luther's Catechism (see H. E. Jacobs, *Lutheran Movement in England*, pp. 314-322). The Swedish pastor and missionary, John Campanius, who preached the gospel from 1643 to 1648 at Tinicum, near Philadelphia, Pennsylvania, translated the Catechism into the language of the Delaware Indians (the 'American-Virginian language'). It was published in Stockholm, at the expense of King Charles XI., in 1696, and brought to America in 1697 (see H. E. Jacobs, *Hist. of the Evangel. Luth. Church in the U.S.*, p. 82). Count Zinzendorf, the great leader of the Moravian movement, caused the first American edition of Luther's German Catechism to be printed by Christoph Sauer, in Germantown, Philadelphia, in 1744. The first American edition issued with the approval of the Lutheran pastors was prepared by Peter Brunnholtz, and printed by Benjamin Franklin and J. Boehm in 1749. The first English translation on American soil was also made by Peter Brunnholtz, possibly with the assistance of Peter Koch, a prominent Swedish Lutheran in Philadelphia, in 1749. The second was made under the auspices of the Swedish Provost Wrangel, the friend and collaborator of Henry Melchior Mühlenberg, the patriarch of the Lutheran Church in America, in 1761. In 1816, Phil. F. Mayer, pastor of the first English Lutheran Church (St. John's) in Philadelphia, issued an English edition of the Catechism which, more than any other, determined the text of the accepted English version in America. It was carefully revised by C. F. Schäffer and a Committee of the Ministerium of Pennsylvania (C. F. Welden, A. T. Geissenhainer, and B. M. Schmucker), in 1854. This translation was adopted by the General Council of the Evangelical Lutheran Church in North America, 1867. A more literal reproduction in the English language is given in Schaff's *Creeds of Christendom*, and in the *English Catechism of the Synod of Missouri* and that of the Joint Synod of Ohio—the work of E. Cronenwett, revised by the faculty of the Theological Seminary of the Ohio Synod in Columbus, O. (see B. M. Schmucker's articles on the editions and translations of Luther's Small Catechism, published or used in America, in the *Lutheran Church Review*, April and July 1886). In recent times a joint Committee of the General Synod, the United Synod of the South, the Joint Synod of Ohio, the English Synod of Missouri, and the General Council united on a carefully revised English translation, which is found in its final shape in the *Lutheran Church Review*, January 1899.

The truly conservative, catholic, and ecclesiastical character of Luther's Reformation stands out most prominently in his catechetical work. He builds on the old solid and popular foundations, found in those three principal parts—the Decalogue, the Creed, and the Lord's Prayer. He shows himself perfectly familiar with the best catechetical tradition of the Church of preceding centuries. In some details of his exposition, especially the treatment of the Lord's Prayer (the third part of the *Enchiridion*), we recognize almost literal reminiscences of the catechetical literature of the Church, as far back as Tertullian and Cyprian. It may be claimed that the whole catechetical work of the first fifteen hundred years of the Church reaches its climax in Martin Luther's Small Catechism. But, with all the conservative features which characterize Luther's catechetical work, there are some which are original with him, and for which he deserves full credit as the first great restorer of Pauline theology in the Church. Most important and significant in this respect is the order in which he arranged the popular three parts—Commandments, Creed, and Lord's Prayer, —giving the first place to the Law, as the schoolmaster to bring men to Christ, and assigning the central and dominating place to the Creed. All other Catechisms—Roman, Greek, and Reformed—differ from Luther's arrangement in this respect. Again, he gave up the traditional division of the Creed into twelve articles, based on the legend of

its Apostolic origin, which is retained to the present day in John Brentius's Württemberg Catechism. Instead of this he divided it, from a Trinitarian point of view, into three articles, and by this arrangement the second article, with its confession of Christ, the Redeemer, becomes the very heart and soul of the whole Catechism.

(*a*) The first part of Luther's Catechism treats of the Law, under the form of the Decalogue, differing in this respect also from the traditional practice of the mediæval Church with reference to the 'Mandata.' The Decalogue, however, is modified by him in the spirit of the New Testament, omitting its transient Israelitic features which belong to the Mosaic dispensation, as in the form of the First, the Third, and the Fourth Commandments, according to the Augustinian numbering of the Ten Commandments. His principal aim in the treatment of the Law is its so-called second use or 'usus elenchthicus,' to lead men to a knowledge of sin.

(*b*) The second part of the Catechism takes for its text the Apostles' Creed, which, except in the Greek Church, was always used 'ad fidei instructionem' (the Nicene Creed being 'ad fidei explicationem,' and the Athanasian 'ad fidei defensionem'). Luther's treatment of the Creed combines the objective and the subjective side of faith, the 'fides, quae creditur' and the 'fides, qua creditur.' The great works of God—Creation, Redemption, and Sanctification—are set forth as the fundamental facts of our salvation; not, however, as purely objective, abstract, doctrinal statements, but with all the fervour of personal conviction and appropriation. There is no dogmatism or scholasticism in this presentation of Christian doctrine in the 'Layman's Bible,' as the *Enchiridion* has frequently been called.

(*c*) In the third part Luther treats the Lord's Prayer as the fruit of justifying faith, the embodiment and demonstration of the new life, in the spirit of sanctification and adoption. It sets forth the life of the Christian as the life of the child of God, with all its privileges and duties, its needs and dangers, its hopes and resources.

(*d, e*) To these three fundamental parts are added the fourth and fifth, on Baptism and the Sacrament of the Altar, with the connecting link, on Confession and Absolution, 'concerning which a Christian must also be properly instructed.' Here the language of the Catechism, otherwise so simply objective and thetical, becomes of necessity more antithetical and controversial, in opposition to various deviations from what Luther held to be sound doctrine on these points. But even here everything culminates in simple living faith. With the requirement of 'truly believing hearts' the fifth and last part of the Catechism closes.

LITERATURE.—*Martin Luther's Werke, Deutsch und Lat.*, Erlangen ed., 101 vols.; Th. E. L. Enders, *Martin Luther's Briefwechsel, bearbeitet und mit Erlauterungen versehen* (ten volumes have thus far appeared, covering the period from 1507 to 1536), Calw, 1884 ff.; K. Kehrbach, *Monum. ADOLPH SPAETH.

CATECHISMS (Heidelberg and Westminster). I. The second (next to Luther's) great Catechism of the Protestant Churches is the **Heidelberg Catechism.** It was prepared by Zacharias Ursinus and Caspar Olevianus, by command of Frederick III., Elector of the Palatinate, and was published in 1563. Ursinus had prepared a *Summa Theologiæ* and a *Catechesis Minor*, which were made the basis of the work. The advice and co-operation of the theological faculty and of the Superintendents and court-preachers were secured, and before publication the Catechism was approved by a Synod of ministers and teachers assembled by the Elector at Heidelberg. It cannot be called a wholly original work, but was the fruit of a long catechetical development. Leo Juda's *Christliche klare u. einfalte Zuleitung in den Willen u. in die Gnad Gottes*, 1534, his *Kurtzer Katechismus*, 1535, and his *Brevissima Christ. relig. formula* of 1538 or 1539; Bullinger's *Hausbuch* of 1558, and the *Summa, Catechesis pro adultioribus scripta* of 1559; Calvin's *Genevan Catechism* of 1545, and the *Emden Catechism* of 1554—are among the sources. Traces of the influence of Löner, Urbanus Rhegius, and Morbanus have been found in it. Though avowedly written to supplant Luther's teaching, the influence of his Catechism is evident. The order of the book is due to Melanchthon's *Loci*, and Reu has traced much of its arrangement to *Eine kurtze ordenliche Summa der rechten waren Lehre*, a catechetical work published by Nikolaus Gallus in 1558. The justly famous first question 'What is thy highest comfort in life and death?' is found in previous works of this sort, and the answer may find its original in the Nuremberg Catechism-Sermons of 1533 (translated under Abp. Cranmer as *A Short Instruction into Christian Religion*, 1548):

'And this, my dear children, is our highest comfort, that Christ is our Lord, and we are His own, for therefore will He protect and deliver us, so that, though we be sinners, He will forgive us our sin, for He has made satisfaction for sin, and, though we die, He will make us to live again, for He has overcome death, and even though we came into hell, hell could not hold us, because He has burst the bonds of hell. Therefore, because we have such a mighty Lord, we cannot need anything' (*Nuremb. Kinderpredigten*, on Art. 2 of the Creed).

The Heidelberg Catechism probably aimed at being a culmination of the catechetical development of the Evangelical Church. Its rejection of the Lutheran doctrine of the Real Presence of Christ, and of the meaning of His Exaltation, is pronounced; and in the 3rd ed. an 80th question was inserted, it is said at the instance of the Elector, in which 'the popish Mass' is condemned as 'at bottom nothing else than a denial of the one sacrifice and sufferings of Jesus Christ, and an accursed idolatry.'

This Catechism was translated into many tongues, and is the most widely used of all 'Reformed' Catechisms. The best English version appeared in New York (Scribners) in 1863. It contains 129 questions and answers. Questions 3-11 treat of the Sin and Misery of Man; 12-85 of Redemption by Christ; 86-129 of the Thankful Life of the Christian. In the Second Part the Articles of the Apostles' Creed are explained under the heads God the Father, God the Son, and God the Holy Ghost. Then follow the two Sacraments. The Commandments are explained in the Third Part under the head of Thankfulness; and this is followed by the Lord's Prayer. While the Heidelberg Catechism retains the form of a Confession in its answers to the questions, it is much more theological than Luther's Catechism; and, edifying as the answers are, they are too long and minute for the memory or use of children. On the other hand, it surpasses Luther's Catechism as a systematic presentation of Christian doctrine.

LITERATURE.—The best modern ed. is *The Heidelberg Catechism in German, Latin and English; with an Historical Introduction*, New York, 1863. The official German editions were issued in 1563, [illegible], 1595, 1684, and 1724. The Latin tr. was published in 1563 and 1566. See also P. Schaff, *Creeds of Christendom*, London, 1877, i. [illegible] ff. and iii. 307 ff., where the literature is given fully. The best introductions are those of

J. W. Nevin, *History and Genius of the Heidelberg Catechism*, Chambersburg, 1847, and Reu, *Süddeutsche Katechismen*, Gütersloh, 1904.

2. Westminster Catechisms.—An English translation of Calvin's Genevan Catechism was used and repeatedly printed in Scotland. John Craig, minister at Aberdeen and afterwards at Edinburgh, prepared a Larger (1581) and a Smaller Catechism (1591). The latter explains the Apostles' Creed, the Commandments, the means of grace, and the way of salvation. It consists of short and simple questions and answers. It was finally superseded by the *Shorter Catechism of the Westminster Assembly* (see Schaff, *Creeds of Christendom*, i. 728 ff.). This is the third of the great Catechisms of the epoch of the Reformation. The Larger and Shorter Catechisms were finished in 1647, approved by Parliament 15 Sept. 1648, and adopted by the General Assembly at Edinburgh in July of that year. Schaff says that the Larger Catechism was chiefly the work of Anthony Tuckney, Professor of Divinity and Vice-Chancellor at Cambridge. He adds that it is based on Ussher's catechetical *Body of Divinity*, and on the *Compendium Theologiæ* (1626) of Johann Wolleb of Basel (see Schaff, *loc. cit.*, and in *PRE*[2]). The Shorter Catechism is a condensation of the other; 'its concise and severely logical answers are traced to the Rev. John Wallis, M.A., an eminent mathematician.' It begins with the celebrated question, 'What is the chief end of man? To glorify God, and to enjoy Him for ever'; defines God, and states the doctrine of the Trinity; tells of the fall and misery of man; explains the offices and states of the Redeemer; and then analyzes the work of the Holy Ghost, effectual calling, justification, adoption, and sanctification. The Apostles' Creed is not professedly explained, but is printed after the Commandments and the Lord's Prayer, at the end of the Catechism. The Commandments set forth 'the rule which God at first revealed to man for his obedience.' All the Reformed Catechisms agree with the Greek Church (against the Roman and Lutheran) in making 'Thou shalt not make unto thee any graven image,' etc., the Second Commandment, and comprising in the Tenth both prohibitions of coveting. The 59th and 60th questions assert the Divine appointment of the first day of the week to be 'the Christian Sabbath,' forbid 'all worldly employments and recreations on it,' and command the 'spending the whole time in the public and private exercises of God's worship, except so much as is to be taken up in the works of necessity and mercy.' Under the Eighth Commandment (Q. 74) is required 'the lawful procuring and furthering the wealth and outward estate of ourselves and others.' The proper use of the Word and the Lord's Supper is insisted on. There is a brief explanation of the Lord's Prayer.

The *Shorter Catechism* is Calvinistic, not only in its formal statements of doctrine, but in every reflexion it contains of the controversies of the time: 'God having out of His mere good pleasure, from all eternity, elected some to everlasting life' (Q. 207); and 'The only Redeemer of God's elect' (Q. 21); but it nowhere urges the eternal reprobation of the non-elect. Schaff (*op. cit.* i. 787) commends and criticizes it thus:

'It far surpasses them [Luther's and the Heidelberg Catechism] in clearness and careful wording, and is better adapted to the Scotch and Anglo-American mind, but it lacks their genial warmth, freshness, and childlike simplicity. . . . It deals in dogmas rather than facts. It addresses the disciple as an interested outsider rather than as a church-member growing up in the nurture of the Lord. Its mathematical precision in definitions, some of which are almost perfect, though above the capacity of the child, is a good preparation for the study of theology.'[1]

[1] For minor Catechisms of the Reformation and subsequent periods, see art. CONFESSIONS.

LITERATURE.—Besides the literature mentioned throughout the article, see Schaff, *Creeds of Christendom*, i. 753 f., and the literature at art. CONFESSIONS.

EDWARD T. HORN.

CATECHUMEN, CATECHUMENATE.

—The word 'catechumen' is derived from the Gr. word *κατηχεῖν* ('instruct,' lit. = 'din into the ear'), which occurs 7 times in the NT (Lk 1^{4}, Ac 18^{25} $21^{21.24}$, Ro 2^{18}, 1 Co 14^{19}, Gal 6^{6}), and whose use in these passages illustrates its very early application to those who were subjected to careful and systematic instruction in Christian doctrine, with a view to being admitted into the body of the Church. This preparation is actually indicated in germ also by the very early insertion[1] of v.[37] into the account of the baptism of the Ethiopian eunuch (Ac $8^{26ff.}$), and by vv.[31.32] in the account of the baptism of the jailer and his household at Philippi (Ac $16^{29ff.}$).[2]

Such systematic instruction in religion would be quite familiar, at least to the converts from Judaism; for not only were there schools attached to most of the synagogues, in which the young were carefully educated by catechetical methods, with the OT Scriptures for text-book, up to the age of twelve or thereabouts, but also there is little doubt that proselytes (*i.e.* Gentile converts to Judaism) received catechetical instruction certainly before, and perhaps after, their admission as such.[3]

As time went on, it would soon be necessary to develop the instruction and prolong the period of preparation, though we have but scanty records remaining to us until we reach the 3rd century. Such as we have, however, are satisfactory so far as they go. The *Teaching of the Twelve Apostles* provides (in its first six chapters)[4] instruction in practical rather than doctrinal subjects, and then proceeds (ch. 7): *ταῦτα πάντα προειπόντες, βαπτίσατε, κ.τ.λ. . . . κελεύσεις δὲ νηστεῦσαι τὸν βαπτιζόμενον πρὸ μιᾶς ἢ δύο.* Here, then, we have (probably in the 2nd cent.) a definite course of instruction laid down for catechumens in that portion of Christendom to which this treatise belongs, and the duty of preliminary fasting enjoined:[5] and there were probably special reasons why the practical rather than the dogmatic side was insisted on. Again, in Justin Martyr's *Apology*, i. 61, we read as follows: *ὅσοι ἂν πεισθῶσι καὶ πιστεύωσιν ἀληθῆ ταῦτα τὰ ὑφ' ἡμῶν διδασκόμενα καὶ λεγόμενα εἶναι, καὶ βιοῦν οὕτως δύνασθαι ὑπισχνῶνται, εὔχεσθαί τε καὶ αἰτεῖν νηστεύοντες παρὰ τοῦ θεοῦ τῶν προημαρτημένων ἄφεσιν διδάσκονται, ἡμῶν συνευχομένων καὶ συννηστευόντων αὐτοῖς. Ἔπειτα ἄγονται ὑφ' ἡμῶν ἔνθα ὕδωρ ἐστί.* Here similar evidence is afforded, together with the addition of prayer for forgiveness of sins, though this is really implied in fasting.

A little later than this, but early in the 3rd cent., we come upon a considerable body of evidence as to the care that was then taken with the preparation of catechumens. Converts in those days, and for some time to come, were still mostly adults, and a good many of these never proceeded to Baptism itself until they were at the point of

[1] Not later than the 2nd cent., since it is quoted by Irenæus (*Hær.* III. xii. 8).

[2] Cf. Ac 2^{38-41}. In each of the cases quoted some preliminary instruction was obviously given, though the special circumstances reduced the period to a minimum. It is to be noted also, as Frere (*New Hist. of Bk. of Com. Prayer*, p. 557) points out, that 'a large proportion at least of the early converts had already had the training of Judaism as their schoolmaster to bring them unto Christ.' The same author also suggests that 'when St. Paul says (1 Co 1^{14-17}) that it was not his work to baptize, he . . . has in view a system of teaching and training' preparatory to baptism (p. 558 n.).

[3] 'One might be tempted to find evidence of early catechetical instruction in such passages as Ps 15. $24^{3ff.}$ 34^{13-15}, Is 33^{14-16} etc. In Harnack's opinion, we have in Διδ. 1^{1-3a} 2^{2}–5^{2}, and fragments in chs. 8 and 13, a book of instruction for Jewish proselytes called "The Two Ways"' (F. C. Porter, art. 'Proselyte' in *HDB* iv. 136^{a}).

[4] Cf. *Apost. Const.* vii. 22.

[5] This is still required of adults in the English Church.

death (*e.g.* the Emperors Constantius and Constantine). No doubt, this was in part due to an exaggerated fear of post-baptismal sins and loss of innocence, but it must also be remembered that the state of the heathen world was such as to make it extremely difficult for the ordinary person to conduct himself with consistency as a Christian, and it was therefore most important that catechumens should be as thoroughly grounded as possible in Christian principles.[1] There must also have been frequent cases of relapse into sin in the ranks of the catechumens, which required punishment and postponement of baptism (see Bingham, *Ant.* X. ii. § 17). An extreme instance of the tendency to Puritanical strictness is found in the history of the early Syrian Church, where, even until the time of Aphraates in the 4th cent., baptism appears to have been 'a privilege reserved for celibates'; or, in other words, it was as a rule postponed till a period in life when men and women felt disposed to live separately.[2] Hence the Christian community consisted of baptized celibates,[3] together with a body of adherents who remained outside, and were not really members of, the body.

But our concern is chiefly with other parts of Christendom, and there by the beginning of the 3rd cent. the writings that are extant give us a clear idea upon the subject. In the first place, modern researches seem to show conclusively that there were only two grades among those who were unbaptized: (1) catechumens pure and simple, *i.e.* adherents to Christianity who were, however, looked upon as members of the community (*e.g.* *Can. Hipp.* 63, 64); (2) catechumens who sought baptism, and were therefore being subjected to a definite course of instruction with a view thereto. These latter were called *φωτιζόμενοι*, *competentes*, *electi*, and the like.[4] The proper time for their preparation was the season of Lent, so that they might be ready for the solemn administration of the sacrament of baptism on Easter Eve. But as baptism might, for one reason or another, be postponed till later on in the Easter season, and as Whitsunday was the end of that period, the latter festival was looked upon as the second great annual occasion for admission. In the East the Epiphany, which was always associated with our Lord's baptism in the Jordan, was also allowed, and sometimes in the West as well. After that, Christmas and other festivals were added, in spite of Papal disapproval.

The first portion of the preparatory period was occupied with three kinds of preparation:[5] (1) instruction in what they must give up (the renunciation) (see art. ABRENUNTIO); (2) instruction in what they must believe (the faith); (3) a series of exorcisms by which the evil spirits were to be driven out of the candidates.[6] A list of names was carefully drawn up of those who were to be admitted to this course. Then by Thursday in Holy Week those who satisfied the bishop were finally determined upon, and after fasting on Friday presented themselves on Saturday morning for the last act of preparation before baptism itself, which would normally take place that same evening. At this last preliminary service there were three ceremonies:[1] (1) the concluding exorcism, with imposition of hands over the candidates as they knelt facing the east; (2) the exsufflation, or breathing into their faces; (3) the *effeta*, each person being touched with spittle (or oil) on the mouth, ears, etc., in imitation of our Lord's action in Mk 7^{31-37}.

If we pass on one hundred years later, to the beginning of the 4th cent., we reach a period in the history of the Church when peace and the cessation of persecution naturally added large numbers to the Christian body, and produced further developments in the regulations for the catechumenate. The same outlines of preparation in the earlier and the later stages are still observed both in the East and in the West (at Rome and in 'Gallican' churches), but the whole system is more systematic and definite.[2]

During the course of instruction, a kind of examination was held from time to time, often called *scrutinium*; by the 7th cent. there were as many as seven of these *scrutinia*, which began in the 3rd week of Lent. The Creed, the Lord's Prayer, and other parts of Christian doctrine (*traditio symboli*) were learnt by heart. Various portions of the Scriptures were read and explained, especially from the historical and moral books (see Aug. *de Cat. Rud.*). What are now called the Apocrypha were also used for this purpose (Athan. *Fest. Ep.* 39; ps.-Athan. *Synopsis Script. sacr.*), more particularly, it seems, the Book of Sirach (*Can. Apost.* 85).[3] At Rome there was, at all events later on, a formal instruction in the four Gospels, called *apertio aurium*, and a curious ceremony of administering salt to the candidates.[4] They were also universally admitted to Church assemblies and to the first part of the Eucharist (*i.e.* up to the *missa* [=*missio*] *catechumenorum*), though actual instruction in the doctrine of Holy Communion was mostly withheld till after baptism.

It must, however, be remembered that, though these ceremonies continued and were even, as has been said, probably added to in process of time, and though the first part of the baptismal service was still called in the liturgical books *ordo ad catechumenum faciendum*, the rapid growth of the practice of infant baptism, which followed upon the establishment and spread of Christianity, soon led to the practical decay of the catechumen system. Comparatively few adults were baptized, but the rites and forms that had been elaborated for *them* were not adapted to the new circumstances, and babes in arms were treated as if they were in full

[1] To the same considerations must be attributed the multiplication of forms and ceremonies which is so noticeable in connexion with baptism in the mediæval rite.

[2] See Burkitt, *Early Eastern Christianity*, 1904, p. 125 ff. The whole question is fully discussed by him; he compares similar tendencies among the Marcionites (Tert. *adv. Marc.* iv. 34), the Manichæans, the Albigenses, and the Buddhists.

[3] The technical name for these baptized persons was *B'nai Q'yāmā* ('sons of the covenant'), who formed a kind of monastic order.

[4] See Duchesne, *Orig. du culte chrét.* (Eng. tr. p. 293), who quotes F. X. Funk, *Theol. Quartalschr.*, 1883, p. 41 ff., as having established that the old idea of their division into four classes is erroneous. It may be added that the case of penitents is, as it were, the case of those who have been reduced to the rank of catechumens, and that the same author (see Duchesne, *op. cit.* p. 436 n.) throws doubt on the universality of the four classes in their case even in the East, while in the West it was never practised at all.

[5] The deacons were specially charged with this work (*Can. Hipp.* 61), but care had to be taken that they too had been efficiently instructed: *οἱ κατηχοῦντες πρῶτον κατηχηθέντες κατηχείτωσαν ὅτι περὶ ψυχῆς ἀνθρώπων τὸ ἔργον* (ps.-Clem. *Ep. ad Jac.* § 13).

[6] The Catechetical School at Alexandria and similar institutions elsewhere were, no doubt, in part, though not exclusively, intended for the benefit of catechumens (in the technical sense).

[1] The authorities for this description are Tert. *de Baptismo*, and *Can. Hipp.* 60–110; a little later we find Serapion's *Prayer-book*.

[2] The authorities are the *Peregrinatio Etheriæ* (a lady pilgrim's account of Church life in Jerusalem), the catechetical lectures of Cyril of Jerusalem, St. Augustine (for Africa), St. Ambrose (for Milan), etc.

[3] Cyril of Jerusalem (*Catech.* iv.) objects to this use of *τὰ ἀπόκρυφα* and 'whatsoever is not read in churches'; but he must be taken, we think, to refer to heretical and uncanonical writings, not to the Apocrypha in our sense (cf. Dion. Alex. p. 52, ed. Feltoe).

[4] This, according to the usage of those days, was often called *sacramentum* (*e.g.* Aug. *de Pecc. Mer.* ii. 26; *Conc. Carth.* iii. canon 5). Baronius and others were mistaken in thinking that this referred to *eulogiæ* (*pain bénit*); see Bingham, *Ant.* x. ii. 16.

possession of their faculties and capacities.[1] At the present day this defect has been more or less completely remedied in the various parts of Christendom, though to a greater extent in the West than in the conservative East; and still more so in the Reformed than in the un-Reformed branches of the Church. Both the modern *Rituale Romanum* and the Prayer-books of the Anglican Communions provide separate Offices for the Baptism of Infants and of Adults, and in the Offices for the latter provision is still made for the due preparation of the catechumens. The rubric in the Roman Office requires that the adult candidate shall receive adequate instruction in faith and morals, shall receive the sacrament of baptism fasting, and, if possible, at the bishop's hands, and on Easter Eve or at Whitsuntide. The Office for the Public Baptism of 'such as are of riper years and able to answer for themselves' was not added to the English Prayer-book till 1661; the Preface thus accounts for its addition:

'Although not so necessary when the former Book was compiled, yet by the growth of Anabaptism, through the licentiousness of the late times crept in amongst us, [it] is now become necessary, and may be always useful for the baptizing of natives in our plantations, and others converted to the Faith.'

The reasons here alleged are still, of course, operative in our days, especially in many parts of the mission field, where great care has to be exercised in the selection and instruction of converts before baptism. It is to be noticed that here, too, the rubric gives directions which are on much the same lines as the Roman rubric just referred to, and follows ancient precedent:

'Timely notice shall be given to the Bishop,[2] or whom he shall appoint for that purpose, a week before at the least, by the Parents, or some other discreet persons; that so due care may be taken for their examination, whether they be sufficiently instructed in the principles of the Christian Religion; and that they may be exhorted to prepare themselves with prayers and fasting for the receiving of this holy Sacrament.'

One of the chief privileges of the catechumenate, up to the time of its practical abolition by the spread of infant baptism, was that of attendance (with penitents) at the first portion of the Eucharist. This consisted, in general terms, of the Scripture lections from OT and NT (*Prophetica*, *Apostolica*, and *Evangelica Lectio*) and the homily. After that, in the East, during the 4th cent., the catechumens first, the energumens next, then the *competentes*, and finally the penitents were dismissed[3] in this form:

'At the invitation of the deacon they offer up a silent prayer, while the congregation also prays for them. The deacon formulates this prayer, specifying the particulars of it, giving the petitions in detail. The faithful, especially the children present, answer him by the supplication *Kyrie Eleison*! The catechumens afterwards rise up, and the deacon invites them in their turn to pray, by joining with him in the form which he employs; he then invites them to incline their heads to receive the blessing of the bishop, after which they are dismissed.'[4]

As to the Roman Liturgy we have no evidence available till the liturgical books of the 8th century. By that time 'discipline in regard to catechumens . . . had been largely modified. There were no longer any adult catechumens. . . .' Duchesne is, however, of opinion that the ancient formulary of the *missa catechumenorum* was preserved notwithstanding, and occurs in the order of baptism of that date.

'On the day of the "Opening of the Ears" [or *traditio symboli*] the deacon dismissed the candidates for baptism with the words, *Catechumeni recedant! Si quis catechumenus est, recedat! Omnes catechumeni exeant foras!*'[5]

[1] Traces of this incomplete adaptation are to be observed even in the Reformed office of the Anglican Church: *e.g.* the 'Thou' and 'I' in the questions to godparents, and their answers, which the phrase 'in the name of this child' only partially sets free from awkwardness.

[2] The Irish Prayer-book retains this rubric in its entirety; the American substitutes 'Minister' for 'Bishop . . . discreet persons.'

[3] Hence the term *missa catechumenorum*, *missa* being a late word for *missio* (like *collecta* for *collectio*, *ascensa* for *ascensio*, etc.). The Roman Mass still ends with the words '*Ite, missa est.*'

[4] Duchesne, *op. cit.* p. 58. [5] *Ib.* p. 171.

For the Gallican use we have the evidence of St. Germain of Paris[1] in the 2nd half of the 6th cent. adduced by Duchesne.[2] By his day

'the catechumenate had become merely a reminiscence. It was necessary then to explain the *missa* (dismissal) *catechumenorum*, of which the rite, however, continued to be preserved.[3] This ceremony took place after the prayer, as in the Liturgy of Constantinople. In the Apostolical Constitutions it is placed before the prayer. We cannot gather precisely from the text of St. Germain whether it was accompanied by special prayers. I am inclined to believe that its text has in view the prayers which I have just dealt with, but that at the beginning there were special prayers, which disappeared with the disappearance of the catechumens. Thus, at the end of the sixth century, at least in the Church of Paris, nothing more was said than some such formulary as *Ne quis catechumenus, catechumeni recedant.*'

Something has already been said about the present state of things in regard to this matter; but it may be further added that, since the prevalence of infant baptism amongst most Christian bodies, systematic instruction in the principles of the faith which, as we have seen, was the most important feature in the primitive catechumenate, is carried on after baptism instead of before; and in the case of the Roman, Anglican, and Lutheran Communions mostly before Confirmation, which has now been separated by a considerable interval from baptism, and postponed till those that are baptized have reached years of discretion. Among Nonconformist bodies this may be said to be provided for by means of Sunday school and other classes. In the Anglican communion the two final addresses to the godparents in the office of 'Publick Baptism of Infants' lay stress upon the duty of their seeing that their godchildren 'be taught, so soon as they shall be able to learn,' the Creed, the Lord's Prayer, and the Ten Commandments, and 'all other things which a Christian ought to know and believe to his soul's health,' this last clause being amplified afterwards into the charge that they 'be further instructed in the Church-Catechism set forth for that purpose.' In this way the spirit of the Early Church is still retained, by which only those who have been properly instructed in the faith are admitted to full communion with the Christian society.[4]

CATHOLIC APOSTOLIC CHURCH.—See IRVING AND THE CATHOLIC APOSTOLIC CHURCH.

CATHOLICISM, CATHOLICITY. — The meaning of these words will be best understood by examining the history of the adjective 'catholic.' The word 'catholicity' is always, or almost always, the name of a quality—the quality of being catholic, in whatever sense this may be understood; the word 'Catholicism' is generally applied to a system of faith or practice which

[1] Died A.D. 576. [2] *Op. cit.* p. 202.

[3] Cf. Council of Epaon (517), c. 29, 'cum catechumeni procedere commonentur.'

[4] In the Bull *Ex omnibus afflictionibus* (Oct. 1, 1567), Pius v. condemned the tenet of Baius, 'opera catechumenorum, ut fides et poenitentia ante remissionem peccatorum facta, sunt vitae aeternae merita' (cf. Denzinger, *Enchiridion symbolorum*[10], Freiburg, 1908, No. 1018).

possesses the quality of being catholic. 'Catholicism' is sometimes, though rarely, used of the quality itself, but 'Catholicity' is never, or very rarely, used as the name of a system.

The adjective 'catholic' is derived from καθ' ὅλου, which means 'on the whole,' 'in general'; and it has an extensive non-ecclesiastical use, which need not be particularly examined. It is used of things which are universally prevalent or applicable, or even of things which are only common, and more particularly of things which are of universal use or interest, and of persons who have universal or wide sympathies. These meanings need not be dwelt upon, but it should be noted that early ecclesiastical writers freely use the word in its non-ecclesiastical sense.

The ecclesiastical use began very early, and the word was from the first specially used to denote an attribute of the Church. It was not commonly applied to persons until much later. In many early instances it is not easy to determine the precise shade of meaning which it was intended to convey. The Church, it is true, might very naturally be called 'universal' for several reasons. It might be so called as teaching a universal religion suitable to the whole of mankind, in contrast to the national character of Judaism. Or the term might be used of actual local extension, either with reference to the future literal extension of the Church throughout the world, or with reference to that actual extension over a great part of the Roman empire—the inhabited world—which took place very early in its history. Or again, the Church in general, the Christian society as a whole, might be called 'universal,' to distinguish it from the local churches, that is, from those parts of the one society which existed in particular places. All these shades of meaning came in the course of time to be associated with the epithet, but it is not clear that any one of them was the original significance. And another idea appears very early, and perhaps to some extent even in the earliest examples of the use of the word. As the true doctrine of the Church was regarded as that which was held by the Church as a whole, while heresies were partial and local, the word 'catholic' came to signify 'orthodoxy as opposed to heresy, conformity as opposed to dissent' (Lightfoot, *Patr. Ap.*, note on Ign. *ad Smyrn.* viii.). This, indeed, became the principal meaning of the word, and so it became usual to speak of the catholic Church in a particular place, in contrast with bodies of schismatics or heretics. The word came also to be very frequently used as a sort of perpetual epithet of the Church, without any more definite significance than that of the 'true' or 'orthodox' Church. The frequency of the use of the word is attested by the fact that it appeared very early in the Eastern Creeds, and somewhat later in those of the West.

The early history and the development of the meaning of the word can be best understood from an examination of some typical examples of its use. The earliest passage in which it occurs is in Ignatius (*ad Smyrn.* viii.):

> 'Shun divisions as the beginning of evils. Let all follow the Bishop, as Jesus Christ the Father; and the Presbytery as the Apostles; and to the Deacons pay respect as to the commandment of God. Let no man do anything of things pertaining to the Church apart from the Bishop. Let that be held a valid Eucharist which is under the Bishop or one to whom he shall have committed it. Wheresoever the Bishop shall appear, there let the people be; even as where Jesus may be there is the Catholic Church. It is not lawful apart from the Bishop either to baptize or to hold an *agape*; but whatsoever he shall approve, this is well pleasing also to God.'

It has been commonly assumed that in this passage the Catholic Church means simply the Church in general, or as a whole, as distinguished from the church in any particular place; and this at first sight seems the obvious sense. But if this is the whole significance of the word in this passage, Ignatius would appear to say that the relation of the Bishop to the particular church is the same as that of Christ to the Church as a whole; and he can hardly mean this—at least not without some qualification. The drift of the whole passage is to insist on the unity of the Church, and the argument appears to be that the indwelling of Jesus is the essence of the Church, and that the visible test by which it may be seen that the community in any place is part of the Church consists in being in communion with the Bishop, who is at once the head and representative of the local church, and the link which connects it with the Church as a whole, of which Christ is the head. This is in accordance with the theory of the early Church about the episcopate; and if this is what Ignatius means, the word 'catholic' has already something of the sense of the 'true' Church.

Other early examples of the use of the word occur in the *Martyrdom of Polycarp*, of which fragments have been preserved in Eusebius, and of which the date may be about 150. This is addressed to 'all the parishes (*i.e.* dioceses) in every place of the holy and catholic Church,' and in §§ 8 and 19 'the whole catholic Church throughout the inhabited world' is spoken of. Here the meaning is not defined; but, if the sense were simply that of local extension, there would have been no object in adding the words 'in every place' and 'throughout the world.' In § 16, according to the old reading, 'the catholic Church in Smyrna' is spoken of; and if this is the right reading, it can only mean the true, orthodox Church. The more probable reading, however, is 'the holy Church.' At all events the sense of orthodoxy is unmistakable in the *Muratorian Fragment*, which says that the heretical writings cannot be received into the Catholic Church, and in Clement of Alexandria, who says (*Strom.* vii. 17) that it is the essential characteristic of the Catholic Church that it should agree in the unity of one faith. In the time of St. Augustine the significance of the word was further developed and commented on; and greater stress seems to have been laid on the idea of universality in the sense of extension—at all events on some occasions, as for instance in controversy with the Donatists. St. Augustine, writing about them to a correspondent, says that they maintained that the Church is catholic 'not from the communion of the whole world, but from the observance of all Divine precepts and all sacraments' (*Ep.* xciii. 23; cf. lii. 1). But the meaning of orthodoxy still prevails, *e.g.* in *de Fid. et Symb.* x.:

> 'We believe also in the Holy Church, that is to say, the Catholic Church. For both heretics and schismatics call their congregations churches. But heretics violate the faith itself by false opinions about God, while schismatics abandon brotherly charity. . . . Wherefore neither heretics belong to the Catholic Church, which loves God, nor schismatics, since it loves its neighbour.'

> So also in *Serm. ad Cat.* 14: 'This is the Holy Church, the One Church, the True Church, the Catholic Church, fighting against all heresies.'

The *locus classicus* for the meaning of the word as it was fully developed during the first three centuries is in the *Catecheses* of St. Cyril of Jerusalem (viii. 23 [A.D. 348]):

> 'The Church is called Catholic because it exists throughout all the inhabited world, from one end of the earth to the other; and because it teaches, universally and completely, all doctrines which ought to come to the knowledge of men concerning things both visible and invisible, both in heaven and on earth; and because it brings into subjection to godliness the whole race of men, both of rulers and of ruled, both of learned and of ignorant; and because it universally treats and heals every kind of sins which are committed by soul and body, and possesses in itself every form of virtue that is named, both in deeds and words and in spiritual gifts of every kind.'

Here there are four kinds of universality indicated—extension in place, completeness of doctrine, adaptation to all kinds of men, and moral and spiritual perfection. In another celebrated passage St. Vincent of Lérins applies universal agreement as a test of doctrine (*Common.* i. 2). After dealing with the appeal to Scripture, he adds:

'Within the Catholic Church itself the greatest care must be taken that we hold that which has been believed everywhere, always, and by all. For this is truly and properly Catholic, as the very force and effect of the word declares, which includes all things with practical universality. But this will be found precisely in this way, if we follow that which is universal, that which is ancient, that about which there is consent.'

St. Vincent does not, however, as has been sometimes supposed, exclude all development of doctrine, for somewhat later he adds:

'As in the case of individuals, so in the case of the whole Church, at the different stages of life and age, there must be great and vehement progress in understanding, in knowledge, in wisdom.'

The Middle Ages added little or nothing to the idea of catholicity. The thought of local extension fell very much into the background, for the missionary work of the Church for several centuries was nearly at a standstill; Christianity had occupied almost all the area open to it, and had enough to do to defend even this from Muhammadan aggression. The word 'Catholic' in its ordinary use meant the opposite of heretical. It was also used as a perpetual epithet. Thus the King of France was called 'the Catholic King,' and the same title was given to the King of Jerusalem. But, after the religious convulsions of the 16th cent., the word came to be used with a greater variety of meaning. The new religious associations which became known as Protestant did not commonly claim the title of 'Catholic' for themselves; and, on the other hand, the Churches of the Papal obedience insisted more explicitly on the doctrine that communion with the See of Rome was a necessary condition of membership of the true Church, and that therefore only those who remained in this communion were entitled to be called Catholic. Hence the term 'Catholic' came to be opposed to the term 'Protestant'; and on the Continent of Europe the words are still popularly used in this way. The Anglican Church, on the other hand, retained its historical continuity, and continued to claim catholicity as being a true representative of the ancient undivided Church. Anglicans, therefore, from the 16th cent. have applied the term 'Roman' Catholic to the Churches of the Roman obedience, while claiming to be equally Catholic themselves. It may be noted that from this period the word is commonly applied not only to the Church as a whole, but also to individual members of the Church. Instances of this use are found much earlier, but it now becomes very common. See further, the article on the CHURCH.

At the present day the word is used in several significations which differ considerably from each other. The chief of them are the following:

(i.) The meaning of catholicity, as it is understood at the present day in *the Roman Church*, may be summed up in the following propositions. (*a*) The Church was intended by God to be literally universal, *i.e.* diffused throughout the world. (*b*) As applied to the Church at any particular time, this universal extension must be understood in a moral sense, whether it be simultaneous or successive. For such a moral catholicity it is not necessary that the Church should be as yet literally extended throughout the whole world, or that its members should form an actual majority of professing Christians, or that its progress in every place should be continuous and uninterrupted. It will be sufficient if it can be shown that, from its first beginnings at Jerusalem, the Church has by degrees extended throughout the greater part of the world, and founded branches progressively in all directions, all of which are united by a real and visible bond of union, that is, not only by common aims and sympathies, but by being under the same government. (*c*) This moral catholicity is a note of the Church, that is, a quality which distinguishes the Church from any other body; for it is an attribute of the Church founded by Christ, and not of a number of different bodies taken together. It implies, therefore, a common faith and a common government, for without these a true visible unity is impossible. (*d*) It is a quality which is possessed only by the Roman Church. The Eastern Churches possess historical continuity, but they are divided into several independent parts without a common government. Moreover, they claim only their own territory, and make no attempt to spread their branches over the world. Nor can they be regarded as forming collectively one part of the Catholic Church, the other part being the Western Church, because their bonds with the West are altogether broken, in respect both of faith and of government. The Protestant bodies are professedly partial and local, they have no bond of union, and they have severed all organic connexion with the historical Church. The Anglican Church claims catholicity, and at the present moment its branches have a wide extension; but this is closely connected with national extension, and even on the supposition that it retains Apostolic orders, the different branches of the Anglican communion are united merely by comity, and not by any efficient common government. It will be seen that, according to this view, the quality of the catholicity of the Church is almost merged in that of its unity. Even the question of orthodox doctrine enters into the conception only in a subordinate degree, and unity of government becomes the real test of catholicity.

(ii.) *The Anglican view* denies that an absolute centralized government is a necessary condition of catholicity, and maintains that such a government was not thought necessary and did not actually exist in the early ages of the Church, but that orthodoxy was maintained by the consentient witness of all parts of the Church. The name of 'Catholic' was given to the Church not so much because of its actual local extension at any moment, although it was destined to be spread throughout the whole world, but because it is in its nature capable of supplying all spiritual needs of all classes of mankind at all times. But it can do this only if it retains its purity and completeness of doctrine and worship; and, according to the teaching of the early Church, this is secured mainly by the continuity of the episcopate which preserves the Apostolic tradition and bears witness to the common consent of all parts of the Christian world. Hence arises the close connexion between catholicity and the episcopate, which is found as early as the passage of Ignatius cited above. The bishops were regarded in early times not as imposing doctrines upon the Church, but as witnesses to the accordant beliefs of different parts of the Church, so that by their agreement the faith of the whole might be ascertained. In the same manner also the due administration of the sacraments was to be secured (Ignat. *l.c.*). Any part of Christendom may therefore rightly be called Catholic which preserves the faith, the sacraments, and the Apostolic ministry. The catholicity of the Church is a real thing, although it is imperfect, just as its unity and its holiness are likewise imperfect.

(iii.) *The religious bodies which were formed in the 16th cent. and later* have made little use of the

word 'Catholic' except in the sense of Roman Catholic. In explaining the term as it occurs in the Creed and in ancient literature, they have generally laid stress upon the idea of local extension, and applied it to the ideal aim of Christianity. Some writers again, using 'Catholic' and 'Protestant' as opposed terms, have applied them to two fundamental religious tendencies. Inasmuch as all religion has as its object to bring men into close relation to God, the direct contact of the individual soul with God is its true concern. On the other hand, as man is obviously created for society, his relations to God imply relations with his fellow-men, and this implies a religious society, in and through which relations to God become possible. As this latter conception—the belief in the necessity of the Christian society, the importance of its orthodoxy, unity, and right government, and of its social acts, the sacraments —was greatly insisted upon in the Middle Ages, while in the upheaval of the 16th cent. there was a strong tendency to lay stress upon the relation of the individual soul to God, some writers use the words 'Catholic' and 'Protestant' to denote these social and individualistic tendencies respectively. This is not, however, the historical use of the words. In recent times the word 'catholic' has been loosely used in a manner still more remote from its original significance. In non-ecclesiastical matters it has been not infrequently or improperly used, as has been mentioned above, to express the ideas of comprehensiveness or general sympathy. Consequently, some modern writers have applied it in ecclesiastical matters to what is vague and undetermined in faith or practice. This use of the word is purely modern, although some approximation to it may be found as early as the writings of Baxter and Defoe, and nothing could be further removed from its historical significance.

There are several subordinate ecclesiastical senses in which the word 'catholic' has been used: (1) It is the title (καθολικός) of certain patriarchs or primates in the Eastern Churches. It is properly applied to a primate who is subordinate to a patriarch, but who has metropolitans under him. (2) It is used of church buildings: (*a*) of a bishop's church or cathedral as opposed to a parish church, (*b*) of a church as opposed to a private oratory, (*c*) of a parish church as opposed to a monastic church. (3) It is used of the Catholic Epistles (see the Comm. and the art. 'Catholic Epistles' in *HDB*).

LITERATURE.—The doctrine of the Church, including its Catholicity, is dealt with more or less fully in most general works on Christian doctrine, especially in treatises on the Creeds. The claims of the Church of Rome are the subject of innumerable works, controversial and constructive. The books mentioned here are merely a few specimens of their classes.

i. Patristic references: Ignatius, *ad Smyrn.*; 'Martyrdom of Polycarp,' *ap.* Euseb. *HE*; Clem. Alex. *Strom.* vii.; Cyprian, *de Unit. Eccl.*; Aug. *Epp.* lii. 1, xciii. 23, *Sermo ad Catech.*, *de Fide et Symb.*; Cyr. Jer. xviii. 23; Vinc. Lir. *Common.* i. 2.

Claims*, Lond. 1888; Moberly, *Ministerial Priesthood*, Lond. 1897; Fairbairn, *Catholicism*, Lond. 1899; Rashdall, *Christus in Ecclesia*, Edinb. 1904; Tyrrell, *Mediævalism*, Lond. 1908; Ehrhard, 'Kath. Christentum u. Kirche in der Neuzeit' (in *Die Kultur der Gegenwart*, I. iv. 1, Berlin and Leipzig, 1909).

J. H. MAUDE.

CAUSE, CAUSALITY.

—I. *THE CAUSAL RELATION.*—1. **Content of the idea of cause.**—By a 'cause' is meant an object, event, or process, in virtue of which some other object, event, or process comes to exist or occur. In the primitive and pre-scientific conception, derived from the instinctive philosophy of the human mind in its uncritical stages, a cause is always a concrete thing or person; but such a thing is a cause only in so far as it takes effect, and at the moment in which it does so. The 'effect' of the cause is the change produced in some other thing. If, sometimes, a certain quality of the thing concerned in its causal activity is abstracted from its other (irrelevant) qualities, and called 'cause,' this is but a convenient abbreviation; for when we say 'friction warms,' we really understand that the true cause of the warmth is the body which produces the friction.

This conception of cause involves the idea of temporal succession. The beginning of the causal action is prior to the completion of the change which is called the effect: 'the cause precedes the effect.'

Further, the popular conception of causality involves, over and above succession in time, the element of 'efficient action'; the effect is 'produced.' The bullet, *e.g.*, would not have flown from the gun unless the charge had been fired; and common thought regards the bullet as having been made, or constrained, to fly. The constant concurrence of events, such as rubbing and warmth, may suggest, or be the occasion of, or create a need for, the application of the concept of causation; but it does not itself yield it. Causation is, then, in the first instance, a transaction between two things, an active and a passive; and this conception of concrete causes is used by Locke and Hume.

To look thus for the ground of one fact in another fact or object involves the assumption of discontinuity in the world-process. It implies that the world is an assemblage of 'things,' history a series of events; that reality consists of separate facts. We shall notice later the view that such breaking up of reality into things and events is arbitrary.

2. **Origin of the primitive concept of cause.**—The idea of causality is generally held to have arisen from our consciousness of voluntary action in ourselves. Our original model, says William James, in the construction of the concept of cause, is our immediate experience in moving our limbs. Similarly, Shadworth Hodgson asserts that the notion of efficient causation is got from our unanalyzed experience of ourself in action; a man's body, together with its consciousness, appears to him to be immediately perceived as a real and originating agent. (On this point, see Sigwart, *Logic*, Eng. tr. ii. 98.) It is certain that our relations with the external world are the events which most keenly excite our interest and attention, and that our volitional action and consciousness of effort measure for us our own 'efficiency.' Consequently, it is natural for us to interpret external events by ascribing to things the action and passion which we experience ourselves. Similarly, it is held, the idea of *necessity* implied in the causal relation is modelled upon and derived from the human feeling of coercion or restraint. The ordinary concept of cause is, in fact, anthropomorphic. It arose in the race from the tendency to 'introject' our own experience into objects, which especially characterized mankind in the animistic stage; and we shall see later how the empiricism of natural science regards the cruder concept of cause as a 'fetish.' But if the foregoing account of the origin of the notion of causation be correct, we can well understand that, in primitive usage, a cause should be a thing or a person—something which we can endow, by analogy, with life like our own.

The concept of 'forces,' as once used by physical investigators, to denote the (unknown) causes of changes in Nature, and of 'force,' defined as 'that which *produces* motion or change of motion,' as used in all but the most recent physical science, is, of course, but a form of the primitive notion of cause. Nowadays, both in science and in vulgar thought, it is events, rather than things or objects, of which the causal relation is predicated.

3. **Ambiguities and difficulties inherent in the popular conception of cause.**—The concept of cause necessarily involves the difficulties which belong to the several concepts—such as 'change,' 'thing,' 'activity'—which it presupposes: difficulties which have led some philosophers to regard the content of such concepts to be 'appearance' rather than 'reality.' And besides these difficulties, which inevitably arise in the application of logic, which is 'discrete,' to the time-process, which is continuous, various ambiguities attach to the words 'cause' and 'effect' on account of their usage in senses implying diverse degrees of reflexion and criticism. The meaning of statements concerning causation will depend, *e.g.*, upon how much we group together under the names of 'cause' and 'effect.' Thought can make order out of the data of experience only when it isolates, as separate 'events,' aggregates or unities whose limits in time are more or less definitely prescribable, and when it distinguishes as 'things' unities which can be easily differentiated in space. These temporal and spatial wholes are linked together, in thought which seeks to 'understand' them, by the causal means.

(*a*) *Continuity.*—As typical of the difficulties which emerge when we analyze the notion of cause, we may refer to that involved in causation as a time-process. As we have seen, both the primitive notion of cause and, generally, the more scientific forms of the concept regard it as of the essence of a cause that it *precedes* the effect. But time is continuous; we can always assert, in thought, elements of time in the time-series between any two points which we have selected to regard as next to each other in succession. And, unless causation is similarly continuous, we should have to suppose the two events which we call cause and effect to be separated by an interval of empty time. And this leads to further puzzles (see Taylor, *Elements of Metaph.* p. 173 f.). See CONTINUITY.

Again, a body, A, cannot be said to act causally on another, B, if, while A is changing, B is not. A cause is a cause only in so far as, and at the moment in which, it produces its 'effect'; just as a soldier is a target only when he is being the object of a marksman's aim. If causation is production of change, then cause and effect would seem to be necessarily simultaneous. We speak, indeed, of the swallowing of poison as the cause of a subsequent death; but, in thus singling out one event in a series and calling it the cause of a later one, we are using language which may be convenient, but which is certainly arbitrary and inaccurate. Between the act of swallowing and the cessation of life, a physiologist could distinguish many successive events, each of which may equally claim the title of cause of the final effect. Indeed, every event permits of conceptional division into parts, *ad infinitum*; it is really a system of events, and these are again systems of a higher order. Science resolves planets, for instance, into atoms, and these into electrons; a flash of light into waves caused by vibrations.

On analyzing a case of causal action, then, we find that it is only in a loose sense of the term that we can speak of a cause as preceding its effect. And this is so, whether 'cause' stands for a particular event or for the sum of empirical 'conditions.'

(*b*) *Transeunt action.*—The idea of cause involves, besides *sequence* in time, the idea of production, or of efficient action. We shall see that empirical science has eliminated this element from its concept of cause; but it has had to advance to the abnegation of the concept altogether. Cause, then, involves the notion not merely of action, but of action *upon* something, in which it produces change. This type of action is called 'transeunt.' It is important to note that transeunt action is not *perceptible.* Experience shows us one thing coming after another, but not *out of* it; observation reveals succession, and regularity of succession, but nothing more. And though efficient action does not of itself imply regularity or uniformity in the succession of effect after cause, the conception is probably motived, psychologically, by the desire to find one ground for the connected changes which we observe. The model from which the notion is derived is the effort which we experience in accomplishing volitional actions, and the restraint of which we are conscious when we are prevented. When we come to close quarters with efficient or transeunt action, we find that it also is an obscure conception; it is hard to imagine how such action is worked, and in what it consists. *Why* does a ball move when impinged upon by another (and this is the type of transeunt causality)? We simply do not know. We can form no definite conception of an 'influence' let loose from the cause and passing over into the effect; and, as Lotze points out in his exhaustive investigation of transeunt action (*Metaph.*, Eng. tr., vol. i. ch. 5), the conception would not help us if we could. *Attributa non separantur a substantiis.* This notion of a 'transference' of something from cause to effect (or rather, to the object in which the effect appears) has been productive of error in earlier philosophy. One of its consequences, *e.g.*, was the scholastic doctrine that 'like can act only on like'—which perpetuates itself in the modern theory of psycho-physical parallelism. Such a conception also presupposes that the body B which receives the 'influence' from A is purely passive in the actual causal process—a point to which we shall soon recur.

Meanwhile, it may be observed that various attempts have been made in the past to dispense with the idea of transeunt activity, in formulating a doctrine of causality, on account of the difficulties attending it. One of these was Occasionalism (see art. OCCASIONALISM). This theory denied all interaction between the so-called cause and the effect, and referred all 'efficiency' to God, who, on the appearance of an event A (ordinarily called 'cause'), was said to produce the event B ('effect'), A being the *occasional*, not the efficient or true, cause of B. Occasionalism, as in the systems of Malebranche, Geulincx, and other Cartesians, implies perpetual 'miracle.' Berkeley also reached, by another road, the view that there is no secondary causation. God is, for him, the sole cause; secondary causes are only 'signs.'

Another theory with similar purpose was Leibniz's doctrine of Pre-established Harmony, which substituted for the continual intervention of Omnipotence, which Occasionalism required, the one initial miracle of the arrangement of harmony between the elements of reality (monads) at the first. The passage from phase to phase of the activity of each monad was conceived by Leibniz as due to an immanent force expressing the nature, created once for all, of that monad; while regularity of succession in phenomena was explained as due to the harmony pre-established between the monads.

These historical attempts to dispense with transeunt action have long been abandoned. So also

has what may be called the conceptional or logical view of the causal relation, inherited by scholasticism from Aristotle, and prevalent until the 18th century—a view which may be mentioned here as not involving any implication of transeunt activity or any attempt to avoid it. According to this view, efficient causes can be known from analysis of the essential nature of their effects, and effects can be deduced from the definition of their causes—a mode of conceiving causation taken over from scholasticism by the earlier philosophers of the modern period, who used mathematical method in science where we now use induction. Descartes, Spinoza, and even Bacon, *e.g.*, used 'cause' in the rationalistic sense. The effect was regarded as 'contained in' the cause; or, as Spinoza expresses it, *aliquid efficitur ab aliqua re* means *aliquid sequitur ex ejus definitione.* The work of Hume and Kant has made it plain that the causal relation is not thus analytic, but synthetic, and indeed causality is no longer interpreted as it was before their time. But our examination of transeunt activity, in terms of which 'efficiency' is most naturally expressed, suffices to show that the ordinary notion of causation is once more lacking in clearness. Of course our inability to conceive, or to imagine the 'how,' of transeunt action between things, or indeed of the activity of living subjects whence transitive action is by analogy derived, is no proof that such action is not fact, but illusion. But so long as the cause is looked upon as what, by its action, exclusively determines the nature of the effect in a purely passive object, efficiency is perhaps impossible as well as inconceivable. The action of A on B cannot be grounded in A alone; the change attributed to A as cause must be determined in part by B also. For it depends on the nature of B how B will behave under A's action. The sun which softens wax hardens clay. The popular view of causal action, in grounding the change of B entirely in A, is therefore one-sided. The action must be reciprocal. In physics this receives expression in Newton's 3rd law of motion: 'Action and reaction are equal and opposite.' Causation, then, is *inter*action; cause and effect are simultaneous; the effect is not contained in the cause; there is not a passive factor.

Transeunt activity, however conceived, is inconsistent with any thoroughly pluralistic theory of reality. Independent substances, like Leibniz's monads, are incapable of interaction. On such a metaphysical system, we have, in any change, a purely self-determined sequence of states in one or several members of the plurality. Such 'causality' is distinguished as 'immanent.' We have referred to Occasionalism and Pre-established Harmony as devices to reduce all causality (secondary) to the immanent type; but unless 'God' is simply another term for the whole of reality, these devices do not succeed in removing the difficulties which they were intended to eliminate. Here, however, we come in sight of another explanation of causal action—one which has received exposition in the philosophy of Lotze. Lotze regards God as the ultimate ground of all change; he conceives of the transition from cause to effect as development in one and the same Being. Thus pluralism is merged in an embracing monism; the many are included in the One; transeunt activity becomes wholly immanent.

It will now be obvious that the concept of cause, as used in our practical *Weltanschauung* suffers from lack of clearness—perhaps, also, from inherent contradictions. Partly in consequence of such obscurities, and partly because of the metaphysical implications of the concept, it has undergone modification at the hands of natural science; and 'cause' is now being eliminated from scientific terminology altogether.

4. The treatment of the concept of 'cause' in physical science.—We have seen that the pre-scientific application of the term 'cause' to objects presented difficulties on critical analysis, and that the continuity of time renders it difficult to conceive of events as efficient causes.[1] We scarcely need to point out that the tendency, sometimes observable, to speak of laws of Nature as if they were causes, and 'produced' the phenomena whose behaviour they describe, bespeaks considerable confusion of thought. We have also seen that 'efficiency' and 'transeunt action' are difficult conceptions, and that they involve more than can be derived from the data of experience. From appreciation of these difficulties and metaphysical mysteries, science, and empiricist philosophy steeped in science, came to speak of an event as the cause of another only in the sense that it is a real *condition*, on the occurrence of which something else happens which would not happen without it. A cause, in fact, becomes a *sine qua non* antecedent, but does not itself necessarily 'produce' the event which is called its effect. How or why an event is a *sine qua non* antecedent, it may not be necessary for science to know or to care; but it must not be forgotten that constancy of co-existence and regularity of sequence in events imply causal relation of some kind somewhere. Similarly, a cause has been described by J. S. Mill as 'the sum-total of conditions' for the happening of an event—a definition approached by that of Hobbes: 'the aggregate of all the accidents.' Our examination of the pre-scientific notion of cause has already led us in sight of the metaphysical result that the ground of any event must be sought in *all the rest of reality*; but if the 'sum-total of conditions' be identified with 'the whole of reality,' or even with the state of the world as a whole at a preceding moment, this definition will be useless to science. There is then an end to particular causes of particular events. We note, then, the tendency of science to eliminate 'efficiency' from the concept of cause, and to reduce causation to invariable sequence; at the same time, as we shall presently see more fully, empiricism has sometimes proved anxious to retain the element of 'necessity' in the causal connexion.

Before Hume's day it had been remarked by Glanvil that 'causality itself is unsensible,' and that, in inferring from constancy of accompaniment to causal relation, we supply more than we are empirically authorized to supply. But it was one of Hume's contributions to the problem of causality to emphasize this fact, and to show that in reading into the causal relation 'efficacy'—or 'agency, power, force, energy, necessity, connexion, or productive quality,' which, he says, 'are all nearly synonymous'—the mind 'goes beyond what is immediately present to the senses.' Now, since Hume—or Mill, his constructive successor—has generally been the fountain at which the scientific investigator has imbibed his philosophical opinions, it is natural that, in the sphere of scientific thought, causality should be replaced by the very different conception—uniformity of co-existence or sequence. But the progress of science itself towards the scientific goal, *i.e.* the inherent tendency of science to become more and more identical with abstract dynamics, is responsible for a further change in the scientific usage of the causal concept. The mechanical description of the world, which science develops and uses, represents the world as wholly inert, and its total 'energy' as constant; and it sometimes repudiates the use of the term 'force' in any sense other than that of the purely mathematical quantity 'rate of change of momentum' (see

[1] Some of these difficulties were pointed out by Ænesidemus, 1st cent. B.C.

art. FORCE). Further, science regards the world as one continuous process of becoming, in which what we have hitherto called, 'with a clear trace of fetishism,' 'cause' and 'effect' are not temporally distinguishable events, but merely phases of one process. In Nature, accordingly, there are no causes and effects. '*Die Natur ist nur einmal da.*' In place of the causal relation, Science now uses the mathematical equation. She speaks only of transferences of energy—not of the action of forces—in which the loss on one side is exactly equivalent to the gain on the other. Such is the modern interpretation of *ex nihilo nihil fit*, and *causa æquat effectum*. Which side of the transaction is cause, and which effect, is immaterial. Thus is 'cause' expelled from the language of science by many of its most eminent representatives; and the rôle of science, since Kirchhoff, has more and more become identified with the description of the course of Nature in terms of the simplest possible conceptual symbols and formulæ, metaphysical implications and language being renounced.

It had been insisted by Comte that the old nomenclature which included terms such as 'cause' and 'force' was obsolete if the standpoint of empiricism were established and adopted. And indeed words implying dynamic dependence or efficient activity are out of place if the causal relation is reducible to, or is required to be replaced by, mere uniformity of sequence. Still, we cannot overlook the fact that uniformity of sequence or conservation of energy is an entirely different thing from efficient action. Efficient action does not imply regularity or uniformity, and indeed is compatible with their opposites. So, if Science uses, for her particular purpose, a descriptive language in which 'cause,' in the sense of activity, finds no place, it by no means follows that efficient action does not exist in the world. Science has not shown that causation is illusion; she has banished it from nowhere but her own vocabulary. Causes, as such, do not enter into her sphere; it is possible, and even advantageous, for her to ignore them.

II. *THE CAUSAL PRINCIPLE.*—The further discussion of the concept of cause requires some investigation of the causal principle. This principle states that 'everything which begins to be must have a cause,' or that the causal relation is universal.

1. Its history before Hume.—At the beginning of the modern period of philosophy we find Descartes, who sets out to develop a system of knowledge from the principle of contradiction alone, compelled to call in the aid of the principle of causality, which he nowhere deduces or proves. Descartes held the scholastic conception of the causal relation, according to which the effect is contained in the cause after the model of the logical connexion of ground and consequence; and he formulated the causal principle in the old terms, *ex nihilo nihil fit*. Spinoza uses the word *causa* as identical with *ratio*, and he also assumes that everything finite or particular must find its necessary place in the one all-embracing reality. But Leibniz first clearly enunciated the principle which rationalistic philosophy had as yet unconsciously assumed, and assigned it its place beside the law of contradiction. His principle of sufficient reason is sometimes stated as if it were exclusively a metaphysical or real principle; but he intended it to be also logical. Perhaps the expression of it which best represents Leibniz's full meaning is that which occurs in his *Monadologie*, 31, 32: 'Our inferences are based on two great principles, that of contradiction and that of sufficient reason, in virtue of which we hold that no fact can be true or actual, no proposition veritable, unless there be a sufficient reason why it should be so and not otherwise.' The relation between this principle and that of causality may here be briefly explained, before the history of the latter principle is resumed.

2. Relation of the principles of sufficient reason, ground and consequence, and causality.—The principle of sufficient[1] reason, in its logical aspect, is identical with the principle of ground and consequence when similarly restricted; it expresses necessary connexion *in thought*. It states that every judgment must have a ground—*i.e.* a universal ground from which the judgment necessarily follows, and which makes that judgment necessary to all thinking beings. Such a ground of truth (objective) is, of course, to be distinguished from the psychological ground of subjective certitude. By 'ground' is meant what the scholastics called *causa cognoscendi*.

The principle which bears the name of sufficient reason or of ground and consequence is thus a fundamental law of thought; it forms the basis of truths of matter of fact, just as the principle of contradiction forms the basis of self-consistent or necessary truths. It differs, therefore, from the principle of causality, which is concerned with the *causa fiendi*. It is only when the causal principle is assumed that we are enabled to apply the principle of ground and consequence in order to infer from an effect to a cause. But sometimes the principle of sufficient reason is taken to be solely metaphysical, not logical; and that of ground and consequence is sometimes construed in both senses. If we adopt this usage, then the principle of sufficient reason—or that of ground and consequence applied to the sphere of succession in time—may be regarded (as in Taylor's *Elements of Metaph.*) as an *axiom* of knowledge, equivalent to the axiom: 'What truly exists is a coherent whole.' Whether this principle is identical with the principle of causality, or whether the latter principle is less fundamental and axiomatic, depends upon whether the 'cause' of an event can be identified with the *complete* ground of that event: in other words, upon whether or not causality, or one-sided dependence of the present on the past, and of the future on the present, is a 'necessary logical consequence of the knowability or systematic character of the Real.' This, however, is a disputed point.

3. History of the principle of causality from the time of Hume.—Ground and cause had been identified in the rationalistic school, until Wolff distinguished clearly between the two concepts. It was, however, in the opposed school of philosophy—among the empiricists—that the modern problem of causality emerged. We may practically date it, in fact, from Hume's *Treatise*.

Hume points out that the most important element in causality, as generally conceived, is 'necessary connexion'; yet that this 'corresponds to no impression,' or is not given through sense. He then examines the principle of causality. This, he easily shows, is not self-evident; for its opposite is not inconceivable. The several 'proofs' of it advanced, *e.g.*, by Hobbes, Clarke, and Locke, only beg the point to be proved.

Whence, then, the necessity of the principle? Hume's answer is that the necessity by which we infer effects from causes is simply that of strong habit. Constant conjunction in the past leads to the expectation of conjunction again. We cannot penetrate into the reason of that conjunction, but we pass mentally from effect to cause through association of ideas. The principle, he implies, is a psychological, not a logical, law. Hume admits that science is based on the principle; but, as the

[1] 'Sufficient' = 'satisfying' in the mathematical sense.

principle is not furnished by reason, science is therefore not knowledge, but belief. The principle of the uniformity of Nature ('like causes produce like effects'), again, like that of causality, has no apodictic certainty; we are not strictly warranted in extending experience beyond the particular cases under observation. Such is Hume's conclusion.

Of course it is the 'constancy of conjunction' that needs to be explained; and if, for this, we are referred to association, association involves the causal nexus—which Hume, strangely enough, did not perceive.

Hume at least destroyed the ancient presupposition that the relation between cause and effect is analytic and rational. And so far Kant, for whom he prepared the way, was in agreement with him; he, too, held the causal connexion to be empirical and synthetic. But for Kant it is not the empirical result of association. It belongs to the original constitution of the human mind; though not in the sense that Reid taught in terms of uncritical 'dogmatism,' but as a necessary condition for all possible experience. Beginning at the opposite end as compared with Hume, Kant assumes that there *is* a science of experience, and seeks for its necessary conditions. One of these is the category of cause. Hume had assumed that successive perceptions are perceptions of changes in permanent objects, and not merely isolated perceptions. But Kant maintained that our sensations become part of a consciousness of objects only in virtue of a synthesis of 'imagination,' and not as they 'are given.' Take, he says, from the perceived change the characteristics we bestow upon it in recognizing it as an *effect*, and we reduce it to a mere succession of perceptions which would not represent a change at all; or, in other words, changes in one permanent object are knowable only through the category of cause.

We may admit, as against Hume's sensationism, that sense alone, abstracted from understanding, cannot yield the causal principle. In order that the passing contents of perception may be *related* as like or unlike, before and after, and so forth, a process of calling up in memory, of recognition and differentiation, of direction of attention, must occur; and this is of the nature of thought, not sensation. Still, this admission will not necessarily carry us beyond that interpretation of causality which sees in it only regular sequence. Even less does it commit us to the particular *a priori* interpretation of causality which Kant elaborated with so much ingenious but cumbrous and arbitrary artificiality. On the other hand, we may reject Kant's account of the structure of knowledge; we may be alive to its intellectualism and its undue ignoring of the volitional element in the unification of experience; we may appreciate the obsoleteness of his psychology, which sharply contrasted 'matter' and 'form,' and which assumed ready-made faculties and processes apparently invented *ad hoc*, in the light of the fact that we can now contemplate such 'ultimates' psychogenetically, and see that they have a history; we may be persuaded that what a-priorist thinkers have taken for inherent laws of thought are rather acquired habits, beginning in the spontaneous tendencies of the human mind in its uncultured state; and yet it *may* be true that the category of cause or the causal principle is necessary to our knowledge of change, and an essential condition for our 'making' of the world 'as known.' This possibility will receive further discussion.

In the meantime, our examination of the sources of modern empirical and rationalist interpretations of causality, in Hume and Kant, may appropriately be supplemented by a brief allusion to the treatment which the causal principle has received from a writer who, professedly eschewing all but exclusively empirical methods, nevertheless evinces anxiety to arrive at a result which only rationalistic systems had as yet afforded. J. S. Mill discusses only 'physical' (*i.e.* phenomenal) causation, as distinguished from 'efficient'; and he defines a cause as an 'invariable antecedent' which, moreover, is 'unconditional' or, as it is usually expressed, 'necessary.' As an empiricist Mill has obviously no right to this term 'invari*able*'; experience can inform us, with regard to any particular causal sequence, only that it has so far been unvary*ing*. This latter statement he admits; for he teaches that the principle of causality is an induction, related to all other particular inductions as *primus inter pares*, though a presupposition essential for their truth. But if the causal principle is only a general hypothesis, as it alone can be for the true empiricist, it possesses no more than problematical validity; and no amount of future experience can ever procure for it a validity of higher order. Similarly, Mill has assuredly no right, on his presuppositions, to the term 'unconditional' as a predicate of cause; empirical knowledge knows nothing of the unconditional. In straining after a necessary and universal causal principle Mill thus forsakes his empiricism, on the basis of which, as Hume had clearly seen, no objection can be established in reason against the supposition of non-uniformity in Nature, or even against that of an uncaused event, or *causa sui*. Mill has indeed served to make it plain that pure empiricism does not and cannot solve the causal problem; that it cannot establish, much less account for, invariable sequence, necessary or unconditional connexion.

The causal principle, then, is not resolvable into an induction or general hypothesis without losing its essential character. Nor has rationalism, founded on the a-priorism of Kant, succeeded in convincing the world that this principle is an *absolute* necessity for thought — for a 'pure' understanding independent of all experience. As Sigwart remarks (*Logic*, Eng. tr. i. 321):

> 'The proof that our sensations as they occur must necessarily submit themselves to the categories and *a priori* principles, leaves much room for question.'

Again, to quote Erdmann (*Philos. Rev.* XIV. iii. 299 f.):

> 'When we take into consideration the evolution of the organic world of which we are members, then we must say that our intellect, *i.e.*, our ideation and with it our sense-perception, has evolved in us in accordance with the influences to which we have been subjected. The common elements in the different contents of perception which have arisen out of other psychical elements, seemingly first in the brute world, are not only an occasion, but also an efficient cause, for the evolution of our processes of "reproduction," in which our memory and imagination, as well as our knowledge and thought, psychologically considered, come to pass. The causal law, which the critical analysis of the material-scientific methods shows to be a fundamental condition of empirical thought, in its requirement that the events stand as causes and effects in necessary connexion, or real dependence, comprehends these uniform contents of perception only in the way peculiar to our thought.'

4. The causal principle from the point of view of modern voluntarism.—Since the age of Kant, and more especially in our own generation, voluntarism has increasingly claimed recognition. There is indeed now a wide-spread tendency to assign the chief function, in the construction of our knowledge, to the interests, desires, and volitions of human subjects; to regard knowledge as practical, as well as theoretical, in origin. The category of cause has come to be referred to the active, rather than to the intellectual side of our experience; and the causal principle, like other axioms, to be regarded as a *postulate* arising from the needs of agents.

Simple observation of the course of Nature, on the part of a being with a merely passive, a purely

theoretic or intellectual, interest in it, would not reveal a regularity of sequence on any wide scale, or the uniformity of Nature implied in the phrase, 'like causes produce like effects.' Events which such a being could not calculate, occurrences which would appear to us to be 'freaks of Nature,' would be observed more frequently than those which he might discover to be orderly. The uniformity which science has found in Nature is not written there so plainly that he who runs may read it. If it were, belief in gods and demons, charms and omens, would have been less prevalent in human thought, and less deeply rooted in the human mind. Causality and uniformity are not concepts which have been thrust by the concrete world upon a passively receptive intelligence. They are rather postulates which needed first, for practical reasons such as the prediction and control of events, to be demanded, and then to be diligently sought for, before, here a little and there a little, they were found, for all practical purposes, to hold true.

The principle of causality, and also the principle of the uniformity of Nature, are, then, according to this view, regulative rather than constitutive principles of our thought. They are postulates, necessary for effort after complete knowledge, but not for experience. They are laws not, in the first instance, at least, to our sense-perceptions or to Nature, but to our own understanding, for its own regulation in investigating Nature (see Sigwart, *op. cit.* ii. 17). They originate in the collective mind of thinking and *acting* subjects. But inasmuch as the further we apply them the more verification they receive, we cannot but infer that Nature is rationally interpretable, and therefore is either herself intelligent or the outcome of intelligence.

5. **Concluding section.**—A few consequences of the preceding inquiry may now be given.

It would appear that some necessary connexion between the phases or elements of the Real is essential to our knowledge; the principle of sufficient reason is axiomatic. But the principle of causality is less general, and of a lower order of validity. The dependence which we are absolutely compelled to postulate is not necessarily that of transeunt causality; the ground of an event need not be wholly contained in the temporally antecedent phenomena or sum-total of phenomena. The one irreducible meaning we must give to cause is 'ground.' Whether causation can be 'efficient' without being also 'final' is an inquiry beyond the scope of this article. Certainly causation implies something more than the regular sequence and equivalence which are the only elements in it that concern physical science. The principle of causation is no more reducible to the principle of persistence of force than to the principle of identity—though both reductions have been attempted. The reduction of all causality to the mechanical type, which leads to mechanistic, if not materialistic, philosophy, is simply the outcome of the abstractness of scientific method and the departmental nature of scientific aims and endeavours. It does not follow, because science treats the world—the sum of the objective in universal experience—without reference to the subjective conditions and elements of that experience, that science has 'banished spontaneity,' or that, because the *concept* of activity is obscure, or incapable of resolution into a mechanical process, activity is the less an immediately experienced and irresolvable fact. *How* the effect is necessarily connected with the cause, in the metaphysical as distinguished from the epistemological sense; *what* is the fundamental element in the antecedent which determines, or helps to determine, the consequent event; *how* efficient action is to be thought: these are unsolved problems—perhaps for ever unsolvable. Causality, as W. James says, is an altar to an unknown god. It may be that the causality which we ascribe to objects or things is appearance, not reality; that the category needs to be replaced by a higher. The necessity of the indefinite regress in causal explanation perhaps implies that 'causality is not a proper formulation of the real principle of the unity of all experience,' not an *ultimate* principle of explanation (Taylor, *op. cit.*). Scientific explanation, in which one event is traced to a previous event as its cause, is, of course, but relative; and such relative explanation is not assisted or supplemented, but destroyed, when a *Causa Sui*, or God, is introduced to bridge a gap or give a start to the series of causes. Religious and scientific (*i.e.* causal) 'explanations' are by no means incompatible or mutually exclusive; but the deficiencies of the one system cannot be overcome by recourse to the other. As to the notion of a First Cause, or a *Causa Sui*, we have, on the one hand, to bear in mind that we refute ourselves in trying to establish it by extension of the application of the causal category, for causality when universalized contains a contradiction; and, on the other, to remember that the ultimate ground simply 'is': to demonstrate its existence involves reference to another ground yet more ultimate.

F. R. TENNANT.

CAVES.—The earliest and most natural refuge for man, wherever the physical character of the region has admitted of it, has been the caves and even the crevices of the rocks. It is true that the arboreal habit, still retained by a few living races, must be of great antiquity. But the advantages of the cave-dwelling, as a safe and permanent abode, are manifest, and must have been recognized by the most primitive types of humanity.

In a consideration of cave-dwellings, it is usual among archæologists to make some slight distinction between veritable caves, which penetrate for some distance into the rock, and those hollows or cavities in the face of a cliff which barely offer a refuge from rain and wind. It is obvious that imperfect shelters of this description would be used only where there was no actual cavern near at hand, or where such cavern was already in the possession of a stronger occupant. Such as they are, however, these 'rock-shelters,' as they are technically known to English-speaking archæologists, have often been used as dwelling-places. Tangible evidence of this fact is afforded by the remains of primitive pottery, the shells of edible molluscs, and the bones of animals still to be found by digging down to the level of the original hearth. The 19th century witnessed a great movement throughout Europe in the direction of a minute and scientific examination of the contents of caves of all descriptions, and rock-shelters have been as closely investigated as any other species of cave-dwelling.

In Italy, where the diminutive *covolo* denotes a rock-shelter, the terms *covo, covaccio, grotta,* and *tana* are applied to larger caves, often in association with the idea of a wild beast's den. *La Tana della Mussina*, in the north of Italy (Reggio Emilia), is especially deserving of mention, as there is strong presumption that it was at one time the abode of cannibals, human bones being found in an under-

lying stratum in conjunction with charcoal and the bones of lower animals. To the south-west of this cave is the *Grotta dei Colombi* in the island of Palmaria, off the Tuscan coast, which bears a similar testimony. In concluding his description of the *Grotta dei Colombi*, Boyd Dawkins remarks (*Cave-Hunting*, London, 1874, p. 261):

'We may gather from various allusions, and stories scattered through the classical writers, such, for example, as that of the Cyclops, that the caves on the shores of the Mediterranean were inhabited by cannibals in ancient times. In the island of Palmaria we meet with unmistakable proof that it was no mere idle tale or poetical dream.'

Evidence of the same kind is found in the caves of Arene Candide in Liguria, Capo Sant' Elia in Sardinia, Diavolo in the Capo di Leuca, Salomone and Sant' Angelo in the Valle della Vibrata, and Lazzaro in Sicily.

'The contents of three caves in the Iberian peninsula, referable to the dawn of the bronze age,' observes Boyd Dawkins (*op. cit.* p. 145), 'render it very probable that the use of human flesh was not unknown in those times.'

The sites thus indicated by him are the caverns of Césareda, in the valley of the Tagus, known respectively as the Casa da Maura, Lapa Furada, and Cova da Maura.

'The most abundant remains were those of man. They were to be counted by thousands, and were so fragmentary and scattered that it was impossible to put together one perfect skeleton. The long bones had lost, very generally, their articular ends, had been fractured longitudinally, and some of them had been cut and scraped. It is therefore probable that this accumulation was formed by a tribe of cannibals: the evidence that human flesh formed their principal food being precisely of the same nature as that by which the flint-folk of the Périgord are proved to have subsisted on the flesh of the reindeer. . . . The ancient burial-places of Ultz, in Westphalia, furnish a second case of the practice of cannibalism, according to M. Schaaffhausen of Bonn' (*ib.* p. 147).

In referring to this as the second instance, however, the author had forgotten that he had already mentioned (pp. 20–21) that

'in 1853, Professor Spring discovered a quantity of burned, broken, and cut bones belonging to women and children, in the cave of Chauvaux [Belgium], which he considered to imply that it had been inhabited by a family of cannibals.'

But although the evidence in all these cases points to cannibalism, it must be added that many students of this science regard that evidence as quite inadequate. They draw attention to the fact that some tribes of modern Eskimos, whom certain castes of European cave-dwellers closely resembled in their way of living, their utensils, and their art, show complete indifference as to the disposal of the bodies of their dead, whose bones are found lying about the Eskimo camps, mixed up with the bones of animals and other remains. Nevertheless those Eskimos are not cannibals. Moreover, it is pointed out by T. Eric Peet (*The Stone and Bronze Ages in Italy and Sicily*, Oxford, 1909, p. 197), who combats the cannibal theory, that

'the rite of *scarnitura*, or stripping of the flesh from the bones, was practised among these people [in ancient Italy and Sicily], and that caves were often used as receptacles for the bones together with the remains of a funeral banquet.'

While these objections are of great importance, there seem still to be sufficient data to prove cannibalism among European cave-dwellers. A Scottish example referred to by Robert Munro is very clear. In describing the *débris* of human occupancy in a rock-shelter close to the Ardrossan Railway Station, Ayrshire, he remarks:

'It is somewhat startling to find that these people were not only cannibals but made implements of human bones. "A great many jaws with teeth," writes Mr. Smith, "and bones were obtained, all the latter which had contained marrow having been split open"' (*Prehistoric Scotland*, 1899, p. 82).

In Caithness, also, fragmentary human remains have been found which suggest cannibalism. One of these fragments, a child's jaw, was pronounced by Owen to have been

'splintered open precisely in the manner in which animal jaws are frequently opened by human agency to extract the juices of the dentary canal, and not in the way in which a dog or wolf would have gnawed the bone' (Samuel Laing, *Prehistoric Remains of Caithness*, London and Edinburgh, 1866, p. 29).

It would be a mistake, however, to assume from such instances as these that the habit of living in caves necessarily implies a savage condition of life. No doubt cannibalism has been found in association with a high culture, as in Central America, difficult as it may be, according to our modern ideas, to reconcile such a practice with a civilized society. But it seems clear that, on the whole, anthropophagy is repulsive to people of advanced civilization, except in occasional cases where it enters into religious ritual or observance. The deposits found in many caves would appear, to modern people, to denote that the cave-dwellers in question were civilized people. A brief examination of the data obtained by investigators will readily justify this conclusion.

But, on the other hand, it is a remarkable fact that cave life, in its crudest form, without any environment to suggest civilization even of a primitive kind, has been voluntarily adopted by many members of highly developed races. In these instances the impelling power has been religious, and its origin is Oriental. At the present day the practice is pre-eminently associated with Buddhism, of which religion it has been a feature for untold centuries. From the graphic pen of Sven Hedin, whose knowledge of the inner life of Tibet is unsurpassed by that of any European, one gains a clear idea of the anchorite life as it is practised by Buddhist hermits. On one occasion, Sven Hedin visited a cave, situated near the monastery of Linga, whose occupant was a lama who had lived there for three years, in complete darkness, and in isolation from his fellow-men. His food was brought to him daily, being pushed into his cave through a narrow tunnel. His predecessor had spent twelve years in this way, in absolute silence. And he in turn had succeeded a lama who, entering the cave at the age of twenty, lived there in the same manner to the day of his death, after forty years of seclusion. Another cave, on a mountain side, was inhabited by a hermit said to be a hundred years old. At the hermitage of Lung-ganden-gompa, a lama had lived for sixty-nine years, having been brought out only to die.

'He was all bent up together, and as small as a child, and his body was nothing but a light-grey parchment-like skin and bones. His eyes had lost their colour, were quite bright, and blind. His hair hung round his head in uncombed matted locks, and was pure white. His body was covered only by a rag, for time had eaten away his clothing, and he had received no new garments' (Sven Hedin, *Trans-Himalaya*, London, 1909, ii. 8).

These details are noteworthy, because they picture the appearance of the anchorites of the present and of the past, and are probably applicable to mediæval Europe as well as to the East. For the Buddhist ideal of a supposed sanctity obtained in this way actuated thousands of anchorites in Egypt and Syria, and thence passed westward into Europe, during the early centuries of the Christian era. It is to be observed that caves thus occupied would yield no traces of civilization to the modern investigator, who might consequently make the erroneous deduction that only the lowest savages had ever made such places their abode.

Not greatly different from one of the Buddhist caves described by Sven Hedin, although widely separated from it by distance, are two rudely-built chapels in the south-west of Scotland, on opposite sides of Luce Bay, both of which have been carefully described by Herbert Maxwell (*Proc. of Soc. of Antiquaries of Scotland*, vols. xix., xx.). In both cases small caves by the seashore have been utilized, protecting walls having been built across the entrances, with other interior embellishments,

the floor of one of them having been paved with flags. Both are associated with saints—St. Ninian and St. Medan respectively. On the stones and rocks of St. Ninian's cave are a number of incised crosses, of an early design. Of St. Medan's cave, Maxwell remarks (vol. xx. p. 88):

'What may be deduced from the scanty remains discovered within the cave, from the bones and shells mingled with pieces of stalagmite and charcoal, is that it has long been used as a human dwelling-place; that the aboriginal platycnemic race [inferred from a highly platycnemic tibia found below the floor] lived in Wigtownshire, as in other lands, either before they were extirpated or absorbed by a more powerful invading people, or before their structural peculiarities had become obliterated by a change in their mode of life. Subsequently, after the lapse of an unknown number of years, the cave fell to be occupied as a cell by a Christian preacher, who may have built, or caused to be built, the shrine outside the cave.'

It seems evident that these two cave-chapels have had similar histories, and that they have been credited with supernatural attributes for a very long period of time. St. Medan's cave, for example, has several neighbouring wells or pot-holes in the rocks, which are filled with sea-water at every tide; and it has been the immemorial custom of the peasantry—a custom not wholly obsolete to-day—to bathe in these wells at sunrise on the first Sunday of May, for the purpose of curing themselves of various diseases. A consideration of these two Scottish hermitages, which are representative of a very large class throughout Europe, shows a close similarity between the anchorites of the West and the East, in habit of life as well as in the nature of their retreats and the supposed sanctity attaching to them.

The results obtained by a scientific investigation of the caves of Europe, during the 19th century, have been instructive in the highest degree. 'In England,' observes A. H. Keane,[1]

'Dean Buckland startled the thinking public by announcing the discovery in 1821 of human relics in association with the remains of over seventy hyænas in the Kirkdale Cavern, Yorkshire, so that it was asked whether some antediluvian menagerie had broken loose in those parts. He was followed by the Rev. Mr. M'Enery, who in 1825 first drew attention to the "storehouse of antiquity" preserved beneath the stalagmite beds of Kent's Cave [near Torquay], and by the Rev. J. M. Mello, who led the way in the exploration of the no less famous Cresswell caves, Derbyshire.'

Other leading explorers in the caves of England and Wales were Godwin Austin, Pengelly, Williams, Beard, and Lloyd.

'The result of these discoveries was the proof that certain extinct animals, such as the woolly rhinoceros and the mammoth, had lived in this country in ancient times, along with two other groups of species which are at present known only to live in hot and cold climates—the spotted hyæna and hippopotamus of Africa, with the reindeer and the marmot of the colder regions of the earth' (Boyd Dawkins, *op. cit.* p. 16).

A scientific investigation of Kent's Cavern, conducted during the period 1865–80, resulted in the discovery of bones of the cave-lion, cave-hyæna, mammoth, woolly rhinoceros, wild bull, Irish elk, reindeer, grizzly bear, wild cat, horse, and beaver, intermingled with shells, ashes, charcoal, and human implements of stone and bone, the latter including two harpoon-heads made from reindeer's antler, several bone awls, and a bone needle. (Fuller details will be found in the British Association Reports, 1865–83.) The researches in the hyæna-den of Wookey Hole, near Wells, Somerset, which were begun in 1859 by Boyd Dawkins, and carried on subsequently by himself and other explorers, revealed again the presence of man, as shown by flint and bone implements, in association with the remains of these extinct mammalia. As early as 1847, Boucher de Perthes had obtained the same deduction in France, and this deduction was reinforced by the discoveries of Lartet and Christy in the caves of Aurignac and Périgord.

'From the remarkable collection of implements and weapons,' observes Boyd Dawkins, referring to these caves, 'the habits and mode of life of the occupants can be ascertained with tolerable certainty; and, from their comparison with the like articles now in use among savage tribes, it may be reasonably inferred that they were closely related in blood to the Eskimos.'

This similarity between extinct races of European cave-dwellers and existing Eskimos is of much interest. The resemblance in custom has been very clearly brought out by Boyd Dawkins (see his *Cave-Hunting*, pp. 353–59), in relation to a common style of art as well as to utensils which are almost identical in character and design. What may be called the Eskimo harpoon has also been found in a seashore cave in the west of Scotland, at Oban, Argyll (discovered in 1894). W. Anderson Smith, in considering the objects found in the cave, and the probable habits of the occupants, observes (*Scots Lore*, Glasgow, 1895, p. 97 f.):

'The large harpoon [of deer-horn], well made, with four barbs on each side, and seven inches in length, with a slot for a thong to bind it to the shaft or a float, is a weapon for a large animal. This so-called "dis-engaging harpoon" is a weapon well known among widely divided races, enabling the harpooner to keep his struggling prey in sight when it is too strong and heavy for his ordinary shaft or connexion. It distinctly presupposes a means of water conveyance by coracle or kayak.'

The writer quoted points out that this cave contains no remains of extinct or Arctic animals, and he suggests that the occupants may have been survivors of a primitive race, living contemporaneously with a ruling race of advanced civilization. This is interesting, in view of the fact that there are records of European Lapps and Samoyeds in the 17th cent. who used the skin canoe, or *kayak*, now associated with Eskimos, and whose implements corresponded in character with those used by the latter people.

The contents of European caves denote a striking variety in the degree of culture possessed by their occupants. Implements of bone and flint speak of a condition that can only, according to modern ideas, be called 'savage,' while other objects, of enamelled bronze or of iron, imply a civilized people. In some cases coins are found—Roman, mediæval, and modern. It is necessary to keep in view the fact that, in times of stress, caves offer a ready shelter to man, of whatever degree of culture. Prince Charles Edward, a representative of European civilization in the 18th cent., was for several months a cave-dweller. At the present day, caves are frequently occupied by ordinary vagrants. Deductions as to the period of occupation of any cave require therefore to be made with great deliberation, after a careful survey of all the facts ascertained.

It is also a significant circumstance that the same cave has been used for burial as well as for residence. This is known in many caves whose occupation must be placed at an early date; but even in modern Alaska, the practice is hardly obsolete of devoting one part of a dwelling to the remains of its former owner, while the kindred of the defunct continue to live in the other portion. Caves may therefore be regarded either as sepulchres or as dwellings. This twofold use is seen among the ancient Hebrews. It is quite clear that the cave of Machpelah, in the field of Ephron the Hittite, before Mamre (Gn 23[8ff.]), was legally purchased by the patriarch Abraham as a family vault for himself and his posterity. On the other hand, the same record shows that caves were frequently used as dwellings.

It may be that, because they were often the graves of those noted for sanctity of life, sepulchral caves gradually acquired a sacred character, until eventually they developed into places of worship. The same result may also have been arrived at on account of the accepted sanctity of the anchorite with whom the cave was first associated. From either of these causes, cave-temples may have had their beginning. This form of temple reached a high state of development in India during the early centuries of the Christian era, when the

[1] In his Introduction to F. Smith's *The Stone Ages in North Britain and Ireland*, London, 1909, p. xvii.

Buddhist religion was acutely active. It is estimated that India possesses, or has possessed, a thousand of these Buddhist rock-temples, most of which are situated in Western India. Those of Ellora (Aurungabad) and Elephanta (Bombay) are especially noteworthy. Ceylon has also many interesting examples, the most famous being that at Damballa, which was excavated about 100 B.C. Those Buddhist rock-temples, with their elaborate architecture, sculptures, and inscriptions, form a special study, of which the best exposition may be found in Fergusson's *Rock-cut Temples of India* (1845, 1864, and 1880), and in Burgess's 'The Elura Cave Temples' (*ASWI* v. [1883]) and *The Buddhist Cave Temples and their Inscriptions* (1883).

In ancient Egypt and Nubia there were many such temples. These are divisible into two classes —the true rock-temple, or *speos*, and the *hemi-speos*, which consisted partly of an excavation in the rock, but with an exterior, open-air building in front. A notable example of the *speos* is that at Abu Simbel, in Lower Nubia, which penetrates 180 feet into the rock, and is guarded in front by four seated colossi 60 feet high. At Deir el-Bahari, in the mountains of Thebes, there is the ruin of a great temple built by Queen Hatshepsu, which, although not definitely a *hemi-speos*, presents some of the features of that order, since it is an outgrowth from the rock-shrine attributed to Hathor and the cave-tombs of kings of the XIth dynasty. This interesting temple is fully described in the Memoirs of the Egypt Exploration Fund (London, 1895–1908).

There is a remarkable rock-temple, showing Greek influence, at Petra, in Northern Arabia; and a large number of cave-dwellings have been cut out of the adjacent cliffs. Not improbably, 'the dens which are in the mountains, and the caves,' constructed by the Israelites during the times of Midianite oppression (Jg 6[2]), were of the same description as these Arabian rock-caves. In Greece itself there is an existing specimen of the rock-temple, although of a much more primitive order than that of Petra, still in occupation. It is known as the Monastery of the Great Cave (*E Mone tou Megalou Spelaiou*), and is situated in the Achaian mountains, 3000 feet above sea-level. This monastery has been originally tunnelled out of the native rock, above which buildings of ordinary character have been erected at later dates.

Somewhat akin to the *hemi-speos* is the Convent of St. George in Palestine, an edifice reared under the shelter of an overhanging cliff above the Brook Cherith. Although not itself excavated from the rock, it obviously owes its position to the security afforded by the protecting cliff. In this respect, and indeed in its appearance, the Convent of St. George is closely allied to the cliff-dwellings of the south-west of the United States. Whether this resemblance is fortuitous, or whether these far-separated buildings may be derived from a common original, is a matter for speculation. Asia Minor also furnishes a connecting link in this species of dwelling. The cliffs of the Bakluzan Dere, in the Taurus Mountains, have, it is stated by Sterrett, of Cornell, U.S.A., who visited them,

'numerous dwellings in natural cavities, which have been walled in roughly on the outside. Some of these dwellings are high up on the sides of the bluffs, and none of them can be reached without artificial help. The entrance to the dwellings is gained by means of a long but strong and perfectly smooth pole. An agile man might easily climb this pole and reach the entrance of the dwelling; but the ascent would seem to be impossible for the aged, as well as for most women and children, without aid of some kind from friends above' (*Century Mag.*, Sept. 1900).

Any one acquainted with the cliff-houses of Arizona will see how nearly this description applies to many of them. The region in which these cliff-houses are found is several thousand square miles in area, including parts of New Mexico, Colorado, and Utah, as well as a large district in Arizona. In no part of the world is there any species of dwelling that offers a more fascinating study. Some are merely caves faced with stone-work, while others are well-built houses, usually of one storey only, but occasionally rising to two, three, and, in one case, four storeys. They are all placed on ledges, more or less cavernous, of the cliffs that line the great ravines or cañons of that region, being sometimes situated at an almost incredible height above the river-bed.

'In an encampment, one thousand feet above the valley of the Rio Mancos,' writes E. C. Hardacre in a very instructive paper ('The Cliff-Dwellers,' in *Scribner's Monthly*, Dec. 1878), 'are single houses, groups of two and three, and villages, according to the width of the shelf they occupy. They are so high that the naked eye can distinguish them merely as specks. There is no possible access to them from above, on account of the rocks that project overhead; no present way of reaching them from below, although doubling paths and foot-holes in the rocks show where the way has been of old trodden by human feet.'

One cannot but feel, in looking at the almost perpendicular sides of these cliffs, that the occupants of the dwellings perched at such a dizzy height, in modern parlance, must have been absolutely free from any tendency to vertigo. The cliff-houses have been much written about in modern times. The Marquis de Nadaillac devotes a chapter to the subject in his *Pre-historic America*, 1885.

Pictorial word-writing and hieroglyphics are found on the cave walls of some of these American dwellings. This is a detail of much interest, and not confined to any one country. It is worthy of remark, that the Bushmen of South Africa, a race very low in the human scale, used to ornament the walls of their caves and rock-shelters with paintings of various scenes, executed with iron oxides, or with ochres, mixed with fat. The most modern of these Bushman pictures are assigned to the early 19th century, while the oldest examples are believed to belong to the 16th century. The most remarkable specimens have been reproduced by H. Tongue in *Bushman Paintings*, Oxford, 1909.

Of the troglodyte dwellings in Cappadocia, represented in one phase by the American cliff-houses, there are two other varieties reported by Sterrett. One of these is found in the volcanic region of Mount Argæus. The geological conditions of this area have produced an immense number of natural pyramids of tufa or pumice-stone, rising to various heights, from 50 to 300 feet. Their number is estimated at about fifty thousand. During an indefinite period these pyramids or cones have been burrowed into by man, chiefly as habitations, although a number have been transformed, with the addition of regular masonry, into temples, churches, and chapels. Some of these dwellings in Mount Argæus approximate to the American cliff-houses, in respect that their entrance door is at a considerable distance from the ground, and is attained by notches cut in the face of the pumice-stone. The existing occupants of the Cappadocian rock-cones are the ordinary inhabitants of the district; but Sterrett (*loc. cit.*) has concluded that

'the cones of Cappadocia were well known and inhabited in the dim, distant Hittite period, at about 1900 B.C.' 'Great numbers of the cone-dwellings are used to-day,' he adds, 'as dove-cotes for the hosts of pigeons, the eggs and flesh of which are used as food by the natives. The windows of such hen-coop cones are always walled in, holes of ingress being left for the birds.'

This is interesting in view of the fact that there is a 'columbarium' in a large cave at Nottingham Park, England, while the Scottish 'doo-cave' (Fife), 'Bruce's Library' (Mid-Lothian), and Dirk Hatteraick's Cave (Galloway) present similar features. Cliff-dwellings, analogous to those of Arizona and Asia Minor, are also found in France, as at Rochecorbon, a few miles from Tours; for a description of these see Ernest Peixotto's *Through the French Provinces*, London, 1910.

The third variety of cave-dwelling found in Asia

Minor is subterranean in character. In his account of this variety, Sterrett quotes the description of the troglodytes of Armenia given by Xenophon:

'The houses were underground, with entrances like that of a well, though they were spacious below. The entrances for the animals were dug out, but the men descended by means of ladders. In these houses there were goats, cows, and poultry.'

This condition of things has a close parallel to-day in Southern Tunisia, where there are large numbers of underground houses and villages, as well as cliff-dwellings. Full information on this subject will be found in *The Cave Dwellers of Southern Tunisia*, translated from the Danish of Daniel Bruun by L. A. E. B., London and Calcutta, 1898. See also an illustrated account of the 'Troglodytes of Tunis,' in *Illustrated London News*, 4th Nov. 1882.

There is an obvious connexion between such subterranean excavations as these and the catacombs of Rome, Naples, Syracuse, and Chiusi; although this gives rise to the question as to whether the catacombs (*q.v.*) were originally intended as sepulchres. A wonderful series of catacombs in Lower Austria has been explored and reported upon by Karner, of St. Veit a/d Gölsen, his account, *Künstliche Höhlen aus alter Zeit*, enriched by numerous designs, having been published at Vienna in 1903. From such subterranean excavations as these there is a natural transition to the underground buildings of the British Isles, formerly used as habitations, of which many examples yet remain in Ireland and Scotland. These, however, although locally known as 'caves,' do not fall precisely within the category ordinarily implied by that term. But a special interest attaches to the artificial souterrain known as 'St. Patrick's Purgatory,' situated in an islet in Lough Derg, Donegal. The account given by James Ware, in his *Insulæ Purgatorii S. Patricii Descriptio* (1654), shows that this structure was one of the 'weems,' or *allées couvertes*, to which reference has just been made. The popular belief was that it was an entrance to purgatory, guarded by St. Patrick. During mediæval times many pilgrimages were made to the place, which even yet retains a sacred character.

LITERATURE.—This is given in the article.

DAVID MACRITCHIE.

CECROPS (Κέκροψ).—Of Cecrops, the snake-tailed autochthon of Athens, much has been written both in ancient and in modern times; but our actual knowledge must ever remain meagre. He was traditionally associated with the oldest sanctuary upon the Acropolis, and his cult was localized there. Attic inscriptions tell us that the Κεκρόπιον was still being used by the Cecropian phyle in 334–3 B.C. as a depository for documents (*CIA* iv. 2, 563*b*, 34), and its site is indicated by the great inscription of 409–8 B.C., commemorating the erection of the Erechtheum (*CIA* i. 322, 9. 56, 62, 83). It was situated below the caryatid hall of the Erechtheum, the south-west corner of which was constructed according to a special design, so as to preserve the older building (cf. Jahn-Michaelis, *Arx Athenarum*, Bonn, 1901, plates xx. and xxi. G). Writers of late date state that Cecrops was buried there (authorities in Jahn-Michaelis, *op. cit.* pp. 27, 13), and in point of fact the Κεκρόπιον may quite well have been a tomb. The cult was attended to by the family of the Amynandrides (*CIA* iii. 1276. 8; Hesych. *s.v.*; cf. Toepffer, *Attische Genealogie*, Berlin, 1889, p. 160); but by the historical period it had lost all significance, and its sanctuary, though preserved, was kept secret. It is thus easy to understand why Pausanias makes no allusion to it whatever. We cannot doubt, therefore, that the cult of Cecrops in Athens was very ancient, and it is equally certain that it had become obsolete at an early date. It was pushed into the background by the cult of Erechtheus.

With this agrees the witness of legend and monument. Cecrops is there spoken of as an autochthon without father or mother, and as the first king of Attica, which, it is implied, was originally called Κεκροπία. The serpent's tail with which he was depicted signifies that he was a son of earth, or rather, perhaps, a hero living in the earth. In virtue of his being the earliest of the Athenians, he was sometimes represented as the arbiter in the contest between Poseidon and Athene for the possession of Athens (Apollodorus, iii. § 179), and as a witness of the birth of Erichthonius from the earth —portrayed in the archaic clay-relief reproduced in *Archäol. Zeitung* (1872), plate 63. Cecrops had neither parents nor posterity. In the list of Attic kings no son of his own succeeds him. The three goddesses who were worshipped upon the Acropolis—viz. Agraulos, Herse, and Pandrosos—are indeed spoken of as his daughters; but the relationship is clearly a late growth, and was always rather indeterminate, as is shown by the fact that Agraulos was actually duplicated, thus becoming also the consort of Cecrops and the mother of the three goddesses. Nor is there any record of the deeds of Cecrops. So far as we can learn, the Athenians knew nothing whatever about him beyond his name, and the fact that his shrine on the Acropolis was of high antiquity. To them, indeed, he was a subject of little or no concern.

Not from the original legend, but from the antiquarian deductions and interpretations of the learned, comes all the rest of our traditional lore regarding Cecrops, *e.g.* his Egyptian origin, which C. O. Müller (*Prolegomena zu einer wissenschaftlichen Mythologie* [1825], p. 176) has finally eliminated, and his political and social achievements, such as the institution of monogamy, the civilization of savages, and the like. A second Cecrops, the son of Erechtheus or Pandion, is likewise an invention of the schools, designed to fill out the list of Attic kings (Kirchhoff, *Hermes*, 1873, viii. 184 ff.). The migration of Cecrops to Eubœa (Paus. i. 5. 3) and his appearance in a Eubœan genealogy are, as it would seem, rightly referred to the same source.

There remains only the remarkable statement of Pausanias (ix. 33. 1) that there was in the Bœotian town of Haliartos, on Lake Copais, a shrine (ἡρῷον) of Cecrops. This is not invalidated by the fact that Pausanias calls him the son of Pandion, as that is due to the hand of the exegete. The shrine was called simply Κεκρόπιον. We are here reminded of the tradition, noted by Strabo (ix. 407), Pausanias (ix. 24. 2), and Stephanus Byz. (*s.v.* Ἀθῆναι), that two very ancient cities, viz. Athens—founded by Cecrops—and Eleusis had been submerged in Lake Copais. This may be a mere theorizing synthesis, propounded as an explanation of certain ruins which emerged during a partial subsidence of the lake in the time of Alexander the Great. But it is inconceivable that these particular names should appear in the story without a foundation of some kind, and this may well have been the cult of the hero Cecrops in Haliartos.

The name Cecrops makes its appearance also in Thrace (Stephanus Byz. *s.v.* Κεκροπία χώρα Θρᾴκης); in Assos in the Troad (?), which, according to Stephanus (*s.v.*), was formerly called Κεκρόπειον; and in the Hellenistic settlement Thessalonica, where, according to the same authority, a certain deme bore the name. Hence the conjecture that Cecrops was of Thracian origin. The name was regarded as barbaric even by some of the ancients (Strabo, vii. 321 [from Hecatæus?]; cf. Fick, *Vorgriechische Ortsnamen*, Göttingen, 1905, p. 130).

CELIBACY.

American (LEWIS SPENCE), p. 271.
Buddhist (T. W. RHYS DAVIDS), p. 271.
Chinese (P. J. MACLAGAN), p. 271.
Christian (GEORGE CROSS), p. 271.
Indian (VINCENT A. SMITH), p. 275.
Iranian (L. C. CASARTELLI), p. 276.
Semitic.—See MARRIAGE (Semitic).
Tibetan (L. A. WADDELL), p. 277.

CELIBACY (American).—The practice of celibacy was not uncommonly incumbent upon the priests and shamans of pre-Columban America, and is still recognized as necessary by the medicine-men of various modern tribes. According to Padilla, Palacios, and Garcia, certain classes of the Aztec priesthood practised complete abscission of the virile parts, but all classes of priests were not celibate. The Peruvian 'Virgins of the Sun' were punished with living burial if detected in misconduct. In more modern times the medicine-men of an Algonquin tribe of the Hudson River displayed such severity in a celibate existence, that they refused to partake of food prepared by a married woman. Von Martius relates that a tribe on the Rio Negro enjoined celibacy upon their shamans because they believed that medicine would prove ineffectual if administered by a married man. Many tribes believed that circumcision denoted a symbolical sacrifice of sexuality, among others the Nicaraguans and Yucatecs, the Guaycurus, Hares, and Dog-Ribs, and certain tribes of the Orinoco.

LEWIS SPENCE.

CELIBACY (Buddhist).—The Buddhist Order of mendicants was governed by the 227 rules of the *Pātimokkha*. Of these, the first four were of special gravity. A breach of any one of the four involved expulsion from the Order, and they were therefore called *Pārājikā*, rules as to acts involving defeat. The first rule is as follows:

'Whatsoever Bhikkhu (who has taken upon himself the system of self-training and rule of life, and has not thereafter withdrawn from the training or declared his inability to keep the rule) shall have carnal knowledge of any living thing, down even to an animal, he has fallen into defeat, he is no longer in communion.'

'Withdrawn from the training' was the technical expression for throwing off the robes, retiring from the Order, and returning to the world—a step which any member of the Order was at liberty at any time to take. There are other rules subsidiary to this, forbidding all actions of an unchaste kind, especially any act or word which might either lead to a breach of the principal rule or give rise to an impression, outside the community, that it was not being strictly observed. For instance, a *bhikkhu* is not to sleep in any place where a woman is present (*Pāc.* 5); or to preach the doctrine, in more than five or six words, to a woman, unless a grown man be present (*ib.* 7); or to exhort the sisters, unless specially deputed to do so (*ib.* 21); or to journey along the same route with a woman (*ib.* 67); on his round for alms he is to be properly clad, and to walk with downcast eye (*Sekh.* 2–7); he is not to accept a robe from a sister not related to him, or from any woman not related to him, except under specified conditions (*Niss.* 4–6); he is not to sit in a secluded place with a woman (*Aniyatā*, 1–2), much less to touch or speak to a woman with impure intent (*Samgh.* 2–5).

In a book called *Sutta Vibhanga*, i.e. 'Exposition of the Rules,' each one of these 227 rules of the Order is explained; and every possible case of infringement, or doubtful infringement, is considered from the point of view of Canon Law, and a decision is given. It is difficult to draw any conclusion from these cases as to how far the rules of the Order were observed at the time when this book was composed. Almost all the cases are clearly hypothetical, and were drawn up with a view to having a recorded decision on every possible occurrence. They are interesting mainly as evidence of legal acumen, and are of value for the history of law. The other literature does not afford any assistance. Outside of the Canon Law we do not hear of any breach of the rule as to celibacy, though we meet with several cases of *bhikkhus* availing themselves of their right, when they found the rules too hard for them, to return to the world. The degree in which the rules of Buddhist celibacy are observed, where it is now professed, will be dealt with in the articles on the various countries where Buddhism prevails.

LITERATURE.—The rules above referred to are translated in *Vinaya Texts*, by Rhys Davids and Oldenberg, vol. i. (Oxford, 1881). The Pāli text of the *Sutta Vibhanga* is in Oldenberg, *Vinaya*, vols. iii. and iv. (London, 1881–82).

T. W. RHYS DAVIDS.

CELIBACY (Chinese).—Celibacy in China finds itself opposed not only, as elsewhere, by the ordinary social instincts, but also by the practice of ancestor-worship, which demands male heirs for its proper performance. On this ground Mencius said: 'There are three things which are unfilial, and to have no posterity is the greatest of them' (IV. i. 26). Public opinion, therefore, favours marriage, and that at an early age.

The reasons for celibacy, where it exists, are either economical or religious. (*a*) Improvident marriages are made in China, as elsewhere; but in some cases—few relatively to the whole population, but many in the gross—poverty postpones or even forbids a man's marrying, especially since the candidate for matrimony must provide a considerable dowry to be paid to the parents of his bride. (*b*) While marriage is favoured by the practice of ancestor-worship and by Confucian teaching, which approves of such worship while it avoids theorizing on it, Buddhism, on the other hand, forbids its monks and nuns to marry or to continue in the marriage relation (see CELIBACY [Buddhist]). Moreover, the more earnest votaries of Buddhism, both men and women, will vow a life of celibacy, without, however, becoming monks or nuns; even married persons will agree to live the rest of their lives apart, in conformity with Buddhist ideals. A like ascetic strain of teaching appears in Taoism, and is practised by some of its adherents, though celibacy is not customary even among the professional performers of Taoist rites.

No stigma attaches to widowers who marry again, though he who refuses to re-marry may be respected as an example of continence. In the case of widows, commendation is given to those who decline re-marriage; and still greater is the praise accorded to a betrothed maiden who, though her bridegroom die before their marriage, reckons herself his wife, and lives a life of perpetual virginity in the home that was his. In such cases an heir to the deceased husband is provided by adoption. Eminent examples of such chastity may be commemorated by memorial arches erected with official sanction (cf. CHASTITY [Chinese]).

P. J. MACLAGAN.

CELIBACY (Christian).—The term celibacy is from the Latin *caelebs*, 'unmarried,' 'single,' and signifies the state of living unmarried. Originally

it was applied to the virgin or the widowed state of either sex, but later usage refers it mostly to a man religiously pledged to a single life. In this article it will be treated as a religious practice, and especially of male devotees.

Religious celibacy takes its rise in the Orient, and originates in that dualistic philosophy which regards matter as the source or seat of evil, and which on its positive side views man as essentially, or, at least so far as concerns his end, a spiritual being, whose self-realization is conditioned on the extinction of those impulses which spring from the material body and its environment. Orders of celibates are found in many religious systems, but only in Buddhism and Christianity have they received full development. Our attention will here be limited to a consideration of celibacy in the Christian religion.

The historical connexion of Christianity with Judaism, and the use by the early Christians of the Jewish Scriptures as a body of authoritative Christian documents, tended to perpetuate in the new religion the traditional Hebrew regard for marriage and a numerous offspring. Even among the Jews, however, ascetical usages, from whatever source they may have come, were not altogether wanting. There were fasts, tabued animals and meats, and at least one Order pledged to a measure of asceticism, the Nazirites (Am $2^{11f.}$, Nu 6^{1-21}). There were minor restrictions of the right of marriage, in the injunctions to observe conjugal abstinence on certain religious occasions (*e.g.* 1 S $21^{4f.}$, Ex 19^{15}, Zec 7^{3}) and in the regulations forbidding priests to marry a harlot or divorced woman, or, in the case of the high priest, any but an Israelitish virgin (Lv 21^{7-14}). Though these restrictions were made much of by advocates of celibacy at certain times, they seem to have had no influence on the primitive Church. With more plausibility it has been argued that the celibacy of John the Baptist and of Jesus, and, especially, the former's rejection of civilized modes of living, imply a connexion with the Jewish Therapeutæ (*q.v.*) or the Essenes (*q.v.*),[1] but the claim is only hypothetical.

1. Primitive Christianity.—Christian advocates of religious celibacy have sought a basis for it in the NT. The language of Mt $19^{4ff.}$ (Mk $10^{3ff.}$) constitutes a general recognition of marriage as a Divine institution. The words 'There are eunuchs, which made themselves eunuchs for the kingdom of heaven's sake' (these words do not occur in Mark, and, some think, are probably a late insertion), however, countenance a voluntary celibacy. Eusebius says that Origen took them literally and carried out the supposed obligation upon his own body. When Jesus (Lk 20^{34-36}, Mk 12^{25}, Mt 22^{30}) contrasts the 'sons of the resurrection' with the 'sons of this world' by saying that the former, unlike the latter, do not marry but are 'equal unto the angels,' He is simply meeting that objection to the idea of a future life which assumes a continuance of earthly relationships. He says nothing here or elsewhere of the moral superiority of that condition, or of the propriety of imitating it on earth. At least some of His apostles were married, and their conjugal relations are endorsed by St. Paul (1 Cor. 9^{2-6}). Heb. 13^{4} commands universal honour to marriage.

From the inquiry sent to St. Paul by the Church at Corinth it is evident that the question of the propriety of Christians marrying arose early. St. Paul's answer (1 Cor. 7^{1-40}), whilst granting the general necessity of marriage, does so on the comparatively low ground of its value as a preventive of fornication (vv.$^{2.5.9}$). For himself and others who can preserve continence, whether unmarried or widowed, the unmarried state is preferable (vv.$^{8.40}$). But the reason he offers is not that there is anything impure or unworthy in conjugal intercourse, but that the imminence of the Parousia and the exigencies of the times call for freedom from the distractions which, in his judgment, the married state involves. A change in his expectations and his condition would annul this 'judgment.' His discussion of the treatment of virgins indicates his approval of the attempt to preserve virginity for religious ends, but he is careful to guard against any 'snare' that might restrict true liberty. It is clear that a movement had already begun that was to have far-reaching effects. From Rev. 14^{4} we may conclude that by the close of the Apostolic age virginity was already viewed by Christians in some quarters as symbolical of a higher spiritual life. The language of St. Paul in Gal. 5^{16-24}, Rom. 7^{14}–8^{13}, and *passim* might easily be understood to support such a view.

The development of Christian organization, and the increasing differentiation of a ministerial order, led to stringency in the rules governing the lives of those men and women who were engaged in ministering to the churches. Thus the bishop was to be a married man, but a monogamist (1 Tim. $3^{2.4.5}$, Tit. 1^{6}, 'the husband of one wife'); but whether he was to be only once married, as seems probable from the parallel case of the enrolled widow (1 Tim. 5^{9}), and as is urged by many early Fathers, or whether the passage means that he was to be clear of the loose practice of divorce so common at the time, is not certain. At any rate, if this excludes the twice-married, it also, if taken literally, excludes absolute celibacy. St. Paul's view of the relation of the human spirit, when indwelt by the Divine, to the human body (Rom. 8^{11}, 1 Cor. 6^{19} etc.) makes it certain that, if the injunctions above referred to were his, they are not to be interpreted as attributing a religious or moral value to asceticism (Col. 2^{16-23}). The institution of a celibate priesthood was not contemplated in the primitive Christian Church.

2. The ancient Catholic Church.—Two influences contributed especially to the rise of sacerdotal celibacy. When Christianity spread into all parts of the civilized world and became a religion of the Gentiles, the effect of contact with heathen ideas and customs was seen, on the one hand, in the reaction of the Christian conscience against the prevailing moral degradation in private, social, and civil life; and, on the other hand, in the stealthy and increasing influx into the Church of heathen philosophical and religious ideas, and of the practices associated therewith. This is particularly manifest in the 'heresies' of the time, especially those embraced under the general name of 'Gnosticism,' in which Pythagorean and Platonic elements favouring asceticism were allied with Oriental mythology and world-speculation. To the Gnostic, matter was essentially evil, and redemption consisted in the separation of spirit from it. Accordingly, Saturninus and Basilides (Irenæus, *adv. Hær.* i. 24) declared that 'marriage and generation are from Satan.' Tatian (Eusebius, *HE* IV. xxix. 3) 'pronounced marriage to be corruption and fornication.' Marcion (Hippolytus, *Phil.* vii. 17–19), who was not exactly a Gnostic but professedly a Pauline Christian, believed the world to be the work of an inferior God, denied the reality of Christ's physical life, and founded churches of celibates which threatened the supremacy of the Catholic movement. Bodies of 'Encratites' (Hippolytus, *Phil.* viii. 13) boasted of a self-restraint superior to that of Christians; and they were sure to be imitated by some of the latter (Clem. Alex. *Pæd.* ii. 2). The survivals of these bodies were later absorbed into Manichæism, a blending of Persian dualism and Christianity. To these we must add the influence of the religion of Isis and the worship of Mithra (Bigg, *Church's Task*, 1905, pp. 40, 54, etc.), both of which were wide-spread throughout the Roman Empire and had a powerful following in the 1st and 2nd centuries. The

[1] For these sects see Pliny the Elder, *HN* v. 17; Josephus, *BJ* II. viii.; *HDB* i. 770 f., 605, iv. 992.

former had its white-clad priests and its tonsured men and women—emblematic of a higher purity. The latter had its grades of initiation and its companies of ascetics and virgins. The similarity between their religious conceptions and some Christian ideas facilitated the adoption of their customs by Christians.

Great Christian teachers were profoundly impressed with the Oriental idea of the absolute superiority of the human spirit to its material tenement. Catholic Christians were not to be outdone by heretics and heathens in self-renunciation (Ignatius, *Ep. ad Phil* iv. ; Polycarp, *ad Phil.* ii., iv., v. ; Hermas, *Vis.* ii. 2, 3, *Sim.* ix. 11 ; Athenagoras, *Apol.* xxxiii. ; Irenæus, *adv. Hær.* v. 19 ; Clem. Alex. *Strom.* v. 9)—so at least Tertullian urged (*ad Uxor.* iii., iv., v., vi.). The outcome was inevitable. The highest type of Christian was the celibate. When persecution relaxed, this tendency was accentuated by the need that was felt of substituting the merits of voluntary self-devotion for the merits of martyrdom. Christian teachers praised virginity, and marriage came to be in their eyes only a secondary good for those who were unable to preserve continence (Orig. *Hom.* vi. *in Num.*; Cyprian, *Treat.* i. 3 ; Euseb. *HE* iv. 29). The Latin writers, particularly Ambrose and Jerome (Ambrose, *de Virg.* i.–iii. ; Jerome, *Ep.* 127, 130, *et passim*), used most extravagant language on this point.

The practice of vowing virginity among females had grown so popular that abuses were creeping in, and this led to the passing of regulations concerning virgins at the Synod of Elvira, A.D. 306 (?). The rise of monasticism under Paul of Thebes, St. Antony, Malchus, and Hilarion co-operated with the influence of these virgin sisterhoods in exalting the worth of celibacy, while the growth of sacerdotalism strengthened the movement. The idea of the likeness of the various grades of Christian ministers to Jewish and heathen priests resulted in demanding of them a higher degree of sanctity than of other Christians, especially in the matter of sexual relations (Tert. *in Cast.* vii., ix., *ad Uxor.* ii. etc.; Clem. Alex. *Strom.* iii.). We have already seen that at an early date there was a sentiment against second marriages among the clergy. This sentiment increased. Athenagoras (*Apol.* xxxiii.) said, 'Second marriage is only a specious adultery'; and Hippolytus (*Phil.* ix. 8) took the same view. When Tertullian went over to the Montanists in protest against the lax discipline of the Catholics and began his agitation against the 'digami,' the Church was compelled to act.

The first official action was taken at Elvira (Routh, *Conc. Elib.* c. 33 ; Dale, *Synod of Elvira*, 1882, *in loc.*) in Spain, when the higher clergy, *i.e.* bishops, priests, and deacons, were restricted to one marriage, and conjugal abstinence was enjoined upon pain of deprivation. This was only a Western provincial Synod ; but soon afterwards a Council at Neo-Cæsarea (*Conc. Neo-Cæs.* c. 1, 8, 10), A.D. 315, and one at Ancyra (*Conc. Ancy.* c. 10), took up a similar, though less advanced, position for the East. The former deposed priests who married in orders, or any cleric living with an adulterous wife ; but the latter Council permitted marriage to deacons who at their ordination professed their desire to marry and their inability to refrain.

In the Ecumenical Council at Nicæa (*Conc. Nic.* c. 8) a more conservative position was adopted, and a motion to impose conjugal abstinence on bishops was vetoed, through the influence, it is said, of the aged monk Paphnutius, whose face, with its eyeless socket, bore testimony to his endurance of persecution, and added force to his arguments against a law that might, by excessive severity, unloose the reins of lust. 'Digami' were to be re-admitted to communion after repentance. Of course, the language of St. Paul, and the Levitical laws above referred to, were invariably cited in support of arguments for restrictions.

But the attempts to erect a celibate standard of life had already stimulated some of the evils they had aimed at preventing. The defiance to sexual lust offered by vowed virgins (Hermas, *Sim.* ix. 11) had sometimes wretched consequences when celibacy became a practice among priests. The γυναῖκες συνείσακτοι (*mulieres subintroductae* [see art. AGAPETÆ]) in the houses of the clergy were a scandal. Among the canons of Elvira against the fearful immorality of the times were several which struck at this practice and the sins of virgins and priests' wives (*Conc. Elib.* c. 27 ; Dale, *Syn. Elv.* p. 196 ; *Conc. Ancy.* c. 19). This was in accordance with Cyprian's (*Ep.* lxi. 2, 4) advocacy of stern measures in such cases. The Nicene Council (*Conc. Nic.* c. 3 ; cf. Euseb. *HE* VII. xxx. 12–15 ; Dale, *Syn. Elv.* p. 201 ; Siricius, *ad. Himer. Tarrac.* c. 13) attempted to combat the same evil ; but these bad practices of the clergy were not stopped, and were even imitated by the virgins, who had their own male 'companions.' In later times, Popes and Councils contended against the evil without success until they were supported by Imperial legislation in the time of Justinian (*Novel.* vi. c. 6, quoted by Routh, *Reliq. Sac.* 1814–18, iv. 165).

Nevertheless the sentiment in favour of celibacy for all who aspired to a holy life grew so strong in some quarters as to cause alarm, and the Council of Gangra (see Gieseler, *Ch. Hist.*, 1836, i. § 97), A.D. 362 (?), found it necessary to condemn the view of Eustathius, the founder of Monasticism in Armenia, that marriage is to be universally rejected. We are fairly safe in saying that the prevailing view as to marriage in the 4th cent. is expressed in the *Apostolic Constitutions and Canons* (*Apost. Const.* VI. iii. 17 ; *Can.* 17, 18) : no digamy among higher clergy ; no marriage at all after ordination ; no second marriage even for the lower clergy (ministers, singers, readers, door-keepers) ; none of the clergy to marry a courtesan, servant, widow, or divorced woman ; deaconesses to be virgins or once-married widows. At length, in the decretal of Pope Siricius (Siric. *ad Himer. Tarrac.*), A.D. 385, we have the first ecclesiastical canon prescribing absolute celibacy for all the higher clergy. According to the Pope's own testimony, the decretal was called forth by the dreadful immorality of vowed priests and virgins. The endorsing of this action by a succession of decrees of Popes and of Councils and Synods established the rule, and the regulations for the conduct of monks and nuns were made more stringent. A synod at Rome (Hefele, ii. 386–390), A.D. 386, imposed conjugal abstinence on bishops, priests, and deacons who were already married. The fifth Carthaginian Council (*Conc. Carth.* c. 3, c. 13, dict. 32, c. 4, dict. 84), A.D. 401, commanded the married clergy to be separated from their wives on penalty of deposition ; and the Emperor Honorius, A.D. 420, gave the rule the support of the secular authorities. Pope Innocent I. (*Epp.* ii. c. 9, 10, iii. c. 1), A.D. 404, had issued even sterner decrees than Siricius, ordering priests and Levites not to mix with their wives, and any man who declared his desire to become a cleric to promise not to marry, whilst priests and Levites violating the law of celibacy were to be deposed. Councils (Routh, ii. 61, 62) at Arles, A.D. 443, and at Chalcedon, A.D. 451, supported

the movement. But these efforts were only partially successful, as is proved by a law of Justinian (*Novel.* vi. cap. 6, quoted by Routh, iv. 165), A.D. 523, forbidding those who had taken the vows to return to the world; and another, A.D. 530, declaring married men, or men who had children or grandchildren, incapable of becoming bishops, and annulling marriages of the higher clergy. Gregory the Great (Greg. I., lib. iv. *Ep.* 26, xiii. *Ep.* 6) strenuously contended against the ordination of 'digami,' forbade the restoration of a priest after a lapse from chastity, and commanded stern steps to be taken against looseness. These extreme measures had little permanent effect. The reaction against them proved too powerful for successful resistance, and the outcome is seen in the canons of the Trullan Council (*Conc. Trull.* cc. 7, 12, 13, 48), A.D. 680, by which priests, deacons, and all inferior clergy were allowed conjugal rights, but marriage (except in the case of lectors and cantors) after ordination, or to a widow before ordination, was to be dissolved and punished by temporary suspension and incapability of promotion. Bishops were to be separated from their wives, who were to accept the monastic life or become deaconesses. 'Digami' were to be deposed, but only temporarily if repentant.

3. The Greek Church.—The decisions of the Trullan Council on this question have virtually regulated the position of the Eastern Church to the present day. Bishops are always celibates, being chosen from the monks. The parochial clergy may marry before ordination, but not after. 'Digami' are not admitted to clerical rank (Schaff, *Ch. Hist.* ii. 412; Lea, *Sac. Cel.* ch. vi.). The Nestorian Christians had previously receded from the Catholic view, but returned to the practice of depriving patriarchs and bishops of the right to marry, leaving the lower orders free. The Abyssinian and Coptic Churches follow the Trullan Council, except that they permit bishops to retain their wives.

4. The Roman Church.—The Western Church, disregarding the Trullan Council's censure, continued in its course, since it regarded the separation of the clergy from the laity as essential to the Church's safety. But the regulations made by Synods, Councils, and Popes proved generally impracticable. The spirit of independence among the new peoples of Western Europe, and their passions and political connexions, proved too strong. The very multiplicity of official utterances shows that they were a failure. Even Gregory the Great had had to make concessions, and the filling of ecclesiastical offices in France by nominees of the Mayors of the Palace—such offices being viewed as rewards to successful warriors—for a time rendered severe discipline impossible. Though the Carolingian kings offered the Popes some aid in the matter, the outcome was only the increase of concubinage and the violent resistance of the offending clergy, who received the support of the people. The confusion which followed the dissolution of Charlemagne's Empire left moral corruption rampant in Church and State. Conditions were much the same in Spain and Italy.

In the British Isles the early Church was of the St. Patrick type, and monastic asceticism prevailed among the Britons. The great British missionaries were all monks, and Columban and Gallus helped to sustain the monastic ideal on the Continent.

On the conversion of the Angles and Saxons through the mission of Augustine, it was found impossible to enforce the stern regulations of Gregory. Even the great reforms introduced by Dunstan, and supported by Edgar the Peaceable and Edward the Confessor, while they are evidences of a growing emphasis on the value of asceticism, failed to bring the secular clergy under control. The only gain made was in the enforcement of celibacy among the regulars, and in the custom introduced by Dunstan of selecting the ministers of the altar from their ranks. The secular clergy were mostly opposed to these measures. Though Lanfranc furthered Dunstan's movement by imposing celibacy on the clergy of the cathedrals and the towns, and though Anselm demanded its enforcement on all without exception, marriage was not wholly discontinued, and concubinage increased. The outcome of the struggle in Europe generally at the close of the first millennium may be summed up by saying that the marriage relation was still adhered to by large numbers of the clergy, and that the rule of celibacy, when enforced, gave rise to concubinage more or less flagrant.

The re-establishment of the Empire under Otto the Great led to the elevation of the Papacy through a succession of capable Popes, and to more thorough measures for the government of the Church. The Cluniac revival developed a spirit of asceticism among all classes, and aroused a demand for the purification of the priesthood. The laity now shared fully in the idea that true piety is ascetical, and therein is found the explanation of whatever measure of success was reached in the renewed propaganda (see Lea, *Sac. Cel.* i. 183 ff.). A series of canons passed at the Synod of Pavia, A.D. 1022, and followed by similar legislation at Synods and Councils at Bourges (1031), Mainz (1049), and Rome (1051), attest the magnitude of the task and the desperateness of the Papal policy on the one hand and of the clerical opposition to it on the other. Clerics, from bishops to subdeacons, were ordered to remove their wives, concubines, and other suspicious women from their houses at once, and to remain separate from their consorts for ever. Not only were the women to be turned adrift on the world, but the children born of such unions were pronounced slaves. The Emperors Henry II. and Henry III. supported the movement vigorously; but the real animating spirit was the famous priest, Peter Damiani, who became Cardinal-bishop of Ostia, the highest dignity in the Roman curia, and whose urgency spurred on Popes Leo IX., Stephen IX., Nicolas II., and Alexander III. to the most sweeping measures. The struggle became bitter. The most obstinate opposition came from the bishops, whose dignity and independence were threatened. Plots, riots, and murders marked the progress of the struggle. Hildebrand, who became Pope Gregory VII. in 1073, was the leader of the reform. At his instigation, Nicolas II., at a Council assembled in the Lateran in 1059, took the extreme step of forbidding all Christians to be present at a mass celebrated by a priest known to keep a concubine or female in his house. After Hildebrand's accession to the Papal throne, this legislation of Nicolas was re-enacted, and to it was added a new canon, to the effect that the laity were authorized to withdraw all obedience from the prelates and priests who were incontinent. Though this was virtually an endorsement of the ancient Donatist heresy, it served the purpose well, for the laity were not slow to avail themselves of the power which this stern policy put into their hands. Catharism, with its dualism and its rejection of all marriage, was powerful in parts of Europe at the time, and stimulated the zeal of the Papal authorities. The rebellious clergy went so far as to unite in a schism, and elected Cadalus, bishop

of Parma, anti-Pope Honorius II. The Milanese clergy were most determined in their resistance, and war followed; but Hildebrand never faltered, and the final outcome was the general abandonment of priestly marriage in those parts of Europe where Papal influence was strongest. In its place concubinage or worse prevailed; but these errors were viewed as less criminal than marriage, because they involved a lesser degree of rebellion against the Church's authority (see, further, art. CONCUBINAGE [Christian]). The victory of the Papacy was signalized by the re-affirmation of its policy, without opposition, at the great Fourth Council of the Lateran in 1215, when 1300 prelates were present, representing all parts of Christendom. Yet the curious thing is that, neither at that time nor since, was there any attempt to enforce the rule upon the Eastern Church.

But, as Lea points out (*Sac. Cel.* ii. 205 f.), all this time in the West celibacy was only a point of discipline, of no doctrinal significance, and not a matter of heresy. The Protestant movement, with its revulsion against clerical immorality and its idea of the holiness of the natural, gave rise to a wide-spread demand for a married clergy. All the Reformed bodies fell in with this demand. The reaction in the Catholic Church against this resulted in elevating the rule of celibacy to the rank of an article of faith. Though for a time the current within the Catholic Church ran so strongly in favour of allowing marriage to the clergy that the moderate party, supported by the Emperors Charles V. and Ferdinand, by Duke Albert of Bavaria, and the Gallican Church under the leadership of Cardinal Lorraine, were willing to allow priestly marriage in order to prevent schism, and though even Pope Paul III. was willing to grant dispensations to deserving priests, the power of the Jesuits, the 'counter-Reformation' party, swept the proposed concession away. The Council of Trent (Schaff, *Creeds*, ii. 193 ff., cc. 4, 6, 8, 9, 10, also *Syllabus of Errors*, viii.) elevated the rule of celibacy into a dogma. At its second last session the decision of the controversy appeared in the form of a defence of the sacredness of matrimony, followed by twelve canons in which were asserted the Church's right to establish impediments to marriage, its right to enjoin marital avoidance, the invalidation by the vow of chastity of the right to contract marriage, and the superiority of virginity or celibacy to the married state. Anathemas were pronounced on all who held to the contrary. This remains the law of the Roman Catholic Church. There have been some temporary reactions against it, the most notable of which occurred at the time of the French Revolution, but it diminished gradually after Napoleon's Concordat with the Pope in 1801. The priests have abandoned utterly the claim to the right of marriage.

5. **The Protestant Churches.**—The Protestants vigorously denounced clerical celibacy, and nearly all the great creeds and confessions of the time reflect their feelings on the question. Luther, as early as 1520, advocated allowing pastors their freedom in the matter, and denounced compulsory celibacy as the work of the devil (Erlangen ed. 1826–57, xxi. 322 ff.). In his 'Admonition' (*Vermahnung an die Geistlichen*, etc., 1530, *ib.* xxiv. 360 ff.), in connexion with the Diet at Augsburg in 1530, he said that the celibacy of the clergy was 'a popish innovation against the eternal word of God.' He says the same in his *Table Talk* (*Colloq. Mensal.* ii. 211 ff.). In his sermon *de Matrimonio*, he says human traditions on the question of the prohibition of marriage are accursed, for they have entered into the Church only to multiply dangers, sins, and evils. Calvin (*Inst.* IV. xii. and xiii.), while approving of fasting as a religious exercise, and saying, 'It is becoming that the people should be ruled by a kindlier, and, if I may so speak, laxer discipline' than the clergy, yet denounced the 'vile celibacy' of the priests and the interdiction of marriage to priests as contrary to the word of God and to all justice. 'The first place of insane audacity belongs to celibacy.' These utterances represent the general Protestant view at the time, as the Creeds show. The Augsburg Confession (pt. ii. art. 2) says: 'It is lawful for them [priests] to enter into matrimony.' Scripture and history are adduced against the rule of celibacy: 'God ordained marriage. . . . but as no law of man can take away the law of God, no more can any vow whatsoever.' The sixty-seven articles of Ulrich Zwingli (cf. especially artt. 29, 30; see Schaff, iii. 202) condemn vows of chastity. The First Helvetic Confession (art. 28; see Schaff, iii. 230) rejects monastic celibacy and 'impure chastity.' The Gallican and Belgic confessions do not mention the subject. The thirty-second article of the Anglican Church, A.D. 1571, asserts that 'Bishops, Priests, and Deacons, are not commanded by God's Law either to vow the estate of single life or to abstain from marriage: therefore it is lawful for them, as for all other Christian men, to marry at their own discretion, as they shall judge the same to serve better to godliness' (Schaff, iii. 507 f.). The Irish Articles of Religion (art. 64; see Schaff, iii. 537 f.), 1615, declare that there is no prohibition of marriage in the word of God, and quote approvingly the Anglican articles. The Westminster Confession (ch. xxiv.) says it is lawful for all sorts of people to marry. The Racovian Catechism and the Confessions of the Independents, the Baptists, and other Nonconformists are silent on the subject, their rejection of the Catholic succession making it unnecessary to express their dissent from the Roman Catholic view (Schaff, iii.). The subject is not noticed by modern Protestant Confessions, excepting the Methodist Articles (*Meth. Art. Relig.* art. xxi.), A.D. 1784, and article xxxiii. of the Reformed Episcopal Church in America, both of which repeat the statement of the Anglican articles.

The attitude of Protestants and Catholics has remained practically unchanged to the present time, and the subject is unlikely to be touched unless a proposal for union be made.

GEORGE CROSS.

CELIBACY (Indian).—When the Census (1901) statistics are examined,

'the first point which strikes an observer is the almost universal prevalence of the married state. In Europe sentiment and prudence exercise divided sway, and the tendency on the whole is rather towards a decline in the number of marriages. In India neither of these motives comes prominently into play. Religion, on the other hand, which in the West makes not unfrequently for celibacy, throws its weight in India almost wholly into the other scale. A Hindu man must marry and beget [male] children to perform his funeral rites, lest his spirit wander uneasily in the waste places of the earth. If a Hindu maiden is unmarried at puberty, her condition brings social obloquy on her family, and on a strict reading of certain texts entails retrospective damnation on three generations of ancestors. . . . Amongst the Hindus this institution [marriage] is a religious sacrament, and the evil consequences which, it is believed, would follow from neglecting it have already been referred to. In the case of Musalmans and Animists the religious sanction is wanting, but . . . the married state is equally common, though it is not entered upon at such an

early age as with the Hindus. Its frequency amongst these communities may be due in part to the influence of Hindu example,' but in the main is the result of social conditions. 'Of the males nearly half are unmarried, but a reference to the age details shows that three-quarters of the latter are under 15 years of age; of the males enumerated at the ages 30 to 40, only 1 in 12 is celibate, and between 40 and 60, only 1 in 20. In the case of females the figures are even more striking. Only one-third of the total number are unmarried, and of these three-quarters are under the age of 10 and seven-tenths of the remainder under 15; less than one-twelfth of the females returned as single had completed the fifteenth year of their age. Of those returned in this category at the age periods "15–20," moreover, the great majority doubtless belong to the earlier part of it; very few females are still unmarried when they attain the age of 20'; and these few are so because of special reasons (*Census of India*, 1901, vol. i. pp. 421, 436).

The statistical generalizations quoted above are in accordance with the experience of all observers, and it may be affirmed in general terms that marriage is universal in India among all classes and creeds. Occasionally a middle-aged man may be found a bachelor, because caste restrictions have prevented him from finding a wife, and certain persons of both sexes are necessarily debarred from marriage by disease. Prostitutes, too, are often, though by no means invariably, unmarried, and exceptionally high rank may occasionally preclude a girl from marriage, as when, for instance, Imperial jealousy condemned Aurangzīb's sisters to a life of celibacy. But such exceptions do not seriously affect the truth of the proposition that every native of India marries at some time or other.

Amongst the Muhammadans celibacy is very rarely practised, even by persons who aspire to a reputation for special sanctity. Hindu, Jain, and Buddhist ascetic orders are commonly, though not without exception, celibate. But even in their case the term 'celibate' cannot be predicated in its strict sense. In India no such creature is conceivable as the monk of Mount Athos who had never, to his knowledge, seen a woman. The Hindu theory of the ideal life for a high-caste man is that he should begin as a chaste, ascetic student, then pass through the condition of a married householder, and spend the evening of his days, first as a forest hermit, and finally as a mendicant. Although that ideal is not often carried out fully in practice, almost all persons who join ascetic orders have been through the married stage. All Indian vows, moreover, are purely personal, no attempt being made to enforce them by external authority. A man or a woman who joins an order can always quit it at will. Monasteries and nunneries are merely convenient open dwelling-places for people actuated by common motives who wish to live together. The barred and bolted monastic buildings of Europe, which aid an iron discipline by physical barriers practically impassable, are unknown in India. The celibate state of an Indian ascetic, monk, or nun, therefore, usually implies previous marriage, and in all cases may be renounced at any moment.

Most of the Indian ascetic orders exact by their rules from members, while they remain in membership, not only celibacy, but the strictest chastity, which is described as the highest form of austerity. The Brāhmanical, Buddhist, and Jain books agree in laying down the most stringent rules for the preservation of personal purity by persons aspiring to lead the ascetic life. In practice, of course, the safeguards often fail to act effectively, and female ascetics, especially, have, and always have had, a bad general reputation, so that, as frequently acting in the capacity of go-betweens, they are, according to the Sanskrit text-books on erotics, to be avoided by every self-respecting wife (Schmidt, *Beiträge zur ind. Erotik*, Leipzig, 1902, pp. 740, 762, 774, 777, 781, 816). Honourable exceptions, however, occur, some of which are described by J. C. Oman, whose book (see Lit. at end) gives a convenient and readable account of Indian asceticism.

The Chaitanyites, or followers of Chaitanya (*q.v.*) in Bengal, who admit both males and females, disregard the law of chastity, some of their sub-sects going even further and treating promiscuous intercourse as virtuous. In ancient times, Buddhist nuns, although looked on coldly, it is said, by Buddha, were numerous and influential in both India and Ceylon, and many individual nuns attained high distinction as authors and saints. In modern days, the nunneries of Buddhist countries are of little importance and indifferent reputation.

Descriptions of various celibate sects will be found in other articles. Here mention may be made of one specially remarkable and widely spread, though numerically small, body, the Mānbhaos or Mahānubhāvas, devoted to the worship of Krishṇa and the study of the *Bhagavad-Gītā*. The headquarters of this sect, which dates from the 13th cent., are at Ritpur (or Rīdhpur) in Berār, and a branch convent exists in distant Kābul.

'The sect is divided into two classes, celibates and *gharbārīs*, or seculars. Celibacy is regarded as the perfect life, but matrimony is permitted to the weaker brethren. The celibates, both men and women, shave all hair from the head, and wear clothes dyed with lampblack. The lower garment is a waist-cloth forming a sort of skirt, and is intended to typify devotion to the religious life and consequent indifference to distinctions of sex' (*IG*, *s.v.* 'Ritpur,' xxi. 301 f.).

Many of the Saiva orders, *e.g.* the Atīts (*q.v.*) are similarly divided into celibate and householder sections.

LITERATURE.—Risley and Gait, *Census Report, India, 1901* (Calcutta, 1903); J. C. Oman, *The Mystics, Ascetics, and Saints of India* (London, 1903); A. Mackintosh, 'An Account of the Maunbhows, or the black-coated Mendicant Devotees,' in *Mad. Journal of Liter. and Science*, 1836, pp. 9–26, which is corrected in *IG*, *s.v.* 'Ritpur.' Details of monastic rules will be found in books treating of Jainism, Buddhism, and Hinduism, *e.g. SBE*, vols. xxii., xlv.; R. S. Hardy, *Eastern Monachism* (London, 1850, 1860); Kern, *Manual of Indian Buddhism* (Strassburg, 1896); the *Laws of Manu*, etc. Particulars of celibate sects may be read in Crooke, *Tribes and Castes* (Calcutta, 1896); and many books dealing with Tibet, Burma, etc.

VINCENT A. SMITH.

CELIBACY (Iranian).—The idea of celibacy is entirely repugnant to the Iranian system, as far as we may judge from the Avesta, and probably also to the tenets of the Achæmenid religion (see Herod. i. 136). Nothing can be more explicit than *Vendīdād*, iv. 47, where Ahura Mazda declares:

'I proclaim the superiority of him who has a wife, O Spitama Zarathushtra, over him who is unmarried; of him who keeps a home, over him who hath none; of the father of a family, over him who hath no children.'

In *Yasht* xvii. 59, Ashi Vanuhi declares:

'This is the wickedest deed that hostile men do, when they keep girls away from marriage, and, leaving them long without husbands, prevent them bearing children.'

The unmarried maidens' prayer is for young and handsome husbands (*Yasht* xv. 40). The repudiation of celibacy is quite in keeping with the general sentiment of Mazdaism, which is opposed to all forms of asceticism, and reckons it more blessed to be rich than poor, to feed well than to eat little (*Vend.* iv. 47 f.), and is not merely owing, as in India, to the desire of offspring for the sake of obtaining funeral rites, though that motive no doubt also enters in.[1] L. C. CASARTELLI.

[1] [This factor in the prohibition of celibacy comes out with especial clearness in the declaration of the Pahlavi *Shāyast lā-Shāyast* (x. 19, tr. West, *SBE* v. 322 f.), that 'a man, when he does not wed a wife, does not become worthy of death; but when a woman does not wed a husband it amounts to a sin worthy of death; because for a woman there is no offspring except by intercourse with men, and no lineage proceeds from her; but for a man without a wife, when he shall recite the Avesta, as it is mentioned in the Vendīdād [the reference probably being, according to West, to the recitation of certain Yasna passages in reparation for involuntary *pollutio nocturna*, as prescribed in *Vend.* xviii. 45–52], there may be a lineage which proceeds onwards to the future existence.'—L. H. GRAY.]

CELIBACY (Tibetan).—The obligation imposed on the monks of Buddha's order, in common with other monastic orders throughout the world, to remain permanently single or unmarried, is part of the course of self-restraint and self-discipline to which they are pledged for the purpose of extinguishing in their hearts all desire and worldliness (cf. CELIBACY [Buddhist]). In Tibetan Buddhism this vow is strictly enforced only by the yellow-hat, or reformed, sect of lamas, the *Gelug*, which, however, claims the great majority of the clergy in the country. Amongst the other sects also celibacy is necessarily the rule in the larger monasteries, as well as in most of the smaller ones, especially of the *Kargyu* sect, which particularly affects hermitages and ascetic practices.

On the other hand, in the smaller lamaseries, or *gompas*, of the unreformed sects, situated in the neighbourhood of towns and villages, which practically are merely temples existing for the performance of popular sacrifice incorporating aboriginal cults, the officiating priests are usually uncelibate. This state of affairs is, doubtless, contributed to by the easy morality of the women, and the facility with which the marriage tie may be contracted in Tibet, where no public civil ceremony is necessary; nor, in common with other Buddhist countries, is any religious ceremony prescribed, for the reason that Buddhism is not a popular religion at all, but essentially a monastic brotherhood which advocates celibacy for every one.

Notable exceptions to the rule of celibacy amongst high lamas are to be found in the case of the hierarchs or chief abbots of the *Sakya* sect, who originally were the first priest-kings of Tibet, and who established their succession in the priest-kingship by the rule of hereditary lineal descent in the family, thus entailing a breach of celibacy —a practice which their later representatives still maintain. The present yellow-hat prelate, or Grand Lama, of Mongolia, who poses as the head monk and the incarnation of a divinity, is nevertheless married to several wives, in whose company he travels about openly, although he has not the excuse of the *Sakya* hierarchs for it, as the succession in his case is not by lineal descent in the family, but by spiritual transmigration, according to the theory of infant re-incarnation, on the nomination of the priests at Lhāsa. Individual lapses from continence are recorded on the part of more than one of the Grand Dalai Lamas of Lhāsa, and also in the case of the chief nun, the professedly Divine abbess of the convent of Samding (see ABBOT [Tibetan]).

Whilst celibacy thus may be said to be the rule amongst the Lamaist clergy, yet the existence of absolute and lifelong abstinence from sexual indulgence is perhaps rare, certainly much more rare than is the case amongst monastic communities in Europe. The third commandment of Buddha's decalogue, the *daśaśila*, or 'ten precepts,' forbids unchastity, which is interpreted as including sexual abstinence as regards the monks; but this is the one vow which, above all others, the Tibetans find difficult to keep. The lapses appear to occur chiefly amongst the ranks of the more illiterate monks and lusty novices, whose grosser animal instincts have not been sufficiently leavened with the ascetic spirit of the Buddhist teaching. On this account great numbers of the younger clerics abscond or are expelled. In the large colony of Tibetans at Darjiling the present writer ascertained that several hundreds of the men doing coolies' work in that town were ex-lamas, mostly of the yellow, or *Gelug*, sect, who had fled from Tibet, with their paramours, or singly, in order to escape the severe penalties attaching to their breach of celibacy. The delinquent is denounced, and, if caught, is subjected to corporal chastisement in public, as well as to a heavy fine and expulsion from the order in disgrace.

A considerable number of the monks do undoubtedly practise absolute continence, and no suspicions in this respect seem ever to have been cast upon the reputation of any of the Tashilhunpo Grand Lamas. Purity of this kind is highly esteemed by the laity, and contributes largely to the saintly repute in which the higher lamas are held by the populace, who feel themselves to be in this way so hopelessly the inferiors of these holy ascetics. Moreover, for the performance of many of those sacrificial rites, embodying aboriginal cults, and so often in demand for the purpose of expelling disease and death and compelling good fortune, ceremonial purity by sexual abstinence is deemed to be an essential qualification in the priest who is to mediate with the gods.

Nuns seldom enter the order as children; generally they are widows, who on resuming the single life take the vow of chastity, and live in communities by themselves as celibates.

A serious result of this wholesale celibacy enforced on such a large proportion of the population of Tibet—about a third of the entire adult males of the country—has undoubtedly been to check disastrously the development of the country and to reduce enormously the population. To this source, much more than to polyandry, the present writer would ascribe the remarkable dwindling in the population which has occurred since the pre-Buddhist days, when Tibet was at its zenith. A still more disastrous and direct result of this wholesale celibacy, it seems to him, has been the decided degeneration of the race. Whilst the Lamaist Church has taken to itself for over a thousand years the best of the population of Tibet, the best of the intellects, and the best born, it has left merely the residue of the least desirables to carry on the continuity of the race, which has in consequence become decadent.

I. *SOURCES.*—Our knowledge of Celtic religion, as far as concerns the Continental Celts and those of Britain under Roman rule, is derived from (1) passages in classical and ecclesiastical writings, (2) inscriptions, (3) monuments, images, altars, bas-reliefs, votive offerings, and coins. For the Celts in Wales there are the *Mabinogion* (which, though found in a 14th cent. MS, contains elements from a remote past), the *Triads*, the *Taliesin* and other poems, while some of the older gods may be identified in the personages of Geoffrey of Monmouth's *Hist. Britonum*, or of the documents of the Arthurian cycle. All these, however, must be used with caution. For the Irish Celts the litera-

ture is more copious, and is found in MSS dating from the 11th and 12th cent. onwards—the *Leabhar na hUidhre* (*LU*), the *Leabhar Laignech* or Book of Leinster (*LL*), the Book of Ballymote (*BB*), the *Yellow Book of Lecan*, etc. For the whole Celtic area, *Lives* of saints, canons of councils, etc., contain incidental notices of ritual; place and personal names are also frequently suggestive; while much information may be extracted from folk-survivals.

While the documents of the insular Celts reveal a copious mythology, they refer only incidentally to ritual. On the other hand, the sources tell us nothing of the myths of the Continental Celts, but are concerned mainly with Divine names and, to a lesser extent, ritual.

The Irish texts contain documents in which the gods are euhemerized and everything is reduced to an annalistic system, as well as romantic tales with a mythological aspect, legends, sagas, and topographical descriptions (the *Dindsenchas*), in which much archaic matter is preserved. Much of this can be traced to earlier compilations, derived in turn from pre-existing materials, though it is not known whether the latter, in the case of mythical and romantic tales, were actual pagan myths redacted in Christian times, or more or less amorphous traditions to which a literary form was given by Christian scribes. In either case, care must be taken lest *Märchen* episodes, belonging to universal folk-tale formulæ and attached to the stories of the gods, should be treated as an integral part of Celtic mythology.

For the Irish texts, see d'Arbois de Jubainville, *Essai d'un catal. de la litt. épique d'Irlande*, Paris, 1883, *Introd. à l'étude de la litt. celt.*, Paris, 1883, *Cours de litt. celt.* vols. ii., v., Paris, 1884, 1892 (cited as d'Arbois); O'Curry, *Lectures on the MS Materials*, Dublin, 1861 (cited as *MS Mat.*); Zimmer, *Kelt Studien*, Berlin, 1881–84; Nutt, *Arch. Rev.*, London, 1889, ii. 110; Leahy, *Heroic Romances of Ireland*, London, 1905 (cited as Leahy); Windisch-Stokes, *Ir. Texte*, Leipzig, 1880 f. (cited as *IT*); Windisch, *Die altir. Heldensage Táin bó Cúalnge*, Leipzig, 1905 (cited as *Táin*); *Trans. of Ossianic Soc.*, Dublin, 1854–61; Irish Texts Society's publications. There are facsimile copies of *LU*, London, 1870; *LL*, London, 1880; *BB*, London, 1887.

For the Welsh texts, see Rhys-Evans, *Text of the Mab.*, Oxford, 1887; Lady Guest's text and tr. of *Mab.*, 3 vols., Llandovery, 1849; Loth, *Le Mabinogion*, Paris, 1889 (cited as Loth; most valuable). *Triads* will be found in Loth, in Rhys-Evans, and in Skene, *Four Anc. Books of Wales*, Edinburgh, 1868 (cited as Skene; it contains also the poems, text and tr.), and in the *Myvyrian Archaiology*, London, 1801 (with other documents); and Loth, *La Métrique galloise*, 3 vols., London, 1900–2.

Sprachschatz*, Gottingen, 1894 (in Fick's *Vergleichendes Wörterbuch*[4]).

II. *THE CELTIC PEOPLE.*—The Celts, who had greater affinities with the Latin than with the Teutonic branches of the Aryan stock, had settled (probably in Neolithic times) in the area between the head waters of the Rhine, Elbe, and Danube, where they became known to the Greeks as the Hyperboreans, and whence they migrated in different directions. By the 9th cent. B.C., the Goidels, belonging to the 'Q' group of Celts, had probably reached the British Isles, whither at a much later date came the Brythonic tribes of the 'P' group. Gaul had been occupied at an early date, North Italy by the 8th cent. B.C., the Spanish peninsula by the 5th century. Other groups are found in the Danube valley and the Balkans; some finally reached Galatia as a result of the revolt of the German tribes. In thus spreading over such a wide area, the Celts must have lost much of their racial purity through mingling with the aboriginal peoples—the dolichocephalic Neolithic peoples and the short brachycephalic stock (regarded by Broca as the true Celts, on whom the so-called Celts had imposed their language). But, in spite of this, the Celts, though a minority in these various lands, possessed racial characteristics of such a marked type as to impress them on the successive peoples with whom they came in contact, giving them a Celtic *facies*, so that a general Celtic type, composed of different racial elements, is now recognizable. Thus the different groups were strongly homogeneous, and the general impression left by a study of the remains of their belief and ritual is that their religion was on the whole of the same character everywhere. Though the divinities among different groups bore different names, and though, among more civilized groups, their personalities may have been more definite, their general characteristics were alike. Local circumstances may have altered myths and beliefs in various ways, but their basis was everywhere the same. Again, though aboriginal cults and beliefs may have influenced those of the Celts, there was probably little difference between them, and the Celts perhaps gave more than they received. It is impossible, however, to say how far any one Celtic group may have developed their religion beyond that of any other group. Hence we shall obtain the best impression of Celtic religion by regarding it as, on the whole, homogeneous, like the Celts themselves.

III. *RELIGIOUS CHARACTERISTICS.*—Primitive elements influenced Celtic religion to the end of its history. The cult of Nature-spirits preceded and outlived the rise of anthropomorphic Nature-gods. Religious evolution was doubtless influenced by the earlier distinction between the cults of men and women, arising from their varying interests, and probably already established before the Celts became a separate people. Men as hunters would worship animals, propitiating the slain animal or rendering Divine honours to one member of the species which was hunted. Other worshipful animals were preserved, the cult thus leading to domestication and pastoral life. But all these animals would be regarded as Divine in themselves; the anthropomorphic stage came later. Perhaps mainly among women arose the cult of the fruitful Earth-mother, since it is to them that the beginnings of agriculture are due. They had gathered and stored wild fruits, roots, and seeds, and from them came the idea of cultivating such plants. Hence with women would arise the cult of vegetation-spirits, embodied in trees—the largest vegetable growth. When corn became a food staple, the corn-spirit would be evolved. All such spirits would be regarded as female. The cult of anthropomorphic animal- and vegetation-divinities, whenever it arose, never quite took the place of the earlier cult of Divine animals and vegetation-spirits. As men began to take part in agriculture, and consequently in the cults till then practised by women, vegetation-, fertility-, and corn-spirits would tend to become male, the Earth-mother an Earth-god, though the latter may have been regarded as her consort or her son. Yet neither was this process ever a complete one, as is seen by the late existence of the *Matres* (goddesses of fertility), and by the cult of corn-mothers and -maidens. Again, as the cult of vegetation- and corn-spirits centred in agricultural processes, so, when they became anthropomorphic divinities, their cult centred in the seasonal festivals, the ritual of which is so important for the elucidation of much in Celtic religion.

New circumstances created new divinities—the growth of crafts, of commerce, of music and poetry. Some of the culture-divinities thus evolved were female, and were never quite ousted by gods of the same occupation, while they were sometimes regarded as mothers or consorts of the latter. To

some of these divinities the origin of culture and the existence of domestic animals were later attributed, and myth told how they, perhaps regarded as culture-heroes rather than gods, had obtained them from the gods' land for men by force or fraud. In some cases they may thus have once been anthropomorphic animal-divinities who had become gods, with whom the particular species of animal was associated. In later stages these culture-gods were very important—the local gods assimilated by Cæsar (vi. 17) to the Roman Mercury.

Warfare also, especially with the migrating Celts, demanded war-divinities, certain of the gods of growth being at first utilized, since in Irish myth some of the latter are great warriors. But there were special war-gods also—many of a local, tribal character—as well as war-goddesses, for here the female influence which moulded other parts of Celtic religion also prevailed. Though the Celts are often regarded as mainly a warrior people, agriculture was also keenly followed by them, as many classical references show. The *Equites* in Gaul engaged in war only when occasion arose (Cæsar, vi. 15, cf. v. 12, 'the Belgæ, having waged war . . . commenced to cultivate the lands'). In Ireland, the dependence of fertility upon the king, himself a warrior, shows the importance of agriculture (see § VIII.).

Of all these various divinities and spirits, those of growth and fertility were probably the most important. As anthropomorphic divinities they were worshipped at large central gatherings during the great festivals, but the cult of the earlier spirits, out of whom they had been evolved, must have continued in simple folk-rituals. But both were essentially the same, and it is not wrong to say that the Celts preserved in an emphatic degree the primitive elements of religion. Hence Celtic religion may be regarded as in the main a cult of powers of growth and fertility, perhaps because the poetic temperament of the people kept them close to the heart of Nature. Nor was the early importance of female cults of goddesses ever quite lost sight of, as the position of goddesses and the popular cult of the *Matres* show. Here and there a higher type of religion may have arisen, especially in those parts of Gaul where foreign influences prevailed, and certainly after the Roman conquest. But that conquest really undermined Celtic religion in Gaul and Britain.

Other characteristics which emerge from a study of the sources are the organization and power of the priesthood, the cruel aspects of the sacrificial cult, derived in part, at least, from the earlier slaying of a Divine-human victim, the simplicity rather than the stateliness of the ritual, suggested by the fact that groves rather than buildings were the temples of the Celts, the general use of magic, and the firm and sustaining belief in bodily immortality.

It should be clearly recognized that most of the divinities were purely local in character—gods of a tribe or group of tribes, similar in functions to those of other groups, but differing in name. This is suggested by the frequent equation in inscriptions of different gods with the same Roman god, while, generally speaking, certain Divine names appear only in inscriptions from certain districts. In Ireland and in Wales, though the divinities in the texts appear to have a more universal character, they may have been gods of prominent tribes, those of other groups having been forgotten. On the other hand, certain divinities were worshipped under the same name over wider areas. Some Irish and Welsh divinities have similar names, as well as others worshipped among the insular and Continental Celts—Lug or Lugus, Ogma or Ogmios, Epona, the *Matres*. These deities may represent the divinities of the earliest times, whose cult was carried far and wide by the migrating Celts. Or the gods of some tribes may have ousted those of tribes conquered by them. Or, again, the cult of a tribal god may have gradually extended itself to other tribes. But, on the whole, the local character of the Celtic gods is one of its most marked features. Each god whose nature and functions are described must thus be taken as representative of a type. Though the extent of the Celtic folk from the east to the west of Europe may seem to make it impossible to treat of their religion as a whole, yet the similarity of the Celtic temperament everywhere, the adherence, in spite of the evolution of their religion, to its primitive features, and the unity of their civilization (southern Gaul alone excepted) render the task less difficult. The uniformity of Celtic religion, wherever found, may in large measure be due also to the organized priesthood and its position as a teaching body. Thus, though this uniformity may be regarded by some as hypothetical, the evidence hardly permits us to suppose that the religion differed materially in different regions.

The Celts were regarded as peculiarly religious by classical observers (cf. Cæsar, vi. 16). They did not neglect ceremonial or what was due to the gods, while they held that all things happened by the will of the gods (Livy, v. 46; Dion. Hal. vii. 70; Arrian, *Cyneg.* xxxv. 1). Nor could the power of the priesthood have been so great unless the people had been eager to approach the gods through their representatives. This Celtic characteristic may be traced even now in the devotion to religion and in the authority of the priest in certain Celtic regions, and it is also seen in the eager acceptance of Christianity by the Celts, in the spirituality of early Celtic saints, and in the position of the Celtic Church in Western Christendom for some centuries. Their spiritual, poetic temperament has given much to literature in France and Britain; the purely Celtic literature of Ireland has much that is romantic and idealistic; and, whatever the origins of the Arthurian saga may have been, its spirit is Celtic. But unfortunately no Celt described his own religion or handed down to us any glimpse of the religious aspirations of his people. The real desire of the Celt for God, his sense of sin, his hopes, remain a sealed book to us. But that they must have existed is evident, when we consider the spiritual ideals which the Celt has bequeathed to mankind.

IV. *THE GODS OF GAUL.*—In his notice of the religion of Gaul, Cæsar (*de Bell. Gall.* vi. 17, 18) confines himself to a description of six divinities, to whom he gives the name of Roman deities:

'Deum maxime Mercurium colunt. Hujus sunt plurima simulacra; hunc omnium inventorem artium ferunt; hunc viarum atque itinerum ducem, hunc ad quaestus pecuniae mercaturasque habere vim maximam arbitrantur. Post hunc, Apollinem, et Martem, et Jovem, et Minervam. De his eandem fere, quam reliquæ gentes, habent opinionem; Apollinem, morbos depellere; Minervam, operum atque artificiorum initia tradere; Jovem, imperium coelestium tenere; Martem, bella regere. . . . Galli se omnes ab Dite patre prognatos praedicant; idque ab Druidibus proditum dicunt.'

But the evidence of inscriptions, etc., shows that there were many gods besides these. Hence Cæsar may have mentioned only the chief gods, or, more likely, there were many local gods with similar functions but different names, since the inscriptions show the assimilation of gods with different names to one Roman divinity. The assimilation throws some light on the characters of the native divinities, though very often some single aspect or function of a god may have been made the connecting link between the two, and generally the native character of the god would be lost in the personality of the Roman divinity. Whether there was one supreme god or a group of supreme gods has been much

debated. Perhaps each tribe or group of tribes had its own group of gods, one of whom may have been regarded as chief. But in some cases a god was worshipped over a wide area under the same name. Cæsar makes the native Mercury the god most worshipped, and the local gods assimilated to Mercury (some sixteen in number), worshipped perhaps on hill-tops, were probably gods of culture, commerce, agriculture, and boundaries, with an occasional anthropomorphic animal-god like Moccus, a swine-god. The Gaulish Ogmios (Ir. Ogma), mentioned by Lucian (*Herakles*), was probably a native Mercury, though his name has not been found in any inscription. The Gaulish gods represented by Juppiter were probably sky-, sun-, and thunder-gods, and one of them has been identified with numerous images of a god with a wheel (a symbol of the sun) and occasionally a thunderbolt. The number of native gods associated with Apollo is very great: *e.g.* Borvo, Belenos, Grannos, etc.; and they were generally gods of healing springs, though some of them may have been sun-gods.

As the Celts became a conquering and warlike people, war-gods tended to become more prominent, and the numerous divinities associated with Mars —Camulos, Teutates, Albiorix, Caturix, etc.—were doubtless tribal war-gods. (Animal- and Nature-gods—Mullo, a mule-god, Vintius, a wind-god, Leucetius, a lightning-god, and Braciaca, perhaps a god of malt—were also associated with Mars.) But in their more settled state, divinities of growth and agriculture would be worshipped by the Celts. The importance of this aspect of Celtic religion is seen in the wide-spread cult of such female divinities as the *Matres*, who, in inscriptions, have generally a local epithet. These goddesses, usually three in number, were primarily goddesses of fertility, as their symbols — fruits, flowers, a cornucopia, or an infant—show; but they became protectors of individuals, families, towns, etc. They are not mentioned by Cæsar, but, like the culture-goddess equated by him with Minerva, the horse-goddess Epona, and others, they were not made subordinate to gods, as were the numerous goddesses associated with the native Apollo or with Mercury, Mars, etc. The cult of the *Matres* was wide-spread and popular (especially in cis-Alpine Gaul and lower Germany), hence also primitive, and it doubtless resembled that of the Bona Dea or Great Mother, with whom Gregory of Tours compares a local fertility-goddess of Autun called Berecyntia (*in Glor. Conf.* c. 77; see FESTIVALS [Celtic]). The *Matres* must have been triplicates of an early Earth-mother, whose place was eventually taken by the Earth-god. She then became his consort or mother, or was even associated with another god. Thus Sirona, perhaps 'the long-lived one,' with symbols of fertility (Robert, *RCel* iv. 133), associated with Grannos, is probably an old Earth-goddess. But generally conservatism preserved intact the cult of these fertility-goddesses, as we see in the case of the *Matres* and Berecyntia. Similarly, female corn- and vegetation-spirits, as they became anthropomorphic goddesses, were only partially ousted by gods. The *Matres*, worshipped also in Gallo-Roman Britain, were never quite forgotten. They survived in popular belief as fairies (see FAIRY, and cf. the Welsh name for fairies, *Y Mamau*, 'the Mothers'), and their images were sometimes adored as those of the Virgin and Child. The *Matronæ* of eastern and cis-Alpine Gaul, of the Rhine and Danube regions, probably local forms of the *Matres*, have a title borne by several rivers —Marne, Meyrone, etc. This suggests that they were associated with the cult of rivers. The Mother-river fertilized a whole district, and thus exhibited the chief characteristics of the whole group of goddesses. Other local group goddesses or female spirits are the *Comedovæ*, *Dominæ*, and *Virgines* (probably not very different from the *Matres*), the *Niskæ*, water-goddesses, etc. Many individual goddesses, unassociated with a god, appear sporadically in local inscriptions. It is thus clear (as the evidence of Irish mythology also shows) that in the earliest times goddesses or female spirits of fertility, culture, etc., had preceded gods, and were never quite ousted by them.

The earth or under-earth gods are most probably represented by Cæsar's Dispater. Various Gallo-Roman images show by their symbols or dress that they are local equivalents of Dispater, of the Græco-Roman Hades-Pluto, *e.g.* the god with the hammer and cup (a symbol of fertility), the god called Cernunnos—a horned god who may be the same as other nameless horned or three-headed gods, evidently of the under world, with symbols of plenty and fertility. Aeracura, a goddess holding a basket of fruits, is associated with Dispater in inscriptions from the Rhine valley, and she is probably an early Earth-mother, as is also the consort of the under-world god on a monument from Saintes. She holds a cornucopia. The horned or three-headed god is associated with a male and female, or two male, or two female, companions, on different monuments. In some cases they are represented as Roman divinities. These varying groupings may point to different myths of which this god was the central figure. From this under-world god, who is also a god of fertility, men were descended—perhaps the late form of a myth telling how men had come to earth's surface from an under-earth region. To his kingdom below the earth, conceived as a glorious state, men returned after death to enjoy that bodily immortality which was so firmly believed in by the Celts (§ XVI.).

The hammer is probably a symbol of power, which might be given to any god, but in the hands of the under-world god, who is a god of fertility, it represents creative power. Horns were also ultimately symbols of power (§ X. 2 [*f*]), but, in the case of these under-world gods with stags' horns, they pre-suppose a cult of the stag which, as a grain-feeder, might be associated with the under-earth region whence the grain sprang. Later the anthropomorphic god of the under world would be represented with stags' horns, and horned animals would become his symbols. Hence they are represented with the god on some of his monuments. The triple head of the god and monuments of a bodiless triple head are not easily explained, but they are probably connected with the Celtic cult of heads and with the idea that the head of a great tribal warrior had protective powers.

For representations of Dispater, see Reinach, *BF*, *RCel* xvii. 45 ff.; Bertrand, *RA*, 2nd ser., vols. xv. and xvi.; Flouest, *RA*, 3rd ser., vol. v.; Barthélemy, *RCel* i. 1 ff.

Inscriptions also show the existence of departmental Nature-divinities of mountains, forests, rivers, winds, etc., and of tutelary deities of towns or districts, which took their name from these gods—perhaps originally tribal divinities, and of anthropomorphic animal-divinities like Damona, Tarvos, Moccus, Mullo, Epona, and Artio (see § X.).

The theory of a Celtic cult of a great Divine triad has been maintained by those who believe that the three gods worshipped by the Gauls with human sacrifices (Lucan, *Pharsal.* i. 444) were such a triad. Their names are Teutates, Taranis, and Esus. But on no inscription do their names occur together, and Lucan lays stress on the bloody aspect of their cult, not on their association as a triad. Nor do his words show that they were gods of all Gaul. They were rather tribal gods, whose cult may have extended over a wide area (see Reinach, *RCel* xviii. 149). Teutates is a war-god of the tribe (**teuta*), but his pan-Celtic cult is still maintained by Jullian (*Recherches*, p. 18). Taranis is probably a thunder-god, and Esus, to judge from a monument found at Paris, is a god of

vegetation (§§ VII. 2; X. 2 [*b*]). Some monuments of the under-world god associate him with two divinities, but, as these vary on the monuments, too much stress must not be laid on this example of a triad. The importance of the number 'three' among the Celts (see CALENDAR [Celtic]) led to their grouping three *Matres* on monuments, and in Irish myths there are some examples of similar groupings, or of the extension of one divinity into three (§ V.). In only a few cases was a god worshipped by a similar name all over Celtdom; more generally gods with similar functions had different names, as a result of the local character of most divinities (see Table appended to § VI.). Some of these local divinities, especially those connected with natural features, and possibly some divinities of growth and fertility, may have been pre-Celtic, but this is not to say that the Celts themselves had not divinities of the same nature whom they could assimilate to these.

The philological evidence of the inscriptional names, the identification with Roman divinities, and the plastic types of the monuments, along with ritual notices, hints in early ecclesiastical writings, and folk-survivals, give us some definite knowledge of religious evolution among the Gauls before the Roman conquest. Out of a primitive Nature-worship, out of early animal and agricultural cults, there had been evolved departmental deities of Nature (of mountains, forests, rivers, of the sun and sky, of thunder), deities of growth and fertility, and anthropomorphic animal-divinities (cf. § X.). From the deities of fertility, or from early earth or under-earth divinities, had been evolved gods of the under world of the dead, but from that under world—a region of fertility—men had come forth, for a myth of this kind probably underlies Cæsar's statement regarding descent from Dispater. Worshipful animals became anthropomorphic animal-gods, often with the animal as their symbol. There were also divinities of speech, of culture, of health, of commerce, and of war. Some of these may have assumed a prominent character, but generally they were local and topical. After the Roman conquest the native cults, save in rural districts, gradually gave place to a cult of Romanized Celtic divinities, worshipped according to the ritual of Rome. But, with the conquest, a road was opened to foreign cults which the Romans themselves had adopted, and consequently remains of Egyptian and other Oriental cults have occasionally been discovered on the soil of Gaul.

The inscriptions and Divine names are given fully in Holder. Many separate articles on the gods will be found in *RCel* and *RA*. See also Allmer, 'Les Dieux de la Gaule celt.,' *Rev. Epigr.*, Paris, 1894 ff.; Jullian, *Recherches*; Bertrand, *Rel. des Gaulois*; Gaidoz, *Le Dieu gaulois du Soleil*; Rhys, *HL*; Reinach, *BF*, and *Cultes, Mythes, et Religions*, 2 vols., Paris, 1905: and for the Matres and Matronæ, see Ihm, in Roscher, *s.v.*, and in *Jahrb. des Vereins von Alterthumsfreunden in Rheinlande*, 1887, No. 83; Daremberg-Saglio, *Dict. Ant. grec. et rom.*, *s.v.*; Vallentin, *Le culte des matres*, Paris, 1880.

V. *IRISH DIVINITIES.*—1. **The Mythological cycle.**—Of the three groups of tales known as the Mythological, the Cúchulainn, and the Feinn cycles, the first alone concerns us here. Its contents, found mainly in the 11th and 12th cent. *LU* and *LL*, are based on mythic tales of a far earlier date. Some of its personages are met with in the other cycles, in Scots Gaelic tales, and in those of Wales and Man. These personages are the Tuatha Dé Danann, Fomorians, Firbolgs, and Milesians, of whom the first two are certainly Divine groups. The mythic tales relate the strife of powers of growth with those of blight, of aboriginal with incoming Celtic gods, or tell of Divine amours with mortals, or of human descent from the gods. Christianity viewed the gods as demons, but at a later time the myths were euhemerized by early mediæval chroniclers and set forth as historic facts. Gods became kings and warriors. Divine and human groups became successive colonists of Ireland, while each group was affiliated to the Hebrew patriarchs. But the data upon which the chroniclers had to work were conflicting, and on the whole they left them so.

According to the annalists, the first group of personages who came to Ireland were Noah's grand-daughter, Cessair, with 50 women and 3 men, all of whom were destroyed by a flood save Finntain. They were followed by Partholan and his company, who found the Fomorians settled there, but were destroyed by a plague, Tuan mac Caraill alone surviving. Finntain and Tuan are annalistic duplicates, who are described as surviving for centuries, the latter through a series of transformations, the idea of which was purely pagan. Next came the Nemedians, who had to pay to the Fomorians two-thirds of their children and of the year's corn and milk on Samhain eve (1st Nov.). One version of the history of the Nemedians makes some of their survivors go to Scotland or Man (the Britons), others to Greece (the Firbolgs), others to the north of Europe (the Tuatha Dé Danann). The Firbolgs, probably to be regarded as the aborigines of Ireland, returned thither. They were not attacked, like the other groups, by the Fomorians, who are spoken of as their gods. The Tuatha Dé Danann, on their arrival in Ireland, were attacked by the Fomorians. The earliest tradition knows of one battle only, in which Firbolgs and Fomorians were both overthrown (Cormac, *Glossary*, *s.v.* 'Nescoit'; *LU* 51), but this was later resolved into two. The first battle, fought at Magtured in Mayo, resulted in the defeat of the Firbolgs on Midsummer day. In this battle, Nuada, king of the Tuatha, lost his hand and had to resign his kingship, which was given to Bres, son of a Fomorian and a woman of the Tuatha Dé Danann. During his reign the Tuatha Dé Danann had to pay tribute and perform menial duties—perhaps a euhemerized version of a myth telling of the subjection of gods of growth and light to powers of death and blight. In seven years Nuada resumed his throne, and there followed on Samhain the second battle of Magtured in Sligo, which made the Tuatha Dé Danann lords of the land. Next came the Milesians, ancestors of the Irish, who defeated the Tuatha Dé Danann, the survivors of whom retired into the hills to become a kind of fairy race.

This chronological system, with its obvious reduplications, shows what the annalists made of existing or dimly remembered myths, legends, rites, and Divine genealogies. All this has been accepted as sober fact by Irish writers down to the present time. But the true nature of the whole is now better apprehended, and it is admitted that in Fomorians and Tuatha Dé Danann we have earlier gods never quite humanized. Fomorians are more or less monstrous—demons or giants rather than men, as the chroniclers admit; the Tuatha Dé Danann are clearly supernatural.

The Mythological cycle is far from representing all the pagan myths of Ireland; its illusory completeness is due to the chronological order in which it is arranged, and in which we see the Tuatha Dé Danann arriving and conquering the land, occupying it for a time, dispossessed by the Milesians, retiring into the hollow hills, and dividing these underground kingdoms among themselves. Fragments of other myths are found in the *Dindsenchas*; others exist as romantic tales, or are transferred to the *Lives* of saints, or are connected with historical or semi-historical personages; while others are found in the heroic cycles. But in whatever guise the Tuatha Dé Danann appear, they never quite lose their true Divine form; as men, as wizards, as fairies, they still reveal themselves as gods.

2. **The Fomorians.**—The Firbolgs, with whom are associated the Fir Galioin and Fir Domnann ('men of Domnu,' in whom some have seen a goddess of the deep [Ir. *domain*, 'deep'], or a god,

and whom Rhys considers, on slight grounds, to be akin to the *Dumnonii* of Devon and Cornwall [*HL* 597; d'Arbois, ii. 130]), are treated as slaves and held in contempt, and this is suggestive of their position as aborigines enslaved by the conquering Goidels. That the Fomorians were their gods or the gods of an aboriginal people is certain, since they are found in Ireland before the coming of Partholan.[1] Thus they would not originally be evil: that character, together with their Celtic names, would be given to them by the Celts. Some of them may have been gods of fertility, for the Fomorian Bres could cause kine to be always in milk, and produce a good harvest every year, and he knew the lucky days for ploughing, sowing, and reaping (Harl. MS, 5280; *RCel* xii. 105). Though the Fomorians were regarded as hurtful to agriculture, this was also said of the Tuatha Dé Danann after the Christianizing of Ireland, though they were gods of growth (*LL* 245, 2). They are also called, like the Tuatha Dé Danann, 'champions of the *síd*' (Harl. MS, 5280, § 41). Thus the 'tribute' offered to them may be a reminiscence of an actual cult of aboriginal gods, since it exactly resembles that of Cromm Cruaich, a Celtic earth-god. Aboriginal and Celtic gods of fertility differed little in personality and cult. The Celts regarded them as hostile and evil, as incoming conquerors so often regard the gods of a conquered race. They dread them and equate them with the evil powers known to them. The Celts did this, and made the Divine Fomorians lords of blight and winter, storm and death. This we gather from the fact that a sinister character is given to them in the texts and in folk-tradition, while they are actual opponents of the bright gods of the Celts. Thus the mythical battles between the two sets of gods became part of the dramatization of the conflict between growth and blight, summer and winter, light and darkness—the dualism which is found in all Nature religions. The sun was vanquished by cloud or storm, summer by winter, and vegetation perished. But the sun shone forth again, summer returned, vegetation re-appeared. All this was symbolic of strife between the Divine and demoniac beings behind these, and it was represented in ritual, since men thought they could aid magically or by rite and prayer the gods of growth. In this strife gods are wounded and slain, because the powers of growth suffer eclipse. But they revive, just as sun and vegetation re-appear. The Celts already possessed such a mythology and ritual, hence it was easy to equate the Fomorians with their own dark powers. If myth represented this as having happened once for all, as if some of the gods had actually perished, men knew that they still lived on, and the Nature drama or its ritual representation still proceeded. The priority of the Fomorians to the Tuatha Dé Danann would also be in accordance with the usual Celtic belief in the priority of darkness to light.

According to the annalists, the Fomorians are sea-demons or pirates, the name being derived from *muir*, 'sea,' or they are demons and giants (Hennessy, *Chron. Scot.*, 1866, p. 6; Girald. Camb. *Top. Hib.* iii. 2), descended, with the Goborcbind ('goat- *or* horse-heads,' *IT* i. 585) and Luchrupán ('little bodies *or* dwarfs'), etc., from Shem (*LU* 2*a*, 45). Rhys connects the name with Welsh *foawr*, 'giant,' and derives it from *fo*, 'under,' and *muir*, 'sea'—hence submarine beings (*HL* 591). MacBain regards them as personifications of the wild western sea (*Celt. Mag.* ix. 130). The Fomorians were certainly located in Tory Island, off Donegal; but this association with the sea may be due to a mere late folk-etymology, wrongly deriving the name from *muir*. The Celtic experience of the Lochlanners or Norsemen, with whom the Fomorians are associated (Harl. MS, 5280; *RCel* xii. 75), would aid the conception of them as sea-pirates. Stokes connects the syllable *-mor* with *-mare* in 'nightmare,' from **moro-*, and thinks of them as subterranean

[1] The possibility of the Fomorians being gods of a group of Celtic tribes at war with another group worshipping the gods called Tuatha Dé Danann should not be overlooked.

as well as submarine (*RCel* xii. 130; *US* 211).[1] MacBain points out that 'the *ó* of *mór*, if it is long (for it is rarely so marked),' is against both these derivations (*Gael. Dict.*, Inverness, 1896, p. 146). More probable is Zimmer's and d'Arbois' derivation from *fo* and a theme *morio*, from *mor*, 'great' (*RCel* xii. 476; d'Arbois, ii. 52). This agrees with the tradition which regarded them as giants.

In spite of the hostility of the Fomorians to the Tuatha Dé Danann, they intermarry or trace descent from each other. Similar relationships are found among the hostile groups of other mythologies. Thus, though in this Irish instance the relationships may have been partly due to the euhemerists, they are also the reflexion, on the Divine stage, of what takes place in primitive society. Hostile peoples intermarry, or the women of one group are captured and made mothers by men of the other group.

Only the more prominent Fomorians need be enumerated. Their functions are even more completely hidden than those of the Tuatha Dé Danann. **Balor** had one eye, the glance of which destroyed whomsoever it fell on, but its eyelid required four men to raise it. He is probably a personification of the evil eye, much believed in by the Celts. **Elatha**, father of Bres and Ogma, may have been an aboriginal god of knowledge like the Celtic Ogma, since his name has some reference to wisdom, and is used as an appellative in the sense of science, art, and literary composition (*IT* i. 521; Rhys, *HL* 275). Perhaps the fact of his son Bres being chosen king of the Tuatha Dé Danann reflects some myth of the occasional supremacy of darkness. Bres, as has been seen, may have been an aboriginal god of growth. His consort is Brig, the Celtic goddess of knowledge. Balor, Elatha, and **Indech** are described as kings of the Fomorians, the last named being son of **Dea Domnann**, a goddess (or god) of the deep, not necessarily the sea, as Rhys suggests (*HL* 597), but perhaps the deep in the sense of under-earth. If so, this goddess would be an Earth-mother of the aborigines. **Tethra**, whose wife resembles the Celtic war-goddess Badb (*LU* 50), is regarded by d'Arbois as lord of Elysium, or the world of the dead, whither, like Kronos, he retired after his defeat. D'Arbois also equates Bres and Balor with Kronos, making Tethra, Bres, and Balor one and the same god (d'Arbois, ii. 192, 198, 375). But the assumption that Greek and Irish mythologies run upon parallel lines is dangerous. These three gods are quite separate personalities. Tethra may have been an aboriginal war-divinity, but there is no real ground for regarding him as a lord of Elysium, which was far from being the world of the dead (see BLEST, ABODE OF [Celtic], § 5). **Nét**, grandfather of Balor and husband of Nemau, the war-goddess, was 'a battle-god of the heathen Gael' (Cormac, *s.v.* 'Neit'). A war-god Neton, equated with Mars, is mentioned on inscriptions in the territory of the Aquitani (Holder, ii. 738), and, like a Gaulish **Nantos*, may be the equivalent of Nét, who would then have been wrongly classed with the Fomorians. Elsewhere he is ranked among the Tuatha Dé Danann, though he is the ancestor of several Fomorians (*LL* 10, 1).

3. **The Tuatha Dé Danann.**—This collective name means 'the folk *or* the tribes of the goddess Danu' (Stokes, *RCel* xii. 129; Rhys, *HL* 89), or, as d'Arbois (ii. 145) renders it, 'folk of the god whose mother is called Danu.' Cognate forms are Fir Dea, Tuath Dé or Tuatha Dea, 'men or tribes of the goddess.' Three gods in particular—Brian, Iuchair, and Iucharbar—are called her children or 'the three gods of Danu' (Harl. MS, 5280, § 83), and they again give a title to the whole group *Fir tri nDea*, 'men of the three gods' (*ib.* § 60). In Welsh mythology their equivalents are the Children

[1] This derivation is now accepted by Rhys. See *Trans. 3rd Inter. Cong. Hist. of Rel.*, Oxford, 1908, ii. 214.

of Dôn. Though euhemerized as warriors, they appear also in the Mythological cycle as a people of magical powers who ultimately became a race of fairy enchanters. Conquered by the Milesians, they had retired into the *síd*. (This Milesian conquest of a race of gods must be regarded as the euhemerists' interpretation of the abandonment of the old paganism and its gods by the peoples of Ireland at the preaching of Christianity. The new faith, not the people, conquered the gods.)

In the Cúchulainn cycle they are supernatural beings or 'demons' assisting the persons of the saga, and in the Feinn saga all these characters are indifferently ascribed to them. The annalists regard them as men. Yet they have the marks of divinity—though they die, they are immortal, they can change their form, they have amours with mortals, they live in a Divine world, they influence human affairs. They are said to be 'unfading,' their 'duration is perennial' (O'Grady, ii. 203). The euhemerizing process which made them mortals was gradual. Eochaid na Flinn in the 10th cent. speaks of them as men, as demons, and as deities (*LL* 10, 2). In the 11th cent. the process was complete, as the poems of Flann Manistrech and Gilla Coemain and the Book of Invasions show (*LL* 9, 11, 127). As a result of this process we now hear of their sepulchres. They had become men, subject to mortality, though possibly the process was aided by pagan myths of slain gods. Yet their divinity was never forgotten, and in romantic tales and sagas, existing side by side with the documents of the euhemerists, they are still gods, while the view that they were a race of fairy-folk—*síd*-dwellers, *fir side*, 'men of the fairy-mounds,' or simply *side*, 'fairy-folk'—whom the pagans had worshipped (*IT* i. 14), is also found.

In Ir. *síd* is a fairy-hill—the hill itself, or the dwelling within it. Perhaps its primitive form was **sêdos*, from *sêd*, 'abode or seat.' Thurneysen suggests a connexion with a word = Lat. *sidus*, 'constellation,' or the dwelling of the gods. The *side* are the dwellers in the *síd*.

As *side* they are more than fairies, since they are called *dei terreni*, whom the pagans adored (*IT* i. 774), and St. Patrick and several bishops were taken by the daughters of Laegaire for *fir side*, viz. gods (*Trip. Life*, i. 99). The mounds themselves were regarded as sepulchres of the gods, but more frequently as marvellous underground palaces, where favoured mortals might go. In this they resemble the over-sea Elysium (BLEST, ABODE OF [Celtic]). But why were the Tuatha Dé Danann transformed into a fairy race? How far the fairy creed existed in pagan times is uncertain (see FAIRY), but perhaps a supernatural race, distinct from the Tuatha Dé Danann, was already supposed to dwell in mounds (Joyce, *SH* i. 252; O'Curry, *MS Mat.* 505). These might be aboriginal gods, since the Fomorians are also called 'champions of the *síd*' (Harl. MS, 5280, § 41). Such a belief would aid the growth of a legend that gods ousted by Christianity were now also in the *síd*. But the difference between this earlier *síd*-folk and the Tuatha Dé Danann may be more apparent than real. Some of the latter are called kings of the *side*, and even in 'Cúchulainn's Sickbed,' where the *síd*-folk are prominent, Manannan, one of the gods, is the husband of one of them, and their island is called by the name of the Celtic Elysium, *Mag Mell*, as it is in the story of Connla (*IT* i. 199; Windisch, *Ir. Gram.* p. 118). Mider, called one of the *side*, is connected with the Tuatha Dé Danann, and his *síd* is like Elysium (O'Curry, *MCAI* ii. 71). The belief that the gods had retired within hills would be aided by the Celtic cult of gods on mounds or hills, *e.g.* the Puy de Dôme, after which a god sometimes took his name, like Cenn Cruaich, 'Head of the Mound.' Churches were afterwards built on such mounds (Shore, *JAI* xx. 9). Such gods would be regarded as still haunting the mounds when the cult had ceased. St. Columba prays against 'this host [*i.e.* of gods] around the cairn that reigneth' (Keating, p. 434). The belief may also be reminiscent of the dwelling of earth- and fertility-divinities beneath the earth in a Divine land whence men had come and whither they returned (§ XVI.). Some of the gods, however, associated with the Island Elysium still retained their place there in tradition.

The association of gods with burial-mounds is not so clear. But early myths of slain and buried gods, the possible cult of gods on tumuli as well as on hills, and the belief that the dead rejoined the gods of growth beneath the earth would all aid this belief. Fairies are also confused with ghosts, and live in burial-mounds, and, when the gods came to be looked on as fairies, they would be associated with such mounds. And, when euhemerization made them dead heroes, conspicuous mounds of the forgotten dead would be called their burial places.

The phrase *dée ocus andée* is used by Tuan mac Caraill of the Tuatha Dé Danann, and is said by him to mean 'poets and husbandmen' (*LU* 16, 2). In the *Cóir Anmann* (*IT* iii. 355) this explanation is given, but there the phrase occurs in a formula of blessing—'the blessing of gods and not-gods.' The author of the *Cóir* seems to realize that it has this meaning, for he adds, 'These were their gods, the magicians, and their non-gods, the husbandmen.' Perhaps the phrase may refer to the position of priest-kings or magicians as men-gods. Cf. the phrase in a Welsh poem, *Teulu Oeth ac Anoeth*, which Rhys renders 'Household of Power and Not-power' (*CFL* ii. 620); but the meaning is obscure. Cf. Loth, i. 197, for *Caer Oeth ac Anoeth*. Rhys compares Skr. *deva* and *adeva* (*HL* 581).

4. Dagda, an early god of the group, is said to be so called because he can do more than all the gods—'It is thou art the *good hand*' (*Dag-dae* [Harl. MS, 5280, § 81, *RCel* xii. 83]). The *Coir Anmann* (*IT* iii. 355) explains Dagda as 'fire (*daig*) of god' (*dia*). But the true derivation is from **dago-devos*, 'good god,' though Stokes regards it as a participial formation connected with *dagh*, whence *daghdu*, 'cunning' (Cormac, *Gloss.* p. 23; *RCel* vi. 369). Other names of Dagda are *Cera* (perhaps cognate with Lat. *cerus*, 'creator'), *Ruadrofhessa*, 'lord of great knowledge,' for 'he had the perfection of heathen science,' and *Eochaid Ollathair*, 'great father,' while he is called 'a beautiful god' and 'the principal god of the pagans' (Cormac, pp. 47, 144; *IT* iii. 355, 357; d'Arbois, i. 202). After the battle of Magtured he divides the *síd* among the gods; but his son Oengus, having been omitted, ousts his father and reigns in his *síd* (*LL* 246*a*). In a later version, Bodb Dearg divides the *síd*, and Oengus drives out his foster-father Elcmar (*Ir. MSS Series*, i. 46). The myth of Dagda's disinheriting may be one formed to explain the growing prominence of the younger god's cult. Rhys makes Dagda an atmospheric god (*HL* 644); MacBain sees in him a sky-god (*Celt. Mag.* ix. 169). But more likely he is an earth or agricultural god, since he has power over corn and milk, and agrees to prevent the destruction of these by the gods (*LL* 245*b*), while he is called 'the god of the earth' 'because of the greatness of his power' (*IT* iii. 355). Dagda's cauldron which never lacked food to satisfy all, his swine (one living, one always ready for cooking), and his trees always laden with fruit also suggest plenty and fertility. They are in his *síd* where none ever tasted death (*LL* 246, 1). He is thus ruler of a Divine land—the under world in its primitive aspect of the place of gods of fertility. Thus he need not be equated with Kronos, who, disinherited by Zeus, went to reign over Elysium (Rhys, *HL* 146), for he is ruler of the *síd* before his disinheriting. He has a large club or fork, and d'Arbois (v. 427, 448) suggests an equivalence with the Gaulish god with the hammer. This god, if, as is likely, he was a Celtic Dispater, was an earth or under-earth god of fertility.

If Dagda was a god of agriculture, he may be a local form of the god whose image was called *Cenn* or *Cromm Cruaich* ('Head *or* Crooked One of the Mound,' Rhys, *HL* 201; 'Bloody Head *or* Crescent' [from *cru*, 'blood'], d'Arbois, ii. 105). Vallancey, citing a lost MS (*Coll. de Reb. Hib.* 1786, iv. 495), says, 'Crom-cocha was a name of the Dagda,' and that a motto at Tara read, 'Let the altar ever blaze to Dagda.' Now the Irish offered a third of their children at Samhain to Cenn Cruaich to obtain corn and milk—the things over which Dagda had power (*LL* 213, 2; *RCel* xvi. 35); and the violent prostrations of the worshippers one Samhain eve caused three-fourths of them to perish—perhaps a reminiscence of an orgiastic cult. Such a god was a god of fertility, the blood of the victims was poured on his image, and their flesh may have been buried in the fields to promote fertility. Hence they may have been regarded as representatives of the god, though their number is exaggerated, or a number of sacrificial victims may have taken the place of such an earlier Divine slain victim.

For grotesque myths about Dagda, see *RCel* xii. 85; *LU* 94. For some stories of Crom Dubh (who may be Cromm Cruaich) in which the fairies (*i.e.* the old gods) refuse to help in the processes of agriculture because they are not to go to Paradise, or, in other words, because their worshippers have become Christians, see O'Curry, *MS Mat.* p. 632; *RCel* iv. 175.

Oengus, whose names *Mac Ind Oc*, 'son of the young ones' (Dagda and Boann), and *In Mac Oc*, 'the young son,' and the myth of his disinheriting Dagda, support the idea that his cult superseded that of an older god, would then be affiliated to that god, as was done in similar cases in Babylon. He may thus have been the god of a tribe assuming supremacy, unless Dagda was an aboriginal god whose cult the Celts adopted, giving that of their earth-god Oengus a higher place. His superiority to Dagda is seen in the myth where he tells him how to escape the Fomorian slavery (Harl. MS, 5280, § 26; *RCel* xii. 65). He is often regarded as a Celtic Eros, but more likely he was a god of growth who occasionally suffered eclipse. Hence, perhaps, his absence from the battle of Magtured. The story of Oengus and Etain has been influenced by *Märchen* formulæ. Finding her separated from her consort Mider through his jealous other wife, Fuamnach, Oengus placed her in a glass *grianan* filled with flowers, the perfume of which sustained her. He carried it about with him till Fuamnach caused her removal from it. Changed to insect shape, she was swallowed by the wife of king Etain and re-born as a mortal (*LL* ii. 3; BLEST, ABODE OF [Celtic], § **2** (*c*)).

Rhys, *HL* i. 146, makes this a sun- and dawn-myth, the *grianan* being the expanse of heaven. But there is no evidence that Oengus was a sun-god; the dawn does not grow stronger with the sun's influence, as Etain did through Oengus's care, and the *grianan* is the equivalent of various objects in tales of the Cinderella type, in which the heroine is hidden. The tale reveals nothing of Etain's functions as a goddess. Other *Märchen* formulæ occur in the story of Dagda seeking the help of Ailill and Medb, king and queen of Connaught, to discover the girl of whom Oengus dreamt (Egerton MS, *RCel* iii. 342). But it shows that gods could seek help from mortals. For variants of the story of Etain, see Stirn, *ZCP* v., and Nutt, *RCel* xxvii. 339.

Oengus is the fosterer of Diarmaid in the Feinn cycle (*Trans. Oss. Soc.* iii.). With Mider, Badb, and Morrigu, he expels the Fomorians when they destroy the corn, milk, fruit, etc., of the Tuatha Dé Danann (*RCel* i. 41). This may point to his being a god of growth and fertility.

Nuada *Argetlam*, 'of the silver hand,' is so called because his hand, cut off at Magtured, was replaced by one of silver. The myth may have arisen from incidents of actual warfare, from the fact that an Irish king must have no blemish, or from images being sometimes maimed or made with a kind of artificial limb. The origin of this last custom being forgotten, explanatory myths accounted for it (*FL* viii. 341). Rhys sees in Nuada a Celtic Zeus (*HL* 121). In any case he is a god of light and growth who suffers in conflict with dark divinities. His equivalent in Welsh myth is *Llûd Llaw Ereint*, or 'silver-handed,' the deliverer of his people from various scourges. The story of the yearly fight on 1st May between Gwyn and Gwythur for Llûd's daughter Kreiddylad (Guest, *Mabinog.* ii. 305) is explained by Rhys by the theory that she is a kind of Persephone wedded alternately to light and darkness (*HL* 563). But the story may rather be explanatory of ritual battles between summer and winter, intended to assist the powers of growth in their struggle with those of blight, more especially as Kreiddylad is the daughter of a god of growth (for such battles, see Train, *Isle of Man*, Douglas, 1845, ii. 118; *GB*[2] ii. 99; Grimm, *Teut. Myth.* ii. 775). Possibly the tales of the battles of Magtured may have arisen in the same way. Traces of a cult of a god Nodens (=Nuada) in Romano-British times have been found at Lydney in Gloucester, and some of the symbols suggest that Nodens was a god of the waters. But this is uncertain (see Holder, *s.v.* 'Nodens'; Bathurst, *Roman Antiq. at Lydney Park*, London, 1879; Rhys, *AL* 122 ff.; Cook, *FL* xvii. 30). Nuada's name may be cognate with words meaning 'growth,' 'harvest,' 'possession' (Stokes, *US* 194), and this supports the view here taken of his functions. The Nudd Hael, or 'the generous,' of the *Triads* (Loth, ii. 235, 296), who possessed 21,000 milch kine, is perhaps a euhemerized form of this god; Nuada may have had various human incarnations (see § VIII.).

Manannan is son of Ler, or the sea—a god of whom we hear only in the story of 'The Children of Ler,' and whose Brythonic equivalent is *Llyr* (§ VI.). Four Manannans are known to Irish story, but they are probably all euhemerized variants of this god. His position as a sea-god is seen from his riding or driving in his chariot over the waves, in his epithet 'horseman of the crested sea,' and in the fact that his 'horses in a sea-storm' are the waves (Harl. MS, 5280, § 148), while he is actually identified with a wave (Bodley *Dindsenchas*, No. 10). Perhaps, as god of the sea, he was readily regarded as lord of the Island Elysium. Manannan is still remembered in the Isle of Man, which may owe its name to him, and which, as the Isle of Falga, was regarded by the Goidels as Elysium. In a myth he is elected king of the Tuatha Dé Danann. With Bodb Dearg he makes the gods invisible and immortal and gives them magic food, while magical things belong to him—his armour and sword worn by Lug, his horse and canoe, his swine, etc. Some of these are borrowed from *Märchen* formulæ; others are the natural property of a god who was a great magician, though the mythological school has interpreted them after its own fashion. (For Manannan, see, further, BLEST, ABODE OF [Celtic], §§ **2**, **8**; and for his Brythonic equivalent *Manawyddan*, see below, § VI.).

In Christian times a legend grew up round the historic 7th cent. king Mongan, said to be a re-birth of Fenn and son of Manannan (*LU* 133). In Irish and Welsh hagiology, SS. Barri and Scuithine have inherited some of Manannan's mythical traits, or may themselves represent local sea-gods (Meyer, *Trans. Soc. Cym.*, 1895–96, p. 78).

Lug is associated with Manannan, from whose Land of Promise he comes to assist the Tuatha Dé Danann against the Fomorians. 'His face shone like the sun on a summer day.' Single-handed he defeated the Fomorians and forced Bres to forego his tribute (Joyce, *OCR* 37). But in another version it is as 'the man of every art' (*samildánach*) that he appears before the gods, showing himself superior to the gods of various crafts, and taking part with them in the defeat of the Fomorians (Harl. MS, 5280; *RCel* xii. 75). Lug may be equated with the Gallo-Roman Mercury, since

samildánach, 'possessing many arts,' is the equivalent of 'inventor of all arts' applied by Cæsar (vi. 17) to that god (d'Arbois, vi. 116). Place and personal names point to the cult of a god Lugus in Gaul; and, though no dedication has been discovered, there are inscriptions of Mercury at Lugudunum Convenarum (*RCel* vii. 400). The *Lugoves* are commemorated in inscriptions from Spain and Switzerland—in the former, at Uxama, by shoemakers—and Rhys recalls the story of Lleu (whom he equates with Lug) disguising himself as a shoemaker (*HL* 425; Holder, *s.v.* 'Lugus,' 'Lugudunum,' etc.). The existence of the Lugoves (like the Junones) points to the multiplication of the personality of the god, like that of other Irish deities (but see Gaidoz, *RCel* vi. 489). Lug's superiority in various crafts shows that originally he was a culture-god, as well as a mighty hero—the meaning given to his name by O'Davoren (Stokes, *TIG* 103). His high place among the gods is indicated in Nuada's renunciation of his throne to him before Magtured, and in his long reign after Nuada's death in the annalistic scheme (Harl. MS, 5280, § 74; *Arch. Rev.* i. 231; *LL* 9, 2). He is made father and helper of Cúchulainn, who is his son or perhaps a re-birth of himself. The assembly at Lugudunum on 1st August was probably in honour of Lugus, as was the Irish festival Lughnasadh on the same date. Craftsmen brought their wares to sell at this feast of the god of crafts, but it was more essentially a harvest-feast (see FESTIVALS [Celtic] and § XIII. below). Certain traits in Lug's mythology give support to Rhys's contention that he was a solar god, though his equation of Lug and the Welsh Lleu, and the meaning of 'light' assigned to both names by him, are doubtful (*HL* 409; see Loth, *RCel* x. 490). Elsewhere solar gods are also culture-heroes, but Lug's name is never associated with the more strictly solar feasts of Beltane and Midsummer.

More prominent as a culture-god is **Ogma**, master of poetry and inventor of ogham writing, said to have been called after him (O'Donovan, *Grammar*, Dublin, 1845, p. xlvii). Probably his name is derived from a word signifying 'speech' or 'writing,' and the connexion with 'ogham' may be a folk-etymology. He is the champion of the gods—perhaps because of the primitive custom of rousing the warriors' emotion by eloquent speeches before a battle. After the fight at Magtured he captures Tethra's sword, goes on the quest for Dagda's harp, and is given a *síd* by Dagda after the Milesian invasion (Harl. MS, 5280, §§ 59, 162–3). His counterpart in Gaul is *Ogmios*, a Herakles and a god of eloquence with a 'smiling face,' according to Lucian (*Herakles*)—a phrase which is cognate with the Irish appellative of Ogma, *grianainech*, 'of the smiling countenance.' His high position is due to the value set on bardic eloquence by the Celts, and to him was doubtless ascribed its origin and that of poetry. Ogma was the son of the goddess Brig, whose functions were like his own, and whom he never completely eclipsed.

Other gods connected with various departments of knowledge were worshipped. **Díancecht** ('swift in power'?) was a god of medicine and, at the battle of Magtured, presided over a 'spring of health' in which the mortally wounded were healed (Harl. MS, 5280, §§ 33, 35, 123). He is thus probably cognate with such Gallo-British gods as Grannos, Borvo, etc. His powers were not forgotten in Christian times—an 8th cent. MS at St. Gall contains a charm invoking his name and power (Stokes, *TIG* p. xxxiv; for other myths about Díancecht, cf. *RCel* xii. 67). **Goibniu** is an eponymous god of smiths (Ir. *goba*, 'smith'), and, like smiths and metal-workers everywhere, he had a reputation for magic, his skill being the subject of a healing charm in the St. Gall MS (Zimmer, *Gloss. Hib.*, 1881, p. 270; cf. St. Patrick's prayer against the 'spells of smiths,' *IT* i. 56). Goibniu made spears for the gods, prepared their feasts, and his ale preserved their immortality (Harl. MS, 5280, § 97; O'Curry in *Atlantis*, London, 1858–70, iii. [1860] 389). **Credne**, eponymous god of braziers (Ir. *cerd*, 'artificer'), and **Luchtine**, god of carpenters, are found shaping magical weapons for the gods at Magtured (Harl. MS, 5280, §§ 11, 100, 122).

Brian, Iuchair, and **Iucharbar** are called *tri dee Donand*, 'the three gods (sons) of Danu' (*LL* 30*b*, 38, cf. 10*a*), or *tri dee danu*, 'the three gods of knowledge' (*dán*)—the latter perhaps a folk-etymology associating *dán* with *Danu*. Various attributes are personified as their descendants, Wisdom being the son of all three (*RCel* xxvi. 13; *LL* 187, 3). Though some of these, especially Wisdom (*Ecne*), may have been actual gods, it is more likely that the personification is due to the subtleties of bardic science, of which other examples occur. The fact that Ecne has three brothers for fathers is paralleled by other Irish instances, and may be a reminiscence of polyandry.

D'Arbois (ii. 373) suggests that Iuchair and Iucharbar are duplicates of Brian, and that three kings of the Tuatha Dé Danann reigning when the Milesians invaded Ireland—MacCuill, MacCecht, and MacGrainne—also grandsons of Dagda, are triplicates of one god and identical with Brian and his brothers. While his reasoning is ingenious, we must not lay too much stress on the annalistic genealogies of the gods. Each group of three may represent similar local gods, who at a later time were associated as brothers. Their separate personality is hinted at in the fact that the Tuatha Dé Danann are called after them *Fir trin Dea*, 'men of the three gods' (Harl. MS, 5280, § 60), and their supremacy is seen in the fact that Dagda, Lug, and Ogma go to consult them (*ib.* § 83).

Brian and his brothers (said to be also sons of Brig, the equivalent of Danu, *LL* 149*a*) slew the god Cian, and were themselves slain by Lug (*LL* 11); and on this myth was perhaps founded the story of 'The Children of Tuirenn,' in which they perish through their exertions in paying the *éric* fine demanded by Lug (*Atlantis*, iv. 159). The tale has no serious mythical significance.

5. An examination of the position of the goddesses is important for the view here taken of Celtic religion. **Danu** (gen. *Danann*) is called 'mother of the gods' (*LL* 10*b*); and this is probably her true position, though the genealogists made her a daughter of Dagda or of Delbaeth. She may be the goddess whom Cormac (*Gloss.* p. 4) calls **Anu** and describes as 'mater deorum hibernensium,' deriving her name from *ana*, 'plenty' (*(*p*)*an*, 'to nourish,' cf. *panis*, Stokes, *US* 12). The *Cóir Anmann* (*IT* iii. 289) calls her 'a goddess of prosperity.' The Paps of Anu in Kerry were called after her. If Danu and Anu are identical, the former was probably a goddess of fertility, an Earth-mother, from whom the gods might be said to have descended. She would, as an Earth-mother, be associated with the under world, as was Demeter (called 'Mother of the Dead'), since the fruits of the earth spring from beneath the surface, and are the gift of the under world whence man had come. As the cult of the fertile earth was usually orgiastic, she would have periodical human victims, perhaps her representatives. A reminiscence of this may be found in the Leicestershire folk-belief in 'Black Annis,' who devoured human victims and dwelt in a cave in the Dane Hills, like the Black Ceres of Phigalia (*Leic. County Folk-lore*, London, 1895, p. 4). The identification of Anu with Annis is not certain. Danu as a goddess of plenty associated with the under world may be compared with Plutus, confused with Ploutos, god of riches. In Celtic belief, the gifts of civilization and prosperity in general came from the under world (see BLEST, ABODE OF [Celtic], § 7). Rhys finds the name Anu in the dat. *Anoniredi* ('chariot

of Anu'?) occurring in an inscription from Vaison (Vaucluse [Holder, *s.v.*]). Goddesses of fertility were sometimes drawn through the fields in a vehicle (see FESTIVALS [Celtic]; Grimm, *Teut. Myth.* 251 ff.). Cormac (*Gloss.* 17) also refers to **Buanann** as mother and nurse of heroes, perhaps a goddess whom heroes worshipped. Rhys finds her name in the Continental place-name *Bononia* and its later derivatives (*Trans. 3rd Inter. Cong. Hist. of Rel.*, Oxford, 1908, ii. 213).

Danu is identified with Brigit, a daughter of Dagda and mother of Brian, Iuchair, and Iucharbar; but the identification may be due to the fact that Brigit was a goddess of *dán*, 'knowledge.' She is a goddess of poetry, revered by poets, and, according to Cormac (p. 23), had two sisters of the same name, goddesses of medicine and smith-work. These may be mere duplicates or local forms of Brigit, who, as an early culture-goddess, is the equivalent of the Gallo-Roman Minerva, inventor of manufactures and the arts (Cæsar, vi. 17). Her name on Gaulish and British inscriptions is Brigindo, Brigantia, Brigan, and Brig (Orelli, 1431; Holder, i. 534). Some of these occur in the territory of the Brigantes, whose eponymous goddess she may have been. Her cult and ritual passed over in part to that of St. Brigit, whose shrine at Kildare, enclosed by a brushwood fence within which no male might enter, contained a sacred fire guarded nightly by 19 nuns in turn, and on the 20th by the saint herself (Gir. Camb., *Top. Hib.* ii. 34, 48). Stokes sees in this the ritual of a goddess of fire, of the hearth, and in the nuns successors of virgin priestesses (*TIG* 33). She may be equated with the British *Sul Minerva*, goddess of hot springs, in whose temple burned perpetual fires (Solinus, xxii. 10). The evidence of a folk-survival in the Western Isles, in which Bride (= Brigit) gives an omen of the harvest on Candlemas (*q.v.*), may point to her being a goddess of fertility (Martin, *Description of the W. Islands of Scotland*², London, 1716, p. 119). The Roman Vestals performed yearly rites for fertility, and Vesta was equated with Diana, goddess of fertility, at Nemi. Brigit may thus have embodied in herself the functions of a cult of fertility and of fire. But she appears mainly as a culture-goddess, worshipped at one time perhaps exclusively by women (cf. the tabued shrine), when most primitive lore was in their hands, or when the early Celts, like the early Semites, worshipped female spirits or divinities rather than male spirits and gods, who later took their place and absorbed their functions. To the end, however, Brigit retained her personality. Nor were her functions as goddess of poetry, medicine, and smith-work ever fully taken from her by Ogma, Díancecht, and Goibniu—a proof of her outstanding personality.

Though the Irish gods are warriors, and there are special war-gods, war-goddesses are more prominent, usually as a group of three—Morrigan ('great queen' [Rhys, *HL* 43]), Neman, and Macha. At times Badb takes the place of one of these, or is identical with Morrigan, or her name (like Morrigan's at times) is generic. *Badb* means 'a scald-crow,' under which form those goddesses appeared, probably from the presence of these birds near the slain. As *Badb-catha* ('battle-Badb'), she is the equivalent of *-athubodvæ* or *Cathubodvæ* of an inscription from Haute-Savoie; and this, with names like *Boduogenos*, shows that a goddess Bodua was known to the Gauls (Holder, i. 841; *CIL* vii. 1292; Cæsar, ii. 23). The battle-crow is associated with Tethra the Fomorian (*LU* 50*a*), but Badb was consort of Nét (see above). Elsewhere Neman is Nét's consort (Cormac, p. 122), and she may be the Nemetona, consort of Mars, of inscriptions, *e.g.* at Bath (Holder, ii. 714). To Macha were dedicated the heads of slain enemies—'Macha's mast' (Stokes, *TIG* xxxv.); and she is perhaps the Macha of the Cúchulainn saga, from whose ill-treatment resulted the 'debility' of the Ultonians. Morrigan (the *mor-* of whose name Stokes connects with *mor-* in 'Fomorian' and with *-mare* in 'nightmare,' explaining her name as 'nightmare queen' [*US* 211; *RCel* xii. 128]) works great harm at Magtured, and proclaims the victory to the hills, rivers, and fairy hosts, uttering a prophecy of evil to come. She is prominent in the Cúchulainn saga, hostile to the hero because he rejects her love, yet aiding the hosts of Ulster and the Brown Bull, and later trying to prevent the hero's death. D'Arbois identifies the three birds on the *Tarvos Trigaranos* monument of Paris with Morrigan in her threefold manifestation as a bird (*Les Celtes*, 64; *RCel* xix. 246). The prominent position of the war-goddesses must be connected with the fact that women went out to war, and that many prominent women in the saga—Scathach, Medb, Aife—are warriors like the British Boudicca (for female warriors—*bangaisgedaig*, *banfeinnidi*, etc.—see Meyer, *Cath Finntrága*, Oxford, 1885, p. 76 f.; Stokes, *RCel* xxi. 396). But they may once have been goddesses of fertility, whose functions changed with the growing warlike character of the Celts. Their threefold character suggests the three *Matres*, goddesses of fertility, and perhaps the change to a more direful character is hinted at in the Romano-British inscription at Benwell to the *Lamiis tribus* (*CIL* vii. 507), since Morrigan's name is glossed *lamia* (Stokes, *US* 211). She is identified with Anu, and is mistress of the Earth-god Dagda, while, with Badb, she expels the Fomorians who were destroying the agricultural produce of Ireland.

Badb, whose name came to mean 'witch,' is sometimes identified with the 'washer of the ford,' whose presence indicates death to him whose armour or garments she seems to cleanse (*RCel* xxi. 157, 315).

Other goddesses occur as consorts of gods; but, in later folk-belief, fairy-queens, like Cleena, ruling over distinct territories, or witches, like Vera or Bera, may be goddesses of the pagan period. The three *Matres*, so popular among the Continental Celts, do not appear by name in Ireland; but the triplication of Brigit and Morrigan, the threefold names of Dagda's wife, and the fact that Anu, Danu, and Buanann are called 'mothers' of gods or heroes, may suggest that such group-goddesses were known. Three supernatural women, occasionally malevolent, occur in later texts and in folk-belief (E. Hull, p. 186; Meyer, *Cath Finntrága*, pp. 6, 13). The *Matres* were goddesses of fertility, who represent earlier Earth-mothers. Such goddesses are often goddesses of love, and the prominence given to the goddesses among the *side*, and the fact that they are often called *Béfind*, 'White Women,' like the three fairies who elsewhere represent the *Matres*, and that they freely offer themselves to mortals, may connect them with this group of goddesses.

6. While our knowledge of the Tuatha Dé Danann is based on a series of mythic tales, etc., that of the gods of the Continental Celts, apart from a few notices in classical authors or elsewhere, comes from inscriptions. But, as far as can be judged, though the names of the divinities in the two groups seldom coincide, their functions must have been much alike, and their origins certainly the same. The Tuatha Dé Danann were Nature-divinities of light, growth, and agriculture—their symbols and possessions suggestive of fertility. They were also divinities of culture, of crafts, and of war. It is extremely probable that there were many other gods in Ireland besides those mentioned here, and that the latter were not worshipped all

over Ireland. Generally speaking, in Gaul there were many local gods with similar functions, but with different names. The same phenomenon doubtless occurred in Ireland. Perhaps the different names given to Manannan, Dagda, and others were simply local names of similar gods, one of whom assumed prominence and attracted to himself the names and myths of the others. So, too, the identity of Brigit and Danu might be explained thus. We read also, in the texts of gods of territories, of the 'god of Connaught,' or the 'god of Ulster,' and these were apparently local divinities; or of the 'god (or goddess) of Druidism'—perhaps a divinity worshipped by Druids exclusively, and thus another example of a god of a special class of men (Leahy, i. 50, 52, 138; *LU* 12*b*; *LL* 347*c*). The origin of the divinities may be sought in the primitive cult of the Earth personified as a fertile being, and in that of vegetation- and corn-spirits and the vague spirits of Nature in all its aspects. Some of these were still worshipped after the more personal divinities had been evolved. Though animal-worship was certainly not lacking in Ireland, divinities who are anthropomorphic forms of earlier animal-gods are less in evidence than on the Continent. The divinities of culture, of crafts, of war, and of departments of Nature must have slowly assumed the definite personality assigned them in Irish religion. But probably they already possessed that to a greater or less extent before the Goidels brought their cult to Ireland. The evidence of Irish mythology, as far as concerns goddesses, points to what has already been said regarding the evolution of Celtic religion. The prominence of these goddesses, their position as mothers of Divine groups, and their functions with respect to fertility, culture, and war cannot be overlooked, and, taken in connexion with the evidence which will be furnished in the section on 'Totemism,' p. 297 (cf. FESTIVALS [Celtic]), seem to point to their priority in time and in importance to the gods.

VI. *BRITISH DIVINITIES.*—Only the vaguest conception of the functions of the divinities of the Brythons can be obtained from the sources already indicated (§ I.). The gods have been euhemerized, the incidents in which they figure are *Märchen* episodes, or, where they are the *débris* of old myths, they are treated in a romantic spirit. The *Mabinogion* and similar tales were probably composed by welding local legends, long after the gods had ceased to be worshipped. The *Mabinogion* reveals three Divine groups—the Pwyll, Pryderi, Rhiannon group, the Llyr group, and the Dôn group.

1. The Mabinogi of Pwyll.—This is divided into three sections. (1) **Pwyll** exchanges personalities with **Arawn**, king of Annwfn (Elysium), for a year, and conquers his rival Hafgan. For this he is called *Penn Annwfn* ('Head of Annwfn'). Thus he may be regarded as lord of Elysium himself in local belief, though in the story he figures as king of the territory of Dyved. (2) There follows the incident of Pwyll's meeting with **Rhiannon**, daughter of Heveidd Hen or the 'Ancient'—perhaps some old god. The whole incident, with that of the marriage of Pwyll, regarded as a mortal, to Rhiannon, a supernatural being, is simply the *Märchen* formula of the Fairy Bride. (3) This section, with the incidents of the disappearance of Rhiannon's child, her consequent degradation, and the child's recovery, closely resembles the *Märchen* formula of the Abandoned Wife. The child is called **Pryderi**, and he reappears in the *Mabinogion* of Branwen and of Manawyddan, bestowing on the latter his mother Rhiannon. In the *Mabinogi* of Math he is king of Dyved, and is robbed of swine given to him by Arawn. But in a *Triad* these swine are brought from Annwfn by Pwyll and given to Pendaran, Pryderi's foster-father, Pryderi acting as their herd (Loth, ii. 247). In Celtic belief, animals useful to man come from the gods' land, and are given to men by the gods or stolen from them (BLEST, ABODE OF [Celtic], § 7). Pwyll thus appears as one bringing such animals from the gods' land. But, since he and Pryderi are undoubtedly old gods, and since Gwydion, a culture-hero, steals the swine from Pryderi, both were probably lords of the Other-world in the old mythology. This older myth is preserved in the *Taliesin* poems, which tell how Arthur stole the mystic cauldron of Penn Annwfn (Pwyll), and how Gweir (Gwydion) was imprisoned in Caer Sidi (Annwfn), and entered it 'through the messenger of Pwyll and Pryderi' (Skene, i. 264). Elsewhere Caer Sidi is connected with Manawyddan and Pryderi—perhaps a local myth which made Manawyddan father of Pryderi (Skene, i. 276). Thus Pwyll and Pryderi are lords of Elysium, and may at one time have been gods of fertility. Rhiannon was an early Celtic goddess of great importance, as her name (= **Rigantona*, 'great queen') suggests. Anwyl (*ZCP* i. 288) supposes that a local myth may have made her the wife of Teyrnon (= **Tigernonos*, 'king'), who discovered her lost child, with the latter as their son. Nutt regards her as Pryderi's mother by Manawyddan, in the earlier form of the myth (*Bran*, ii. 17). A Rhiannon saga must be postulated, or there may have been more than one local Rigantona, fused later into the Rhiannon of the *Mabinogi*. Like other Celtic goddesses, she may have been associated with fertility.

2. The Llyr group.—This group is associated with the former, and seems to be opposed to the Dôn group. Its members are Llyr, his sons Bran and Manawyddan, their sister Branwen, and their half-brothers Nissyen and Evnissyen, sons of Llyr's wife Penardim, daughter of Beli, by a previous marriage. Their story is told in the *Mabinogion* of Branwen and of Manawyddan (see Nutt's criticism of the former, *FLR* v. 1 ff.).

Llyr is the equivalent of the Irish sea-god *Ler*, and is perhaps a compound of three Llyrs mentioned in Welsh literature (Loth, i. 298, ii. 243; Geoffrey of Monmouth, ii. 11). He is a sea-god, but is confused with Llûdd Llaw Ereint (= Ir. Nuada, and Nodens). Geoffrey's Llyr, father of Cordelia (Kreiddylad), becomes Llûdd, father of Kreiddylad, in *Kulhwch and Olwen* (Loth, i. 224), while Llûdd, one of the three notable prisoners of Prydein in *Kulhwch*, is replaced by Llyr in the *Triad* of these prisoners (cf. Loth, i. 265, ii. 215, 244). The suggestion has been made that Llyr and Llûdd (Nodens) were originally identical, just as in Irish texts Manannan is now called son of Ler, now son of Alloid (perhaps = Llûdd [Skene, i. 81; Rhys, *Academy*, 7th Jan. 1882]). But the confusion may be accidental, and it is doubtful whether Nodens was a sea-god.

Llyr's prison is said in a late *Triad* to have been that of Eurosswyd, the father of his stepsons. Perhaps his imprisonment was the result of his abduction of Eurosswyd's wife, but we do not hear of such an incident. Geoffrey (ii. 11–14) makes Llyr a king of Britain, and tells the story of his daughters, later immortalized by Shakespeare. He adds that he was buried at Caer Llyr (Leicester), in a vault built in honour of Janus. Hence Rhys (*AL* 131) regards Llyr as the equivalent of the Celtic Dispater, represented on monuments with more than one face, and as the lord of a dark underworld. But this is not substantiated, and there is no evidence that Llyr, a sea-god, was a god of a world of darkness. The Celtic Dispater was rather a god of the underearth conceived as the source of fertility—a bright world, not one of gloom.

Manawyddan is the equivalent of the Irish sea-god and lord of Elysium, Manannan; and the poet's words in the Black Book, 'deep was his counsel,' probably refer to his Divine traits (Skene, i. 262). The reference in the *Triads* to his being one of the three golden cordwainers recalls his practising

that and other crafts in the *Mabinogi*, as well as his superior skill, while his instructing Pryderi in these crafts might be paralleled by Manannan's position as patron of Diarmaid. He is associated with the Other-world in a *Taliesin* poem (see above), and it is possible that his position in the *Mabinogi* as a great craftsman and grower of corn may result from the idea that all culture came from the gods' land. If local myth regarded him and Rhiannon as a Divine pair with Pryderi as their son, this would give point to his deliverance of Rhiannon and Pryderi from their magic imprisonment as related in the *Mabinogi* (see Nutt, *Bran*, ii. 17, but cf. Anwyl, *ZCP* ii. 127), while Rhiannon's magical appearance to Pwyll would be paralleled by the similar appearances of goddesses from Elysium in Irish story, if she was associated with Manawyddan as lord of Elysium. Manawyddan is made one of Arthur's warriors in *Kulhwch*, and helps to capture the *Twrch Trwyth* (Loth, i. 208, 280), just as other local gods are later drawn into the heroic Arthur saga.

Bendegeit Vran, or 'Bran the Blessed'—a title probably derived from paganism—appears first as a huge being, realistically described; and these allusions to his great size may be an archaic method of signalizing his divinity. His second appearance in the *Mabinogi* is as the *Urdawl Ben*, or 'Noble Head,' entertaining its guardians and, when buried, protecting the country from invasion, until Arthur, relying on his own power, uncovered the head (*Triads* [Loth, ii. 217-19]; for obscure references to this *Mab.*, see *Book of Taliesin*, xiv. [Skene, i. 274]). Rhys regards Bran as a dark divinity, and equates him, as a huge being sitting on the rock at Harlech, with the Gaulish squatting god Cernunnos, and his head with the sculptured heads of the same god, while his wading across to Ireland signifies his crossing the dark waters to Hades (*HL* 90 ff.; and, for his Welsh equivalents to Bran, all regarded as 'dark' gods, see *AL*, ch. 11). Cernunnos, however, is a god of fertility (as his monuments show), of the bright underworld whence all things spring forth, and whither the dead pass to immortal bliss. There is nothing 'dark' in his character, as there would be in that of a god of darkness and blight; rather is he one of the lords of life. Nor is there any sinister or dark aspect in the presentation of Bran. Ireland in the *Mabinogi* need not mean Hades, since its occurrence there is probably due to the proximity of Anglesey, the locality of Branwen's legend, to its coast, and also to the interpretation of a mythico-historic connexion of Wales and Ireland. If Bran is a double of Cernunnos, he is a god of the fertile under world. But he may have been regarded locally as a lord of Elysium, as various incidents in the tale suggest. In presence of his head, time passes like a dream; feasting and merriment prevail, sorrow is forgotten; and these are characteristics of Elysium, while the tabued door, which, when opened, brings remembrance of sorrow, is also suggestive of Elysium tabus (see BLEST, ABODE OF [Celtic]). The mysterious Bran who fought on the side of the lord of Annwfn at the mythic battle of Goden, may have been the Bran of the *Mabinogi*, and another form of Arawn. The protection of the land by the buried head reflects actual custom and belief regarding the heads of bodies of dead warriors, or of the power of a Divine image or sculptured head (see § XIII. 2). In the *Mab.*, Bran is euhemerized as a king (cf. *Triads* [Loth, ii. 285], where he is one of the three founders and lawgivers of Prydein). In Geoffrey (iii. 1 ff.) he is probably Brennius, who quarrels with his brother Belinus about the crown, and, after their reconciliation, leads an army to Rome and conquers it. (In the Welsh version the brothers are called Bran and Beli.) Bran is here confused with Brennus, who led the Gauls in the sack of Rome. Belinus may have been suggested by the god Belenos and by Beli, father of Llûdd (see below). Geoffrey also speaks of the gate on the banks of the Thames, called 'Billingsgate' after Belinus, and of his ashes preserved in a tower on the gate. This may be a reminiscence of some local cult of Belenos at this spot. Bran was also transformed into a Christian saint, one of the three inspired kings of Prydein, who brought the faith to the Cymry, after having been hostage for his son Caradawc at Rome for seven years (*Triads* [Loth, ii. 284]). Caradawc was probably a war-god, confused with the historic Caractacus carried captive to Rome. Hence the latter was associated with Bran, whose epithet 'blessed' led to the supposition that he was a saint. Hence, too, Bran's family was looked upon as one of the three saintly families of Prydein, and Welsh saints were frequently held to be his descendants (*Triads* [Loth, ii. 257]; Rees, *Welsh Saints*, 1836, p. 77). Bran may be the equivalent of the Irish Brian discussed above, or, more probably, of a Bran, brother of Manannan, mentioned in Irish myth.

Branwen or **Bronwen**, 'white bosom,' as daughter of a sea-god, may also have been associated with the sea as 'the Venus of the northern sea' (Elton, p. 291)—a goddess of love (and therefore, probably, of fertility), if she is the Brangwaine who, in later romance, gives a love-potion to Tristram. As a goddess of fertility, the cauldron, symbol of a cult of fertility (see BLEST, ABODE OF [Celtic], § 6 (*f*)), which is only indirectly connected with her in the *Mabinogi*, may have been more prominently her property in an older myth. This cauldron originally came from a water-world, such as may have been the region with which she was associated—the Elysium under the waves.

3. The Dôn group.—This is met with mainly in the *Mabinogi* of Math, son of Mathonwy—a complex of several independent tales. Its personages are Gwydion, Gilvaethwy, Govannon, Arianrhod, and her children Dylan and Llew. But in *Kulhwch* another son of Dôn, Amaethon, is mentioned (Loth, i. 240).

Dôn, though regarded by some writers as male, is called Math's sister (Loth, i. 134), and is probably to be equated with Ir. *Danu*, mother of the Tuatha Dé Danann, while her children are in part the doubles of some of these. Dôn must thus have been a goddess of fertility and culture. She is called 'wise' in a *Taliesin* poem; in another her court is mentioned (Skene, i. 297, 350). In later folk-belief the constellation Cassiopeia was called her court (Guest, *Mab.* iii. 255). Dôn's consort is never mentioned, but in the *Triads* a woman called Arianrhod, perhaps Dôn's daughter, is daughter of Beli.

Assuming Beli to be Dôn's husband, Rhys (*HL* 90 ff.) equates him with the Irish Bile, ancestor of the Milesians, and regards him as lord of a dark underworld. Hence, also, connecting Dôn's name with words meaning 'death' or 'darkness,' he makes her a goddess of death. The Irish Bile is never associated with Danu, as this equation would require, nor is his kingdom of Spain necessarily the dark nether world (see BLEST, ABODE OF [Celtic], § 5). If Dôn, like most Celtic goddesses, was a local goddess of fertility, she was associated with life, not death, with the underearth as a region of plenty and light.

Math, or **Math Hen**, 'the Ancient' (Skene, i. 286), is lord of Gwyned, and probably an old local god of that region. In the *Triads* and poems, as well as in the *Mabinogi*, he appears chiefly as a mighty magician, teaching his magic to Gwydion (Loth, ii. 229, 257; Skene, i. 269, 281, 299). But his character is more than that of a magician. He is benevolent and just, punishing where wrong has been done, and showing kindness to the wronged. These traits may have been his as a god, or reflected upon him as exemplifying the Celtic

ideal kingly qualities (for Math as a Celtic Pluto, see Rhys, *Lects. on Welsh Phil.*, 1877, p. 414).

Gwydion is also a past-master of magic, especially in the arts of producing things by enchantment and shape-shifting, and these are also the subject of a *Taliesin* poem, while Taliesin refers to his enchantment by Gwydion (Skene, i. 296, 281). He is a supreme bard in the *Mabinogi*, and, if he is the Gweir who was imprisoned in the Otherworld and thus became a bard (Skene, i. 204), all this is significant in view of the probable derivation of his name from a root *vet* giving words meaning 'saying' or 'poetry,' with cognates like Ir. *fáith*, 'diviner,' 'prophet,' or 'poet,' Ger. *Wuth*, 'rage' (Rhys, *HL* 276). Gwydion, who receives his bardic art from the gods' land, is the ideal *fáith*, and the god of those who practised divination, prophecy, and poetry. Although in the *Mabinogi*, Pryderi, whose swine he steals, is a mortal, yet he is really a god, and these animals are stolen from him as such. Hence Gwydion is a culture-hero bringing gifts from the gods' land to men. The more primitive version is probably preserved in the poem where Gweir's raid is made on Caer Sidi (=Elysium); he is apparently unsuccessful, and is imprisoned. Perhaps, as one of the three cow-herds of Prydein (*Triads* [Loth, ii. 296]), he was also regarded as the bringer of cows to men. Possibly, too, he was the anthropomorphic form of an old swine-god, the animal being later associated with him. The swine is one of the forms into which Math transforms him, and the places at which he rests Pryderi's swine—Mochdrev, Mochnant (*moch*, 'swine')—may have been local centres of a swine-cult, while the references to the resting of the swine there would be an ætiological myth explaining why they were so called, after the cult had ceased. Gwydion's magic has a tricky, deceitful aspect, and a poem speaks of his vicious muse, though also 'in his life there was counsel' (Skene, i. 299, 531). His relation with his sister, inferred rather than expressed, is on a parallel with other incest incidents in Celtic story, for example, Arthur's with his sister Gwyar, and may reflect some early custom preserved in the royal house. In later folk-belief the Milky Way was called Caer Gwydion, and a story was told how he pursued Blodeuwedd along it (Morris, *Celt. Remains*, 1878, p. 231).

Rhys (*HL* 283 ff.) equates Gwydion and Odinn, and regards them as Celtic and Teutonic aspects of a hero common to the period of Celto-Teutonic unity. But it is doubtful whether all the alleged parallels can be maintained, or are more than might be looked for in the myths of any divinity.

In *Kulhwch*, among the tasks imposed on its hero is that of tilling a piece of ground so wild that none but **Amaethon**, son of Dôn, could till it, but 'he will not follow thee of his own accord, and thou canst not force him' (Loth, i. 240). Amaethon (Cym. *amaeth*, 'ploughman,' Gaul. *ambactos*, from **ambiaktos*, 'messenger,' 'servant') may have been a divinity associated with agriculture, perhaps an anthropomorphic corn-spirit. He appears also as a culture-hero who caught a roebuck and whelp belonging to Arawn, king of Annwfn (*Myv. Arch.* i. 167), or, in a *Triad*, a bitch, a roe, and a lapwing (Loth, ii. 259). The reference to the lapwing is obscure; but, as far as dog and deer are concerned, Amaethon brings them from the gods' land to men. Possibly they may have been representatives of the corn-spirit, and so connected with the god if he were a corn-divinity. Or they may have been worshipful animals, of which Amaethon became the anthropomorphic form, while they in turn became his symbols—a later myth telling how he had brought them from Annwfn.

Several of the incidents told of **Llew Llaw Gyffes** in the *Mabinogi* are little more than *Märchen* formulæ. But his transformation into an eagle may be a hint that he had once been a bird-divinity. His disguise as a shoemaker is referred to in a *Triad*, while another speaks of him as one of the three *ruddvoawc* whose footprints caused the herbage to wither for a year (Loth, ii. 250, 231). Like other gods, he was euhemerized, and his death must have been recounted in story, for the 'Verses of the Graves' refer to his sepulchre, and add 'he was a man who never gave justice (or truth?) to any one' (Skene, i. 314). This suggests that he had come to be regarded in an unpleasant light, unless 'truth' is a reference to his disguises.

Rhys (*HL* 408) regards 'Llew' as a mistake for 'Lleu,' which he connects with words meaning 'light.' He equates him with Ir. *Lug*, whose name he also takes to mean 'light,' and he makes both of them sun-gods. *Llaw Gyffes* he equates with Lug's epithet *lám-fada*, 'long hand,' giving it the same meaning, though the title is given to Llew in the *Mab.* because of his sureness of hand. Loth (*RCel* x. 490) considers that the change of *Llew* into *Lleu*, 'light,' is not convincing. There is nothing in Llew's story which points to his being a sun-god.

Rhys's further interpretation of Lug's birth from Ethnea, daughter of Balor, his nurture by Gavida (Goibniu) the smith, and his slaying of Balor, as paralleled by Llew's history, is not convincing. He equates Balor with Beli, but Llew does not slay his grandfather as does Lug, nor does Govannon the smith nurture Llew. Thus the equation (*HL* 319) is true only in the correspondence of Govannon to Gavida, while in an older version of the Irish story, Manannan, not Gavida, nurtures Lug. Other incidents—Llew's misfortune at the hands of Blodeuwedd's lover (the sun overcome by darkness) and Blodeuwedd's transformation by Gwydion into an owl, the bird of darkness (dawn becoming dusk or gloaming)—are thus interpreted in terms of sun-myths (*HL* 384). They are probably the *débris* of *Märchen* incidents, not true parts of Llew's mythology. Moreover, if Llew is a sun-god equivalent to Lug, why is he not associated with the August festival which in Wales corresponds to Lughnasadh in Ireland? Thus, whatever Llew's functions were, his character as a sun-god is not supported, unless the *Triad* reference to his scorching the herbage be regarded as the withering of vegetation by the sun's heat.

According to the *Mabinogi*, **Dylan**, as soon as he was born and baptized, rushed off to the sea, taking its nature. 'Hence he was called *Dylan Eil Ton* ("son of the wave"). Never wave broke under him.' His death at the hands of his uncle Govannon was lamented by the waves, which sought to avenge him, and his grave is 'where the wave makes a sullen sound' (Skene, ii. 145, i. 310). But his name and description suggest that he is the waves themselves, while two *Taliesin* poems call him 'son of the sea' or 'of the wave'; and this is supported by popular belief, which regards the noise of the waves pressing into the Conway as his dying groans (Skene, i. 282, 288; Rhys, *HL* 387). Probably Dylan was a local sea-god, and the *Mabinogi* references are the *débris* of myths explaining the connexion of an anthropomorphic sea-god—formerly the sea itself—with Arianrhod and his murder by Govannon.

Rhys's explanation of Dylan as a dark divinity, his rush to the sea as darkness 'hying away to lurk in the sea,' and his death as the equivalent of that of the Fomorian Ruadan at the hand of Goibniu (*HL* 387), while Dylan and Llew are respectively darkness and light, children of a dawn-goddess, is in agreement with his scheme of mythological interpretation. But there is no hint that Dylan has dark traits—he is described as blond, and his death is lamented, not praised.

Arianrhod ('silver wheel') is called one of the three blessed ladies of Prydein (*Triads* [Loth, ii. 263]), though her position in the *Mabinogi* as Gwydion's sister-mistress, passing herself off as a virgin, is in contradiction with the title. Perhaps she was worshipped as a virgin-goddess, while myth gave her a different character; or if, like other Celtic goddesses, she was an Earth-goddess, she may have had the double character of Artemis—a chaste virgin and a fruitful mother. In later belief she is associated with the constellation

Corona Borealis, which is called Caer Arianrhod (Guest, iii. 256).

'Arianrhod' is a place-name which has become a personal name, by taking the name of the goddess's castle, Caer Arianrhod, in the sense of 'Arianrhod's Castle.' Her real name is unknown.

Govannon the smith is referred to in *Kulhwch* as one whose help must be obtained by the hero to wait at the furrow's end to cleanse the iron of the plough (Loth, i. 240). Whatever meaning underlies this is unknown. His name (from Cymric *gof*, 'smith') suggests that, like Ir. *Goibniu*, he was a god of smiths, and he is referred to in a *Taliesin* poem as an artificer (Skene, i. 286–7).

4. The family of Beli.—Beli has four sons—Llûdd, Caswallawn, Llevelys, and Nynngaw—and, in the *Mab.* of Branwen, Caswallawn takes possession of the kingdom in Bran's absence. Geoffrey (iii. 20) makes Heli the father of Lud, Cassibellaun, and Nennius, while Beli or Belinus is brother and opponent of Brennius (iii. 1), though another Belinus is general and counsellor of Cassibellaun (iv. 3). Here Caswallawn is confused with the historic Cassivellaunus, opponent of Cæsar, as he is in the *Triads* (Loth, ii. 210). Perhaps Beli is the god Belenos of the inscriptions, and all Geoffrey's references may be to him or to persons called by his name. The hostility of Caswallawn to the race of Llyr may be hinted at in the hostility of Belinus and Brennius. Whether any mythic significance underlies this is doubtful, and it may hint rather at the rivalry of hostile tribes or of Goidel and Brython (Anwyl, *ZCP* i. 287). If Beli is a form of Belenos, he would be a god of healing and light—perhaps a sun-god—since Belenos is equated with Apollo, but there is some evidence connecting him with the sea—*Biw Beli*, 'the cattle of Beli,' are the waves, and *Gwirawt Veli*, 'the liquor of Beli,' is brine. In the *Triads* he is beneficent (Loth, ii. 278). Elsewhere he is implored as 'victorious Beli . . . that will preserve the qualities of the honey-isle of Beli' (Skene, i. 431). These references do not support Rhys's theory that Beli is a 'dark' god.

Caswallawn is a 'war-king' (*Triads* [Loth, ii. 283]), and he was probably a war-god after whom chiefs and kings were called. His personality is lost in that of Cassivellaunus—perhaps a leader bearing his name. Other *Triads* appear to mingle the *débris* of his myths with the pseudo-history of the native chief (Loth, ii. 209, 249; *Myv. Arch.* 403).

Llûdd Llaw Ereint is the equivalent of Ir. Nuada Argetlam, a primitive **Nodens Lām-argentios* ('silver hand') having become through alliteration **Lodens Lām-argentios*, resulting in Llûdd Llaw Ereint, while the older form gave a personage called Nudd (Rhys, *HL* 125; Loth, i. 265). A clear distinction is, however, drawn between Llûdd and Nudd, *e.g.* Gwyn son of Nudd is the lover of Kreiddylad, daughter of Llûdd (Loth, i. 269; Skene, i. 293). Llûdd Llaw Ereint is probably the Llûdd, son of Beli, whose kingdom in the tale of *Llûdd and Llevelys* is subjected to three plagues: (1) the Coranians; (2) a shriek on May eve which makes all land, animals, and women barren; (3) the mysterious disappearance of a year's supply of food. Llûdd rids his kingdom of the authors of these plagues. This and Llûdd's liberality in giving meat and drink may point to his earlier character as a god of growth (for the tale, see Guest, iii. 295 ff.; Loth, i. 173 ff.; and cf. Rhys, *HL* 606). London was called Caer Ludd because Llûdd rebuilt its walls (Geoffrey, iii. 20), and his name is still found in 'Ludgate Hill,' where he was buried. Probably the place was a centre of his cult. For Nodens, see § V. 4.

The Coranians are a hostile race of warriors in the *Triads* (Loth, ii. 274), but they are obviously superhuman. Their name may be connected with *cor*, 'pygmy.' The plagues may correspond to the hostility of the Fomorians to the Tuatha Dé Danann, since by two of them fertility and plenty are destroyed. The story may be based on earlier myths of beings hostile to growth and fecundity. The second plague occurs on May-day, and in a *Triad* the plague of the Coranians becomes that of March Malaen on May 1st (Loth, ii. 278). March may correspond with the Fomorian Morc who levied a sacrificial tax on Samhain. But it is not clear why the plagues should be worst at the beginning of summer, when the powers of growth are commencing their ascendancy.

More prominent than Nudd is his son **Gwyn**, whose name, like 'Fionn,' means 'white' or 'fair.' His fight with Gwythur for Kreiddylad may point to his being a god of fertility (§ V. 4); but, if so, he must have become a god of war and the chase, since his character in a poem of the Black Book is that of a great warrior (Skene, i. 293). He was also associated with Annwfn, and became, in popular belief, a king of fairyland, like the Tuatha Dé Danann. This is seen in the legend of S. Collen summoned to the court of Gwyn, king of Annwfn on Glastonbury Tor, where he saw a wonder-land, not unlike that of the Irish Elysium, which disappeared when he sprinkled holy water (Guest, iii. 325). The story may recall the hostility of Christian missionaries to the cult of Gwyn, and this may account for the fact that he is also associated with Annwfn in its later sense of 'hell,' and hunts the souls of the wicked (Rhys, *AL* 155). A sentence in *Kulhwch* mediates between the pagan and Christian conceptions of Gwyn, for in him 'God has placed the force of the demons of Annwfn (here = "hell") to hinder them from destroying the people of this world' (Loth, i. 253). In the *Triads*, Gwyn is a mighty astrologer, like Gwydion (Loth, ii. 297).

5. The Cerridwen cycle.—Save for a reference to Taliesin as a bearer of Bran's head, the *Mabinogion* does not mention this group, which is found in the 16th cent. *Hanes Taliesin* (from materials of far older date) and in the poems of the *Book of Taliesin*. These poems frequently refer to the Dôn, Llyr, and Pwyll groups. The explanation may be that all these were local gods with local myths, that the Cerridwen cycle was more purely Brythonic, and that, after the redaction of the *Mabinogion*, all the groups were mingled in other tales, of which the poetic references are the reflexion.

Avagddu, son of Cerridwen (wife of Tegid Voel, who dwelt in Lake Tegid), is so ugly that his mother resolves to boil for him a cauldron of inspiration as a compensation. Gwion Bach is set to stir it, and by accident obtains the gift of inspiration intended for Avagddu. He flees, pursued by Cerridwen, and the flight is told in terms of the *Märchen* formula of the Transformation Combat. Finally, Gwion, as a grain of wheat, is swallowed by Cerridwen as a hen. She gives birth to him and casts him into the sea, where he is found by Elphin and called Taliesin ('Radiant Brow'). He becomes a bard. The story (for which see Guest, iii. 356 ff.) is thus connected with the sporadic Celtic idea of re-birth (see TRANSMIGRATION). The cauldron, Cerridwen as an inspired poetess, and Taliesin's gift of shape-shifting are referred to in the poems, and in one of them Cerridwen's hostility to Taliesin and his gift seem already to have been stereotyped in the *Märchen* formula so evident in the prose *Hanes Taliesin* (Skene, i. 532). The Cerridwen saga was probably composed in a district lying to the south of the estuary of the Dyfi (Anwyl, *ZCP* i. 293).

Cerridwen and **Tegid**, dwelling in Lake Tegid, are divinities of the under-water Elysium, and the cauldron is the Elysian mystic cauldron, also associated with a water-world in the *Mab.* of Branwen (BLEST, ABODE OF [Celtic], § 6 (*f*)). Taliesin has a 'chair' in Caer Sidi (Elysium), and

seeks to defend it against Cerridwen's cauldron (Skene, i. 275). The poems describe Cerridwen as a goddess of inspiration and poetry, probably worshipped by bards, with her cauldron as the source of inspiration. In its more primitive form the cauldron is a symbol of a fertility cult, hence Cerridwen must have been a goddess of fertility, perhaps an Earth-mother, thus equivalent to Ir. *Brigit*. Or she may have been a corn-goddess, since she is described as a goddess of grain in the Black Book (*Mon. Hist. Brit.* 1848, i. 498, ii. 5). If the tradition which associates the pig with her is genuine, the animal would then be an earlier form of the corn-spirit, connected at a later time with the corn-goddess (cf. Demeter and the pig; Thomas, *RHR* xxxviii. 339). Gwion's obtaining inspiration may be a form of the myth of the theft of culture from the gods' land, though, since the story describes Taliesin's birth from Cerridwen, other myths may have regarded him as her son, as Ogma was the son of Brigit. Taliesin is probably a god of poetic inspiration, confused with the 6th cent. poet Taliesin, who appears to have claimed identity with the god whose name he bore. His chair was in Caer Sidi, with him was 'the inspiration of fluent and urgent song,' and he speaks of his presence with the gods. Identifying himself with the god, he (or the poets who write in his name) describes his creation, his enchantment by the gods, and his numerous transformations or re-births (Skene, i. 263, 274 f., 276 ff., 278, 282, 286 f., 309, 532). He also speaks of his presence with Arthur when the cauldron was stolen from Annwfn. The Taliesin myth may combine the mythologies of two separate gods, or, more probably, two aspects of this god—as a culture-hero bringing inspiration from the gods' land, and as a son of the culture-goddess. The story may point to the usurping of the place of a culture-goddess by a god; hence some myths would tell of her hostility to him, others how he was her son. The *Hanes Taliesin* would be a later commingling of such myths, confusing the god with the poet.

For Rhys's equation of Gwion and Taliesin with Ir. *Finn* and *Oisin*, see *HL* 551. Fionn, however, is not re-born as Oisin, but as Mongan (*LU* 133*a*).

Tegid is not mentioned further. Creirwy, the daughter of the pair, is one who fascinates her lovers (*Myv. Arch.* 339); she may have been a goddess of love. Avagddu is obscurely referred to in the Taliesin poems (Skene, i. 296, 297, 525); his brother Morvran ('sea-crow') is 'an obstructor of slaughter' in a *Triad*, and at the battle of Camlan is thought to be a demon (Skene, ii. 459; Loth, i. 209). He may have been a war-god—his name 'sea-crow' suggesting a similarity with the Irish war-goddesses who appeared as birds.

6. **The Arthur group.**—The attempt to find in the personages of Arthurian romance as a whole the old gods of the Brythons seems futile, while the attempt to find sun and dawn myths, etc., in the romantic incidents of the cycle belongs to that mythological interpretation of saga and *Märchen* which is now discredited. In any case, it could throw little light on Celtic religion. On the other hand, some of its personages probably belong to old Divine groups, since they are already present in purely Welsh tales like *Kulhwch* and in early Welsh poems which are unconnected with the cycle, or in Geoffrey of Monmouth. Perhaps a local Brythonic Arthur saga might be postulated in which a local Brythonic god or hero called Arthur was ultimately fused with the historic 5th to 6th cent. Arthur, while from it or from Geoffrey's handling of it sprang the great romantic cycle. Nennius knows Arthur as a war-chief, but the reference to his hunting the *Porcus Troit* (the *Twrch Trwyth* of *Kulhwch*) suggests the mythic Arthur. Geoffrey may have partly rationalized the local saga here postulated. The main incidents given by him—Arthur's birth due to shape-shifting on the part of Uther, his unfaithful wife Guanhumera (Guinevere), and his final disappearance to Avallon (Elysium)—belong to a primitive set of incidents told of other Celtic heroes (Nutt, *Bran*, ii. 22 ff.). They were made the mythic framework surrounding the personality of Arthur as a local Brythonic god or hero. Hence arose the Arthur-saga, blending the historic Arthur with the god—a saga probably widely known before the rise of the romantic cycle, since Arthur is already a prominent figure in early Welsh literature. This Arthur of the saga drew to himself many local gods and heroes, who figure as his warriors in *Kulhwch*. On the other hand, he is unknown to the *Mabinogion*; but, as its legends belong to the regions of Gwynedd and Dyfed, where Goidelic influences prevailed, this may point to the exclusion of the more purely Brythonic saga from those districts.

Taking the character of Arthur as a whole, before his being blended with the historic Arthur, he appears as the ideal hero of a local Brythonic tribe or tribes, as Cúchulainn or Fionn was to the Goidels. He may have been worshipped as a hero, or have been an earlier god more and more envisaged as a hero. Rhys (*AL* 39 ff.) regards the early form of his name as *Artor*, 'ploughman,' but possibly with a wider significance, and equivalent to that of the Gaulish Artaius, equated with Mercury (for a derivation from *arto-s*, 'bear,' see MacBain, *Gael. Dict.* p. 357). Hence he may have been a god of agriculture, who became, like other such gods, a war-god or hero. But he was certainly regarded also as a culture-hero, since he stole the magic cauldron from the gods' land and tried to obtain the swine of March (Skene, i. 264; Loth, ii. 247)—probably the late form of a myth telling how Arthur, like Gwydion, tried to obtain swine from the Divine land. He is also a bard (Loth, ii. 216). To this ideal hero's story would be fitted the formulæ of the supernatural birth and final disappearance to Elysium (later localized at Glastonbury), whence it was believed he would one day re-appear. See, further, art. ARTHUR.

The Merlin of the romances, famed there for magic and shape-shifting, for his love for the Lady of the Lake, and his imprisonment by her in a tree, a sepulchre, or a tower without walls, already appears in Geoffrey as the child of a mortal and a supernatural father, selected as the victim for the foundation sacrifice of Vortigern's tower. He confutes the *magi* (Druids), shows why the tower cannot be built, and utters prophecies. To him is attributed the removal of the Giant's Dance (Stonehenge) from Ireland—an ætiological myth accounting for the origin of Stonehenge. Finally, he figures as the shape-shifter to whom is due Arthur's birth (Geoff. vi. 17-19, vii., viii. 1, 10-12, 19). Thus he appears as a mighty magician, and probably had a place in the early Arthur saga, as he is later prominent in the romances. Rhys regards him as a Celtic Zeus or the sun, because late legends tell of his disappearance in a glass house into the sea. The glass house is the expanse of light travelling with the sun (Merlin), while the Lady of the Lake who comes to him daily is a dawn-goddess. Stonehenge was probably a temple of the Celtic Zeus 'whose late legendary self we have in Merlin' (*HL* 154, 158, 194). Such late legends can hardly be regarded as affording safe basis for such views, and their mythological interpretation is more than doubtful. The sun is never the prisoner of the dawn, as Merlin is of the Lady of the Lake. Merlin is rather regarded as the ideal magician, perhaps

once a god worshipped by magicians or Druids, like the Irish divinity of Druidism. Farther than this his legend does not carry us, and, as all gods were later regarded more or less as magic-workers, this interpretation must be regarded as merely tentative.

Mabon, son of Modron, is associated with Arthur in *Kulhwch* and the *Dream of Rhonabwy*. His name means 'a youth,' and he is probably the Maponos equated with Apollo as a god of health in Romano-British and Gaulish inscriptions (Holder, ii. 314). His mother's name, **Modron**, is a local form of Matrona; hence she was perhaps a river-goddess or one of the *Matres*, goddesses of fertility. In the *Triads*, Mabon is one of the three eminent prisoners of Prydein. To obtain his help in hunting the magic boar his prison must be found, and this is done by animals, in accordance with a *Märchen* formula, while the words spoken by them show the long duration of his imprisonment—perhaps a hint of his immortality (Loth, i. 260 ff., 280, ii. 215, 244). But he was also regarded as a mortal, buried at Nantlle, in Caernarvon, which, like Gloucester, the place of bis prison, may have been a site of his widely-extended cult.

Kei, who appears in *Kulhwch* and the romances, is probably an old god. In early Welsh poetry his prowess in fight is specially signalized—'when he went to battle he fought against a hundred' (Skene, ii. 51). Hence he may have been a war-god, and the description of his nature in *Kulhwch* ('His breath lasted 9 days and 9 nights under water. He could remain for the same period without sleep. No physician could heal a wound inflicted by his sword. When he pleased he could make himself as tall as the tallest tree in the wood. And when it rained hardest, whatever he carried remained dry above and below his hand to the distance of a handbreadth, so great was his natural heat. When it was coldest, he was as glowing fuel to his companions' [Loth, i. 225]) may be a description of his 'battle-fury' corresponding to that of Cúchulainn. Elton (p. 279), however, regards it as proof that he was a god of fire.

In *Kulhwch* and in a late poem (*Myv. Arch.* i. 175) he is hostile to Arthur, and, in the latter, Gwenhwyfar (whose ravisher he may have been) asserts his superiority to Arthur. Perhaps this is evidence of Kei's having been a god of tribes hostile to those of which Arthur was the hero.

7. **Hu Gadarn**, the subject of ridiculous Neo-Druidic speculations (Davies, *Myth. and Rites of the Druids*, London, 1809), is referred to in the *Triads* as the leader of the Cymry in their wanderings, the teacher of ploughing, and the inventor of music and song as the repository of ancient traditions. He divided the Cymry into clans, and drew the *avanc* from Llynn Llionn (the bursting of which had caused a deluge) by means of his oxen, identified with men transformed for their sins (Loth, ii. 271, 289, 290–291, 298–299; Guest, ii. 349 ff.). The *Triads* about him are of late date, but they may point to him as a culture-god of certain tribes.

8. **British gods of the monuments.**—Some of these may be identified with the personages just considered—Nodens with Llûdd or Nudd, Belenos with Beli or Belinus, Maponos with Mabon, Taranos (known only on Continental inscriptions) with the Taran mentioned in *Kulhwch* (Loth, i. 270). Many others, some of them referred to in classical writings, have no place in the literature. Thus **Andrasta** is described by Dio Cassius (lxii. 6) as a goddess of victory supplicated by Boudicca. **Sul** is equated with Minerva at Bath, and is a goddess of warm springs (Solinus, xxii. 10). Others are **Epona**, the horse-goddess, whose cult was widespread on the Continent; **Brigantia**, perhaps the Irish Brigit; **Belisama**, the name of the Mersey in Ptolemy (ii. 3. 2), but known as a goddess in Gaulish inscriptions. Many inscriptions also refer to the **Matres**. Several gods are equated with Mars, and were probably local or tribal war-gods—**Camulos**, known also on the Continent and perhaps to be equated with Cumal, father of Fionn; **Belatucadros**, 'comely in slaughter'; **Cocidius**, **Corotiacus**, **Barrex**, **Tutatis**, and **Totatis** (perhaps the Teutates of Lucan's *Pharsal.* i. 444, from **teuta*, 'tribe' or 'people'). Others are equated with Apollo in his character as a god of healing—**Anextiomarus** (known also at Le Mans), **Grannos** (in an inscription at Musselburgh, but found in many Continental inscriptions), **Arvalus** (also equated with Saturn), **Mogons**, etc. (for these see Holder, *s.v.*). Most of these, and many others occurring in isolated inscriptions, were probably local gods, though some, as is seen by their occurrence on the Continent, had a wider popularity. In the case of the latter, however, some of the inscriptions may be due to Gaulish soldiers quartered in Britain.

9. **British divinities and the Tuatha Dé Danann.**—Dôn may be equated with Danu, Govannon with Goibniu, Llew with Lug, Llyr with Ler, Manawyddan with Manannan, Bran with Bron, brother of Manannan (*RCel* xvi. 143), Llûdd or Nudd with Nuada (Nodens). But there is a further general resemblance of the groups to the Tuatha Dé Danann. They are euhemerized as kings, queens, heroes, and heroines, etc., while in Geoffrey and the Chronicles a definite period is given to their reigns or lives, or, again, they re-appear as saints. They are subject to death, and their tombs are referred to. Some are regarded as fairies, others as magicians. Thus they exactly resemble the Irish gods as they appear in the texts, though the degradation of their personalities and of their myths is more complete in Wales, and the literature which treats of them is less copious. There is also a general likeness in the functions of the two series. They are associated with growth and fertility, with departments of Nature, with war, and with the arts of culture; and some of them are gods of local Other-worlds. In Wales, too, as in Gaul and Ireland, certain goddesses seem to have a prominent and independent position—perhaps a hint of their pre-eminence over gods, which is here regarded as characteristic of earlier Celtic religion. But it is doubtful whether these divinities, under the names by which we know them, had more than a local fame, though parallel divinities with similar functions undoubtedly belonged to other localities.

Certain *Mabinogion* incidents, especially those of Branwen, have Irish parallels. The cauldron of regeneration restoring warriors to life is like the cauldron of Elysium and the incident of Diancecht restoring the Tuatha Dé Danann in his well. The description of Bran as he approaches Ireland is like that of MacCecht in 'Da Derga's Hostel.' The red-hot iron house in which the owners of the cauldron were to be destroyed has a parallel in an incident of the *Mesce Ulad*. But probably these are superficial borrowings, due to intercourse between Wales and Ireland, and have not the same importance as the fundamental likenesses in name of certain of the divinities.

10. The incidents of the *Mabinogion* have an entirely local character, as Anwyl has shown (*ZCP* i. 277, ii. 124, iii. 122). and are mainly associated with Dyfed and Gwent, Anglesey, and Gwynedd, of which Pryderi, Branwen, and Gwydion are respectively the heroic characters. These are the districts where a strong Goidelic element prevailed, whether these Goidels were original inhabitants (Bp. Jones of St. David's, *Vestiges of the Gael in Gwynedd*, London, 1851; Rhys, *Trans. of Soc. of Cymmrodor*, 1894–1895, p. 21), or invaders from Ireland (Skene, i. 45; Meyer, *Trans. Soc. Cym.* 1895–1896, p. 55 ff.), or perhaps both. But they had been conquered by Brythons, and had become Brythonic in speech from the 5th cent. onwards. On account of this Goidelic element, it has been

claimed that the personages of the *Mabinogion* are Goidelic. But only a few are parallel in name with Irish divinities, and the parallel incidents are, on the whole, superficial. Hence any theory which would account for the likenesses must account for the greater differences, and must explain why, if the *Mabinogion* is due to Irish Goidels, there should have been few or no borrowings from the popular Ossianic or Cúchulainn sagas (for these see Loth, i. 202; Skene, i. 254), and why at a time when Brythonic elements were uppermost such care should have been taken to preserve Goidelic myths. If the tales emanated from native Welsh Goidels, the explanation might be that they, the kindred of the Irish Goidels, must have had a certain community with them in Divine names and myths, while others of their gods, more local in character, would differ in name. Over the whole Celtic area we find many local gods, and a few whose names are spread everywhere. Or, if the tales are Brythonic, the likenesses might result from an early community in cult and myth among the common ancestors of Goidels and Brythons (cf. Loth, i. 20; I. B. John, *The Mabinogion*, London, 1901, p. 19). But, as the tales are comparatively late, composed when Brythons had overrun these Goidelic districts, more probably they contain a mingling of Goidelic (Irish or native Welsh) and Brythonic materials, though part may come from the common Celtic heritage. Llyr, Manawyddan, Govannon, etc., would be more or less local Goidelic gods; others may have been local Brythonic divinities classed with these as members of the different Divine groups. This would explain the absence of divinities and heroes of other local Brythonic groups from the *Mabinogion*, e.g. Arthur. But, with their growing importance, the latter attracted to themselves the personages of the *Mabinogion* and other tales. These are associated with Arthur in *Kulhwch*, and the Dôn group mingles with that of Taliesin in the *Taliesin* poems (Anwyl, *ZCP* ii. 127). Hence Welsh literature, as far as it concerns the old religion, may be regarded as including both local Goidelic and Brythonic divinities, of whom the more purely Brythonic are Arthur, Gwyn, Taliesin, etc.

The following table gives divinities with similar names in Ireland, Britain, and Gaul. Italics denote inscriptional names.

IRELAND.	BRITAIN.	GAUL.
Nuada.	Nudd Hael (?).	
	Nodens.	
	Llûdd Llaw Ereint.	
Manannan.	Manawyddan.	
Ler.	Llyr.	
Lug.	Llew or Lleu (?).	Lugus.
Mider.		*Medros.*
Ogma.		Ogmios.
Goibniu.	Govannon.	
Bron.	Bran.	Brennus (?).
	Beli, Belenos.	*Belenos.*
Net.		*Neton.*
Danu.	Dôn.	
Anu.	Anna (?).	*Anoniredi*, 'chariot of Anu.'
Buanann.		**Buanu.*
Brigit.	*Brigantia.*	*Brigindo.*
Cumhal.	*Camulos.*	*Camulos.*
Badb.		*Bodua.*
Nemon.	*Nemetona.*	
	Mabon, *Maponos.*	*Maponos.*
	Belisama.	*Belisama.*
	Epona.	*Epona.*
	Tutatis, Totatis.	Teutates.
	Taran.	*Taranis.*
	Anextiomarus.	*Anextiomarus.*
	Grannos.	*Grannos.*
	Mogons.	*Mogounos.*
	Silvanus.	*Silvanus.*
	Matres.	*Matres.*

VII. *ANTHROPOMORPHISM.*—**1. The gods.**—Divine images, as well as myths, show that Celtic gods had human forms and passions. They fight with each other, and pursue amours—often with mortals, hence mortals or semi-Divine heroes trace descent from them. Many names compounded of a Divine name and *-genos*, 'born of,' or *-gnatos*, 'son of,' *e.g.* Boduogenos, Camulognata, show that those who first bore them were regarded as children of divinities. St. Augustine (*de Civ. Dei*, xv. 23) and Isidore of Seville (*Orat.* viii. 2, 103) speak of Gaulish *dusii*, impure demons who troubled women. These were probably lesser divinities or spirits, but the passages show the current belief in Divine-human unions. Fairies, in Brittany called *duz*, may be a reminiscence of these. There are, however, fewer obscene myths in Irish texts than elsewhere. Invisibility and shape-shifting, ascribed to the gods, were powers claimed by or attributed to Druids, etc., and are thus reflected back upon the gods from the human sphere. Their true divinity is found in their control over the universe and the destinies of men. In a word, they are worshipful beings, to be propitiated by sacrifice and prayer, in return for which they fulfil men's wishes, grant fruitfulness, prosperity, and victory, or interfere at critical moments to save their favourites. On the other hand, they sometimes seek the help of mortals, or ask their love, or invite them to Elysium. Their superiority is also seen in their gigantic stature and their immortal nature, though the latter may have been less inherent than obtained from foods and drinks of immortality. The Feinn Caoilte contrasts himself with a goddess—'She is of the Tuatha Dé Danann who are unfading and whose duration is perennial. I am of the sons of Milesius that are perishable and fade away' (O'Grady, ii. 203).

2. Hero-worship.—The Celtic belief in the king as a divinity may have arisen from the belief in the priest-king as representative of the vegetation-spirit. Examples of the former are found in the Divine names given to kings (§ VIII.), in the title *dia talmaide*, 'terrestrial god,' given to the mythic king Conchobar (*LU* 101*b*); in the fact that Maricc, chief of the Boii, who caused the Gaulish revolt in A.D. 69, called himself a god, and, though thrown to the beasts, was revered by the people (Tac. *Hist.* ii. 61); and in the ready acceptance of the divinity of the Roman emperors by the Gauls, showing that such a cult existed among themselves. Whether Arthur, Cúchulainn, Fionn, etc., who, whatever else they may have been, were idealized heroes of the Celts, ever had a formal cult in their heroic capacity is uncertain, though probably divinity was ascribed to them (see FEINN CYCLE, § 6 (*c*)). Cúchulainn may have been a war-god, since he is associated with war-goddesses, and is himself a great warrior, while he has some of the traits of a culture-god—bringing a cauldron and cows from the gods' land, claiming superior knowledge of Druidism, bardic science, law, and wisdom, and instructing a king in the art of government (BLEST, ABODE OF [Celtic] § 6 (*f*); *RCel* xi. 442 ff.; *IT* i. 213). D'Arbois sees in Cúchulainn and Conall Cernach equivalents of the Dioscuri, and claims that they are the Smertullos and Cernunnos of a Paris monument (*Les Celtes*, ch. 7). He also sees in Cúchulainn the Esus of another monument (*ib.* p. 63), while the figures on these monuments represent incidents of the *Táin Bó Cúalnge*, which was perhaps known in Gaul. Was Cúchulainn an anthropomorphic form of the Brown Bull of the *Táin*? His life is bound up with that of its calf (*IT* ii. 241); his 'distortion' may reflect the fury of the bull in fight. In some folk-versions of the *Táin*, the bull is his property, and the giant sent by Medb to steal it seizes one horn, while the hero seizes the other, and it is rent in twain (*Celt. Mag.* xiii. 327, 514). If we could be certain that this represents the earlier form of the *Táin*, it might have originated as a tale explaining actual ritual,

in which a bull was the incarnation of a vegetation-spirit, slain and eaten by his worshippers. Later, this ritual may have been changed to the sacrifice of a bull to a god who was really its anthropomorphic form, and legend would then tell how he had slain a bull, which was his favourite sacrificial animal. Cúchulainn may have been such a bull-god, or the myth of a bull-god may have been transferred to him, and out of this the primitive form of the *Táin* might arise. Such changes in cult or in the nature of a god from beast to human form, with the animal as his symbol or otherwise associated with him (sometimes slain by him), are not uncommon. The slaying of an animal incarnation of a vegetation-spirit was known to the Celts, and it may have given an impulse to animal cults. Esus (Cúchulainn?) seems to have been a god of vegetation. (For the *Táin*, see Windisch, *Táin*; and CUCHULAINN CYCLE.)

As to Fionn, his father Cumhal may be Camulos, a war-god identified with Mars in Gaul and Britain, while Fionn's surname mac Cumall would then resemble Camulogenus, 'son of Camulos,' the name of a Gaulish chief (Cæsar, vii. 62). For Arthur, Brythonic hero or god, see § VI. 6.

VIII. *THE DIVINE KING AND THE PRIEST-KING.*—Celtic kings appear to have been regarded as representatives or incarnations of gods, and this may explain the easy change of gods to kings by the annalists. Kings often bore the name of a god, which later became a kingly title. Several Irish (mythic) kings are called Nuada, and are hardly discriminated from the god (*IT* iii. 290, 326, 366–68). In one text *nuadat* is glossed *in rig*, 'of the king,' as if the name had come to be a title (*Fled Bricrend*, Irish Texts Soc. ii. 88, 177). Welsh kings are also called Nudd (Skene, ii. 455). Brennos who stormed Delphi, and the mythic Brennos who sacked Rome, may have been called after the god Bran (cf. the instances of Conchobar and Maricc, § VII.). The result of the observance or non-observance of the *geasa*, or tabus binding on Irish kings, throws light on the nature of the gods they represented. Observance was followed by good seasons, fertility, abundance of cattle and fish, and prosperity; non-observance by the reverse. Later, perhaps through Christian influence, these were said to result from a king's personal goodness. But the older conception shows that the kings represented gods of growth like Nuada. Hence, being Divine incarnations, they could not do all that other men did. Was the king in primitive times slain that, by never growing old, his vigour might be handed on unimpaired to his successor, as in the case of Divine kings elsewhere? This is not impossible, but the custom would be transmuted into that of the king remaining a king as long as he could hold his own against all comers; or, more generally, a slave or criminal would be chosen as mock-king and Divine incarnation, and then slain. The May-kings of later survivals would be the successors of such mock-kings, themselves the *succedanea* of actual Divine kings. Certain Irish *bile*, or sacred trees, were associated with kings whose sceptre was the symbolic branch of such trees with which the king's life was wrapped up. It was great sacrilege to cut down these trees (see § X. 1). They were, like the kings, representatives or dwelling-places of a god (earlier a spirit) of vegetation. Other trees, perhaps the *succedanea* of the *bile*, as the mock-king was of the Divine king, were cut down and burned in the Beltane fires, in which the human representative may also have perished (see FESTIVALS [Celtic]). Before cutting them down, it may have been necessary to pluck a branch or something growing on them, *e.g.* mistletoe. Hence Pliny's notice of the mistletoe rite may be connected with this annual custom. The mistletoe or branch was the soul of the tree and contained the life of the Divine representative. It must be plucked before the tree could be cut down or the victim slain. This is hypothetical, but Pliny's account is incomplete—the elaborate ritual must have had some other purpose than that of the magico-medical use of the mistletoe which he describes, or else he is referring to an attenuated custom. Human sacrifice had been prohibited, and the oxen slain may have been substitutes for the man-god of earlier days. In later romantic tales a knight carries a bough and challenges all comers, or a giant or knight defends a tree from which another seeks to pluck fruit or a bough (Weston, *Legend of Sir Gawain*, 1897, pp. 22, 86; *Trans. Oss. Soc.* iii. 113 ff.). These suggest the old belief in tree and king as representatives of a god of vegetation, and of a ritual like that associated with the priest of Nemi (see Frazer, *History of the Kingship*, 1905, and Cook, 'The European Sky-God,' *FL* xvii.).

Celtic kings may also have been priest-kings. The Galatian Celts had 12 rulers ('tetrarchs') of provinces who, with 300 men, formed the council of the nation, which met at a place called *Drunemeton*. This meeting resembles that of the Druids in a consecrated place (Cæsar, vi. 13), while its representative character and the fact that *Drunemeton* was a consecrated place (*nemeton*) and that the syllable *Dru-* is again found in *Druid*, may point to the fact that these 'tetrarchs' had also a priestly character. The wife of one was a priestess; another tetrarch, Deiotarus ('divine bull'), was skilled in augury (Plutarch, *Virt. Mul.* 20; Cicero, *de Div.* i. 16, ii. 36), while certain Gauls were chosen as the priest-kings of Pessinus in the 2nd cent. B.C., possibly because such an office was not unknown to them (Jullian, p. 100). The mythic king Ambicatus and his nephews, Bellovesus and Segovesus, founders of colonies, seem to have consulted the gods with priestly help, and the British queen Boudicea had priestly functions (Livy, v. 34; Dio Cass. lxii. 6). There may be a reminiscence of the priest- or magician-king period in the fact that in Welsh story kings, or gods euhemerized as kings, are the greatest magicians (Loth, i. 92, 117 ff., ii. 229), just as the Irish Manannan is in legend king of Man and a great magician. It is significant of an archaic state of things that some of these teach their art to a sister's son. The differentiation between the offices of priest and king may not have been simultaneous over the Celtic area, and perhaps was never complete. Where it did take place, certain of the Druids would occupy the place of the priest-king as representative of a god. The references in Irish texts to the king's influence on fertility may be reminiscent of the earlier period, unless kings asserted this right as against the Druids. Yet the Druids claimed powers over nature and growth, and were regarded as superior to kings (Dio Chrys. *Orat.* 49; *LL* 93), while the name Σεμνοθέους, coupled with that of 'Druids' by Greek writers (in Diog. Lært. I. *proœm.* i.), may imply some notion of divinity, and that they had taken the place of the earlier priest-kings (see DRUIDS, § 6). Again, since to women belong the early processes of agriculture, a female spirit or goddess of vegetation would have a female representative. But, when the gods superseded goddesses or the latter became their consorts, the priest-king would take the place of the female representative, who, however, may have remained as the bride in the rite of the sacred marriage. But conservatism would retain sporadically female cults of a goddess of vegetation, and these would account for such rites as those of the Namnite women, one of whom was yearly slain; for the presence of the May-queen alone in certain

folk-survivals; and for many Celtic female cults from which men were excluded (see FESTIVALS [Celtic]).

IX. *WORSHIP OF THE DEAD.*—Celtic burial customs suggest a cult of the dead (§ XVI.). The heads of the slain were offered to the 'strong shades,' and bards sang their praises (Sil. Ital. v. 652; Lucan, i. 447). Where mythic heroes were honoured as eponymous tribal ancestors watching over the tribe, a cult of ancestors may be suspected. The tombs of dead kings, on whom tribal prosperity depended, were sacred places (Amm. Marc. xv. 10. 7; Joyce, *SH* i. 45; cf. § V. 3). Archæological researches, as well as folk-survivals, show that the family cult of the dead centred in the hearth—the Celtic brownie of the hearth being in some aspects a successor of the ancestral ghost (Bulliot, *Fouilles du mont Beuvray*, Autun, 1899, i. 76, 396; Déchélette, *RA* xxxii. [1898] 63, 245; Le Braz², ii. 67; see FAIRY). Other survivals point to a more extended cult of the dead (Wilde, *Anc. Legends*, 1887, p. 118; Curtin, *Tales of the Fairies and the Ghost World*, 1895, p. 54; Le Braz², i. 229, ii. 47; *FL* iv. 357). A yearly cult of the dead took place on Samhain eve, 31st Oct., traces of which remain in popular belief and custom; while in Ireland, on the anniversary of the burial of chiefs or kings, feasts were held—the festival of Lughnasadh is sometimes said to have been founded thus. See also FESTIVALS (Celtic); ANCESTOR-WORSHIP (Celtic).

X. *NATURE-WORSHIP, ANIMAL-CULTS, TOTEMISM.*—1. Most Celtic divinities were evolved from the various parts of Nature personified or from Nature-spirits, but the cult of the latter still went on in that primitive fashion which is found as a lower stratum in all religions. Evidence of it exists in folk-survivals, in ecclesiastical denunciations of these, in scattered notices in Irish texts, and in a few inscriptions. The sea, rivers, wells, mountains, trees, sun, moon, stars, and winds, or the spirits of these, were worshipped, invoked in magic runes, or called to witness oaths (*LL* 13*b*; *RCel* vi. 168, xxii. 400; D'Achéry, *Spicil.*, Paris, 1661 v. 216 ff.). Departmental spirits of Nature survived in later times as fairies or demons, and elements of the cult may be traced, *e.g.*, in the *Sabbat*.

(*a*) Manannan, *the sea-god*, was first the sea itself, and an animistic view of the sea prevailed. Its moaning told of its sympathy with the dying or dead, its roaring was prophetic of certain events, and both could be interpreted by poets, hence the shore was 'a place of revelation of knowledge' (*RCel* xxvi. 9; Rhys, *HL* 387; Joyce, *PN* i. 195). This view of the sea led the Continental Celts to beat back the high tides with weapons (Aelian, xii. 23; Aristotle, *Ethics*, iii. 7, *Eudem. Ethics*, iii. 1).

(*b*) Gods (Danuvius, Bormanus, etc.) and goddesses (Devona, Serona, Bormana, etc.) of *rivers and fountains* were worshipped. At first, as river-names derived from **deiva*, 'divine,' **mâtér*, 'mother,' show, rivers themselves were regarded as Divine or as fertile mothers; later, divinities were associated with them, and some Celtic proper names show that descent from a river or river-god was believed in. *Springs and wells* were also Divine, and gave gifts of fertility and healing, and no aspect of the earlier cult has survived so markedly as this—the well, however, being now put under the protection of a saint. Some Celtic myths show the danger of women's intrusion on wells (Rhys, *CFL* i. 392), but more often they are guardians of wells (Skene, ii. 59; O'Grady, i. 233; Le Braz², i. p. xxxix), and this survives in the custom of a woman being sometimes charged with the care of a holy well. Costly offerings were thrown into lakes or rivers (Strabo, IV. i. 13); shrines were built on river banks, and *ex-votos* have been found in large numbers near them (Reinach, *BF* 355). Human sacrifices may have been made to rivers, as various traditions suggest. Animals were regarded as water-divinities; the water-horse and bull may be reminiscences of these, while Epona, the horse-goddess, was associated with rivers. Fish tenanting certain rivers or wells were sacrosanct. In cases of healing at sacred wells the ritual is still invariable, wherever found, and has probably changed little since pagan times. The waters of wells also gave fertility, and oracles were drawn from them or from the animals living in them.

(*c*) *Tree-worship* is associated with the cult of the oak, which formed the Celtic image of Zeus (Max. Tyr. *Diss.* viii. 8), and had a sacrosanct character (Pliny, *HN* xvi. 44). It may have been regarded as embodying the spirit of vegetation, and as such was cut down and burned in the annual Midsummer fires which magically aided the sun (see FESTIVALS [Celtic]). Hence it would easily be associated with a sun- or sky-god—the Celtic Zeus. In Ireland the ash and yew rather than the oak were venerated, though *daur*, 'oak,' is once glossed *dia*, 'god' (Stokes, *RCel* i. 259), and certain trees called *bile*, associated with kings, were too sacred to be cut down or burned (*RCel* xv. 420; Keating, p. 556; Joyce, *PN* i. 499). Forests were divinized (*Dea Arduinna* of the Ardennes, *Dea Abnoba* of the Black Forest, *CIL* vi. 46; *CIRhen.* 1654, 1683), while groves were the temples of the Celts (§ XIV.). Groups of trees (the *Sex Arbores* of Pyrenæan inscriptions), single trees (*Fagus Deus*), or spirits of trees (*Fatæ Dervones*) were the objects of a cult. Trees were associated with wells and burial-mounds, and in some cases a totemistic character may have been ascribed to trees, or a tree-spirit was regarded as an ancestor, since tribes are named after them, *e.g.* the Eburones (from **eburos*, 'yew'), and some personal names suggest descent from a tree, *e.g.* Dergen (**Dervogenos*), 'son of the oak,' Guerngen (**Vernogenos*), 'son of the alder,' while men are sometimes called after trees (*RCel* x. 173; Jullian, p. 41; d'Arbois, *Les Celtes*, 52). The late survival of tree-cults is seen in the denunciations by councils and in sermons, and in the hostility which Christian missionaries met with in trying to cut down sacred trees (D'Achéry, *Spic.* v. 215; Sulp. Sev. *Vita S. Mart.* p. 457).

(*d*) Pliny's reference to *the mistletoe rite* was foundation for much speculative nonsense by earlier writers on Celtic religion. All he says is that on the sixth day of the moon the Druids, clad in white robes, cut it with a golden sickle, while it was caught in a white cloth. Two white bulls were sacrificed, and prayer was made that 'God' would make his gift prosper with those on whom he had bestowed it (*HN* xvi. 44). The account is vague and incomplete. Nothing is said of the purpose of the rite save that the plant is called 'all-healer' (as it is still in Celtic speech), that it was a remedy against poison, and that a potion made from it and given to animals made them fruitful. Nor does he say who the 'god' was to whom prayer was made. We may conjecture that, as the plant is still culled on Midsummer eve for magical purposes, it was especially associated with the Midsummer festival, and that it was regarded as the life of the oak (cf. Gael. *sùgh an deraich*, 'sap of the oak,' *i.e.* mistletoe) or of the spirit or god of vegetation in the oak, which could not be cut down or burned till the plant was culled (see § VIII.; FESTIVALS [Celtic]; *GB*² iii. 327). Other sacred plants were used for medical purposes, though the ritual employed in culling them and the method of use were magical. Silence, ritual

purity, a certain method of uprooting the plant, and occasionally sacrifice were all necessary. The plants were used as charms and medicines (Pliny, *HN* xxiv. 11, xxv. 9). The magical use of plants is mentioned in Irish texts, and in modern folk-custom they are employed as charms as well as medicines (O'Grady, ii. 126; Harl. MS, 5280, §§ 33–35, 123; Carmichael, *Carmina Gadelica*, Edinburgh, 1900; Sauvé, *RCel* vi. 67).

(*e*) Earlier Animism had associated spirits with conspicuous *stones*, just as megalithic monuments were believed to be tenanted by ghosts. Such stones, the objects of a cult, appear in the Irish texts with magical qualities. They float on water, speak, sing, or shriek like the Lia Fail—the traditional coronation stone. The nature of the cult is unknown, but in recent folk-custom libations of milk were poured on 'Grnagach' stones. Whether an earlier divinity lurks under this name, applied to giant, brownie, etc., is uncertain (see O'Curry, *MS Mat.* 387, 393; Nutt-Meyer, §§ 17, 18; *RCel* xii. 57; Hartland, *FL* xiv. 'The Voice of the Stone of Destiny.' For the magical use of stones, cf. § XV. and see STONES [Celtic]).

2. **Animal-cults.**—The cult of animals originated in the period when men worshipped the animals which they hunted or reared—in the latter case, or in the case of animals not hunted, slaying one periodically to obtain its Divine benefits (cf. 3 (*b*)). Cult led to domestication; but even in the period when domesticated animals were freely slaughtered, the older sacramental rite survived in the religious aspect of this slaughter (§ XIII. 1). The cult of animals, with a few exceptions, gave place to that of anthropomorphic divinities of animals, with these animals as their symbols, sacrificial victims, etc., this evolution leading to the removal of restrictions on slaying and eating the animal. This earlier slaying and sacramental eating in cults observed by men may have led to a similar usage with human or animal victims representing female vegetation- or corn-spirits among women, in whose hands the primitive forms of agriculture lay. On the other hand, as men began to take part in such female cults, the fact that such spirits were female, or were coming to be regarded as goddesses, may have led to some of the animal-divinities being regarded as female (cf. Epona, the horse-goddess). But, with the increasing participation of men in agriculture, divinities of growth and agriculture would tend to be regarded as male, while, as the two cults coalesced, the Divine animal and the animal representative of the corn- or vegetation-spirit would not be differentiated. Yet the earlier aspect was never quite lost sight of; witness the Corn-mother, and anthropomorphic goddesses of fertility (see art. ANIMALS, and also art. FESTIVALS [Celtic]).

(*a*) A swine-god Moccus, equated with Mercury, was known in Gaul, and the boar was a religious symbol and represented in images, though in one of these, ridden by a Celtic Diana, the animal has become the symbol of a goddess (Holder, ii. 603; Tac. *Germ.* 45; Pennant, *Tour in Scotland*[4], 1776, p. 268; Reinach, *BF* 255, *Cultes, mythes, et rel.*, Paris, 1905, i. 45). In Irish myth, monstrous swine are eaten at feasts, and swine are the immortal food of the gods (*IT* i. 99, 256). These, with the monstrous *Twrch Trwyth* hunted by Arthur (§ VI. 6), may be reminiscences of earlier swine-gods. In Welsh myth the swine is brought from the gods' land. This cult may have been connected with totemism, and, if it led to domestication, the animal would be preserved and not generally eaten. Certain branches of the Celts have abstained from eating swine's flesh (Paus. VII. xvii. 10 [Galatia]), and there was and still is a prejudice against it in some parts of the Highlands; while in the myth of Diarmaid (§ 3) the boar is a totem animal. Elsewhere it was reared for sale and eaten (Strabo, IV. iv. 3), perhaps because its old sacredness was passing away, or because many clans would not regard it as a sacred totem. The swine was placed, sometimes alive, in Celtic graves (*L'Anthrop.* vi. [1895] 584; Greenwell, *Brit. Barrows*, Oxford, 1877, p. 274; *Arch. Rev.* ii. 120).

(*b*) The bull appears on coins and in bronze images, often with three horns—a symbol of divinity (Plutarch, *Marius*, 23; Reinach, *BF* 277). A bull with three cranes occurs on an altar found at Paris, with the inscription *Tarvos trigaranos* (*garanos*, 'crane'). On another side Esus cuts down a tree. On another altar, found at Trèves, a god cuts down a tree in which are a bull's head and three birds. Reinach has shown that this unites the two representations of the Paris altar (*Cultes*, i. 234 ff.), while d'Arbois (*RCel* xix. 246) sees in these a reference to incidents of the *Táin*. The bull is the Brown Bull of Cúalnge, Esus is Cúchulainn cutting down a tree to intercept his enemies, the birds are the Morrigan in her triple form. Some facts support the view that the Cúchulainn cycle was known in Gaul—the chief of the Helvii was Donnotaurus (Cæsar, vii. 65), equivalent to *Dond tarbh*, one of the bull's names. This mythic bull and its rival were re-incarnations of swine-herds of the *síd*-folk, *i.e.* they had a Divine origin (*IT* iii. 235). But the bas-reliefs may merely represent ritual actions or myths upon which the incidents of the *Táin* were later founded. Place-names, like Tarvedum, Tarvisns, etc., point to a wide-spread bull-cult over the Celtic area. Later the Divine bull became the symbol of an anthropomorphic divinity (cf. the bull with the god Medros [*CIL* xiii. 6017]).

(*c*) To the cult of the horse succeeded that of the horse-goddess Epona (from **epo-s*, 'horse'), who is represented as riding, feeding colts, or surrounded by horses. She was protectress of horses, of which the Gauls were great breeders, as well as of all who had to do with horses or mules ('mulionum dea' [schol. ad Juv. viii. 157]). Epona, whose cult and monuments spread far and wide, is sometimes associated with, or represented with the symbols of, the *Matres*. Hence she had come to be regarded as a goddess of fertility. With her, too, seems to have been merged a river-goddess —the river being conceived as a rushing steed—or such a goddess may on that account have been associated with horses and called Epona (Holder, i. 1447; Reinach, *Epona*, Paris, 1895). A horse-god Rudiobus and a mule-god Mullo, equated with Mars, were also worshipped (*CIL* xiii. 3071; Holder, *s.v.*). The horse was sacrificed at the Midsummer festivals, probably as representing a god of fertility (FESTIVALS [Celtic]).

(*d*) The goddess Damona may have been an animal-divinity if her name is derived from **damatos*, 'sheep,' cognate to the Welsh *dafad*, 'sheep,' and Gael. *damh*, 'ox.' A cult of the stag is suggested by monuments of anthropomorphic gods like Cernunnos with stag's horns (§ IV.).

(*e*) A *bear-cult* gave place to that of a bear-goddess, Dea Artio (**artos*, 'bear'), whose cult is commemorated in the famous bears of Berne (Holder, i. 227; Reinach, *Cultes*, i. 57). Andarta ('strong bear'?, d'Arbois, *RCel* x. 165) may have been another local bear-goddess, while Artaios, equated with Mercury (*CIL* xii. 2199), may have been a bear-god. Place-names derived from **artos* show a wide-spread cult of the bear, and personal names, like Welsh *Arthgen*, Ir. *Artigan* (= **Artigenos*, 'son of the bear'), point to a belief in human descent from a bear-god.

(*f*) A horned serpent occurs with twelve Roman gods on an altar at Mavilly (*RA*, 1897, p. 313). The serpent is also the symbol of the under-world god of fertility (Reinach, *BF* 195), and its association with this god may result from its having been worshipped as a chthonian animal. The horn or ram's head with which it is often represented is doubtless a symbol of divinity like the third horn of bull or bear, or, if the ram was sacrificed in the cult of the dead (*RA* xxxii. [1898] 63, 245), it might be associated with the chthonian serpent. Reinach is disposed to connect the horned serpent with the 'egg' produced by serpents (Pliny, *HN* xxix. 12), as dislocated elements of a myth resembling that of the Orphic Zagreus (Divine serpents producing an egg whence came a horned snake), and to find a common origin for both in a Celtic element in Thrace (*RA* xxxv. 210). Horned serpents, however, occur in many other mythologies. An Irish cult of serpents may be hinted at in the two-headed serpents seen in Elysium (*IT* i. 205). Snakes were burned in late survivals of the Midsummer fires in France (FESTIVALS [Celtic]).

(*g*) Other Divine animals were associated with the cult of the waters (§ X. 1), while the use of certain beasts and birds in divination points to their sacred and probably Divine character. A cult of bird-gods may lurk behind the Divine name Bran, 'raven,' and the reference to the magic birds of Rhiannon in the *Triads*.

On the whole subject of animals in religion, see art. ANIMALS in vol. i.

3. **Traces of totemism.**—Certain data point to the existence of totemism among the Celts, or of conditions out of which totemism was elsewhere developed (though some of the instances may be due to animal- or plant-worship). These are (*a*) tabued animals, (*b*) animal sacraments, (*c*) animal descent, and (*d*) exogamy.

(*a*) *Animal tabus.*—Besides the Celtic dislike of swine's flesh—perhaps totemic in origin—may be noted the tabu on killing and eating the hare, hen, and goose among the Britons. Cæsar (v. 12) says they were bred for amusement—an undoubted error for the breeding of sacred animals which were not eaten. The hare was used for divination by Boudicca, and a sacred character still attaches to that animal in Wales, where it is sometimes ceremonially killed and eaten (Thomas, *RHR* xxxviii. 320-1). In Devon a ram or lamb is ceremonially slain and eaten; the eating confers luck (Gomme, *Village Community*, 1890, p. 113). The ill-luck believed to follow the killing of certain animals may be reminiscent of old tabus (Thomas, *op. cit.* 366). Fish were not eaten by the Pictish Meatæ and Caledonii (perhaps a totemic restriction), and a dislike of fresh-water fish existed among 18th cent. Highlanders (Dio Cass. lxxvi. 12; Logan, *Scottish Gael*, 1876, ii. 125). Certain fish in sacred wells were tabu and gave oracles (§ X. 1). Heron's flesh was disliked in Ireland, and it was unlucky to kill a swan in some parts of Ireland and in the Hebrides (Joyce, *SH* ii. 529; Martin, *Descr. of W. Islands*, 1716, p. 71). Fatal results following the slaying or eating of an animal with which the slayer was connected by name or descent, *i.e.* by totemic relation, occur in Irish sagas in the cases of Conaire, Cúchulainn ('hound of Cu'), and Diarmaid, to whom it was tabu to kill respectively a bird, a dog, and a boar (*RCel* xxii. 20, 24, 390–1, iii. 74; Joyce, *OCR* 334 ff.). Here an earlier clan totemism would seem to have been later connected with a mythic hero. Another example may be found in the tale of the men changed to badgers whom Cormac slew and brought to his father Tadg to eat. Tadg refused the food because they were transformed men and his cousins (*IT* iii. 385). Tadg's loathing arises from the fact that the badgers are men—a common idea in myths explanatory of misunderstood totemic usage, but the idea of relationship between a man and his totem was not forgotten, since the badgers are said to be his cousins. Popular beliefs in lucky or unlucky animals, in omens drawn from them, etc., may be partially based on totemic usage.

(*b*) *The ceremonial eating of a sacred (totem) animal* may underlie the tale of the eating of mac Datho's boar (*IT* i. 96), and the belief that swine were the immortal food of the gods. Frazer has argued (*GB*² ii. 442 ff.) from analogous cases elsewhere that the custom of 'hunting the wren' in Celtic regions, carrying it from house to house, preserving a feather in each house, eating it ceremonially, or solemnly burying it, may be an instance of sacramental communion with a slain god in animal form. In any case it has a strong totemic aspect. A sacramental eating of a sacred pastoral animal probably took place in early times at Samhain (§ XIII. 1).

(*c*) The traces of *animal or tree descent* referred to above may be totemistic, though, where a personal name implies such descent, the connexion with totemism would be indirect, if the name was derived from the earlier clan totem name (see below). Other clan names of this kind are those of the Bibroci of S.E. Britain, a beaver clan (**bebros*, 'beaver'), the Eburones, the yew-tree (**eburos*) clan, and Irish clans with animal names —'calves,' 'griffins,' 'red deer' (O'Curry, *MCAI* ii. 208). The *Fir Bile*, 'men of the tree,' were so named from the sacred Tree of Dathi (*RCel* xvi. 279). Instances of lycanthropy associated with certain families or clans (Gir. Camb. *Top. Hib.* ii. 19; *IT* iii. 376) may be based on clan totemism—the belief in lycanthropy (*q.v.*) easily attaching itself to local wolf-clans. The stories of Cormac mac Art suckled by a she-wolf, of Lughaid mac Con, 'son of a wolf-dog,' suckled by that animal, and of Oisin, whose mother was a fawn (O'Grady, ii. 286, 538; Campbell, *The Fians*, 1891, p. 78), may be totemistic in origin, as may be also travellers' tales of the Irish taking wolves as godfathers and praying to them. Bands of warriors at the battle of Cattraeth, described in Aneurin's *Gododin*, were called dogs, wolves, bears, and ravens, and Owein's band of fighting ravens may have been a raven clan (Guest, *Mab.* ii. 409 ff.). Groups of Dalriad Scots bore animal names—'Little Goat' clan, 'Fox' clan—while the animal or plant badges of clans and animal ensigns of older Celtic groups may be totemic. On coins an animal on horseback is figured, perhaps leading a clan, as birds led the Celts to the Danube area, and these would then depict myths of the leading of a clan to its present territory by the clan totem-animal (Blanchet, i. 166, 295, etc.). These myths may survive in legends of an animal showing a saint where to build his church (Rees, *Cambro-British Saints*, Llandovery, 1853, pp. 293, 323, 453; Jocelyn, *Vita S. Kentigern.*, ed. Forbes, Edin. 1874, c. 24).

Celtic warriors wore horned helmets; and Irish myths speak of men with cat, dog, or goat heads (*IT* iii. 385; Rhys, *HL* 593), perhaps men wearing a head-gear of the skin or head of clan totem-animals, and later remembered as monstrous beings. The horned helmets would be derived from the same custom. Solinus says the Britons wore animal skins before going into battle, and these may have been skins of the animal under whose protection they placed themselves (*Mon. Hist. Brit.* 1848, p. x). The 'forms of beasts, birds, and fishes' which the Picts tatued on their bodies (Herodian, iii. 14. 8; Duald Mac Firbis in Irish *Nennius*, Dublin, 1848, p. vii) may have been totem marks, while the painting of their bodies with woad by the Southern Britons may have been of the same character, though Cæsar's words (v. 14) hardly indicate this. Certain marks on faces figured on Gaulish coins seem to be tatu marks (*ZCP* iii. 331).

Personal names in *-genos*, 'son of,'—*Artigenos, 'son of the bear'; *Brannogenos, 'son of the raven';

*Cunogenos (Congan), 'son of the dog'; *Vidugenos, 'son of the tree' (Holder, *s.v.*)—suggest a period when it was thought that men, animals, and plants were alike or might be related, such names remaining long after the idea itself had passed away. Whether these names are relics of clan totemism, however, is uncertain. Rhys (*CB*[4], p. 267) argues from the frequency of names like Cúrói, 'hound of Roi,' Cú Corb, 'Corb's hound,' Mac Con, 'hound's son,' Maelchon, 'hound's slave' (cf. Welsh *Gwrgi*, 'man-dog'), that there existed a dog totem or god, not of the Celts but of a pre-Celtic race. This assumes that totemism could not be Celtic, while here again the names are of individuals, not clans.

(*d*) *Exogamy and the counting of descent through females* are closely connected with totemism, and traces of both are found among the Celts. Whether the Picts were Celtic or not is still arguable, but the probability is that they were. These customs survived in their royal house, the kingship passing to a brother by the same mother or to a sister's son. The king's father was never king and was often a 'foreigner' (for other Aryan instances, see Frazer, *Kingship*, p. 241). Traces of this are also found in Ireland and Wales (Stokes, *RCel* xvi. 148; Rhys-Jones, *Welsh People*, 1899, p. 44), while Livy (v. 34) describes how the mythic king Ambicatus sent not his own, but his sister's sons to found new kingdoms. Traces of the matriarchate are found in Irish and Welsh Divine groups called after their common mother—Danu, Domnu, Dôn, Anu, 'mother of the gods'; in the fact that the eponymous ancestor of the Scots is a woman, Scota; and that gods and heroes have a matronymic, the father's name being omitted—Lug mac Ethnend, Conchobar mac Nessa, Indech son of Dé Domnann, Diarmaid na (descendant of) Duibne, Muirchertach mac Erca, Mabon son of Modron; while a man is sometimes called not by his own name, but 'so and so's husband' (*IT* iii. 407, 409). Goddesses and heroines have a high place, and frequently choose their own lovers or husbands. Thus a general custom was later confined to the royal house or preserved in Divine myths. Perhaps certain cases of incest (Strabo IV. v. 4; *RCel* xii. 235, 238; *LL* 124, 131; Rhys, *HL* 308; Loth, i. 134 ff.) may be explainable by earlier permissible unions under totem law, which would be regarded as incestuous when totemism had declined, while tradition would exaggerate them into worse forms, *e.g.* brother-sister unions (though these may have been customary in the royal house and then reflected back on Divine personages). The polyandry which existed in Britain (Cæsar, v. 14; cf. sporadic instances in Ir. sagas), and possible community of women among the Pictish Caledonii and Meatæ (Dio Cass. lxxvi. 12), may simply have been marriage customs regulated by totemism; and, if the couvade was a Celtic institution (cf. 'The Debility of the Ultonians,' E. Hull, p. 97; Jullian, p. 64), it would point to the former existence of the matriarchate.

There is thus among the Celts a certain amount of evidence for totem usage or of the elements which elsewhere compose it. To explain it as pre-Celtic, or to say that the Irish sagas had been coloured by aboriginal customs (Zimmer, *Zeit. d. Savigny-Stiftung*, Weimar, 1893, xv. 209),[1] is to neglect the fact that the customs in question were bound up with Celtic life, while it leaves unexplained the influence of such alleged pre-Celtic customs on a people whose customs, *ex hypothesi*, were totally different.

See also papers by Gomme, *Arch. Rev.*, 1889, pp. 217, 351, and Thomas, *RHR* xxxviii. 295. In these, however, the survivals are credited on the whole to pre-Celtic peoples. See Reinach's suggestive paper, 'Les Carnassiers androphages dans l'art gallo-romain,' *Cultes, mythes, et rel.* i. 279.

XI. *CULT OF WEAPONS.*—The hammer or mallet held by the Celtic 'god with the hammer,' or Dispater, or represented on monuments, is probably a symbol of Divine creative power, and points to an old cult of the hammer. The god with the hammer had been preceded by a hammer-god. A cult of the axe is suggested by the symbol of the axe and the words *sub ascia dedicare* on tombs in Gaul (*CIL* xiii. 256), while the axe appears in the hands of the god Esus on two altars (see § X. 2). Weapons were personified by the Celts and believed to be alive or tenanted by spirits (or demons, according to the Christian chronicler [d'Arbois, v. 175, 275]). Magic powers were ascribed to the weapons of gods and heroes, and an actual worship of weapons is referred to by an Irish chronicler (O'Curry, *MCAI* ii. 254). On Gaulish coins a sword is sometimes figured, stuck in the ground, or driving a chariot, or with a warrior dancing before it; or a dancing warrior has an axe or sword in his hand—a ritual act like that described by Spenser as performed by Irish warriors in his day, while they said prayers or incantations before the weapon stuck in the ground (Blanchet, i. 160–1; Spenser, *View of the State of Ireland*, ed. 1809, p. 97). Swords were persistently addressed in songs by the Irish (*RCel* xx. 7), or oaths were taken by them (*Atlantis*, i. 371). Such songs, of which traditional remains are known in Brittany, represent the chants of the ancient cult. Finally, the Divine sword re-appears in mystic form as the 'glaive of light' of Arthurian romance and Celtic folk-tales.

XII. *COSMOGONY.*—The Druids taught many things about the universe and its form (Cæsar, vi. 14), but their teachings did not survive. Possibly they held that the earth was supported by mountains or pillars, as a high mountain near the source of the Rhone was called the 'column of the sun' (Avienus, 644 ff.), and was perhaps regarded as supporting the sky. An allusion to such a myth, of which traces survive in folk-belief, may underlie the phrase 'pillars of the world' used of SS. Patrick and Brigit (*IT* i. 25; Gaidoz, *ZCP* i. 27). The Irish Druids claimed to have made sun, moon, earth, and sea (*Ant. Laws of Ireland*, Dublin, 1869–79, i. 23); but, as existing folk-beliefs suggest, primitive myths of creation must have been told; *e.g.* springs and rivers are formed from the sweat of giant, fairy, or saint, and mountains are the material thrown up by giants (Sébillot, i. and ii. *passim*), these personages taking the place of older divinities. Hence, as Irish myths also show, the earth was thought to have gradually taken form; lakes are formed at the digging of a tomb, or from the overflowing of sacred wells (the latter a genuine Celtic deluge-myth), or from the tears of a god—a myth found also among the Continental Celts (*RCel* xv. 429, xvi. 50, 277; Loth, ii. 280, 299; Apollonius, iv. 609).

No myth of one special abode of the gods exists, the assertion that the Tuatha Dé Danann came from heaven being probably the guess of a Christian scribe (*LL* 10*b*; *LU* 16*b*). Nature-gods were doubtless associated with the domain which they ruled, and those worshipped in groves manifested themselves there (Lucan, *Pharsal.* iii. 425). The Tuatha Dé Danann were associated later with mounds or hills, some of them with the Island Elysium (BLEST, ABODE OF [Celtic], § 8), while the Gaulish Dispater, like the other gods of fertility, was associated with the under world.

The Celts believed, perhaps, in descent from, rather than in creation by, the gods. A Druidic myth taught the descent of the Gauls from Dis-

[1] Zimmer's paper is translated under title 'Matriarchy among the Picts,' in Henderson, *Leabhar nan Gleann*, n.d.

pater (Cæsar, vi. 18), the Celtic under-world god, and this may point to a belief in man's ascent to earth's surface from this region. Clans, families, or individuals traced descent from gods, animals, or plants (§§ VII. 1; X. 3), while branches of the Celtic race are traced by classical writers to eponymous founders (Diod. Sic. v. 24; Appian, *Illyr.* 2).

The Druidic tradition, reported by Ammianus Marcellinus (xv. 9), that some of the people of Gaul were indigenous, while others had come from 'distant islands,' others from beyond the Rhine, is not so much a myth of origins as an explanation of the presence of different peoples in Gaul; nor need we suppose with d'Arbois (ii. 262, xii. 220) that the phrase 'distant islands' refers to the Island Elysium.

The Druids taught that 'fire and water must one day prevail' (Strabo, IV. iv. 4), and this may be hinted at in the words of the Gauls to Alexander, that they feared most the fall of the heavens (ἔφασαν δεδιέναι μήποτε ὁ οὐρανὸς αὐτοῖς ἐμπέσοι, Arrian, *Anab.* I. iv. 7; cf. Strabo, VII. iii. 8). In Ireland, Conchobar boasts of rescuing Medb's captives unless the heavens and the earth burst open and the sea engulf all (*LL* 94*a*). These, with Badb's and Fercertne's prophecies of the end of the world (*RCel* xii. 111, xxvi. 33), are evident references to a myth of a final cataclysm, in which the gods might be involved.

XIII. *RITUAL AND CUSTOM.* — **1. Festivals.**— The earliest division of the Celtic year, at first lunar rather than solar, was into two parts, then into three and four. Night preceded day, and the year began with winter (Pliny, xvi. 95; Cæsar, vi. 18; CALENDAR [Celtic]). Traces of a twofold division—a winter half (*Geimhredh*) and a summer half (*Samhradh*)—are found in Ireland, but these were sub-divided, each quarter beginning with a festival, and three of these are known—Beltane (May 1), Lughnasadh (Aug. 1), Samhain (Nov. 1). St. Bridget's Day had taken the place of the fourth on Feb. 1 (O'Donovan, *Book of Rights*, Dublin. 1847, p. liii ff.). Traces of a midsummer solstice feast are also found over the Celtic area, perhaps the result of the adoption of a solar year. But the rituals of Beltane and Midsummer are so much alike that both may represent an early movable summer festival, though Beltane may at first have been a pastoral, and Midsummer an agricultural, festival. Lughnasadh was a harvest festival, but traces of pastoral, though much more of agricultural, ritual are found in the others. As a central rite at Samhain and the summer feasts, a bonfire representing the sun, and intended to aid him in his course and in his fight with dark powers, is found. Round it people danced sunwise; through it cattle were driven as a cathartic rite. Samhain, opening the year, was a festival of beginnings, probably orgiastic. New fire was taken from the bonfire to kindle the fire in each house, and rites of divination, to tell the fortune which the year would bring, were performed. The pastoral aspect is seen in the slaughter of cattle for the winter's food, but this slaughter was ritual, partly sacrificial and sacramental, a feast on one of the animals taking place. As such it dates back to a time when pastoral animals were sacred, and a limited slaughter, probably of one animal, with a feast of communion on its flesh, occurred. Masquerading in the animals' skins, thus assimilating the wearer to the Divine animal, is also found. Agriculturally, Samhain was connected with threshing rather than with ingathering. But the dim suggestions of human sacrifice point to the slaying of a human victim, representing the corn-spirit. Samhain was also a festival of the dead. At the Summer festivals a ritual combat between summer and winter occurred (§ V. 2), and in the king and queen of the May of later survivals may be seen traces of the 'sacred marriage,' both rites intended to promote fertility. The tree burned or carried round the fields, etc., embodied the vegetation-spirit, which was slain ritually (§ X. 1 (*d*)). In folk-survivals, animals were burned in the bonfire; and these, with other traces of animal sacrifices, may point to an earlier slaying of an animal representative of the vegetation-spirit (Bertrand, *Rel. des Gaulois*, Paris, 1897, p. 407; Hone, *Everyday Book*, 1839, ii. 595). Other survivals point to human victims who may be connected with the holocausts referred to by Cæsar, Diodorus, and Strabo. These may in turn be sacrificial extensions of the old slaying of a human representative of the vegetation-spirit (*Old Stat. Account*, xi. 620; Bertrand, p. 119; Mannhardt, *Baumkultus*, Berlin, 1875, pp. 514, 523). These ritual acts were intended to promote fertility, and part of the victim may have been eaten sacramentally (cf. Pliny, *HN* xxx. 1, for a possible example of ritual cannibalism), and part buried in the fields. Brands from the bonfire, in which the tree and victim were consumed, and which also represented the sun, were carried through the fields or otherwise used. For Beltane cakes, see CAKES AND LOAVES (§ 1).

As agriculture was at first a woman's labour, the oldest ritual would be in the hands of women, and the vegetation- and corn-spirits would be female, as would also the victims who represented them. This would account for the May-queen and other female personages in festival survivals, and for the name 'Beltane carline,' or old woman, given to the mock victim in survivals of Beltane. As men began to take part in agriculture and priests took the place of priestesses, the victim would generally be a man. But the older female ritual still prevailed here and there (Strabo, IV. iv. 6; Pliny, *HN* xxvi. 1), and traces of it may be seen in such survivals as those of the witch orgies. See FESTIVALS (Celtic) § 4.

Lughnasadh is connected with the god Lug, and means 'the festival of Lug' or 'the wedding of Lug' (Cormac, p. 99; Rhys, *HL* p. 416). It is also connected with his foster-mother Tailtiu and with a female called Carman, perhaps euhemerized forms of old corn-goddesses or corn-spirits. But it would easily come to be associated with Lug if he were a sun-god, the giver of a bountiful harvest. The festival, besides being of the harvest, was also celebrated at important local centres in Gaul, as well as in Ireland, where it took the form of fairs with horse-races, while it was also a common time to celebrate marriages. This, if Lughnasadh means 'the marriage of Lug,' may point to an old ritual celebration of the Divine marriage, and perhaps to earlier ritual licence. But, as harvest is generally later in Britain and Ireland than Aug. 1, some of the agricultural ritual would be deferred till Samhain, which had also its agricultural aspect.

Such notices of these festivals as we possess show that they had become connected with large central gatherings combining religion, pleasure, and commerce, and probably with the cult of anthropomorphic divinities. But there is no doubt that they were evolved from primitive village-rituals and the cult of less definite vegetation- and corn-spirits. This was never lost sight of in the larger gatherings, while, as survivals show, the simpler rituals continued side by side with these.

For further details and references, see FESTIVALS (Celtic).

2. Sacrifice.—Celtic animal and human sacrifices were mainly propitiatory in later times, though the older slaying of human and animal victims in agricultural ritual must not be overlooked. References to animal sacrifice in classical and Irish texts are scanty (Arrian, *Cyneg.* 33; Cæsar, vi. 17; Orosius, v. 16. 6; Pliny, *HN* xvi. 44; O'Curry, *MCAI* i. p. dcxli; cf. DRUIDS, § 9). But such sacrifices in Celtic districts have continued in folk-survivals down to a comparatively recent time, in connexion either with the cult of saints who represented former divinities, or with the cathartic ritual of the scape-animal. Part of the animal may have

been eaten sacramentally. In other cases a feast was associated with the sacrifice (Arrian, *op. cit.*; Dio Cass. lxii. 7). The heads were hung on trees in sacred groves, and the blood was sprinkled on sacred objects (Lucan, *Pharsal.* iii. 404 ff.; Livy, xxiii. 24). Libations are also found in various popular survivals. Classical references to human sacrifices are numerous, and show how abundantly the Celts offered such victims—generally slaves or prisoners of war. They were hanged, impaled, burned, drowned, or stabbed, and oracles were drawn from their movements or from their entrails (Dio Cass. lxii. 7; Athen. iv. 5; Diod. Sic. v. 32, xxii. 9; Justin, xxvi. 2; Cæsar, vi. 16; Strabo, IV. iv.; Tac. *Ann.* xiv. 30). The evidence for Irish human sacrifice has been disputed, but there is no reason to doubt its truth, though the number of victims at each sacrifice is an obvious exaggeration (*LL* 7*a*; *Book of Fermoy*, 89*a*; O'Curry, i. p. DCXLI, ii. 222; see § V. 4, **Dagda**). Within the sphere of Roman influence the Celts were prohibited from offering human sacrifice, but continued it symbolically (Pomp. Mela, iii. 2, 18). Probably the victims who represented the vegetation- and corn-spirits tended to become propitiatory offerings to gods of fertility, their numbers also being largely increased, and the sacrifice connected with the fertility of the land (Strabo, IV. iv. 4). Pliny's reference to ritual cannibalism in Britain may point to a sacramental eating of part of the flesh of such victims (*HN* xxx. 4, 13). The Celts ate the flesh and drank the blood of slain enemies to obtain their strength, and perhaps, as a rite of communion, they drank the blood of dead relatives (Livy, xxiii. 24; Diod. Sic. vi. 16; Solin. xxii. 3). Human victims were offered as foundation sacrifices (Nennius, *Hist. Brit.* § 40; Stokes, *TIG* xli; Carmichael, *Carm. Gad.* ii. 317), and at burials, though in the case of relatives and slaves the sacrifice was often voluntary (ANCESTOR-WORSHIP [Celtic]; Leahy, i. 105; O'Curry, *MCAI* i. p. CCCXXX; *L'Anthrop.* vi. [1895] 586). Heads of dead enemies were presented to the gods, or preserved ritually, probably in order that their spirits might be subservient to the victors. Heads of great tribal warriors were perhaps preserved in order to obtain for the tribe the protection of their spirits, as the myth of Bran's head would suggest (§ VI. 2); and from this cult of heads may have arisen the practice in Gaul of representing heads of certain divinities, sometimes in triple form (Strabo, IV. iv. 5; Diod. Sic. v. 29; Livy, x. 26. 9; *IT* i. 205; d'Arbois, v. 11, 175). See, further, SACRIFICE (Celtic).

3. **Prayer.**—Prayer defined the purpose of the sacrifice, or expressed the worshipper's desire that the gods would be propitious, as is seen in the Druidic petition at the mistletoe rite, and in Galatian Celtic sacrifices (Pliny, *HN* xvi. 95; Plut. *Virt. Mul.* 20; Aelian, *Nat. An.* xvii. 19). The arms were raised, during prayer, towards heaven (Dio Cass. lxii. 6; Tac. *Ann.* xiv. 30). Some prayers may have been of the nature of ritual incantations, the result depending on observance of an exact formula, *e.g.* the incantations used by the priestesses of Sena or the formulas used by warriors advancing to battle (Appian, iv. 8; Livy, xxi. 8, xxxviii. 17). War-cries sometimes consisted of the name of a god—an instance of the magical power of a Divine name; and, if the dance which warriors performed before a sword was mimetic of actions in battle, it would be a kind of acted prayer (Appian, vi. 53; Blanchet, *passim*).

4. **Divination.**—The Celts were devoted to divination (Cicero, *de Div.* ii. 36 [76]; Justin, xxiv. 4), and a special class of diviners existed in Gaul, like the *filid* in Ireland, though the Druids and private persons also practised it (see DRUIDS). Divination from the movements of victims, their blood, or their entrails, is often mentioned (Diod. Sic. v. 31; Justin, xxvi. 2; Tac. *Ann.* xiv. 30; Strabo, III. iii. 6). Auguries were drawn from the flight of birds or the course of animals (Justin, xxiv. 4; pseudo-Plut. *de Fluv.* vi. 4), and Strabo refers to the crow as an arbiter of disputes (IV. iv. 6). Irish sagas mention the crow as a prophetic bird; and the Druids divined from the voices of birds, from the clouds, from the direction of smoke or flames, and from yew rods on which oghams were written (*IT* i. 129, 220; O'Curry, *MCAI* ii. 224, *MS Mat.* 284; Joyce, *SH* i. 229; Livy, v. 34). Druidic knowledge of astronomy was probably largely astrological, as Irish examples show (O'Curry, *MCAI* ii. 46; Stokes, *TIG* 103). Divination by dreams was used by the *filid* in Ireland and also by the Continental Celts (Cormac, p. 94; *Ant. Laws of Ireland*, i. 45; Hyde, *Lit. Hist. of Ireland*, 1899, p. 241; Justin, xliii. 5; see BARDS [Irish]). The Irish 'illumination by rhymes,' used also in Wales, was a species of trance-utterance (O'Grady, ii. 362; Gir. Camb. *Descr. Camb.* i. 16). In the *taghairm* the seer was bound in an animal's hide and left by the waters, the spirits of which inspired his dreams (Martin, *op. cit.* 111; Pennant, *op. cit.* i. 311). The hide was probably that of a sacrificial animal. Seers also slept on graves to receive inspiration from the dead (*Coll. de Reb. Hib.* iii. 304; O'Curry, *MS Mat.* 494; Tertullian, *de Anima*, 57). See also DIVINATION (Celtic).

5. **Prophecy.** — The scholiast on Lucan (ed. Usener, p. 33) speaks of the Druids prophesying after eating acorns, the fruit of the sacred oak. Prophecy is also ascribed to the priestesses of Sena, and the 'Druidesses' of late Roman times (see DRUIDS). In Ireland both Druids and *filid* prophesied, while prophetic utterances are put into the mouths of divinities. In some cases the word used for these prophecies, *baile*, which also means 'ecstasy,' 'madness,' suggests that the method of the prophet was to work himself up into a frenzy or to speak in a trance. Prophecies and incantations were uttered by the seer standing on one foot, with one arm outstretched and one eye closed—this attitude is also ascribed to divinities when using prophetic and magical utterances (*RCel* xii. 98, xxi. 156, xxii. 61). The purpose was, perhaps, to concentrate the prophetic force or increase the virulence of the incantation, while the attitude may account for the references in Irish texts to certain mythic beings with one leg, one arm, and one eye. A similar attitude is used in magical rites elsewhere (GB^2 ii. 32).

6. **Tabu.**—The only reference to tabus among the Continental Celts is that made by Cæsar regarding the interdiction of religious rites to those who disobeyed the Druids, and the tabu on spoils of war which, being the property of the gods, could not be used by men (*de Bell. Gall.* vi. 13, 17; cf. the case of animals not eaten, v. 12; see § X. 3 (*a*)). In Ireland references are more frequent. *Geis* (pl. *geasa*) means something which ought not to be done for fear of disastrous results, or a binding obligation put on one person by another. The former has the more usual sense of tabu. Such *geasa* might involve a person before birth or in childhood, and were probably hereditary. Others were totemic, *e.g.* the *geis* on Cúchulainn not to eat dog, on Conaire not to kill birds, and on Diarmaid not to kill a boar. Others reveal and are based on primitive ethics, on ideas of honour, on omens, or on remembrance of catastrophes following certain deeds. The best known are those affecting kings (O'Donovan, *Book of Rights*, p. 3 ff.). Obscure as they are, they resemble kingly tabus elsewhere, and show that the kings were once regarded as gods, or Divine representatives, on whom the welfare of the community, agriculture, etc., depended,

and who must therefore avoid certain actions, places, and things. Later, the fruitfulness of the land was said to depend on a king's goodness, but at an earlier time it depended on his observing his *geasa*. In such case he would not meet with misfortune, he would make the earth fruitful, and would not experience the decay of years, and no epidemic would occur in his reign (O'Donovan, p. 7). The king had certain prerogatives which probably formed *geasa* to other people. He alone could eat of certain foods or go to certain places on certain days. The former may refer to the custom of first-fruits being tabu till eaten by a king, chief, or priest, or to the practice of kings and chiefs appropriating certain food-stuffs where food is scarce (see FIRST-FRUITS; Keane, *Man Past and Present*, Cambridge, 1899, pp. 141, 149). By analogy from the kingly *geasa*, the heroes of the sagas had many which they must observe (*LL* 107; O'Grady, ii. 175), religious, magical, honorific, etc. *Geasa* in the second meaning of the word were perhaps framed as spells, which fear made people obey when pronounced by another, *e.g.* a Druid. In folk-tales the word is often used for 'spells.' The most famous example is the *geis* which Grainne put on Diarmaid to elope with her (FEINN CYCLE, § 4). In either sense of the word the consequences of breaking *geasa* were disastrous, and several tales turn upon their inevitable fatality (see *RCel* xxi. 149, xxii. 27). The *geasa* are detailed, the breaking of them is described, and the tragedy ends with the destruction of the *geasa*-breaker. Perhaps fear of results of tabu-breaking produced these results automatically when a tabu was broken in Ireland, as among savages. See E. Hull, *FL* xii. 41, and § X. 3 (*a*) above (totemic tabus).

7. **Blood-brotherhood.**—This custom is mentioned sporadically in Irish sagas. Devorgilla wishes to wed Cúchulainn, but he, having sucked the blood from her wound while she was in bird-form, says, 'I cannot wed thee now, for I have drunk thy blood' (*LL* 125*a*). When Medb desires Cúchulainn's former friend Ferdiad to fight him, both heroes display great reluctance because of the tie of blood-brotherhood existing between them (Leahy, i. 158). A third example occurs in the tale of 'The Death of Muirchertach mac Erca,' in which Cairnech mingles the blood of Tadg and Muirchertach in a vessel for a treaty between them (*RCel* xxiii. 394 ff. § 14). The Irish also ratified leagues by drinking each other's blood, even in Christian times, and traces of a similar custom existed in the West Highlands in the 17th century (Gir. Camb. *Top. Hib.* iii. 22; Martin, p. 109).

XIV. *SACRED PLACES, THINGS, AND PERSONS.*—1. **Temples.**—The sacred grove, *nemeton*, existed over the whole Celtic area, the word frequently occurring in place-names (cf. the Irish *fid-nemed*, 'sacred grove' [Holder, ii. 1750; *Ant. Laws of Ireland*, i. 164], and the Galatian *Dru-nemeton*, § VIII. above). Lucan gives a vivid description of the horrors of such groves (*Pharsal.* iii. 399 ff.), and Dio Cassius (lxii. 7) mentions the human sacrifices which were offered in them. The scholiast on Lucan (ed. Usener, p. 33) says that the Druids worshipped the gods in woods without temples; but we know that the Boii and the Insubri had temples (Livy, xxiii. 24; Polyb. ii. 32), while temples, in the sense of buildings or sacred enclosures, are referred to by Diodorus (v. 27), Plutarch (*Cæs.* 26), and Poseidonius (*apud* Strabo, IV. iv. 6). The 'consecrated place' in Gaul mentioned by Cæsar (vi. 13; cf. 17) may be either a grove, a sacred enclosure, or a temple. There is no evidence that the insular Celts had temples. Under Roman rule, elaborate temples and smaller shrines were built on Roman models all over the Romano-Celtic area. Sacred vessels, spoils of war, money collected for sacred purposes, and war standards were kept in temples or 'consecrated places' (Livy, xxiii. 24; Florus, i. 20. 4; Arrian, *Cyneg.* 23; Polyb. ii. 32; Cæsar, vi. 13). See TEMPLES (Celtic).

There is no evidence that stone circles were Druidic temples. Stonehenge dates from the close of the Neolithic age, and the smaller circles are all probably pre-Celtic. They were primarily places of sepulture, and as such would be the scene of ancestral cults. The Celts probably regarded them as sacred, and may have joined in such cults; but they cannot be regarded as Celtic temples in the strict sense of the word. Celtic commemorative rites and festivals took place at tumuli or mounds, but worship at stone circles is never referred to (see § V. 3; FESTIVALS [Celtic], § 5). Stone circles with mystic trees growing in them, one of them with a well giving access to the Land under Waves, are connected in Irish tales with magic rites, but are not spoken of as temples (Joyce, *OCR* p. 246; Kennedy, *Leg. Fictions*, 1866, p. 271).

2. **Images.**—Maximus of Tyre (*Diss.* viii. 8) says that the Celtic (German?) image of Zeus was a lofty oak; but this may have been rudely shaped like the tree-trunks—images of gods—referred to by Lucan (*Pharsal.* iii. 412 ff.). Pillar-stones on graves are often mentioned in Irish texts, and these were apparently regarded as images of the dead. Other stones were also venerated in Ireland. The *plurima simulacra* of the Gaulish Mercury (Cæs. vi. 17) may have been boundary-stones like the Greek ἑρμαῖ, and evidence goes to show that the Gauls had a cult of such boundary-stones (Reinach, *RCel* xi. 224, xiii. 190). Hence *simulacra* may mean 'symbolic representations' rather than 'images.'

Bertrand (*RA* xv. 345) and Reinach (*RCel* xiii. 189) consider that the Gauls had no images, these being prohibited by the Druids, whom they regard as a pre-Celtic priesthood hostile to images (see DRUIDS). But there is some evidence for the existence of pre-Celtic images (*L'Anthrop.* v. 147), and no writer mentions Druidic hostility to image-worship. Among the Celts there were tree and animal images, and figures of divinities on pre-Roman coins (Blanchet, i. 152), while the insular Celts possessed images, though their priesthood was Druidic. The ready adoption of Roman images shows that no antagonism to images existed, and certain rude Gallo-Roman images—*e.g.* those of Cernunnos—have almost certainly been modelled on existing native types. The disappearance of such images would be accounted for if they were made of wood (cf. Grimm, *Teut. Myth.* i. 112). The Galatian Celts worshipped images (Strabo, XII. ii.; Plutarch, *Virt. Mul.* 20), and the Gauls who conquered Rome bowed to the seated senators as to gods, as if they were accustomed to images (Livy, v. 41).

In Irish texts idols are often mentioned (Cormac, p. 94; Stokes, *Martyr. of Oengus*, p. 186; *RCel* xii. 427; *Ant. Laws*, i. 45; Joyce, *SH* 274 ff.). The idols of Cenn Cruaich and his satellites were carved and ornamented in human form (*LL* 213*b*; Stokes, *Trip. Life*, i. 90, 93), and such groups of images existed elsewhere (O'Curry, *MS Mat.* p. 284). 'Hand gods,' probably images used for divination, are also mentioned (Keating, *Hist.* 49). In Celtic Britain idolatry is often referred to in the *Lives* of saints (Aelred, *Vita S. Nin.* ch. 6; Jocelyn, *Vita S. Kentig.*, chs. 27, 32, 34), and Gildas speaks of 'images mouldering away within and without the deserted temples, with stiff and deformed features' (*Hist. Brit.* 4), though these may have been Romano-British. Numerous Romano-Celtic bas-reliefs and images in stone and bronze have been discovered, and in some of these the dress and symbols of divinity are purely Celtic. See also IMAGES (Celtic).

3. **Symbols.**—Gaulish images may be classified by means of their symbols—the mallet and cup (symbols of creative power and of plenty) borne by Dispater, the wheel of the sun-god, the cornucopia and torque carried by Cernunnos. Other symbols occur on images, altars, coins, etc.; but their meaning is doubtful, and in many instances they are not purely Celtic, but of world-wide occurrence. These include the *swastika* and *triskele* (perhaps sun-symbols), single or concentric circles (sometimes with rays), crosses, and a curious S figure. The circles and crosses are often incised on bronze

images of Dispater, the S occurs on coins, and nine of these S symbols hang from a ring carried by the god with the wheel. Various explanations of this figure have been given; the most probable is that which recognizes in it a thunderbolt (see Reinach, *BF* 33, 143, 150, 152, *Catalogue sommaire du Musée des ant. nat.*[4], Paris, 1905; *RA* xvi. 17; Flouest, *Deux stèles* (appendix), Paris, 1885; Blanchet, i. 17, 158, 169, 316).

For sacred numbers, see CALENDAR (Celtic).

4. The Priesthood.—The Celtic priesthood is fully discussed in the art. DRUIDS. See also § VIII. above.

XV. *MAGIC.*—Magic runs through the whole fabric of Celtic religion, and is ascribed to gods, to kings (possibly the old priest-kings), to Druids, and to unofficial persons; hence there is no reason to believe that the methods recorded are pre-Celtic or were borrowed by the Celts. The Druid is the *magus*, or magician, *par excellence*, and later folk-belief makes Druidism and magic one and the same. Though the magical craft of the Druids is more in evidence in the Irish texts than in classical references, there is no doubt that the Druids of Gaul were regarded as magicians. Magic is also freely ascribed to women, and 'the spells of women' were dreaded by pagan and by Christian missionary alike. In Irish texts the *filid*, or poets, also practise magic, and most of the magical acts of the Druids are attributed also to the Christian saints who combated them. Druidic magic included shape-shifting (ascribed also to women and goddesses), invisibility, producing a magic sleep, causing lunacy by means of a magic wisp (the Norse 'sending'), uttering satires, probably of the nature of a spell, which caused blotches and death (a practice also ascribed to the *filid*), and protecting an army by the *airbe Druad*, or 'Druid's hedge.' Still more absurd were the Druids' claims to power over the elements, which they asserted they had created. Such powers were often exercised by the Druids of rival hosts to destroy the opposing force. They brought down fire from the sky, caused snowstorms, mists, and floods, dried up wells, and practised the art of rain-making. All these and other feats, *e.g.* removal of barrenness, were supposed to be produced by spells, such as those which the *filid* had to learn (O'Curry, *MS Mat.* 240). Perhaps the verses which the Druids would not commit to writing (Cæsar, vi. 14) were also spells. Spells with a magical appeal to the name of pagan divinities were still used in Christian times, and form the earliest native documentary evidence (8th or 9th cent.) to the old religion (§ V. 4). Many spells are still used locally in Celtic regions, Divine or saintly names being substituted for those of the old gods. They are handed down orally, and are used especially for healing (for the posture assumed while repeating a spell, see § XIII. 5; and for agricultural magic, see FESTIVALS [Celtic], and § XIII. 1). In Celtic areas, customs of an erotico-magical nature connected with megaliths, sepulchral stones, and boulders are still practised, and we may trace in them the old idea that ghosts of the dead or Nature-spirits could grant fruitfulness, etc., to those who performed a due ritual. In other cases, rites for healing are performed in connexion with trees and holed dolmens. For fuller discussion of the subject of this section, see MAGIC (Celtic), and CHARMS AND AMULETS (Celtic).

XVI. *FUTURE LIFE.*—The Celts believed firmly in a bodily existence after death, the doctrine being taught by the Druids. But there were various aspects of this belief; and there is evidence of a theory that the soul tenanted a new body in another region, of a theory derived from distant ages that the body lived on in the grave, and of a theory of transmigration.

1. Classical evidence.—Cæsar (vi. 14, 19) says that 'the Druids taught that souls do not perish, but pass from one to another ("ab aliis . . . ad alios") after death,' while Diodorus (v. 28) and Valerius Maximus (ii. 6, 10) connect the Druidic doctrine of immortality with the teaching of Pythagoras. Though the passages are generally taken to mean that the Celts believed simply in transmigration, the Druidic doctrine shows no trace of the Pythagorean expiatory transmigration. The points of connexion were rather that a doctrine of immortality was taught by Pythagoras and the Druids, and that this immortality was of a bodily kind. Cæsar's passage may be a mistranslation of a Greek original, and need not refer to a transmigration doctrine. Had the passages referred to been intended to indicate such a doctrine, they would not have alluded as they do to debts being paid in the other world, or letters conveyed there by the dead, or human sacrifices to benefit the dead there—the victims being supposed to rejoin the dead man. The Druidic doctrine probably resembled the ancient Vedic idea that the soul received its old body complete and glorified in another region. Bodily existence in another region is mentioned by Lucan: 'regit idem spiritus artus orbe alio' (*Pharsal.* i. 456 f.). Timagenes (*ap.* Amm. Marc. xv. 9), Strabo (IV. iv.), and Mela (iii. 2) speak only of the immortality of the soul; but Mela's passage suggests bodily existence also, as it speaks of debts passed on to the next world.

2. Burial customs.—The profuse Celtic funeral *mobilier* and the evidence of human sacrifice at burials also suggest that the Celtic future life was life in the body (see E. F. von Sacken, *Das Grabfeld von Hallstatt*, Vienna, 1868; *RCel* x. 234; *Antiquary*, xxxvii. 125; Greenwell, *British Barrows*, 1877; Blanchet, ii. 528; *L'Anthrop.* vi. 586). Irish texts describe the dead as buried with ornaments and weapons, ogham stones being set over the grave. Animals and, possibly, human victims were sacrificed. Wives of heroes desired to be buried at once with their husbands (*LU* 130*a*; O'Donovan, *Annals*, Dublin, 1848–51, i. 145, 180; Nutt-Meyer, i. 52; O'Curry, *MCAI* i. p. cccxxx; Leahy, i. 105; Campbell, *Pop. Tales of the W. Highlands*, iii. 62). Cæsar (vi. 19) says that all things dear to the dead man, even living animals, were consumed on the funeral pyre. Slaves and clients had formerly been consumed. Mela (iii. 2) also refers to those who of their own free will cast themselves on the pyre of their relatives, hoping to live along with them.

3. The Irish sagas.—Ghosts, in our sense of the word, do not exist in the sagas. The dead who return are fully clothed upon with a body, and the passages show that this corporeal life was independent of transmigration. Thus, when Cúchulainn returned at the command of St. Patrick,

'his hair was thick and black, . . . in his head his eyes gleamed swift and grey, . . . blacker than the side of a cooking-spit each of his two brows, . . . redder than ruby his lips.' His clothes and weapons are fully described, while his chariot and horses are equally corporeal (*LL* 245; cf. other instances in Nutt-Meyer, i. 49; E. Hull, p. 293).

This bodily existence of the dead is also suggested in Celtic versions of the 'Dead Debtor.' An animal, in whose shape the dead man helps his benefactor, is found in other versions, but in the Celtic group the dead man re-appears in his own corporeal form (Le Braz[2], i. p. xii; Campbell, ii. 12; Larminie, *W. Ir. Folk Tales*, 1893, p. 155; Hyde, *Beside the Fire*, 1891, pp. 21, 153).

4. The grave as the place of the dead.—Custom and belief show that early man believed that the dead lived on in the body in the grave. The belief often survives where quite different beliefs exist, and this seems to have been the case with the Celts. Their doctrine of bodily immortality may have been an extension of this belief, and their

under-world region of the dead an extension of the individual grave in its aspect as a dwelling of the dead man.

Oracles were sought at the graves of the dead, just as in Scandinavian belief the dead lived on in their barrows and spoke thence to the living (Tertull. *de Anima*, 51; E. Hull, *Pagan Ireland*, 1904, p. 142). Warriors were supposed to exert a sinister influence on their enemies from the grave. Existing customs in Celtic areas show connexion with the primitive belief, *e.g.* drawing the coffin nails, loosening the bindings of the corpse, or leaving the limbs free (Curtin, *Tales of the Fairies*, p. 156; Le Braz[2], i. 212; *FL* xiii. 60; Campbell, *Superstitions of the Highlands and Islands of Scotland*, 1900, p. 341). The dead are believed to rise in the body on the night of All Saints. In Celtic folk-tales the grave is a house in which the dead live, and they emerge from it in the body and act as if still alive (Curtin, p. 156; Larminie, p. 31; Le Braz[2], i. 217, 313, ii. 146; *RCel* x. 214).

5. **The 'orbis alius.'**—If the Celtic *orbis alius* to which Lucan refers means 'another region' of the world rather than 'another world' (Reinach, *RCel* xxii. 447), that region was most probably underground, the conception being evolved from that of the dead living on in the grave; and, though Lucan says that souls do not go to the silent halls of Erebus and the pale kingdoms of Dis, he is contrasting the current Roman belief in a world of shades with the richer belief of the Celts in bodily immortality rather than contrasting localities. Cæsar undoubtedly found the Gauls believing in an under-world god who could be equated with Dis. Other classical observers speak of the dead Celts as *inferi*, or as going *ad Manes* (Val. Max. ii. 6, 10; Mela, iii. 2, 19), and Plutarch makes Camma speak of descending to her dead husband (*Virt. Mul.* 20). But, as the Celtic Dis, ruler of the under world, was apparently a god of fertility, and as the Celtic doctrine of immortality contained no dismal element, the region must have been one of exuberant life. From the subterranean world of the Celtic Dis men had come forth (§ XII.), and thither they returned. From it also proceeded the fruitfulness of all things rooted in the earth. It was a replica of the land of the living, but life there was fuller, freer, and immortal. To this the words of Lucan point (*Pharsal.* i. 457 f.): 'Death, if your lore be true, is but the centre of a long life.'

The *orbis alius* was not the Celtic Elysium (BLEST, ABODE OF [Celtic], § 5). The dead are never said to pass thither; only favoured mortals while still alive might do so. Some Celtic folk-lore, however, reported by Plutarch (*de Def. Orac.* 18), might suggest that certain of the mighty dead passed to an Island Elysium. Some islands near Britain were called after gods and heroes, and in one of them dwelt sacrosanct persons. They were visited by Demetrius, according to Plutarch, and he was told that certain storms were caused by the passing away of some of the 'mighty.' Perhaps such mighty ones went to these mysterious islands, but this is certainly not stated. In another island Kronos was imprisoned, watched by Briareus and attended by demons. Elsewhere (*de Fac. Lun.* 28) he repeats the story of Kronos, and says that this island is mild and fragrant, and that people live there waiting for the god, who sometimes appears to them and prevents their departing. They are happy in pursuing religious practices and in studying legends and philosophy. Plutarch has mingled the Celtic Elysium belief with what he knew of the Druids and perhaps of such islands as that of Sena (FESTIVALS [Celtic], § 4), while the reference to Kronos may be based on Celtic tales of heroes sleeping in hills or mounds, whence they will one day emerge to benefit their people.

If souls of the mighty went to an island (whether Elysian or not), or if some local belief in an island of the dead had come to be held by Celts living on the coast (as in local Breton folk-beliefs regarding the drowned [Le Braz[2], i. p. xxxix; Sébillot, ii. 149]), this would explain the story in Procopius (*de Bell. Goth.* iv. 20) of the shades being carried by fishermen to Brittia—perhaps a mingling of such a local belief with the idea that Ulysses' island of the Shades lay to the north or, as Claudian sang (*in Rufin.* i. 123 ff.), in the west. But this island, as described, differs both from the *orbis alius* and from Elysium. Survivals of the old belief in an underground region are still to be traced (Sébillot, i. 418).

6. **Transmigration.**—In the Irish sagas this is asserted only of divinities and heroes, but not generally in connexion with their death. But it may have been extended sometimes to mortals, since traces of it are found in folk-belief. The dead are represented as birds (*Voyage of Maelduin*, § 19; O'Curry, *MS Mat.* p. 78), or are supposed to appear in various animal forms. But this is generally asserted of the wicked or unbaptized, and it may be a totemistic survival, or is perhaps connected with the common belief that the soul has the appearance of a small animal (*FL* iv. 352; *FLJ* v. 189; *Choice Notes*, 1858, pp. 61, 69; Maury, *Croyances et légendes*, 1896, p. 272; Rees, *Cambro-British Saints*, p. 92; Le Braz[2], ii. 82, 86, 307). The evidence is hardly sufficient to show that transmigration was the vital Celtic doctrine of future existence (cf. Joyce, *SH* i. 300). See TRANSMIGRATION.

7. **Future retribution.**—Of this there is little evidence in Celtic paganism, and it is doubtful whether any difference was made between the virtuous and the wicked beyond the grave. In existing Irish and Breton folk-belief the dead are believed to suffer from cold, and mediæval Celtic accounts mention the terrors of cold as an aspect of hell (Curtin, 146; Le Braz[2], ii. 91); but there is hardly ground for connecting this with pagan belief. In the *Adventures of S. Columba's Clerics*, hell is reached by a bridge over a glen of fire; but this may be traced to Scandinavian sources (*RCel* xxvi. 153). It might, of course, be contended that the Christian doctrine of hell has absorbed a pagan belief in retribution, but there is no trace of such a belief in the sagas, or in classical notices of Celtic eschatology. The hope of future bliss made men die without a tremor (Cæsar, vi. 14; Lucan, *Pharsal.* i. 455 ff.).

For the Celtic Elysium, see BLEST, ABODE OF THE (Celtic).

LITERATURE.—Besides the texts, editions, translations, and classical references (see § I.), the following works are essential: E. Anwyl, *Celt. Rel. in Pre-Christ. Times*, London, 1906, 'Celt. Rel. in the Mabinogion,' *Trans. 3rd Internat. Cong. Hist. of Rel.*, Oxford, 1908, ii. 234 ff.; A. Bertrand, *Rel. des Gaulois*, Paris, 1897; Bertrand-Reinach, *Les Celtes dans les Vallées du Pô et du Danube*, Paris, 1894; G. Bloch, 'Rel. des Gaulois,' *Rev. inter. de l'Enseignement*, xxix. 523 ff., xxx. 145 ff., *Hist. de France*, i., Paris, 1900; *Bulletin Epigraphique de la Gaule*, Vienna and Paris, 1877-86; J. G. Campbell, *Superstitions of the Scottish Highlands*, 1900; J. F. Campbell, *Pop. Tales of the W. Highlands*, 4 vols., Edinburgh, 1890, *Leabhar na Feinne*, London, 1872; *CIL*, Berlin, 1863 ff.; *Corpus Inscr. Rhenanarum*, Elberfeld, 1867; H. d'Arbois de Jubainville, *Cours de litt. celt.*, 12 vols., Paris, 1883-1902, *Essai d'un catal. de la litt. épique de l'Irlande*, Paris, 1883, *Les Celtes*, Paris, 1904, *Les Druides et les dieux celtiques à forme d'animaux*, Paris, 1906, *Les premiers habitants de l'Europe*[2], 2 vols., Paris, 1889-1894; Daremberg-Saglio, *Dict. des antiq. grec. et rom.*, Paris, 1886-90; Roget (Baron de Belloguet), *Ethnogénie gauloise*, 4 pts., Paris, 1858-1875; E. O'Curry, *Manners and Customs of the Anc. Irish*, 4 vols., London, 1873, *MS Materials of Anc. Irish Hist.*, Dublin, 1861; S. H. O'Grady, *Silva Gadelica*, 2 vols., 1892; *RCel*, Paris, 1870 ff.; S. Reinach, *Bronzes figurés de la*

Gaule romaine, Paris, 1900, *Epona*, Paris, 1895, *Cultes, mythes, et religions*, 2 vols., Paris, 1905, *Orpheus*, Paris, 1909; C. Renel, *Religions de la Gaule*, Paris, 1906; *Rev. épigraph. du Midi de la France*, Vienna and Paris, 1878 ff.; J. Rhys, *Arthurian Legend*, Oxford, 1891, *Celtic Britain*[4], London, 1908, *Celtic Folk-lore*, Oxford, 1901, *Celtic Heathendom* (Hibbert Lect.), London, 1888, President's Address, Section vii., 'Religions of the Germans, Celts, and Slavs,' *Trans. 3rd Internat. Cong. Hist. of Rel.*, Oxford, 1908, ii. 201 ff.; P. Sébillot, *Folk-lore de la France*, 4 vols., Paris, 1904 ff., *Paganisme contemporaine chez les peuples celto-Latins*, Paris, 1909; W. F. Skene, *Celtic Scotland*, 3 vols., Edinburgh, 1876–1880, *Four Ancient Books of Wales*, 2 vols., Edinburgh, 1868; C. Squire, *Mythol. of the Ancient Britons*, London, 1905; W. Stokes, ed. *Three Irish Glossaries*, London, 1862, Texts of *Dindsenchas* in *FL* iii. iv., *RCel* xv. xvi., ed. *Cormac's Glossary* (tr. O'Donovan), Calcutta, 1868, *Urkeltischer Sprachschatz*, Göttingen, 1894; E. Windisch, *Die altir. Heldensage Táin Bó Cúalnge*, Leipzig, 1905; Windisch-Stokes, *Irische Texte*, Leipzig, 1880 ff.; Wood-Martin, *Elder Faiths of Ireland*, 2 vols., London, 1903; *ZCP*, 1897 ff.

The older works on Celtic religion are mainly speculative, and should be used with great caution. Of these Dom Martin, *Religion des Gaulois*, 2 vols., Paris, 1727, is by far the most praiseworthy. Others are E. Davies, *Celtic Researches*, London, 1804, *Mythol. and Rites of the British Druids*, London, 1809; G. Higgins, *The Celtic Druids*, London, 1829; A. Herbert, *Britannia after the Romans*, London, 1836, *Neo-Druidic Heresy*, London, 1838; T. A. Wise, *Hist. of Paganism in Caledonia*, London, 1884.

J. A. MacCulloch.

CENSORSHIP.—In the present article this term is used in the sense of the official examination and regulation of matter intended for publication or for the stage. It applies to newspapers, books, songs, and plays, and is not to be confounded with inspection of publications or plays after production, with possible prosecution if immorality or sedition be found. Censorship proper takes place *before* publication. It is a private function, though discharged by a public official. It may abort intended books or plays, and the public may never know—hence its peculiar dangers.

1. **Of the press.**—There were no official censors before the age of printing, but there were informal beginnings of the practice. Among the ancients, methods were rough and ready. Socrates was condemned for blasphemy and for corrupting the morals of youth, and the hemlock cup prohibited any further offence. Xenophon published his *Anabasis* anonymously because he was an exile, and therefore forbidden to speak or publish in Attica. Such facts show that authorities were jealous of authors even in those early days. In the Middle Ages writers were ecclesiastics chiefly. To show courtesy to their superiors, and to avoid the risk of later censure, they used to submit their work before it was multiplied. When printing had quickened the flow of books, and growing culture had widened the circle of authors, clerical influence was strongest in demanding censorship, in view of dangers to the tenets of the Church (see Index).

In England, after the Reformation, the control of the press was centred in the Crown, and was exercised through the Company of Stationers. But laxity crept in. Many books were not even registered. Hence the Long Parliament enforced censorship, in spite of Milton's protest in his *Areopagitica*, the classic on toleration of opinion. Milton had himself been censored: objection was taken to part of *Paradise Lost*, so that he spoke feelingly. The Restoration made censorship even more rigorous. But, in 1693, a century after Milton's plea, the statutes in question were cancelled. The Act of Toleration in 1689 made the abolition of censorship a logical necessity. Since then the press of Great Britain has been free. No one is prohibited from publishing anything, but everything published has to run the gauntlet of possible prosecution for slander, sedition, immorality, or blasphemy. To facilitate prosecution, if necessary, printers must keep one copy of everything they print, with the name of the person employing them, and all publications (some official documents excepted) must bear the name of their printers and publishers.

In Scotland, in 1646, it was enacted that no book treating of religion or of the Kirk should be printed without a licence from the General Assembly. If a book dealt with the kingdom, it had to be licensed by a judge or by a Secretary of State. Printers had to be licensed also. Since the Union, Scottish and English practice have coincided.

In India there was established in 1910 the nearest permanent approximation to a censorship that the Empire possesses. Money penalties are imposed on newspapers for sedition. A third offence involves forfeiture of the press. It was stated in the Indian Legislature that there was to be 'no censorship or antecedent restraint.' But, if its press be confiscated, there is some restraint on the issue of a newspaper. Control of the printer has always been a favourite mode of controlling publications. But this Indian censorship is not entirely private and Star-Chamber-like, for the public have the opportunity of judging a newspaper before its suppression. These special precautions may be justified by the unrest of the time.

The only undiluted censorship of the press surviving under British rule is that of war-news from the seat of operations. This is common to all countries, and has obvious strategic reasons. No news is allowed to pass unless certified by military censors—officers specially detailed for the duty.

European countries generally exercise close supervision over the press—more for political than for moral reasons. Russia is particularly active. There foreign literature is revised before delivery, on importation. Pages may be torn out, articles 'blacked,' or delivery refused. She is even more vigilant over her native press. Newspapers are very firmly ruled. Recent revolutionary riots in St. Petersburg were reported to Russian readers by smuggled foreign papers, the home press being perforce silent thereon. The historian Bilbassov is said to have written a history of the reign of Catherine I. The two volumes published were promptly suppressed, and the remaining ten volumes are still in MSS. Thus it is that important works are sometimes printed in France, and smuggled into Russia, as Bibles and tracts were into England in pre-Reformation times. France is less active, but she has had fits of supervision. Voltaire had some of his works burnt by the public executioner. He had to publish outside of Paris, and have his books run in surreptitiously for a time. Much the same can be said of Rousseau. Nowadays freedom is practically perfect. Germany censors public meetings and public prints alike. Till well into last century nothing was allowed to be published without preliminary approval, though booksellers could often supply customers they trusted with prohibited matter. Even to-day German opinion is less free in its expression than British, though more free than Russian.

An unofficial censorship of books was intimated in 1909 in this country by the Circulating Libraries Association, which announced that they would not circulate books that were 'personally scandalous, libellous, immoral, or otherwise disagreeable,' and asked publishers to submit doubtful books for approval, a week before publication. Authors have protested, and the scheme has been somewhat modified. But it is difficult to condemn such censorship. The evils of bad novels are patent. The drawbacks of an official censorship are not present here. The books are not suppressed, and critics will readily champion any which may be wrongly tabued.

Censorship is impracticable. Books are too many. The name of newspapers is legion, and their issues are prepared in hot haste, during the night. Preliminary inspection is absurdly impossible.

Censorship is inadvisable. History has shown that it may deprive a nation of its best leading and inspiration. No man or body of men is wise enough and tolerant enough to be entrusted with the power of controlling the expression of public opinion. The right of free speech is a bulwark of freedom and progress.

'Should ye set an oligarchy . . . over it [the press] to bring a famine upon our minds again, when we shall know nothing but what is measured to us by their bushel?' asks Milton indignantly of the Long Parliament. He adds: 'When God shakes a Kingdom with strong and healthful commotions to a general reforming, it is not untrue that many sectaries and false teachers are then busiest in seducing; but yet more true it is, that God then raises to His own work men of rare abilities and more than common industry not only to look back and revise what hath been taught heretofore, but to gain further and go on some new enlightened steps in the discovery of truth.' He relies on the survival of the fittest in this sphere. 'Let her [Truth] and Falsehood grapple: who ever knew Truth put to the worse in a free and open encounter?' (*Areopagitica*).

But this assertion of freedom is without prejudice to the right and duty of careful inspection of what is thus freely published. There is clamant need for prompter and more strenuous effort to check the stream of corruption that would mingle with the river of publications. Some wholesome, if disagreeable, scavenging would sweeten literature.

Frequent offences occur in reports of divorce cases, and some would have such reports prohibited. Yet Lord Justice Bingham, President of the Divorce Division, giving evidence in a Parliamentary inquiry in 1910, defended them as a strong deterrent from immorality. Perhaps all that can be safely required is that judges should extend the practice of taking the grosser evidence *in camera*.

2. Of the stage.—Greek drama, which flourished four or five centuries B.C., almost certainly had a censorship from the nature of the case. Theatres were great State-institutions, as their magnificent ruins show. These would be closed to plays unless approved. There was also indirect censorship, in that plays were commonly entered in public competition for prizes. The judges would practically be censors. Plays that did not conform to their ideas or prejudices would not gain prizes, and probably would suffer in their chance of performance. It is an illuminative fact that what is perhaps Aristophanes' best play, *The Birds*, was in competition placed second to one by an almost unknown writer. It is on record, too, that Æschylus and Aristophanes, the fathers of tragedy and comedy respectively, were both prosecuted for offences against the dominant orthodoxy and politics of their times—offences, that is, in their plays. Censorship of the more modern stage, like that of the press, had an ecclesiastical origin. For that stage itself was ecclesiastical at first. Miracle and Passion plays were naturally subject to the Church. When religious drama was dying, the theatre began to be somewhat free in its criticism of the Church, and to deal with politics. Hence regulation was called for. In England the Master of Revels, the Privy Council, the Star Chamber, and the Lord Chamberlain have been successively the authorities in charge. The last named was doing the work as early as 1628, and in 1727 was statutorily entrusted with it. The then Lord Chamberlain swore in an Examiner of Plays, which office has existed continuously till now.

It was Jeremy Collier who, in 1697, by his *Short View of the Profaneness and Immorality of the English Stage*, established censorship permanently. Wycherly, Congreve, and Dryden were specially attacked. The last of these confessed the justice of the indictment, and retracted all of his works 'which can truly be argued of obscenity, profaneness, or immorality.'

The stage is the only institution which is regularly censored. 'The preservation of good manners, decorum, or of the public peace' is the stated object in view. Every new play or addition to an old play must be submitted to the Examiner seven days before performance, and, if licence be withheld, must not be performed, under a penalty of £50, and possible forfeiture of the theatre licence. This is the law in Great Britain. There is no censorship in Ireland. In the United States no general censor supervises the drama; but local authorities, with differing powers, are entrusted with the duty of forbidding the representation of plays hurtful to morality.

In 1909 a Parliamentary Select Committee sat on the subject, and reported that almost all the dramatists of the day desired freedom from censorship, or, at least, a court of appeal. They held that suppression of plays was an excessive use of executive power, and that prosecution of producers of improper plays was a sufficient safeguard. On the other hand, theatre-managers gave evidence that they desired censorship to continue. They feared that uncensored plays might bring disrepute on the whole stage. They also feared the vagaries of local authorities, if prosecution were relied on. The actors agreed with the managers. The Committee further reported that, in its own opinion, the laws that punish indecency, libel, and sedition were insufficient for the case, nor was it fair that theatre-managers should have to make expensive preparations for plays, without such an assurance as preliminary licence gave. Censorship should continue. But secret censorship, not subject to public opinion, was in danger of becoming conventional and partial. Therefore it should not continue to have the power of veto, and it should be allowable to present a play even though the licence had been refused. But the producers should be exposed to the risk of prosecution. Even licensed plays should involve that risk, with this difference, that, on conviction for indecency or libel, they should only be prohibited, while unlicensed plays, conviction being secured, should incur not only prohibition, but penalties for the author and the theatre-manager. Possibly legislative endorsement may be given to these proposals.

Stage censorship is more practicable than that of books or newspapers. Plays are limited in number, and it has been possible hitherto for one man to read and pass judgment upon them all, in Great Britain, *i.e.* upon all that are sent to the Examiner through theatre authorities. He does not receive plays from aspiring writers directly.

Censorship is also needful for the protection of those who enact the parts, and of the audiences. There have been bad plays, even with the censorship, and the Examiner testifies that he has refused to pass many, and has required pruning of more. Freedom from preliminary scrutiny would mean, for some theatres, a descent into the abyss. In many districts local authorities would be very slow to prosecute without some stimulus, no matter what the character of the plays. That a doubtful play should have attention drawn to it by the refusal of a licence, and so be subject to special vigilance, is the minimum of protection consistent with public safety.

For Roman Catholic censorship, see INDEX.

Popper, *The Censorship of Hebrew Books*, 1899; W. Barry, 'The Censorship of Fiction,' in *Dublin Review*, cxliv. [Jan. 1909] 111; Blue Book, 'Stage Plays (Censorship),' London, 1909.

THOMAS TEMPLETON.

CENTAUR.—'Centaur' is the name given in Greek mythology to a monster usually represented as having the upper part (to the waist) of a man and the body and legs of a horse. This definition must not be taken as exhaustive; the characteristic centaur form appears in Babylonian art of about the 11th cent. B.C. as the sign of Sagittarius (Perrot-Chipiez, *Hist. de l'Art*, iii. 604);[1] and, on the other hand, it is by no means certain that the early Greeks imagined the creatures they called centaurs to have this shape. Homer (*Il.* i. 268, ii. 743) calls them simply Φῆρες (a Thessalian form for θῆρες, 'wild beasts'); and the development of the centaur in Greek art seems to imply a gradual evolution rather than the borrowing of a ready-made type.

The centaurs in Greek legend are of two kinds. To the one belong Chiron, who is called by Homer (*Il.* xi. 832) δικαιότατος Κενταύρων, and who acted as teacher and guardian to heroes such as Achilles and Jason in his cave on Mt. Pelion in Thessaly, and Pholus, who entertained Herakles on Mt. Pholoë, between Elis and Arcadia; to the other, the wild and lawless monsters who laid violent hands on women, hurled trees and rocks, and were conquered or destroyed by Herakles or the Lapithæ. The two chief occasions of Herakles' exploits against them were when Nessus, who was carrying Deianeira over the river Evenos, laid hands on her and was slain by the arrows of the hero, and when the other centaurs, attracted by the odour of the jar of wine that Pholus had opened, invaded his cave and were driven off by Herakles. Both are favourite subjects in art, as is also the great battle between the Lapithæ and the centaurs, in which the chief heroes are Theseus and Pirithous; and the most characteristic incident is the overwhelming of the invulnerable Cæneus with pine trees and rocks, the usual weapons of the centaurs.

Many varying accounts are given in local legends as to the origin of the centaurs. According to one version, they were the offspring of Ixion and a cloud (Νεφέλη) substituted for Hera; another account made them arise from the seed fallen from Zeus in his passion for Aphrodite; and, according to others, their mother had or took the form of a mare. Chiron was said to be the son of Kronos and Philyra (the poplar); and Pholus, of Silenus and one of the Μελίαι (ash-nymphs). The names of centaurs generally suggest mountains or trees (*e.g.* Πετραῖος, Οὔρειος, Δρύαλος, Πευκεύς).

Few questions have been more disputed among mythologists than the origin and interpretation of the myth of the centaurs. Many suggestions have been made as to the etymology of their name, but none is satisfactory; the connexion with the Sanskrit *Gandharvas* (on whom see Macdonell, *Vedic Mythol.*, Strassburg, 1897, pp. 136–138, and the references there given) is now discredited, since the two classes of being agree neither in name nor in characteristics. By some the centaurs have been thought to be personifications of natural phenomena, such as winds or mountain-torrents; but such personification is alien to primitive myth. They should probably be rather regarded, with Mannhardt (*Ant. Wald- und Feldkulte*, ii. 102), 'as spirits of the forest or mountain, to whose action these phenomena are assigned.' They are thus in many ways analogous to the Sileni and Satyrs, whom they resemble in their love of wine and their unbridled passions. The rationalistic explanation of the centaurs as horsemen who appear to be one with their horses may apply to the Oriental archer, but seems inconsistent with the history of the form in Greece.

The earliest representations of centaurs in Greek art usually show them in completely human shape, with the body and hind legs of a horse attached to their backs. Later on they take the more familiar form which we see, for example, in the metopes of the Parthenon. The battle of Greeks and centaurs came, with the ethical tendency of myth, to be regarded as a symbol of the triumph of skill over brute force and of civilization over barbarism, and therefore as typical of the great victory of Hellene over Oriental. In later art, centaurs were a favourite subject of playful mythological genre, such as the centaur family by Zeuxis, or the centaurs with Erotes or Mænads of Græco-Roman art.

Mythol. und Religionsgesch.*, Munich, 1906, Index, *s.v.* 'Kentauren'; J. C. Lawson, *Modern Greek Folklore and Ancient Greek Religion*, Cambridge, 1910, p. 190; Roscher, art. 'Kentauren,' where full references are given.

E. A. GARDNER.

[1] According to late Hindu tradition, the Naras, created, along with other semi-divine beings by Brahmā, also possess human bodies with horses' limbs, as contrasted with the Kinnaras, who have horses' heads and human figures; but it would be idle to connect these Naras, who are among the musicians of Kuvera's court (*Mahābhārata*, II. x. 14), either with the centaurs or, in view of their late origin, with Babylonian mythology.

CENTRAL AFRICA.—See NYANJA TRIBES.

CENTRAL AMERICA.—Central America, as we understand it, begins on the isthmus of Tehuantepec. To the west of it lay the countries subject to the sway of the Mexican kings. The prominent feature of the regions east of the isthmus is the compact mass of nations belonging to the great Maya linguistic stock. The particular traits of Mexican culture may be recognized to a certain degree also among the less civilized nations, settled, formerly as well as now, together with or close to the Mexican tribes in the countries west of the isthmus region. The Mayas of Central America had to deal in their very home with Mexican intruders. But Maya culture, Maya art, and—it would seem—Maya mythical and religious conceptions prevailed throughout that vast region, down to Honduras and the primeval forests of eastern Nicaragua and Costa Rica, where other more primitive nations of South American stock were in contact with the highly civilized Central American tribes. We know very little about the religion of those semi-civilized inhabitants of the isthmus of Panama, of Costa Rica, and of eastern Nicaragua. Central American religion is for us the religion of the Maya tribes.

1. Religious practices.—The general character of Central American religion was the same as that of the Mexican tribes. The rites and ceremonies practised answered a double purpose: they were intended (1) to fit one to approach the supernatural beings, and (2) to secure from the gods, by a kind of magic process, the things one needs at any given moment.

Ceremonial ablution was the favourite method of securing the former aim. In Mexico and Central America it was regularly connected with the penances, mortifications, blood-lettings, of which we shall presently speak. In Mexico there was a more particular use of ceremonial ablution in the case of a new-born child. In Central America, that is to say, in Yucatan, sprinkling with holy water ('virgin-water,' *i.e.* rain-water) and washing the forehead, the cheeks, and the hands and feet were resorted to in the ceremony of the *em-ku*, 'descent of the Divinity,' when the youths of both sexes were deprived of the baubles distinctive of childhood, and admitted into the fellowship of the tribe.

In a more general way, fasting was considered indispensable for fitting oneself to enter into communion with the Divinity. In Central America, as well as in Mexico and in most parts of the American continent, it consisted in abstaining from the usual seasoning—salt and red pepper—and from sexual intercourse.

Penance, mortification, and blood-letting exhibit the most prominent feature of Mexican and Central American religious practice. Incisions were made in the rim of the ear; the tongue was pierced, and sticks, sometimes attached to a string, were drawn through the hole made in it; the muscles of the arms and legs were pricked by thorns. In some countries, at certain ceremonies, the penis was pierced in the same manner, and a string was drawn through the holes so as to connect the whole company. The motive that led to such practices was, without doubt, to get rid of sin and to be qualified thereby to approach God.

For the same reason, confession played a great part in the religious practices of these people. In Central America it was considered the indispensable expedient if one was to escape from an imminent danger. A physician, called to attend a person suffering from mortal disease, commenced the treatment by confessing him. And down to this day the inhabitants of the tropical woodlands of Guatemala and Honduras, when they meet a jaguar, instead of attacking him, fall down on their knees and begin to enumerate their sins, saying: 'Do not kill me, I committed such and such sin.' It is obvious that this behaviour originates in the idea that confession cleanses from sin and thus relieves from death, the punishment of sin. For the same reason, in Central America, as well as, *e.g.*, in ancient Peru, confession was the regular preliminary to a religious observance. It fitted men for approach to God.

What confession was for the individual, the rite called by Landa *echar al demonio* ('expelling the demon') was for the community. It was the regular preliminary to every public ceremony in Yucatan. Within a sacred enclosure, where all who were to take part in the ceremony stood, the head-priest presented an incense-offering, praying over it, and then a man carried the offering, together with the censer, out of the village, flung it away, and returned without looking back.

Incense was the regular offering. Copal, beeswax, rubber, and maize-flour were burned as incense. The censers are described as dishes or bowls, or as footed vases with perforated sides and fantastical faces on the rim. The latter form is still used by the Lacandons, a branch of the Maya family, who succeeded in remaining free from Spanish domination and from Christianity, and in conserving their ancient pagan rites. It is a curious fact that the censers are regarded by the Lacandons as representing their gods. In an ancient report on the manners and customs of the Indians of Valladolid (Yucatan), the name of 'idols' is applied to the vases that served for incense-burning. Tozzer infers that the Lacandon view was the original one; but we know that real idols, carved from red cedar-wood, were in general use throughout Yucatan and the neighbouring countries, and the excavations have brought to light a number of clay idols of most variegated form and artistic design.

Besides incense, all kinds of food were offered to the gods—maize, the blood of turkeys, and various animals. A distinction was made according to the cardinal point where the god to whom the offering was presented was thought to reside; turkey being offered to the eastern, deer to the northern, iguana to the western, fish to the southern, gods. A particular and important class of sacrifices was that of dogs. It has been maintained that this dog-sacrifice was only a substitute for human sacrifice, but the present writer thinks that another explanation must be given. The dog played an important part in the mythical conceptions of the Central American tribes. He represented to them the fire that falls from heaven—lightning, thunder-storm, and the like; he was a kind of rain-god and a bringer of food. Presenting a dog to the gods was certainly meant as a magic rite to attract rain and to produce food. Human sacrifice also existed in Central America, but was by no means so regular and so frequent as, *e.g.*, in Mexico.

For all these practices there were professional adepts or priests, called *ah kin* ('fortune-teller') or *ah buc tzotz* ('with tangled hair'), who served as mediators between the common people and the gods. They were assisted in the execution of the ceremonies by four aged men called *ohac*, who were elected by the people. Particular priestly offices were that of the 'singer' (*kayom*), that of the 'slayer' (*nacom*), and that of the interpreter of the Divine oracles (*ohilam* or *ahbobat*), and there were recognized sorcerers, called *ah cunal than*, *ah ez*, *ah pul yaah*, and *naual*.

2. Gods.—There has been much dispute as to the origin of gods. We shall not enter upon this tangled question, but, judging from what we learn from primitive peoples, it may be said that the gods of primitive peoples are, practically, personifications of natural bodies or physical agents; hence the established polytheism throughout the world.

In the pantheon of Central America, Mexico, and other parts of the continent, the first place was occupied by the heavenly bodies—the sun, the moon, and the stars, especially the morning-star, and the evening-star. The sun-god was called in Yucatan *Kin-ich ahau* ('Lord of the face of the sun'). He was interpreted or symbolized as an *arara*, or identified with this bird, and thence derived the name *Kin-ich Kak-mó* ('the fire-bird, the *arara*'). His temples stood on the north side of the central court, and he presided over the years that were considered to belong to the direction of the north.

The moon-god was supposed to be an old man, the father of the gods and of men. He represented the death and the regeneration of Nature, and he was said to resuscitate the dead. His name was *Itzamná* or *Itzmatul*, interpreted by the words the god himself uttered when he lived among men: *Itz en caan, itz en muyal*, 'I am the dew of the heaven, I am the dew of the clouds.' His temple stood on the west side of the central court, and he was the ruler of the western years.

The stars were regarded as the souls of the dead, and it seems that the Milky Way, or the direction south-north, was assigned them. We do not know the names of these star-divinities, but their images are well marked, and are often to be found in the figured and hieroglyphic manuscripts. The direction of the south seems to be ascribed to them, particularly to *Hozan-ek*, the evening-star, or—as a substitute for them—to the god of death.

The rain god or thunder-god, called *Ch'ac*, *Hu'tz-Ch'ac* or *Pap'ol-Ch'ac* ('lightning, the cutter, the opener of the pouch'), or *Ah bolon tz'acab* ('Lord of the nine generations [or medicines]'), is the fourth of the four great Divine powers, and is assigned to the direction of the east. He is distinguished by a curious elongated nose. His image is exceedingly common in the manuscripts as well as on the walls of the temples and on other sculptural monuments.

Another god, whose image occurs very frequently on the pages of the Mayan manuscripts, is obviously a personification of the maize plant. He is associ-

ated with another young god, and is, in some places, found acting as a substitute or representative of Itzamná.

A god called *Ekchuah* ('black scorpion') is mentioned by Landa, and described as the god of merchants and of cacao-planters. A black god, represented in the manuscripts in two very different forms, both distinguished by a scorpion-tail, must be identified with the *Ekchuah* of Landa.

There were also female deities: *Ix ch'el*, the goddess of medicine; *Ix chebel yax*, identified by the priest Hernandez with the Virgin Mary, and others.

Special gods, called *Bacab*, were the upholders of the heavens in the four quarters of the world; and the heavenly gods, in opposition to those of the under world, were known as the *oxlahun ti ku* ('the thirteen gods') as contrasted with the *bolon ti ku* ('the nine gods'), according to the supposed number of the heavens and of the under worlds.

The two creator-gods, called *K'u-cumatz* ('feathered snake') and *Hurakan* ('one-legged'), the prominent figures in the cosmogonic myths of the *Popol Vuh* (the Quiché saga-book), are not indigenous Central American conceptions, but are borrowed forms of the famous Mexican gods *Quetzalcoatl* and *Tezcatlipoca*. In Yucatan, *Kukulcan* corresponds to the Quiché *K'u-cumatz* and the Mexican *Quetzalcoatl*. He is described as a culture-hero, a founder of cities, and he represents the period when Mexican colonists had control over the greater part of the Yucatan peninsula.

Some other personages named in the Quiché saga-book deserve special mention, as they obviously are of indigenous creation, e.g. *Vukub Cakix*, the great macaw; the *arara*, acting as a sun- and moon-god of pre-historic times; his sons *Cipacna* and *Cabrakan*, the gods of the earthquakes; and, finally, the twin heroes, the ball-players *Hunahpu* and *Xbalanque*, who descend to the under world, defeat its rulers, and, in acknowledgment of their victory, are transformed into the sun and moon.

The popular Quiché god was *Tohil*, the thunder-god; the national gods of the Cakchiquels were the *Chay-abah* ('the obsidian stone') and the bat-god, also called (apparently) *Nicah ta'kah* ('centre of the valley'). At the present day the Kekchi inhabitants of the mountainous district of Alta Vera Paz (Guatemala), without derogating from their Christianity, worship the sun (called by them *Xbalamke*), the moon (called *Po*, the female consort of the sun), the lightning (called *K'aa'k*), and a number of other deities (generally called *Tzultaka'*, 'mountain and valley,' and identified with certain remarkable or grandiose natural objects—high summits, mountain-passes, precipitous rocks, dangerous river-passages, thermal waters, caves, lonely trees, and the like).

3. Calendar and annual religious festivals.—The public ceremonies celebrated by a tribe in the course of a year are generally connected with the work that is necessary in the different seasons, and, in the case of an agricultural people, with the different stages of field-labour. The number of performances depends on the religious activity of the tribe, and, in part, on their calendar. Men are generally in the habit of dividing the year according to the revolutions of the moon. It is a peculiarity of the Mexican and Central American tribes that the partitions of the year were made in conformity with their numeral system, that is to say, by periods of twenty days. The year is in this way divided into eighteen sections of twenty days each (usually called months by the Spanish historians) and five supplementary days. The latter were called by the Mexicans *nemontemi* ('unfit for work'), and by the Mayas *xma kaba kin* ('days without names'; for further details, see art. CALENDAR [Mexican and Mayan]). The Mexicans had celebrations in each of the eighteen periods of twenty days, but they avoided any ceremony, and generally abstained from any important work, during the five supplementary days. The Mayas were more moderate in celebrating festivals in the course of the year, but they devoted the five supplementary days to a series of very important ceremonies. In accordance with their custom of expelling evil and averting bad omens before entering on a ceremony or beginning any important work, they sought also to avert misfortune and bad luck before beginning the new year: and the five supplementary days, the *xma kaba kin*, were devoted to these particular ceremonies.

On a day of the so-called month *Ch'en* or *Yax* (=January), by appointment of the priests, the Mayas celebrated the *oc-na* ceremony, the renovation of the temple. They cast away and broke their clay-idols and censers, repaired and re-painted their temples, and at the same time 'examined the signs (prognostics) of the gods of the four cardinal points,' that is to say, they undertook, by elaborate ceremonies, to drive out the evil that was to occur in the new year, according to the quarter of the world by which the new year in question was considered to be governed. From the great central square, in each of the ancient Mayan towns, there started four roads running more or less directly to the gates by which the enclosure was interrupted at the four cardinal points. There were heaps of stone raised on the outside of each of the gates. In the five days preceding the year that was to be governed by the divinities of the east, they set up an idol called *uayayab* on the stone-heap at the outside of the southern gate; and in the house of the cacique, in the midst of the town, was placed another idol representing the god who ruled the east. Then they took the *uayayab*-idol from the stone-heap at the southern gate, mounted it on the top of a pole, and placed it opposite the idol of the ruler of the east, in the house of the cacique. They honoured it with a variety of offerings, and at the end of the five days took it to the eastern gate and cast it out of the town. In the same way, in the five days preceding the year that was to be governed by the divinities of the north, they set up the *uayayab* on the stone-heap at the eastern gate, brought it to the house of the cacique in the midst of the town, and cast it outside the town at the northern gate. And so in the five days preceding the other two years.

A great annual ceremony, called *tupp-k'a'k* ('extinguishing the fire'), took place at the vernal equinox, in the so-called month *Mac*, just before the beginning of the rains. A great pile of wood was heaped up and set on fire; animals of every kind were sacrificed and thrown into the fire; and finally, the priests, by pouring water out of jars, extinguished the flames. It is distinctly stated that this was performed for the purpose of getting abundant rain for the crops. The performance concluded with the erection of a miniature effigy of a stepped pyramid and anointing the upper steps with the sacred blue colour.

A second great annual ceremony was celebrated in the month called *Pax*, corresponding to the second half of our month of May—the time when the sun, in its shifting to the north, comes to stay in the zenith over Yucatan. The festival was called *Pacum Chac*, and the god worshipped in it was the war-god *Cit chac coh*. Five days before the ceremony, the chiefs of the different villages assembled in the temple of the war-god in the principal town. They fasted and kept awake all these five days, war-dances were performed, and the war-chief (*nacon*) was conducted in procession through the town. The feast itself consisted in a

fire-ceremony similar to that of the month *Mac*, but it was followed by the solemn sacrifice of a dog—the representative of the thunder-god (see above)—and the breaking of jars filled with wine, imitating and producing, as was certainly believed, the pouring down of the much-desired rain.

The third great annual ceremony was held in the so-called month of *Pop*, the second half of our July, when the sun, in its return to the south, came to stay in the zenith over Yucatan. This feast was, at the time of the conquest, regarded as the beginning of the year. Consequently, the principal ceremony was the kindling of new fire and a solemn incense-burning. For this feast they renewed all their household-utensils—plates, bowls, jars, stools, and the wrappings of their idols—throwing to the dust-yard those that had formerly been used.

In the months following this feast, the different social classes performed a consecration of their professional instruments by anointing them with the sacred blue colour (the colour of water and rain). First came the priests; then the sorcerers and the physicians; next the hunters and fishermen; finally the artisans and other working men.

The fourth great annual feast was the *Chickaban*, held in the town of Mani, in honour of the god *Kukulcan*, in the so-called month of *Xul*, corresponding to our October and November. The chiefs of the whole country assembled in the town of Mani, and a standard of costly feather-work, presented in one year by one town, in the next by another, was set up on the temple of Kukulcan. The chiefs placed their particular idols in the courtyard of the temple on a bed of leaves, and passed the five days preceding the feast in fasting, keeping awake, and worshipping their idols, and in religious dances. The feast itself consisted in a solemn offering, and the god was believed to come down from heaven to receive the objects and the service presented to him.

Other feasts of minor importance were celebrated at different seasons in honour of *Ekchuah*, the god of merchants and cacao-planters, *Hobnil*, the tutelary god of bee-hives, and *Acanum*, the god of hunters; and in the different towns and villages in honour of *Chac*, the rain-god, to whom was ascribed the growth of the maize crops and of other vegetables.

CENTRAL INDIA.

1. Geography and ethnology.—'Central India' is the official designation of a group of Native States in India forming a straggling and incompact area, which lies between 21° 22′ and 26° 52′ north latitude, and 74° and 83° east longitude. It includes 132 States, while, in addition, sixteen chiefs belonging to it now possess no territory, but receive cash revenues paid by other chiefs, under the guarantee of the Government of India. Central India has a total area of 78,772 sq. miles, and its population in 1901 was 8,628,781.

Political relations with the Government of India are supervised by an Agent to the Governor-General, subordinate to whom are seven officers in charge of the Presidencies of Gwalior and Indore, and the Political Agencies of Baghelkhand, Bundelkhand, Bhopal, Bhopāwar, Indore, and Mālwā. The principal chiefs are the Maharajas (Hindu) of Gwalior, Indore, Rewah, Orchha, Datia, Panna, Chhatarpur, and Charkhāri, the Rāja (Hindu) of Dhār, the Begam (Muhammadan) of Bhopāl, and the Nawāb (Muhammadan) of Jaora. Gwalior, the largest State, has an area of 25,041 sq. miles, and a population of 2,933,001; while Rewah has an area of 13,000 sq. miles, and a population of 1,327,385. No other State attains an area of 10,000 sq. miles or a population of a million.

As a political unit, Central India is entirely a creation of British rule, and its physical features and population both present great diversities. Near the southern border flows the Narbadā river, from east to west, in a broad valley between two ranges known as the Sātpurās and the Vindhyas. North of the latter lies an extensive plateau, with an area of 34,000 sq. miles, including the tract known as Mālwā. East and north-east of the main plateau is a low-lying area of about 18,000 sq. miles, in which are situated Bundelkhand and part of Baghelkhand. The remainder of Central India, about 26,000 sq. miles, comprises the hilly tracts in the Vindhyas and Sātpurās and their offshoots. The inhabitants of the plateau and of the plain alike live chiefly by cultivation, but differ in physical appearance, those of the low-lying tracts being shorter and more thickset than their neighbours to the west. In the hills are found hunting tribes such as Bhils, Gonds, and Korkūs, with whom agriculture is a secondary occupation. Western Hindi is spoken by 4½ millions, and Eastern Hindi by 1½ millions, chiefly in the plains; various dialects of Rājasthāni by 1½ millions in the plateau, and Bhil dialects by ½ million.

2. History.—Early Sanskrit literature assigns most of Central India, as defined above, to the dark-skinned aboriginals; but in the 4th and 3rd cents. B.C. the Mauryas claimed jurisdiction over it, and Aśoka was viceroy at Ujjain. A fragment of an edict issued by him when he had become emperor, and had been converted to Buddhism, has been found at Sānchī, in the Bhopāl State, where a magnificent *stūpa*, with ornamented gateways and railing, is still standing. When the empire of the Mauryas broke up, Brāhmanism again revived among the Aryan settlers, and spread to some extent among the jungle tribes. It is worthy of note that the only known inscription on stone mentioning the Indo-Greek rulers of the Panjab, which was found recently near the town of Bhilsa, in the Gwalior State, records the erection of a pillar in honour of Garuḍa, the emblem of Viṣṇu.

From the fragmentary historical records of early times, Central India appears to have been penetrated by the Sakas about the 2nd cent. B.C., while some of the jungle tribes held their own against the Guptas in the 4th cent. A.D. In the 5th and 6th cents. began the dominance of Rājput communities of Gūrjara origin in this part of India, though their full conversion to Hinduism may date from three or four centuries later. At the end of the 10th cent., when Muhammadan invasions began, they were supreme, but divided into clans which carried on constant wars with each other. During the early Muhammadan period, the country suffered from fierce raids by the invaders, gradually paving the way for more complete subjection to protect the route from Delhi to Southern India, which lay through this tract. As the central power at Delhi waned, an independent dynasty rose to power in Mālwa (A.D. 1401 to 1531), but yielded at last to the neighbouring king of Gujarāt. Early in his reign Akbar incorporated the whole of Central India in his empire. At the death of Aurangzib, when the Mughals, like their predecessors, found themselves no longer able to retain their vast possessions, the Hindus again regained independence. From 1743 may be dated the beginning of Marāthā rule, which gradually spread over the whole tract, though fierce resistance was offered by the Bundelas in the east. Throughout the latter part of the 18th cent., Marāthā, Muhammadan, and British fought with each other, till the last prevailed. At the beginning of last century a policy of non-intervention was enjoined by the Directors of the East India Company, with evil results to the wretched populace of Central India, who suffered from the constant quarrels of their rulers. Under Lord Hastings, however, the Marathas and the bands of freebooters, who had not only laid waste Central India, but had also raided adjacent British territory, were rapidly and effectively subdued. To Sir John Malcolm (1818–1821) is due the settlement under which the States of Central India took their present form. Apart from a brief war in Gwalior in 1843, and the Mutiny of 1857–59, Central India has since enjoyed peace.

3. Castes and religion.—Caste (*q.v.*) and religion are the two striking characteristics of the people of India.

(*a*) To obtain a view of *caste* in this area it is necessary to consider separately the natural divisions of the country. In the plateau the Brāhmans come of the same stock as those in the neighbouring parts of Rājputāna, such as the Mālwi, the Nimārī, and Srīgaur. Those dwelling in the plains are akin to those of the United Provinces, such as the Jijhotia. Over the whole area Brāhmans form 13 per cent of the Hindu population, and constitute the strongest single caste. The Rājputs or Kṣatriyas are fewer in number. Those who live in the plateau are chiefly offshoots of the great clans of Rājputāna proper, and maintain marriage connexions with them; but in the plains are found local groups, such as Bundelās, Dhandheras, and Ponwārs or Parmārs, with whom the recognized Rājputs do not intermarry. The Marāthās now advance a claim to be considered Rājputs, and similar pretensions are advanced by the Bhilāla Bhūmiās in the hilly tracts, who afford an example of the absorption of aboriginal tribes by Hinduism. No peculiarity has been noticed among the Baniās, or trading castes, who belong to classes well known in Northern India. A considerable proportion are Mārwārīs from Rājputāna. By religion the Baniās are Hindus and Jains, but many professing Jains also reverence Hindu deities. As in the case of the two leading castes, the difference between the plateau and the plain is strongly marked among the lower castes. Thus, in the former, Gūjars, Mālīs, and Kunbīs are most important, while in the latter are found Ahīrs, Gadariās, Kāchhīs, and Lodhīs. The chief hill tribes are the Arakhs, Bharuds, Bhīls, Bhilālas, Gonds, Kirārs, Kols, Korkūs, Kotwāls, Mīnas, Patlias, and Seherias.

(*b*) It is difficult to classify a population including such heterogeneous items by *religion*. The vast majority profess to be Hindus, but among the jungle tribes inhabiting the hilly tracts the distinction between Hinduism and Animism is hard to trace, and, indeed, the same may be said of the lower castes elsewhere. At the Census of 1901, as a rough guide, all members of the twelve hill tribes already named were classified as Animists. On this basis, Hindus numbered seven millions, and Animists one million; but, according to the census schedules, about two-thirds of the latter described themselves as Hindus. Central India thus presents a most interesting variety of religious belief—from the pantheism, which may be taken as the highest form of Hinduism, among educated people to the elementary Nature- and spirit-worship practised by the shy tribes dwelling in the jungles on the slopes of the Sātpurās and Vindhyas.

An examination of the sects returned by Hindus shows, as elsewhere in India, that only a comparatively small proportion of the people really know to what sect they belong. About a million declared themselves to be Smārth. More than two and a half millions expressed their special reverence of Viṣṇu in one form or another, but few could state the particular Vaiṣṇava sect to which they belonged, such as Kabīrpanthi (125,000) or Rāmanandi (156,000). Those who professed to reverence Devi (975,000) or Sakti (759,000) must be taken as including not only the worshippers of female counterparts of the recognized gods, but also many whose deity is a local goddess or a special goddess of disease. Altogether about 650 sects or deities were returned by Hindus. Most rivers and many lakes or ponds are held sacred. Chief among these is the Narbadā, giving its name to the Narmdeo Brāhmans, who form the special priests at shrines on its banks. It is held so pure that the Ganges is believed to come annually, in the form of a black cow, to be cleansed from sin in its sacred waters, returning white and purified. Its source near Amarkantak in the Rewah State, and Barwāni, are the most sacred spots on its course in Central India. One legend ascribes the origin of the Narbadā and the Son, which also rises at Amarkantak, to two tears dropped by Brahmā. The Sipra, a river of Mālwā, said to have sprung from the blood of Visnu, and believed to flow with milk at times, is sacred throughout its course. To the Bhīls and Kolis, dwellers in the wilds, no river is so holy as the Māhi, which they regard as their mother.

Altars to the snake-gods are found in nearly every village. Generally a low platform built round a snake's hole suffices, but sometimes a small shrine is built. Snakes are worshipped chiefly by women, in connexion with the bearing of children, but in Bundelkhand they are invoked to cure gout and rheumatism. Among the Bhīls and Bhilālas the python is especially reverenced. Tree-worship presents no peculiarities compared with other parts of India, but a number of trees are reverenced by particular sections of the animistic tribes. Hero-worship is common, and fresh subjects are still acquiring their places in the pantheon.

As an example may be mentioned Hardaur or Hardol Lāla, whose worship is especially popular in Bundelkhand. He was the brother of the Rāja of Orchha, early in the 17th cent., and was poisoned by the latter in consequence of an unfounded belief that he had been unduly intimate with the Rāja's wife.

As many as 38,000 people returned themselves as *pret-pūjak*, or worshippers of spirits, to whom offerings are commonly made at the foot of a tree supposed to be haunted by the spirit. Among the jungle tribes, spirit-worship is pre-eminent. Goats and cocks are offered at the *devasthān*, or god-place, where wooden benches are provided for the gods to sit on. The Bhīls worship Bāba-deo, or the Father-god, in particular, but did not always return this name at the census. As is usual throughout India, disease has its gods and goddesses, chiefly the latter, and natural objects such as the sun and moon receive adoration. While orthodox Hinduism and the many lower forms of belief claim adherents among most of the population, the modern theistic sects, such as the Brāhma Samāj (*q.v.*) and Ārya Samāj (*q.v.*), have only a few hundred followers.

Other religions are not numerically important. Musalmāns in 1901 numbered 529,000, most of whom (450,000) were Sunnīs, while Shi'ites included 50,000. They are proportionately most numerous on the plateau, in Mālwā, Indore, and Bhopāl. Contact with Hinduism, or, in the case of converts and their descendants, imperfect assimilation of the strict tenets of Islām, has caused a great development of hero-worship. Shrines of saints reverenced by Muhammadans, sometimes in common with Hindus, are found in all parts.

The Jains (113,000) are chiefly of the Digambara sect (55,000), worshipping a naked image, and most of the remainder (35,000) are Svetāmbaras, though Dhundias and Terapanthis are also found.

Christians are very few in number (8114), and less than half of the total (3715) are Indian. The chief Mission is the Canadian Presbyterian, with headquarters at Indore. The St. John's mission at Mhow, the Friends' mission at Indore, the Society of Friends of Ohio at Nowgong, the Hansley Bird and Pandita Rāma Bai's missions at Nīmach, and Roman Catholic missions at various places are also at work. Most of the converts are obtained among aboriginal tribes, low castes, or orphans picked up in time of famine. A few Sikhs (chiefly soldiers), Parsis, and Jews were also recorded.

4. Sacred places.—Central India contains a number of places celebrated in the history of

religion, or for their religious buildings. Ujjain, anciently known as Avanti, is one of the most sacred Hindu cities in India, and is believed to be the place where the elbow of Satī fell when her body was dismembered by Siva. It is also notable as the first meridian of Hindu geographers, and was known to Ptolemy as Ozene. Vikramāditya, the patron of Indian literature, reigned here, but his exact identification is still a subject of controversy. The group of Buddhist remains round Bhilsa, dating from the 3rd cent. B.C., has already been referred to. Besides *stūpas*, the remains of a *chaitya*, or Buddhist church, exist near Sānchī, and are of special interest as presenting the only known example of a building of this description, other *chaityas* being rock-cut constructions. Of the latter, examples are found dating from the 6th and the 12th centuries. Early Hindu and Jain temples are common in many parts, but the series from the 8th and the 15th cents. are the most numerous. They excel in beauty and proportions the later buildings of the 16th and 17th cents., when the influence of Muhammadan architecture had caused deterioration. Khajraho in the Chhatarpur State may be specially mentioned for its magnificent Hindu and Jain temples, dating chiefly between 950 and 1050 A.D.

The earliest mosque of known date, which stands near Sehore, in the Bhopāl State, was built about 1332, but others of an early date and of striking grandeur are found at Māndu and at Dhār. Their style of architecture shows that, though designed by Muhammadans, they were built by Hindu workmen. In many cases their pillars were taken from Hindu temples.

LITERATURE.—C. E. Luard, *Bibliography of Literature dealing with the Central Indian Agency*, London, 1908, and *Ethnographical Survey Monographs*, Lucknow, 1909 ff.

R. BURN.

CENTRAL PROVINCES.—*Introductory.*—The Central Provinces of India cover an area of 113,281 sq. miles in the centre of the Indian peninsula, and comprise a large portion of the broad belt of hill and plateau country which separates the plains of Hindustān from the Deccan. They are administered by a Chief Commissioner, and have a population of eleven million persons; but in these statistics Berār, which since 1903 is also under the jurisdiction of the Chief Commissioner, and for most purposes of administration has been amalgamated with the Central Provinces, is not included. Being held on perpetual lease from the Nizām of Hyderābād, the Berār Districts are not, strictly speaking, a part of British India. But the distinction tends to become more and more nominal, and the two Provinces are gradually being amalgamated into a single unit of government. If the population of Berār be added to that of the Central Provinces, the combined total is nearly fourteen million persons, and the area 131,000 sq. miles. The religion of Berār (*q.v.*) forms the subject of a separate article.

The territory comprised in the Central Provinces has many aspects of interest. It was for long a comparatively unknown country to the Hindus, and was held principally by petty kings or chiefs (*rājas* and *zamīndārs*) of the non-Aryan or aboriginal tribes, designated by Risley as 'Dravidian.' Of these the principal are the Gonds (*q.v.*), numbering about two million persons, whose kings in former times ruled over the greater part of the Province: while other and older tribes are the Baigās (*q.v.*) and Kurkūs (*q.v.*). From the 16th cent. the open country in the north of the Province, comprised in the Vindhyan plateau and Narbadā valley, has been peopled by emigrants from the plains of Hindustān; while in the 18th the Nāgpur plain, lying along the south of the Sātpura hills, and, farther to the east, the valley of the Wainganga, were conquered and settled by Marātha freebooters from Bombay. The Marātha kingdom of Nāgpur under the Bhonsla dynasty existed for about a century, and lapsed to the British, owing to failure of heirs, in 1853; and eight years later it was constituted, with the already acquired Saugor and Narbada territories to the north, into the new Central Provinces of British India. The population of the Province is thus of very diverse ethnical constitution. Owing to the large numbers of the primitive Dravidian tribes, and the backward state of even the Hindu residents as compared with the older civilizations of Hindustan, Bombay, and Madras to the north and south, the tract is one of considerable ethnological interest. In the religion of the people, rustic superstitions and the cult of the agricultural divinities of the soil and crops overshadow the orthodox observances of Hinduism. In the present article an attempt has been made to collect some of these, and to make of them, so far as is possible, a consecutive narrative. The village deities which are here described are represented, as a rule, only by a small platform of earth and a white flag tied to a post, which indicates the site from a little distance. Only the most important, as Siva or Mahādeo, and Hanumān, have small stone shrines, provided perhaps by the generosity of some childless cultivator, who leaves a small sum of money for a temple and a plot of land to endow it. The village deities are in charge of a special priest, usually a member of one of the lower castes or primitive tribes, who makes offerings to them all two or three times a year on the principal festivals, the materials being subscribed by the villagers. On other occasions they are worshipped only by those who have some special end to gain, or some evil from which they desire to be delivered.

1. Village deities.—(1) *Siva or Mahādeo.*—Siva is the favourite deity of the great Hindu triad, but is almost universally known in the country as Mahādeo, or 'the great god,' his proper name being scarcely heard. He is revered generally as the chief or principal of the village deities, and is represented by a circular slab of stone, with a groove cut on its surface, and the *linga*, or phallic emblem, raised in the centre. A representation of his sacred animal, the bull Nandī, is usually placed before him. He is worshipped on Mondays, as being the god of the moon, which he carries on his forehead.[1] No animal sacrifices are made to him, but the trifoliate leaves of the *bel* (*Ægle marmelos*), his sacred tree, as well as rice, sandalpaste, and flowers, may be offered by the more devout, while the ordinary worshipper simply pours a pot of water over his stone and sprinkles a few grains of rice upon it. In summer an earthen vessel full of water is sometimes supported on a tripod over the phallic stone, and a small hole is made in the bottom and covered with cloth, so that the water may drip through it on to the god, and keep him cool. Or a Brahman may be hired, by subscription of the villagers, to pour water over the stone continuously for a month or more. If the rains fail, the stone representing Mahādeo is sometimes kept immersed in a pot of water, and the people believe that this will bring rain, according to the principle of sympathetic magic.

The *bel* tree is connected with Mahadeo by a story that on one occasion a hunter was pursued by wild beasts and took refuge in this tree, beneath which there happened to be a shrine to the god. The hunter stayed awake in the tree all night, and was so terrified that his trembling shook off the dew from the foliage and caused it to fall on the shrine of the god beneath, together with some of the flowers and leaves of the tree. This involuntary

[1] The second day of the week is named after the moon in India as in Europe, being called Somwār, from *soma*, the moon. As lord of the moon, Siva or Mahadeo has the title of Somnāth.

act of worship was very pleasing to the god, and he ordained that the hunter, though of low caste and impure as a killer of animals, should attain to *Kailās*, or Paradise; and the hunter, on dying immediately afterwards, was transported thither. In memory of this, votaries of Mahādeo stay awake and fast all night on the full moon of the month of Phāgun, which is known as Śivrātri, or Śiva's night. The original veneration of the tree probably arose from the tripartite shape of its leaves, resembling the clover; and the story lends some colour to the hypothesis that Śiva may have been, in some aspects at any rate, a deity of the primitive tribes, personified from the tree. His close association with the bull suggests another origin of his apotheosis. In the Marāthā country, Śiva is worshipped in his incarnation of Khaṇḍoba, accompanied by or riding on a dog; Khaṇḍoba is a legendary hero who is supposed to have led the Marāthās against the Muhammadans. It was in his honour that women formerly swung themselves from a post by iron hooks fastened into their flesh, after naming a petition to his priest; and men dragged along a loaded cart by a hook planted in their bodies (Kitts, *Berār Census Report*, 1881, p. 44).

(2) *Devī, the consort of Śiva.*—Devī, the consort of Śiva or Mahādeo, is a deity of Protean nature, venerated under several aspects. The word *devī* simply means 'goddess,' so that she is commonly spoken of as 'the goddess' *par excellence*, just as Śiva, her husband, is called Mahādeo, or 'the great god.' Elsewhere she is best known as the terrible Kāli ('the black one'), the devourer of human flesh, represented with a void in place of a stomach, to show that her hunger can never be glutted. But here she is commonly of more beneficent mien, and is often the tutelary goddess of the village. Sometimes she appears to be one with the earth itself, or to be regarded as the Divine Mother, like Isis of Egypt. She is represented frequently by an iron prong with three points fixed in the ground, and, when possessed by the goddess, her votaries will thrust this prong through their tongue or cheeks. Clothes are offered to her at weddings, and people make an image of her in the form of a woman, and hang it round the necks of children to keep them from harm. Another name of the goddess is Dūrga, and she is said to be so called because her shrines are difficult of access, perched above steep ascents, or buried at the extremities of precipitous glens or in hidden caves at the sources of streams. It has been said that the Brāhmans know well how to call in the help of nature for the provision of a *mise en scène* calculated to impress the minds of votaries arriving at the shrine of the deity; but it seems more probable that the Hindu god or goddess has in such cases merely succeeded to the veneration formerly paid to the spirits by which these wild spots were believed to be tenanted. And no doubt the sanctity already attaching to the place determined its selection for the shrine of the new divinity.

In some cases also Devī takes the form of the well-known rag-deity, being known as Chitarhai Devī, 'the goddess of rags.' People give her a bit of old rag, hanging it on to a thorny tree, in the hope that in return for it they will obtain a new cloth. They say, 'O Devī, we give you our old cloth; give us a new one.' In other localities, however, the rag-deity is not associated with Devī, but is known as the Rag-uncle. Again, Devī has local titles by which she is specially worshipped, as the Vindhyabāsini Devī, or the goddess of the Vindhyan Hills, just as the Greek deities were associated with special places. Probably here also she has taken over the attributes of some anterior and more animistic deity. Some castes have a special veneration for a particular shrine of the goddess at their ancestral home, and will go hundreds of miles to worship at it. In this case they, no doubt, make a distinction between the goddess in this particular place and her manifestations elsewhere. Again, a miracle is performed at some one of her temples, it acquires a special fame, and pilgrims come from a long distance to worship at it.

(3) *Cholera and smallpox deities.*—Sometimes Devī is said to be not one, but seven sisters, recalling the seven Hāthors of Egypt. The seven Devīs are considered to preside over different diseases, but only two of them, Marhai Devī, the goddess of cholera, and Śītalā Devī, the goddess of smallpox, are commonly known and worshipped. When cholera breaks out, an earthen pot with wine, glass bangles, a cloth containing the image of the goddess in vermilion, a rupee, and some cakes and incense are offered to the goddess, and are then taken outside the village and left at a place where three roads meet. It is held that the offering of all kinds of property which the goddess values will cause her to spare the village and pass on elsewhere. The people also believe that, if any one takes up these articles, the disease will pass to him, and the sufferers in the village will get well. If a cow or she-buffalo passes them, she will become barren, or, if she is in milk, it will dry up. The vessel and other things are called the *nikāsi*, or 'averters,' and, if any one meets the priest at the time he is taking them out to the cross-roads, it is believed that he will die at once. Another device is to let loose a scape-goat, and drive it to the next village to carry the disease with it.

When a person has smallpox, he is believed to be possessed by Śītalā Devī. The house in which he lives is therefore held sacred, and any one who comes into it must take off his shoes and wash his feet, as if entering a sacred place. A Brāhman must not come in at all, as it is thought that his presence would cause the goddess to manifest herself more strongly and make the sufferer worse. A woman in her menstrual period must not enter the house, as it is believed that, if she sees the patient, he will get cataract in his eyes. Fire is kept continually burning on the earthen cooking-stove, and a lighted lamp is placed beside the patient, and must be fed with vegetable, not with mineral, oil. A branch of the *nīm* tree, or Indian lilac (*Melia indica*), which is sacred to Śītalā, is hung over the door to show that there is smallpox in the house. Every word that the patient utters is considered to emanate from the goddess, and whatever kind of food or drink she demands through his mouth must be supplied (E. M. Gordon, *Indian Folk-Tales*, p. 32). The father and the mother of the patient practise various rules of abstinence, and make vows for the propitiation of the goddess if the patient should recover, more especially if it is a child. The mother will vow to walk to Śītalā's shrine carrying a brazier of lighted coals on her head, or to cover the whole distance stretching her body length by length along the ground, or to distribute in charity a quantity of sugar or dates equivalent to the weight of the child. A vow made by one father was to wear no turban until the child should have worshipped the goddess, and to perform the distance of the last four fields to her shrine in a series of somersaults (Forbes, *Rās Mālā, or Annals of Gujarat*, ii. 326 f.). If the child gets well, a cradle and a blank sheet of paper are offered to the goddess, with various kinds of food, the offering of the paper being made possibly with the idea that the child's face should be free from marks. If the disease attacks the eyes of a child, the mother offers a pair of silver eyes to the goddess in order to save them. In the Hindu scriptures Śītalā is described as 'naked, seated on a donkey, wearing a broken winnowing-fan on her head, with the pad of a water-vessel in one hand and a besom in the other, and as being of the Chaṇḍāl (sweeper) caste' (Forbes, *loc. cit.*). She is, therefore, though feared and venerated above most deities owing to her power for harm, considered as, in a manner, despicable.

(4) *Hanumān, the monkey-god.*—Hanumān, the deified ape, is the favourite deity in the Marāthā districts. His principal attribute is strength, and he is considered to be the son of Añjani, or the wind, whence he is termed *Māroti*, after the Marūts, or Vedic gods of the wind. His image is usually represented carved in half-relief on a stone slab inside a small alcove, and coloured with vermilion to represent blood. He is half monkey and half man, having a monkey's tail and head; while he carries a mountain in one hand and a staff in the other, and sometimes has a slain demon beneath his feet. He always looks towards the south, because he went that way to Ceylon to help Rāma against the demons. He is worshipped on Tuesdays and Saturdays, his power being invoked on the latter day to counteract the evil influences of the planet Saturn. A wreath of the flowers of the cotton-tree is offered to him, and incense of resin and sandalwood is burnt before his shrine. Hanumān is often the tutelary deity of the village, and, when a new one is to be founded, his image must be installed on the site and worshipped before the building of houses is begun.

(5) *Dūlha Deo, the young bridegroom.*—A favourite household deity is Dūlha Deo, the spirit of a young bridegroom who was carried off by a tiger on his way to his wedding. When a marriage is celebrated, a miniature coat, a pair of shoes, and a bridal crown are offered to Dūlha Deo, and sometimes also the model of a swing on which the child may amuse himself. Inside the house Dūlha Deo is represented by a date and a nut tied up in a small piece of cloth and hung on a peg in the wall. When worship is to be performed, the date and nut are taken down and set on a platform, and offerings of food and other articles are laid before the deity on leaf-plates. On the occasion of a marriage, or the birth of a first child, or in every third year, a goat is offered to Dūlha Deo.

The animal is brought before the platform, rice is given to it, its forehead is marked with red ochre, water is poured over it, and as soon as it shivers it is killed. The body is then cooked and eaten entire inside the house; and after the meal the skin, bones, and all other remains of the animal, with the leaf-plates which have held the food, are buried in a pit dug inside the room, and the water with which the eaters wash their hands is also thrown into the pit. The idea is that the whole body of the sacrificial animal must be consumed, and no fragment lost, which might, owing to the holy or tabued character imparted to it by consecration, do an injury to anybody regarding it as ordinary food.

In former times, as is shown by Jevons (*Introd. to Hist. of Rel.*[3], 1904, p. 144), the animal—skin, bones, and all—was consumed by the worshippers; but, this custom having become repugnant to the nicer stomach of civilized man, the burial of the remains is adopted as a substitute. The people also say that nothing which has been put into the sacrificial pit must on any account be taken out: and that, on one occasion, a child of the household having fallen by accident into the pit, the parents were debarred by their piety from rescuing it, and covered over the hole, leaving the child inside; but their zeal was rewarded, for, when the pit was opened for the next sacrifice, the child was found in it alive and playing.

2. **Deified human beings.**—The spirits of many heroic personages, legendary or real, are also revered, of which it will suffice to give one or two as specimens. A favourite deity in the north of the Province is Hardaur Lāla, a young Rājpūt prince, who was falsely suspected of loving his brother's wife, and was poisoned in consequence by his jealous brother. It is related that, when he died, his horses and dogs died with him. After he was burnt, a post was put up to mark the place, and when his sister, mourning for him, came and put her arms round it, the post split apart to show that he knew her. His ghost continued to wander unappeased until he was deified and worshipped. Clay horses are offered to him at marriages, and he is supposed to be able to keep off rain and storms during the ceremony. Another godling is Bhilat, a deified cowherd, who as a boy was stolen by the god Mahādeo, and brought up at his shrine in the Pachmarhi Hills. Various miracles, of no special interest, are related of him, and his disciples are believed to have the power of curing snake-bite with the long sticks which they carry. It is noticeable that many deified mortals are of the caste of Ahīrs, or cowherds; and Dait, or the spirit of some indefinite deified Ahīr, is a common village godling. These men, owing to the long days spent in motionless solitude as they watch their cattle, are much inclined to reverie and to the belief in unseen voices and supernatural visions—leading, in the case of those most affected, to the claim of Divine possession, and, when this is recognized, to the somewhat easily obtained honour of canonization after death. The fact that the Ahīrs tend the sacred cow may also have something to do with their character for piety.

3. **Worship of ancestors.**—The spirits of deceased ancestors are widely venerated. In the bardic chronicles the ordinary manner of recording a Rājpūt chief's death is to say that he became a *deo* (god), like the Roman emperors. In many villages the spirit of Māl Bāba, some former headman of strong personality, is included among the local deities. The famous Badhak dacoits were accustomed to revere the spirit of the most successful robber in the annals of their community, to invoke his aid before setting out on any fresh enterprise of plunder, and to take the omens in his name. The Banjāras, or carriers on pack-bullocks, who also added highway robbery and cattle-reiving to their legitimate calling, worshipped Mīthu Bhūkia, a renowned freebooter of past times. In each hamlet a hut was set apart for him, with a white flagstaff before it; on the return from a successful robbery, a share of the spoil was allotted to him, and, after food and liquor had been offered before his flagstaff, Mīthu Bhūkia's share was expended in a feast to the community. Among Hindus generally, the fortnight of the waning moon in the month of Kunwār (September) is allotted to the veneration of ancestors, being known as *Pitripaks*, or 'the Fathers' Fortnight.' During this time offerings of food and water are made to the ancestors of the family on the same day in the fortnight as that on which they died in any other period of the year;[1] while the spirits of all female ancestors receive offerings on the ninth day.

According to one account, the Brāhmans think that the spirits of their deceased ancestors dwell on the under side of the moon; but the common people suppose them to be incarnate in crows, so that food is given to these birds as a propitiation to their spirits. Members of the agricultural Kunbi caste are especially assiduous in feeding the crows with this end in view; and, when the Kunbi throws out food and no crows come to eat it, he thinks it is because his ancestors are displeased with him, and that the fare he has offered is not acceptable; so he goes on trying one dainty after another, until at length a crow appears and picks up the food. Then he thinks he has found out what his ancestors like best to eat, and offers this annually until a similar *contretemps* of the absence of crows again occurs.

The Koshtis, or silk-weavers, have another method. On one evening in the *Pitripaks* fortnight a man will invite his caste-fellows to a meal. On this occasion the host stands in the doorway of the house with a pounding-pestle, and as each guest comes up he bars his entrance and says, 'Are you one of my ancestors? This feast is for my ancestors.' To this the guest will reply, 'Yes, I am your great-grandfather; take away the pestle.' By this symbolism the resourceful Koshti is able to combine the entertainment of his friends with the difficult filial duty of feeding the spirits of his ancestors.

In some localities the Gonds make a little brass image of a dead relative and keep it with the household gods. If the family remains undivided, these relics naturally accumulate, and opportunity is taken of the death of some revered ancestor to bury the majority of them with him. A special veneration must be paid to those who have died a violent or sudden death (Frazer, *Psyche's Task*, 1909, p. 61 f.), for it is held that the ghosts of such men, owing to their sharp and untimely severance from

[1] The Hindus number the days from one to fifteen in each fortnight of the lunar month separately.

life, have a grudge against the living, and haunt them in the shape of *bhūts*, or evil spirits.

Thus the primitive tribes think that the spirit of a man who has been killed by a tiger will sit on the head of the tiger and guide him to any lonely or belated wayfarer in the forest; and that he will call to such persons in a human voice so that they, proceeding in the direction from which the voice has come, may fall into the tiger's jaws. Accordingly, among the cultivators of the Waingangā valley, when a man has been killed by a tiger (*bāgh*), he is deified and worshipped as Bāgh Deo. A hut is made in the yard of the house, and an image of a tiger is placed inside and venerated on the anniversary of the man's death. The members of the household also will not afterwards kill a tiger, as they consider the animal to have become a member of the family. A man who is bitten by a cobra (*nāga*) and dies is similarly worshipped as Nāg Deo. The image of a snake made of silver or iron is venerated, and the family will not kill a snake. If a man is killed by some other animal, or by drowning, or by a fall from a tree, his spirit is worshipped as Ban Deo, or the forest-god, with similar rites, being represented by a little lump of rice and red lead. If the corpses of such persons are recovered, they are buried and not cremated, and the bodies of victims to cholera and smallpox are disposed of in the same manner; because it is thought that their spirits will thus, to a certain extent, be imprisoned in the grave and impeded from wandering about their old haunts. The spirit of a woman who dies in childbirth, or between the birth and the performance of the sixth day ceremony of purification, becomes a *churel*; her feet are turned backwards, she casts no shadow, and she follows and worries any woman who comes near the place where she sits. When such a woman dies, a nail is sometimes driven through her head to prevent her ghost from rising and walking.

4. Deified animals and natural objects.—From the host of minor deities of the hills, forests, fields, and rivers, a few selections may be given. *Banjāra Deo*, named after the Banjāra pack-carriers, lives in the forest, and travellers appeal to him to protect them from the attacks of wild beasts. He is represented by a heap of stones by the roadside at the entrance of the forest, and every traveller makes his supplication by adding a stone to the heap. But, now that carriage is principally by carts, the cartmen have a separate deity whose business it is to see that their wheels run smoothly. His name is *Ongan Pat*, or the oil-god. He lives in a hollow tree at the bottom of hills, and the cartmen pour into his hole a little of the oil with which they grease their axles, so that their carts may reach the top of the hill without breaking down. *Dongar Pat* (*dongar*, a hill) is the hill-godling who prevents earthquakes and volcanic eruptions, and keeps off frost. There is often some hill in the neighbourhood, on which, as the people tell, a light appears at times during the night and burns for half an hour; this is a manifestation of Dongar Pat. *Maswāsi Pat* is the god of hunting, and hunters make an offering to him before setting out on expeditions. He is supposed to influence a certain part of the forest, and will bring game into it in view of the hunter if he is in a benignant mood. *Asrā* is the goddess of water, and lives near rivers. The milk of a cow or buffalo is offered to her for the first three days after calving, as, if this is not done, she will drink the milk, and the animal will become barren. *Kurm Pat* is the god of bees, and it is said that in former times warriors worshipped him in the hope that he would make the wild bees fly in the faces of their enemies. But now those who collect honey from the combs of the wild bees worship Kurm Pat before setting out to their work, in order that he may save them from being stung. *Anjan Deo* is the forest-god in the Nimār District, and his name is taken from the *anjan* tree (*Hardwickia binata*), which grows in abundance in that locality. Those who go to cut timber offer a coco-nut to Anjan Deo, in order that their fellings may be successful and their carts may not break down on the way back. *Sāmbhar Deo* is the godling who controls the wild animals of the forest; he is the deified *sāmbhar* stag (*Cervus unicolor*), and is worshipped by those whose fields are near the forest, in order that he may prevent the wild animals from damaging their crops. The old forts built with walls of stone or earth, which are found in many villages, are a relic of the stormy period of the Pindari robber raids of a century back, when the villagers fled to them for protection, with their property and cattle, at a moment's notice, on the news of the approach of these marauders. One of the towers of such a fort is usually believed to be inhabited by a *pīr*, or the spirit of a Muhammadan saint, who acts as its guardian angel. He is worshipped by the proprietor of the village, who burns incense before him on Thursdays, and sometimes keeps a lighted lamp at his shrine for an hour or two every day. The *pīr* is a jealous personage, and, if neglected, he will cause stones to fall down inside the house, or make the milk go sour, in order to recall his indolent worshipper to a sense of his duty. *Rakat Soka* is the godling who is the enemy of children, drinking their blood, and making them grow weak and waste away without visible cause. Vows are made to him for the recovery of the child, and, if it does recover, he is worshipped with great ceremony, the child being brought before him while the *hom*, or fire-sacrifice, is performed, and an offering made to the accompaniment of musical instruments. A very curious deity is *Chhappan Deo*, who is worshipped by a man when his wife has run away. Chhappan, or 'Fifty-six,' is taken to represent the largest number of places to which she may have gone, and he prays that she may not have fled to any of these, but to her mother's house. *Bhūlan Bāba* ('Father forgetting,' from *bhūlna*, 'to forget,' and *bāba*, 'father') is the godling who makes people forget things and leave them lying where they have halted by the way. Offerings are made to him when the lost articles are found.

5. Worship of caste implements.—In addition to the numerous deities who superintend almost every action or relation of life, members of each caste venerate the implements with which they ply their trade or earn their livelihood. Instances of this custom have been collected by Nesfield (*Brief View of the Caste System*):

'The boating and fishing castes sacrifice a goat to every new boat before it is put into the water, and at the time of the Diwāli [the feast of lamps, marking the commencement of the Hindu commercial year, and falling in November] they make an annual offering of vermilion, flowers, and sweetmeats to every boat they possess. Similarly all the pastoral castes pay a kind of worship to their animals by rubbing red ochre on their tails, horns, and foreheads; this is done on the annual festivals of Diwāli, Holi,[1] and Nāgpanchami.[2] The agricultural castes pay worship to the plough on the day called Akti, when the monsoon sets in and the work of cultivation is renewed. The Barai, or grower of the betel-vine, pays homage to the vine in October, before he begins to pick the leaf; and in July, before planting the new crop, he does homage to the ground prepared for the purpose. On the great annual festival of the Dasahra, which is especially sacred to Rājpūts, all men of this caste worship their weapons of war—the sword, shield, matchlock, and bow and arrow—and the animals used in war—the horse and the elephant. Artisan castes worship the tools by which they practise their respective crafts, chiefly on the Holi. The Basor ("basket-maker") worships the knife with which he splits the bamboo and cane; the Chamār ("tanner") worships the *rāmpi*, or currier's knife; the Bunkar or Kori ("weaver"), the apparatus with which cloth is woven; the Teli ("oilman"), his oil press; the Kalār ("liquor-seller"), an earthen jar filled with wine; and the Kumhār, his potter's wheel. Artisan castes of higher rank worship their various tools on the Diwāli festival, which to the more respectable castes marks the opening of the new year: the Rangrez ("dyer") reveres a jar filled with dye; the Halwai, or confectioner, does honour to his oven by placing against it a lamp lighted with melted butter. The trading castes invariably bring out their rupees and account-books on the Diwāli festival, and worship them as the implements of their trade. The Kayasth, or writer caste, does homage to the pen and ink.'

6. Spirits of trees and plants.—Not less are trees and plants considered to be sentient and the abodes of spirits. A common superstition is the belief that trees must not be struck at night lest the sleep of the tree-spirit may be disturbed. The

[1] The Holi is the Hindu Saturnalia, or Carnival, falling in February at the end of their calendar year.

[2] The festival for the worship of snakes, especially the cobra. Wrestling is held on this day, because the movements of the wrestler resemble the convolutions of a snake.

Hindus clean their teeth with a *dātan*, or tooth stick, consisting of a twig taken from any tree; but, if they break the first twig, it is considered wrong to take another, because it is equivalent to destroying two lives. With some people it is the custom before climbing a tree to pray for its pardon for the rough usage to which it is to be subjected. If a mango tree withers for a time and then grows again, it is considered that the tree-spirit has been absent on a pilgrimage. When a mango grove is planted, every tree has to be married to a twig of jasmine. The spirits of Brahman boys who die unmarried are supposed to take up their residence in the sacred *pīpal* tree (*Ficus religiosa*), and it is believed that the spirit of the tree has thus the power of making barren women fertile, the custom being that such a woman, having taken off her clothes, shall walk round the tree at night a certain number of times.

7. **Totemism.**—While the belief in the universal existence of spirits, which is termed Animism, is still widely prevalent, the cognate superstition of totemism is now traceable only in a decaying form. The majority of the castes and tribes in the Central Provinces are divided into a number of exogamous septs or clans, governed by the rule that a man and woman of the same clan may not marry. These clans are very frequently named after animals and plants from which at one time the members of the clan considered themselves to be descended, this being one of the essential ideas of the primitive belief known as totemism. But this idea has now been either forgotten or abandoned, and except in a few instances can no longer be considered as a working force. In many cases the members of a clan named after some animal will abstain from killing it or eating its flesh, while those named after a tree will not cut it down or use the wood. The more backward tribes, if they come across the dead body of one of their totem animals, will bathe and wash their clothes, and throw away an earthen pot, as if they had been rendered impure by the death of a relative. At marriages an image or drawing of the totem animal or plant is sometimes made and worshipped, and a portion of the *meher*, or sacrificial marriage-cake, which is partaken of only by relatives of the family, may be given to the live animal or left at its hole or den. Members of the primitive Bhaina tribe must be tatued with representations of their totem before marriage, as a proof that they are proper members of their respective clans. But the more interesting developments of totemism recorded among the aboriginal Australians and the American Indians can no longer be observed in the Central Provinces.

8. **Agricultural rites and superstitions.**—Nearly four-fifths of the population live by the land, and, as might be expected, the operations of agriculture are attended with an elaborate religious ritual, some details of which will form a suitable conclusion to this article.

Before sowing begins, an auspicious day, known as *mahūrat*, must be fixed by a Brahman, who also declares what kind of rice should first be sown, what is an auspicious letter or syllable for the commencement of the sower's name, and what colour the bullock should be which is first yoked (C. E. Low, *Balaghat District Gazetteer*, p. 83). If the tenant does not possess a bullock of the colour prescribed, he will get over this by applying to the forehead of his own bullocks a mark of the required colour. Monday and Friday are generally considered lucky days for the commencement of sowing, and Tuesday and Saturday unlucky days. In the wheat districts the completion of sowing is celebrated by the *Machhandrī Pūja*, or worship of Mother Earth—a ceremony meant to invoke fertility.

At the edge of one of his fields, the cultivator puts up a little circular or triangular wall of clods, which is meant to represent a hut. This is covered over with green grass as if it were thatched, and represents the temple of Mother Earth. Inside it a little fire is made, and milk is set to boil in a tiny earthen pot, which is allowed to boil over as a sign of abundance. While this is going on, the ploughmen, who are all collected in the field, drive their ploughs at a trot, shrieking wildly. The cultivator meanwhile offers a little rice, sugar, and vermilion to Machhandri, and then makes two tiny holes in the ground to represent *bandās*, or granaries, drops in a few grains of wheat, and covers them over. This is a symbol of prayer that his granary may be filled from the produce of the land. The bullocks are then let go, and the ploughmen rush off at top speed across country, scattering wheat boiled whole as a sign of abundance. In some localities the first seed should be sown by a pregnant woman, and no barren woman or widow is permitted to enter the field (C. A. Elliott, *Hoshangabad Settlement Report*, p. 125).

In the rice districts the oldest man in the house sometimes cuts the first five sheaves of the crop, and they are left in the field for the birds to eat. At the end of harvest the last one or two sheaves are left standing in the field, and any one who likes can cut and carry them away. In some localities the last sheaves are known as *Barhona*, or the giver of increase. When all the rest is cut, the labourers rush together at this last patch of corn and tear it up by the roots; everybody seizes as much as he can and keeps it, the master having no share in it. Elsewhere they throw the corn into the air, shouting out the name of their favourite deity. It is then made into a sheaf, stuck on a bamboo, placed in the last harvest cart, and driven home in triumph. It is afterwards bound to a tree beside the threshing-floor or in the cattle-shed, where its services are essential in averting the evil eye. The underlying idea in this is that the last handful of corn contains the corn-spirit, and when it is cut he flies away or his life is extinguished. The same belief prevails in many parts of the world, as recorded by Frazer (*GB*[2] ii. 171 ff.).

In the wheat districts, when the earth of the threshing-floor has been beaten hard and surrounded by a strong fence, the god of the threshing-floor is placed within, in the shape of a stone daubed with vermilion. A pot of water from a sacred stream is also set here to scare away evil spirits. During threshing-time, if any beggar comes to the ground, he must be given some grain to propitiate him, or he will cast the evil eye on the crop. In the rice districts, on the conclusion of a day's threshing, the cultivator rubs a wisp of straw on the forehead of each bullock, and pulls a hair from its tail, and the hairs and straw, made into a bundle, are tied to the pole of the threshing-floor. The cultivator prays: 'O God of Plenty, enter here full and go out empty.' Before leaving the threshing-floor for the night, he draws circles on the ground, round the pole of the threshing-floor and the heap of grain, with the ashes of burnt straw. Outside the circles he makes representations of the sun, the moon, a lion, and a monkey, or of a cart and a pair of bullocks. Next morning before sunrise the ashes are swept away by waving a winnowing-fan over them. The meaning of this process is that the face of the threshing-floor is disfigured by the black marks in order that the evil eye may be averted from it, exactly as women place lampblack on their eyes for the same purpose.

Winnowing in the wheat districts is a very solemn and important operation, not lightly to be commenced without consultation of the stars.

The winnowing-place is cleaned and plastered with cowdung, and a circle is made of ashes, into which none may go with his shoes on. When the village priest has given the *mahurat* ('auspicious time'), the cultivator and his family go to the threshing-floor, and, washing the stake with water, make offerings to it and to the heap of threshed grain. The boiled wheat of the offering is sprinkled about, in the hope that the *bhuts* ('spirits') may content themselves with it, and not take any of the harvested corn. Then the master stands on the three-legged stool, and, taking five basketfuls from the threshed

heap, winnows them. After winnowing, the grain and chaff are collected again and measured, and if the five baskets are turned out full, or anything remains over, it is a good omen; if they cannot fill the baskets, the place where they began winnowing is thought unlucky, and it is removed to another part of the threshing-floor. The five basketfuls are presented to a Brâhman, or distributed in the village, and not mixed with the rest of the harvest. After this, winnowing can go on whenever a good wind blows, but no artificial means are ever employed for making a blast. So long as winnowing proceeds, the corn-basket must never be set down on its bottom, but always upside down; otherwise the spirits would use the basket to carry off the grain (Elliott, *op. cit.* p. 78).

In the rice districts, before the grain is measured, it must be stacked in the form of a trapezium, with the shorter end to the centre, and not in that of a square or oblong heap. The measurer sits or stands with his back to the west,—the unlucky quarter of the day—having the shorter end of the heap on his left hand. By the larger end of the heap are laid the reaping-hook, a winnowing fan, the rope by which the bullocks are tied to the threshing-pole, one or two branches of the wild plum tree, and the twisted bundle of straw and hairs of the bullocks which had been tied to the threshing-pole. Five balls of cow-dung are laid on the grain, and the *hom*, or fire-sacrifice, is offered to the heap. The measurer must not speak at all during this work, and he ties knots in a piece of cloth or string to keep count of the number of baskets. He must always wear a turban. He never quite empties his measure while the work is going on, as it is feared that, if he did this, the god of abundance would leave the threshing-floor.

The spirits rob the grain till it is measured, thinking they cannot be found out, but when once it has been measured they are afraid of detection. It is considered unlucky for any one who has ridden on an elephant to enter the threshing-floor, but a person who has ridden on a tiger brings luck. Consequently the forest Gonds and Baigās, if they capture a young tiger and tame it, will take it round the country, and the cultivators pay them a little to give their children a ride on it. The cultivators think that each grain should bear a hundred-fold, but they do not get this, since it is taken by Kuver, the treasurer of the gods, or Bhainsāsūr, the buffalo demon, who lives in the fields. Bhainsāsūr is worshipped when the rice is coming into ear, and, if the cultivators think he is likely to be mischievous, they give him a pig, but otherwise a smaller offering. When the standing corn in the fields is beaten down at night, they think that Bhainsāsūr has been passing over it. He also steals the crop while it is being cut and is lying on the ground. Once Bhainsāsūr was absent while the particular field in the village from which he stole his annual provision was cut and the crop removed, and afterwards he was heard crying that all his grain for the year had been lost.

R. V. RUSSELL.

CERBERUS.—1. When Hermes, the guide of the dead, brings souls to Pluto's kingdom, they are received at the River of Woe by Charon, the grim boatman, who ferries them across, provided the passage money has been placed in their mouths and their bodies have been duly buried in the world above. Pluto's house has a janitor Cerberus (Gr. *Kerberos*), sometimes friendly, sometimes snarling, when new guests arrive, but always hostile to them that would depart. Honey cakes are provided for those that are about to go to Hades—the 'sop to Cerberus.' This dog, nameless and undescribed, Homer mentions simply as the dog of Hades. Herakles, as the last and chief test of his strength, snatches him from the horrible house of Hades. First Hesiod (*Theog.* 311), and next Stesichorus, who wrote a poem on the subject (see Pollux, x. 152), discover his name to be Kerberos. The former makes him born of Typhaon and Echidna, and describes him as the irresistible, ineffable flesh-devourer, the voracious, brazen-voiced, fifty-headed dog of hell. Plato in his *Republic* (588 C) refers to the composite nature of Kerberos. Not until Apollodorus (II. v. 12) in the 2nd cent. B.C. comes the familiar description. Kerberos now has three dog heads and a dragon tail, and his back is covered with the heads of serpents.

Classic art has taken up Cerberus very generously; but its treatment is far from being as definite as that of the Greek and Roman poets. Statues, sarcophagi, and vase-paintings whose theme is Hades, or scenes laid in Hades, represent him as a ferocious Greek collie, often encircled with serpents, and with a serpent for a tail; but there is no certainty as to the number of his heads. Often he is three-headed in art as in literature, as may be seen conveniently in the reproductions in Baumeister's *Denkmäler des klassischen Altertums* (3 vols., Munich, 1885–88). Very familiar is the statue, in the villa Borghese, of Pluto enthroned, with three-headed Cerberus by his side. A Greek scarabæus shows a pair of lovers, or a married couple, who have died at the same time, crossing in Charon's ferry, awaited on the other side by three-headed Cerberus. On the other hand, a bronze in Naples shows Herakles engaged in leading a *two-headed* Cerberus from Hades. This last of the wonderful deeds of Herakles is a favourite theme of vase-pictures; the dog is generally two-headed. Such a Cerberus may be seen in Gerhard, *Auserlesene Vasenbilder* (Berlin, 1840–47), ii. 131, or in Norton's reproduction of an amphora in the Louvre (*Amer. Journ. of Archæology*, xi. 14).

2. Neither Greek literature nor Greek art, however, really seems to fix either the shape or the nature of Cerberus. It was left to the Roman poets to say the last word about him. They finally settled the number of his heads, or the number of his bodies fused in one. He is *triceps*, 'three-headed'; *triplex* or *tergeminus*, 'threefold'; *triformis*, 'of three bodies'; or simply *Tricerberus*. Tibullus (III. iv. 88) states explicitly that he has both three heads and three tongues (*cui tres sunt linguae tergeminumque caput*). Vergil (*Æn.* vi. 417) has huge Cerberus barking with triple jaws; his neck bristles with serpents. Ovid (*Metam.* x. 21) makes Orpheus, searching for Eurydice in Tartarus, declare that he did not go down in order that he might chain the three necks, shaggy with serpents, of the monster begotten of Medusa. His duties also are determined for all time; he is the terrible, fearless, and watchful janitor or guardian (*janitor*, or *custos*) of Orcus, the Styx, Lethe, or the black kingdom. And so he remains for modern poets, as when Dante, reproducing Vergil, describes him (*Inferno*, vi. 22 ff.):

> 'When Cerberus, that great serpent, us had seen,
> His mouth he opened and his tusks were shown,
> And not a limb was as it erst had been.
> And then my Leader, with his palms out-thrown,
> Took of the earth, and filling full his hand,
> Into those hungry gullets flung it down.'

3. Classical explanations of Cerberus's shape are feeble and foolishly rationalistic. Heraclitus (Περὶ ἀπίστων, 331) states that Kerberos had two pups. They always attended their father, therefore he appeared to be three-headed. The mythographer Palaiphatos (39) states that Kerberos was considered three-headed from his name Τρικάρηνος, which he obtained from the city of Trikarenos in Phliasia. The late Roman rationalistic mythographer Fulgentius states that Petronius defined Cerberus as the lawyer of Hades—apparently because of his three jaws, or the cumulative glibness of his three tongues. Fulgentius himself has a *fabula* in which he says that Cerberus means *Creaboros*, that is, 'flesh-eater,' and that the three heads of Cerberus are, respectively, infancy, youth, and old age, through which death has entered the circle of the earth (*per quas introivit mors in orbem terrarum*).

4. India is the home of the Cerberus myth in its clearest and fullest development. Early Hindu conceptions of a future life are auspicious and quite the reverse of sombre. In the main, life after death does not include the notion of hell.

The early visions are simple, poetic, and cheerful. The bodies of the dead are burned, and their ashes are consigned to earth. But this is viewed merely as a symbolic act of preparation—cooking it is called outright—for another life of joy. The righteous forefathers of old have found another good place. Especially Yama, the first mortal, has gone on to the great rivers on high; like a pioneer, he has searched out the way to the highest heaven where beams unfading light, where flow eternal waters, where every wish is fulfilled on the rich meadows of Yama. Day by day Yama sends forth two dogs, his messengers, to search out among men those that are to join the fathers, who are holding revel and rejoicing in Yama's company.

The Rigveda contains three stanzas (X. xiv. 10–12) which refer to the dogs: it is quite clear that we are dealing with the conception of Cerberus. In stanza 10 the two dogs are conceived as ill-disposed creatures, standing guard to keep the departed souls out of bliss. The soul, on its way to heaven, is addressed as follows: 'Run past straightway the two spotted four-eyed dogs, the brood of Saramā; enter in among the propitious fathers who hold high feast with Yama.' A later Vedic text, the book of house-rites of Āśvalāyana, has the notion of the sop to Cerberus: 'To the two dogs born in the house of Yama, Vivasvant's son, to the dark and the spotted, I have given a cake; do ye guard me ever on my road.' The 12th stanza of the Rigveda hymn strikes a different note, which suggests both good and evil in the character of the two dogs: 'The two brown, broad-nosed messengers of Yama, life-robbing, wander among men. May they restore to us to-day the auspicious breath of life, that we may behold the sun!' The part of the Cerberi here is not in harmony with their function in stanza 10; instead of debarring men from the abodes of bliss, they pick out the dead that are ultimately destined for boon companionship with Yama. The same idea is clearly expressed in two passages of the Atharvaveda (V. xxx. 6 and VIII. i. 9). The 11th stanza of Rigveda X. xiv. presents the two dogs as guides of the soul (ψυχοπόμποι) to heaven: 'To thy two four-eyed, road-guarding, man-beholding watchdogs entrust him, O king Yama, and bestow on him prosperity and health!' It follows that the two Cerberi were originally located in heaven.

A legend of the Brāhmaṇa texts, the Hindu equivalent of the Talmud, tells explicitly that there are two dogs in heaven, and that these two are Yama's dogs. There were Asuras (demons) named Kālakāñjas. They piled up a fire altar in order to obtain the world of heaven. Man by man they placed a brick upon it. The god Indra, passing himself off for a Brāhman, put on a brick for himself. They climbed up to heaven. Indra pulled out his brick; they tumbled down. They who tumbled down became spiders; two flew up and became the two heavenly dogs, the dogs of Yama (*Taittirīya Brāhmaṇa* I. i. 2 and *Maitrayaṇī Saṁhita* I. vi. 9).

Other Brāhmaṇa texts carry the explanation of the two dogs to a clear conclusion. The *Kaṭha Saṁhitā* xxxvii. 14 says: 'These two dogs of Yama, verily, are day and night'; the *Kauṣītaki Brāhmaṇa*, stating the names of the two dogs, Śyāma and Śabala (the dark and the spotted), says: 'Śabala is the day; Śyama is the night.' The *Taittirīya Saṁhitā* (V. vii. 19) correlates the two dogs with the time-markers in heaven. In this passage sundry parts of the sacrificial horse are assigned to four cosmic phenomena in the following order: (1) sun and moon; (2) Śyāma and Śabala (the two dogs of Yama); (3) dawn; (4) evening twilight. They occur here as special poetic designations of sun and moon; a passage in the *Śatapatha Brāhmaṇa* states explicitly: 'The moon, verily, is the divine dog; he looks down upon the cattle of the sacrificer'; and a passage in the Kashmir version of the Atharvaveda says: 'The four-eyed dog (the moon) surveys by night the sphere of the night.' The epithet 'four-eyed' makes it certain that the dog, the moon, is one of the dogs of Yama.

In the theosophic Upaniṣads also the soul must pass the two dogs before it can be released from the round of existences (*saṁsara*) and be absorbed in *Brahman*. The *Kauṣītaki Upaniṣad* (I. ii. 2) arranges that all who leave this world go first to the moon, the moon being the door of the world of light. The *Maitrāyaṇa Upaniṣad* (vi. 38) sketches salvation as follows. When a mortal no longer approves of wrath, but ponders upon the true wish, he penetrates the veil that encloses the *Brahman*, and breaks through the concentric circles of sun, moon, fire, etc., that occupy the ether. Only then does he behold the Supreme Being. And the *Chhāndogya Upaniṣad* (viii. 13) has the same idea, mentioning both moon and sun by their ancient names and in their capacity as dogs of Yama. The soul of the aspirant for fusion with *Brahman* resorts alternately to Śyāma (the moon-dog) and Śabala (the sun-dog): 'From Śyāma (the moon) do I resort to Śabala (the sun); from Śabala to Śyāma. Shaking off sin as a steed shakes off the loose hairs of its mane, casting aside my body, my real self delivered, do I enter into the uncreated world of *Brahman*.'

It is clear that the two dogs of Yama, the heavenly dogs, are sun and moon. On the one hand, the exhortation to the dead to run past the two dogs in order to get to heaven suits the idea of the two heavenly bodies coursing across the sky. On the other hand, by an easy though quite contrary change of mental position, the same two heavenly dogs are the guides who guard the way and look upon men benignly: hence they are ordered by Yama to take charge of the dead, and to furnish them such health and prosperity as the shades may require. Again, with an equally simple shift of position, sun and moon move among men as the messengers of death: by night and by day human beings perish while these alternate in their presence among men.

5. The Avesta has reduced the Cerberus myth to stunted rudiments. In *Vendīdād* xiii. 9 the killing of dogs is forbidden, because the dogs that keep the Chinvat bridge (the bridge to Paradise [see BRIDGE]) will not 'help him when dead, despite his cries of terror and woe.' When a man dies, as soon as the soul has parted from the body, the evil corpse-demon (Druj Nasu) from the regions of hell falls upon the dead. The demon is expelled from the dead by means of the 'look of the dog': a 'four-eyed dog'—in practice a dog with a spot over each eye—is brought near the body, and is made to look at the dead, whereupon the demon flees back to hell (*Vendīdād* viii. 14–22).

6. Norse mythology also contains certain animal pairs which seem to reflect the Cerberus idea. At the feet of Odhin lie his two wolves, Geri and Freki, 'Greedy' and 'Voracious.' They hurl themselves across the lands when peace is broken. The virgin Menglodh sleeps in her wonderful castle on the mountain called Hyfja, guarded by the two dogs Geri and Gifr, 'Greedy' and 'Violent,' who take turns in watching; only alternately may they sleep as they watch the Hyfja mountain: 'One sleeps by night, the other by day, and thus no one may enter' (*Fjölsvinnsmál*, 16). It is not necessary to suppose any direct connexion between this fable and the Vedic myth, but the root of the thought is alternating sun and moon coursing dangerously across the sky.

7. The epithet 'four-eyed,' which is assigned to the dogs in the mythology of the Veda and the Avesta, is not altogether clear. It may possibly

contain a tentative fusion of the two dogs in one. The capacity of the two dogs to see both by day (the sun) and by night (the moon) may have given the myth a start in the direction of the two-headed Greek Kerberos. But there is the alternate possibility that 'four-eyed' is but a figure of speech for sharp-sighted. Certainly the god Agni, 'Fire,' is once (*Rigveda* I. xxxi. 13) called 'four-eyed,' which can only mean 'sharp-sighted'—an obviously suitable poetic conception of fire.

8. The two dogs of Yama derive their proper names from their colour epithets. The passages cited above make it clear that Syāma, 'the black,' is the moon-dog, and that Śabala, 'the spotted or brindled,' is the sun-dog. More than a hundred years ago the Anglo-Indian Wilford (in *Asiatick Researches*, iii. 409) wrote: 'Yama, the regent of hell, has two dogs, one of them named Cerbura, or varied; the other Syama, or black.' He then compares *Cerbura* with Greek *Kerberos*, of course. The form *Cerbura* he obtained from his consulting pandits, who explained the name Śabala by the Sanskrit word *karbura*, 'variegated,' a regular gloss of the Hindu scholiasts. About fifty years later a number of distinguished scholars of the past generation, Theodor Benfey, Max Müller, and Albrecht Weber, again compared *Śabalas* with Greek *Kerberos*. Though the comparison suffers from a slight phonetic difficulty, it is rather surprising that the two languages have not manipulated their respective versions of the word so as still further to increase the phonetic distance between them.

9. But whether the names *Śabalas* and *Kerberos* are identical or not, the myth itself is clear. The explanation by means of the texts of the Veda imparts to the myth a definite character: it is no longer a dark and uncertain touch in the troubled visions of hell, but a lucid treatment of an important cosmic phenomenon. Sun and moon course across the sky; beyond is the abode of light and the blessed. The coursers are at one moment regarded as barring the way to heaven; at another as outposts who may guide the soul to heaven. In yet another mood, because they constantly look down upon the race of men dying day by day, they are regarded as daily selecting candidates for the final journey. In due time Yama and his heaven are degraded to a mere Pluto and hell—such is, after all, the fear of death. Then the terrible character of the two dogs is all that can be left to them. And the two dogs blend into a unit variously, after their origin is forgotten: either a four-eyed Parsi dog or a two-headed—finally a plural-headed—Kerberos.

Visionslitteratur*, pp. 127–131 (Leipzig, 1892); Macdonell, *Vedic Mythology*, p. 173f. (Strassburg, 1897); Gruppe, *Griech. Mythol. und Religionsgesch.*, pp. 405–408 (Munich, 1906).

MAURICE BLOOMFIELD.

CERINTHUS, CERINTHIANS.

—The date of Cerinthus is fixed by the well-known story of his encounter with John of Asia at Ephesus. Irenæus says, referring to Polycarp:

'And there are some who heard him say that John, the disciple of the Lord, going to bathe in Ephesus and seeing Cerinthus within, leapt out of the bath without bathing, but saying, "Let us flee, lest the bath fall in while Cerinthus the enemy of the truth is within"' (*Hær.* III. iii. 4).

It was not unusual for scholars to reject this story as a floating fable, attached now to this man, now to that, on the ground that Epiphanius tells it of Ebion instead of Cerinthus. But, in view of the almost complete untrustworthiness of the statements about Cerinthus which are peculiar to Epiphanius, and of the grave improbability, in spite of Dalman's opinion to the contrary, that such a person as Ebion ever existed, it would be quite unjustifiable to throw any discredit on the statement of Irenæus. It is true that he did not hear the story from Polycarp at first hand, but the internal evidence strongly favours its historicity. It would not have occurred to any one to invent the story that John went to bathe at the public baths. Epiphanius obviously felt that this was out of harmony with what would be expected of an Apostle, and explained that it was only under the influence of the Holy Spirit that John visited the baths, and did not understand the reason for the impulse which took him there till on inquiry he discovered that Ebion was within (*Hær.* XXX. xxiv.). We may, accordingly, confidently accept, with most recent scholars, the story of Irenæus, and assume that Cerinthus was a contemporary of John of Asia (whether of the Apostle, as the present writer thinks, or of the Presbyter may here be left undetermined) about the close of the 1st cent. A.D. Even if the story itself were apocryphal, the residence of Cerinthus in Ephesus at that time would be guaranteed by it. For, unless it had been known that such was the case, the story of the encounter would hardly have been in circulation.

Hippolytus (*Philos.* vii. 33, x. 21) further informs us that Cerinthus had been trained in Egypt. Some authorities have doubted this statement. For example, Lipsius speaks of it as only one of those loose conjectures with which the author has so richly adorned his work (*Gnosticismus*, 1860, col. 110). A measure of doubt must hang over the statement, but it may very well have been taken by Hippolytus from his notes of Irenæus' lectures, and be historically accurate. Epiphanius speaks of the Merinthians, but is dubious whether Merinthus was another name for Cerinthus, or whether the two were distinct (*Hær.* XXVIII. viii.). We may without hesitation set aside the latter alternative. Some scholars, for example Hilgenfeld (*Ketzergesch.* 1884, p. 417), consider that Merinthus is simply another form of the name. It is more probable, however, as Fabricius suggested (*Cod. Apoc. NT*, 344), that Epiphanius had in his hands an earlier work in which the author gave Cerinthus the nick-name Merinthus, which means 'noose.' This writer was probably Hippolytus (see Lightfoot, *Biblical Essays*, 1893, p. 119). Epiphanius communicates a lengthy account of Cerinthus' earlier history in Palestine, Syria, and Galatia; but, since these stories are rejected with practical unanimity, it is unnecessary to devote space to them further than to say that they connect him closely with the Judaizing propaganda in the early Church.

Our most trustworthy information as to the doctrine of Cerinthus is derived from Irenæus. His account of the system is brief, and may be quoted in full:

'A certain Cerinthus in Asia taught that the world was not made by the Supreme God, but by a certain power entirely separate and distinct from that authority which is above the universe, and ignorant of that God who is over all things. He submitted that Jesus was not born of a virgin (for this seemed to him impossible), but was the son of Joseph and Mary, born as all other men, yet excelling all mankind in righteousness, prudence, and wisdom. And that after His baptism there had descended on Him, from that authority which is above all things, Christ in the form of a dove; and that then He had announced the unknown Father and had worked miracles; but that at the end Christ had flown back again from Jesus, and that Jesus suffered and rose again, but that Christ remained impassible, since He was a spiritual being' (I. xxvi. 1).

Hippolytus (*Philos.* vii. 33, x. 21) practically repeats the account of Irenæus. Pseudo-Tertullian, who probably draws on the *Syntagma* of Hippolytus, gives a very brief account (*adv. Omn. Hær.* x.), which is in substantial agreement with Irenæus, though much scantier. He tells us that Cerinthus taught that the Law was given by angels, and says that the God of the Jews was

not the Lord but an angel. Hippolytus also speaks of the world as being made by an angelic power (*Philos.* x. 21).

Our earliest and most trustworthy sources, accordingly, represent Cerinthus as a genuine Gnostic, in so far as he drew a distinction between the Supreme God and the Creator, and between Jesus and Christ. The work of Jesus he characteristically found in revelation rather than in redemption through His death. Since he affirmed the real humanity of Jesus, he had no temptation to deny the reality of His human experiences or the fact of His crucifixion and resurrection. But, of course, he could not admit that a heavenly being from the highest sphere could suffer the indignity of the Cross, and therefore he affirmed Christ's abandonment of Jesus before the Passion, and the return of Christ to the Supreme God. In a later part of his work (III. xi. 1) Irenæus has a further reference to Cerinthus, and the views promulgated a long time before by the Nicolaitans; but unfortunately it is not clear whether, in the tenets he proceeds to enumerate, he is referring to them or to later heretics. We have here again the distinction between the Creator and the Father of the Lord, and between Jesus and Christ. But Jesus is identified with the Son of the Creator—which can hardly refer to Cerinthianism. Accordingly, when we read that Monogenes (only-begotten) was the beginning, and that Logos was the true son of the only-begotten, it is very doubtful whether we should suppose that Cerinthus taught this doctrine, which would constitute the recognition of a Pleroma, which, indeed, we find affirmed in this passage in the statement that Christ 'had again flown back into His Pleroma.' Elsewhere (III. xi. 7) Irenæus says: 'They who separate Jesus from Christ and say that Christ remained impassible, but that Jesus suffered, preferring the Gospel according to Mark, can be corrected if they read it with love of the truth.' This statement seems, on comparison with the language of Irenæus in I. xxvi. 1, to refer to Cerinthus, and it is recommended by the consideration that the Second Gospel does not contain the account of the supernatural conception. It is true that some scholars deny the reference on the ground that Epiphanius (*Hær.* xxviii. 5, xxx. 14) and Philaster (*de Heresibus*, xxxvi.) affirm that Cerinthus used only the Gospel of Matthew, of course in a mutilated form. This, however, should probably be rejected, but it stands or falls with the general account of Cerinthianism given by those writers.

In a dialogue with Proclus the Montanist, written by Gaius of Rome early in the 3rd cent., there is an important reference to Cerinthus, which runs as follows:

'But Cerinthus also, by means of revelations purporting to have been written by a great apostle, lyingly imposes upon us marvellous prodigies, which he professes to have been shown him by angels, saying that after the resurrection the kingdom of Christ is an earthly kingdom, and again that men shall live in Jerusalem in the flesh and be the slaves of lusts and pleasures. And, being an enemy of the Scriptures of God, he would fain deceive, and says that a tale of a thousand years is to be spent in marriage festivities' (cited by Euseb. *HE* iii. 28 [tr. quoted from Lightfoot, *Clement of Rome*, 1890, ii. 381]).

It was natural that Gaius should have been thought to attribute in this passage the authorship of the Apocalypse of John to Cerinthus, and it is in fact likely that Dionysius of Alexandria understood him in this sense (Euseb. *HE* vii. 25). But this inference is probably quite unwarranted; for, apart from the fact that Gaius does not say so, and that Eusebius, with his dislike of the Apocalypse, would probably not have failed to quote him to that effect if he had so declared, the language of Gaius does not very well suit the Apocalypse; nor, indeed, is it likely that he should have attributed to Cerinthus a book so different from his well-known views. It is unnecessary to discuss any further either this or the still more grotesque opinion that Cerinthus wrote the Fourth Gospel as well as the Apocalypse, since we are not concerned in this article with statements made about Cerinthus which cannot possibly be true, but with the views of Cerinthus himself. The importance of the quotation from Gaius for our purpose lies in its attribution to Cerinthus of the doctrine of a sensuous millennium on earth. It is true that we have no evidence for this doctrine in Irenæus, but no importance need be attached to this, since Irenæus would have been in sympathy with Cerinthus in his millenarian views, and would not have felt it necessary to call attention to them when he was giving a description of his heretical opinions. We could not infer with any confidence that there was an immoral strain in his teaching, in view of the constant tendency of controversialists to put an evil construction on the language of their opponents, and especially to charge them with vicious indulgence.

Our decision on this matter is affected by our view as to the relation between the teaching of Cerinthus and the First Epistle of John. Many scholars consider that his doctrines are definitely assailed in that Epistle. In favour of this view we have the words: 'Who is the liar but he that denieth that Jesus is the Christ?' (1 Jn 2^{22}). Here we probably have an attack, not on the Jewish rejection of the Messianic claim of Jesus, but on a refusal to identify Jesus with Christ. Even more important is 1 Jn $4^{2\text{-}3a}$, which runs thus in the critical texts: 'Hereby know ye the Spirit of God: every spirit which confesseth that Jesus Christ is come in the flesh is of God: and every spirit which confesseth not Jesus is not of God.' It is true that the reference to 'the flesh' may seem to favour an allusion to Docetism in the strict sense of the term, *i.e.* the representation of the physical appearance and actions of Christ as an illusion. The opening verses of the Epistle, with their strong and reiterated assertions that the real humanity of the Word had been guaranteed by physical tests, are not relevant against Cerinthianism, inasmuch as Cerinthus did not deny the real humanity of Jesus. But there is no insuperable difficulty in the view that two types of Christological error are attacked in 1 John. Both Cerinthianism and Docetism were current at the time, the latter being attested by the Epistles of Ignatius. When we read that Jesus Christ came 'not with the water only, but with the water and with the blood' (1 Jn 5^6), it is most natural to see in this an attack on the view of Cerinthus that Christ descended on Jesus at the Baptism but left Him before the Passion. This will suit 1 Jn $2^{2\text{-}3a}$ in the commonly accepted text. But it is by no means improbable that in v.^{3a} we should read 'and every spirit which dissolveth (λύει) Jesus is not of God.' If this reading is accepted, the reference to Cerinthus seems to be clear. The dissolution of Jesus is the separation made in Cerinthianism between Him and Christ. Now, it is quite clear from the language of 1 John that practical immorality and speculative heresy were associated. There were those who claimed to know God and to live in the light, but whose life gave the lie to their claims. It is quite possible that this applies to Cerinthus and his followers; and, if so, this would corroborate the statement as to his sensual doctrine of the millennium, and that in an immoral sense. But, in view of the fact that two forms of false Christology seem to be attacked, no certainty attaches to this conclusion.

It has been usual to speak of Cerinthus as a

Judaizing Gnostic. The earliest and best sources that we possess, however, give no warrant for this representation, which is due to Epiphanius and Philaster.[1] It is quite likely that what has given rise to it is the way in which Irenæus connects Cerinthus with Carpocrates and the Ebionites. His account of the Ebionites follows that of Cerinthus, and he says:

'Those who are called Ebionites agree that the world was made by God; but their opinions with respect to the Lord are similar [for *non similiter* read *similiter* or *consimiliter*] to those of Cerinthus and Carpocrates. They use the Gospel according to Matthew only, and repudiate the Apostle Paul, maintaining that he was an apostate from the Law' (I. xxvi. 2).

The point of contact between the Ebionites and Cerinthus lay in their denial of the supernatural origin of the humanity of Jesus; and this was extended by Epiphanius and Philaster to an acceptance of a mutilated Gospel of Matthew and a Judaizing legalism. We may agree with Zahn's conclusion that the Judaism of Cerinthus is only a learned myth.

LITERATURE.—The subject is dealt with in the Church Histories and Histories of Doctrine, also in the Histories of Heresy and works on Gnosticism. The connexion of Cerinthus with the Johannine literature, alleged by the Alogi and Dionysius of Alexandria, has occasioned not a little attention to be given to him in the NT Introductions, and books on the Canon of the NT (Zahn in particular should be mentioned). See, further, E. W. Möller, *Gesch. d. Kosmologie in der griech. Kirche bis auf Origenes*, 1860, p. 373 f.; Knopf, *Das nach-apostol. Zeitalter*, 1905, pp. 328–330; Lipsius, *Zur Quellenkritik d. Epiphanios*, 1865, pp. 115–122; Drummond, *The Character and Authorship of the Fourth Gospel*, 1903, pp. 337–342; Law, *The Tests of Life*, 1909; Schwartz, *Ueber d. Tod d. Söhne Zebedäi*, 1904, pp. 33–45; Stanton, *The Gospels as Historical Documents*, pt. i. [1903] pp. 204–208.

ARTHUR S. PEAKE.

CERTAINTY.—I. Logical certainty and psychological certitude: distinction and relation between them.—'Certainty' is used both in an objective or logical, and in a subjective or psychological, sense. (*a*) In the former sense it means such a degree or kind of evidence in or for the subject-matter of a judgment as removes the judgment beyond doubt or question. (We may describe this objective certainty or evidence as 'logical,' but it must be observed that we are then using the term 'logical' in a very wide sense, to cover evidence of all kinds—not merely that which a conclusion derives from its premisses, but also the self-evidence of axioms, the evidence of direct perception, of memory, of testimony, etc.) In this sense certainty is contrasted with probability, or, in terms of the distinction prominent in Greek philosophy, pertains to knowledge as contrasted with opinion. (*b*) In the subjective or psychological sense certainty means such a degree or kind of assurance on the part of the individual as overcomes all doubt in his mind, or even prevents any doubt from arising. It is convenient to use the term 'certitude' for this subjective assurance, and keep 'certainty' for the objective or logical sense.

In so far as the 'assurance' of (*b*) is produced by the 'evidence' of (*a*), certainty and certitude will, of course, coincide, and—from the logical point of view at least—it seems obvious to regard this as the normal case. On the other hand, we have frequent enough experience of cases where we seem at the time to have the fullest subjective certitude about matters in regard to which we are afterwards convinced of error; and, again, of cases where we have full certitude ourselves, although we cannot make the truth of what we believe evident in the logical sense, *i.e.* evident to the apprehension of other people, or even to our own apprehension in so far as we take an outsider's impartial point of view; or, to put the matter more generally and abstractly, to the apprehension of a (hypothetical) mind possessed of all human faculties and susceptibilities, but free from all merely individual bias. We may, for instance, be convinced of a man's honour, and find ourselves deceived, or, again, be convinced, and, as after events show, rightly convinced, of it, and yet be unable to bring any kind of proof which will convince others, or even to formulate to ourselves definite grounds for our own conviction. Such experiences of apparently illogical and non-logical certitudes compel us from the logical point of view to begin by distinguishing certitude from certainty. The distinction does not, indeed, solve the problems which are raised by these experiences,—on the contrary, it only brings them more distinctly into view,—but for the logician it has the advantage of postponing them for the time being. He can say: 'For my present purposes I intend to exclude, or even ignore the existence of, any certitudes which are not at the same time certainties; certainty is what I am concerned with, and I cannot recognize any certitude which does not coincide with, or simply reflect, a certainty.' And this, in fact, is the attitude, not merely of the logician, but also, in a large measure, of the practical man. For in the concerns of ordinary life, as well as in the abstract discussions of logic, we have to be on our guard against all prejudice, bias, fancifulness, and sentimentalism. It was, therefore, not only as a thinker anxious for mere truth, but also as a practical man anxious for sobriety of thought and conduct, that Locke wrote the well-known and controverted passage that opens his chapter on 'Enthusiasm' in the Essay (*Human Understanding*, bk. IV. ch. xix.):

'There is nobody in the commonwealth of learning who does not profess himself a lover of truth; and there is not a rational creature that would not take it amiss to be thought otherwise of. . . . How a man may know whether he be so in earnest, is worth inquiry: and I think there is one unerring mark of it, viz. the not entertaining any proposition with greater assurance than the proofs it is built upon will warrant. Whoever goes beyond this measure of assent, it is plain, receives not truth in the love of it; loves not truth for truth-sake, but for some other by-end. For the evidence that any proposition is true (except such as are self-evident) lying only in the proofs a man has of it, whatsoever degrees of assent he affords it beyond the degrees of that evidence, it is plain that all the surplusage of assurance is owing to some other affection, and not to the love of truth.'

But, while it is convenient for the logician from his logical point of view to approximate certitude as far as possible to certainty, and, in fact, to assume their coincidence, we must observe that the same coincidence may be asserted with a precisely opposite motive by the sceptic who refuses to recognize any objective grounds for the distinction between certainty and probability, or even for that between true and false belief; or, again, by the psychologist who takes a view of his science which precludes him, officially or even in principle, from recognizing such distinctions within its bounds. The sceptical view is illustrated by Hume's reduction of all assent or conviction to a '*strong* propensity to consider objects *strongly* in that view under which they appear' (*Treatise*, bk. I., last section), and by his explanation of the strength of the propensity in terms of a superior vivacity in those ideas which have come to be conjoined together by the force of what is, in the last resort, mere blind custom. On such a view there is no objective distinction between one certitude and another, and if any person is, in point of fact, able to cherish a certitude which violates customary modes of belief, there is no more to be said: other people have no right to gainsay his private convictions. Thus, from Hume's own point of view, there is truth as well as irony in the concluding declaration of his essay *Of Miracles*, that Faith is quite above argument as to the probability of miracles, since he who is moved by Faith to

[1] The question whether Philaster is here dependent on Epiphanius, or whether both derive their account from an earlier source, need not be discussed. It is possible that they draw on the lost *Syntagma* of Hippolytus, and, since Hippolytus was probably not responsible for this particular representation, that Philaster derived it from Epiphanius, whose account is thoroughly untrustworthy and confused.

assent to the Christian Religion 'is conscious of a continued miracle in his own person which . . . gives him a determination to believe what is most contrary to custom and experience.' A scepticism like Hume's, however, which is quite aware of, and explicitly calls attention to, its own paradoxical results (in above section of, and appendix to, *Treatise*), is less dangerous than the unconscious scepticism of the psychologist, who does not for a moment deny the objective or logical distinctions in virtue of which we are entitled to hold one belief more strongly than another, yet thinks himself free (or even obliged) to ignore these distinctions in his account of the causation of belief in terms of purely 'psychological' laws. All psychology of the Associationist type—and much of our modern psychology remains Associationist in principle—is committed to this position. But even a psychologist so little restricted by the traditions of a school as James seems to see no difficulty in adopting it.

'Hartley,' he tells us, 'suggested habit as a sufficient explanation of all connexions of our thoughts, and in so doing planted himself squarely upon the properly psychological aspect of the problem of connexion, and sought to treat both rational and irrational connexions from a single point of view. The problem which he essayed, however lamely, to answer, was that of the connexion between our psychic states considered purely as such, regardless of the objective connexions of which they might take cognizance' (*Principles of Psychology*, vol. i. p. 553).

And yet it is obvious that, if the formation of our beliefs can be explained in a manner which is 'regardless of the objective connexions of which they might take cognizance,' the said 'objective connexions' are as effectually denied in practice as if they did not exist at all. We must conclude, then, that, while the logician's identification of certitude with certainty may be accepted as a provisional simplification, the psychologist's reduction of certainty to certitude cannot be accepted at all, because it deprives the certitude itself of all real value. The sceptical implications of such a reduction of objective certainty to mere subjective certitude are obvious enough when we contemplate the reduction on a large scale. But it is important to remember that precisely the same consequences are implied in every particular case, so far as it goes, in which it is proposed to explain any kind or degree of belief in terms of *merely* subjective factors. It is, no doubt, very easy and very natural to appeal to such factors, to explain not only the cases of apparently non-logical certitude above referred to, but also all beliefs which are bound up with feeling and action, such as moral and religious beliefs. But, in proportion as we do reduce any belief to a *merely* subjective certitude, we simply justify the logician in his refusal to recognize it. And thus an attitude on his part, which would otherwise represent only the narrowness and inadequacy of his own logic, becomes an entirely defensible protest on behalf of general logical principle.

2. Possibility and degrees of certainty.—Accepting in the meantime the logician's simplification, we must notice the questions that arise relating to strict logical certainty and its correlative certitude. These fall roughly into two classes. (1) There are general questions as to the possibility of certainty in general; the meaning (if any) of degrees of certainty; the kind or degree of evidence which constitutes certainty; the relation of certainty to the lower kinds or degrees of evidence which constitute probability; the relation in each case of the corresponding certitude or inferior conviction to its objective counterpart; and, finally, the ultimate basis of certainty. (2) There is the special question as regards each special department of knowledge: how far, and upon what conditions, certainty is attainable in that department. While these two classes of questions may for convenience be distinguished, they cannot, of course, be kept at all rigidly apart in actual discussion. A full discussion of them would cover a great part of logic and methodology, not to speak of metaphysics; for the purposes of the present article, some general indications of the character of the issues involved must suffice.

It may be pointed out, to begin with, that there is a sense in which certainty as well as certitude may be characterized as subjective, though it is not the same sense. Take any disputed historical question. The judgment of the historian as to the probability or certainty of a particular solution ought to be objectively determined in the sense of being determined solely by the evidence, and not by any personal prejudices. But, suppose he decides that one solution is, on the whole, more probable than another—that is to say, there are two suggested courses which the events in question may have taken, he cannot pronounce either impossible, but sees reason to think it more probable that the events occurred in this way rather than in that. It is clear that to all this doubt, hesitation, and caution in the historian's mind there is nothing corresponding in the actual events themselves. The events, of course, happened in one definite way only; every contrary suggestion, therefore, is really impossible, and would be seen to be so if at any time a discovery of additional evidence showed what the actual sequence of events really was. Thus the notions of possibility, probability, and, as contrasted with these, certainty itself, are here evidently subjective in the sense that their use is determined—as we may roughly say—not by anything in the reality itself, but by the extent and the deficiencies of our knowledge of it. And yet they are not subjective in the sense of being applied arbitrarily or at the instigation of mere personal prejudice. On the contrary, they are objective in so far as they are determined by the evidence available. And this evidence, again, so far as it is reliable, states actual features of the reality itself. To be accurate, then, we must revise our statement, and say that the application of these notions *is* determined by features of the reality itself, but by a reality which is imperfectly known, and that the need for distinguishing the several notions arises in connexion with the imperfection of our knowledge. Such a view, though drawn from a single example, has obviously a very wide range of application. It applies in precisely the same way, for instance, to the probability of a scientific hypothesis as to that of a historical event. (The case of future events, and especially of future events depending on human choice, raises further difficulties—for in this case there is evidently a sense in which the incompleteness of our knowledge is due to the incompleteness of the reality itself. But, for the sake of simplicity, this case may be disregarded. Our knowledge of future events is, at any rate, inconsiderable as compared with (1) knowledge of past events, and (2) knowledge into which considerations of time do not directly enter.)

The general view, then, to which the foregoing considerations point is that certainty corresponds to complete or perfect knowledge, the various degrees of probability to the less or greater degrees of incompleteness or imperfection in knowledge. But the question at once suggests itself, Is our knowledge ever perfect? Is not finite knowledge, simply as finite, obviously and necessarily incapable of completeness? To answer this question, we must distinguish. If by finite knowledge is meant the whole body of human knowledge, the question is justified. But then, in any discussion of certainty and probability, we evidently have in view, not the whole body of knowledge, but the comparative stability and precision of particular

knowledges. And the question is, whether a particular knowledge may not be complete within the limits—explicit or implicit—within which alone we really affirm it. We must admit, of course, that no particular knowledge can be isolated from all the rest, and, therefore, also that no particular knowledge can be said to be absolutely exempt from the process of revision which is constantly going on in the total body of knowledge. How, then, it may be urged, can we be sure that the supposed completeness within certain limits will not be affected by the immeasurably wider unknown conditions outside these limits? But, in answer to this objection, it may be remarked, in the first place, that the unknown conditions must, in order to affect our particular knowledge, be relevant to it. Our knowledge of Scottish history in Queen Mary's time might be vitally affected by additional evidence as to contemporary English or French history, but hardly by any amount of information as to contemporary events in China. The same example shows that, from what we already know, we are even able in a sense to form a rough estimate of the extent to which unknown conditions can really be relevant. In the second place, there is no reason to assume that, where the unknown conditions would affect our present knowledge, they would affect it in the one way of making uncertain what seemed previously certain, or less probable what seemed previously more probable. On the contrary, the progress of knowledge exhibits the verification, extension, and deepening of previous ideas, no less than their correction and reversal. Still, it may be said, the difficulty remains that we can never be sure; so long as unknown conditions remain, doubt cannot be excluded. And, for that matter, the sceptic may reach the same result, without appealing to unknown conditions at all, by simply pointing out that our faculties of perception, memory, and reasoning are not infallible, and often deceive us; and he may conclude, with Carneades, that (it is probable that) we can never attain any certainty at all, but, at most, some lower or higher degree of probability.

These vague and general suggestions of possible error may rightly indicate the need for a correspondingly general caution, but they do not afford a specific ground for doubting a specific knowledge which, after the exercise of all due caution, we are still compelled to regard as certainly true. Nor is anything really gained by saying that we must be content to regard every knowledge, even that which is apparently certain, as no more than probable, though perhaps in a high degree. For the distinction between apparent certainty and high probability remains, and would simply have to be expressed over again as a distinction within the sphere of probability—as a distinction, too, of a special kind, not quite on the same level as the distinction between the various degrees of strict probability. Moreover, the systematic denial of all specific certainty would appear to contradict itself, since the specific assertion of any degree of probability implies that there are specific conditions of certainty, which the probable assertion partly fulfils, and which (because they are specific) might conceivably, if not actually in a given case, be fulfilled completely. In short, the fact is that we have no right whatever to dictate *a priori* the degree of confidence with which any particular knowledge may rightly be held. This can be determined only by the nature and contents of the knowledge itself. And the attempt to dictate it *a priori* probably depends upon metaphysical assumptions as to knowledge, error, and reality that are themselves of a highly questionable character.

There is, however, one virtue in the sceptic's insistence on the finite and relative character of knowledge: it tends to promote a right recognition of the gradations of logical evidence, and a right reluctance to interrupt these gradations by abrupt gaps and intervals. It must, no doubt, be agreed that the main line of distinction must be drawn between the highest stage of probability, on the one hand, at which room for doubt still remains, and genuine certainty, on the other, from which doubt has vanished, or into which it is unable to thrust itself. And it seems plausible to contend that an absolute gap here separates knowledge from opinion: within opinion there may be degrees of probability; within certain knowledge there can be no degrees; the knowledge of anything cannot be more certain than certain. But—not to speak of that 'moral' or 'practical' certainty in regard to which, for some given purpose, the distinction between certainty and very high probability is a vanishing one—it must be pointed out that certainty takes various forms, and that it is impossible to put all these forms on the same level logically, or to maintain that certainty is not increased when it passes from a lower to a higher form, or when it is present in different and consilient forms. The calculations by which Adams and Leverrier were enabled to anticipate and predict the observation of the planet Neptune may be said, in a quite valid sense, to have given knowledge which was certain before the actual observation; for the observers merely saw what they were told they would see. But we still regard the actual observation as verifying, and so heightening the certainty of, the calculated result. The converse case is a still better illustration, for an astronomer's confidence in a number of fragmentary observations would be really raised to a higher plane if it could be shown by calculation that the observed facts could be explained as appearances of a planet which must have followed that very path at the times in question. But even in certainties of the same form we are compelled to recognize degrees. John may recognize with certainty Thomas, whom he has seen only a few times, but the certainty of John's recognition could not be put on the same level as that with which Thomas is recognized by his own near relatives. This topic of the degrees of the logical strength of judgment is technically known as the 'Modality of Judgment,' and in the text-books of Logic detailed discussion of it will usually be found under that head. The question is sometimes discussed, whether the degrees are degrees of what we have distinguished as certainty or certitude respectively. The natural view is that they are degrees of both, and that, as Locke maintains in the passage above quoted, the degrees of subjective assurance ought simply to reflect the degrees of the objective evidence.

3. Basis of certainty.—When the question of the ultimate basis of certainty is raised, there is a strong temptation to revert to a merely subjective point of view. All certainty, it may plausibly be argued, is in the last resort certitude. When I affirm that a thing is certainly true, what I really mean in the last resort is that I 'feel certain' about the thing. I may be wrong, but I cannot get beyond my own certitude, I cannot get outside my certitude and criticize it. The plausibility of this sort of argument depends upon its ambiguity. According as we interpret the argument in different ways, it either becomes trivial, or involves us in a circle, or is essentially false. (1) The argument is trivial, if it merely means that every certainty or certain knowledge is the knowledge of some individual knower, and therefore must be felt as a certitude. Knowledge does not float in the air, and no knowledge is actual except in the minds of

individual knower. (2) It involves us in a circle, or rather a ὕστερον πρότερον, if it means that the certainty is to be referred for its explanation to the certitude. For, where there is both certainty and certitude—*i.e.* where we are dealing with logical or grounded certitude, as contrasted with apparently groundless certitude and with mere prejudice—we must obviously explain the certitude by reference to its evidence or ground. We have here simply one case of the general principle that a faculty can be defined or determined only by reference to its objects, and that the explanation of its being determined in one way rather than another can be sought only in the differences of the object. Assuming my visual faculty to be normal, the only explanation of my seeing a soldier's coat to be red, and not blue, is that the coat *is* red and not blue. No amount of looking would make the coat look blue, if it was really red. And in like manner my certitude that the angles of a triangle are together equal to two right angles is to be explained only by my certain knowledge (present or remembered) of this geometrical truth in the light of Euclid's demonstration of it. So far is it from being the case, then, that we can explain any particular certainty by referring to a certitude brought about somehow in the subject's mind that, on the contrary, we cannot explain how he comes to cherish that particular certitude except by examining the objective contents of his knowledge. (3) We can now see how essentially false, or, at any rate, how thoroughly misleading, it is to say that no one can get beyond his own certitude. For my present certitude is entirely relative to my present knowledge, and I can therefore always go beyond my present certitude, and either correct or verify it, if I take the trouble to extend my present knowledge. (Nor does the fact that the individual's thinking tends eventually to run in fairly definite grooves really conflict with this assertion, so long as the fact remains one with which logic can deal at all.) We can derive little instruction, then, from a test of truth like Herbert Spencer's 'inconceivability of the opposite.' It either tells us nothing, in so far as it merely suggests that we cannot really think that which is not true; or it merely indicates a fact about our present state of knowledge, viz. that there are certain things which we seem unable to think—an inability which we naturally suppose to be due to the just-mentioned reason that the things in question are not true, though in supposing so we may be as far astray as was Locke's king of Siam, who refused to believe it possible that water could become solid. Or, finally, it puts us on the false track of making introspective experiments, instead of the right track of extending our knowledge.

When we turn away from the illusion of a subjective basis of certainty, the chief difficulty on the objective side is that which is raised by the conception of *immediate knowledge*. The process by which knowledge grows is a process of continual mediation, *i.e.* a process in which we are continually trying to arrive at new results by analyzing what is immediately before our minds and connecting it with the rest of our knowledge. Now, to this process of mediation or interpretation there would seem to be two ultimate limits: a lower limit of data which cannot be further analyzed, and an upper limit of principles of connexion which cannot themselves be shown to result from more general principles. Given the simple data at the one end and the first principles at the other, the certainty of all intermediate knowledge (so far as it is certain) can be explained as arising from the connexion of clearly discerned data according to clearly discerned principles. But the certainty of the data and principles themselves would be beyond this sort of explanation, and must therefore be referred to an immediate knowledge of perception or reason as the case may be. The natural conclusion, then, would be that the ultimate bases of certainty are particular perceptions, on the one hand, and intuitions of reason, on the other.

A view of this kind—which has come down to us, we may say, speaking roughly, from Aristotle, though in his own logical system it is qualified in ways with which we are not here concerned—may be all very well in its own place. It serves us quite well, for instance, in the logical analysis of any particular scientific inquiry, for every such inquiry moves between two limits: on the one hand, the general principles, assumptions, or point of view which the inquirer shares with his fellow-scientists; on the other, the special set of facts which he is investigating and in regard to which he must at some point or another stop with data taken as ultimate starting-points for the purposes of that inquiry. So far as that particular inquiry is concerned, we need not care how the assumptions and the data are themselves guaranteed. But the case is quite different when the view is extended without qualification to knowledge as a whole, and used to determine the ultimate bases of knowledge and certainty. For then it is precisely the guarantees of our principles and data that we are concerned about. And, unfortunately, the view in question easily suggests a quite misleading conception of the manner in which knowledge is acquired and certainty attained. It suggests that knowledge arises out of a combination of pre-existing elements—a great number of perfectly single, simple, and definite, particular perceptions on the one hand, and a small number of perfectly clear and highly general principles on the other; and that these elements are apprehended with certainty in themselves, before the derivative process of knowledge proper begins at all. The picture thus suggested of the mind, as originally furnished with these elements out of which it manufactures knowledge, has, it need hardly be said, no sort of psychological actuality. But even if we keep to the abstract point of view of logical analysis, the conception remains unreal and misleading. What we call a particular fact in ordinary life, *e.g.* that one's bicycle was punctured on one's last run, is in reality very complex: and the certainty with which it is affirmed depends, *e.g.*, on the way in which it is attached to a whole series of other facts of memory. And, of course, the same thing applies even more to a particular fact in science, *e.g.* an astronomer's observation, which is possible only with the aid of delicate instruments, and is affirmed with a reserve for probable error. The notion of a perfectly simple and unmediated perception, then, must be dismissed altogether. The kind of perception which has a value for knowledge is one whose conditions and context are known as fully as possible. And it is indeed precisely because the particular inquirer has a body of well ascertained knowledge at command that he can take definite starting-points for granted.

A very similar argument applies to the general principles. It is true that first principles cannot be proved from other principles,—otherwise, of course, they would cease to be *first* principles,—and they cannot, therefore, have this kind of demonstrative certainty. But it does not follow that our certitude of their truth is due to an act of immediate intuition in which they are contemplated in total abstraction from the rest of our knowledge. On the contrary, our certitude depends on the precisely opposite ground, that only in terms of these principles can we understand our actual experience. It may be, of course, that this experience is in a

given case, *e.g.* that of geometrical principles, of a very abstract and elementary kind. And the fact that we apprehend the truth of Euclid's axioms so easily has certainly been one of the chief factors historically in maintaining the view under criticism. But the special circumstances of this case must not be allowed to mislead us as to the general truth. If we took sciences at the opposite pole, such as psychology or ethics, we should find that the apprehension of genuine first principles is usually the last result of a prolonged experience of more or less false and inadequate ones. The objection may be apt to suggest itself here, that at this rate the certainty of our knowledge would again seem to be undermined, if first principles may remain long in dispute and particular facts are so hard to determine with accuracy. But once more it must be replied that the very relativity on which sceptical doubts are based supplies the best answer to them. It is not necessary that we should have all our certainties about a thing at once, or, more accurately, that our certainty about it should have from the beginning all the fullness and precision of detail which we are ever destined to attain. The particular fact of the distance between Edinburgh and London could be known with certainty to be between two limits before there was any Ordnance Survey, and the result of the Survey is only to replace a vaguer certainty with one more precise. And the same thing holds in regard to first principles. It is a long step from the principle, 'Out of nothing, nothing comes,' to the principles of the Conservation of Matter and Energy, but the earlier formula served for its own time even as the later ones serve for ours.

4. **Types of certainty.**—On the question of certainty in the several departments of knowledge a few words must suffice. The great type of certainty almost from the beginning of the history of philosophy has been that which is exhibited in mathematical science, and especially in geometry. And the reason why is not far to seek. The exceptional appeal which geometrical certainty makes arises from the double advantage which the science possesses in the exactness and the direct intuition which are combined in the definition or construction of its concepts and in its axioms. Within the limits of its fundamental assumptions as to the nature of space—say, that space is tri-dimensional and homogeneous—no uncertainty can arise from the nature of the geometrical elements, because these elements can be determined with such perfect precision and exhaustiveness. In modern times, however, mathematics has gradually come to be rivalled, or even in large measure supplanted, in this pre-eminence as a type of certainty, by physical science. For (pure) mathematics, after all, suffers under the drawback of being very abstract, and of seeming to recede into regions very remote from the ordinary reality which is accessible to the plain man's understanding, whereas physical science (including applied mathematics) has the enormous advantage that its triumphs come home to everybody in the shape of the most marvellous practical inventions and appliances. In the face of these practical proofs an attitude such as could be adopted little more than two centuries ago by Locke—his denial of certainty and true scientific character to physical knowledge, and his insistence that it hardly goes beyond particular observations and vague probabilities—has become almost incredible to us. When the certainty of physical science is challenged on abstract grounds of philosophical theory, we are inclined to adopt an attitude like Hume's in regard to miracles, and reply that it is easier to distrust the theory than the science; nor is the reply by any means wholly irrelevant.

The extreme predominance of a type of certainty peculiar to one particular department of knowledge is apt to exert a very mischievous influence on other departments. Those who are engaged in the studies of these departments are put in an unhappy dilemma. If the knowledge which they claim to possess cannot be expounded in conformity with the accepted type of scientific certainty, it will be accused of not being science at all. On the other hand, if, as is apt to happen, they succumb to temptation and try to *force* their subject-matter into conformity with the accepted type, they do it at the expense of distorting and perverting their subject-matter, and the accusation is then entirely deserved. The mischievous effect of the geometrical ideal of certainty in this direction is a well-known fact in the history of thought. In modern times it is the ideals of physical and natural science which have become most dangerous. One powerful check to this danger, however, was set in operation by the philosophy of Kant. And—strangely enough in one way, though naturally enough in another—it is largely by reason of his own strong belief in physical science that he has come to exert this influence. For it seemed to him that he could not secure that certainty of physical science in which he strongly believed, except at a price that required the sphere of such science to be rigidly limited. On the other hand, it is this very limitation of scientific knowledge that leaves room for certainties of another kind in which he also strongly believed—certainties not of science, not, in Kant's restricted use of the term, of 'knowledge,' but of faith, the certainties of morality and religion. The opposition between knowledge and faith is apt to excite distrust, and may in fact easily merit the reproach under which it suffers. But in the hands of Kant, and of the theologians who have learned from him, the distinction is the very reverse of sceptical. It is simply their emphatic way of expressing the truth that morality and religion must have their certainty in themselves, must have that specific sort of certainty which is appropriate to their own nature and contents. The real scepticism lies not in this contention, but in its rejection, in the attempt to make morality and religion subsist on a borrowed certainty. It is unfortunate, though intelligible, that these thinkers should be apt to use the term 'subjective,' and other similar expressions, to describe the more personal and intimate certainties of faith as contrasted with an impersonal scientific knowledge which makes no appeal to man's moral nature. But they do not for a moment mean to suggest that moral or religious certitude is unevidenced and groundless, or that there is any element of arbitrariness, bias, or fancifulness in it.

5. **Non-logical certitude.**—We have here come round again to the question which was provisionally excluded when we accepted the logician's simplification of the problem of certainty (see p. 321[a], § 2). Is there a certitude which is subjective in a further and more vital sense, a certitude which, if not *il*logical, is at least *non*-logical, a certitude of which it is, in some vital sense, beyond the powers of logic to give an adequate account, but which we must none the less be content to accept as a genuine type of belief? The obvious difficulty in the way of an affirmative answer is that of showing how a *belief* which is in any vital sense non-logical can possibly be saved from being illogical. But let us first be clear as to when a belief does become non-logical in a really vital sense. Cardinal Newman is a writer who would usually be regarded as a strong advocate of non-logical certitude, and it need not be denied that there are many points in which his theory of belief, or at least his manner of expressing it, is open to

criticism from this point of view. But, taking his theory as a whole and in its historical setting, it cannot, in the opinion of the present writer, fairly be interpreted as making belief non-logical in the really vital and dangerous sense. The truth, to which Newman constantly returns, and which is really the foundation of his whole theory, is that which is contained in the distinction between the actual grounds of a belief and the reflective analysis (or self-consciousness) of these grounds—or, as he himself entitles it in one of his *University Sermons*, the distinction between Implicit and Explicit Reason. 'A peasant,' to use one of his own incidental examples, 'may from the look of the sky foretell to-morrow's weather, on grounds which, as far as they are producible, an exact logician would not scruple to pronounce inaccurate and inconsequent.' From the fact, that is to say, that the peasant cannot give a satisfactory account of the grounds of his belief, we cannot infer that his belief was groundless, or even that (considered as a practical belief about a thing so uncertain as the weather) it was inadequately grounded. It is true that a scientific meteorologist could not possibly be content with such a belief, or recognize it as authoritative, though even as a man of science he could not afford to dismiss it with contempt. But for the peasant himself such belief is valid enough. And if the 'exact logician' cannot recognize any kind or degree of validity in it, then, with Newman, we have a right to say, so much the worse for his logic. Much stronger cases, of course, could be given. The instance, given above, of one's confidence in a friend's character, is a stronger case. Newman's main interest, naturally, is in the corresponding cases of religious belief. To an inquiry, then, which seeks to determine the place of 'non-logical' belief in this sense, logic itself has no real objection, or rather, it is in the interests of logic that such an inquiry should be made.

But the doctrine of non-logical certitude has been maintained in another, and far less defensible, form. The claim has been made that a place must be conceded to the influence of the emotions, the desires, and the will, in the determination of belief—not merely as a matter of fact (for that this is in some sense true we need not dispute), but as a matter of right. Man, it is maintained, is not a mere logical machine, and in the formation of his beliefs his whole personality has a right to count. Now, here again we must first know clearly what is meant. It is quite true that the existence of emotions and desires may warrant belief in the (more or less probable) existence of corresponding objects. The existence of fear points to the existence of a terrifying object, the existence of desire points to an apparent good, which may or may not be capable of being realized. But this is not what is meant in the doctrine in question. What is claimed is rather that the existence of these emotions and desires, which are thus *logically* related to their *own* objects, must be allowed (no doubt, within limits) to influence, *in a non-logical way*, our belief in the existence of *other* objects (or in the future realization of as yet unrealized objects); so that, if the intellect is unable definitely to affirm, or on the other hand to deny, the existence (or realization) of these latter objects, our emotions and desires have a right to throw themselves into the scale, and determine us to believe. Let it be assumed, *e.g.*, that man dreads death and desires immortality: if, then, the intellect does not decisively affirm or deny a future life, our dread and our desire may *rightfully* induce in us a 'will to believe.' It is difficult to think that such a doctrine would really continue to be maintained, if it could be kept free from the confusions in which the connected psychological discussions are so readily entangled. It is by the ambiguities of these discussions that the doctrine may best be explained and excused. What is less easily excused is the notion that the doctrine makes a valuable contribution to the cause of religious faith. To the theologian this notion is unlikely to commend itself. He will be apt to think that religion is the worst possible sphere to select for the exercise of make-believe. (Cf. Herrmann, *Verkehr des Christen mit Gott*², 1892, pp. 45–47, *Gewissheit des Glaubens*², 1889, pp. 44–45, in reference to a similar error in theology proper.)

See also artt. AUTHORITY, AXIOM, BELIEF.

LITERATURE.—For the history, see Janet-Séailles, *Hist. of the Problems of Philos.*, Eng. tr. 1902, vol. ii. pp. 93–145 ('Scepticism and Certitude'). On the fundamental questions of logical principle, see Bosanquet, *Logic*, 1888, vol. i. ch. ix. ('Modality'), vol. ii. ch. vii. ('Ultimate Nature of Necessity'), also his *Essays and Addresses*², 1891, p. 181 ff. ('Philos. Distinction bet. Knowledge and Opinion'), *Knowledge and Reality*, 1885, ch. iii. ('Assertion and Modality'), and Conclusion. Besides the writers referred to in the first of these three works, the following may be mentioned: R. L. Nettleship, *Philos. Remains*², 1901, Lectures on Logic (especially sections vii. and viii. and note B); Wundt, *Logik*, 1880, Bd. i. Abschn. v. Kap. i. ('Begriff des Wissens'); Sidgwick, *Philos. of Kant*, etc., 1905, pp. 430–467 ('Criteria of Truth and Error'). General works on theory of knowledge like Volkelt, *Erfahrung u. Denken*, 1886, have necessarily much to say about certainty. Scientific discussion may be represented by Milhaud, *Conditions et limites de la certitude logique*², 1898; Jevons, *Principles of Science*², 1877, esp. bk. ii. ch. xi. ('Philos. of Inductive Inference'); but the philosophy of these writers is open to much criticism. H. Spencer's test is stated in his *Principles of Psychology*, vol. ii. pt. vii. ch. xi.; it is criticized by Mill, *Logic*, bk. ii. ch. vii.; cf. on both, Green, *Works*, ed. Nettleship, 1885–88, vol. ii. p. 265 ff. On the psychology: Stout, *Analytic Psychology*, 1896, vol. ii. ch. xi. ('Belief and Imagination'). A good representative of the Kantian distinction between knowledge and faith is Herrmann, *Religion im Verh. zum Welterkennen u. zur Sittlichkeit*, 1879, esp. pp. 100–117. For the doctrine of non-logical certitude: Newman, *Oxford University Sermons* (1843, 1871), and *Grammar of Assent*, 1870. On the 'will to believe': James's book so named (1897), and his *Principles of Psychology*, 1891, vol. ii. ch. xxi.; a more elaborate and careful presentation of a similar view is given by a thinker to whom James makes acknowledgments, Renouvier, *Psychologie rationelle* (part of his *Essais de critique générale*², 1875), 2me partie, contained in tomes ii. and iii. Questions of the non-logical relation of belief to authority are discussed by A. J. Balfour, *Foundations of Belief*, 1895, pt. iii.

HENRY BARKER.

CERTAINTY (Religious).—**1. Definition and Introduction.**—By 'religious certainty' is meant the assurance of personal salvation. This article will therefore deal mainly with what the Reformers described as *certitudo salutis* or *certitudo gratiæ*. But in usage the notions of objective security (*certitudo veritatis*) and subjective assurance have often been so closely intertwined that it becomes necessary to differentiate religious certainty, properly so called, from other aspects of certitude in regard to matters of faith. The ultimate difficulty of the subject is the relation between external testimony and inward experience. A consideration of the manifold ways in which this relation has been conceived and formulated in different theological systems ought, therefore, to yield some indication of the direction in which the solution of the problem must be sought.

To arrive at certainty of any kind, sufficient evidence must be forthcoming; the criterion of sufficiency will vary according to the nature of the facts to be investigated. Two examples of the use of the word 'certainty' in the NT supply an illustration of this obvious but frequently neglected truth. (1) In Lk 1[4] Theophilus is told that the purpose of the Third Gospel is to furnish such evidence as will enable him to attain to the certainty (ἀσφάλεια) which results from learning that teaching accords with fact. For modern inquirers, such certitude of belief rests upon a conviction of the trustworthiness of the credentials of the Gospel. (2) In Ac 2[36] the first and emphatic word in the final sentence of St. Peter's address on the day of Pentecost is ἀσφαλῶς: 'Let all the house of Israel therefore know *of a certainty* that God hath made

him both Lord and Christ, this Jesus whom ye crucified.' On what was this certainty based? An analysis of St. Peter's argument supplies the answer. For our present purpose, the significance of that argument is its appeal to various grounds of assurance. Religious certainty, in the sense of inward experience of the Holy Spirit's working, is itself regarded as witnessing to the reality of the Resurrection of Christ; but that certainty may also, it is assumed, be strengthened by testimony to the objective grounds of faith, as they are found in Scripture and in history. St. Peter's reasoning is forcefully shown in Chase's lucid summary, *The Credibility of the Acts of the Apostles*, 1902, p. 152 f. (in the quotation the italics are ours):

'The assurance of the Resurrection and the Ascension was to be found *in the prophetic words of Scripture*—the words which were universally regarded as the words of David, but which in the magnificence of their hope could not be true of him whose sepulchre was in the midst of his people. It was to be found *in the actual experience* of those particular Israelites on the day of Pentecost—"this which ye see and hear" (2^{33}). It was to be found in the present beneficent activity of Jesus of Nazareth—*in the miracle wrought in His name*: He is active; therefore He lives. It was to be found *in the personal testimony of the Apostles themselves* to "the things which they had seen and heard" (4^{20}). It was to be found, lastly, *in the inner witness* of the Spirit—"we are witnesses of these things; and so is the Holy Ghost" (5^{32})—the Spirit who revealed the fitness of the Resurrection, and its harmony with the Divine purpose as partially shadowed forth in the words of Scripture. . . . It would be hard to add another to this series of testimonies.'

2. Affirmation of uncertainty (pre-Reformation period).—In mediæval times the general effect of the teaching of the Church was to discourage the expectation of attaining to religious certainty. The great scholastics of the Middle Ages treated together the doctrine of merit and the doctrine of grace. According to the doctrine of merit, salvation must be gained by the actions of human free agents, who, nevertheless, need grace in order that their works may be meritorious (Wetzer-Welte, *Kirchenlexicon*, xii.² [1901] 690 ff.). Peter Lombard's definition of hope, often criticized by Luther, reveals the incompatibility subsisting between the Roman Catholic doctrine of merit and the tenet of the certainty of salvation:

'Est certa exspectatio futurae beatitudinis veniens ex Dei gratia et meritis praecedentibus vel ipsam spem vel rem speratam. Sine meritis enim aliquid sperare, non spes, sed praesumptio dici potest' (lib. iv. dist. 26, 1; quoted by Kunze in *PRE*³ xx. 503).

Thomas Aquinas taught that by a threefold way one may ascertain whether he is the subject of Divine grace or not: (*a*) by direct revelation on the part of God; (*b*) by himself (*certitudinaliter*); (*c*) by various indications (*conjecturalitur per aliqua signa*). But the last two were, in his opinion, uncertain; and, as for the first, God very seldom makes use of it, and only in particular cases (Hagenbach, *Hist. of Christian Doctrines*, Eng. tr. 1880, ii. 303 f.). Aquinas, it is true, held that salvation is attained by the sacraments; but he did not affirm that the communicant has an inward assurance of the reception of saving grace. In his view, a Christian cannot attain to religious certainty, except by direct revelation from God; those to whom this special favour is not vouchsafed must remain in uncertainty:

'Revelat Deus hoc aliquando aliquibus ex speciali privilegio' (*Summa*, II. i. qu. 112, art. 5).

At the Council of Trent this doctrine was authoritatively affirmed:

'No one can know with a certainty of faith, which cannot be subject to illusion, that he has obtained the grace of God. . . . Except by special revelation, no one can know whom God hath chosen unto himself' (*Concil. Trident.* vi. 12; cf. also vi. 9).

But the experience of devout souls cannot be confined within the limits of official definitions. That before the Reformation believers attained to religious certainty cannot be doubted by those who remember how great is the debt which Roman Catholic Mysticism owes to two 12th cent. saints—not to mention others—Hugo of St. Victor and Bernard of Clairvaux. The writings of the former have 'a mystical tinge,' and the latter knew by experience that Jesus is the 'bridegroom' of the individual soul. The hymn associated with his name is now ascribed to one of his disciples (see BERNARD OF CLAIRVAUX). In it religious certainty finds expression in words whose truth has been confirmed by the experience of Christians of all communions: 'The love of Jesus, what it is, None but His loved ones know'; but they know of a certainty, and that certainty is established rather than shaken by the consciousness that His love 'passeth knowledge' (Eph 3^{19}). Reference has been made to the decrees of the Council of Trent, but it should not be forgotten that even the story of the Tridentine controversy yields proof that the subject of religious certainty had forced itself upon the attention of thoughtful Christians. At the famous Council, Ambrosius Katharinus was the leader of the Scotists against Dominicus da Soto, the leader of the Thomists. Soto held that the Roman Church taught the uncertainty of grace; but Katharinus, who did not regard the authority of the Scholastics as unconditionally binding, maintained that the *certitudo gratiæ* was in accordance with the doctrinal definitions of Rome (*PRE*³ xviii. 539). Juan de Valdés (d. 1541) also, in one of his publications, quotes a discourse on the subject, 'Can a Christian be certain of his justifying and glorifying?,' which is extant in Italian, and forms the fifth of the *Trattatelli* (ed. Halle, 1870, Rome, 1872, under the title *Sul principio della dottrina cristiana*).

The controversy in regard to Probabilism, in the Roman Catholic Church, bears upon the question of religious certainty. It is true that casuistry in morals is primarily concerned, but on this subject Harnack reminds us that 'ethics and dogmatics do not admit of being separated.' Proof of the statement is given in a reference to Alfonso Liguori (1699–1787)—'the most influential Roman theologian since the days of the Counter-Reformation.' Liguori's own doubts 'involved him more deeply in the conviction, that it is only in the absolute authority of a father-confessor . . . that any conscience can find rest' (*Hist. of Dogma*, Eng. tr. 1899, vii. 108).

3. Relation between subjective and objective certainty (Lutheran position).—The notion that a believer in Christ must remain in uncertainty as to whether he is or is not in a state of grace was denounced by Luther as a dangerous and sophistical doctrine (*Com.* on Gal 4^{6}). The Reformers' teaching concerning justification by faith involved, says Ihmels, an attempt to answer a twofold question: 'How can man attain objectively and subjectively to communion with God?' To Luther, as to St. Paul, the certainty to which the Gospel testifies is that God is gracious. Objective testimony may be given to this truth, but it is the believer's privilege to know subjectively that God is *gracious to him* (*PRE*³ xvi. 483). Kattenbusch describes Luther's teaching about salvation as being, in brief, that the man who on earth has experience of the love of God in the forgiveness of sins already enjoys a foretaste of the bliss of heaven. Upon this idea of salvation Luther based his doctrine of the believer's certainty of salvation (*Heilsgewissheit der Gläubigen*). He held that, according to the gospel of the grace of God, a Christian may be assured that it is God's will to forgive and to save (*certum esse de gratia Dei*). But the thought of the ever certain grace of God signified for him not the indifference of God towards sin, but God's power over sin (*PRE*³ xvi. 152).

During Luther's lifetime there were, however, some who regarded his teaching on religious certainty as defective. To questions in regard to the

time and manner of conversion, his answers were said to be indecisive or incomplete. Even in his exposition of the doctrine of justification by faith, Karlstadt and Münzer said that they missed clear instruction concerning 'the transition (*Ueberleitung*) to the certainty that the Divine grace avails even for me, and for me even now' (Feine, *Bekehrung im NT und in der Gegenwart*, 1908, p. 26). The truth is that there were two strains in Luther's teaching. On the one hand, Dorner's definition is thoroughly Lutheran:

'Christian certainty is the Divinely effected certainty that we are known, loved, and reconciled by God (1 Co 8[3], Gal 4[9]), since He regards us in Christ. . . . The Holy Spirit . . . creates a firm because a Divine consciousness. The knowledge of man is exalted to Divine knowledge. It is Divine as to its contents, for it knows God and His thoughts of love. But it is also Divinely certain of these contents, without ceasing to be human' (*System of Christian Doctrine*, Eng. tr. 1880, i. 153 ff.).

On the other hand, Luther's affirmation that religious authority is based not on the Bible alone, but on the Bible as interpreted to the individual by the Spirit of God, has led many Lutheran theologians to dwell on the *testimonium Spiritus Sancti* less as the inward assurance of personal salvation than as the guarantee of the truth of Scripture, and, indeed, of Christian theology. It should, however, be added that modern Lutheran theologians of the positive school would make the ground of objective certainty not the Scriptures, but the Christ whom the Scriptures reveal.

'The basis of faith is Christ as known to us in the testimony of His first disciples. . . . Nor is it possible to allow any essential difference between Christ as the basis of faith and Christ as the content of faith. He who sees in the man Jesus only His moral majesty, and never beholds His Divine glory, is not led to faith in Him in the religious sense' (Kirn, 'Glaube,' *PRE*[3] vi. 681).

H. B. Workman (in *New History of Methodism*, 1909, i. 21) suggests that the reason why the doctrine of assurance has not been a potent factor in the life of the Protestant Churches of the Continent is that 'as Luther grew older his conception of faith became more and more intellectual.' Certainly intellectualism has been unduly prominent in orthodox Lutheran teaching, and it is profoundly true that 'when faith is reduced to the assent of the intellect it ceases to have that guarantee or assurance which faith can have only when it is the consciousness of the soul transformed with the passion of love.' To teach that justification by faith is followed, in due course, normally by knowledge of justification or assurance of salvation is to incur the responsibility of showing, beyond all possibility of doubt, that by faith is meant, not intellectual assent to pure doctrine, but

'*Fides specialis* — a personal act, according to which the person confidently applies to himself the *gratia universalis*. This is *Fiducia*. If we analyze this *fiducia* more closely, it is a trustful acceptance, not yet assurance of salvation. Only the contents received by faith have the power to give . . . the *certitudo salutis* by the *testimonium internum Spiritus Sancti*' (Dorner, *op. cit.* iv. 199).

With the statement in this form there would be general agreement. The words omitted assert that 'the contents received by faith have the power to give certainty of their truth.' The religious consciousness does, indeed, verify the saving truths of the gospel; but, as will be shown in the next paragraph of this article, extreme claims have been made in regard to the range of truth which inward assurance has been supposed to guarantee. Religious certainty is quite compatible with scanty knowledge of Christian doctrine, though it always prompts to the acquirement of truth, and indeed is, to a large extent, sustained by knowledge of the truth.

'One may not only have faith, but even the "full assurance" of faith, without a correct knowledge, or even without any theory at all, of the mental process it involves' (Robert Whyte, *Expositor*, 2nd series, viii. [1887] 216).

The relation between subjective and objective assurance in religious certainty will vary. To one who has been carefully instructed in Divine truth, religious certainty means that what has been implicit becomes explicit; there is a realization of the power of Christ, who may have been theoretically acknowledged as the Son of God, but who has never before been known as Saviour. But another, whose knowledge of Christ's teaching and claims is very scanty, may be led to trust His promise of forgiveness in the hour of conviction of sin; he will have 'an overwhelming feeling of the reality of his experience,' and his growth in assurance will depend upon his diligence in 'the investigation of the grounds of the belief'; in his case that investigation is 'a matter for later reflexion' (see art. BELIEF, vol. ii. p. 463[b]).

Among 19th cent. Lutheran theologians who have made a special study of the subject of 'Christian certainty,' a prominent place must be given to F. H. R. von Frank (1827-1894), the founder of the 'Erlangen school' of German theology. His religious experience is instructive. His father was a Lutheran minister with decided leanings towards Rationalism. But, during his University course, Frank was greatly influenced (*a*) by Harless at Leipzig, who represented the staunch Lutheran orthodoxy of which his pupil afterwards became a firm defender; (*b*) by Hofmann at Erlangen, under whose guidance he was led to seek 'new methods of teaching old truths.' In his writings Frank endeavours to do justice both to the subjective and to the objective side of religious certainty. R. Seeberg points out (*PRE*[3] vi. 160) that in Hofmann's teaching there is a similar blending, due to his having learnt (*a*) from Schleiermacher to lay stress upon subjectively experienced spiritual realities; and (*b*) from Hegel to recognize the importance of the historical method.

In his *System of Christian Certainty*[2] (Eng. tr. Edinburgh, 1886), Frank begins by stating that the expression 'Christian certainty' is used 'in a much more comprehensive sense than that of the personal assurance of salvation, the *certitudo salutis*.' But underlying the certainty, in which Frank attempts to find a basis for Christian doctrine, is the experience of regeneration. Of this new life the Christian is certain. Moreover, he is certain that this new experience is not self-produced; in contrast to his former experience, it bears witness to an efficient and sustaining cause. The argument that the central certainty of the Christian stands in indissoluble relation to the objects of faith is developed on three lines: (*a*) in relation to the *immanent* objects of faith, *e.g.* consciousness of sin and of the reality of the new life; (*b*) in relation to the *transcendent* objects of faith, *e.g.* the reality and personality of God, the one personal God as the triune God, and the fact of the expiation of the God-man, the sinless One; (*c*) in relation to the *transeunt* objects of faith, by which he means factors which come into consideration because they bring about the transition of those realities, transcendent in themselves, in their operation upon the subject, *e.g.* the Scriptures, the sacraments, and the Church.

In a sympathetic but discriminating estimate of this elaborate work, R. Seeberg (*op. cit.* p. 161) shows that Frank has been unjustly charged with (*a*) *subjectivism*, whereas his purpose was not to give expression to the mere affirmations of the religious consciousness, but to demonstrate that certainty of objective reality could be gained by subjective experience and assurance; (*b*) *intellectualism*, whereas he was in sharp opposition to the error that Christianity consists in a number of dogmas.

'It is only seemingly intellectualism, when all the subtleties of Lutheran doctrine are derived from Christian certainty. What may truthfully be said is that the value of the new

principle of knowledge is overestimated, and that it is incautiously applied.'

With this judgment general agreement would now be expressed. Frank had a profound realization of the evidential value of religious certainty, but he had an unduly exalted sense of the range of its doctrinal implications. In attempting to derive Christian truth from Christian certainty, he passed beyond the limits of the Christian consciousness into regions of thought concerning which it cannot speak. Dorner examines at length Frank's *System of Christian Certainty* in his *System of Christian Doctrine*, i. 52 ff. He speaks of its conclusions as 'a superstructure based upon mere subjectivity' (p. 54)—a severe judgment of which Seeberg's words supply the necessary modification. Especially valuable, however, is Dorner's comparison of Frank's *System der christlichen Gewissheit* with his *System der christlichen Wahrheit*. It is shown that

'Frank presents, strictly regarded, two Doctrines of Faith, one of which would pass from beneath upwards, from the subjective and empirical knowledge of the Christian to God; the other of which, to which he also gives the name of the Metaphysics of Christian Truth, would proceed from above downwards. Both give the Christian contents, but under a different aspect' (*op. cit.* i. 57).

4. Relation between present and future certainty (Calvinism).—The doctrine of religious certainty (*certitudo salutis*) has a place in the theology of the Reformed Church.

'Protestantism began as a reassertion of the rights of the individual. The protest against Rome took different forms. Luther emphasized justification by faith, Calvin, the Divine decree; the substance was the same. In either case the necessity of ecclesiastical mediation was denied, and the essence of religion found in the relation between the individual soul and God' (W. Adams Brown, *Christian Theology in Outline*, 1907, p. 199).

But Calvin's close linking of the doctrines of religious certainty and election had important theoretical and practical results. The theoretical result was that the ultimate ground of certainty —the immutable Divine decree—was as external as the special revelation granted to favoured Roman Catholics; the practical result was that emphasis was laid on the assurance of final salvation rather than on the present witness to forgiveness and adoption.

The subject of the certainty of election is discussed at length by Calvin (*Inst.*, Eng. tr. 1845, bk. iii. 24). He grants that 'the enjoyment of their election is in some measure communicated' to the elect, when they are called. 'Those are in error,' he affirms, 'who make the power of election dependent on the faith by which we perceive that we are elected'; yet he cannot but admit that 'in regard to us election is doubtful and ineffectual till confirmed by faith.' It follows that 'we must look there for its certainty, because, if we attempt to penetrate to the secret ordination of God, we shall be engulfed in that profound abyss'; but, having shown that our election is in Christ Jesus, he says: 'If we are elected in Him, we cannot find the certainty of our election in ourselves.' The teaching, as a whole, furnishes scanty ground for assurance to consciences deprived of peace, because, as Calvin declares, they cannot help asking two questions: 'Whence our salvation but from the election of God? But what proof have we of our election?'

In comparison with mediæval teaching, Calvinism marks an advance as regards its doctrine of the certitude of salvation. That the advance was not wholly in the right direction is due to the grounding of that doctrine 'solely upon the eternal nature and working of God Himself.' The Reformed Church claimed to have risen above 'the uncertainty of mere human subjective conviction' to 'immediate apprehension of the objective certainty of salvation as ultimately founded in the eternal Divine purpose.' The endeavour to combine objective and subjective grounds of certainty indicates a clear perception of the complexity of the problem, but a new difficulty was added when

'the Principle of Absolute Predestination logically took shape, as the ultimate expression of the Protestant Reformation in its search for a certain and infallible ground upon which to base the personal assurance of salvation' (Hastie, *Theology of the Reformed Church*, 1904, p. 231 ff.).

According to the *Formula Concordiæ*, it is our predestination which assures us of our salvation; but Luther regarded this idea as 'a constant factor of unrest' (*PRE*[3] xvi. 155). Hence the affirmation that 'the believer is as certain of his future salvation as he is of his mortality' is not too severely characterized by Thieme as 'a vulgar misunderstanding of the Lutheran doctrine of salvation.' According to that doctrine, the believer does not yet possess the inheritance, although he has become an heir. But even of the inheritance itself the certainty of salvation gives him a foretaste. In the love of God and of his brethren, he already enjoys the fruit of faith (*PRE*[3] xxi. 120). The practical tendency of strict Predestinarianism is, as Workman points out (*op. cit.* i. 23), to leave a 'loophole for doubt.' This is evident from the words of the *Helvetic Confession*: 'If thou believest and art in Christ, hold without doubt that thou art elect.' Calvin himself speaks of 'the constant struggle of the faithful with their own distrust.' Nevertheless, the element of truth in Calvinistic teaching on this subject should not be forgotten; it is happily stated by W. Adams Brown (*op. cit.* p. 387):

'It is not a future but a present state which is the primary object of religious assurance. It is God's present forgiveness and acceptance of which we have experimental knowledge, and which is the ground of our confidence. None the less is it true that, since the God with whom we have present communion through Christ is at the same time the Lord of all life, our thought reaches out inevitably to the future, and the consciousness of present acceptance and forgiveness passes imperceptibly into the hope of final salvation.'

5. Inwardness of religious certainty (Quakers and Mystics).—The Quaker doctrine of 'the Inner Light' emphasizes the inwardness of religious certainty. Rufus M. Jones holds (*Social Law in the Spiritual World*, 1904, p. 172) that Quakers 'universalized the principle which Luther made fundamental in salvation,' namely, that 'the final test of everything in religion is the test of experience.' The doctrine of the Inner Light has many aspects; some of these do not concern us now. But in simple terms George Fox was defining religious certainty when he said: 'I was commanded to turn people to that inward light . . . by which all might *know* their salvation'; and again: The Light is 'that which reacheth this witness of God in yourselves' (*Journal*[8], 1901, i. 36, 343). In thus insisting on the trustworthiness of the witness of the religious consciousness, the early Quakers reiterated the doctrine of assurance, as taught by St. Paul. Modern exponents of their teaching, such as Rufus M. Jones, are able to show that to whatever extremes the theory may have led individuals,

'the early Friends did not minimize the importance of the Scriptures, or of the historical Christ and His work for human redemption. . . . One of the great fruits of the Incarnation and Passion, according to their view, was the permanent presence of Christ among men in an inward and spiritual manner, bringing to effect *within* what His *outward life* had made possible' (*op. cit.* p. 167 f.).

Edward Grubb claims that the message of the early Quakers may be so re-stated as 'to conserve at once the catholicity of the Mystics' appeal to universal light, the sobriety of the faithful student of religious history, and the fervour of evangelical belief in Christ.' Epecially significant is his acknowledgment that

'beneath all the extravagances and unrealities that have marked the Catholic notion of authority, there is at least this solid nucleus of truth: that the Holy Spirit is a present

possession of the Church, and that in the unity of the Christian consciousness there is an authority, not absolute and final, but real and living, which has its place in correcting the vagaries of individual illumination' (*Authority and the Light Within*, 1908, pp. 9, 25).

With such safeguards against excessive subjectivity, it is rightly urged that the doctrine of the Inner Light is in accord with modern psychology.

'That I am I, is the clearest of all facts, but nobody could prove it to me, if I lacked the testimony of consciousness. I know that I have found freedom from the sense of sin, joy in union with the Infinite Spirit, peace through forgiveness only because *I know it*, because it is witnessed within, not because some man in sacred garb has announced it, or because I have read in a book that such an experience *might be* mine' (Rufus M. Jones, *op. cit.* p. 171 f.).

What has been said in regard to the Inner Light applies to the essential truth of Mysticism. There is wisdom in Garvie's contention that, inasmuch as the chief peril of Mysticism is the isolation of its teaching concerning the contact of the soul with God, 'this contact need not be spoken of, as it often is, as *mystical*; the term *spiritual* should be used' (*Mansfield College Essays*, 1909, p. 166). The writer of this article has elsewhere endeavoured to show that true Mysticism is inseparable from the teaching of the NT in regard to the work of the Holy Spirit in the hearts of believers; that it is implied in spiritual religion and neglects none of its elements; that it is distinguishable from false Mysticism in that it undervalues neither the historic basis of faith nor the testimony of the Scriptures, and is independent neither of the means of grace nor of the corroborative witness of the saints. The individual believer may derive religious certainty from the testimony of his own consciousness; and

'the argument from experience is not discredited by the charge that it depends upon an appeal to feelings. This is not its sole basis; moreover, feelings are facts which must be accounted for and which may be subjected to tests. The believer who has "felt" may by thought and inquiry establish the credibility of the facts which prove that his faith accords with reason' (*Spiritual Religion*, 1901, p. 124 f.).

The reason why Mysticism has been prone to under-value the objective grounds of confidence is admirably stated by W. B. Pope:

'Mysticism has been in all ages either avowedly or virtually a reaction and protest against superstitious dependence on the external props of Christian certitude, and such exaggeration of the soleness of the inward witness was to be expected. It is seen among the Pietists of Germany, among the Friends, and occasionally among the less instructed Methodists; in fact, among all who have been suddenly aroused by strong tides of religious revival from indifference or from ceremonialism to the intense pursuit of personal salvation' (*Compendium of Christian Theology*[2], 1880, iii. 123).

6. Joint witness of Divine and human spirit (Methodist teaching).—'The fundamental contribution of Methodism to the life and thought of the Church' is said by Workman (*op. cit.* i. 19) to be 'the doctrine of Assurance.' It is not implied that the doctrine is peculiar to Methodism, as the quotations from the *Homilies* of the Church of England and from Hooker (*Work* , iii. 673) sufficiently prove. But it is asserted, and with good reason, that Wesley's teaching was regarded as 'a dangerous innovation,' and that he made Assurance part of his 'working creed.' When Jeremy Taylor is quoted as having influenced Wesley by his teaching that perpetual doubt concerning acceptance with God is necessary, it should also be remembered that Samuel Wesley, the rector of Epworth, gave this dying charge to his son John: 'The inward witness, son, the inward witness—this is the proof, the strongest proof, of Christianity' (*New History of Methodism*, i. 168). A twofold interest attaches to the narrative of Wesley's visit to Herrnhut: (1) Lutherans still write as though the Methodist doctrine of Assurance reduced the witness of the Holy Spirit to 'a feeling of peace' (Ihmels, in *PRE*[3] xvi. 514); but Wesley learnt from Christian David, one of the Moravian Brethren, that 'being justified is widely different from the full assurance of faith.' Hence he writes after his visit:

'I now saw clearly that we ought not to insist on anything we *feel*, any more than on anything we *do*, as if it were necessary previous to justification or the remission of sins. I saw that least of all ought we so to insist on the full assurance of faith as to exclude those who had not attained this from the Lord's Table.'

(2) Sacramentarianism and the doctrine of Assurance represent two opposite conceptions of the spiritual life. One extreme doctrine confines grace to sacramental channels, but another extreme theory was held by those Moravians who made full assurance an essential condition for partaking of the Holy Communion. This part of their teaching Wesley could not accept. That the Lord's Supper may prove the means of grace at which the believing communicant attains to religious certainty is proved by the experience of the mother of the Wesleys. The inscription on her tombstone in Bunhill Fields states that she received the assurance of the forgiveness of sins whilst her son-in-law, Mr. Hall, was handing to her the cup and repeating the words, 'The blood of our Lord Jesus Christ which was given for thee.'

At the Reformation, Luther re-affirmed and emphasized the doctrine of justification by faith; and, in the 18th cent. Revival, Wesley re-affirmed and emphasized the doctrine of the Witness of the Spirit. The distinguishing features of his exposition of religious certainty are his insistence on 'the joint testimony of God's Spirit and our spirit,' and his refusal to identify them. He defines the testimony of our own spirit as 'the testimony of our own conscience that God hath given us to be holy of heart, and holy in outward conversation. It is a consciousness of our having received, in and by the Spirit of adoption, the tempers mentioned in the word of God as belonging to His adopted children.' Concerning the testimony of God's Spirit, he insists that

'it must needs be, in the very nature of things, antecedent to the testimony of our own spirit'; and, 'desiring any who are taught of God to correct, to soften, or to strengthen, the expression,' he says: 'the testimony of the Spirit is an inward impression on the soul, whereby the Spirit of God directly witnesses to my spirit that I am a child of God; that Jesus Christ hath loved me, and given Himself for me; and that all my sins are blotted out, and I, even I, am reconciled to God' (*Sermon* x.).

That Wesley did 'much to clear the Scriptural doctrine of Assurance from the misapprehensions that have obscured it' is shown by W. B. Pope (*op. cit.* iii. 125). The following points are made prominent: (1) Assurance is 'the common *privilege*' of all believers; this is important in view of current misconceptions of Methodist teaching, as though it identified faith and the assurance of faith. The Holy Spirit bears witness with human spirits, hence there will always be differences in human experience.

'The Spirit's witness *comes from God*, therefore it is veracious, Divine, omnipotent; but the Spirit's witness from God *is in man*, therefore it may be wrongly read, it may be checked, it may for a time be kept down, and prevented from showing itself to be what it is' (Maclaren, *Sermons preached in Manchester*, 1871, 1st series, p. 66).

Yet Assurance is 'a result of faith that may be expected, and should be sought.' (2) Assurance is 'the *direct* witness' of the Spirit; by this Wesley meant that there is a testimony of the Holy Spirit 'other than that which arises from a consciousness of the fruit of the Spirit' (*Works*, v. 132); there is a joint testimony, but 'our own spirit is not supposed to bring its inferences to be confirmed; rather the witness of the Holy Spirit to our adoption is borne through the spirit of our new regenerate life' (Pope, *op. cit.* iii. 129). (3) Assurance is confirmed by the accompaniment of 'the *indirect* witness, or testimony of the conscience on the evidence of a sincere life.' To the

pragmatic test 'By their fruits ye shall know them' Wesley submitted his doctrine of Assurance. He encouraged none to imagine that they had the Holy Spirit's witness unless the fruit of the Spirit was seen in their lives. As expressed by the psychologist, his teaching is that

'religion includes . . . a new zest which adds itself like a gift to life . . . an assurance of safety and a temper of peace, and, in relation to others, a preponderance of loving affections' (James, *Varieties of Religious Experience*, 1902, p. 485 f.).

Of this indirect witness Wesley speaks (*Sermon* xi.) as 'the result of reason, or reflexion on what we feel in our own souls. Strictly speaking, it is a conclusion drawn partly from the word of God, and partly from our own experience.' Modern psychological study of the phenomena of the spiritual life justifies the criticism which maintains that the witness of the Christian consciousness cannot be confined to intellectual processes of inference and reflexion. 'This witness is indirect as a conclusion; but as the consciousness of experience, or of conscience, which is the moral consciousness, it is as direct as that of the Spirit Himself' (Pope, *op. cit.* iii. 130). It is quite in harmony with Wesley's own teaching concerning spiritual experience which 'shines by its own light' (*Christian Perfection*, p. 119) when Sheldon says that

'from living spiritual affections' there issues 'spontaneous conviction without any consciousness of argumentative procedure. . . . In stimulating to love and trust, the Holy Spirit contributes to assurance. . . . For the Holy Spirit to enkindle love, especially in one who is confronted by the objective revelation of God's love in Christ, is to work effectively toward an inward persuasion of the love of God. . . . Assurance is in and through the filial consciousness, which consciousness is at once an activity of man's spirit and a product of the Holy Spirit's agency' (*System of Christian Doctrine*, 1903, p. 472 ff.).

The attempt to explain the Holy Spirit's utterance of the cry 'Abba, Father' as one of the ecstatic phenomena of the glossolalia (Gunkel, *Die Wirkungen des heiligen Geistes*[2], 1899, p. 66) is rightly rejected by G. B. Stevens, on the ground that 'the thought of both passages where the Abba-cry is mentioned is quite remote from the subject of speaking with tongues.' In the doctrine of the Spirit's witness to the believer assuring him of his sonship to God 'we reach the Apostle's most characteristic thoughts.' Answering the question 'whether the Spirit is conceived of as the cause of the *fact* of sonship, or as the cause of the *assurance* of it,' the same writer says:

'I hold the latter to be Paul's thought. . . . The sinner becomes a son of God in justification by faith. To this fact the Spirit bears witness, enabling him to realize the certainty of his sonship to God' (*The Theology of the NT*, 1899, p. 440 f.).

In his sympathetic exposition of 'the evangelical Arminianism of Wesley,' G. P. Fisher shows that

'the doctrine of the Holy Spirit, of His indispensable agency in conversion and sanctification, was never displaced or lowered in the Wesleyan creed. This faith in the living power of the Holy Spirit, not anything ascribed to unaided human agency, was the secret of the emphasis which was laid on Assurance as a privilege attainable by all believers' (*Hist. of Christian Doctrine*, 1896, p. 392).

7. Relation between personal and collective certainty (Ritschlian School).—The work of the Holy Spirit is inadequately treated in the writings of Ritschl. Garvie is of opinion that this is, to some extent, due to 'the limited range of his religious experience' (*The Ritschlian Theology*, 1899, p. 337 ff.). In this respect, however, the disciples of Ritschl have supplemented his teaching. An able and systematic statement of the doctrine of religious certainty, from the Ritschlian point of view, has been given by Clasen (*Die christliche Heilsgewissheit*, 1897). Uncertainty in regard to personal salvation is said to result from attempting to answer such questions as 'Have I done enough to merit salvation?' or 'Am I holy enough to be sure that I am saved?' (p. 3). But it is clearly stated that a Christian may be certain of the grace of God, that he may know that he is reconciled to God through Jesus Christ, and that, in spite of sin, he is a child of God and an heir of eternal life (p. 13). The writer's main positions are: (1) that religious certainty must have a firmer foundation than the excitement of the feelings (p. 64); (2) that religious certainty does not consist in the knowledge of God merely, inasmuch as with that knowledge may co-exist a consciousness of the chasm which separates sinful man from the holy God (p. 68); (3) that religious certainty cannot be attained by means of an idea, or of a doctrine, or of a book, but by communion with a person in whom God Himself draws near to us (p. 72); (4) that religious certainty rests upon our knowledge of what Christ is to us rather than upon our comprehension of what He is in Himself (p. 78).

In several striking passages, Clasen shows that religious certainty has both an objective and a subjective basis. Objectively it rests upon the fact of Christ; subjectively upon experience of redemption from sin (p. 17).

'Without this inward redemption, however obedient one may be to the precepts of Christianity, however much he may know of God in Christ, however confidently he may accept all Christian doctrine, he has no Christian certainty, his Christianity is only an external form' (p. 18). Clasen does not, however, advance beyond the teaching of Ritschl that 'the individual can experience the peculiar effect which proceeds from Christ only in connection with the community founded by Him. . . . The individual believer . . . is reconciled by God through Christ in the community founded by Christ' (*Justification and Reconciliation*, 1900, p. 578).

In full accord with this teaching, Clasen argues that, although an individual may come to doubt his standing in grace, as *a member of the Kingdom of God* he has 'in this fact a guarantee that the redemption of Jesus Christ, which is a pre-supposition of the existence of this Kingdom, has actually attained its end in him and avails for him' (p. 28). But the Reformation doctrine is that individuals have access to grace as individuals, and not as individuals who are members of the 'community of reconciliation.' As a sympathetic student of the Ritschlian theology points out,

'Ritschl does not distinguish between the historical and the religious significance of the community. Its historical significance appears in that it can lead the individual to Christ by instruction and example. But it must also point the individual away from itself to Christ, for in the deepest religious acts all historical mediation vanishes and the individual soul has to do with God alone. The importance of the doctrine of Justification is independent of the theory that the Church is the storehouse of the Divine treasures of grace; its central truth is individual assurance of salvation. Therefore, the doctrine of Justification does not require the subordination of the individual to the society' (Wendland, *Albrecht Ritschl und seine Schüler*, 1899, p. 125).

To this able criticism may be added the words of an Anglican theologian. Writing on the mission of the Holy Spirit, T. B. Strong says:

'It is certainly subjective; that is, it comes not only to the Church as a whole, but to each individual soul. . . . The grace which comes to those who receive the Holy Ghost inspires them with certainty' (*Man. of Theol.*[2], 1903, p. 336 f.).

8. Scriptural basis.—The doctrine of religious certainty, as it is sketched in this article, is broadly based on the teachings of Scripture. It does not rest upon a few cardinal passages. A writer who has felt the influence of Ritschl acknowledges that in the NT, although salvation is represented in different aspects,

'all who are in possession of this new life are represented as having a clear consciousness of it. "You know," "we know" are expressions used again and again.' In a later passage, after recalling 'the plenitude of possibilities' by which different types of conversion are explained, he adds: 'If we should from this draw the conclusion that for this reason there is, generally speaking, no consciousness of the new life, because this consciousness is so different in every individual . . . then this would be a fallacy of the most fatal kind, and recognizable as such, because logically it would necessitate the denial of the assurance of salvation' (Haering, *The Ethics of the Christian Life*, Eng. tr. 1909, pp. 199, 206).

'We know' is the frequently recurring expression of St. John's doctrine of Assurance; for an

interesting comparison of his view of religious certainty with that of St. Paul, although both Apostles describe 'the same fundamental Christian experience,' see Law, *Tests of Life*, 1909, p. 279 ff.

'Full assurance' or 'much assurance' is the RV rendering of πληροφορία in Col. 2[2] and 1 Th. 1[5]. Commenting on the former passage, Lightfoot says that '"full assurance" seems to be the meaning of the substantive wherever it occurs in the NT.' If this translation be adopted in Heb. 6[11] and 10[22], where RV has 'fulness' (AV 'full assurance'), religious certainty is expressed in the two phrases 'full assurance of hope' and 'full assurance of faith.'

Bruce (*Com. in loc.*) has an excellent paraphrase of both verses: 'that your salvation may be a matter of certainty, and not merely of charitable hope' (6[11]). 'With a true heart'—*i.e.* not timid and fearful—he can draw near who has full assurance of faith, 'absolute unqualified confidence, without any doubt of a gracious reception.' Such confidence is justified by the facts mentioned in vv.[19-21] (10[22]).

The fullest analysis of religious certainty is found in two passages in St. Paul's Epistles, namely, Rom. 8[15ff.] and Gal. 4[6]. The Holy Spirit, as the Spirit of adoption, produces in the believer the assurance of his sonship. The variation of the phraseology is especially instructive, and is clearly brought out by Swete (*The Holy Spirit in the NT*, 1909, pp. 204 f., 218 f.).

The Spirit of sonship makes the adopted sons 'conscious of their sonship and capable of fulfilling their responsibilities.' In Gal 4[6] it is the Spirit who cries 'Abba, Father,' but 'the words which are uttered belong to the human subject and not to the Divine Spirit, and, when they appear again in Rom. 8[15], this is made evident by a verbal change in the phrase with which they are introduced; in the later Epistle it stands *in which we cry*. But *crying* in Galatians has its own truth to teach; the Spirit of God inspires the cry which the human spirit utters.' Any doctrine of religious certainty is incomplete which weakens St. Paul's statement that in the believer the Holy Spirit is a filial spirit. 'It inspires the daily *Pater noster* of the Church; in those who are led by it, it is a joint-witness with their own consciousness that they possess the nature as well as the rights of sons.'

LITERATURE.—Full references have been given in the various sections of the article. The subject is treated in most manuals of Theology. In addition the following may be mentioned: **Cunningham**, *The Reformers and the Theology of the Reformation*, 1862, Essay 3; **Carlblom**, *Zur Lehre von der christlichen Gewissheit*, 1874; **E. CEYLON BUDDHISM.

CEYLON BUDDHISM.—According to the tradition handed down at Anurādhapura, Buddhism was introduced into Ceylon by a mission sent by Asoka (*q.v.*) the Great. It will be convenient, after (1) discussing this story, to group the rest of the scanty historical material under the following heads: (2) the Order: its temporalities; (3) its literary activity; (4) the outward forms of the religion; (5) the religious life; (6) the Doctrine.

1. The introduction of Buddhism into Ceylon.—We have at least eight accounts, in extant historical works, of the way in which the island of Ceylon became Buddhist. Apart from a few unimportant details, the accounts agree, all of them being derived, directly or indirectly, from the now lost *Mahāvaṁsa* (see under LITERATURE [Buddhist]), or Great Chronicle, kept at the Great Minster in Anurādhapura. The lost Chronicle was written in Sinhalese, with occasional mnemonic verses in Pali, and our earliest extant authority is probably very little else than a reproduction of these verses. The later extant works give us, in varying degree and usually in Pali, the gist also of the prose portion of the lost Chronicle. We have space only for the main features of the story as told in the oldest of our texts—the *Dipavaṁsa* and the *Mahavaṁsa*, composed in the 4th and 5th centuries A.D. respectively.[1]

In the middle of the 3rd cent. B.C., Tissa, the then king of Ceylon, though still a pagan, sent an embassy to Asoka, the Buddhist emperor of India, soliciting his friendship. The emperor sent him presents in return, recommended him to adopt the Buddhist faith, and afterwards sent his own son Mahinda (who had entered the Buddhist Order) as a missionary to Ceylon to convert the king. Mahinda, with his six companions, flew through the air, and alighted on Mount Missaka, the modern Mahintale, seven miles from Anurādhapura. There the king was hunting, and met the new-comers. Mahinda, after some conversation, discoursed to him on the 'Elephant Trail'—a well-known simile (*Majjhima*, i. 175) in which the method to be followed in discovering a good teacher is compared with the method adopted by a hunter in following up an elephant trail; and incidentally a summary is given of the Buddha's teaching. Well pleased with the discourse, the king was still more pleased to find that the missionary was the son of his ally Aśoka. He invited the party to the capital, and sent his chariot for them the next morning; but they declined it, and flew through the air. On hearing of their arrival in this miraculous way, the king went to meet them, conducted them to the palace, and provided them with food. After the meal, Mahinda addressed the ladies of the court on the Heavenly Mansions and the Four Truths. But the crowd grew too great for the hall. An adjournment was made to the park, and there, till sundown, Mahinda spoke to the multitude on the Wise Men and the Fools. On the next day the princess Anulā, with five hundred of her ladies, requested permission of the king to enter the Buddhist Order. The king asked Mahinda to receive them, but the missionary explained how for that purpose it was necessary, according to their rules, to have recourse to the Order of *bhikkhunis*, and urged him to write to Aśoka to send over his (Mahinda's) sister Saṅghamittā, a profoundly learned member of the Order, with other *bhikkhunis*. The people of the city, hearing of these events, thronged the gates of the palace to hear the new teacher. The king had the elephant stables cleansed and decorated as a meeting-hall, and there a discourse was addressed to the people on the uncertainty of life. For twenty-six days the mission remained at the capital expounding the new teaching, which was accepted by king and people. The king despatched an embassy, under Ariṭṭha, to Aśoka, asking that Saṅghamittā should be sent over, and also a branch of the Wisdom Tree under which the Buddha had attained *nirvaṇa*. Both were sent, and received with great ceremony. The tree was planted in a garden at Anurādhapura (and there it still flourishes, an object of reverence to Buddhists throughout the world). A special residence was prepared for Saṅghamittā and presented to the Order, together with the garden in which it stood. The mast and rudder of the ship that brought her and the branch of the Wisdom Tree to Ceylon were placed there as trophies. The *Mahavaṁsa*, in giving these details, adds (xix. 71) that through all the subsequent schisms the *bhikkhunis* maintained their position there. That may have been so up to the date of the Chronicle. But the Sisterhood was never important in Ceylon, and is now all but extinct.

A list has been preserved at the Great Minster (*Mahavaṁsa*, xx. 20-25) of the buildings erected by King Tissa in support of his new faith. They were: (1) The Great Minster, close to the place where the branch of the Wisdom Tree was planted; (2) the Chetiya Vihara, Mahinda's residence on Mt. Missaka; (3) the Great Stupa (still standing); (4) the Vihara close by it; (5) the Issara Samaṇa Vihara (still in good preservation), a residence for brethren of good family;[2] (6) the Vessa Giri Vihara for brethren of ordinary birth; (7) the so-called First Stūpa; (8) and (9) residences for the Sisterhood; (10) and (11) Vihāras at the port where the Wisdom Tree was landed, and at its first resting-place on the way to the capital.[3]

It is difficult, without fuller evidence, to decide how far the account, here given in abstract, is to be accepted. On the one hand, there are miraculous details that are incredible; and, the original document being lost, we have only reproductions of it some five or six centuries later in date. On the other hand, we know that the tradition was uninterrupted, *i.e.* the lost documents were extant when our authorities were composed; and such contemporary evidence as we have con-

[1] For these works, see LITERATURE (Buddhist), and W. Geiger, *Dipavaṁsa und Mahavaṁsa*, Leipzig, 1905, for a detailed analysis of their relation to one another and to the other extant works.

[2] This regard paid to birth in assigning buildings to the Order is against the rules. Had the list been invented at a later period, it is scarcely possible that the distinction would have been made.

[3] A full statement of all the authorities for each episode is given by Geiger, *op. cit.* 114-119.

firms the story in at least two of its main points. Asoka's own edicts claim that he sent missionaries to various countries, and among these he mentions Ceylon;[1] and in a bas-relief on one of the carved gateways to the Sānchi Tope, which bears Asoka's crest (the peacock), we have a remarkable representation of a royal procession bearing reverently a branch of an *assattha* tree (the Wisdom Tree was an *assattha*) to some unmentioned destination.[2]

It is probable, indeed, that Buddhists had reached Ceylon from North India (the South was still pagan) before the time of King Tissa, and that the ground had been thereby prepared. It is quite possible, and indeed probable, that the formal conversion of the king and the declared adherence of the people were brought about by an official embassy from the ardent Buddhist who was also the powerful emperor of India. It is certain that Tissa was the first Buddhist king of Ceylon, and that it was in the middle of the 3rd cent. B.C. that Buddhism became the predominant faith. It is needless to add that the then existing animism or paganism still survived, especially among the ignorant, whether rich or poor. It has been constantly in evidence, still exists throughout the island in the treatment of disease, and has been throughout the only religion of the Veddas.

2. The Order: its temporalities.—The evidence as to the numbers of the Order, and its possessions at any particular period, is both meagre and vague. The chronicles afford us little help. They give, it is true, quite a number of names of *vihāras* constructed or repaired by the kings and their courtiers. But it is only quite occasionally that the size of the residence or the extent of its property is referred to. The inscriptions are more instructive. The oldest date from about 235 B.C., and were cut by order of the niece of King Tissa himself, at a spot where the branch of the Wisdom Tree rested on its way from the seaport on the east coast to Anurādhapura. According to Parker (*Ceylon*, 420 ff.), this was No. 11 of the list (given above) of *vihāras*, etc., constructed by King Tissa; and it is most interesting to see what such a *vihāra* was.

There is here a range, about 1½ miles long, of low-lying hills covered with rocks and boulders. The caves have been hollowed out, and had, no doubt, been plastered and painted. Apartments were also made under the boulders, by building walls against them and adding doors. Such apartments were intended for shelter and sleep. The ground outside is more or less levelled, and planted with palms and other trees. The grass, in their shade, commanding a wide view of hill and plain, furnishes what in that warm climate is almost an ideal class-room, sitting-room, and study. There was facility for cultured talk or solitude. A reservoir was constructed below to supply water to the villagers, who, in their turn, were glad to provide the Brethren with sufficient food and clothing. In other instances the lands had been granted to the Order. Here we have no evidence of such a grant. There are about fifty inscriptions on the cave residences scattered over the hills. They give the name either of the resident Brother or of the 'maker' of the cave. In the latter case it is usually added that the cave is given to the Order as a whole. There are many hundreds of such hillside residences in Ceylon; but there is only one other place known to the present writer where so many are found together.

That other is Mahintale. Here there is a three-peaked hill, several miles long. Each peak is crowned by a *dāgaba*. The ascent to a table-land between two of the peaks is assisted by a flight of nearly two thousand steps of granite, each 20 feet broad. Fā-Hien (*Travels*, tr. by Legge, 1886, p. 107) was told at the beginning of the 5th cent. that there were 2000 *bhikkhus* dwelling on the hill; and Tennent (*Ceylon*, ii. 604) says:

> 'The rock in many places bears inscriptions recording the munificence of the sovereigns of Ceylon, and the ground is strewn with the fragments of broken carved-work and the débris of ruined buildings.'

An inscription, beautifully engraved on two slabs of polished stone standing at the top of the great staircase, is full of historical matter. It records rules to be observed by the residents in different parts of the hill in their relations toward each other, and in the management of the estates belonging to the Order there. We hear of a bursar, an almoner, a treasurer, an accountant, and other officials. Revenues from certain lands, and the offertory at certain shrines, were to be devoted respectively to the repair of certain buildings. Unfortunately, neither the extent of the lands nor the amount of the revenue is stated. An interesting point is that, whereas each repeater of the *Vinaya* (Rules of the Order) is to receive five measures of rice as the equivalent for food and robes, a repeater of the *Suttas* is to receive seven, and a repeater of the *Abhidhamma* twelve. The date of these rules is somewhat late—end of the 10th or beginning of the 11th cent.—but they are based on earlier regulations. They have been often translated. The best version is by M. Wickremasinghe, in *Epigraphia Zeylanica*, i. 98 ff.; but even there some of the most instructive passages are still obscure.

Spence Hardy gives the number of *bhikkhus* in Ceylon in the middle of the 19th cent. as 2500 (*Eastern Monachism*, 57, 309); Fā-Hien (tr. Legge, ch. 38) gives the number in the beginning of the 5th cent. as twenty times as large. The proportion at the later date would be 1 to 1000 of the population, and at the earlier date the population must have been much larger. The actual number ascertained by the Census to be in Ceylon in 1901 was 7331, and these authentic figures throw considerable doubt on both the above estimates. The proportion of rice fields held by the Order to those held by the people seems to have been quite insignificant. The Brethren, with very rare exceptions, have been satisfied with rice for food and cotton clothes for raiment; and Tennent cannot be far wrong when he says (*Ceylon*, i. 351): 'The vow of poverty, by which their order is bound, would seem to have been righteously observed.'

3. The Order: its literary activity.—One of the main duties of the Brethren was the preservation of the literature. There were neither printers nor publishers. Any teacher who desired to make his views known had to gather round him a number of disciples sufficiently interested in the doctrine to learn by heart the paragraphs (*Suttas*) or verses (*Gāthās*) in which it was expressed. They, in their turn, had to teach by repetition to others. Were the succession of teachers and pupils once broken, the doctrine was absolutely lost. This has frequently happened. We know the names, and the names only, of systems that have thus perished. Writing was indeed known, and short notes could be scratched on leaves. But materials for writing books were not invented in India or Ceylon till the 1st cent. B.C., and were even then so unsatisfactory that the long-continued habit of recitation was still kept up.[1] The books written on leaves tied together with string were most difficult to consult. There were no dictionaries or books of reference. Practically the whole of the material aids to our modern education were wanting. This may help to explain why, even as late as the 10th cent., we

[1] Senart, *Inscriptions de Piyadasi*[2], 1881–86, i. 64, 270.

[2] See Rhys Davids, *Buddhist India*, 1903, p. 302, and pls. 52, 54, 55 for illustrations.

[1] This curious (probably unique) state of things is discussed at length in the present writer's *Buddhist India*, 120–140.

hear (see § 2) of *repeaters* of the sacred books. In transliterated editions of the size and type used by the Pali Text Society these books would take more than 30 volumes of about 400 pages each.

This literature was in a dead language, almost as foreign to the Sinhalese as Pali is to us. Elaborate explanations were required in their own language. These were recorded in books, and repeated in class, but not learnt by heart, as the grammar and dictionary were. In the 4th cent. the Sinhalese began to use Pāli as the literary language, and soon afterwards these commentaries were re-written in that language. The whole of this literature, text and commentary, has been preserved for us by the untiring industry of the Order in Ceylon. This was possible only by a system so exacting that it left little opportunity for originality. Daily classes, attended for many years, with the constant appeal to authority, are not favourable to subsequent independence of thought.

It was mainly in the larger *vihāras* (groups of residences) that these studies were carried on. In the smaller *vihāras*, scattered above the villages throughout the country, there was often only one Elder and two or three juniors. One or other of these had probably assumed the robes with a view to education rather than religion, intending to leave at a convenient opportunity (just as the youths in our Grammar Schools used to wear clerical garb). He would not be very keen to learn by heart the volumes of the Canon Law. After learning a little Pāli, he would be taught the poetry and easier prose literature of the *Suttas*. Perhaps he would get interested, and desire to remain permanently; but this was the exception. Part of his duty would be to teach the boys and girls of the village to write Sinhalese, with pointed sticks in the sand. If another of the juniors had joined for good, the Elder would have to give him quite a different training preparatory to his going up to the larger *vihāras*, which were a sort of university.

There were both advantages and disadvantages in such a system, the latter predominating. The Order could not efficiently do what is now expected of Board School teachers, private tutors, Secondary School masters, and Professors, and at the same time act as annalists, record-keepers, librarians, and authors. Their difficulties were increased by the want of all modern mechanical aids, and not a little by incursions of barbarians, who, not seldom, burnt their books and buildings. The advantages of the system are seen in its results. The average intelligence of the Sinhalese is high; and they alone, of all the semi-Aryan tribes in India, have succeeded in preserving for us a literature extending over two thousand years, and containing materials for the religious history both of India and Ceylon. For the *bhikkhus* found time not only to repeat the old Pali books, but to write a voluminous new literature of their own, in Sinhalese and Pali. Of this much has been lost, but much still survives.[1]

4. The Order: the outward forms of religion.—It is not possible as yet to say how far the religious life of the Order in Ceylon differed from that of the early Buddhists in India, as none of the Sinhalese religious literature has so far been properly edited or translated. Spence Hardy has translated extracts, and, to judge from his specimens of the *Questions of King Milinda*, has not been very exact. But a beginning may be made, and first as to the outward forms of the faith. The *Kathina* ceremony has nearly died out. In N. India[1] it was a quaint and pretty affair. A layman or village offered to the *bhikkhus* resident in a certain locality enough cotton cloth to provide each of them with a new set of robes for the coming year. If, in chapter assembled, the offer was accepted, then a day was fixed, on which all the local *bhikkhus* had to be present, and to help, while the peasantry marked the cloth where it was to be cut to make the right number of robes, cut it, washed it, dyed it, dried it in the sun, sewed it together, with the requisite seams, gussets, etc., and offered to the senior *bhikkhu* the particular robe he chose. All this had to be completed in one day, or the gift was void. In Ceylon (S. Hardy, *East. Mon.* 121) the custom is sometimes extended to making also the cloth from the raw cotton on the same day. On this Tennent (*Ceylon*, i. 351) quotes Herodotus (ii. 122) as saying that the Egyptian priests held a yearly festival at which one of them was invested with a robe made in a single day; and also the Scandinavian myth of the Valkyries, who weave 'the crimson web of war' between the rising and the setting of the sun.

This ceremony was carried out in India after the yearly season of retreat during the rains (*Vassa*). The Retreat was necessary in India, as the *bhikkhus* did not reside, as a rule, in particular spots, but wandered about teaching. This being impossible during the tropical rains of Northern India (from July to October), they went then into retreat. In Ceylon all this is changed. They retain the name (corrupted into *Was*) and apply it to the original months. These in Ceylon are, however, not rainy; the *bhikkhus* do not wander during the other nine months, and do not, as a rule, go into retreat. But they utilize the fine weather in *Was* to hold what we should call an open-air mission.

'As there are no regular religious services at any other time, the peasantry make a special occasion of this. They erect under the palm trees a platform, often roofed but open at the sides, and ornamented with bright cloths and flowers. Round this they sit in the moonlight on the ground, and listen the night through to the sacred words repeated and expounded by relays of *bhikkhus*. They chat pleasantly now and again with their neighbours, and indulge all the while in the mild narcotic of the betel leaf.'[2]

No such missions were arranged by the early Buddhists. Conversation was the usual means of propaganda, though this lapsed fairly often into monologue, and there are a few cases of arrangements made for a single *bhikkhu* to address villagers.

The ceremony of *Upasampadā* (Reception into the Order) has remained practically the same. But the authority empowered to conduct it has greatly changed. In the ancient days the basis of government in the Order was the locality. The *bhikkhus* in any one locality could meet in chapter, and decide any point. For ordination a chapter of five was required, presided over by an Elder of ten years' seniority. The last kings of Ceylon gave the power to the Malwatte and Asgiri Vihāras at Kandy, thus taking the first step towards the substitution of a centralized hierarchy for the old union of independent republics. A new sect—the Amarapura—disputes the validity of this revolution.[3] The same sect objects to another innovation in outward forms—the leaving of the right shoulder bare when adjusting the robe for ordinary use (S. Hardy, *East. Mon.* 115). There is a third, very small, sect—the Ramanya—which also objects to these changes, and goes even further in its strict observance of the ancient rules than the Amarapura.

5. The religious life.—As regards the religious spirit of the Order in historical times in Ceylon, the amount of evidence is at present very slight. S. Hardy's extracts from mediæval Ceylon books

[1] As full an account of the Sinhalese literature as is possible in the present state of our studies, with a complete bibliography, will be found in W. Geiger's Handbook, *Litteratur und Sprache der Singhalesen*, Strassburg, 1900.

[1] See *Vinaya*, i. 253 ff.; tr. in *SBE* xvii. 146 ff.

[2] Rhys Davids, *Buddhism*, p. 58 (slightly changed). See also S. Hardy, *East. Mon.* 2..ff.

[3] Oldenberg, *Buddha*, 1907, p. 390 ff.; Dickson, *JRAS*, 1893, p. 159 ff.

deal almost exclusively with the embellished accounts they give of Indian Buddhists. In the few cases of Ceylon Buddhists there seems to be but little difference. On one particular point, that of *samādhi* ('concentration,' often rendered 'meditation'), the present writer has published a Ceylon text (the only text in the Siṅhalese language as yet edited in transliteration); and the introduction discusses the question as to how far the details differ from the corresponding details in Indian Buddhist books.[1] We have in this manual nearly 3000 different exercises to be gone through in order to produce, one after the other, 112 ethical states arranged in ten groups. These deal respectively with joy, bliss, self-possession, impermanence, memory, planes of being, love, knowledge, the noble eightfold Path, and its goal, *nirvāṇa*. Some of the conceptions are of great ethical beauty; it is doubtful whether the suggested sequence is really of any practical value; most of the groups are found already in the Pāli *Suttas*, but there are slight variations in detail. A quaint addition is the association, in some of these exercises, of the five elements (earth, fire, water, wind, and space) with the ethical states under practice. This reminds one of the supposed association between colour and sound; and it is not easy to see exactly what is meant.

6. The Doctrine.—Ceylon Buddhism, so far as regards the philosophy, the ethics, and the psychology on which the ethics are based, remains much the same as the Buddhism of the Indian Pāli texts. Details are sometimes a little different, but not in essential matters. These are amplified and systematized; occasionally new technical terms are added, or greater stress is laid on terms scarcely used in the *Suttas*. But the essentials, so far as our present evidence shows, remain the same. Buddhaghoṣa's *Path of Purity*, the main authority for the ethics of the middle period, has not yet been published. The *Abhidhammattha Saṅgaha* (edited by the present writer in *JPTS*, 1884), the manual used by all *bhikkhus* in the study of philosophy, psychology, and ontology from the 12th cent. down to the present day, has not yet been translated. When these are available greater precision may be possible.

It is far otherwise with the legendary material relating to persons, and especially to the Buddha. A comparison of the episodes quoted by S. Hardy from the Ceylon books shows a marked difference from the same episodes in the Indian books. The love of the Siṅhalese for the miraculous, for the art of the story-teller and the folk-lorist, has cast its glamour over them all. These mediæval Ceylon authors far outdistance Buddhaghoṣa, the Indian Buddhist, fond as he was of a story. But it is the same tendency, and we need not be surprised to find that it has grown stronger with the lapse of centuries. It results partly from a want of intellectual exactitude, partly from a craving for artistic literary finish. The mediæval literature was largely devoted to such tales, which we know only from Pāli versions such as the *Rasa-vāhinī*; there is quite a number of them buried in MSS in the Nevill collection in the British Museum.

To sum up: there is no independence of thought in Ceylon Buddhism; and, as in most cases where a pagan country has adopted a higher faith from without, the latter has not had sufficient power to eradicate the previous animism. But Buddhism has had a great attraction for the better educated, and has led to remarkable literary results. The nation as a whole has undoubtedly suffered from the celibacy of many of the most able and earnest; but, on the other hand, there is very little crime, and in certain important particulars, such as caste and the position of women, Ceylon is in advance of other parts of our Indian empire, with the single exception of Burma, where the same causes have been at work and the same disadvantages felt.

CHAITANYA

CHAITANYA.—1. Life.—The Vaishnavite reformer and religious teacher Chaitanya was born in the year 1485 at Nadiyā in Bengal, about sixty miles north of Calcutta, on the west bank of the sacred river Bhāgīrathī. Nadiyā, at one time the capital of Bengal, is famous for its schools of Sanskrit learning, and an annual festival in honour of Chaitanya is celebrated here in the month of Māgha (Jan.–Feb.). Of Brāhman parentage, he received the ordinary religious education of a Brāhman youth, and is said to have been especially devoted to the study of the *Bhagavad-Gītā* and the *Bhāgavata Purāṇa*, the two works that enjoin faith in Krishṇa and devotion to him as the supreme duty of man. Stories of his birth are told which suggest the presence of Christian influence—that wise men came and offered homage to the child and brought gifts. His subsequent teaching also proved that he owed not a little to the example and practice of Buddhism. Like Krishṇa, he is said as a boy to have given much time and energy to sport, and to have shown zeal and aptitude in learning, so that he early became proficient in all branches of Sanskrit knowledge.

In due course Chaitanya entered upon the second stage of the career of an orthodox Brāhman and became a *grihastha* (householder). He is said to have been twice married, his first wife being the daughter of the celebrated teacher Vallabhāchārya (*q.v.*). At the early age of twenty-five, however, he severed himself from the ordinary duties and engagements of the world, and adopted a mendicant life, wandering for a period of six years from shrine to shrine in northern and southern India, visiting especially the sacred places of Benares, Gayā, Śrīraṅgam, and the great temple of Jagannāth at Purī. He finally settled at Kaṭak in Orissa, and spent the remainder of his life in the neighbourhood of the temple, teaching and practising the rules and observances of *yoga* (*q.v.*). In one of his visions, about the year 1527 A.D., he is said to have imagined that he saw Krishṇa himself sporting on the waves, and to have walked into the sea and been drowned in an endeavour to reach the god. According to other accounts, he was translated to Vaikuṇṭha, the heaven of Vishṇu, without suffering the pains of death.

2. Teaching.—In his teaching, Chaitanya, like other great Hindu reformers, proclaimed the way of salvation through *bhakti* alone—devotion in act and thought to the one supreme personal God, the Maker and Preserver of all things, whose attributes are pitifulness and love, and who is infinite in power and wisdom. He was himself believed to be an incarnation of Krishṇa, in whom the Divinity manifested Himself in order to save the world by revealing and preaching the true faith. The two chief disciples of Chaitanya also, Advaita (or Advaitānanda) and Nityānanda, to whom he entrusted the general oversight of his adherents, were recipients to a less degree of the power and presence of the god; and in later belief they formed, with the founder himself, a kind of triad, to whom religious worship was paid.

Partly with the view, it is believed, of winning over those who had been attracted by the teaching of Buddhism, as well as those to whom the grosser forms of the popular Hinduism were repellent, Chaitanya laid stress upon the doctrine of *ahiṁsā*, the duty of avoiding by all means injury to any living thing; and enjoined equal regard and treatment for all men, irrespective of birth. In thus ignoring caste, he followed on the lines of other Hindu reformers, who had found in the doctrine of the equality of all men their most powerful weapon against the established social order, and the most attractive and persuasive appeal it was in their power to make to the middle and lower classes of their fellow-countrymen. A saying of Chaitanya is quoted: 'The mercy of God regards neither tribe nor family.'[1] Within the precincts of the temple of Jagannāth at the present day no distinction is made between high and low caste, and the food prepared is received and eaten by all at the season of the great festival. Elsewhere and at other times, amongst those who profess to be his followers, caste has re-asserted its sway, as under similar circumstances in India it has always succeeded in doing; and the higher castes maintain their rigid exclusiveness and separation from the lower.

The principle of *bhakti* which Chaitanya thus expounded and enforced was held by him in common with many Vaishnavite teachers, who sought to promote a purer and more spiritual type of faith amongst the people; and with him also it possessed the same mystical significance as in the language and thought of others whose influence was more far-reaching than his seems ever to have become. Symbolically this doctrine was expressed by him under the figure of human love, the ardent attachment of a young man for the maiden on whom his affections are centred. So a man ought to love God, and to cling to Him with unalterable persistence and loyalty. And the final end and goal for every worshipper was to lose his separate and individual existence in a mystical union with the Supreme. Chaitanya's teaching apparently owed some of its characteristic features both of doctrine and practice to a Buddhism which, though decadent, still exercised a considerable influence in Bengal and the neighbouring districts. Essentially, however, it was the ancient Hindu mysticism, with its theistic inspiration and its emphasis on personal devotion —a form of religious faith and aspiration which has always proved itself strongly attractive to the more earnest and thoughtful Indian mind.

The enthusiasm and popular character of the preaching of Chaitanya appear for the time to have carried all before them, and the number of his followers rapidly increased. They were recruited mainly from the lower classes, for the Brāhmans stood aloof from one the acceptance of whose doctrines implied the surrender of their ancient exclusive privileges. The successors of the founder maintained his propaganda, and organized a very considerable sect of his adherents, who were known by his name. Gradually, however, as has so frequently been the case with movements of Indian reform, their distinctive features of doctrine and observance became obscured, the surrounding social order proved too strong, and there was a general return to the forms of orthodox Vaishnavism. Statistics of their present numbers and strength do not seem to be available, and there is little or nothing to mark them off from other Hindus who hold a theistic faith and worship Vishṇu in one or other of his forms. Nadiyā is the headquarters of the sect, where the descendants of Nityananda reside, who are recognized as leaders, and invested with all spiritual authority.

LITERATURE.—*Census of India Report*, Calcutta, 1903, p. 361; H. H. Wilson, *Works*, ed. R. Rost, London, 1862–71, vol. i. p. 152 ff.; E. W. Hopkins, *Religions of India*, London, 1896, p. 503 f.; Monier-Williams, *Brahmanism and Hinduism*[4], London, 1891, pp. 138–142, 476; A. Barth, *Religions of India*[2], London, 1889, p. 232 f.; cf. also G. A. Grierson, in *JRAS*, 1909, pp. 626 f., 642, and his art. BHAKTI MĀRGA in vol. ii. p. 546. The chief original source for the life of Chaitanya is the *Chaitanya Charitra* of Bṛndāvan Das, which is said to have been compiled from two narratives of his life as a householder and as a pilgrim and ascetic respectively, written by two of his immediate followers (see Wilson, *loc. cit.*).

A. S. GEDEN.

CHAITYA.—1. (Skr. *chaitya*, an adjectival form derived from *chitā*, 'a funeral pile').—In accordance with its etymology, the word might denote originally anything connected with a funeral pile, *e.g.* the tumulus raised over the ashes of the dead person, or a tree marking the spot. Such seems to have been its earliest use in Indian literature, whether Brāhmanical, Buddhist, or Jain; but, as the custom of erecting monuments over the ashes or over the relics of departed saints prevailed chiefly among the Buddhists and the Jains, the word (or one of the Prakrit equivalents, Pāli *chetiya*, etc.) is especially characteristic of their literature. In this sense it is practically synonymous with *stūpa*, 'tope,' in India (though *stūpa* is rather the architectural, and *chaitya* the religious, term), and has various equivalents in the countries of Asia to which the custom extended with the spread of Buddhism, e.g. *dāgaba* (Skr. *dhātu-garbha*) in Ceylon, *chorten* or *dungten* in Tibet, etc. At a later period *chaitya* was used more generally to denote any shrine, reliquary, or sacred tree. This is clear not only from the references in the literature, but also from the express statement in a Skr. dictionary of synonyms, the *Viśvaprabāśa* of Maheśvara Kavi (A.D. 1111), quoted by the commentator Mallinātha (14th cent. A.D.) on Kālidāsa's *Maghadūta*, verse 23.

In modern archæological works the term *chaitya* is sometimes applied generally to any Buddhist or Jain temple, and sometimes particularly to a special form of Buddhist architecture, the '*chaitya* hall,' of which many examples are found in India. This is normally a rock-hewn cave, which was originally ceiled and lined with wood, the earlier caves even imitating, in their sides, the inward slant of wooden pillars designed to meet the thrust of the wooden roof (a good example is the Bhaja Cave, in the Bombay Presidency). In the Karli Cave, 4 miles north of the Bhaja Cave, the '*chaitya* hall' reaches its acme. Here we find a cave 126 ft. deep and 45 ft. 7 in. wide, with a central aisle 25 ft. 7 in. wide, and two side aisles each 10 ft. wide, including the pillars. This pillared nave forms the approach to the *chaitya* proper, which occupies a position under the semi-dome of the apse of the cave closely corresponding to that of the altar in a Christian church; and the resemblance of the entire structure to the basilica has often been noted. In this last sense, therefore, the *chaitya* is distinguished, on the one hand, from the *stupa*, or dome-shaped structure developed from the tumulus or relic-mound, with which it was originally identified, and, on the other, from the *vihāra*, or monastic dwelling-place, which was often also a rock-hewn cave.

'Chaitya'; Hodgson, *Essays on the Languages, Literature, etc., of Nepal and Tibet*, London, 1874; Fergusson, *Hist. of Indian and Eastern Architecture*, ch. v., London, 1876; Waddell, *The Buddhism of Tibet*, London, 1895; Macdonell, *Jour. of Roy. Soc. of Arts*, lvii [1908–09] 316 ff.

2. (Skr. *chaitya* from *chiti*, 'mind,' 'soul').—A philosophical term denoting the individual soul as distinguished from the world soul (cf. *Bhāgavata-Purāṇa*, III. xxvi. 61, etc.).

E. J. RAPSON.

CHAKRAVARTIN.—This Skr. word means 'universal monarch.' It is of considerable importance in Buddhism (cf. art. BLEST, ABODE OF THE [Buddhist]) and Jainism, as well as, though in a less degree, in the legendary history of the Brāhmans. The term has been variously explained; Senart[1] has used it in support of his famous solar theory of Buddha. It may be premised that the two parts of the word *chakra-vartin* are very common words in Sanskrit. *Chakra* (κύκλος) originally means a wheel or a circle, then a disk, a discus (especially that of Viṣṇu); and it has also a number of secondary meanings, such as 'multitude,' 'troop,' 'army,' etc. *Vartin*, usually found at the end of compounds, means 'abiding in.' But what the etymological meaning of the compound originally was is anything but clear; and different scholars have advanced various opinions regarding it. It will therefore be expedient to reserve the discussion of this point till the end of the article, when we have become acquainted with the actual use of the word in the various phases of its history.

The idea of a universal monarch, of a paramount βασιλεὺς βασιλέων, is very ancient in India. Famous kings of old are said, after their anointing, to have conquered the earth and then to have offered the *aśvamedha*, or horse-sacrifice (*Aitareya Brāhmaṇa*, viii. 21–23). A king who is acknowledged by the other kings as lord paramount is, in ancient literature, called a *samrāj*. The word 'Chakravartin' first occurs in the *Maitrāyaṇa Upaniṣad*, a late, if not apocryphal, work. In i. 4 great warriors (lit. 'archers,' *mahādhanurdharas*) are mentioned, 'some of whom were Chakravartins': and fifteen of them are named—Sudyumna and others, most of whom are known from the Epics and the Purāṇas. After them the Upaniṣad mentions 'the kings, Marutta, Bharata,' etc.; and, though they are not called Chakravartins, those named are known as such in epic legends. The Upaniṣad continues: 'There are others higher still—Gandharvas, Asuras,' etc. It is evident from this sequence that the Chakravartin is here regarded as a human being, and in rank inferior to demi-gods.

Next we meet with the word in epic literature, not yet, however, in the *Rāmāyaṇa*.[2] Nor is the title 'Chakravartin' given to any hero of the *Mahābhārata* proper; it is in episodes of the great epic, which have the same character as the Purāṇas, that we meet with Chakravartins, *e.g.* Bharata, the son of Duṣyanta and Śakuntalā, after whom *Bhāratavarṣa* is believed to be named; Māndhātṛ, and Marutta. Once (xii. 27. 10) *chakravartin* means only a 'mighty king,' just as in the *Maitrāyaṇa Upaniṣad*; but in the remaining passages it has the technical meaning 'universal monarch.' In i. 73. 30 (cf. 74. 124)[3] it is said of the Chakravartin Bharata that his wheel met with no obstacle when he went to war with his enemies. This is apparently the proper interpretation of the term *chakra-vartin*, for it is also repeated by Kālidāsa (*Śakuntalā*, vii. 122).

In the Purāṇas we meet with some more Chakravartins, but not with a fixed list of them. The most prominent is Pṛthu Vainya, who first settled the earth, called after him *Pṛthivī*; of him it is said in the *Viṣṇu Purāṇa* (i. 13. 46) that Brahmā saw in his hand the discus (*chakra*), the sign of Viṣṇu, as it is visible in the hand of every Chakravartin, 'one whose power is invincible even by the gods.' But in the *Bhāgavata Purāṇa* (iv. 15, 16) Viṣṇu presents Pṛthu with the discus *sudarśana* at his coronation, while other gods also give him precious things. The latter are partly identical with some of the fourteen *mahāratnas*, which, according to the *Bhāgavata Purāṇa* (ix. 23, 31), were in the possession of the Chakravartin Śaśabindu. In commenting on this passage, Śrīdhara quotes a verse from the *Mārkaṇḍeya Purāṇa* (not verified in the printed text), in which the fourteen *mahāratnas* are thus enumerated: 'elephant, horse, car, wife, arrow, treasure, wreath, garment, tree, javelin, noose, jewel, parasol, and *vimāna*.'

Classical writers use *chakravartin* in its primary meaning of 'universal monarch,' as well as in its secondary meaning, which denotes the most prominent member of a class, similarly to, but not so commonly as, *indra*, *rāja*, *śiromaṇi*, etc.

Thus we see that in Brāhmanical literature the word *chakravartin* originally denoted a famous chief or king of great power, then a universal monarch, while in late Purāṇas some fabulous attributes are added to this meaning.

In the old popular literature which was collected in the *Bṛhatkathā*, and is known to us from Sanskrit works based on this lost compilation, the dignity of a Chakravartin is also attributed to the Vidyādharas, or fairies.[1] The hero of the work just named, King Naravāhanadatta, became Chakravartin of the Vidyādharas, and came into possession of the seven *ratnas*: elephant, sword, moonlight, wife, the destroying charm, the lake, and the sandal-wood tree.[2] In another version[3] the list is: flag, parasol, moon (*sudhābimba*), sword, elephant, horse, and rod. The two lists vary considerably, but they agree in this, that the *chakra* is not among the *ratnas* of the Chakravartin.

With the Buddhists and the Jainas the Chakravartin represents the highest temporal power, just as the Buddha or Jina represents the highest spiritual power. If Gautama had not become a Buddha, he would have become a Chakravartin, and a Buddha as well as a Chakravartin has the thirty-two marks (*lakṣaṇa*) of a great man (*mahāpuruṣa*) and the eighty minor marks. Similarly, the same fourteen great dreams which the mother of an Arhat (Tīrthakara) sees announce also the conception of a Chakravartin.[4] It will therefore readily be understood that a Chakravartin is, in the popular imagination of the Buddhists and the Jainas, lifted high above the level of common men, and verges on the Divine. His most prominent attribute is the *chakra*, wheel, or discus, which precedes him through the air on his conquest of the world. With the Jainas, therefore, *chakradhara* and *chakrin*, 'possessor of the *chakra*,' have become synonyms of *chakravartin*.[5] The ideas of the Buddhists concerning the miraculous *chakra*, and the part it plays in the success of the Chakravartin, are well illustrated in a passage occurring in several Pāli *sūtras* (see *SBE* xi. 251 ff.), and in the *Lalitavistara*. We subjoin the tr. from the latter (*Bibliotheca Indica*, p. 33 f.):

'That anointed Kṣatriya king, who is inaugurated fasting on the fifteenth day of the moon, seated in the highest apartment of his palace, surrounded by female apartments—for him doth the mighty and auspicious wheel appear in the east: a wheel comprising a thousand radii, complete with tyre and nave, ornamented with gold works, of the height of seven palm trees, visible from the recesses of the zenana, and worthy of a Chakra-

[1] *Essai sur la légende du Buddha*[2], Paris, 1882.

[2] At least there is no reference to the *Rāmāyaṇa* in the Petersburg Dictionary *s.v.* 'Chakravartin,' and 'Chakravartin' certainly does not occur in the 2nd and 3rd books, since the word is not found among the compounds contained in them (see Kirfel, *Beiträge zur Gesch. der Nominalkomposition*, Bonn, 1908, p. 26).

[3] Similarly *Mārkaṇḍeya Purāṇa*, cxxx. 6.

[1] The notions prevailing in this popular literature of romantic epics and fairy tales are adopted also in legendary works of the Jainas, the oldest of which, the *Padma-charita*, by Vimalasūri, claims to have been composed about the beginning of our era. Hence the Jainas, too, have Chakravartins of the Vidyādharas, besides human Chakravartins, *narachakravartinas*.

[2] *Kathāsaritsāgara*, cix. 19 ff.

[3] *Bṛhatkathāmañjarī*, p. 595, v. 11.

[4] See *Kalpasūtra*, § 76 [*SBE*, vol. xxii. p. 246]; in § 80 the one is called a *chāuranta-chakkavaṭṭi*, the other a *dhammavara-(chāuranta)-chakkavaṭṭi*.

[5] *Chakkahara* in the passage of the *Kalpasūtra* quoted in the preceding note.

varti rājā. . . . Now, when the mighty wheel doth appear, an anointed Kṣatriya king, kneeling on his right knee, and lowering one of his shoulders, should hold forth his right hand and, praying for the Chakraratna, thus repeat: "Conduct, O Lord, this precious wheel through virtue, and not through vice!"

When the majestic wheel, on being thus addressed by an anointed Kṣatriya king, proceeds in its aerial course towards the east for the promotion of prosperity, the Chakravarti rājā follows it with all his army, and, wherever it halts, there he likewise halts with all his forces. Thereupon all the provincial rājas of the east receive him with offerings of silver-dust in golden vessels, or of gold-dust in vessels of silver, saying, "Hail, O Deva! thou art welcome; all these are thine—this rich, extensive, prosperous, flourishing, beautiful, and populous kingdom: thou hast, conquering, earned it; may it ever continue thine!" The anointed Kṣatriya king and lord should then thus address the provincial chiefs: "Virtuously rule ye these provinces, destroy not life, nor resume what has been given. Act not fraudulently through temptation; nor utter what is false. It is sinful to conquer him who sues for mercy, therefore do it not; nor do ye approve of the vicious!" Thus, when an anointed Kṣatriya king has conquered the east, bathing in the eastern sea, he crosses the same. When the wheel, having crossed the eastern sea, proceeds southward through the atmosphere, he follows it with his army, and, like unto the east, conquers the south; and, as the south, so does he conquer the west and the north; then, bathing in the northern sea, returns through the atmosphere to his metropolis, and sits an invincible monarch in the inner recesses of his palace. Thus does a Chakravarti rājā acquire the *chakraratna*, or the jewel of a wheel.'

In the same way the Chakravartin attains to the six remaining *ratnas*, for their number is seven, viz. the elephant, the horse, the jewel (which changes night into day), the wife, the steward, and the general.

The Chakravartin of the Jainas resembles, in all essential features, the Chakravartin of the Buddhists. At the moment when the predestined person is to acquire the dignity of a Chakravartin, the miraculous *chakra* appears and completes his victory. There were 12 Chakravartins in the present age of the world—Bharata, Sagara, Maghavan, Sanatkumāra, Śānti, Kunthu, Ara (the last three afterwards became Tīrthakaras), Subhūma, Padma, Hariṣeṇa, Jaya, and Brahmadatta. These 12 Chakravartins, together with the 24 Tīrthakaras, 9 Vāsudevas, 9 Baladevas, and 9 Prativāsudevas, make up the 63 Śalākāpuruṣas, or great persons of Jain hagiology, whose lives and deeds have been described by Hemachandra in the *Triṣaṣṭiśalākāpuruṣacharita*. In bk. i. ch. 4 of that work the first Chakravartin's conquest of our part of the earth, called after him *Bhāratavarṣa*, is described at great length. Preceded by the *chakra*, Bharata subjects all kings, and even the Vidyādharas acknowledge his supremacy. He is accompanied by some *ratnas*, and acquires some more during his progress, so that their whole number amounts to fourteen, viz. *chakra*, parasol, sword, rod, cowrie, piece of leather, jewel, the nine treasures, general, steward, *purohita* ('household priest'), architect, elephant, and horse. In addition to these 14 *ratnas* he gains a fifteenth, the *strīratna*, his wife.

The greater number of these *ratnas* are the usual perquisites of kings, in the highest degree of perfection; four, however, seem to have been adopted from mythology,[1] viz. the cowrie (*kākiṇī*) and the jewel, whose functions resemble those of the moon and the sun, the piece of leather or hide,[2] which stretches over rivers and straits in order to give a passage to the army, and, of course, the *chakra*.

The possession of the miraculous *chakra* gives a kind of mythological stamp to the legendary Chakravartin of the Buddhists and Jainas, and makes him appear in the light of a solar hero. Yet it may be doubted whether this was already the case in early Buddhism. There is the phrase *dhammachakkam pavattitam*, used to denote the inauguration of the 'reign of religion,' which is further described as 'that wheel which not by any Samana or Brāhman, not by any god, not by any Brahmā or Māra, not by any one in the universe, can ever be turned back.'[1] The idea on which this expression is based is very much like that noticed above as occurring in the *Mahābhārata*, etc., according to which the wheel of the Chakravartin meets with no hindrance. If, therefore, in later Buddhist works the Chakravartin is represented as a semi-mythological person, who might be mistaken for a sun-god in disguise, there must have been some cause at work to bring about this new development. And this cause is easy to guess. The first part of the compound word *chakra-vartin* being popularly referred to the discus of Viṣṇu, the symbol of the sun, the Chakravartin assumed, in popular imagination, some traits which properly belong to the Divine wielder of the *chakra*. Such an apotheosis of the king is quite natural to primitive peoples, who look on their kings as descendants, or representatives, of the sun, whether they be Pharaohs, or Incas, or members of the Sūryavaṃśa. And the august character of the Chakravartin was still more exalted, since he and a Buddha or a Tīrthakara were placed on parallel lines by the Buddhists and Jainas. Therefore the Chakravartin may be said to share in the majesty of the sun-god, but it would be the reverse of the truth to say that he is but a humanized solar deity.

It remains for us to discuss the etymology of the word *chakravartin*. According to Wilson,[2] it means grammatically, 'he who abides in (*vartate*), or rules over, an extensive territory called a chakra.' Kern[3] takes *vartin* to mean *vartayati* ('who rules'). But in all other compounds *vartin* has the force of *vartate*, not of *vartayati*, so that Wilson's etymology seems preferable. But the meaning Wilson gives to *chakra* is not found in ancient Sanskrit literature, though it is mentioned by native lexicographers. If we take *chakra* in its original sense of 'circle,' we can explain the meaning of the compound by reference to the political term *maṇḍala*.[4] In the *Nītiśāstra*, or science of politics, a valiant king (the *vijigīṣu*) is considered in his relation to his neighbours; usually twelve kings form a *maṇḍala*, a political sphere or circle (of neighbours). The *vijigīṣu* is that king who strives to gain the supremacy in the *maṇḍala*, and he is praised if '*viśuddhe maṇḍale charan*,' *i.e.* 'if he walks in a pure circle.'[5] This seems to be the notion which gave rise to the idea and expression of Chakravartin. He is the *vijigīṣu* on the grandest scale: his *maṇḍala* is the whole earth. The word *maṇḍala-vartin* is used in the *Bhāgavata Purāṇa* (vi. 3, 6) to denote a king subordinate to a paramount lord such as a Chakravartin. Another etymology has been proposed by Senart:[6] *chakravartin* is one who owns a *chakravāla*; for he derives *chakravāla* from *chakravarta*. But the latter word is not found in Sanskrit or in the Prakrits; and, even if it did exist, linguistic reasons make it impossible to derive *chakravāla* from it.

LITERATURE.—This is sufficiently indicated in the article.

CHALMERS.—The Presbyterian Churches are notable for the high average of intellectual attainment reached by their ministers. They encourage the ordinary man to stir up and make the most of the gifts that are in him. But they do not offer the same opportunities to men of exceptional talent. Although not a few have left Scotland from time to time to take high place and exercise wide influence in other Churches, the number of outstanding personalities in the Church at home has been few. One of them, however, is Dr. Chalmers.

1. Life and Work.—Thomas Chalmers was born at Anstruther, in Fife, on Friday, 17th March 1780, the sixth of fourteen children of John Chalmers, a general merchant there. From the tender mercies of a nurse, whose cruelty and deceitfulness haunted his memory through life, he was sent to the Parish School, where he was well flogged but learned little. In November 1791, though not yet twelve years of age, he matriculated as an Arts student in the United College of St. Andrews.

(1) *St. Andrews and Kilmany.*—The first two sessions were wasted. But in the third session, under the influence of Dr. James Brown, the assistant professor of mathematics, Chalmers came to life intellectually. At once the lad set himself to recover lost time. He could not write, he could not spell, he knew no grammar, he was ignorant of the existence of English composition. But in two years he mastered these elementary things and made much progress in the study of mathematics.

His Arts course was now over, and in 1795 he was enrolled as a student in Divinity. After the close of his Divinity course, throughout the whole of which his chief interest was mathematics, and after an unfortunate experience as private tutor, he was appointed assistant to the professor of mathematics in the University. In this position he was too successful. The Chair was held by an invalid, who disapproved of his assistant's vivid illustrations, and perhaps resented his popularity. He decided not to re-appoint him, and unfortunately suggested that he was inefficient. Chalmers returned to St. Andrews the following session, opened rival classes, and, after much flutter, compelled recognition both of his ability and of his sincerity. At the end of two sessions his classes were discontinued. But he had proved himself a force to be reckoned with.

During these two sessions, Chalmers was also acting as minister of the parish of Kilmany. He had been presented to this parish, distant a few miles from St. Andrews, by the professors of the University, and had been ordained on the 12th of May 1803. He afterwards disapproved of 'pluralities,' and fought a strenuous battle against them. But meantime he had no difficulty in combining the professorship with the pastorate. One of his parishioners, who often called at the Manse, said one day, 'I find you aye busy, sir, with one thing or another, but, come when I may, I never find you at your studies for the Sabbath.' His answer was, 'Oh, an hour or two on the Saturday evening is quite enough for that.' But the day was not far off when he entered in his journal, 'I mean to give my main strength this year to the composition of sermons.' And then the same visitor said, 'I never come in now, sir, but I find you aye at your Bible.'

There was some physical weakness in the Chalmers family. Several of his brothers and sisters died in early life. In the year 1809, Chalmers himself had a severe illness and believed that he would not recover. The contrast between the insignificance of time and the magnitude of eternity was strongly impressed upon his mind. He read Pascal's *Thoughts*. Pascal also had once been devoted to the study of mathematics, and after illness had entered upon an experience which made spiritual things of more importance to him than things intellectual. A similar change came over Chalmers. It was again a new birth, as unmistakable as the birth of the intellect had been. It did not involve the despising or disuse of any of his intellectual faculties, any more than the intellectual birth had carried with it the loss of his physical faculties. But from this time till the end of his life the physical and the intellectual were made to serve the ends of the spiritual.

Chalmers did not find God at this crisis. During the years of his study of Divinity in St. Andrews he was 'possessed,' as he says in one of his letters, 'with a sense of His greatness and His power, and His pervading agency' (*Memoirs*, i. 17). What he now found was that he belonged to God, and that it was his duty to yield Him unremitting obedience (*ib.* i. 153). He accordingly entered upon a period in which he stood sentinel over himself, and recorded every lapse from his standard of righteousness, mercilessly, in a private journal. This continued for a year. But he 'got little satisfaction, and felt no repose' (*ib.* i. 186). Reading Wilberforce's *View of Christianity*, he came to see that 'the Saviour had already and completely done for him what, with so much strenuousness, but with so little success, he had been striving to do for himself' (*ib.* i. 188). He 'committed all to the sufficiency of Christ his Saviour.' He found 'peace and joy *in believing*' (*ib.* i. 257; italics his own).

A vehement preacher always, Chalmers now preached with power. 'The first effect, indeed, of the great spiritual change,' says his biographer, 'was to chasten rather than to stimulate the vehemence of his delivery in the pulpit.' But there was a new note of earnestness. 'Entreaties that every sinner he spoke to should come to Christ just as he was, and "bury all his fears in the sufficiency of the great atonement," were reiterated on each succeeding Sabbath, presented in all possible forms, and delivered in all different kinds of tones and of attitudes. He would desert for a minute or two his manuscript, that with greater directness and familiarity of phrase, greater pointedness and personality of application, he might urge upon their acceptance the gospel invitation' (*ib.* i. 420). And the pulpit appeal was supported by his work in the parish. The regular visitation, which had formerly occupied three weeks, now extended over the whole year; district services were held; a class was opened for the religious instruction of the young. Nor was his zeal confined to the parish. After a speech in the General Assembly of 1814—a speech, by the way, against 'pluralities'—the minister of the parish of Linton wrote approvingly of 'the wonderful display of talents' made by the minister of Kilmany, but disapprovingly of his interest in Missionary and Bible Societies: 'For my own part,' he said, 'I have never yet seen any proper call to us for engaging in the measures of these Societies, and such is the feeling of this part of the country with a very few exceptions' (*ib.* i. 403).

(2) *Glasgow.*—In 1814 the pulpit of the Tron Church in Glasgow fell vacant, and Chalmers was named as a candidate. The Magistrates, to whom the appointment belonged, were divided. After a keen struggle Chalmers was elected. The objection of the opposing party was that Chalmers seemed to them to be 'mad.' It was not merely the vigour of his preaching that gave them this impression, it was also the substance of it. It was the energy and earnestness with which he advocated the doctrine of 'peace in believing.' But his preaching had irresistible attraction for the people. The

Glasgow ministry began in a blaze of popularity. Nor had time or familiarity any influence in staying the rush of hearers to the Tron Church or lessening the strain of their attention. There were at this time eight ministers of the Church of Scotland in Glasgow, and it was the custom for them to preach, in turn, a special sermon in the Tron Church every Thursday forenoon. When Chalmers' turn came—'to see a place of worship,' says Dr. Wardlaw, 'crammed above and below, on a *Thursday forenoon*, during the busiest hours of the day, with fifteen or sixteen hundred hearers, and these of all descriptions of persons, in all descriptions of professional occupations, the busiest as well as those who had most leisure on their hands, those who had least to spare taking care so to arrange their business engagements previously as to *make time* for the purpose, all pouring in through the wide entrance at the side of the Tron steeple, half an hour before the time of service, to secure a seat, or content if too late for this to occupy, as many did, standing room—this was, indeed, a novel and strange sight' (*Memoirs*, ii. 149).

It was at these Thursday forenoon services that the Astronomical Discourses were delivered, the most successful, when published, of Chalmers' writings. That Chalmers was sensible of the flattery contained in crowds hurrying to hear these sermons, and in still greater multitudes rushing to read them, is evident from his journal. He was saved from vanity by the sincere searching of heart of which that journal is equally the evidence, and also by the abundance and irksomeness of his parochial and public duties.

Chalmers carried out a rapid but regular and thorough visitation of his parish, divesting himself of the administration of its numerous charities that his ministrations might be received at their own value. He divided the parish into forty districts, and placed a Sunday school in each district. He built day schools also, found teachers for them, and took upon himself the charge of providing the teachers' salaries. He entertained an astonishing project of supporting the poor by means of voluntary contributions. And, when it proved impossible to carry out this scheme in the Tron parish owing to legal obstacles, a new parish was erected by the Town Council and a new church was built, to which Chalmers was presented. The new parish was named St. John's.

But the toil and trouble were nearly overwhelming. In 1823 the offer was made to him of the professorship of Moral Philosophy in the University of St. Andrews. He accepted it. And for a few, not wholly peaceful, years he returned to that city. Then came the resignation of the professor of Divinity in the University of Edinburgh. On the 31st of October 1827, Chalmers was unanimously elected by the Town Council and Magistrates, and the third and last period of his life began. He was in the forty-seventh year of his age.

(3) *Edinburgh.* — Chalmers did not know that the call to Edinburgh was a call to lead the Church of Scotland through one of the most momentous and harassing periods of its history. He had no desire for leadership, nor had he all the qualifications for it. Not so ready as impulsive, he was never quite at home in Church courts; and when the pressure of events compelled him at last to take part in the strife of parliamentary politics, he had no heart and little patience for it. In the General Assembly, Dr. Cook was always a match for him in tactics, although so far behind in the grasp of great principles and the gift of popular appeal. And in Parliament, Lord Aberdeen, after some correspondence, felt himself strong enough to speak of Chalmers as 'a reverend gentleman, a great leader in the Assembly, who, having brought the Church into a state of jeopardy and peril, had left it to find its way out of the difficulty as well as it could.' This was really, what in his private journal Chalmers calls it, 'a foul attack'; but if he had been more of a politician, Chalmers would have known that it was merely an incident in the game.

By the Revolution Settlement of 1699 lay patronage in the Church of Scotland was abolished. But it was restored by Bolingbroke in 1711. The restoration was unpopular. For some time patrons did not exercise their right, or acquiesced in their proposals being set aside. Then came what evangelicals call 'the long reign of Moderatism.' More and more the lay patron made his presentation, less and less the parishioners protested against it. But the harmony was not always admirable. In the year 1813 the Rev. William Ferrie, Professor of Civil History in the University of St. Andrews, was presented to the living of Kilconquhar. The Presbytery met to moderate in a call, but no signatures whatever were attached to it. It was afterwards explained that the parishioners concurred in the settlement, and they apologized for not having attended to sign the call. The harmony was not always admirable, nor did it continue always to be harmony. Under the influence of that new spirit which was known by the name of Evangelicalism, and the popularity of which was largely due to the preaching of men like Andrew Thomson in Edinburgh and Thomas Chalmers in Glasgow, the Church began to recognize again her responsibilities and to reassert her rights in the choice of her ministers, or at least in the rejection of unfit presentees. In 1834 the General Assembly passed the Veto Act, enjoining Presbyteries to reject a presentee who had been disapproved of by a majority of the male heads of families, members of the vacant congregation and in full communion with the Church. But when the rejected presentee at Auchterarder appealed to the Court of Session, the Veto Act was practically declared to be *ultra vires*. And this judgment was upheld, on appeal, by the House of Lords.

It was now a dispute between the civil and the ecclesiastical courts. Elsewhere the civil courts might have triumphed easily. But in Scotland the Church was responding more and more to that spirit to which Erastianism is anathema; and her past, both in law and precedent, brought her peculiar strength. For one thing, she had always held that evidence of a call to the ministry must precede ordination; and this evidence had been found in the free choice or approval of a congregation. It had accordingly been a law of the Church that ordination should not take place unless accompanied by induction. That is to say, a man could be ordained to the ministry (missionaries being of necessity excepted) only when he had received a call from some particular congregation, to the oversight of which he was thereupon inducted.

But this was part of a larger principle, the principle of Spiritual Independence. Spiritual Independence had been claimed by the Church of Scotland from the Reformation, and it had been legally affirmed by an Act of the Scottish Parliament in 1567. It had then become, as Chalmers says, 'the great question between the Jameses and the Charleses on the one hand, and the Scottish people on the other, who called it the Headship of Christ—the term given to the principle when looked to in a religious light. But when looked to constitutionally, it is termed the final jurisdiction of the ecclesiastical courts, or Church courts, in things sacred, as distinct from things civil' (*Memoirs*, iv. 592). But this principle of Spiritual Independ-

ence was now recognized only by a few individual members of the civil courts in Scotland, and it was scarcely even intelligible to an English court. Had it been simply a question between the patrons and the people, the will of the people would have prevailed, and probably without much trouble. But, when the majority in the Assembly had at last to appeal from the civil courts to Parliament, it became evident that a serious crisis was at hand. The Government, whether Whig or Tory, for it was never a question of party politics, failed to realize the gravity of the situation, and refused relief. On Thursday the 18th of May 1843, four hundred and seventy ministers of the Church of Scotland, with the people who adhered to them, including all the missionaries abroad, left the Church, surrendering all the buildings and emoluments, and formed the Free Church of Scotland.

Chalmers' life was nearly done. After the Disruption he resigned his Chair in the University of Edinburgh, and was appointed Principal and Primarius Professor of Divinity in the New College. On the evening of the 30th of May 1847 he asked a friend to conduct family worship, saying, 'I expect to give worship to-morrow morning.' In the morning he was found to be dead.

2. **Religious and ethical influence.**—The author is for subsequent generations; the orator is for his own. Chalmers was an orator. He wrote what he preached, and his writings were published in many volumes, but they have not continued to be read—not even the Astronomical Sermons, though they ran a race with Scott's *Tales of my Landlord*, published in the same year, nor the *Bridgewater Treatise*, though two editions of 1500 copies each were disposed of as soon as published. Chalmers was an orator, and captured his audience by his manner as well as by his meaning.

A literary critic who listened to him says, 'Of all human compositions there is none surely which loses so much as a sermon does when it is made to address itself to the eye of a solitary student in his closet and not to the thrilling ears of a mighty mingled congregation, through the very voice which nature has enriched with notes more expressive than words can ever be of the meanings and feelings of its author. Neither, perhaps, did the world ever possess any orator whose minutest peculiarities of gesture and voice have more power in increasing the effect of what he says—whose delivery, in other words, is the first, and the second, and the third excellence of his oratory—more truly than is that of Dr. Chalmers' (*Peter's Letters to his Kinsfolk*[3], 1819, iii. 267).

But Chalmers was an orator because he was a preacher. He himself was heartily persuaded of the truth of that which he delivered so well. He preached a conviction which had been in his own experience at once a deliverance and a great uplift, and he believed that by responding to it other men would pass through the same experience. It was, in his own words, the conviction of 'the futility of resting a man's hope of salvation upon mere obedience; that there is no confidence but in Christ; that the best security, in fact, for the performance of our duties is that faith which worketh by love, and which, under the blessing of God, will carry us to a height of moral excellence that a mere principle of duty, checked and disappointed as it must often be in its efforts after an unattainable perfection, could never have reached' (*Journal*, 7th Jan. 1811: *Memoirs*, i. 200). This was the substance, as it was the strength, of all his preaching. To the effective delivery of it he brought together all his gifts. For, although he always rejected the use of pious but empty phrases, and stoutly protested when men spoke of receiving calls which they gave themselves no trouble to obey, he never faltered in the belief that this was the work he had been sent to do, and with perfect sincerity could have used the language of Paul, 'Woe is unto me, if I preach not the gospel.' Thus he became perhaps the strongest single influence in that movement which gave the evangelical party a majority at last in the General Assembly, which in course of time abolished lay patronage, and liberated the religious thought of Scotland from the dictation of external authority in any form. After Chalmers came Rainy, but also Robertson Smith; the Free Church and also the free spirit.

The two chief practical interests of Chalmers' life were Church extension and the voluntary support of the poor. The need of Church extension had become very great. During a period of nearly one hundred years, while the population had more than quadrupled, only two new city churches had been built in Glasgow. Secessions had been taking place from the Church of Scotland, and they had done not a little to arrest the evil. But Chalmers was convinced that the remedy was to be found in the right use of the parochial system. In 1836 he organized meetings throughout the country; and he was able to report to the General Assembly of 1838 that nearly two hundred new churches had been built. In 1841 he had the satisfaction of seeing the twentieth new church completed in Glasgow alone.

The voluntary support of the poor was the reduction to practice of the lifelong study of Political Economy, to which Chalmers gave himself with characteristic enthusiasm. In Kilmany he carried out successfully a scheme of voluntary support; and, after some experience of the position in Glasgow, he persuaded the Magistrates to separate the parish of St. John's, chiefly for the purpose of enabling him to try the same method there. Again he was successful. By dividing the parish into districts, and appointing over each district reliable and unpaid assistants, who investigated each case on the spot, he supported the poor of this Glasgow parish with its ten thousand inhabitants and more than its fair share of destitution, out of the voluntary contributions made at his own church door. It was something more than an experiment. It encouraged the rich to give willingly, the poor to receive only of necessity. And it will always remain as an answer to those who doubt the possibilities awaiting the practice of social Christianity.

JAMES HASTINGS.

CHAMS.—The Chams, the last remnants of the inhabitants of ancient Champā[1] in Indo-China, to-day form a population of only about 130,000 persons. They are settled partly in Annam, in some valleys of Bình-thuận, where they number 80 villages and somewhat over 30,000 souls; partly in Cambodia, where they are nearly 90,000 in number; partly in Cochin-China (in Châu-dôc and Tây-ninh); and lastly, in Siam.

1. **Origin.**—The origin of the Chams has given rise to several hypotheses. At one time they were thought to be sprung from a mixture of natives and Hindu emigrants; at another, to have come from Java. It is now admitted that they belong to the Malayo-Polynesian race, whose origin, according to Kern, must

[1] Champā occurs also in the following forms: *Chamba*, *Ciamba*, *Ciampa*, *Csiampa*, *Cyamba*, *Dsiamba*, *Dsiampa*, *Jampa*, *Kiampa*, *Tchiampa*, *Tjampa*, *Tschiampa*, *Tsiampa*, *Tsjiampaa*, etc. The word *champā* in Sanskrit is the name of a tree and a flower (*Michelia champaca*, L.). Other forms of the word *Cham* are: *Čam*, *Čam*, *Chàm*, *Chăm*, *Kiam*, *Tchame*, *Thiāme*, *Tjam*, *Tjame*, *Tscham*, *Tsiam*, etc. The form employed in this art. is the Sanskrit slightly modified.

be looked for, not in Malaysia or the Indian Archipelago, but in Indo-China on the borders of what is now called Annam, where the kingdom of Champā flourished in bygone days, and where the last of the Chams still linger.

2. History.—The Chams were one of the great powers of Indo-China. Their kingdom, although it is impossible to fix its limits clearly, seems to have comprised Cochin-China, the whole of Annam, and part of Cambodia. About the 2nd cent. A.D., as the inscription of Nha-trang attests, it was formidable; even in the 13th cent. Marco Polo was strongly impressed by it. As early as the 14th cent. A.D., however, it was attacked by the Annamese, the vanguard of the Chinese power, who were to take a separate name in the 10th cent. by freeing themselves from China; and in the south by the Cambodians. These two neighbouring powers gradually extended their territory, and always at the expense of Champā. In 1471, after several fierce struggles, Champā passed under the relentless control of Annam. At this time a great number of the Chams fled to Cambodia, where we find their descendants to-day. An even greater number were enslaved by the Annamese. There now remain on their native soil, between Phan-rang and Nha-trang, only a few miserable relics of the race. They were governed nominally by their princes, but really by the Annamese mandarins, and existed in this condition down to the 19th cent., when the occupation by France, which they gladly welcomed, delivered them.

3. Physical appearance and modes of life.—From the point of view of physical type, the Chams are very clearly marked off from the races surrounding them. They are much taller than the Annamese, whose height seldom reaches 1 m. 59, while that of the Chams often attains to 1 m. 70. The men are sturdy, the women smaller and graceful. Their complexion varies from brown to a light brownish red. Their hands are not nearly so narrow as those of the Annamese. Their skin, very soft to the touch, is dull, except on the face, where it is often glossy. Their hair, very fine and brittle, and often wavy, varies from raven black to very dark chestnut. Both men and women wear it long in the Annamese fashion, the women having it twisted up behind, the men covering it with a turban or a knotted scarf. In Cambodia, however, the Chams have short hair like the Malaysians, and wear a little white fez (*kapyah*, cf. Mal. *kopiyah*) on their heads. The women cover their heads with a veil somewhat like a cowl (*halañ*). The Chams have well-proportioned heads, fine profiles, and faces of a broad rather than high type; the nose is not so broad at the root as that of the Annamese; the eye is large and full, frank in look and colour; the mouth is of average size, the lips of ordinary thickness. They are, in short, Asiatics whose type resembles our own. The men wear a *sarong* and a sort of long tunic; the women a skirt, white or with red stripes, and a close-fitting tunic, nearly always green, cut to fit at the neck. They often adorn their ears with studs or precious metals.

The Chams live grouped in communities or villages in the plains, sometimes on the banks of a large river, as is the case with those of Cochin-China and of Cambodia, and sometimes by the sea-shore, as is often the case with those of Annam. The villages of the Chams of Annam are surrounded by a strong palisade of dead wood, and give a first impression of parchedness and bareness, due to the absence of large trees in their enclosure. The Chams believe that the shadow of trees over the house brings ill-luck. In Cambodia and in Cochin-China, where they live nearly always with the Malays, their villages are enclosed by a hedge of bamboos and prickly shrubs. The houses of the Chams of Annam are humble little huts of bamboo and mud, covered with rice-straw—they are not allowed to use *nipah* like the Malays—and built and grouped without regard to artistic taste. The Chams do not build their houses themselves, but get the Annamese to do it for them. In Cambodia and in Cochin-China, where the manners of the Chams have been somewhat modified by contact with the Malays and the Khmèrs, their houses are built on piles, and are practically the same as those of their neighbours.

Although strong in body, the Chams are very mild in disposition. This mildness is accompanied by great indolence and a complete absence of initiative. They have neither commerce nor industry; they weave some stuffs, but they do nothing else beyond cultivating rice, maize, a little cotton, and a few pea-nuts (*Arachnis hypogæa*, L.), and rearing some buffaloes. Oxen and pigs are never seen among them, owing to religious objections. Goats, dogs, hens, and ducks are their only domestic animals. They can build fine light carts, which the Annamese come and buy from them.

4. Ancient religions.—The epigraphy and iconography of Cambodia provide us with fairly accurate and full information on the religion of ancient Champā. That religion was Hinduism, that is to say, the worship, exclusive or combined, of the three gods of the Indian *Trimūrti*—Brahmā, Viṣṇu, and Śiva,—and of the *śaktis*, or wives, of the last two—Lakṣmī and Umā. Buddhism also played a part, but a much less extensive one, in the life of the Chams.

Brahmā, if we may judge from the small number of images and statues of him which have come down to us, does not seem to have been worshipped very fervently. He is called *Chaturmukha*, and is represented with four faces, only three of which are generally seen, as the figure has its back leaning against something.

Worshippers resort chiefly to Śiva, whose cult is very widespread under the form of the *liṅga*. Even to-day we find in the ruins of several temples libation-tables, or *snana-droṇi*, on which the *liṅga* was formerly set up and from which it has disappeared. All these *liṅgas* have the usual form: they are cylinders of stone more or less rounded at the end. The temple of Pō Kloṅ Garai at Phan-rang even contains a variety of *liṅga* with a face (*mukhaliṅga*). In this *mukhaliṅga* the face, decked with the crown and ornaments belonging to the Cham kings, appears to have been not Śiva but the legendary king Pō Kloṅ Garai, the founder of the temple and identified with Śiva. Similarly, in the temple of Pō Ramē at Phan-rí, an engraved pillar shows us Pō Ramē, one of the last kings of Champa, likewise identified with Śiva. The cult of Śiva, however, was surpassed in importance by that of his *śakti* Umā, who became the great goddess of the Chams, under the names of Umā, Bhagavati, Pō Nagar (=Pō Ino Nögar, Pō Yaṅ Inu Nogar, Yaṅ Pu Nogar) 'the Lady of the kingdom,' 'the holy Lady Mother of the kingdom.' The greatest of the sanctuaries still standing, that of Nha-trang, was dedicated to her.

Viṣṇu and his *śakti* Lakṣmī, though not so extensively worshipped as Śiva and Pō Ino Nogar, appear, nevertheless, to have held a place in the religion of the ancient Chams superior to that of Brahmā. This is attested by various statues, the best preserved of which, that at Biên-hoà (Cochin-China) has passed nowadays into the ranks of Annamese idols, and is situated in the pagoda of Buu-sön, 800 miles N.W. of Biên-hoà. It represents the god seated with his legs bent under him, crowned with the tiara (*mukuṭa*), and decorated with bracelets; he has four arms, the two upper hands holding the conch and the discus, each of the two lower hands holding a club. Lakṣmī also is represented on several monuments, holding what look like lotus-flowers in her hand, and seated under a canopy of *nāgas* (serpents).

Buddhism probably had very little importance, judging from the small number of its sanctuaries, the most famous of which seems to have been the cave of Phong-nha (Quang-binh), where the devotees used to go to buy clay medallions exactly similar to the Buddhist seals found at Bodh-Gayā and at Sohnāgar, several specimens of which are to be seen in the museum of the École française d'Extrême-Orient at Hanoi. As in Java and Cambodia, the Buddhism was that of the *Mahāyāna*. There still exist, as great witnesses to this religious past, the temples, which constitute the only specimens of Cham architecture yet discovered. The most harmonious and best situated, overlooking the sea, is the temple of Umā or Pō Ino Nogar at Nha-trang; the best preserved is that of Pō Kloṅ Garai; the most extensive is the group of eight sanctuaries, which form a veritable city of religion, brought to light in the circus of My-son (Quang-nam) by the exertions of Parmentier and Carpeaux, the architect members of the École française d'Extrême-Orient. All these traces of a lost art have been carefully studied and classified, since 1899, by the efforts of this same École, which desires to restore the most beautiful of them. These buildings, without having the gigantic appearance of the works of Khmèr art, bear witness to real originality. Constructed nearly all on well-chosen sites, on the top of a hill, facing the east, and built of solid brick, they consist of a square tower or a series of square towers built very closely together. Each tower contains a sanctuary in the form of a pyramidal vault, furnished with a door opening out of a porch on one face, while the three other faces are decorated with false doors. All this forms a sort of ground floor that is surmounted by an upper storey set further back, which is an exact reproduction on a smaller scale of the first, and which continues into a third and fourth stage of the same type, but growing smaller and smaller. The richness and variety of ornamentation slightly counteract this apparently intentional monotony.

Islām, which came much later, though we cannot yet tell in what era, has left no monuments.

5. Present-day religions.—The religion of the Chams at the present day is still Brāhmanism on the one hand and Islām on the other, but a Brāhmanism and an Islām so corrupted, so confused with the practice of magic, that they are barely recognizable. The Brāhman Chams are called *Jāt* (Skr. *jāta*) or 'native' Chams: their Musalmān countrymen give them the further name of *Kaphir* or *Akaphir* (Arab. *al-kāfir*) Chams, 'Infidels,' because they have refused to accept the law of Muhammad. The latter name is even accepted by the Brāhman Chams themselves, and neither party sees any opprobrium in the designation. The Musalmān Chams call themselves *Bani* (Arab. *bani*) Chams, 'the Sons [of the religion],' or *Asalam* Chams, that is to say, 'Chams of Islām.' In Cambodia, where all the Chams are Musalmāns, this name 'Bani' is not used.

6. Brāhmanist Chams.—The cult of the Brāhmanist or Hinduist Chams—a vague Śaivite Brāhmanism—has, in our day, only a far-off connexion with the Brāhmanism of the Hindus; and what still survives of this religion, stripped of all

metaphysical concepts, not knowing the names or nature of its gods, is saturated further with Musalmān and animistic influences. In short, as has been said, the vagueness of this worship reveals at a glance the sad degeneracy of this fallen race. Alongside of Indian practices like the worship of the *liṅga* and of Nandin (Śiva's bull), the ritual action which consists in reciting an invocation to Śiva—*namaḥ śivāya*—while touching the finger-joints alternately with the thumb and forefinger of the right hand, and the use of *mantras* in very corrupt Sanskrit (such as *Oṃ taṅpuruśam tatpuruśatya nòmò tatpuruśammukkhai nòmai śibaṅya nòmò*; Sanskrit: *oṃ tatpuruṣaṃ tatpuruṣāya namaḥ tatpuruṣamukhāya namaḥ śivāya namaḥ*), there exists a world of practices and ideas which are foreign to India and borrowed from the Annamese, the Khmèrs, or the half-civilized peoples of Indo-China called 'Savages.' Some of the Chams' agrarian magic rites resemble those of the Malays in every detail, and a certain number of ritual and food restrictions, classed together under the name of *tabuṅ* ('tabu'), appear to be close connexions, like their name, of similar rites among the Malayo-Polynesians. The prayers for the eagle-wood harvest, and the priest's chant over the sacrifice of a buffalo, are purely native. Finally, the co-existence of Islām has still further contaminated the Śaivite Brāhmanism of the present Chams, so that it has now no connexion with Hinduism—which, however, could never have taken deep root in Champā—except by some words and a very few ideas.

(*a*) *Deities.*—The Chams classify their deities into males and females. The great male deities are: (1) *Pō*[1] *Yaṅ*[2] *Mòḥ* or *Amòḥ*, the creator of all and censor of the gods (Siva [?], Brahmā). He has the property, which he shares with *Pō Ovlaḥ* or *Alwaḥ* (Allāh), of being polymorphous. (2) *Pō Jātā*, god of the heavenly regions, who emanates from the foregoing god. (3) *Pō Ovlaḥ* or *Alwaḥ* (Allāh), the creator of *Pō Rasullak* and *Pō Latila*, and dwelling in Mökaḥ (Mecca). He was created by *Pō Ovlahuk*, father of 'nöbi Mohamat' (*nabī Muhammad*). It is quite evident that several of the Chams' deities are simply words, which they have not understood, from the Musalmān invocation: 'There is no other god but God, and Muhammad is his prophet' (in Arabic: *lā ilahū illā ū'llāh wa Muhammadun rasūlu 'llāhi*). This is enough to show the incoherence of their religion.

The female deities are: (1) *Pō Inö Nögar* or *Pō Yaṅ Inö Nögar Tahā*, 'the great goddess, Mother of the kingdom.' *Muk Juk*, 'the black Lady' (Kālī?), and *Patau Kumĕi*, 'Queen of women,' are other names given to this goddess, the most powerful female deity of the Chams. Born from the clouds or from the foam of the sea, she had 97 husbands, among whom was *Pō Yaṅ Amòḥ*, 'the Father God,' and 38 daughters, who were worshipped extensively in former days. She created rice, and presides over agriculture and good harvests. Neither Hindu nor Musalmān in origin, she seems to be a native deity, to whom some of the traits of the Indian Śrī and perhaps also of Durgā have been attributed. Among her daughters there are still held in veneration, each in a special district, *Pō Nögar Darā*, *Pō Byā Tikuḥ* 'queen Mouse' (Gaṇeśa?), *Tara Nai Anaiḥ*, *Pō Śaḥ Anaiḥ*—all virgins, and maleficent deities who must be appeased by sacrifices. (2) *Pajau Yaṅ*, or 'Divine Priestess,' is, on the other hand, a favourable goddess, the dispenser of happiness, who heals diseases and comforts the afflicted. She is invited to all sacrifices. She has no statues or images, but in the imagination of the people she is a woman of thirty. Offerings of fruit are made to her on the first day of the waning moon. She used to live on the earth. *Pō Jātā*, or the King of Heaven, to prevent her from raising all the dead, sent her to the moon, but left her the power of bestowing happiness and health. She gives the souls of the dead who come to greet her a flowering plant (*jrū dī iā bulan*, 'moon-balm'), which makes their journey easy for them to the *ālā tanöḥ riyā*, 'lower regions,' the Cham Hades.[1] *Pajau Yaṅ's* face is seen in the moon, and her name is synonymous with 'moon.' In this name Kern finds the Kawi *pajaṅ*, 'light of the moon'; the age of thirty attributed to her recalls the thirty days of the month. Moreover, the Chams identify *Pajau Yaṅ* with the moon, and explain a lunar eclipse as an act of homage by the lunar deity to the solar deity *Pō Adityak* (Skr. *āditya*); the eclipse of the sun is the homage rendered by *Pō Adityak* to *Pō Jātā*, the deity of the heavens. (3) *Pō Yaṅ Darī* (Skr. *darī*, 'hollow,' 'cave') is the goddess of disease. She dwells in grottos, caves, hollows, dens, or very dense thickets. An upright stone, on which is drawn a white horizontal mark ('to stand for the mouth,' the natives say), is the representation of this goddess. She appears in a vision to an old man, and shows him the place where the stone must be erected; round about this stone, which is set up under a tree, a circular space must be cleared, the diameter of which is not fixed; a circle of dry stones must be formed with the erected stone as centre; and an opening is left to afford entrance into the circle. This constitutes the *tanöḥ yaṅ*, or sacred enclosure. The arrangement of the stones is carried out under the supervision of the man who has had the wonderful dream, and he offers a sacrifice of chickens, cooked rice, and betel—a sacrifice which must not take place either at mid-day or in the night. All who enter the forest must perform the same offering. When coming out of the forest they have only to add a stone to the circle of the *tanöḥ yaṅ*. Such is the cult of Pō Yaṅ Darī at Phan-rang. At Phan-rí she cures fever in little children. She symbolizes the *yoni* ('womb'). She is worshipped wherever there is a hole, a natural cavity, in trees or rocks; a pestle is turned round in the cavity, which has previously been sprinkled with water and alcohol, while an obscene *mantrā* is chanted to win a favour from the goddess.

Alongside of these chief deities we must also mention *Pō Ganuör Mötri*, god of sculptors, engravers, and carpenters; *Pō Pan*, who teaches men the various industries; *Pō Bhauk*, god of storms, of boatmen, and of merchants, who commands the storms; *Pō Rayak*, king of the waves, or the whale-god; and, above all, the deified ancient kings of Champā, *Pō Kloṅ Garai* and *Pō Ramĕ*. They still enjoy such prestige that to-day they constitute, along with *Pō Inö Nögar*, the deities most frequently invoked by the Chams. *Pō Kloṅ Garai* has even taken the place of Śiva in the temple of Phan-rang.

The history of these national gods is naturally full of marvels. *Pō Kloṅ Garai* was born of a virgin-mother, *Pō Śaḥ Inö*, who was subsequently deified, and, after a life full of adventures, became the goddess of merchants. He came into the world covered with leprosy, and a *nāga* cured him by licking him. This god invented the irrigation of rice-plantations, and the

[1] *Pō* (Mal.-Polyn. *po*, *pu*), 'lord,' 'master'—a title given by the Chams to gods, priests, and kings.

[2] *Yaṅ* 'God,' 'spirit,' 'deity,' 'genius,' sometimes 'the king.' This word is found in Malayo-Polynesian (Dayak *saṅyaṅ*; Javanese *yaṅ*, *hyaṅ*; Malay *ka-yaṅ-an*, *yaṅ-yaṅ*, *sembaḥ-yaṅ*; Malagasy **zaṅa* in *zaṅahari*) and in the Indo-Chinese dialects (Bahnar *iāṅ*; Khā pi and Radē *yaṅ*; Stieng *jaṅ*, etc.).

[1] Cf. the Cham expressions *Iā Harĕi*, 'liquid sun,' and *Iā Bulan*, 'liquid moon,' with the title *Jalāṅgeśa*, 'Lord (of the star) of the liquid body,' *i.e.* of the moon, given to Siva (*Inscr. sanscr. de Campā et du Cambodge*, vol. i., inscr. xv. B, 5, pp. 106 and 112). The moon-deity also has the name of *Pō Candrok* (= Skr. *chandra*). The word *iā* in *iā harĕi*, *iā bulan*, may perhaps be simply a corruption of *yaṅ*, 'deity.'

construction of dams and embankments. A five-year-old ox, Kapila,[1] served him as a mount. He raised himself to heaven by his magic power. There he is the protector of men, and his ox carries the dead to Hades. A somewhat incoherent hymn tells of the merits of the god thus: 'The god *Pō Kloṅ* loves maidens. He consents to eat the sacrificial food only if arranged in two rows and offered between the second and third watch. In this way must offerings be arranged so that they may be acceptable to *Pō Kloṅ Garai*. Then he comes down from his mountain, with a beautiful turban on his head, and shoes on his feet, to partake of the sacrifice.'

His companion and servant, *Pō Kloṅ Gaśait*, sprung from a cloud of smoke and dwelling in dark forests, was deified along with him and is celebrated in an even more incoherent hymn: 'It rains in the mountain plunged in darkness; king *Pō Kloṅ Gaśait's* gown and tunic are soaking wet. The rain falls on the mountain; it falls with uproar, pouring through the garments of the king. It rains on Mount Rapat; the god and his wife are bathing. They are up to the mouth in water and the king cannot swim. . . . Deign to accept this sacrifice, O God, and hearken to the prayer of the master of the house.'

Pō Ramē, like *Pō Kloṅ Garai*, was born of a virgin-mother. He watched over the buffaloes of the king until his predestination was revealed to all. He married the daughter of the king—a Cambodian woman. Later on he married an Annamese princess, sent by her father, the king of Annam, to seduce him. A story goes that the Annamese wife of *Pō Ramē*, wishing to ruin the Cham kingdom for the benefit of her own country, asked her husband to have the *kraik* tree,[2] the protector of Champā, cut down, saying that she would then be cured of a supposed disease which the king's doctors had failed to cure. After long hesitation the king gave the order to cut down the *kraik*. A hundred soldiers attacked it with axes, but the wounds of the tree closed up again immediately. The king became impatient and enraged, and, armed with a hatchet, struck the magic tree; blood gushed forth, and groans were heard. The *kraik* fell exhausted, and its blood flooded the ground. The king of Annam declared war on Champā, and *Pō Ramē* was taken and cut in pieces. His Cambodian wife begged for his incisors to make them an object of worship, and her request was granted. The following hymn is devoted to him: 'When *Pō Ramē* descends from the heights where he reigns, his body shines and his head glitters with rays of light. The hair stands on end, the heart is sore afraid when one sees *Pō Ramē*, for his face shines like gold, is limpid as pure water. At the court queen *Akaraṅ* and queen *Than Chan* vie with each other for his favours, but this god, who loves peace, leaves his palace to escape the quarrelling of his wives. Let the god like unto the sun deign to accept this sacrifice and hearken to the prayer of the master of the house.'

(*b*) *Priests*.—If the deities of the pagan Chams are numerous, their priests and rites are not less so. The priestly caste properly so-called (*bòn̈cha* [=Skr. *vaṃśa*] *baśaih*) has at its head a priest of superior rank, the *pordimògru* (Skr. *prathamaguru*?) and three high priests, or *pō ādhya* (Skr. *ādya*), appointed for life, for *Pō Yaṅ Inò Nògar*, *Pō Kloṅ Garai*, and *Pō Ramē*. The priesthood is hereditary (but not obligatory) in the families of the *baśaih*. Consecration takes place at twenty-five years of age, after a long initiation, followed by the marriage of the new priests, who abstain from the flesh of the ox. There is a *baśaih* or *baśeh* (cf. Bahnar *bŏk śoi*, 'sacrificer,' 'priest,' and Pāli *upajjhāya*) in every village. The *baśaih*, charged with the religious service of the people, wears a gown and tunic of white linen, and on his head a white turban, for which a white mitre with red and blue designs is substituted during the performance of his duty. Next in rank to the *baśaih* comes the *ċamenĕi*, deacon-sacristan, who looks after the temples and the objects of worship, arranges the offerings, and dresses the deities; then the *kathar* (Skr. *gandharva*?), who sings the sacred chants, accompanying himself on a two-stringed violin, the body of which is of tortoise-shell (*kaṇi kura*).

Besides these ministers, the *mòdwòn* and the *pajau*, of whom we shall speak below, are officials outside the priestly caste and in direct communication with the deities. The *mòdwon*, initiated by his predecessor, offers sacrifices to all the gods in private ceremonies and in the temples, singing meanwhile, to the accompaniment of a drum, flat on one side, a song which has no meaning for him. The *mòdwòn* is a soothsayer and healer. Lastly, the *oṅ banòk*, 'lords of the dams,' the religious chiefs of canals and works of irrigation, clad in white, preside every year over the work of repairing dams and canals. All the time of these operations they must abstain from sexual intercourse, and must not eat the flesh of the *hakan* fish (silure).

The *pajau* (Bahnar *bòjau*, 'sorceress') is a sorceress-priestess compelled to celibacy, who is found also among several peoples of Indo-China. There is one for every four or five villages. She herself chooses her assistant to take her place in the succession. She reads the future after she has, by means of ecstasy, entered into communion with *Pajau Yaṅ*, or the Heavenly *pajau*; it is natural, therefore, that she should frequently be consulted by the Chams. Like the *baśaih*, the *mòdwòn* and the *pajau* must abstain from certain foods. Under the *pajau*, and qualified to take her place, is the *kaiṅ yaṅ*, 'girdle,' 'loins of the god,' 'she who encircles the deities.' She is a sort of convulsionary priestess who makes a living by presenting offerings to the deities for others. Besides the *pajau*, the Chams have still other officials, called *rijā* or *srwak rijā*, for their private ceremonies. Of 20 years of age or less, they are chosen by the whole family, and are not bound by any rules except to wear a white robe on the days when they are officiating.

All the priests, including the *mòdwòn* and the *pajau*, must abstain from certain dishes in varying degrees, and for varying times. The abstinences, which are binding only in certain months, apply to otter flesh with shallots, hare, chicken, pigeon, ginger, the dish of flesh with oil, the *bakyak* herb (*Phyllanthus sp.*, Euphorbiaceæ), the *katwòn* herb (*Arum esculentum*, Aroideæ), crabs with sweet potatoes, sugar-cane, tortoise, the *hakan* fish (silure), the *krwak* fish (*Annabas sennal*). The fasts belonging to the different days of the week comprise ragout and mince of raw fish with prawns (Sunday); pearl-grey chicken, black chicken, and black goat with spotted belly (Monday); red foods (Tuesday); dark-brown foods (Wednesday); hare and ash-coloured chicken (Thursday); spotted chicken, tortoise, and honey (Friday); eels, lampreys, and the *bakyak* fish or pike (Saturday). The violation of these restrictions means a serious shortening of life.

(*c*) *Festivals*.—Sacrifices and offerings to the gods take place all through the year, and are presented on various occasions of a private nature (illness, birth, marriage, rain, drought, etc.), by the priests, the *mòdwòns*, and the *pajaus*. The most solemn festivals are those of *katē* and *ċabur*. The former is held in September–October, the latter in January–February. At *katē* there are five consecutive days of feasting and sacrifice in the *kalan*[1] and the *bumauṅ*, 'huts of leaves'; and at *ċabur* for the same length of time both in the towers where the *baśaih* officiates, and in the houses where private persons make their offerings personally. Mention must also be made of the *paralau rijā Śaḥ*, 'development of the feast of the goddess *Pō Śaḥ Inò*,' which takes place on the tenth day of the second month of the Cham year (June–July),[2] and which also lasts five days. The ceremonies (offerings, dances, worship of the sea) take place in leaf-huts by the sea-shore, the Brāhman priests and the Musalmān *imāms* taking part in it. On the last day at sunset they throw paste figures of tortoises, buffaloes, and men into the sea. Another curious ceremony is *dih srwak*, 'being stretched out with the body stiff.' In it

[1] This is evidently *Nandin*, the bull of Śiva, but it is difficult to explain how it could have got this purely Sanskrit name (*kapila* = a reddish or brown cow).

[2] This name is given by the modern Chams to *Mesua ferrea* (L.), or ironwood.

[1] Ancient Cham brick temples, in the shape of truncated pyramids or forming a series of retreating stages placed one above the other. The finest are those of Phan-rang and Nha-trang in Annam.

[2] In 1900 it began on the 3rd of June.

are invoked the *prauk* or *prauk patrā*, 'spirits of children who have died young, who inhabit the bodies of squirrels.' The *pajau* with rigid body falls down in a nervous spasm, real or pretended, while the *mòdwòn* beats his flat drum. We may also mention the *yaṅ rijā*, 'the feast of the possessed *or* of possession,' a ceremony analogous to the *thvö rŏṅ*, 'the feast of the possessed' of the Khmèrs, in which a healer, man or woman, called *rijā*, after preparation by a series of magical rites, summons the illnesses which he has cured during the year to a feast where, after eating certain food and drinking alcohol, he is seized with convulsions, pretends to be the incarnation of a spirit, and 'breathes' this spirit over one of the onlookers. The latter, possessed in his turn, passes on the spirit to his neighbour, and so on, from first to last.

Amongst celebrations common to the Brāhmans and the Musalmāns may be mentioned an agrarian sacrifice which takes place every year before undertaking the working of the consecrated rice-plantation, or *hamū ćaṅrauv*. Each proprietor knows by tradition which is the consecrated rice-plantation of the year. After certain offerings placed by the mistress of the field—her husband has only a secondary rôle in the ceremony—in a secluded corner of the rice-plantation where a candle burns, the wife and husband invoke the god *Pō Olwaḥ Tā Alā*, whom the Chams call the 'lord of the lower regions,' but whose name is no other than the Arabic expression *allāh ta'āla*, 'God, exalted be He!'

(*d*) *Sacred vessels and other objects used in connexion with religion.*—The chief sacred vessels and religious objects are:—(1) The *bālaṅòḥ*, 'ark of the sacred fire,' which may not be touched except by the *baśaiḥ*. It used to serve for the consecration of the kings, and is now used for the sacrifices offered at the ordination of the priests. It is a light cage of bamboo, 1 metre in height, cylindrical at the top, and conical at the lower part, and placed on a little square basket containing two wax candles and strewn with raw white rice. The whole is covered over with flowing white cotton crossed by a red band. (2) The *baganraċ*, which only the *baśaiḥ* may touch. It is a tray 30 centimetres long, supported by a framework of sticks and furnished with a cover. It is sometimes rectangular, sometimes with its surface the shape of a violin. It is used for containing the sprinkling-vase, the cups, the metal cruets for the salt, the box of flour for the magic figures, the sacred conch, the rosary, etc. (3) The *habauk*, a copper vase for the lustral water. (4) The *bap*, or *bak*, and the *śop*, libation-ladles. (5) The *kalaiḥ* (Skr. *kalaśa*), a tin vase for the aspersions. (6) The *śaṅ* (Skr. *śaṅkha*), the sacred conch for blowing as a horn. (7) The *ralaṅ hamu*, a bundle of blades of *ralaṅ* (*Saccharum spicatum*, L.) in the form of an S reversed (Ƨ), which the *baśaiḥ* holds in his hand during the sacrifice. (8) The *khak mau*, a large elliptical ring fashioned out of three blades of *ralaṅ* plaited together, which the priest puts on his hand round the four fingers, just below and excluding the thumb. (9) The *karaḥ*, a smaller ring made of similar materials which he wears on his ring finger. (10) The *kaṅom*, the mitre of the Cham priests; it is ornamented with two fillets hanging down behind. (11) The *gai jrŏṅ*, a club made from a rattan whose roots have been plaited in basket form. (12) The *batău rasuṅ*, the block on which the paste is made with which the figures of the deities are smeared. (13) The precious silk cloths for 'dressing' the deities, and the boots of red cloth embroidered in gold, with turned-up toes.[1]

[1] The inscriptions of Champā mention the offering of embroidered clothing to the gods

In their ceremonies the Chams employ three kinds of lustral water: (*a*) eagle-wood water; (*b*) citron water; (*c*) *mu* water (water with *mu*, unpurified calcium carbonate and magnesia, in suspension). The first kind is for aspersions, the second for whitening the face of the *mukhaliṅga* ('the *liṅga* with face-form'), and the third for purifications. *Gahlau* (= Skr. *aguru*; cf. ἀγάλλοχον), 'eagle-wood,' is the most valuable substance used in worship; it is still used by the kings of Annam in the ceremonies they perform. It is an excrescent product of a tree of the family Leguminosæ, the *Aloexylon agallochum* (Lour.) and of another tree of the family of Aquilariæ, the *Aquilaria agallocha* (Roxb.). The ceremony of gathering eagle-wood is very complicated among the Chams; even the Musalmāns take part in it. A Musalmān village is by tradition charged with the gathering of the eagle-wood. At its head is the *pō gahlau*, or 'lord of the eagle-wood,' whose dignity is hereditary. He has under his orders sixteen chiefs of the squad, or *kañi*, and seven hamlets of *Oraṅ Glai*, or *Ra Glai*, 'men of the woods,' a half-civilized people settled in the west of the Cham country. During their absence there must be no games, no laughter, no quarrels in their dwellings, for that would harm their search. Their wives must not speak to any stranger, and if they do not abstain from all sexual relations the greatest misfortunes are sure to occur. For his part, the *pō gahlau* observes all these prescriptions with the greatest care, and abstains at the same time from the *hakan* fish (silure). The same precautions are taken by the *Ra Glai*, who help in the hunt for eagle-wood, and whose villages become *tabuṅ*, 'tabued,' 'interdicted.' All the searchers for the eagle-wood, so long as their search lasts, employ a conventional language (*ar baṅu*, 'flowery language'; *jal śadhŏr*, 'the water of the river'), formed from periphrases, corrupted Sanskrit words, words of dialects foreign to the Cham, or onomatopoetic words. The following are some words of this language:—*mŏrabău*, 'the thing which smells' = eagle-wood; *ćyim ćauṅ*, 'the bird that pricks' = the axe; *bhoṅ*, 'the red' = fire; *garmeṅ*, 'the spider' = the goat; *ŏśdhuk* (= Skr. *oṣadhi*, 'herb'), 'betel'; *ćil*, 'a serpent'; *upbabhup*, 'to eat,' etc.

After two or three months of search the squads generally succeed in gathering from four to fifteen pounds of eagle-wood. The return home takes place solemnly, in arms and to the sound of musical instruments. There is a first series of feasts and festivals, which lasts two days and two nights, at the place where the Chams part company with the *Ra Glai*, and another at the entrance to the Cham village, for the Cham eagle-wood hunters. At the entrance of the Cham village a large shed is built. The women bring the eatables for the festival, the lustral water of sacrifice, and the oil for anointing their husbands, whom they go to meet in high holiday garb, accompanied by armed men. For three days there are sacrifices, banquets, and dances, these last being led by the *pō gahlau* and his wife; but the prescribed abstinences do not yet come to an end. [Before the French occupation, the band of eagle-wood searchers went to deliver this wood to the Annamese mandarins who had claimed it for their king.] Finally, some new sacrifices mark the actual entry into the village and the return to normal life. In the rainy season, the seventh or eighth month of the Cham year, the *pō gahlau* once more ascends with his train to sacrifice a buffalo on the mountain to the deities of the eagle-wood, that they may prosper future searches. A festival of three days follows the sacrifice.

Such are the ceremonies by which the Chams

honour their gods. A persistent tradition, about which, however, they are not very fond of giving an opinion, bears witness to the existence at one time among them of human sacrifices. Friar Gabriel de San Antonio, a Spanish Dominican who visited Champā at the end of the 16th cent., depicts the Chams as 'a people of great wickedness and bad heart,' and relates that on certain days they sacrificed over 6000 persons, whose gall was carefully collected and carried to the king, who bathed his body and head in it. This gall was also used to bathe the statues of the gods.[1] Besides this, it appears that, at the construction of a dam, the *oṅ banòk* at night secretly got hold of a child four or five years old, and drowned it in the irrigation works, in order to win the favour of the deities. Friar Gabriel tells also of a feast which is entirely forgotten by the present Chams, but recalls the procession of the chariot of Jagganāth :

'The Chams have numerous idols, which they place on a chariot on feast days. This chariot is fitted with swords, and the people drag it along, out of piety. Some place themselves under the wheels and let themselves be cut in two ; others offer the foot or the arm, and others the band. Those who survive are beatified, and those who die are regarded as saints. . . . The bodies of the victims, from which the gall has been torn for the service of the king, are gathered together and burnt on the top of a mountain as a sacrifice to the sun.' Friar Gabriel adds that among the Chams 'the dead are burned'—a custom observed even to the present day,—'and widows voluntarily share the funeral pyre of their husbands'—a custom no longer seen.

7. Musalmān Chams or Banis. — It is not known in what year, or how Islām penetrated to the Chams. A chronicle tells that *Pō Olwaḥ* (Allāh) reigned over *Srī Banòy*, their second capital, from A.D. 1000 to 1036, and made a pilgrimage to Mecca. This may have been an Arab chief or a Malay who brought Islām to Champā. We do not know. It is easier to describe what the religion of Muhammad has now become in this country. Of course, the religion varies widely according to the places where it is practised. In Cambodia, where the Banis or Musalmān Chams are in contact with the Malays, Islām is naturally less mixed with heathen practices, and comes nearer to orthodoxy. In Annam, on the other hand, it is in such a state of corruption that it is sometimes very hard to recognize it. An extract from the religious writings of the Banis of Annam informs us that '*Alwahuk* (= Arab. *allāhū*), the uncreated god, holds his seat on the forehead ; *Uwlwah* (*allāh*), Allāh, the Demiurge, on the left eyebrow ; *Mohammat* (=Muhammad), on the right eyebrow ; *Jibarael* (the archangel Gabriel), on the right eye ; *Asan* (Ḥasan), on the left nostril ; *Aśai* (Ḥusain), on the right nostril ; *Hawa* (Eve), on the left ear ; *Adam*, on the right ear.' All their theology, based on the localization, in the face or body of man, of the holy personages of Islām, of its practices and feasts, could not be better exemplified than by this passage.

The ministers of worship among the Bani Chams are: (1) *pō* or *oṅ gru* (= Skr. *guru*, 'spiritual teacher'), chief of the ministers ; (2) the *imòms* (*imāms*), from whom the *grus* are chosen ; (3) the *katip* (Arab. *ḥaṭīb*), minister entrusted with the sermon ; (4) the *mòdin* (Arab. *mūaddin*), the crier of the mosque and singer ; (5) the *ácàrs* (Skr. *ācārya*, 'a spiritual guide or teacher'), masters charged with the teaching of the Law. The word is also used to denote Muhammadan ministers in general, in contradistinction to the *baśaiḥ* of the Hinduists.

The ministers of the cult have their heads shaven. In Cambodia they wear a white fez, which in Annam is covered by a voluminous turban with red, maroon, and gold fringes. The hierarchic rank is marked by the breadth of the fringe. Like the *baśaiḥ*, the *imāms* have a long staff of rattan (for the *oṅ gru* only, the roots of it are plaited like a basket). A white *sarong* and a long white tunic buttoned and cut to fit the neck form their whole costume. On feast days they wear, instead of their turban, a kind of disk with a hole through the centre, and fastened to the fez by a piece of linen ; the whole has the appearance of a judge's cap.

The *imāms* can hardly read Arabic ; still less do they study it. They understand the general drift of the *sūras* of the Qur'ān, which they recite by rote, and which, they say, their fathers used to recite. The fast of *ramwòn* (Ramaḍān) is kept by the priests only. As for the laity in Annam, if they observe it for three days, during the rest of the month they eat a little at midday. The *imāms*, who fast for the whole community, transform the mosque into an encampment for the purpose, where they recite prayers during the whole month of Ramaḍān. They do not leave the mosque except for the great ablutions in the river.

The mosque is a bamboo building, with trellis walls and thatched over with rice-straw ; it is surrounded with an enclosure of dead wood, and its end is turned to the West. At the door are seen a large drum (*agar*), to call to prayer, and the mats used for prayer-carpets, tied up in a bag and hung from the joists. The pulpit (*minbar*) is at the far end. The end of the mosque and the *minbar* are covered with white cloth during feasts.

On Fridays (Cham *jummat*, *jomaat* = Arab. *jum'a*) the *imāms* and the *pō gru*, meeting at the mosque, read some sentences of the Qur'ān, in the presence of the worshippers. Prayer lasts for an hour, and is followed by a meal washed down with rice-brandy, of which all but the priests partake. Purifications are neglected ; their place is taken by digging in the sand, and imitating the movement of drawing the necessary water. The five prescribed prayers are hardly ever said, and circumcision, which takes place about the age of fifteen, is nothing but a symbolic operation. The *oṅ gru* mimics this operation with a wooden knife, after which the newly circumcised receives a new name as 'an initiated person' ; usually the name is 'Alī, Muhammad, Ipbrahim (= Ibrāhim), etc. He still keeps his secular name, however,—the name of some object, quality, or tree,—in his everyday life. On the other hand, the *karoh* (lit. 'seclusion'), or declaration of marriageability of girls, is celebrated with great solemnity. The girls may then marry and put their hair up. Until then they are *tabuṅ*, 'interdicted,' and to violate this interdiction would expose the culprit to serious penalties.[1] The celebrations, presided over by the *oṅ gru* accompanied by the *imāms*, last two days, and are performed for a group of girls, and not for one alone. After prayers addressed to Allāh, to Muhammad, to the Hindu deities, and to the ancestral spirits, a festival takes place at which only the priests eat. Two sheds have been constructed—one for the ceremony, the other for the toilet of the young girls. They sleep in this the first night under the care of four matrons. The *imāms* pass the night in prayer. At seven o'clock in the morning the maidens, dressed in their best and adorned with all their jewels, their hair hanging loose and surmounted by a triangular mitre, come forward preceded by an old woman and a man clothed in white, who carries a year-old infant, dressed like the girls except for the mitre. They proceed to make obeisance to the *oṅ gru* and the *imāms*. The little child is presented to the *oṅ gru*, who puts a grain of salt into his mouth, cuts off a lock of hair from his forehead, and offers him a

[1] See Gabriel de San Antonio, *Breve y verdadera relacion de los succesos del Reyno de Camboxa*, in S. Pablo de Valladolid, 1604, fol. 22. The present writer is preparing a new edition of this work, which has become very rare.

[1] Perhaps this *karoh* is analogous to the legal seclusion for three months imposed by Musalmān jurisprudence on divorced or repudiated wives.

little water to drink. All this is repeated for the young maidens, who then return to their shed in procession. If a girl has violated the interdict the lock of hair is cut from the nape of her neck as a sign of shame. Then another feast, where the priests eat first and the worshippers afterwards, closes this part of the ceremony. About ten o'clock the girls re-appear, their hair put up this time as a mark of their having passed into the ranks of marriageable women; they prostrate themselves before the priests; then all the relatives, and especially the women-guests, come to enumerate the presents of clothing, money, finery, and even fields and buffaloes, which they are giving to such and such a new member. Then, after much bowing, the young maidens go and fetch the viands and presents prepared for the *imāms*, and offer them on trays. The *oṅ gru* makes a pretence of tasting them, and presents a small particle to the little child. A bounteous feast brings to an end the solemnization of the *karŏh*. This ceremony generally takes place only a very little before the marriage of the girls, who are at this time from fifteen to eighteen years old.

Another feast, called *taba* or *tupah* (= Arab. *taubah*), takes place in all the families where there are old men. It is celebrated in a shed built for the purpose; the *oṅ gru* and several *imāms* offer up prayers; the old man and his family make the responses. A sprinkling of lustral water, accompanied by a banquet, closes this ceremony, which blots out the old man's sins, and takes place for each man individually.

Some deeply rooted survivals of the ancient Malayo-Polynesian cults contaminate the Islāmism of the Bani Chams, not to mention the evident corruptions of their cult by that of their brothers the Hinduists. While worshipping Allāh, they also invoke the *Pō Yaṅ*, 'deities,' and offer them sacrifices. They make offerings to the spirits of their ancestors on serious occasions: to get healing, or to gain assurance of the success of an important affair. They offer worship to the *prok*, the souls of still-born children which are incarnated in the bodies of squirrels, and are particularly malignant spirits. To appease them or win their favour, both Banis and Kaphirs pray to them in complicated ceremonies, like the *ḍih srwak*, of which we have spoken above, and its complement, the *dayŏp*, or 'sacrifice of the twilight.' The two sects invite each other to all their feasts, and give each other the place of honour. But the Banis never take part in any cremation. As regards this, a curious old tradition says that at one time they alone were summoned to the side of the Brāhmanist Cham queens in childbed, as being less liable to bring ill-luck than the *baśaih*, who was charged with supplying the corpse with food and drink until its cremation.

Mixed marriages are rare, and especially so between a Brāhmanist girl and a Musalmān, the children having to follow their mother's religion. Nevertheless, perfect toleration is the rule, not only among the adherents, but even among the priests of the two cults. If the Bani Chams have no scruples about worshipping the *Pō Yaṅ*, or Hindu deities, the Kaphirs on their side have included Allāh and Muhammad in their pantheon. They all abstain from pig's flesh, dare not rear oxen, and cut themselves off from all sexual relations on Mondays, in commemoration of the supposed birth of Allāh. Corresponding to the *pajau*, or sorceress-priestess, of the Kaphirs, there is among the Banis the *rajā* or *rijā*, who performs similar duties. The *rajās*, who must be twenty years old, do not form a special caste, and their functions are not hereditary. In short, they are private officials, and do not play a really important part except at certain annual feasts called *rijā*, which seem to correspond to the solemnizations of *katē* and *ćabur* of the Kaphirs, and at which the ancestral spirits are worshipped. These feasts, of Malayo-Polynesian origin, take place in the ninth month (Dec.–Jan.). In the formulas recited at them the name of Java and the Javanese occurs often. We shall describe them briefly.

In an enclosure a large shed is constructed, of new materials as far as possible, and is covered over inside with white cotton cloth. The altar is a rude trough with trays, on which are placed betel, foods, and fruits; and wax-candles are stuck on the edge of the trays, which are further surrounded with coloured cotton threads. From the roof hang images of monkeys, elephants, boats, and carts, all made of paper. A swing, fastened to two pillars, is set apart for the *rijā*. Attended by three *imāms*, she is the chief personage of the fête. The *mŏdwŏn*, with his flat drum, conducts an orchestra composed of a flute, a violin, cymbals, and an elongated drum (*ganŏṅ* = Mal. *gendaṅ*, Javanese *keṇḍaṅ*), and accompanies the *rijā*. The ceremony, which is interrupted by a number of feasts, lasts two days and three nights. It begins with the *bismillāh*, and continues with the invocation of the spirits of the mountains and woods, of the dead, of the spirits of 'beyond the sea,' and, by name, of the thirty-eight deities or spirits.[1] The calling out of their names is followed by prayers from the three *imāms*.

The characteristic part of the ceremony takes place on the second day, at the time when the morning star appears. After the *mŏdwŏn* has invoked the deities, and the *rijā* has performed a special dance in their honour, they take a little rowing-boat, fashioned out of a piece of wood supposed to have come from Java or China to exact tribute. The master of the house where the ceremony takes place pleads ignorance of Javanese, and the *mŏdwŏn* acts as interpreter. In pantomime they place eggs, cakes, and a kind of jointed monkey on the boat. Then they all cut the partition walls and the roof of the shed into pieces, and fight over the cakes. On the third day the *rijā*, accompanied by the priests and the orchestra, proceeds solemnly to launch the boat with the monkey on the river of the village, and this is the end of the ceremony.

Besides this great annual *rijā*, they celebrate others in special cases, *e.g.* to charm the evil spirits who take possession of a girl, or to get healing. They are all celebrated in the same way as the preceding, except that the *mŏdwŏn* alone takes the place of the orchestra, and that the mistress of the house herself often takes the part of the *rijā*.

It would be just as difficult to fit into the domain of Islām the agrarian rites common to the Banis and Kaphirs. They distinguish three kinds of sacred fields:—(1) The *hamū tabuṅ*, which bring death to the people and beasts who cultivate them. Nothing can turn aside their evil influence, which is now cheaply avoided by selling the fields to the Annamese Christians. (2) The *hamū cañrauv*, or sacred rice-plantations, which are regarded as the 'queens' of the other rice-plantations. We have already described the cult of which they are the object. (3) The *hamū klaik lawak*, 'fields of secret labour.' These are worked by stealth, after a sacrifice has been offered, and the buffaloes, ploughs, and offerings have been sprinkled with lustral water. The sacrifice must be renewed at the flowering and harvest of the rice. Perhaps there remain in it some traces of the ancient native cults for appeasing the spirit of the soil that has been reclaimed from the forest.

In regard to the *oṅ banŏk*, or religious chiefs of dams and irrigation, we may at least admit that their functions correspond to the religious respect of Musulmāns for all that is connected with the distribution of water in the hot countries which they originally inhabited. The *oṅ banŏk*, clothed in white, keep certain fasts, and avoid sexual intercourse during the exercise of their ministry. They preside every year over the repairing of the dams and canals. As already stated, they were believed to drown a little child secretly in the irrigation works to assure good irrigation of the fields.

8. Magic rites and various customs.—Black magic, the casting of spells, and sorcery are common to the Hinduist and Musalmān Chams, as well as to the Annamese and Khmèrs, but the latter peoples consider the Chams the abler sor-

[1] Cf. the thirty-eight daughters of Pō Inö Nögar.

cerers. The Chams believe that certain individuals have the power of killing at a distance, or of causing the ruin and downfall of persons, or of trees, by means of magic formulæ. Though the *jalawöc*, or those who extract the gall, have disappeared, the belief persists none the less that fresh human gall gives invulnerability. The life of the Chams, whether Banis or Kaphirs, is associated with innumerable superstitious ideas and practices. The absence of shrubbery round the houses is explained, as we have seen, by the belief that the shade of a living tree brings misfortune.

The construction of a Cham house includes a series of propitiatory rites meant to drive off the evil spirits. The enclosure of dead wood is first raised, and, after the plan of the house has been traced with a line, the pillars are set up—tree-trunks which are to support the building. But first the builders must place a *mantra* engraved on a plate of lead, and always the same *mantra*, in the hole into which the pillar is to be put. Then they sink the north-east pillar, once more invoking the deities. Other *mantras* are laid at the places where the pillars meet the woodwork of the roof; and the roof is then covered with thatch taken from the mountain. Then the master of the house, having chosen the place where his bed is to be, stretches himself out on it for a moment, but does not dare to install himself finally in the new habitation until he has made a sacrifice to the unfavourable powers.

A new cart is never put to use either by the Banis or by the Kaphirs without a ceremony, which consists in a sacrifice to the deities, and aspersions of lustral water on the cart. After this it is plunged into the river, and receives several light strokes of an axe, as a sample of the chastisement in store for it if it does not fulfil its function well.

The Chams never go during the day to take the rice they need from the granary: that is the time when it is asleep. They therefore await its awaking, that is to say, the fall of night. This rice, moreover, has not been put into the granary until the principal matron of the family has cut enough to make three sheaves in the fields. These three sheaves are set upright on the bank of the rice-plantation, and the matron-harvester says to the stems still standing: 'You are fit to enter the granary; follow the sheaves you see here.' In addition to this, after the buffaloes have trodden the rice, a sacrifice is made at the winnowing ground.

The Chams, like the other Malayo-Polynesians, believe in 'favourable' and 'unfavourable' days, and they never undertake anything of importance without being assured, by the consultation of tables, of a propitious day and hour.

9. Birth.—When a child is born, a matron of the village assists at the delivery, and keeps a burning fire[1] near the mother, during a period more or less variable—7 days is the average in Binh-thuận. Then she surrounds the hearth with cotton thread, and lights a cubit-long candle to keep off evil spirits. It is she also who 'breaks up' the fireplace at the end of the lying-in, and who carries the ashes to cross-roads in order to make a pile of them, surmounted by a stone and betel-quid. The Banis omit the sacrifice which is then offered by the Kaphirs to the good spirits. The child receives a name when about the age of six months, *i.e.* just when the first glimmering of intelligence is seen. Children of good constitution and normally born get a 'good' name ('Good-luck,' 'Joy,' 'Concord,' etc.); children prematurely born, deformed, or whose mother has had several miscarriages, get a 'bad' name ('Dog,' 'Cat,' 'Buffalo,' 'Excrement,' etc.). This bestowal of a bad name tricks the spirits who would injure the child; if at the age of 12 years no harm has befallen the child, a bad name is changed for a good one; but this is often forgotten. It is remarkable that several Cham kings have borne the name *Aiḥ* ('Excrement').

10. Marriage.—Boys and girls marry between the ages of 15 and 18. If a girl, Bani or Kaphir, becomes pregnant, unless she lives publicly with a man of the village, she must tell the name of her seducer. The latter, if he admits the deed, has to pay a small fine to the parents, and may marry the girl. If the girl refuses to name the father of her child, she is punished by 50 strokes of the rattan, all precautions being taken to avoid a miscarriage. But cases of seduction are not common. Marriage among the Kaphirs requires very little formality, and cohabitation may take its place for a long time.

Among the Banis, marriage is a little more complicated. It includes a religious ceremony and a very costly banquet. People are often found putting marriage off so long that grown-up children are present at the wedding-feast of their parents. In the cases (which, however, are rare) where the feast takes place before marriage, it is the parents of the boy who supply the greater part of the provisions; those of the girl give the rice and the cakes. Towards evening, the married couple, clad in unhemmed white cotton, and holding each other by the hand or by the gown, go by a road carpeted with mats, so that their feet may not touch the ground, from the house of the young maiden to the shed specially constructed near by. There, in front of the *imāms* engaged in prayer, presided over by the *oṅ gru*, the parents of the betrothed maiden declare her given over to the youth, who accepts her as his wife before all. The maiden goes back to the house, while the *oṅ gru*, who for the occasion has taken the name of Lord Mohammat (=Muhammad), and is accompanied by an *imām* who has received the name of Lord Omar, asks the fiancé, designated by the name of *Pagindā Ali* (=Mal. *baginda* ['prince,' 'majesty,'], 'Alī), what presents he means to offer to his wife '*Phwatimòḥ*' (=Fāṭima). The youth enumerates them, beginning with the silver wedding-ring and ending with the jewels, the ornaments, the buffaloes, and rice-plantations, if there are any. In case of divorce, this dowry remains with the wife. Then two *imāms* take the ring which the *oṅ gru* has just blessed, and go into the house to put it on the finger of the maiden, at the same time asking her if she consents to the marriage. They proceed to fetch the fiancé and the *oṅ gru*, and then they solemnly conduct the married couple into their dwelling. Before going into the house the bridegroom crushes three betel leaves on the threshold. In the nuptial chamber, four venerable matrons spread out a special white cloth over the mat set apart for the newly-married couple. The wife sits down on it, with old women round about her, and her husband at her side. *Imāms* join the hands of the married pair, who are then sprinkled with lustral water, bless them, and after some prayers and moral recommendations leave them alone. The wife then prepares a betel-quid, which she places in her husband's mouth. He throws part of his clothing over her, and finally they both go out to prostrate themselves before the priests and the godparents of both parties. This is the time when the guests offer their presents, a list of which is drawn up. An interminable banquet, to which nearly the whole village is invited, closes the marriage-ceremony.

The position of woman among the Chams of Annam, where there still exist very distinct traces

[1] Hence the expression *diḥ di apuĕi*, 'to sleep near the fire,' meaning 'to be delivered.'

of matriarchy, is an agreeable one. In religious and domestic ceremonies she takes the first place after the priests, and has the right to transmit property. She chooses her husband; the children belong to her and not to the father. Divorce is easy to get and often taken advantage of, being always sought by the wife, who is allowed to keep the children, the common house, and a third of the property, etc.

Adultery is theoretically punished by death, but in practice the penalty is reduced to a few strokes of the rattan and a fine. It is, however, very rare, not owing to the special virtue of Cham women, but because they can, as we have seen, obtain separation from their husbands quite easily.

11. **Disposal of the dead.**—(*a*) *Among the Banis.*—Funeral rites are highly developed among the Chams, partly in honour of the ancestral spirits, partly to prevent the dead man from coming back to annoy or carry off those whom he has left in his house. Islām has been unable to modify completely the beliefs of the Banis on this point, but the funeral ceremonies of the latter are much less complicated than those of the Kaphirs, and—an important point—burial takes the place of cremation among the Musalmāns, while cremation persists among the Kaphirs. After the last breath, the corpse is carried into a shed built for the purpose. It is washed in several waters, wrapped in a piece of white cotton, and laid, without a coffin, in a trench, with the head towards the north. This is done in presence of four *imāms*, who recite prayers, while the family and friends adjure the dead to rest in the tomb and not return to torment the living. Contrary to what takes place among the orthodox Musalmāns, it is the *imāms* who lead the procession. Commemorative services, called *padhis* (Skr. *upādhi?*), with prayers and a feast on the tomb, take place on the 3rd, 7th, 10th, 30th, 40th, and 100th days. A sacrifice is also offered on the tomb in all serious family crises. Finally, in the 5th or 6th month for the poor, in a year for the rich, the corpse is exhumed, and carried with the same ceremonies as before into a certain valley, considered a holy place by the Banis.

(*b*) *Among the Kaphirs.*—Cremation among the Kaphir Chams is a very solemn procedure. The corpse, washed and clothed in a series of white cotton garments, put one on top of the other, has the appearance of a parcel, and the head, though veiled, is the only recognizable part. The body is laid out, with the head to the south, on a kind of luxurious catafalque adorned with candles, and food is placed at the corpse's side. The priests pray beside it night and day, and go through the pantomime, three times a day, of giving it food. During this time, the friends and relatives come from any distance, with lively musical instruments, to feast and laugh unceasingly in the house. They must bear the corpse company, and by their gay talk keep the family from giving itself up to a too violent grief. This may last a week or several months, according to the fortune of the deceased and the condition of the atmosphere. When the corpse becomes too much decomposed, it is at last consigned to the flames. It is laid out on an enormous new catafalque, made by the *baśaiḥ*, and ornamented with figures of animals or flowers in gilt paper. Carriers dressed in white seize the catafalque, round which crowd all the priests and the *pajau*, clothed in white, with a bundle of five candles in their hand. Musical instruments give the signal to march. Mourners, the family dressed in white, and all the inhabitants of the village girdled with white scarfs, carrying lances, swords, and flags, follow the catafalque, which the carriers, under the order of the midwives, keep turning to left and right, so as to mislead the dead in case he should want to return home afterwards. When they have arrived at the place of cremation, the first knock is given by a *baśaiḥ*; then the relatives clear the ground, preparing the pile where the body is placed. After the priests have circumambulated the pile, keeping their right side towards it all the time, the body is uncovered once more to offer it a final repast and to allow the adoration of its friends. Then fire is applied to the pile, which is decorated with the priests' candles, and into which are also thrown some food, all the precious things, clothes, and utensils belonging to the deceased, and the presents, often of real value,[1] which his friends and relatives give him at his death. After cremation the central part of the frontal bone is picked up. This, broken into nine parts, constitutes the 'noble bones,' and is put into a little gold, silver, or copper box called *kloṅ*, and taken back to the former dwelling of the deceased. These *kloṅ* are nearly always bought beforehand, and buried in some corner of the proprietor's enclosure or in the forest. They are never buried in the house, the presence of a *kloṅ* bringing ill-luck and often causing the death of the person for whom it is meant to be kept. The family of the deceased then celebrate *padhi* (Skr. *upādhi?*), or commemoration-services, on the 3rd, 10th, and 100th days after the death, with prayers and feasting.[2] At the *padhi* held on the anniversary, the *kloṅ* are buried beside the rest of their ancestral bones under the *kut*, or family tombstones. These stones, of about three cubits' length, are three in number for women, five for men. They are erected nearly always in the family property, and preferably at the foot of a tree. The poor, for lack of private property, bury their *kloṅ* in the forest. At the feasts of *katē* and *ćaḅur*, care is taken never to omit to pay homage to the ancestral spirits, which are invoked also in cases of illness, accident, and important decisions. These sacrifices, though unorthodox, are offered by the Musalmān Chams of Annam and of Cambodia.

12. **Eschatology.**—The ideas of the Chams of either sect as to the survival and fate of the soul after death are singularly confused. The Brāhmanists generally think that the souls of pious men go into the sun, those of women into the moon, those of servants into grey clouds; but they sojourn there only until their entrance into the heart of the earth (*alā tanòḥ riyā*). Others declare that souls return to the state of the gods, others that they pass into the bodies of certain animals—serpents, crocodiles, squirrels, etc. Each family abstains from eating the flesh of a particular animal. A belief common to all the Chams is that the souls of infants born dead, or dying very young, who have not undergone cremation (among the Brāhmanists only, since the Banis bury their dead), incarnate themselves in squirrels and palm-rats (*Sciurus palmarum*), and would soon become harmful if they were not appeased by means of sacrifices called *sriwak* and *dayòp*.

13. **Cambodian Chams.**—The Chams who came to Cambodia, very probably at the end of the 15th cent., after the decisive fall of Champā, are quite different. Numbering 90,000, they form a veritable nation, which has acquired coherence from the Islām they all profess. They live generally on the banks of the Mekhong or of the Great Lake, and are often on the move. There are also attached to them some villages in Cochin-China, particularly at Châu-dôc and Tây-ninh, and a small group in

[1] They are content sometimes with only passing them through the smoke.

[2] The funeral rites of the Chams are very complicated, and correspond in some parts to those of India, but they include a number of practices which are not found in the Brāhman writings on funerals.

Siam. They are often confounded with the Malays, who are not nearly so numerous as they are, and who almost always settle alongside of them. Intermarriage also is gradually fusing the two races. Very different from their apathetic brothers in Annam, the Banis of Cambodia are active, enterprising, and intelligent, and seem to have acquired all these qualities from living near the Malays. They are chiefly woodcutters, agriculturists, fishermen, and tradesmen, able workmen, and cunning usurers. Their women weave silk stuffs with good taste, but never rear silk-worms, preferring to buy the raw material they need from the Khmèrs or Chinese. Their villages are built on piles, shaded by a clump of false-jujube trees, and surrounded by well-tilled fields, and have not the gloomy appearance of the low huts and parched villages, surrounded with dead wood, of the Banis of Annam. They plant rice, cotton, indigo, and maize; and they rear oxen and buffaloes, but pigs are objected to.

Their Islām, though mixed with native practices, is much more enlightened and thoughtful than that of the Chams of Annam. As they are in permanent contact with Malays and Hindus, who are fervent Musalmāns, and are better instructed in their religion, there is quite a considerable number among them who have made the pilgrimage to Mecca. They worship only Allāh, perform the five prayers and the prescribed ablutions, and always abstain from pigs' flesh, and usually from fermented liquors, especially in public. To do otherwise would incur a reprimand from the *imāms*. The Friday assembly (*jòmaat*) always comprises the forty required members.

(*a*) *Clergy*.—The hierarchy of the ministers of the cult consists first of four persons named by the king of Cambodia and forming part of his council. They are assisted by 40 *imāms*. These are the *mòphati*, 'teacher of the Law' (*muftī*), the *tuh kalik*, the *rajak kalik*, 'magistrates' (*qāḍī*), and the *tuon pakĕ*, 'jurisconsult' (*faqīh*). These ministers of the cult are highly honoured by both the Chams and the Malays. Then come the *hakīm* or *hakem*, 'doctors of law and mosque-chiefs' (*hākim*), and the *katip*, 'the official in charge of the prayers' (*haṭīb*). All these priests are clothed in white, have their heads shaven, wear only a little beard, and have a white turban. The *lebĕi* and the *halīm* (=Arab. *'ālim*), the one an official and the other a teacher of the Law, are simply laymen, employed in the mosque. Mention must be made, finally, of the *bilāl* or *mòdin* (*mūaddin*).

The great dignitaries and the *imāms* have wide authority over their congregation. They have the right to apply a certain number of strokes with a stick to those who transgress the religious requirements, use fermented drinks, or traffic in strange idols, etc. The offering of sacrifices and oblations to the deities of the polytheists may incur exclusion from the community, although such a prescription, if exactly followed, would mean the total excommunication of all the Bani Chams.

The Chams of Cambodia now send Cham or Malay missionaries to their fellow-worshippers in Annam, to bring them back to more orthodox practices. They are received and entertained with the utmost cordiality, but their efforts are fruitless against the absolute indifference of the latter and their secular custom of sacrificing to the *Pō Yaṅ*.

(*b*) *Festivals*.—The Chams of Cambodia celebrate the following festivals:—(1) *Ramòwan* (=Arab. *Ramaḍān*) or *Bulan Ŏk*, 'month of fasting,' fixed by the priests, and regularly observed by all the worshippers in the usual way. (2) *Bulan Ŏk Haji*, 'month of the pilgrimage fast,' or *Bulan Oulwah*, 'month of God,' a supplementary fast, when the Banis must not eat before nightfall for five days. It takes place three months after *Ramòwan*. (3) *Rijā Surah* or *Surah* (=Arab. *'Ashūrā*?), 'the feast of the distress,' in memory perhaps of the flight of Muhammad. (4) *Tapat*, the *tupah* (=Arab. *taubah*) of the Annamese Chams, a ceremony for the purification of the sins of old men. (5) *Tamat* (=Arab. *tāmmat*, 'conclusion'), a feast in honour of a young man who has finished his theological studies. Dressed in his finest clothes, and surrounded by his friends, he makes a triumphal entry on horseback into his village, musicians leading the way. (6) The circumcision of boys, which is not a mere pretence as in Annam, is the occasion of a feast. The operator, nearly always the *oṅ gru*, uses a razor and pincers for the circumcision. The youths on whom it is performed must be about fifteen years old. Their relatives offer presents to the operator, and a banquet follows. The *karòh* of the Annamese Banis is not in use for the girls. (7) *Molot* or *Mòlot* (=Arab. *malaṭ*, 'shave'?) is a ceremony which seems confused with that of the cutting of the tuft among the Khmèrs. An *imām*, assisted by at least three colleagues, after reciting prayers and sprinkling a child with lustral water, cuts off a lock of its hair. The child undergoes *molot* only once in its life, between the ages of 3 and 13, and it is on this occasion that it is given a Musalmān name—nearly always Muhammad, 'Abd Allāh, or 'Alī, if it is a boy; and, if a girl, Fāṭima (in Cham *Phwatimòh*). In ordinary life the child is called by the purely Cham name which is given it at birth. The inevitable banquet closes the ceremony.

The Chams of Cambodia, it is evident, are better Musalmāns than those of Annam, but it would be exaggeration to conclude from this that their Islām is always perfectly enlightened and conscious. It is easy, on the contrary, to discover in it a number of practices which are evident survivals of the old Malayo-Polynesian, Hindu, and Animistic cults which preceded Islām, and were originally native to the country. They feel this vaguely, and try to hide them under an Islāmic or so-called Islāmic mask. Thus, like the Malays of Cambodia, they worship a number of saints' tombs, or *ta-lak*; they go to them to obtain healing, before the conclusion of an important affair, etc. The cult consists of the recitation of prayers and formulæ, aspersions of lustral water, a feast near the tombs, and—a Buddhist custom—the freeing of pigeons. This worship of the *ta-lak* has some analogy with the worship of the *kramat*, or mounds supposed to be tombs of Musalmān saints, in Malacca. The worship they give to evil spirits, styled *jin asalam*, 'Musalmān genii,' has its counterpart likewise in the Malay Peninsula.

(*c*) *Sorcery and Sorceresses*.—Sorcery, which can by magic practices cause the death or ruin of people and things, inspires the Banis of Cambodia with great hatred, and the sorcerers, or supposed sorcerers, are often assassinated secretly. These sorcerers, nearly always women, are supposed to transmit their magic power from one to another by means of a midnight initiation in the forest. The person wishing to become a sorceress sacrifices a live cock on an abandoned termite's nest. She cuts it in two from the head to the tail, and has to dance and sing quite naked in front of the altar, until, by a kind of magic attraction, the two halves of the cock begin to approach each other, and the bird returns to life and utters its cry. This devilry ended, the sorceress can bring harm and desolation anywhere at will. Fortunately she is easily re-

cognizable by her swollen and bloodshot eyes, and by the tendency of her face to change colour. These sorceresses are called *kamölai* or *kamòlai bhut* (cf. Skr. *bhūta*), and when they are recognized, by the signs described above, every one hurries away from them in terror. The evil may be exorcized from them by means of *mantrās*, and by the ingestion of unclean substances, which are expected to make the bad spirits that haunt the possessed flee in disgust.

The Banis of Cambodia believe that gall, taken immediately from a man who has been killed for the purpose, is the best charm for invulnerability. They used to be very much dreaded by the Cambodians, who regarded every Cham as a *jalawöć*, 'taker of gall'; this practice does not exist nowadays except as an isolated crime.

The agrarian rites are only a feeble echo of those of the Banis of Annam. When a Cambodian Bani wants to make a rice plantation from part of a forest newly cleared by fire, he chooses a *dies fastus*, sprinkles a handful of rice-grains with lustral water, and puts them in seven holes already bored in preparation; he does not begin the sowing till he has performed this rite. The same procedure is followed also in the case of maize, cotton, or any other plantations. Before a new cart is used, all that is necessary is to light a candle, pour a libation of water over the cart, and utter this imprecation: 'Beware if you do not run well!'

(*d*) *Calendar.*—This is the same for both the Chams of Annam and those of Cambodia. The reckoning by the *śaka* era employed in inscriptions having completely disappeared, they use the duodenary cycle to compute time. Each of the twelve years of this cycle, borrowed from the Turks through the Chinese, bears the name of an animal—rat, buffalo, tiger, hare, dragon, serpent, horse, goat, monkey, cock, dog, pig. But, in contrast with what takes place among several peoples who use this cycle, the names of these animals are taken from the ordinary language. Each year, beginning in April–May, contains twelve lunar months, the first ten denoted by numbers, and the last two, *pwaś* and *mak*, having Sanskrit names (*pauṣa* and *māgha*). The week has seven days, the names of which, borrowed from Sanskrit, designate planets. Each day is divided into twelve periods of two hours, and the periods into eight parts with the value of our quarter of an hour. The night is divided into five watches. The time is expressed by means of such forms as 'the cock crows' (=1 o'clock a.m.), 'the cock leaps to the ground' (=2 o'clock a.m.), etc.

In the manuscripts we find traces of a cycle of eight years, named by corrupt Arabic letters and analogous to the Javanese *windu*, and of a method of reckoning time by periods which recall the Javanese *wukus*.

(*e*) *Birth.*—At the birth of a child, the usual fire is kept burning near the mother, and the midwife scatters its cinders likewise at cross-roads, but without the accompaniment of offerings to the spirits. The superstitions connected with name-giving are the same in both countries. On the other hand, education and instruction are a little better cared for here than in Annam, and extend even to the girls. Presents of cloth, rice, or fruits are offered to the master, who teaches his pupils to repeat some verses of the Qur'ān and to read Arabic.

(*f*) *Marriage.*—Marriage is not allowed with a non-Musalmān except on condition that he be converted, which does not, however, happen often with the Khmèrs. They are very faithful to Buddhism, and this accounts for the fact that mixed marriages scarcely ever take place except between Chams and Malays. Bridegrooms are generally 15 to 18 years old, never less; the proposal of marriage is made by the parents, with the help of a female mediator. The fiancé settles a dowry of money on his future wife, which she is to keep in case of divorce not sought by her; then he proceeds to serve in the house of his parents-in-law until his marriage. The wedding, accompanied by long banquets, lasts three days. On the evening of the third day, the youth, decked in a gold-embroidered coat, mounted on a richly-harnessed horse, and shaded by a parasol of honour, surrounded by his relatives and guests, goes to the house of the girl, who waits for him dressed in all her finery, seated on the ground with her legs bent under her, in a shed built for the purpose, where the *imāms* bless the union. The wife places the traditional betel-quid in the mouth of her husband, and he puts part of his clothing over her.

The Chams of Cambodia, richer than those of Annam, sometimes take as many as four wives when their means permit. Few, however, have more than two or three; others have only one. The wife of the first rank has command over the others. The Bani who has become a slave has never any right to more than two wives.

Marriage by capture, although rare among the Chams, nevertheless exists. In it the suitor introduces himself into the house of the girl he wishes to marry if the door is open, draws her close into his arms, and, in spite of the blows applied by the family of the girl, entwines her in a scarf; he is then married, and has only to 'redeem the shame of the family' by means of a sum of money. Divorce is more difficult to obtain and rarer than in Annam. Unions are nearly always fertile, but the Chams of Cambodia further increase their race by foreign elements, by Annamese or Khmèr children whom they accept in payment of bad debts, and whom they cause to be brought up as Musalmāns.

(*g*) *Disposal of the dead.*—This is no more solemn among the Cambodian Chams than among the Banis of Annam. The commemoration services take place at the same times, but without heterodox practices. Burial is once for all; there is no exhumation.

(*h*) *Folk-tales.*—A very competent judge, A. Barth,[1] gives the following appreciation of the Cham tales published by Landes:

'Le fonds de ces récits est un merveilleux étrange, fait d'animisme et de magie, sans aucun alliage mythologique ou théologique. Une ou deux fois seulement on voit intervenir un seigneur Alwah (=Allah). . . . A côté d'une dureté et d'une apathie de sentiments extrêmes, on y trouve des traits d'une sensibilité exquise. Le [conte] no. x. . . . rappelle par plusieurs endroits le conte égyptien des deux frères et il contient aussi les données essentielles de Cendrillon et des épreuves de Psyché. Non moins curieux est le no. v., "Les ruses du Lièvre." Ce conte, qui est également connu au Cambodge et en Annam, et dont plusieurs données se retrouvent aussi dans les *Jātakas*, est une de ces séries de fables reliées les unes aux autres et enchassées dans un cadre commun, dont l'Inde paraît avoir fourni les premiers modèles.'

CHAMĀRS (total number, 11,137,362 at Census of 1901).—i. *HISTORY*.—**1. Name.**—The name *Chamār*, *Chambhār*, or *Charmakār* (fem. *Chamarin*, *Chamāin*) is derived from the Skr. *charma-kāra*, 'a worker in leather.' In the Madras Presidency, to which they have migrated from the Central Provinces, the Chamārs are also known as *Chamura* (*CI*, 1901, vol. xv. pt. i. p. 149). In some districts of Rājputāna they are called *Bolas* (*ib.* vol. xxv. p. 147). Chamārs frequently conceal their identity by giving only the name of their sub-caste, *e.g.* *Jaiswārā* or *Kori* (*ib.* vol. xiii. pp. 145, 182). The name *Mochī* (*Muchī* or *Muc'chī*), though, as will be shown below, it generally denotes a difference of occupation or of religion from that of the *Chamārs*, is sometimes applied indiscriminately to the latter (*CI*, 1881, vol. iii. p. ciii; 1901, vol. vi. pt. i. p. 388, vol. xxvi. A, p. 196). The Chamārs themselves derive their name by tradition from a princess named Chāmu (W. Crooke, *TC* ii. 170), or from *Nona* or *Lona Chamārin*, a deified witch (Sherring, *Hindu Tribes and Castes*, vol. i. pt. iv. p. 392).

2. Origin and territorial distribution.—(*a*) *Origin.*[1]—The great majority of modern writers upon the subject regard the Chamārs as having been of low caste from the very first. Sherring, indeed, accepted the traditional view of Manu on the ground that their clearly defined caste prejudices were evidence of their semi-Brāhmanical origin. His judgment was influenced by the fact that he had met with several Chamārs of high-bred appearance, and by the prowess of the Dosādhs, whom he considered to be a subdivision of the Chamārs, when they fought under Clive at Plassey (*op. cit.* vol. i. pt. iv. p. 392 ff.). Yet the dark complexion of the Chamārs is so generally recognized as distinguishing them from Brāhmans that it has given rise to the Hindi proverb,

Kariā Brāhman, gora Chamār,
Inke sāth na utariye pār,

which may be freely rendered,

'If the Brāhman be black, if the Chamār be fair,
Let the wise when he crosses a river beware,'

i.e. a fair-skinned Chamār is so rarely seen that his appearance is uncanny and bodes no good (Elliot's *Gloss.* i. 71; *CI*, 1901, vol. i. p. 545). Sir William Hunter, describing the Chamārs of Oudh, says: 'Always on the verge of starvation, their lean, black, and ill-formed figures, their stupid faces, and their filthy habits, reflect the long degradation to which they have been hereditarily subjected' (*IGI*, vol. x. p. 499). Whenever delicate and refined features and a fair complexion are seen in a Chamār, they should, W. Crooke thinks, be attributed to intercourse in recent times between the Chamārs and higher castes (W. Crooke, *TC* ii. 169; see also *CI*, 1901, vol. xiii. p. 184). The view has been advanced by E. B. Alexander that the Chamārs of Gorakhpur in N.W. Prov. were originally the retainers of the Aryan invaders rather than themselves the invaded aborigines (*Gazetteer N.W. Prov.* vol. vi. [1881] p. 359). Nesfield, who regards function, and function only, as the foundation upon which the whole caste system of India was built up, classes the Chamārs among the artisan castes of the age preceding metallurgy, and thinks that they have sprung out of several different tribes like the Dom, Kanjar, Habura Cheru, etc., the last remnants of which are still without the pale of Hindu society (*Caste System of the N.W. Prov.* § 49). Risley classifies the Chamārs amongst the Aryo-Dravidians, of which they represent the lower strata, as the Brāhmans do the higher; and in this he appears to have the support of anthropometrical data (*TC* i. 175 f.; *CI*, 1901, vol. i. pp. 499, 500, 503).

(*b*) The *home* of the Chamārs is in Bihār and the United Provinces, but they are steadily migrating to Bengal, where there is no indigenous caste of skinners, tanners, hide-dealers, and cobblers, to compete with them in their multifarious occupations (*CI*, 1901, vol. vi. pt. i. p. 388; R. N. L. Chandra, *Tanning*, etc., p. 2). They are also firmly established and numerous in the Panjāb, Central India, the Central Provinces, Rājputāna, and Bombay (see Ethnographical Map in *CI*, 1901, vol. i., Appendix). As one goes south, the Chamārs decrease in number, their place being taken by leather-working castes of purely Dravidian origin, as the *Shakkiliyar* in Tamil districts, and the *Mādiga* in the Telugu country (*Census of Berar*, 1881, p. 149; *CI*, 1891, *General Report*, p. 199, vol. xiii. p. 301, vol. xxv. pt. i. p. 254 f., 1901, vol. i. p. 545, vol. xxiv. pt. ii. p. 537; *C.M.S. Intelligencer*, Aug. 1900, p. 576 ff.; A. Chatterton, *Monograph on Tanning . . . in Madras Presidency*, pp. 13, 15). In estimating the numbers and importance of the Chamārs, it is important to distinguish between them and the great Mochī subcaste. This distinction is not racial, but either occupational, social, or religious. The occupation of the Mochīs is the making of shoes and other articles from the leather that has been prepared by Chamārs; hence their name, which is derived from the Skr. *mochika*, 'tanner,' 'shoemaker.' When a Chamār forsakes his traditional occupation and becomes a shoemaker, he frequently changes his caste name to *Mochī*, and thus proclaims his rise in the social scale (*Gazetteer N.W. Prov.* 1875, vol. ii. p. 182; *Census Punjab*, 1881, vol. i. § 607; *CI*, 1891, vol. xxiv. pt. i. p. 437 f., 1901, vol. xiii. p. 184, vol. xviii. p. 470). In the west of the Panjāb, however, the distinction is one of religion: the Musalmān *Chamār*, though only a tanner, calls himself a *Mochī*. The variations in the Census returns of *Chamārs* and *Mochīs* in the Panjāb in successive Census years may therefore be regarded as some index to the conversions from Hinduism to Islām (*Census Punjab*, 1881, vol. i. § 604; A. J. Grant, *Leather Industry of the Punjab*, § 12; *CI*, 1881, vol. iii. p. ciii, 1901, vol. i. A, pp. 320, 338, vol. vi. pt. i. p. 388, vol. xxvi. A, p. 196; A. Chatterton, *op. cit.* p. 16).

3. Occupations.—The Census Returns for 1901 show that Chamārs are found to hold twenty-three distinct occupations, of which the most important are agriculture and the working of leather. The proportion of agriculturists to leather-workers is given as nearly six to one, but it must be remembered that such proportions vary with the season of the year, because the Chamār is a 'Jack of all trades' (*CI*, 1901, vol. i. pp. 189, 190, 217, 218, 521, vol. i. A, p. 406 f.). The position of the Chamār engaged in agriculture has until recently been that of a serf, tied to the soil and transferred with it. When an estate was divided, no sharer would consider the partition complete until an adequate number of Chamārs had been allotted to him in proportion to his interest in the land (*Gazetteer N.W. Prov.* 1875, vol. ii. p. 396; *IGI*, vol. i. p. 172, vol. x. pp. 71, 499; J. C. Nesfield, *op. cit.* § 49). Except in the Cawnpore district, the poverty of the Chamārs is great; many are unable to afford themselves even a blanket, and are obliged to protect themselves from cold by the use of a mere cloth stuffed, when they can get it, with cotton. One Chamar, on being asked how he passed the night with so little clothing, replied that he slept till the cold awakened him; then he lit a few sticks and warmed himself till the fire went out, when he returned to his cot; and he repeated these proceedings at intervals till the sun rose

[1] For traditions relating to their origin, see Manu, x. 8, 11, 36 in *SBE* xxv. 403 f., 411; Sherring, *op. cit.* vol. i. pt. iv. p. 392 ff.; W. Crooke, *TC* ii. 169 f.; *CI*, 1901, vol. xxi. p. 124; Elliot's *Gloss.* i. 69 f.

(*IGI*, vol. iii. p. 284; *Gazetteer N.W. Prov.* vol. iv. p. 288; cf. W. Crooke, *N.-W. Prov. of India*, p. 273). Under British rule, the Chamārs, though still the objects of contempt to Hindus and Sikhs on account of their traditional occupation, are emerging from their menial position (*IGI*, vol. iii. p. 119; A. J. Grant, *op. cit.* § 2).

The Chamār proper deals with the skin of animals at death, or even sooner. From time immemorial one of their perquisites has been the hide of any animal that dies; and the temptation to hasten death by means of poison has frequently proved irresistible.

Three principal methods of cattle-poisoning are in vogue. One of these is simply to give white arsenic wrapped in a castor-oil leaf, which is liked by the cattle. A second method is to grind the *ghunchi* berry to a fine powder, and, having made a paste with water, to roll this into the shape of a long thorn, which is dried in the sun till it is hard, and then pressed into the head or neck of an animal. The third device is to make a poisonous snake bite a piece of rag wound round a pointed stick, which is then forced into the anus of a cow or bullock.

Public opinion, however, is now leading to the expulsion from caste of Chamārs detected in these malpractices (*CI*, 1901, vol. xvi. p. 232; W. Crooke, *TC*, vol. ii. pp. 172, 190, 191; H. H. Risley, *TC* ii. 98 f.). The hide of an animal, when by fair means or foul it has been obtained, is tanned by the Chamār, who places it in a pit, covering it with water containing lime and impure carbonate of soda; after ten days it is taken out, and the hair is removed with an iron scraper. It is then sewn up in the form of a bag and filled with bark solution, and, after hanging from a tree or stand for five days, it is considered to be sufficiently tanned (W. Crooke, *TC* ii. 191).

The remaining occupations of the Chamārs range between the 'learned and artistic professions' (13,565 in Bengal) and the 'personal, household, sanitary, indefinite, and disreputable occupations' (8102). The large number of the former class bears evidence to the influence of Western education in breaking down the barriers of caste, and enabling the industrious to rise in social position. Throughout the country nearly every office has its Mochī employed as a clerk, and handling pens and paper instead of hides and refuse (*CI*, 1901, vol. i. A, p. 406 f.; A. Chatterton, *op. cit.* p. 16; A. J. Grant, *op. cit.* § 3). In their degraded occupations, which include the removal of dead bodies, the execution of criminals, the beating of drums at marriages and other festive occasions, the Chamārs infringe upon the functions of Doms and Pariahs (see PARIAHS) (Sherring, *op. cit.* vol. i. pt. iv. p. 393 f.; *CI*, 1901, vol. xiii. p. 182, vol. xvi. p. 232). The Chamār women act as the midwives of the village, and perform menial tasks for the wives of the men whom their husbands serve (W. Crooke, *op. cit.* ii. 175, 190).

4. **Social organization.**—(1) The sub-castes of the Chamārs are reckoned by some writers as seven, by others as numbering more than three thousand. Each locality where Chamārs are numerous possesses its seven sub-castes, but these do not correspond to those of another district; the division into seven is purely arbitrary, and is due to regard for the sacred number, not to any historical cause (Balfour, *Cyclop. of India*, p. 645 f.; Elliot's *Gloss.* i. 70; W. Crooke, *TC* ii. 172; *CI*, 1891, xxi. 62–62*e*). In Gwalior, as the smaller sub-castes of Chamārs are included in the larger ones, a man may with truth call himself by the name of either. A Chamār must marry outside the smaller sub-caste (*gotra*) and within the larger sub-caste (*khap*); the distinction, therefore, between main sub-castes and minor ones is that of exogamy or endogamy (*CI*, 1901, vol. xxi. p. 124; cf. A. Lyall, *Asiatic Studies*², 1st ser. pp. 156, 174 ff.; *Census Punjab*, 1881, vol. i. § 608). In Bengal, however, the intermarriage of all sub-castes is forbidden, and the infraction of this rule renders the offender liable to a fine (*CI*, 1901, vol. vi. pt. i. Appendix, p. xlvi). The following are amongst the most important of the sub-castes of Chamārs:

(*a*) The *Jaiswārā*.—Many of these are servants, but their high position is evidenced by their carrying burdens on their heads, not on their shoulders; any neglect of this custom would render a man liable to be out-casted. They supply most of our syces, and, one of their objects of worship being a halter, any *Jaiswārā* who ties up a dog with this implement has to pay a fine. Their name is probably derived from the old town of *Jais* (Sherring, *op. cit.* vol. i. pt. iv. p. 393; W. Crooke, *TC* ii. 173).

(*b*) The *Dhūsiya* or *Jhūsiya*.—These are allowed in some districts to intermarry with the Jaiswārā; in Mymensingh and Shāhābād they are held to be superior to all other sub-castes. Their primary occupation is that of shoe- and harness-makers. Their name is probably derived from a village called *Dhūsi* or *Jhūsi* (Elliot's *Gloss.*, vol. i. p. 70 [Beames' editorial note is corrected in Sherring's *Hindu Tribes and Castes*, vol. i. pt. iv. p. 394]).

(*c*) The *Jātūa*, *Jatia*, or *Jatiya*.—This sub-caste is most numerous in the neighbourhood of Delhi and Gurgaon. They are despised by other sub-castes, on the ground that they work in horse- and camel-hides; but, on the other hand, their employment of Gaur Brāhmans for priestly services, instead of degraded *Chamārwa* Brāhmans, gives them the position of the highest sub-caste of Chamār. Their name is either tribal, and marking some connexion with the *Jāts*, or functional, and derived from the word *jaṭ*, meaning a camel-grazier (*Census Punjab*, 1881, vol. i. § 608; W. Crooke, *TC* ii. 173).

(*d*) The *Chāndars*, *Chāndaurya*.—The members of this sub-caste work only in prepared leather. In Hissār and Simla they are the principal sub-caste of the Chamārs, and hold an important place in the caste throughout Rājputāna. They claim to be descended from *Chāṇūra*, the famous wrestler who was slain by Kṛṣṇa (*Census Punjab*, 1881, vol. i. § 608; W. Crooke, *TC* ii. 172 f.; *CI*, 1901, vol. xxv. p. 147).

(*e*) The *Harale Chamārs*.—These are found chiefly in Berar. Their name is derived from *Haralya*, the primeval Chamār who, when Mahā Muni's supply of hides ran short, is said to have shown his devotion to Mahā-deo (see below, p. 353ᵇ) by stripping off a piece of his own skin and making out of it shoes for the god (*Census of Berar*, 1881, p. 149). See artt. DOSĀDHS, KORIS, RAI-DĀSĪS.

(2) For particulars concerning the *self-government* of Chamārs by their *pañchāyat*, see ISLĀM (in India); Beames, in Elliot's *Gloss.*, vol. i. pp. 279–282; *Camb. Mission to Delhi*, Occ. Paper, No. 7, p. 13 f.; B. H. Baden-Powell, *The Indian Village Community*, p. 24 f.; W. Crooke, *TC* ii. 175 f.; *CI*, 1901, vol. vi. pt. i. App. p. xlvi.

(3) We have seen above how intimate is the connexion between the existence of sub-castes and the character of *marriage regulations*. The general laws of exogamy and endogamy admit of qualification in various grades of society, and the nearer we approach to primitive conditions the less stereotyped do such regulations become. Thus in the case of the Chamārs we find that the sub-caste of Dhūsiya is allowed to intermarry with the Kanaujiya, and the sub-caste of Chamārs with the Dosādhs. Their rules of exogamy admit of similar expansion; the descendants from a common stock are called *dayād*, and are not allowed to intermarry, but the limitations of the *dayād* itself are defined with a latitude which corresponds to the wishes and prejudices of those concerned, and the

payment of a fine will cover any but the gravest irregularities (A. Lyall, *op. cit.* p. 163 ff.; W. H. Macnaghten, *Principles of Hindu and Mohammedan Law*[2], p. 63 f.; W. Crooke, *TC* ii. 174). The practice of infant marriage is on the increase. The age of the bride varies from three to eight years. At Nāsik, however, the marriage of the poorest Chamār males does not take place till they reach the age of thirty or thirty-five, whilst girls wait till they are fifteen or sixteen (*BG*, vol. xvi. p. 69). The form of marriage is the *āsura* (lit. 'spiritual,' Manu, iii. 21, 31), in which the consent of the father of the bride is obtained for a pecuniary consideration (*BG*, vol. xv. pt. i. p. 357). Polygamy is discouraged, although, when a wife proves to be barren, the *pañchāyat* will sanction bigamy. The re-marriage of widows is fully recognized, except amongst those Chamārs who have risen in the world. This is in accordance with the prevailing custom of the lower castes; for, as recent inquiries have shown, out of 40,000,000 Hindus, 30,000,000, or 75 per cent, permit and even encourage this practice. Widow-re-marriage is indeed a most important factor in the development of the country; for, in very unhealthy tracts, at any rate, the offspring of 'virgin' brides is barely sufficient to make up for the wastage by disease and to maintain the population (W. Crooke, *N.W. Prov. of India*, p. 228 f.). A Chamār widow's first choice is a younger brother of her late husband. If she marries outside her own caste, it knows her no more, nor can she lay claim to her late husband's estate (W. Crooke, *TC*, vol. ii. p. 177 f.).

ii. *RELIGION.*—The religious systems to which the Chamārs adhere form the subject of separate articles, and these should be consulted for information in regard to general principles. It will be necessary here to treat of these faiths only in so far as they are illustrated by the Chamār people in orthodox or unorthodox directions; by those who follow the old paths, and by those whose struggle for religious freedom brings to light the fetters by which they are bound. At the Census of 1901 the following returns were made of the religions of Chamārs and Mochīs (*CI*, 1901, vol. i. A, pp. 279, 299):

	CHAMĀR.	MOCHĪ.
Hindu	11,043,093	531,925
Animist	938	54
Musalmān	16,992	475,540
Sikh	76,263	54

	11,137,362	1,007,812

The term 'Animist' has in this table little more than a negative value; it shows that the 992 persons thus returned did not regard themselves as members of any verbally defined creed (*CI*, 1901, vol. i. p. 349). On the other hand, the border-line between Animism and Hinduism is so shadowy that the latter may be said to include the former, and the numbers professing each may be combined (*ib.* p. 357; W. Crooke, *N.W. Prov.* p. 240 f.). The remarkable omission of Christians from this table is probably to be accounted for by the fact that Christian missionaries instructed members of their congregations to return themselves as Christians without stating their previous caste (Letter from Rev. Dr. Weitbrecht of the C.M.S.; and J. S. Dennis, in *East and West*, Oct. 1905, p. 459). Thus in the Census Returns there appears no return of a *Christian* Chamār, and there is no means of ascertaining how numerous these may be. An account of some Chamār Christians is given below.

1. Hinduism.—(*a*) *Objects of veneration.*—The worship of such inanimate objects as the *rāpi*, or tanner's knife, the plough, and the halter appears to be little more than a pious recognition of these implements as instrumental to the support of those who use them. This worship is readily transferred to such objects as pens, paper, sealing-wax, red tape, and ink, when these become the means of gaining a livelihood. The reverent fear of desecrating other inanimate objects may be associated with totemism, as in the case of the Harbans Chamārs, who, being connected in some way with a bone (*haddo*), will not wear bones in any shape or form (*CI*, 1901, vol. i. p. 357 f.; J. C. Nesfield, *op. cit.* § 49; W. Crooke, *TC* ii. 173, *PR* ii. 158).

From the worship of inanimate objects we pass to the worship of malignant spirits, foremost among which are the 'godlings of disease.' Of the seven sisters who are supposed to control small-pox, one of the most malicious is named *Chamāriya*, and can be propitiated only by the offering of a pig by a Chamār or other low-caste priest. Her name may point back to a time when small-pox made its greatest ravages amongst the Chamārs, and its numerous victims were transformed into spirits of evil; for persons who die in any sudden or unusual way are supposed to undergo the change and to require propitiation (W. Crooke, *TC* ii. 189, *PR* i. 129). Whatever the illness may be, it is attributed to an evil spirit, who must needs be identified by a sorcerer and appeased by the offering of an appropriate sacrifice.

The worship of the spirits of the departed, when these have been lovely and pleasant in their lives, is a step towards the recognition of benevolent as well as malignant spirits, and is closely connected with hero-worship. The soul of a dead husband is worshipped by his widow under the name *manuṣya deva*, or 'man-god'; offerings of clothing are made to him, and sometimes a pig is sacrificed in his honour (W. Crooke, *TC* ii. 189). The Chamārs, with other low-caste Hindus, worship the five *Pāṇḍava* brothers under the name *Panch Pīr*, and in the form of five wooden pegs fixed in the courtyard of the house (*PR* ii. 206). The primeval Chamār, *Mahādeo*, is worshipped by the Chamārs of Berar on a Sunday in the month of Śrāvan; and *Guga* (or *Gugga*) *Pīr* and *Chanu* are also regarded by the Chamārs as being semi-divine (*Census Berar*, 1881, p. 149; *CI*, 1891, pp. 104, 115). Every locality possesses its own minor deities; but, as Animism becomes transformed by philosophy into Hinduism proper, there is an increasing tendency to merge the innumerable lesser gods in the greater ones, and to worship the general principles of creative or destructive power rather than each local manifestation of the same. This is shown in the adoption of such names as *Parameśvar*, 'the Supreme Being,' or *Jagīśvār*, 'the Lord of the World,' and by the worship of the greater gods and goddesses of the Hindu pantheon, as, *e.g.*, that of Kālī, goddess of destruction, whom the Bengal Chamārs invoke to favour them with a murrain, and consequent rich harvest of hides (W. Crooke, *TC* ii. 184; *CI*, 1901, vol. i. p. 357; R. N. L. Chandra, *op. cit.* p. 18). The Chamars also occasionally worship the sun, moon, and fire, and at the *Panchainyān* festival offer milk and parched grain at the hole of the domestic snake (W. Crooke, *op. cit.* ii. 185).

(*b*) *Priesthood.*—Of the Chamārs, the *Jatia* sub-caste alone has the privilege of employing high-caste Gaur Brāhmans, and this only in some parts of the Panjāb (*Census Punjab*, 1881, vol. i. §§ 294, 608). Other Chamārs have to content themselves with the ministrations of low-caste Brāhmans or of priests of their own caste. Just as the higher castes of Brāhmans form groups corresponding in social and religious status with those to whom they minister, so are the low-caste Brāhmans who serve

the unclean castes subdivided according to the social position of their clients. Thus the sub-caste of Brāhmans who act as the *purōhits* ('family priests') of the Chamārs are known as *Chamārwa* Brāhmans or *Gurras*, and, although they wear the sacred thread and will not eat with those whom they serve, yet they are not admitted to the house of a high-caste Hindu (Sir A. Lyall, *op. cit.* p. 175 f.; *PNQ*, vol. i. p. 237; *CI*, 1901, vol. i. p. 545, vol. xvii. p. 316).

The lower sub-castes of Chamārs have, in place of *Chamārwa* Brāhmans, *masands*, who correspond to the *gurus* ('religious guides') of high-caste Hindus. These *masands* often belong to the Chamār caste, and in some districts are allowed to marry their disciples (*PNQ*, vol. i. p. 237; *Census Punjab*, 1881, vol. i. § 294; *CI*, 1901, vol. xvii. p. 166, vol. xxv. p. 147). The Chamārs (Chambhār) of the Deccan call their priests *bhāt*. The *bhāt* is a Chamār, and eats with them, though they do not eat with him. In the marriage ceremony he beats a drum, repeats holy verses, and accepts a fee of about 5s. (*BG*, 1880, vol. xii. p. 114 f.). In addition to the established priesthood, the Chamārs recognize and employ professional astrologers, or *jyotish*; these have no definite constituency, but usually serve about 100 families, and receive from a quarter to three-eighths of the fee offered to the Brāhman (*CI*, 1901, vol. i. p. 199; *BG*, vol. xv. pt. i. p. 355 f.). In the Nāsik district the spiritual guides of the Chamārs are known as *bāva*. The head *bāva* goes on tour once a year with one or two men, who with their cymbals accompany their leader's devotional songs. He is greatly respected by the Chamārs of the district, and on their consenting to keep the three rules of conduct, viz. to abstain from stealing, cheating, and adultery, he admits them to discipleship by bathing and reciting the initiatory verse: 'He (*i.e.* God) is I. This is our true charm for avoiding the eighty-four million wanderings' (*BG*, vol. xvi. p. 70).

(*c*) *Religious rites.*—The rites which are connected with the three epochs of human life—birth, marriage, and death—illustrate in concrete form the general beliefs which have been specified above.

Previous to the birth of a child the spirits of the departed are invoked, with promises of offerings, to vouchsafe an easy delivery; but, not relying wholly upon intercession, the relatives of the mother take the precaution of burning an old shoe and of hanging thorny branches of the *bel* tree in the doorway to scare away the spirits of evil. On the night of the sixth day after the birth the woman sits up all night and worships *Ṣaṣṭī*, or *Chhathī*, the goddess of the Sixth, with an offering of cakes made of barley-flour and rice boiled with sugar. For the first twelve days a cutting instrument of iron is kept near the mother and child, probably, as is still the case amongst some Teutonic people, for protection against evil demons. When the child is about six months old, it is named by a senior member of the family, and is fed for the first time upon grain. Between the ages of five and seven it is initiated by the boring of its ears, and after this must conform to the caste rules in regard to food (W. Crooke, *TC* ii. 178).

Marriage ritual likewise bears witness to the belief in ever-present spirits. The marriage ceremony of the richer Chamārs is that called *shādi*, *charh*, or *charhaua*, whilst that adopted by the poor is the *dola*. In the *shādi* marriage various cakes are offered on the second day to the spirits of the departed. A 'wave ceremony' is performed by the bride's mother to ward off evil spirits, and for the same reason she smears her daughter's eyelids with lamp-black, and hangs a necklace of beads about her neck. The actual marriage is performed by the bride and bridegroom walking five times round a plough-beam, which is fixed in the centre of a pavilion; a goat or ram is then offered to *Paramesvar*, 'the Supreme being.' In the Bombay Presidency a post of *salai* (*Boswellia thurifera*) wood takes the place of the plough-beam and is surrounded by twenty-one earthen pots (*BG*, 1880, vol. xii. p. 115). The ceremonies in a *dola* marriage commence with the worshipping of a drum (*dhol*), which is afterwards smeared with a paste of turmeric and rice, and marked with five stripes of vermilion. To the beat of the drum the women march to a neighbouring field, where the senior woman worships *Dharti Māta*, or Mother Earth, and digs up five spadefuls of earth, which are then brought home and placed in the courtyard. In the same place are set an earthenware jar full of water, a plough-beam, and a green bamboo. The actual marriage takes place at night. The names of the bride and bridegroom and of their ancestors are recited, the jar is worshipped, and offerings are made to a fire lighted beside it and to another fire sacred to the household god (W. Crooke, *TC* ii. 180–183). When a married girl attains the age of puberty she is tatued; the object of this rite appears to be not only a further initiation into the caste, but to secure her identification in the next world (*PNQ*, vol. i. p. 224; *PR* ii. 32).

There is much variety of custom amongst Chamārs in their disposal of the dead. In the Panjāb, cremation is usual, whilst in Rājputāna the dead are buried in Sirsa and Hissār; indeed, both practices are adopted indifferently, even by members of the same family. In the Bombay Presidency married people are cremated and the unmarried are buried (*BG*, vol. xii. p. 115). Pecuniary as well as religious considerations have considerable weight; some poor Chamārs, on account of the cost of cremation, content themselves with scorching the face of the corpse, which is afterwards buried (*Census Punjab*, 1881, vol. i. § 294; W. Crooke, *TC* ii. 183). The ashes after cremation, and the nails of the fingers and toes, if the corpse be buried, are committed to a stream which, whether actually a tributary of it or not, is regarded for the purpose as identical with Mother Ganges (*ib.*). On the day after the cremation an earthen pot full of milk and rice-gruel, with a pitcher of water, is placed outside the house of the deceased, for the use of the disembodied spirit. On the third day cakes of barley-flour are offered to it, and on the tenth day this offering is repeated, and members of the caste are fed. During these ten days water is poured daily upon some stalks of grass planted near a tank, to serve as an abode for the homeless spirit. The repetition of the offerings and the number of feasts given to the caste depend upon the wealth of the family. The belief in the aimless wandering and subsequent purposeful transmigration of the soul, to which these ceremonies bear witness, is, however, by no means universal amongst the Chamārs. Many of them believe that the soul at death passes immediately to heaven or to hell; and the unique event of death, which makes all life's incidents of joy and sorrow alike seem small, appears to sweep aside the thought of a multiplicity of spirits, and to make for a creed which, though very vague, is yet monotheistic in its nature. The cry of the mourners as they accompany the bier to the grave is *Tu hi hai! Tainne paida kia, aur Tainne māria*, 'There is but Thou! Thou hast given and Thou hast taken away' (*Census Punjab*, 1881, vol. i. § 294; W. Crooke, *TC* ii. 183 f.; *BG*, 1884, vol. xvii. p. 169).

(*d*) *Theistic sects.*—Of the Chamārs of the Central Provinces more than 50 per cent belong to the *Satnāmi* sect, which was founded, or reformed, by the Chamār visionary, Ghāzi Dās, about A.D. 1820 (see SATNĀMIS). Many Chamārs—their exact

number is not known on account of a confusion of names in the Census returns—belong to the Rai Dāsīs, another sect which owes its origin to a Chamār (see RAI DĀSĪS). A third sect, to which many Chamārs belong, is the *Sivanārāyan* which some modern writers identify with the Rai Dāsīs (see ŚIVA NĀRĀYANIS).

2. **Islām.**—The Census returns of 1901 show a total of 492,532 Muhammadan Chamārs, of whom 475,540 claim to be Mochīs. When once a Chamār has been admitted as a Muhammadan, he becomes, in regard to all religious privileges, the equal of Muslims of the highest social position; Islām therefore offers a road towards emancipation from the thraldom of caste (*Census Punjab*, 1881, vol. i. § 294 [contrast § 607]; E. Bickersteth, in *Camb. Miss. to Delhi*, 'Occ. Paper,' No. 5, p. 4 f.). This fact may partly account for the rapid increase in the number of Chamār converts from Hinduism. In the Panjāb the proportion of Muhammadan to Hindu Chamārs increased from 1 per cent in 1881 to 2½ per cent in 1891 (A. J. Grant, *op. cit.* § 12). The line of demarcation between Hinduism and Islām is not so clear in some country districts as in the great cities; ignorant Muhammadans are found to adopt various Hindu rites and customs, and this laxity must make the transition from Hinduism to Muhammadanism less difficult (E. Bickersteth, *loc. cit.*, p. 6).

3. **Sikhism** (at 1901 Census, 76,263).—Many Chamārs are followers of Rām Dās, the third Guru in succession from Nānak Singh and the constructor of the famous tank at Amritsar. It is not possible to ascertain their number with any degree of certainty, on account of their being confused in the Census returns with the Rai Dāsī Chamārs. The Rām Dāsī Chamārs are true Sikhs, and take the *pāhul*, i.e. the rite of initiation into the Sikh community. The Sikhs being even more strict in their reverence for the cow than are the Hindus, the Chamārs are admitted to membership only upon their exchanging the tanning industry for weaving or similar occupation, and even after initiation they are not regarded by other Sikhs as their equals (H. H. Wilson, *Select Works*, ii. 127, 148; *Census Punjab*, 1881, vol. i. §§ 294, 606; *CI*, 1891, pp. 145, 158).

4. **Christianity.**—As stated above, the Census returns do not enable us to estimate the number of Christians who were once members of the Chamār caste, because caste finds no recognition in the Protestant Christian Church. Although there have not been such general conversions from amongst the Chamārs as there have been from the corresponding caste of Mādigas in S. India, where 10,000 became Christians in one year (E. R. Clough, *While Sewing Sandals*, p. vii), so that nearly 10 per cent of the population are now nominally Christian (A. Chatterton, *op. cit.* p. 13), yet a very large proportion of the Indian Christians in the Panjāb were once members of this degraded caste. This may be illustrated from the records of one Mission District. In Delhi and its immediate vicinity over 800 Chamārs accepted the Christian faith when the famine of 1877-78 gave the Christian missionaries occasion to show that goodwill towards men is an integral part of the Christian creed. The number of these converts, however, was reduced when they found that membership of the Church necessitated separation from caste and the surrender of caste privileges and heathen practices. This was brought home to them on the adoption by the Cambridge and S.P.G. Mission of a policy of modified segregation of converts. Instead of inviting the Chamār Christians to forsake their own neighbourhood and to establish themselves around the Mission Compound, the missionaries settled a few of the most earnest-minded men with their families in a *basti*, or little square of houses, in the midst of the dwellings of their caste-fellows. The Christian tenants of this *basti* were, as a condition of tenancy, obliged (1) to observe Sunday as a day of rest; (2) to use Christian rites exclusively at birth, marriage, and death; (3) to abstain from the use of *charas*, an intoxicating drug. The experiment was speedily justified, for the impossibility of practising Hinduism on the principles of Christianity was now felt by all concerned. A *pañchāyat* was summoned to determine the relationship between Christian and other Chamārs, and it was decided to 'sift out' the Christians and to expel them from the caste. The crucial test adopted was the worship of a jar of Ganges water. The moral courage of the first five Christians to whom the test was applied failed them; they raised the water to their heads and by this act abjured the Christian faith. The sixth Christian, a man of some position, who had therefore the more to lose by his decision, was true to his new faith in spite of great pressure. After three or four more had followed his good example, the meeting was broken up, as it was realized that the number of staunch Christians was so great that to cut them off from caste-communion was too serious a step to be taken at once. As time wore on the Hindu Chamārs showed no inclination to dissociate themselves officially from their Christian brethren; but the discipline of the Church had in 1887 reduced the number of its adherents in Delhi and its vicinity from 1000 to 700 (*Camb. Miss. to Delhi*, 'Occ. Paper,' No. 7). Since that period, both by the re-admission of the lapsed and by fresh conversions, the number of Chamār Christians has slowly but steadily increased, and in 1906 the number in connexion with the S.P.G. and Cambridge Mission alone was nearly 1200.

FRANK LILLINGSTON.

CHANCE.—The word 'chance' is derived from the Latin verb *cadere*, 'to fall,' and gets its specific meaning from a particular reference to the fall of dice. The derivation of the word thus suggests at once the illustration which most completely expresses its significance. For, in the throw of dice, the result in every instance is due to chance, in the sense that no uniformity of sequence between antecedent and consequent can possibly be discovered, however carefully and patiently one may experiment with the various conditions involved. The conditions, indeed, are too complex to admit of any exact determination; so many elements must combine in order to produce a certain specific result that our powers of analysis are wholly incapable of detecting them.

Chance, therefore, may be defined as a complex of causal elements, in which indefinitely various

combinations are possible, and each distinct combination yields a distinct result. Inasmuch as there is no possibility of knowing what particular combination may occur, there is no possibility of forecasting the precise effect which may follow. The relation between specific combinations of causal elements and their corresponding effects is not only unknown, but must ever remain unknown, because the conflicting or conspiring forces which enter at random, now into one combination and again into another, are too many and too various for human intelligence to calculate. Consequently, there is no basis whatsoever for the definite calculation of any future event. But, while definite calculation is impossible, an estimate of general tendencies is quite within the scope of our capabilities. Hence arises the doctrine of chances, or the theory of probability. Such a theory is grounded fundamentally upon the mathematical theory of combinations. It is possible to express the chance of any event so far as to indicate the number of combinations which normally tend to produce that event, in comparison with the number of combinations which tend to produce some other than the event in question. The chance of any event occurring, therefore, such as that of any particular fall of dice, may always be represented in terms of a ratio whose numerator indicates the number of combinations capable of producing the event, and the denominator the total number of combinations both favourable and unfavourable. Moreover, in any set of complex circumstances chance is reduced to a vanishing point in all cases in which any uniformity of sequence may have been established. And uniformity of sequence always appears whenever all the other combinations than those favourable to the happening of an event are rendered impossible. Suppose, for instance, with 'loaded' dice 'double sixes' regularly appears, whatever may be the character of the throw, there is the ready inference that all other combinations of causal elements except those capable of producing 'double sixes' have been effectually eliminated. So also the introduction of a definite purpose at any time into a group of variously combining causal possibilities immediately reduces all these possibilities to zero, except the one designed event. If one draws at random a card from a pack, the chance of its being any previously designated card is, of course, expressed by the ratio $\frac{1}{52}$. But if one examines the pack in order to select a definite card, every one of the other 51 possibilities is at once eliminated by this process of definite intent. Purpose, by its essential nature, tends to uniformity; and, by producing uniformity, it makes chance disappear. The activity of will is always destructive of chance.

There are certain fallacies which are often attached to the concept of chance. Perhaps the most common is that a chance event is an uncaused event. Chance is defined loosely and vaguely as something which happens without a cause, when what is meant evidently is that chance is something which happens without our knowledge of the cause definitely determining it. Chance is an idea which is in no sense whatever opposed to that of causation, but merely to that of a uniform causal relation.

Another fallacy has its roots in the superstition that chance represents a sort of whimsical fate, or, it may be, writ large as FATE, which arbitrarily metes out its good or ill fortune to helpless mortals whose happiness and even destiny are brought under this capricious control. Chance, however, is not a deity; and any superstitious sentiment must give place to a simple matter-of-fact characterization of chance as a complex set of causes, too intricate and too involved to admit of definite determination.

There is still another fallacy, which insists that games of chance, and all forms of gambling, based as they necessarily must be upon chance, are wrong, because there is in all such cases an appeal to the unknown, and therefore in every turn of chance one is tampering with occult forces with which it is not becoming or permissible for man to deal. This, too, is a relic of a superstition which has always clouded reason. Chance as such has no moral significance whatsoever. It is not immoral, but simply non-moral. Chance happenings become immoral solely in consequence of the uses to which they may be put. And the failure to appreciate this has, in many quarters, discredited the real argument against gambling, by raising a false issue and confusing the essential with the unessential. No evil principle can lurk in the simple fact itself of a chance event, whether it be the casting of a lot, the fall of dice, a hand at cards, or the turn of a wheel. The phenomena of chance, however, it must be conceded, lend themselves peculiarly to the practices and devices of the gambler's art, and therefore are brought into ill repute through association with methods whose immoral taint rests wholly on other grounds.

LITERATURE.—The standard work on the subject of Chance is J. Venn, *Logic of Chance*[3], London, 1888; cf. also G. B. Airy, *Theory of Errors of Observations*[3], London, 1879; A. de Morgan, *Essay on Probabilities*, London, 1838; Laplace, *Essai phil. sur les probabilités*[6], Paris, 1840; J. W. Lubbock, *Treatise on Probability*, London, 1844; R. A. Proctor, *Chance and Luck*, London, 1887; W. A. Whitworth, *Choice and Chance*, London, 1901; L. A. J. Quételet, *Letters on the Theory of Probabilities*, London, 1840; I. Todhunter, *History of the Mathematical Theory of Probability*, Cambridge, 1865; G. H. Joyce, *Principles of Logic*, London, 1908; and the standard works on Logic.

JOHN GRIER HIBBEN.

CHANDRAGUPTA.—I. Chandragupta Maurya (*c.* 322–298 B.C.), the founder of the Maurya dynasty, was the grandfather of Aśoka (*q.v.*), and the first emperor or paramount sovereign of India, which at the time of Alexander's invasion (326, 325 B.C.) was parcelled into a multitude of petty States, not subject to any controlling authority. Chandragupta, a relative, apparently illegitimate, of the Nanda king of Magadha (S. Bihār), having incurred the displeasure of that monarch, fled to the Panjāb, where, as a young man, he is said to have met Alexander. After the death of the latter (June 323 B.C.), the exile put himself at the head of certain frontier tribes and defeated the Macedonian garrisons. He effected a revolution in Magadha, the premier State of India, deposed and killed his kinsman, the Nanda king, and seated himself on the vacant throne. He organized a vast army, with which he overran the greater portion of India. It is known that he held effectively the peninsula of Surāṣṭra (Kāthiāwār) on the western coast, and it is probable that his sway extended as far south at least as the Narmadā (Narbadā) river. When Seleukos Nikator attempted in 305 B.C. to recover the Indian conquests of Alexander, he was successfully opposed by Chandragupta, who compelled him to cede a large part of Ariana, west of the Indus, and to enter into a matrimonial alliance. These advantages were purchased at the small cost of five hundred elephants. After the conclusion of peace, Seleukos (303 B.C.) sent Megasthenes as his envoy to the court of Chandragupta at Pāṭaliputra (Patna). Although the description of India written by Megasthenes has been lost, numerous fragments of his work have been preserved (ed. Schwanbeck, Bonn, 1846, tr. by M'Crindle, 1877), which probably include all the most valuable passages. His statements continued to be the principal source of European knowledge of India

down to modern times. The Greek observers noted with interest the superficial peculiarities in the mode of life of the Brāhmans and ascetics, but, not being qualified to distinguish the various sects, failed to record particulars with precision sufficient to enable their readers to realize the state of religion in the time of Chandragupta. We are informed that the Brāhmans 'wrap up their doctrines about immortality and future judgment and kindred topics in allegories, after the manner of Plato' (Strabo, xv. 1. 59); that they frequently discoursed of death, and so forth; but such generalities do not make any definite impression on the mind. The writers' vague descriptions indicate that the Brāhmans and ascetics of the olden time were much the same as they are now. Clemens Alexandrinus (c. 200 A.D.) seems to be the first Greek author to mention Buddha (Βούττα). According to Jain tradition, Chandragupta abdicated, retired in 297 B.C. to Sravana Belgola in Mysore, and died there as a Jain ascetic twelve years later, by voluntary starvation.

2. Chandragupta I., founder of the Gupta dynasty (A.D. 320–c. 335), was king of Magadha (S. Bihār), and extended his dominions as far east as Prayāga (Allāhābād). The Gupta era, of which the year 1 ran from Feb. 26, A.D. 320, to March 13, 321, probably was instituted to commemorate his coronation. He was an orthodox Hindu in religion, and his reign marks an early stage in the reaction of Brāhmanical Hinduism against Buddhism which characterizes the Gupta period.

3. Chandragupta II., of the Gupta dynasty, surnamed Vikramāditya, grandson of Chandragupta I., reigned from c. 375 to 413 A.D. He conquered Malwā and Surāṣtra (Kāthiāwār), and so became lord paramount of all India north of the Narbadā river. Fa-hien (A.D. 399–413), the Chinese pilgrim, spent several years in the dominions of Chandragupta II., and formed a very favourable opinion of the merits of the government. Although the sovereign was himself an orthodox Hindu, specially devoted to the worship of Viṣṇu, the Buddhist religion was exercised without hindrance, and its adherents were numerous, rich, and influential. All respectable persons ordinarily followed the Buddhist rules of conduct, and abstained from taking life, drinking wine, and eating onions or garlic. The Buddhist monasteries were liberally endowed with royal grants, and alms were freely bestowed on the monks. Notwithstanding the prosperity of the Buddhist church, and Fa-hien's apparent blindness to the change which was taking place, it is certain that the restoration of the Brāhmanical religion to popular favour, and the associated revival of the Sanskrit language, as distinguished from Prākrit, made rapid progress during this reign.

LITERATURE.—The Greek notices of India are collected in M'Crindle's works, especially *Ancient India as described in Classical Literature* (London, 1901). A full account of the three Chandraguptas will be found in Vincent A. Smith's *Early History of India*[2] (Oxford, 1908).

VINCENT A. SMITH.

CHANGE.—Change is so elementary and so comprehensive a conception that it is difficult to define it. Probably the best way, however, to approach the meaning of the term is to indicate its kinds, that is, to give its logical divisions. In this way we may reach its essential characteristic. There are four general types of change. They are (1) Qualitative change; (2) Quantitative change; (3) Local change; and (4) Formal change. It is possible to include the last three types in the general conception of Spatial Change, which we might subdivide into quantitative, local, and formal. Quantitative change can be divided into expansion, contraction, detrition, and accretion. The first two are consistent with absolute identity of the subject expanded or contracted, and the last two involve some addition or subtraction of matter. None of them necessitates local change or motion of the subject from a static position as a whole. Local change is convertible with motion, and means that, whatever other changes accompany it, the whole alters its position in space. Formal change is a change of shape, and may consist with every other type of change except local. Qualitative change is a change in the qualities or properties of a subject, and may consist with a static condition, quantitative, local, and formal. It is illustrated in chemical action and composition.

All changes take place in time and space. They are thus events in substance. Time and space do not change, but are conditions of all change, except that qualitative change may take place without quantitative, local, or formal change. But no change can take place without involving time, and there are no changes in which a difference of time is not involved. Persistence in time is not change but stability.

In its most comprehensive sense, then, change is any fact, event, or action which is contrasted with rest or stability, and involves some element of difference either of quality, space, or time.

It is the fact of change that suggests all inquiries into causes, whether these inquiries be spoken of as scientific or philosophic. Curiosity regarding causal agency begins with the discovery of change and terminates in explanation. No question of explanation would ever arise but for this departure from an inactive condition of things, unless we had other reasons to suppose that mere existence was also caused. Change represents the dynamic, as rest or inertia represents the static, side of things, and hence obtains the credit of instigating scientific and other curiosity. Consequently it is the indication of the existence of new phenomena in the world order, and is the condition of the very existence and conception of progress usually expressed in the process of evolution.

In an earlier period of reflexion it was 'motion' that was supposed to demand explanation, and so was the centre of speculative interest. But the fact is that the term was then more comprehensive than it is now, as will be apparent in the study of those ancient systems of philosophy which turned on this conception. Greek thought, in its earlier development, did not clearly and always, if ever, distinguish between the ideas of motion and change. The term κίνησις did duty for both conceptions, and the consequence was that some confusion occurred in various philosophic theories. Aristotle seems to have been the first to recognize the equivocal character of the term, and in his distinction gave rise to that limitation of the concept 'motion' which has ever since confined it to that of local change or change of place, so that qualitative change became a distinct phenomenon.

The difficulty created by the confusion of motion and change was apparent in the conflict between the philosophies which regarded 'motion' as caused and those which regarded it as eternal and uncaused. Theistic and creationist speculations possessed a weapon of some force against philosophers like the Eleatics who denied all change and motion, but Democritus and Epicurus robbed these of their vantage ground by making 'motion' eternal, this conception having been accepted as reasonable or possible from the philosophy of Heraclitus. With 'motion' uncreated or uncaused, there was nothing left apparently for scientific curiosity. But the distinction of Aristotle opened the way to the admission that motion might be permanent while change of some kind still existed to be accounted for. Philosophic reflexion thus survived, and the confusion of the

two schools ultimately resulted in the modification of the doctrine of inertia, since the resolution of the equivocation in the conception of 'motion' or change made it necessary to conceive one as possibly eternal and the other as only ephemeral.

In early Greek thought, inertia, not a speculatively recognized concept, did not mean what it means in modern scientific parlance. It denoted a state of inactivity or rest, not the inability to initiate a change whether of motion or rest. The consequence was that any observed action might have its cause placed within or without the subject in which it appeared, according to the disposition of the observer. Not having any doctrine of gravitation like the Newtonian with which to reckon, ancient speculation thus enjoyed considerable liberty in the application of internal causes to the phenomena of nature, as a study of its philosophic systems abundantly illustrates. It was natural, taking ordinary sensible experience as the guide, to suppose that weight, an intrinsic property of matter, should give rise to motion, and in fact the atomic systems of the time so conceived the case. In ordinary reflexion, motion, not distinguished from change, was conceived as having a beginning in time, and the normal condition of things was supposed to be that of rest. But in the absence of an idea of attraction or gravitation, self-motion became a conceivable phenomenon, and, at least where vertical direction and a vacuum were supposed, was considered the natural state of matter. This conception involved the possibility of perpetual motion, and so combined the ideas of constancy and change in the same fact. So far as the phenomenon was thus conceived, it was either not caused at all or had no external cause; and, as the conception of causality in subsequent ages became very largely convertible with external agency, wherever the idea was used at all, motion became conceivably an eternal and uncaused fact. The materialist thus had two presumably uncaused facts against the creationist point of view, and they were matter and motion. He admitted, however, as in the Epicurean swerving of the atoms from a vertical direction attributed to free action other than gravity, that any deviation from the existing status required some additional cause to explain it, whether this cause were made internal or external.

This intellectual situation produced two effects. It admitted and widened the conception of change as a fact to be explained, and gave rise to a new conception of inertia which has come to possess all modern thought. As the conception of motion was made consistent with permanence, inertia could no longer indicate rest or inaction, but had to be made convertible with inability to initiate change, whether of motion or rest, without the interposition of an external cause, and this inability was assumed to characterize matter. This made the idea compatible with the eternity of motion which the earlier conception did not recognize, but it left the mind free to inquire for causes in any change from any existing *status quo* of things, and this sufficed to give reason and character to scientific and philosophic curiosity as a quest for explanations. Change became the comprehensive term for all facts or events demanding causes.

Change thus becomes the basis upon which all causal speculations rest, and motion will not figure in the case except as a change of direction or as a phenomenon conceived as beginning in time. Whether the causes sought are internal or external, free or determined, will depend upon the extent to which the doctrine of inertia is applied. If matter is wholly inert, that is, unable to initiate change, the cosmos must remain in a given condition, unless external intervention occurs to cause any assumed or known change from the *status quo.* This conception was the assumption on which the Aristotelian *primum mobile* was accepted, though its inertia was assumed to follow after an initial impulse and no continuous causal agency was supposed. Hence the vantage ground of the theistic and deistic point of view. But, if inertia is not assumed as an absolute condition of matter, internal forces may be conceived as the cause of change and a *deus ex machina* excluded as unnecessary. Whatever cause for change was supposed would have to be immanent, and possibly a *creatio continua*—certainly so, if change were constant. In mechanical physics the doctrine of inertia still prevails, and external causes are supposed to initiate change or motion, though no effort is made to trace the causal agency beyond a given point. Spatial, including quantitative, local, and formal, changes are the phenomena to be explained. In chemistry, qualitative change is the phenomenon to be accounted for, and some relation to internal causation is conceived which does not seem reducible to mechanical agency, and so a question as to the absoluteness of inertia is suggested by it. Whether we shall ever reach the conclusion for final or teleological causes will depend upon other facts than mere change. The adjustment of a variety of means to an end not naturally the result of any one agency is necessary here. But the existence of internal causes, once assumed to account for any change whatever, or any movement towards a result, will leave the way open for analogies with human action for the explanation of real or apparent adjustment to organic ends in nature as reflecting intelligent direction of causes, the changes involved being so complicated as to suggest intelligence as well as internal agency.

LITERATURE.—R. Adamson, *Development of Modern Philosophy*, Lond. 1903, vol. i. part v. ch. ii.; B. P. Bowne, *Metaphysics*, revised ed., N.Y. 1902, part i. ch. iii.; L. T. Hobhouse, *Theory of Knowledge*, Lond. 1896, part ii.; Shadworth Hodgson, *Metaphysic of Experience*, Lond. 1898, vols. i. and ii.; Lotze, *Metaphysic*, Eng. tr., Oxf. 1884, books i. and ii.; Schopenhauer, *The World as Will and Idea*, Eng. tr., Lond. 1883–86, vols. i. and ii.; Taylor, *Elements of Metaphysic*, N.Y. 1904, book ii. ch. v. These works give a sufficient discussion of 'change,' and fairly discuss the topic from different points of view. The most recent book on the subject is D. P. Rhodes, *The Philosophy of Change*, N.Y. 1909.

JAMES H. HYSLOP.

CHANGELING.—**1. Definition and characteristics.**—A changeling may be defined as the child of a non-human race left in place of a human child which is stolen away from its mother by members of that race. Adult changelings (below, § 6) are of a different character. In general, the changeling may be the child of fairies or elves (British Isles, France, Italy); of dwarfs, elves, or under-earth folk (Germany, Scandinavia, and among the Slavs and Wends); of various nature-spirits—water-sprites, nixes, wood-folk, wild women, *laumes*, etc. (Hungary, Germany, Bohemia, Moravia, Holland, Lithuania); of Nereids (Greece); and, in most of these regions, of a witch or some other demoniac creature; or, travelling beyond the European area, of a variety of beings who will be considered later (§ 7).

The equivalent terms for 'changeling' are: Welsh *plentyn-newid*, German *Wechselbalg*, Swedish *bytingar*, Finnish *luoti*, Polish *odmenik*, Lettish *laumes apmainytas*, Bohemian *podwrznec*, while the Latin form *cambiones* appears in a 15th cent. MS (see Grimm, *Teut. Myth.* pp. 468, 1421, 1754).

The changeling is not always in reality a fairy child. Occasionally it is a stock with the appearance of a child (*FLR* ii. 197), but more usually it is an adult member of the fairy folk, who has assumed that form, as many tales show (cf. § 3). Probably this is a later development of the idea, the changeling being a child in what may be regarded as the more primitive versions. The idea might arise from the belief that fairies, etc., could assume different forms (cf. the Arab *jinn*—in many respects

equivalent to fairies—who transform themselves from baby to giant form, etc., *JAI* xxix. [1899] 253, 259), but in some cases the adult is reduced to child form by a process of beating and squeezing (Craigie, *Scandinavian Folk-lore*, Paisley, 1896, p. 148). In an Icelandic tale the changeling is the husband of the fairy who stole the human child (Arnason, *Icelandic Legends*, 1864-66, p. 113).

A changeling was usually detected by its appearance. It was ill-favoured or deformed, with thick neck and large head; it seldom ceased crying when under observation, and was, to all appearance, imbecile (cf. Luther's description of a changeling seen by him, in his *Table-Talk*). It had also an abnormal appetite, quantity not quality being regarded, but in spite of eating so much it never grew or throve. Sometimes, however, as in the Manx case seen and described by Waldron (*Descr. of Isle of Man, 1731*, Douglas, 1865, p. 29), while abnormal in appearance and incapable of movement, the changeling never spoke or cried, and ate little. Again, when it thought itself unobserved, a changeling would frisk and dance and show every sign of merriment. At other times its appearance was normal, but it would exhibit abnormal musical powers or capacity for work. The stories of changelings, wherever found, show that the act of exchange took place when the human child had been left unguarded for a moment, or through the helplessness of the mother, or by some trick on the part of the fairy thieves, or because the usual precautions against them had not been taken; the theft took place before the child had been baptized.

2. Precautions against the exchange.—Fairies being regarded as pagans, one group of precautions against their kidnapping was of a Christian character. Thus, an effectual method was to place a Bible, or a prayer-book, or a leaf of either, in or near the cradle. Other religious objects—a rosary, a cross, or the like—might be used in this way. Prayer, a pious ejaculation, the utterance of a Divine name, or blessing oneself, would cause the fairies to drop the child either inside or outside the house, if they had succeeded in seizing it. But, above all, baptism was effective, for once the child was baptized the fairies' power over it was gone, as it had now ceased to be outside grace; in other words, it was no longer a pagan, and could no longer be liable to the attacks of non-Christian beings (see BAPTISM [Ethnic], § 13, and cf. a song in D'Urfey, *Wit and Mirth*, London, 1819-20, i. 322, where a child 'Must be christened that very morn, For fear it should die a pagan'). This semi-theological explanation has taken the place of ideas connected with ethnic customs of name-giving, baptism, and purification, by which various dangers menacing the child from spirits, demons, etc., or even danger arising from him in his tabu state, are neutralized, and before the performance of which he is sometimes regarded as not quite human (cf. an instance among the hill tribes of Central India, where, until the performance of the rites of hair-shaving or ear-piercing, the child is regarded as a *bhūt*, or devil, *JAI* xxviii. [1899] 246). More purely magical is another set of precautions. Among these the custom of carrying fire round the child, or having a light in the room until it is baptized, to keep off spirits and fairies from mother and child, is analogous to similar pagan practices (cf. *SBE* xxiv. 277; Martin, *Descr. of West. Islands of Scotland*², 1716, p. 118; Crawley, *Mystic Rose*, London, 1902, pp. 10, 226), and is doubtless due to the primitive idea of the sacredness of fire. In one story a burning brand thrown at a fairy forces her to drop the child (Campbell, *Superstitions of the Highlands and Islands of Scotland*, Glasgow, 1900, p. 81). Placing part of the father's clothing in or near the cradle, or wrapping the child in it, is also used, and has analogies in ethnic custom, the idea being that the father's influence protects the child through the proximity or contact of his clothes (cf. Crawley, *op. cit.* p. 427). Equally effective was it to place iron in some shape or form—utensil, tool, or weapon—in the cradle, on account of the well-known dislike of iron by fairies, etc. An obnoxious odour in the room, *e.g.* that of an old shoe burning in the fire, was useful because of the fairies' dislike of strong odours. Or, as in the Highlands, the door-posts were sprinkled with urine kept for washing purposes (Campbell, *op. cit.* p. 36). Tracing a magic symbol, *e.g.* a pentagon, on the cradle was used in Switzerland (*Morgenblatt*, 1865, No. 32, p. 764). All these methods were effective against every evil influence which might attack the child. Again, sheer force employed by either parent against the intruder would cause him to relinquish his evil purposes.

3. Recovery of the stolen child.—Even after a considerable lapse of time, it was possible for the stolen child to be recovered, and the various methods employed are described with remarkable unanimity in tales from the various European lands where the changeling belief is found. Taking the changeling to church, where the priest touched it, caused its disappearance, as is seen in an old Scots ballad (*FLR* i. 235). Flogging the changeling and laying it in a ditch, whence it was taken by its kinsfolk and the human child returned, occurs in several tales. Sweeping it out of the house, laying it on a manure-heap, throwing it into a stream, and placing it in a grave, are methods found in other tales. Or, to starve or neglect it or to make it cry lustily was enough to procure its removal and the re-instalment of the real child. Or, again, it was threatened with death, or its head was chopped off. Still more cruel was the subjection of the suspected child to fire. It was removed with red-hot tongs, or a cross was signed on its forehead with a red-hot poker, or it was placed in the oven or pressed down on the glowing embers, in the hope that it would be destroyed or would disappear. In tales exhibiting this method, the true child is returned, sometimes with the uttered reproach from the fairy that she had not treated it as the human mother had treated the changeling.

There can be no doubt that in many cases deformed or sickly children, suspected of being changelings, were thus cruelly treated. Cf. actual cases in Ireland, where a child and a woman, believed to be changelings, were, one severely burned, the other roasted to death, in 1884 and 1895 respectively (see Hartland, *Science of Fairy Tales*, London, 1891, p. 121; *FL* vi. [1895] 373); and in Tiree, in 1878, a child was exposed on the shore for several hours by its mother, who thought it was a changeling (*Celtic Magazine*, Inverness, viii. [1883] 253).

In cases where the character of the child was uncertain, a stratagem was resorted to in order to discover its true nature. In one class of stories, with copious variants, the mother is advised to prepare food or boil water in one or several egg-shells, whereupon the changeling cries that he has seen many things (involving a great lapse of time), or has lived so long, but has never seen a sight like that. In another series a sausage is prepared, containing the carcass of a young pig, and set before the child. Here the formula is similar, save that he declares he has never seen a sausage with hide, hair, eyes, and legs. The intention is to make the changeling unwittingly betray his real nature. This is sometimes enough to cause his disappearance and the restoration of the true child, probably because of the belief that supernatural beings fear the discovery of themselves by mortals, as in the similar case of their name, which, when discovered, brings its owner within the power of the human discoverer. But in some cases the story adds that the changeling was threatened with cruel treatment, or was actually punished in some of the ways already described, before the

exchange was once more made. Simrock (*Handbuch der deutschen Mythol.*[6], Bonn, 1887, p. 436) asserts that the purpose was 'to force him to laugh, for laughter brings deliverance'; but, as Hartland (*op. cit.* p. 117) points out, the laughter-incident rarely occurs in the tales, and the betrayal of the changeling's true nature by the admission of his age is rather in question here. In all such stories the changeling is not a real fairy infant, and this may point to their being of later date (see § 1).

Examples of these tales, and of the formula in which his age is expressed by the changeling, will be found in Grimm, pp. 469, 1421; Keightley, *Fairy Mythology*, ed. Bell, London, 1900, pp. 126, 365, 436, 473; Campbell, *Pop. Tales of the W. Highlands*, new ed. Edin. 1890–93, ii. 57; Kamp, *Danske Folkeminder*, Odense, 1877, p. 19; Kristensen, *Danske Sagen*, 1891–6, i. 1049; Hartland, *op. cit.* p. 113 ff.; Scott, *Minstrelsy*, 1839, p. 218. The formula runs: 'I've been in the world 1500 years, and never seen that,' or 'I have seen the egg before [it became] the white hen, and the acorn before the oak, seen it acorn and sapling and oak in Brezal wood, but never aught like this,' or 'I have seen the wood in Tisö young three times over, but never the like of this,' etc.

In other tales nothing short of a visit to fairyland by the parents, usually armed with various articles disliked by the fairies, will suffice for the child's recovery. Again, if the fairy child was treated kindly, this ensured similar treatment for the stolen child, and sometimes led to its restoration.

4. **Purpose of the theft.**—This may be expressed generally in the words of Grimm (p. 468), that 'elves are anxious to improve their breed by means of the human child, which they design to keep among them, and for which they give up one of their own.' The same motive underlies the theft of human mothers or maidens to act as midwives to a fairy mother, to nurse fairy children, or to marry a fairy, which is found in a multitude of stories. Scarcely an example occurs in which the stolen child is ill-treated, and frequently, when it is restored, it remains lucky or skilful in some craft (Campbell, *op. cit.* ii. 57; Keightley, p. 300).

This might seem to give some ground for Simrock's theory (*op. cit.* p. 436) that the motive for the theft originally lay in the desire of the fairies to benefit human children, and that the more selfish motive was not ascribed until later, when growing enlightenment suggested to men that the once beneficent fairies were falling into decay, and now, for self-preservation, resorted to the theft. This, however, finds little ground in the fairy superstition itself, and is not corroborated by the tales taken as a whole. To make the child completely one of themselves, the fairies may have been supposed to give it fairy food or to perform some rite, and hence a folk-belief may underlie the lines of Beaumont and Fletcher (*Faithful Shepherdess*, Act. i. sc. 2) in which they are described as dipping stolen children in a fairy well 'to make them free from dying flesh and dull mortality.' At the same time, when the changeling was a fairy child and not an adult fairy, it had the advantage of being suckled by a healthy human mother. That this was an advantage is seen from the stories of stolen mothers already referred to (cf. also Gervase of Tilbury, *Otia Imper.* iii. 85), and particularly in a Hessian tale where a woman struggles with a fairy who is stealing a child, which is not restored until the mother has put the fairy's offspring to her breast to nourish it 'with the generous milk of human kind' (Grimm, p. 468). With this may be compared a Scots story in which a mother, nursing her child, is begged by a fairy to suckle her infant. The fairy disappears, leaving it with the woman, who finds rich garments and delicious foods by her side whenever she awakes from sleep (Cromek, *Remains of Nithsdale and Galloway*, 1810, p. 302).

Another folk-reason alleged for the theft is that the fairies may have good Christians among them at the day of judgment to assist their salvation—a question as to which they are often represented as standing in great doubt (*FL* vii. [1896] 163). A still more selfish reason for the theft may have been popularly believed, though it is probably of later origin: it was alleged that the fairies had to pay an annual or septennial sacrificial tribute out of their company, to the devil. This is found in the indictment of Alison Pearson, a witch, in 1588; in the ballad of *Tamlane*; and in the tale of *Thomas the Rhymer* (Scott, *Demonology*, 1898, pp. 109, 114, 130, *Minstrelsy*, pp. 221, 231, 423; *FLR* ii. 113), and it may be referred to in a Highland tradition mentioned by Hugh Miller (*My Schools and Schoolmasters*, ed. Edinburgh, 1891, p. 259), to the effect that on an island in Loch Maree the fairy queen sat and gathered *kain* ('tribute') for the devil. Lady Wilde (*Ancient Legends*, 1887, i. 70) also refers to it vaguely as a current belief in Ireland. In the cases cited it is a human victim who is offered; and both Scott and Lady Wilde say that it is a popular belief that infants were stolen for this purpose. Witches were certainly alleged to steal and sacrifice infants to the devil (perhaps a traditional reminiscence of actual sacrifice by women in orgiastic rites to a goddess of fertility); and, as fairies were commingled with witches in late mediæval belief, the custom may have been ascribed sporadically to them. Eating human infants is asserted of fairies in certain tales (Welsh: Rhŷs, *Celt. Folk-lore*, Oxford, 1901, ii. 673; French: Sébillot, *Folk-lore de France*, Paris, 1904–7, i. 229)—perhaps also a reflexion from witch-lore.

In general, infants are in danger from female demoniac beings, or from witches (the two differing but little from each other), who injure, kill, eat, or change them. The Jews feared Lilith, the night-demon, who was especially hostile to children, living on the blood of those whom she slew (Sayce, *Hib. Lect.* [1887], 1891, p. 146; cf. also Blau, in *JE* viii. 87 f.). The *lamia* of ancient Greek myth, who murdered children because Hera deprived her of her offspring, passed into popular superstition as a demoniac being who sucked the blood of children, or was multiplied into the *lamiæ*, who devoured youths (Daremberg-Saglio, *Dict.* 1886, iii. 2, 908). These *lamiæ* survive in modern Greek superstition as witch-like hags fond of children's flesh (Bent, *Cyclades*, 1885, pp. 98, 388). In ancient times children who died young were thought to have been carried off by the nymphs (Preller, *Gr. Myth.*[4], 1894, i. 566). The Græco-Roman *striges*, or owl-like bird monsters which tore the vitals of children and sucked their blood (Ovid, *Fasti*, vi. 131 ff.), and the *strigæ*, or witch-hags who flew by night and strangled and devoured children, replacing their bodies by a bundle of straw (Petronius, chs. 63, 134), resembled the *lamiæ*, and they still survive in Greece, Italy, and the east of Europe as witches of a similar character (the *strigela*, *strega*, etc. [Garnett, *Greek Folk Poesy*, 1896, ii. 457]). In mediæval belief, demons, *striges*, and *lamiæ*, as well as witches, were commonly supposed to draw infants from their cradles, to maltreat or roast them, to suck their blood, or eat them (Grimm, citing mediæval sources, pp. 1058–60, 1081, 1625). No charge was commoner in mediæval witch-trials than that witches had stolen children and devoured them at the Sabbat; and the midwife, in ages when there was a great mortality of children, was often regarded as a witch. The witch may in this case be the survival of an earlier priestess, and the cannibalistic act the relic of ritual cannibalism and a sacrifice to a goddess of fertility. In many cases, however, the corpse of an unbaptized child was said to have been disinterred and eaten (see Reuss, *La Sorcellerie*, Paris, 1871, pp. 47, 52, 66; Pearson, *Chances of Death*, 1897, ii. 21 ff., 32; Scott, *Demonology*, pp. 172, 231; Görres, *Die christliche Mystik*, Regensburg, 1842, bk. 8, ch. 15). Such beliefs survive in much later folk-superstition. Italian peasants believe in witches who tear the faces of unbaptized children (Hartland, p. 99). In Servia the *Hexen* are especially fond of the flesh of young children (Ploss, *Das Kind*, Leipzig, 1884, i. 113; Grimm, p. 1077). Russian peasants fear the *Baba Yaga*, a female ogre or a witch, who devours children (Ralston, *Russian Folk Tales*, 1873, p. 165); and similar beliefs are found throughout most European lands, while precautions resembling those used against the attacks of fairies are general. Similar deeds are ascribed to female demons resembling the *lamiæ*, and called *devs*, *als*, etc., in Georgian, Roumanian, Armenian, Coptic, and other Oriental tales (Wardrop, *Georgian Folk-Tales*, 1894, p. 56; Leland, *Gypsy Sorcery*, 1891, p. 64; Abeghian, *Armen. Volksglaube*, Leipzig, 1899, pp. 118–120; Gaster, *Græco-Slavonic Literature*, 1887, p. 82). Outside Europe such beliefs are found among savage and barbaric peoples. In Abyssinia the *Werzelyā* is a Lilith who kills children; in W. Africa witches catch children, cut out their tongues, and change their nature so that they become creatures called *asiki* (Nassau, *Fetichism in W. Africa*, 1904, p. 299). In India, among the Vadāls, the birth-spirit in the shape of an animal is believed to devour the skull and heart of an infant on the fifth night after birth (*PR* i. 265), and a similar belief is already found in the Atharvaveda (vii. 10; see Whitney and Lanman, *Atharva-Veda*, Cambridge, Mass., 1905, i. 395; Ploss, i. 120). The Malays believe in a female vampire which sucks the blood of newly-born children (Skeat, *Malay Magic*, 1900, p. 327). Among the Ainus the legend of the goat-sucker embodies a belief in a child-stealing demon (Batchelor, *The Ainu and their Folk-lore*, 1901, p. 185). For an American Indian instance—a Cree child who turned into an owl by night and ate other children—see Petitot, *Traditions indiennes*, Paris, 1886, p. 462.

Mediæval witches were also supposed to kill newly-born children, or to dig up the corpses of the unbaptized in order to cut off their fingers or hands for various magical uses. This is referred to by Shakespeare (*Macbeth*, IV. i. 30)—the 'finger of birth-strangled babe' was one of the ingredients of the witches'

cauldron—and it is still a popular belief in Sicily (Grimm, p. 1073; Hartland, p. 100). Robbers were also supposed to use the hands of children or adults as candles, the well-known 'hand of glory' (Baring-Gould, *Curious Myths*, new ed. 1888, p. 405 ff.; Stoll, *Geschlechtsleben in der Volkerpsychologie*, Leipzig, 1908, p. 285). The salve, rubbed by witches on their bodies, in order that they might acquire magic power, was made of an unguent obtained by boiling the body of an unbaptized child stolen from its cradle.

5. **Witch and diabolic changelings.**—The witch, like the fairy, was also supposed sometimes to change the human child, obtaining entrance to the house in the form of a bird or an insect, unless the precaution had been taken of placing iron or a broom beneath the pillow. Instances are found in Roumanian and Servian belief (Gerard, *Land beyond the Forest*, 1888, ii. 14; Ploss, i. 113; Leland, *Gypsy Sorcery*, p. 64). Such changelings may have been the offspring of a witch and the devil. Sometimes the devil himself was believed to effect the exchange. Having carried off young maidens, he had intercourse with them and kept them till they were delivered. A human child was then stolen by him, and the offspring of this union was put in its place (Thorpe, *Northern Mythol.*, 1851–2, vol. ii. p. xxi). Such changelings resembled the fairy changeling in ugliness and abnormal appetite; they cried when touched, laughed at any evil in the house, and had a continual hiccup (Reuss, *La Sorcellerie*, 71). Luther's opinions in his *Table-Talk* on this subject are frequently cited. He firmly believed that the devil often changed infants, laying devils in their place. These had a great appetite, were very filthy, and wrought harm to the mothers. He describes one which he had seen at Dessau, and he strongly recommended that the changeling should be thrown into the river. These changelings, in his opinion, were masses of flesh without a soul. Such beliefs regarding diabolical changelings survived into modern times in Prussia and Lithuania (Ploss, i. 113, cf. *Das Weib*[8], Leipzig, 1905, i. 569); but, in the old German legend of Zeno, the devil himself takes the form of the child which he had abstracted (Simrock, p. 483).

In Slavonic belief, the nocturnal demon, *Kikimora*, is a child whose mother cursed it before its birth, and whom the devil stole from her womb. The devil also carries off all children execrated by their parents (Tooke, *Hist. of Russia*, 1799, i. 100). Analogies to this are common in savage and barbaric superstition regarding stillborn children, etc., who become demons.

6. **Adult changelings.**—The carrying off of men and women, especially the latter, by fairies, dwarfs, giants, or the supernatural personages of European and Oriental mythology, the detaining of them in their land, and, in the case of women, forcibly marrying them or compelling them to act as midwives or nurses, are commonplaces of folk-tales wherever found, while in many cases their rescue from their captors is the cause of the strangest adventures (cf. the English tale of Childe Rowland [Jacobs, *English Fairy Tales*, 1898, p. 117], and see art. FAIRY). We are here concerned with the theft only in so far as it illustrates the changeling superstition. Here it applies mainly to women in child-birth or before their churching,—a period when they were peculiarly liable to the attack of supernatural influences,—but there are similar instances of girls and men being carried off and a substitute left in their place. To prevent such attacks on women in childbirth, precautions resembling those taken in the case of infants were usual (see § 2; Ploss, i. 110). As a rule, when a child was taken, a genuine changeling was left in its place, but in the case of an adult the substitute was generally an illusory appearance. Frequently it was a log of wood, to which was given the semblance of the woman's corpse, or, less usually, of herself in life. This was also done when a man or girl was carried away. Other methods of substitution occur in certain tales. Occasionally a fairy woman, with the appearance of the stolen wife, was left (Campbell, ii. 76); and a belief is also mentioned to the effect that fairies take the substance and leave only the shadow, or steal the soul, leaving a fairy soul in its room (Scott, *Minstrelsy*, p. 217; Campbell, *Superstitions of the Highlands . . . of Scotland*, p. 32). But whatever it be, the relatives are overcome by the power of fairy 'glamour,' and believe it to be the living person, or his or her corpse (for examples, see Scott, *Minstrelsy*, p. 222; Curtin, *Tales of the Fairies*, 1895, pp. 8, 23 ff.; Campbell, *Tales of W. Highlands*, ii. 61; Campbell, *Superstitions*, pp. 38, 86; Hyde, *Beside the Fire*, 1891, p. 95; Keightley, p. 392; Gregor, *Folk-lore of the N. E. of Scotland*, 1881, p. 62; Thorpe, ii. 139). In some cases the fairies are seen carrying off the woman; she is rescued, and, after she is taken home, the illusory appearance is destroyed. But frequently the tales are linked on to those of the 'Dead Wife' or 'Orpheus and Eurydice' cycle—a dead wife rescued by her husband from the other world (see DESCENT INTO HADES [Ethnic]). Where the changeling is concerned, the illusory appearance of the corpse is buried, but the real woman appears to her husband in dreams, or is seen nursing her children. She gives directions regarding her recovery, sometimes involving her rescuer's visit to fairyland. These directions are not always carried out, in which case the woman remains a prisoner there. Where she is recovered from the fairy realm, the stories bear a close resemblance to those of the rescue of the dead wife from the other world, showing, as in other cases, that in popular fancy there is little real distinction between the two regions (see Scott, p. 222; Hartland, p. 130 ff.; Lang, 'The Dead Wife,' *Murray's Magazine*, 1887, p. 491; MacCulloch, *CF*, p. 43). Such tales are mainly of Scottish and Irish provenance; but they also occur in Scandinavia, and sometimes the 'appearance' of the woman remains in life. The object of the theft was that the woman might act as nurse to her captor's child, or, in the case of a girl, as his wife or housekeeper. The Irish versions relate that the victim was first struck with a 'fairy stroke,' and apparently fell ill and died (Curtin, pp. 60, 66); this was also a current belief in the W. Highlands (Campbell, *Superstitions*, p. 27).

Cattle were also liable to be 'changed.' A cow was stolen and some substitute left in its place—an alder stock, an old elf, etc., with the appearance of the cow (Campbell, p. 32 f.; Curtin, p. 125).

Similarly, when a witch stole a child, the parents were hindered by spells from seeing its disappearance; and when a witch went to the Sabbat, she left a log in her place by her husband's side in bed (Reuss, p. 39; Grimm, p. 1072).

7. **Origin of the changeling belief.**—(*a*) There is no doubt that this belief must be ultimately connected with the primitive and savage idea, surviving in higher stages, that infants are peculiarly liable to the attack of spirits, demons, etc., with whom they are sometimes associated in nature before name-giving and purificatory rites take place (§ 2). The ritual precautions taken to avoid such attacks often bear a close resemblance to the European methods of keeping off fairies; while, just as baptism was an efficacious remedy against fairies, so the rites referred to had a similar efficacy against spirits (see BAPTISM [Ethnic], § 13). Some examples of the savage and general idea of infants being in danger of spirits have been given (§ 4). Among the Veddas, with whom the arrow has a sacred significance, two arrows are placed before a sleeping child to guard it when its parents have to leave it for some time (*L'Anthropologie*, v. [1894] 243). The Torres Straits Islanders believe in a female spirit who steals and eats children, besides getting rid of wives and personifying them (*JAI*

xix. [1890] 323). In Amboina a spirit called Pontianak steals away infants (Riedel, *De sluik- en kroesharige rassen tusschen Selebes en Papua*, The Hague, 1886, p. 58). The Abors of Assam think that the wood-spirits kidnap their children (Dalton, *Ethnol. of Bengal*, Calcutta, 1872, p. 25). Among the Kalmuks, who believe in spirits dangerous to mother and child, the father runs out with a cudgel at a birth, to fight them (Ploss, i. 112). (For other savage instances, see Macdonald, *Africana*, 1882, i. 114, 224; Hahn, *Tsuni-Goam*, 1881, p. 77; Powell, *Wanderings in a wild Country* [New Britain], 1883, p. 207.) Similar beliefs were current among the Parsis, who employed elaborate rites to keep the spirits and other obnoxious beings at a distance (West, *SBE* v. 316, 343, xxiv. 277). The Romans held that the woodland god Silvanus was dangerous to mother and child, who were protected by men striking the threshold with axe and pestle, and sweeping it with a brush (Augustine, *de Civ. Dei*, vi. 9), while the Greeks believed that children who died young had been carried off by the nymphs (Decharme, *Myth. de la Grèce antique*, Paris, 1879, p. 332).

Innumerable examples of this universal belief might be given, while no incident is commoner in *Märchen* from all countries than that of children carried off by ogres, giants, or other beings. If, as can scarcely be doubted, such a belief was current among the ancestors of the various European folk who hold the fairy creed, it was inevitable that, when fairies, dwarfs, etc., came to be believed in, similar practices should have been ascribed to them, especially as they were in many cases nature-spirits in origin. This is seen by the fact that the changeling superstition is a fluid one, and is, as shown above, ascribed equally to fairies, witches, the devil, nature-spirits, and occasionally ghosts. Indeed, all the actions ascribed to fairies are also assigned in folk-belief to witches and spirits of all kinds. All alike are in turn derived from a much earlier range of circumstances, in which vague spirits were the prominent actors (see FAIRY). In this connexion it is important to observe that, among peoples with whom the belief is found that spirits, etc., are harmful to children, the actual changeling superstition occasionally exists, probably apart from any influence exerted by European changeling stories.

Many Yoruba tales resemble our changeling belief, though here the child is possessed by a spirit which makes it assume the form of a growing boy and devour quantities of food. The discovery is made by secretly watching the child. Another class of spirits enter a child and eat all its food till it becomes emaciated and dies. In the former case beating the child drives the spirit out; in the latter, an offering is made to it, and iron rings, etc., are hung about the child's body to keep the spirit away; but if this is not successful, incisions are made in the body, and pepper or spices put in them (Ellis, *Yoruba-speaking Peoples*, 1894, pp. 120, 111). Among the Shoshones the mountains of Montana are believed to be peopled by little imps called *ninumbees*, who eat unguarded infants, leaving, instead, one of their own baneful race. Should the mother suckle it, it devours her breast and escapes, while she dies soon after, and, if not watched, is eaten up by her nursling (*NR* iii. 157). A race of cannibal spirits, living under rivers and feeding on human flesh, especially that of children, was feared by the Cherokees. These spirits came unseen to a house just after daybreak, and if any one was found asleep, they shot him with invisible arrows and carried his body away, leaving in its place a shade or image of the victim, which awoke and acted as he did in life. This image had no life in it, and withered away in seven days, when the people buried it, imagining it to be the body of the real child or man (*RBEW* xix. [1900] pt. i. 349). The belief also exists in a curious form in China. If a child's soul leaves its body in sleep, a demon soul may take its place, endangering the mother when she suckles the child. To avert this demon invasion, the ashes of banana skin, mixed with water, are painted in the shape of a cross on the child's forehead. The demon cannot recognize the body thus disguised, and flies off, affording an opportunity for the true soul to approach. But, to facilitate its entrance, the mark must be washed off, else the soul will not recognize its body, and death will follow (*FLJ* v. [1887] 225). Bedawī women with an emaciated child take it to a grave, and, laying it thereon, say: 'Oh, you inhabitants of the grave, come and take your son, and give me back my son!' The child is then left there for some time, and the rite is repeated for several days (*FL* xv [1904] 348). Here the ghosts are supposed to have exchanged the child. (Laying the changeling in a grave was adopted in the W. Highlands as a means of getting rid of it [Martin, *Western Isles*, p. 118].) In Armenia, shears are placed under the pillow at a birth, to keep off the spirit called *Al*, who tears out the woman's liver, or changes and steals her child (*FL* xv. 445). Similar changeling stories are told of *višaps* and *devs* in old Armenian and Persian myth and romance (see ARMENIA [Zoroastrian], § ii. 3; Keightley, p. 17; Ploss, i. 118). In modern Greece the *nereids*, female spirits of Nature, steal and replace a human child by one of their own fractious offspring (Abbott, *Macedonian Folklore*, Cambridge, 1903, p. 125); and elsewhere in Europe, where nature-spirits take the place of fairies, the changeling superstition is also connected with them; *e.g.* in Hungary (the water man or woman), in Moravia (the wild woman), in Bohemia (the wood woman), in Lithuania (the *laume*), etc. (Ploss, i. 112–113). Thus the changeling belief, connected as it is with nature-spirits, demons, etc., may well have existed before it was connected with fairies.

(*b*) Why should children be so liable to the attack of spirits, fairies, and other beings? Their own and their mother's helplessness no doubt made them easy victims of the beings mysteriously surrounding men, ever on the watch for a favourable opportunity of doing them an injury. Again, the child, being in close contact with the mother, shared with her in the 'uncleanness,' the tabu state, into which the sexual crisis of childbirth brought her, and which made her 'dangerous.' This, being an unnatural state, may have been thought to bring her and her child into closer relation with non-natural beings, and therefore to render them more liable to their attacks (we have seen that the unpurified, unnamed, unbaptized child has a demoniac or pagan character). Hence the various purificatory ceremonies which she and the child had to undergo at once removed the tabu state and rid them of the danger of such attacks.

(*c*) This, however, does not fully explain why the belief in a changeling should have arisen. Hence we must allow much to the play of human fancy and imagination, prompted by the living belief in such terrors from outside evil influences of all kinds. Where it was believed that spirits, etc., actually stole children or did them harm, it would be an easy step for the parents to imagine that their child had actually been exchanged for the offspring of the supernatural thieves, especially where a child was emaciated or deformed, or did not thrive, or was especially fractious, gluttonous, or the like. Emaciation and fractiousness, as in the Bedawī and Greek instances cited above, are specially regarded as proofs of the exchange. Again, where a child bore a real or fanciful resemblance to the appearance popularly ascribed to any supernatural being, it would be easy to suppose that he actually was such a being. A hydrocephalous child might well be regarded as a dwarf changeling, dwarfs being supposed to have enormous heads; or, as Ploss suggests (i. 117, 119), a child with symptoms of cretinism would easily be looked upon as a changeling, the traditional form of which resembles that of a cretinous child. Reputed changelings, observed by Luther and by people in much more modern times, always have an unnatural appearance, which is due to disease or to physical abnormality. The belief once formed, many fanciful ideas, such as the changeling superstition everywhere shows, would arise and become part and parcel of it.

Nutt (*Voyage of Bran*, ii. [1897] 230 f.) seeks to explain the origin of the belief in Ireland as (1) the form which the memory of the sacrifice of children ('one-third of their healthy offspring') took when such sacrifices had ceased under Christianity. The children had been carried off by the powers of life, viz. the fairies. Or (2), since sacrificial victims must be young, healthy, and vigorous, probably the sickly and ailing would be rejected. In folk-memory this was translated into the statement that the fairies had carried off the healthy and left in exchange the sickly. Though this may account in part for the Irish changeling belief (in Ireland the old gods were thought to have become a kind of fairies [see CELTS, § v.]), it does not explain the belief as it is found elsewhere, since in general it is connected with the universal idea that infants are in danger from spirits, demons, etc.

(*d*) Nor can we omit from a consideration of the changeling belief the possibility of its containing an element of actual fact, which did not originate, but served to strengthen, the superstition. When the territory of an aboriginal people was invaded by a conquering race, before the two finally came to terms, the former may have lived in seclusion, venturing forth by stealth to harry and raid their conquerors. Women and children would fall victims to them and would be stolen away; nor is it altogether impossible that, when a child was taken, a deformed or weakly child of the aborigines would be left in its place, perhaps with a view to its being benefited by the care of members of the superior race. Many of the fairy and dwarf legends of northern Europe are eminently suggestive of actual fact, and in this sense fairies may once have been a real race, hostile to and tricking the invading folk. Thus existing belief in spirits or other beings with traits akin to those of fairies would be merged in the later traditions of this actual race. This is not to say that the fairy belief originated wholly in traditions of an actual people, for it is much more complex than that (see FAIRY). Some have seen in such traditions reminiscences of an actual pygmy race in Europe (Ploss, i. 111; MacRitchie, *Testimony of Tradition*, 1890; cf. Lang, Introd. to Kirk's *Secret Commonwealth*, 1893, xx-xxv); nor is this altogether impossible, since certain archæological remains suggest it. In any case such traditions based on actual occurrences may have been handed down from the time of the conflict of Neolithic with Palæolithic men, and of men of the Bronze with those of the Neolithic age. Contrariwise, existing beliefs about supernatural beings would easily be alleged of any aboriginal secluded folk whose name, handed down to later generations, became more and more mysterious.

H. H. Johnston (*Uganda Protectorate*, 1902, ii. 513 ff.) has cited some facts which lend support to this theory. He shows that the pygmy races of the Congo region, with gnome-like appearance and tricky character, have some of the traits of the European dwarfs and fairies, and adds: 'It is sometimes related that when the Negro mother awoke in the morning, her bonny, big, black child had disappeared, and its place had been taken by a frail, yellow, wrinkled Pygmy infant, the changeling of our stories' (*op. cit.* 516).

CHANNING.—See UNITARIANISM.

CHANT.—See MUSIC.

CHAOS.—'Chaos' comes from the same root as χάσκω—the 'yawning' space. According to Hesiod (*Theog.* 116), it was before all things and consisted of mist and darkness. From it were begotten Erebos and Night (see Gomperz, *Griech. Denker*, 1896, i. 32-80, 417, 430 f.), as well as Love (Erôs) or Desire (Plato, *Symp.* 178 B). The Stoics, deriving the word from χέω, explained Chaos as the elemental water (schol. on Apoll. Rhod. i. 498), while in the Roman age it became the primeval matter out of which the universe has been constructed (Ovid, *Met.* i. 7 f., *Ars amor.* ii. 470 ff.; see Lactantius, *de Div. Instit.* i. 5). The Orphic cosmology made Æther and Chaos the offspring of Chronos, or Time, and so, along with Necessity, the second principle in the universe (Damascius, *de Prim. Princip.* p. 380 ff.). In the Greek poets the word is sometimes used of the atmosphere; Latin writers identify it with the under world.

Hesiod's conception of Chaos and of creation as a generative process points to the east. Though our knowledge of Phœnician cosmology is derived from late writers, whose accounts of it have been largely coloured by the speculations of Greek philosophy, the cosmology itself is based upon old materials, and in its main outlines probably goes back to an early period. Chaos appears in it as the elementary principle whose union with Spirit (πνεῦμα) produced Desire (πόθος). Desire, in its turn, combined with Chaos and Spirit to generate Môt, which, according to Philo Byblius (Euseb. *Præp. Evangel.* i. 10), was explained to be 'mud' by some, and 'the putrefaction of a watery mixture' by others, and is usually connected etymologically with *mô*, 'water.' From Môt proceeded the egg which contained all the germs of the universe, including the heavenly bodies; this broke in half, and out of the two halves the earth and heaven were formed. Life originated in the thunderstorms that were produced by the heat of the air. In this system Chaos seems to correspond exactly with the Chaos of Hesiod, which consisted of mist and darkness, Môt being rather the Chaos of Ovid. In Gn 1[1.2] the place of Chaos and other abstract principles is taken by a personal God who created the heaven and earth. The conception of Chaos, however, is still left, but it becomes the condition in which the earth was created by the Deity together with the darkness which was spread over the face of the pre-existent deep. The Phœnician idea, however, of the union of Chaos with Spirit is retained in the statement that along with the darkness the Spirit of God also brooded over the deep, though instead of the abstract πνεῦμα we have 'the Spirit of God.'

The Phœnician and Hebrew cosmologies are ultimately traceable to Babylonia, but, while the Phœnician cosmology rejects the polytheism of the Babylonian system, and develops the materialistic side of it, the writer of Genesis 1 rejects both the polytheism and the materialism of the Babylonian original, and admits the agency only of the one Creator. In the Babylonian Epic of the Creation the two primary principles are the Deep (*Apśu*), 'the primeval one,' and 'the Flood' or Chaos (*Mummu*) of Tiamât, the dragon of the unformed and anarchic ocean, from whom were afterwards derived 'the waters above the firmament,' where in the present orderly universe they are safely kept under lock and key. In the account of the Babylonian cosmogony given by Damascius, *Môymis*, *i.e.* Mummu, is made the son of Apśu and Tiamât rather than Tiamât herself under another aspect. Haupt is probably right in explaining Mummu as *Mu-mu*, 'the waters'; the views of Jensen (that the name means 'frame' or 'art') and of Delitzsch (that it signifies 'turmoil') are untenable. In any case, as Gunkel and Zimmern have pointed out (*Schöpfung und Chaos*, p. 401), Mummu represents the origin of things, and the ideograph denoting it proves that it has the primary signification of 'flood.' This is in accordance with the fact that the official cosmology of Babylonia originated at Eridu on the shores of the Persian Gulf, and taught that the earth had grown out of the water, which was consequently the origin of the universe. But the water could be envisaged under two aspects, either as the law-obeying element which provided Babylonia with its annual flood, and over whose surface trade and culture had been carried in boats to Eridu, or as the anarchic element which had brought about the great deluge, and from the midst of which storms and whirlwinds descended upon mankind. In the Epic of the Creation the creation of the world is ascribed to the union of the two forms of the watery element; amongst a people, however, who believed that order was imposed on disorder and law on anarchy, the primordial principle would necessarily have been the watery chaos rather than the deep, which was subject to law. Cf. artt. COSMOGONY AND COSMOLOGY.

LITERATURE.—Cory, *Ancient Fragments* (London, 1826), ed. by Hodges, 1876; Gunkel, *Schöpfung und Chaos* (Göttingen, 1895), pp. 7, 17–29; Zimmern in *KAT*³, ii. i. 507–514.

A. H. SAYCE.

CHARACTER.—'Character' (Gr. χαρακτήρ, from χαράσσειν, χαράττειν, 'to engrave') meant originally the tool employed for drawing and stamping, as well as the impression made therewith—the distinctive mark, especially as used in the minting of coin. As early as the 5th cent. B.C. the word acquired a metaphorical sense, as is shown by the writings of Herodotus, Æschylus, and others, who applied it both in the sphere of ethical psychology and in that of literary criticism. The work on *Moral Characters* (ἠθικοὶ χαρακτῆρες) which bears the name of Theophrastus, the pupil and successor of Aristotle, is, in all probability, a later compilation; nevertheless the Aristotelian school resembled its founder in showing a general predilection for exact observation and distinct portrayal of the various types of human nature. The delineation of such types was set before the public with special clearness and force by the New Comedy, while the rhetoricians likewise devoted themselves eagerly to the subject.[1] In its psychological reference, accordingly, the term χαρακτήρ is used in the writings of later antiquity with great frequency and with manifold shades of meaning. The word, moreover, was also employed in the sense of species or category of literary style, as, *e.g.*, in the distinction of four (or sometimes three) diverse 'characters' of diction.[2] To Latin writers χαρακτήρ was, of course, a foreign word, for which they tried in various ways to find an equivalent in their own tongue.[3] In the language of the mediæval Church the word came into frequent use, acquiring in particular a peculiar religious connotation. From the time of Augustine, 'character' was applied as a technical expression to the spiritual signs which, according to the belief of the Church, were indelibly impressed upon the soul after baptism, confirmation, and ordination. This usage is found fully developed, *e.g.*, in Thomas Aquinas: 'character baptismatis, confirmationis, ordinis,'[4] and it has been maintained in the Roman Catholic Church till the present day.[5] The older varieties of meaning, however, still hold their ground in the recognized speech of the learned, whence the word 'character' found its way into the languages of modern civilization. In these languages, with other significations, it not seldom denotes simply a letter of the alphabet.[6]

In modern times the word was brought into more general notice and application by La Bruyère's *Les Caractères de Théophraste, avec les caractères ou les mœurs de ce siècle*, a work which, published in 1687, exercised a great influence upon the literature not only of France but of other civilized peoples. As a result of its vogue, the analysis and delineation of individual types of personality became once more, as in the later period of ancient literature, a favourite subject of literary interest.[1] At that time the term 'character' was often applied to something in the nature of a representation, sketch, or portrayal,[2] but it was used chiefly to connote the peculiar psychical constitution of an individual—the more permanent qualities of the personality in contrast with its more mutable states. There are, accordingly, many different kinds of character, good or bad. A person of no character is one whose qualities have no distinct stamp. Character would thus appear to be in the main a gift of nature, though the co-operation of the individual will is by no means excluded.

In regard to both the conception of character and the problem involved, a new epoch begins with Kant. First of all, he distinguishes between an *empirical* and an *intelligible* character. The former lies within the region of experience, and is subject to the laws of causality; the latter, on the other hand, is the cause of actions as phenomena, and is therefore free, and independent of necessary law.[3] To this distinction Kant attaches the utmost significance, as it enables him to recognize the operation of both necessity and freedom in human conduct, and thus to harmonize their long-standing antithesis. The distinction also provided a theme of great interest for post-Kantian speculation in Germany, and in particular played an important part in the philosophy of Schopenhauer. A much stronger and wider influence, however, was exercised by the further distinction drawn by Kant—that, namely, between *physical* and *moral* character. His discussion of this subject is found mainly in his *Anthropologie*, the second part of which is devoted to 'die anthropologische Charakteristik.' Moral character alone, he holds, is character in the proper sense: it is not divisible into particular kinds; it is not this or that, but must always remain a single entity. Man's physical character, embracing his natural disposition and temperament, represents merely what nature has made of him; his moral character is what he makes of himself. 'Simply to have a character—*i.e.* a moral character—implies that property of the will by which the subject binds himself to certain practical principles unchangeably laid down for himself by his own reason.' 'The foundation of a character is absolute unity in the inner principle of conduct as a whole.'

This view soon attained a wide diffusion, even outside of Germany, and to it is primarily due the high estimate now set upon the conception of character. Kant proceeds to ask whether the moral life is, or is not, founded upon one's own action—whether it is paramountly one's own, or in greater or less degree superinduced. The importance now commonly attached to the formation of character is likewise traceable to Kant. The term 'character,' however, still retains the sense favoured by empirical psychology. Thus we speak without misgiving, *e.g.*, of an inherited character, of a character acquired by adaptation, habit, and the like. The uncritical use of the

1 On this subject Sauppe, *Philodemi de vitiis lib. x.*, Leipzig, 1853, p. 7 f., writes: 'Peripatetici disciplinae suae principis et auctoris exemplum nulla in re magis secuti sunt, quam ut omnia quae vel in natura rerum existerent vel in vita hominum et publica et privata usu venirent accuratissime observarent et observata sive libris singularibus explicarent sive ad sententias suas firmandas et illustrandas adhiberent. Neque vita ipsa tantum exempla suppeditabat, sed maximam notationum copiam nova comoedia habebat. Quae ut eidem saeculi ingenio originem debebat, atque Aristoteleum illud studium vitam quotidianam moresque hominum observandi, ita quaedam fortasse ex Aristotelis vel Theophrasti libris desumta in usum suum converterat, sed multo plura certe quam acceperat deinde philosophis et rhetoribus suppeditavisse censenda est.'

2 Examples of this usage will be found in the well-known *Thesaurus* (1816–28) of Henricus Stephanus.

3 Stephanus cites the following passages: Cicero, *Top.* xxii.: 'Additur autem descriptio, quam Graeci χαρακτῆρα vocant'; *ad Brutum*, 36: 'sed in omni re difficillimum est, formam (quod χαρακτήρ Graece dicitur) exponere optimi.'

4 Schütz, *Thomas-lexikon*, Paderborn, 1881, *s.v.*

5 So in the decrees of the Council of Trent (Sess. vii. 'de Sacramentis in genere,' can. ix.): 'Si quis dixerit in tribus Sacramentis Baptismo scilicet, Confirmatione et Ordinatione non imprimi characterem in anima, hoc est signum quoddam spirituale et indelebile, unde ea reiterari non possunt, anathema sit.' Cf., further, Denzinger, *Enchiridion symbolorum*¹⁰, Freiburg, 1908, nos. 411, 695, 1918.

6 Murray (*OED*) enumerates no fewer than nineteen varieties of meaning in English.

1 Of the development of the word in Germany, an excellent investigation is given by R. Hildebrand, 'Charakter in der Sprache des vorigen Jahrhunderts,' in *Ztschr. f. d. deutschen Unterricht*, vi. [1892] 7.

2 *e.g.* Rabener in his *Satires*, 1755, speaks of the 'originals of my characters.'

3 The leading passage dealing with this distinction is *Kritik der reinen Vernunft* (ed. Hartenstein, Leipzig, 1869, iii. 374 ff.).

word in such divergent senses is a fruitful source of ambiguity and confusion.

The term 'character' has also had a somewhat singular history. The one persistent element in its connotation has been the attribute of stability, which, however, pertained first of all to the symbol, then to the thing symbolized, and which, while originally a property induced from without, came at length to denote one generated from within; finally, this stability was at first regarded as in the main a gift of nature, and subsequently as a product of self-activity. The signification of the term has been transferred by degrees from the external to the internal, and from the sphere of necessity to that of freedom. We have here, in fact, a signal illustration of the way in which the spiritual evolution of mankind may reflect itself in the history of a word.

While that definite ethical sense of the term 'character' with which we are nowadays mainly concerned was first imparted to it by Kant, the idea itself is no creation of modern thought. For thousands of years man has striven to find in self-activity a basis for his life, and so to invest his humanity with a certain independence of the external, and a certain stability within. This endeavour found classical expression in Stoicism, and the peculiar type of human character evolved in that school has persisted throughout all succeeding generations. It asserted itself more particularly in many outstanding personalities of the 'Enlightenment' period. Even Kant himself shows a certain affinity with the Stoic system of thought, as may sometimes be traced in his phraseology.

This inwardly directed movement of the human spirit manifests itself for the most part in periods when the conventional relations of life are felt to be unsatisfactory. It proceeds upon the postulate that there subsists within the soul of man a bond of affinity with the cosmic reason, and also the capacity of developing that affinity. In other words, the movement implies that man is no mere link in a chain of natural causation, but a being endowed with a spontaneous energy, and therefore free to determine his own acts. Where human life shows no such power of inward movement, the idea of forming a character is practically out of the question.

In our own age the dearth of character is widely deplored, and not without good reason. The activities of the civilized man of to-day are also largely engaged with the external world, and at the same time his conviction of the existence and presence of an internal world is undermined by so many doubts that it is difficult for him to find an inner foundation for his life and conduct. Then there is also the hurry of modern life, which hardly favours the task of calm reflexion, or of combining the various activities of life into a single and coherent whole. Now, as the disadvantages and dangers of such a method of living are apparent to all, there rises on every hand the cry that more must be done for the building of independent character. Such a demand, it is true, seems on the face of it to involve a contradiction. Character can be formed only in virtue of personal decision and action. It cannot be coerced by external provisions and precautions; mere drill will not make character. Nevertheless, while the vital impulse must always proceed from the individual himself, much may be done by the community in the way of stimulus and support. First of all, there must be in the social environment an effective revival and realization of the idea of an inner world—the primary condition, as has been said, of character-building in the real sense. Further, it is a matter of profound importance that the things of the spirit should be assessed at their true value by the community at large, and that they should not be overwhelmed by the external things so highly prized in our social life. It is indispensable, finally, that wider scope be given to personal and self-directed activity. No one who truly cares for the development of independent character will attempt to direct the course of a man's life by mere mechanical rules and methods. The reformer in this sphere must have faith in freedom, and must not shrink even before the dangers which freedom undoubtedly carries with it.

All this makes high demands not merely upon our system of education, but upon the whole structure of our social life. To treat of these demands in detail lies beyond the purpose of this article. But there can be no question that the problem we have here outlined is one of the most serious and most urgent of the present day.

CHARAN DĀSĪS.—The Charan Dāsīs are an Indian Vaiṣṇava sect, an offshoot of the *Bhakti-mārga* (*q.v.*). The name is a corruption of the Skr. *Charaṇa-dāsī*, and is derived from the religious name of the founder of the sect, Charan Dās (Skr. *Charaṇa-dāsa*). The number of its adherents is small. They are found in the S.E. Panjāb, in the United Provinces of Agra and Oudh, and in the Native State of Alwar. No complete enumeration of the sect was made in the census of 1901, but 1253 were recorded in 1891 in the Panjāb, and 161 in the United Provinces.[1] As for Alwar, all we know is that there the Charan Dāsīs are neither numerous nor wealthy, but have ten small temples and monasteries. The most important of the temples is that at the town of Bahādurpur, the home of the founder's maternal ancestors, in whose honour a small fair is held. Other holy places connected with his history are Ḍaharā, also in the Alwar State, where he was born, and where a *chhatrī*, or ornamented pavilion, is built over the spot in which his navel-cord was buried; and Delhi, where he died. At Ḍaharā his cap and rosary are preserved and exhibited to the faithful; and at Delhi there is a *samādh*, or monument, in his honour, with a temple attached, in which an impression of his foot is shown, and where a fair is held every *Basant Pañchamī* [the vernal feast of the fifth lunar day of the month of Māgh (Jan.-Feb.)].

Although the members of this sect are few in number, it will be advisable to discuss their tenets in some detail, for they are typical of an important group of the so-called 'dissenting' Vaiṣṇava forms of belief, and, moreover, the sect is one of the few concerning which we possess authentic literary documents.

1. Founder.—In order to a right comprehension of such an Indian sect, to whom the life of its founder is still a living memory, a consideration of the historical circumstances of his time is of the first importance. Charan Dās was born A.D. 1703 and died in 1782. These seventy-nine years were a period of calamity for India, and especially for Hindus.

[1] Charan Dāsīs were counted in the United Provinces in 1901, and then numbered 1773. This is nearer the mark than the very doubtful 161 of 1891.

In A.D. 1707, Aurangzib, the oppressor of Hindus, died miserably at Ahmadnagar. Then followed the five years' struggle of Bahādur Shāh with the Sikhs. Bahādur Shāh died in 1712, and, after seven years of internecine strife, Muḥammad Shāh came to the throne. During his weak reign Haidarābād revolted, and Oudh became practically independent. In 1739 India suffered the horrors of Nādir Shāh's invasion. In 1743 the Marāṭhās conquered Mālwā, and, in 1751, Orissa and Bengal became tributary to them. In 1747, 1751, 1756, and 1759, occurred the four invasions of Aḥmad Shāh Durrānī. By the second he won the Panjāb, in the third he sacked Delhi, and in the fourth the Marāṭhās were defeated by him at Pānipat in 1761. From this time the Mughal empire ceased to exist except in name, and in 1765 the Dīwānī of Bengal, Bihār, and Orissa was granted to the British.

It was during these terrible times that many Hindus sought a refuge from persecution and tyranny in ascetic pietism. They found in the horrors that almost daily surrounded them a proof that no religious observances, no obedience to Brāhman priests or to the rules of caste, could give release from the trammels of existence, which they had been taught for generations, and now found by experience, to be nought but misery. To such even the loving faith in a kindly, personal Supreme—the keynote of the *Bhakti-mārga*—seemed to make demands too great for suffering human nature. Some found consolation in self-abandoning resignation (*Prapatti-mārga*), while others, especially in N. India, turned to mysticism, and sought by inward meditation, coupled with morality of conduct, to attain to the release that faith in a God, whose love had become hidden, appeared unable to secure. One of these latter was Charan Dās. He was born at Ḍaharā in Alwar, and was named Ranjīt (Skr. *Raṇa-jita*) by his parents. His father's name was Muralīdhar, and his mother's Kunjo. They belonged to the Ḍhūsar tribe of the Baniyā caste. He came of a pious stock. His father was accustomed to wander in the forest near his home for the purpose of prayer and meditation, and one day went out with this object, but never returned. When search for him proved unavailing, Kunjo took her five-year old son to Delhi, where her father, moving from his ancestral home at Bahādurpur, had lately settled. The lad, who was lame of one leg, showed from his earliest years signs of extraordinary piety, and, as his father had done before him, used to wander in the forest, full of religious questionings. In his nineteenth year, while thus roaming in ecstasy, he came across a holy man named Suk-deo Dās (Skr. *Śuka-deva Dāsa*) of Śukra Tāl, a village near Muzaffarnagar. Later legends have identified this person as a re-incarnation of the famous Śuka-deva who is said to have narrated the Purāṇas. Influenced by the loving words addressed by Suk-deo to the band of children that accompanied him, Ranjīt threw himself at his feet, and besought him to receive him as his disciple, and to carry him, poor lame creature that he was, across (the ocean of existence into the haven of perfect peace). The saint took him on his shoulders (literally or metaphorically), and, after carrying him for some distance, initiated him as a disciple, teaching him the Rāma-*mantra*, or initiatory formula of Rāma-worshippers, and instructing him in faith in God (*Hari-bhakti*) and knowledge of the Supreme (*Brāhma-jñāna*).[1] Suk-deo named his new disciple 'Charan Dās,' or 'Foot-servant,' in token that he was no longer lame in spirit.

The convert returned to Delhi and took up his abode in a cave near that city, where he studied for twelve years, 'continually murmuring Rāma's name and meditating on the Adorable (*Bhagavat*).' He then, about A.D. 1730, commenced to teach others, and founded a sect of his own. He had fifty-two chief male disciples, each of whom founded a local centre of the sect (*gaddī*), all of which are said to be still in existence. The best known of these followers was named Yuktānand. Charan Dās had several female disciples, of whom the most celebrated were Sahajo Bāī and Dayā Bāī. These two were poetesses, and their hymns, overflowing with devotional faith, are much admired.[1]

Many legends concerning miracles performed by Charan Dās are narrated in a work called the *Guru-bhakti-prakāśa*. He is said to have granted his mother a vision of the Adorable in his personal form—a favour which had previously been conferred only upon the Saint Nārada, and to have been denied even to Brahmā (cf. *Mahābhārata*, x. 12,971). He was arrested by Nādir Shāh, but vanished from the prison. When again seized, and loaded with chains, he appeared the same night by Nādir Shāh's couch, and kicked him on the head. The tyrant, full of terror at the sudden apparition, fell at his feet and implored his forgiveness. Another story is that two years previously he foretold the death of the emperor 'Ālamgīr II. (1759). Charan Dās died in 1782 at Delhi, where he was cremated, the *samādh* already mentioned being erected at the spot.

2. Tenets of the sect.—Charan Dāsīs are Vaiṣṇavas, and as such claim to be followers of the *Bhakti-mārga*. As stated in the article on that system of belief (vol. ii. p. 544), although each Vaiṣṇava church has become divided into numerous sects, none of these is opposed to the mother church. Each has been given a name and a separate recognition only on account of the preferences (*ruchi*) of particular teachers for laying stress on particular points. This is as true of the Charan Dāsīs as of the others. The teaching of their founder is a well-recognized phase of Vaiṣṇavism. He, in agreement with other teachers like Palṭū Sāhib, Jagjīvan Dās, Daryā Sāhib, and the better known and far older Kabīr and Nānak,[2] insisted upon two things as of primary importance—the power inherent in the *guru*, or spiritual guide, of conferring salvation, and the mystic power of the Name of the Adorable (*Bhagavat*). The preface to the collection of his hymns takes pains to inculcate that all such sects were founded by great and holy men, and that for members of one Vaiṣṇava sect to condemn the tenets of the founder of another is only to betray ignorance. The man who does this condemns at the same time, *ipso facto*, the teaching of the founder of his own sect, and is thus guilty of grievous sin. With this reservation, the following may be taken as a summary of the main points of the teaching of Charan Dās.

Belief in the Vedas and Purāṇas, image-worship, obedience to caste-rules, pilgrimages, and other outward religious observances, although to a certain degree effectual, are, when compared with *bhakti* directed to the *guru* or with meditations on the name, of no value as means of salvation. By salvation is meant the personal, blissful, endless

[1] These are the terms actually employed by Charan Dās himself in the passage of his *Swarodaya* describing the episode. Other writers of the sect call his doctrines the *Śabda-mārga*, or 'Word-path,' in contrast with the *Bhakti-mārga*, or 'Way of Faith.' How much of the account of the episode is literal and how much metaphorical it is impossible to say. Throughout all his works Charan Dās invariably refers to Suk-deo as his authority, and the sect is even called by some the *Śuka-saṁpradāya*, or 'Church of Śuka.' (Suk-deo is often wrongly called 'Sukh-deo' by later writers.)

[1] Collections of the hymns of both have been printed at Allahabad (Sahajo's in 1908, and Dayā's in 1909), with a summary, in each case, of all that is known concerning them. Both, like Charan Dās, were born at Ḍaharā, and belonged to the Ḍhūsar caste. For the former, see also Devī-prasāda, *Mahilā-mṛdu-vāṇī* (Benares, 1905), where there is a notice with specimens of her hymns. Her father's name was Hariprasād. Nothing more is known about her, but her poems contain valuable information regarding her teacher, or *guru*. She cannot have been Charan Dās's sister, as is said by some. Dayā Bāī's best-known work, the *Dayā-bodha*, was written in 1751.

[2] So similar are the doctrines taught by Charan Dās to those of Nānak, the founder of the Sikh religion, that there are actually Sikhs who at the present day also call themselves Charan Dāsīs (see Rose, *Report on the Panjāb Census*, 1901, p. 130).

existence of the soul near the Adorable after release from the bonds of transmigration, exactly as in other forms of the *Bhakti-mārga* (vol. ii. p. 544).

An extravagant respect paid to the *guru* is the common property of most *Bhakti-mārga* sects. In some it is carried even further than by the Charan Dāsīs. It is a favourite Vaiṣṇava statement that the *guru* has two arms. With one he reaches downwards and rescues the proselyte soul from the world of sin, while with the other he reaches upwards and presents the soul, freed from worldly defilement, before the throne of the Adorable.[1] From this point of view he closely corresponds to our idea of a Mediator. It will easily be understood how this belief, held by a population readily accessible to mysticism, could branch out luxuriantly in many directions. In some sects the *guru* has become God incarnate, and claims possession of everything held dear by the devotee—his wealth, his home, nay, even his wife. Amongst others, including the Charan Dāsīs, it has developed into an exaggerated idea of the sanctity of the *guru*. No words can be too strong to describe his spiritual might. He is the General who levels the castle of delusion with a bombardment that has love for its cannon-balls, and that inflicts the wounds of the Word (*śabda*). He is the Hunter who shoots the sinner-deer with the arrow of the Word. He is the Sword of the Word, which cleaves in two the body of Sin. He is the Arrow of the Word, the Javelin of the Word, and so on. He drags the body pierced by him across the bounds of existence, so that it returns not, and lays it, freed from the eighty-four bonds, at the feet of Hari. The believer must know the *guru* and Hari to be one, and yet the *guru* is mightier than Hari Himself, for he protects the sinner from His wrath. He is the Rāma-incarnation, he is the Kṛṣṇa-incarnation, he is the Man-lion-incarnation, and so on.[2] In other words, the tendency of the cult is to divert the adherent's *bhakti*, or devotional faith, from the Deity to the human mediator.

We have stated that its followers refer to the doctrine of the cult as the *Śabda-mārga*, and attention will have been attracted by the importance attached in the above quotations to the *śabda* of the *guru*. *Śabda* means literally 'word,' and is technically applied to the short, pithy verses in which a religious teacher, such as Charan Dās or Kabīr, couched his maxims. But *śabda* has also an esoteric meaning. It is the deified Word, the 'Logos.' In the works of the older reformer, Kabīr, there are many passages[3] which are little more than expansions or paraphrases of the opening verses of St. John's Gospel, and Charan Dās employs very similar language regarding what he calls the 'Limitless Word' (*An-had śabda*).[4] It is, he says, beyond the farthest limit of the beyond. It completely purifies the thoughts. It has no letters and no articulate sound. It is the Supreme Deity (*Parabrāhma*). He who meditates upon it becomes himself the Supreme Deity; he puts on immeasurable glory, and all his error flees. Nothing that is known is like unto it. It is to be considered as the sun, as the moon, as all creation. The soul that possesses self-knowledge, and is absorbed in this limitless One, becomes the Supreme Self (*Paramātmā*). In his meditation he hears the Limitless, and, becoming limitless himself, his earthly desires are all destroyed. His sins and his virtuous actions alike lose their fated fruit.[1]

Closely connected with this view of the deified Word is the doctrine regarding the mystic Name of the Deity. It is here unnecessary to do more than allude to the frequent parallels in other religions. Charan Dās says:

'The Name is inarticulate. It cannot be written, read, or pronounced. Upon this Name must the devotee meditate day and night. The Name removes all sorrow; without it all sacrifices, all austerities, all pilgrimages, all vows are without fruit. To attempt these without the Name is but to grind chaff and expect flour. The Vyāsa made the four Vedas, and carefully weighed their meanings, yet the essence of them all is but the Name of Rāma. Meditation on the Name of Rāma destroys all sins, even the worst. Take the Name when drinking water or when eating food, when sitting down or when rising to walk. Repeat the Name in body, heart, and soul, through every waking hour, for, except Hari, there is no other friend.'[2]

A favourite comparison is that of a holy man with a hero. On account of the similarity to Christian ideas, a few verses may be quoted from the *Surmā kā Aṅga*:

'No hero is equal to the saint who, like the warrior, hath destroyed Illusion with all his army. He graspeth the shield of patience, and with it thrusteth aside the hosts of outward religious observance. Memory maketh he his arrow, kept in the quiver of his heart, and he shooteth it from the bow of meditation pulled by the hand of love. He bindeth to his side the dagger of wise discrimination, and wieldeth the lance of holy sayings. The trumpet of the Limitless Word soundeth in his ears, and filleth him with eagerness for the fray. With heart full of rapture he rusheth to the field of battle, and in his death he gaineth immortality.'

The ideas of the Deity inculcated by Charan Dās are those of other Bhāgavata sects. The Supreme is personal and endowed with all auspicious qualities, and salvation consists in the soul, free from all earthly bonds, dwelling for ever near Him in perfect bliss. As a personal deity He is named Hari or Rāma indifferently. He is also worshipped under the dual form of Rādhā and Kṛṣṇa, and at the present day these are the favourite deities of the sect, although, except in passages avowedly based upon the *Bhāgavata Purāṇa*, the present writer has failed to notice in Charan Dās's own works any special reverence paid to these incarnations.

The practical teaching of the founder is strongly ethical. While he attacks all formal religious ceremonies, and forbids image-worship of any kind, he lays great stress upon the necessity of general morality. The moral code of the sect consists of ten prohibitions. Its members

'are not to lie, not to revile, not to speak harshly, not to discourse idly, not to steal, not to commit adultery, not to offer violence to any created thing, not to imagine evil, not to cherish hatred, and not to indulge in conceit or pride. The other obligations enjoined are, to discharge the duties of the profession or caste to which a person belongs, to associate with pious men, to put implicit faith in the spiritual preceptor, and to adore Hari as the original and indefinable cause of all, and who, through the operation of Māyā, created the universe, and has appeared in it occasionally in a mortal form, and particularly as Kṛṣṇa at Vṛndāvana.'[3]

The Māyā, to which allusion is here made, must be distinguished from the Māyā discussed in the Advaita Vedānta of Saṅkara. Many of the modern Bhāgavatas have borrowed the name, using it to indicate the demiurge who created the physical world, with all its evil qualities, in subordination to the Supreme. In the works of other writers, such as Tulasī-dāsa, Māyā sometimes performs an office resembling that of the Satan of the Book of Job.

It is noteworthy that Charan Dās admitted

[1] See, for instance, Govindachārya, in *JRAS*, 1910, p. 587.

[2] This account is quoted from various verses in the *Guru-mahimā* section of Charan Dās's *Bāṇīs*. The extraordinary statement that the *guru* is more powerful than the Deity Himself is not confined to India. A scandal was created in Ireland recently by a story of a Roman Catholic priest using almost the same words with reference to the consecration of the Host.

[3] See G. H. Westcott, *Kabir and the Kabir Panth*, 1908, *passim*, and Index, *s.vv.* '*Shabda*' and 'Word.'

[4] The curious half-Indian, half-Arabic compound, *An-had*, as applied to the Word, is not peculiar to Charan Dās. It is at least as old as Kabīr, and occurs in the Sikh *Granth*. The term 'limitless' includes time as well as space. The 'Limitless Word' has been described to the writer by an Indian friend as the 'eternal sound' or 'unceasing music' ever abiding within the Self—a sort of indwelling Spirit.

[1] Various verses in the *An-had Śabda kī Mahimā*.

[2] Verses taken from the *Sumiran kā Aṅga*. All modern Bhāgavatas lay stress on the power of the Name (cf. Grierson, *JRAS*, 1910, p. 107 ff.). But the Charan Dasis regard meditation upon it as the only means, not as one of the means, of salvation.

[3] Wilson, *Essays on Rel. of Hindūs*, i. 179.

persons of either sex to the full privileges of discipleship, and that no qualifications either of caste or of sex were required for his teachers. As already mentioned, two of his most famous disciples were women—Sahajo Bāī and Dayā Bāī.

Although the founder prohibited image-worship, his followers are not so strict at the present day, and the worship of the more sacred Vaiṣṇava symbols, such as the *Sālagrāma* stone or the *Tulasī* plant, is not uncommon amongst the less particular members of the community. They now even have images in their temples, respect Brāhmaṇas, and, like other pious Hindūs, fast on the eleventh day of each lunar fortnight.[1] Wilson's account of the community may be quoted as the fullest and most accurate :

'The followers of Charan Dās are both clerical and secular; the latter are chiefly of the mercantile order; the former lead a mendicant and ascetic life, and are distinguished by wearing yellow garments and a single streak of sandal, or *gopīchandana*, down the forehead; the necklace and rosary are *Tulasī* beads; they wear also a small pointed cap, round the lower part of which they wrap a yellow turban. Their appearance in general is decent, and their deportment decorous; in fact, although they profess mendicity, they are well supported by the opulence of their disciples.'[2]

The written authorities of the sect are all in the Hindī language. None of them is in Sanskrit. Great stress is laid upon this, and, according to Powlett (*op. cit.* p. 215), writing about the year 1880, 'some time ago they resented the attempt of a learned Charan Dāsī to substitute Sanskrit verse for the vulgar tongue.' They have translations of the *Bhāgavata Purāṇa* and of the *Bhagavad-Gītā*. These versions are ascribed, at least in parts, to Charan Dās himself. His original works include the *Bhakti-sāgara* (see below), the *Jñāna Swarodaya* (printed, Delhi, 1876), the *Sandeha Sāgara*, the *Dharama Jahāz*, the *Brahmavidyā Sāgara* (also called the *Charaṇa-Dāsa Sāgara*; pr. Lahore, 1898), and the *Nāsiketopākhyāna* (pr. Bombay, 1882). The *Jñāna Swarodaya*, which is much esteemed, is a small book of only 227 verses. The *Nāsiketopākhyāna* (*sic*) is a version of the story of Nāsiketa taken from the *Brahmāṇḍa Purāṇa*. The Paurāṇik tale is based on the old and famous legend of Nachiketas told in the *Kaṭha Upaniṣad*. Under the form of the Nāsiketa legend it was one of the first subjects dealt with in modern Hindī prose, having been written in the then new form of speech by Sadala Miśra, and published in 1803 under the title of *Chandrāvatī*.[3] The most striking part of the work is a kind of *Inferno*, in which the hero is permitted to visit the various hells, and to see the torments of the damned. The damned, and their sins, are described in detail. He is then taken to heaven, and subsequently returns to earth to narrate his experiences. A good edition of Charan Dās's *Bāṇīs* (1908), or shorter poems, and others of the *Bāṇīs* of Sahajo Bāī (1908) and Dayā Bāī (1907), have been published at Allahābād during the past few years. The *Bhakti-sāgara*, together with 16 minor works, was published at Bombay in 1903, and editions of the same treatise appeared previously to this in Lucknow (3rd ed. 1903). The *Bhakti-sāgara* is dated Sam. 1781 (A.D. 1724).

LITERATURE.—The principal materials for our knowledge of the sect are the works of Charan Dās and his disciples mentioned above. Further information is given in a scholarly article by Dēvī Prasāda in the *Nāgarī Prachāriṇī Pattrikā*, v. [1901] 132, and in the anonymous introductions to the three collections of *Bāṇīs* printed at Allahābād. The latter are valuable as being founded on materials provided by members of the sect. All these are in the Hindī language. As regards European writers, H. H. Wilson's, in *Essays on the Religion of the Hindūs*, London, 1861, i. 178 ff., is the only approximately complete account. Additional information is given by P. W. Powlett on p. 214 ff. of the *Gazetteer of Ulwur* (Simla, 1880), and by E. D. Maclagan on p. 120 ff. of the *Punjab Census Report for 1891* (Calcutta, 1892). All the above European information is brought together and collated by W. Crooke in the art. 'Charandāsi' in vol. ii. of his *Tribes and Castes of the N.W. Prov. and Oudh* (Calcutta, 1896). The writer is indebted to Prof. J. F. Blumhardt for information regarding some of the published texts.

CHARISMATA (χαρίσματα).—'Charismata' is the Gr. term rendered in the EV 'spiritual gifts,' and used to denote certain normal and abnormal expressions of Christian activity in the primitive Church.

1. The linguistic usage.—The word χάρισμα is not found in classical Greek, or apart from early Christian literature except in Philo, *Leges allegoriæ*, iii. 24 ('All things in the world and the world itself are the donation and benefaction and gift of God': δωρεὰ καὶ εὐεργεσία καὶ χάρισμα Θεοῦ). In the NT it occurs 6 times in Romans, 7 in 1 Cor. (5 times in ch. 12), once each in 2 Cor., 1 and 2 Tim., and 1 Peter. In these passages we can distinguish between (1) a general, and (2) a special or technical sense.

(1) In Ro $5^{15.16}$ the term (sing.) is used of God's justification of the sinner by faith in Christ, in 6^{23} (sing.) it is defined as eternal life, in 11^{29} (plu.) it refers to the special privileges bestowed by God upon Israel. In 2 Co 1^{11} it expresses the Apostle's deliverance from serious peril. Ro 1^{11} marks a transition; St. Paul hopes to confer on the brethren at Rome some χάρισμα πνευματικόν, which may be interpreted either generally of advice, instruction, comfort (so Schmiedel, *EBi*, col. 4755), or specifically of the endowments described in Ro $12^{6ff.}$ and in 1 Co 12–14 (so Sanday-Headlam, *Com. on Rom.*[5] 1902, p. 21).

(2) In the two passages last noted the plural is used; in 1 Co 1^7 7^7 and 1 P 4^{10} the singular in a distributive sense; in the Pastoral Epistles (1 Ti 4^{14}, 2 Ti 1^6), the singular again, but in a semi-collective sense, with reference to all the qualifications which an official in Timothy's position should possess, and especially to a qualification for the task of teaching. It should be noticed that in 1 Co 12^1 πνευματικά, and in Eph 4^8 δόματα (closely connected with χάρις, v.[7]), are used practically as synonyms of χαρίσματα.

2. Nature and classification of charismata.—Any inquiry into the nature of the endowments grouped under the technical usage of the term χαρίσματα must be limited in the first instance to the passages in 1 Cor. ($12^{4-11.\ 28-30}$), and Rom. (12^{6-8}) as being primary sources and acknowledged Pauline writings. We may set the three statements in tabular form thus:

1 Co 12ª.	1 Co 12ᵇ.	Ro 12.
* { λόγος σοφίας	‡ ἀπόστολοι	* προφητεία
{ λόγος γνώσεως	* προφῆται	διακονία
πίστις	* διδάσκαλοι	* διδασκαλία
† χ. ἰαμάτων	† δυνάμεις	‡ παράκλησις
† ἐνεργήματα δυνάμεων	† χ. ἰαμάτων	† { ὁ μεταδιδούς / ὁ ἐλεῶν
* προφητεία	† ἀντιλήμψεις	† ὁ προϊστάμενος
‡ διακρίσεις πνευμάτων	† κυβερνήσεις	
† γένη γλωσσῶν	† γένη γλωσσῶν	
‡ ἑρμηνεία γλωσσῶν		

We may confidently group the λόγος σοφίας and the λόγος γνώσεως of 1 Co 12ª, and identify the united concept with the διδασκαλία (plus the παράκλησις?) of Rom., and the διδάσκαλοι of 1 Co 12ᵇ. Another probable identification is that of ὁ προϊστάμενος in Rom. with κυβερνήσεις in 1 Co 12ᵇ. Nor shall we be far wrong in bringing together ὁ μεταδιδούς and ὁ ἐλεῶν (Rom.) and putting them alongside ἀντιλήμψεις (1 Co 12ᵇ). So that in our comparative table, representing by * those charismata which have a place in all three lists, by † those which occur in two, and by ‡ those which are peculiar to one, we have left the general expressions πίστις (Cor.) and διακονία (Rom.). Now

in Ro. 12^{6} πίστις is made the measure of προφητεία, and earlier, in v.^{3}, is spoken of as something of which God has dealt a portion to all; it is thus regarded as a regulative principle of the χαρίσματα. And in 1 Co 12$^{4-6}$ διακονίαι seems to be synonymous with χαρίσματα and ἐνεργήματα, the three terms being each inclusive of the whole range of spiritual gifts.

Various attempts at classifying the χαρίσματα, especially as enumerated in 1 Co 12^{8}, have been made, but with incomplete satisfaction. The earliest is that of Tertullian (*adv. Marc.* v. 8), thus:

(1) λόγος σοφίας and λόγος γνωσεως—'sermo intelligentiae et consilii.'
(2) πίστις—'spiritus religionis et timoris Dei.'
(3) ἰάματα and δυνάμεις—'valentiae spiritus.'
(4) {προφητεία, διακ. πνευμάτων / γένη γλωσσῶν, ἑρμηνεία γλωσσῶν}

Bengel and Meyer, assuming that ἕτερος denotes generic and ἄλλος specific distinctions, make this arrangement:

(1) Intellectual: (*a*) λόγος σοφίας.
,, (*b*) λόγος γνώσεως.
(2) Faith and its dependents:

πίστις
deeds (ἰάματα, δυνάμεις) | words (προφητεία) | reason (διακ. πνευμάτων).

(3) 'Tongue' gifts: (*a*) utterance (γενη γλωσσῶν).
(*b*) explanation (ἑρμηνεία γλωσσῶν).

But it is curious that St. Paul should put prophecy and criticism in the same class as healings and powers; and it is better not to force the distinction between ἕτερος and ἄλλος, but to regard them as used for the sake of variety. T. C. Edwards (*Com. on 1 Cor.*, 1885, p. 314) would group them thus:

(1) Intellectual power (λόγος σοφίας, λόγος γνώσεως).
(2) Miraculous power (πίστις, ἰάματα, and δυνάμεις).
(3) Teaching power (προφητεία).
(4) Critical power (διακ. πνευμάτων).
(5) Ecstatic power (γένη and ἑρμηνεία γλωσσῶν).

He points out, too, that there is a progress from the most worthy (λόγος σοφίας, 'the power of the spiritual man to understand the Divine philosophy of the revelation in Christ') to the least worthy (γλώσσαις λαλεῖν).

Taking our three passages together, we may (omitting the terms πίστις and διακονία) adopt some such classification as this:

(1) Gifts of power: ἐνεργήματα δυνάμεων, δυνάμεις, χαρίσματα ἰαμάτων.
(2) Gifts of sympathy: ἀντιλήμψεις, μεταδιδόναι, ἐλεᾶν.
(3) Gifts of administration: κυβερνήσεις, ὁ προϊστάμενος (ἀπόστολοι).
(4) Gifts of utterance:
(*a*) διδασκαλία, λ. σοφίας, λ. γνώσεως, παράκλησις.
(*b*) (ἀποκάλυψις), προφητεία, διακ. πνευμάτων.
(*c*) γένη γλωσσῶν, ερμηνεία γλωσσῶν.

The ἀπόστολος really stands outside such a scheme, as one who participates and exercises all kinds of spiritual gifts.

(1) In this class fall physical cures and cases of exorcism and mental disease, together with the punishment of offenders, *e.g.* 1 Co 4^{21} 5^{5}. The belief in the continuance of such marvellous powers lasted down to the end of the 2nd cent.; Justin Martyr, *Dial.* 39 (*c.* 150), speaks of ἴασις ('healing'), and Irenaeus, *Hær.* II. xxxii. 4 (*c.* 185), tells of everyday exorcisms and healings and occasional raisings from the dead.

(2) This class is summed up in Ac 20^{35}. The care of the early Church for its sick and poor was conspicuous; it is pleasant to find such acts of mercy recorded so persistently among the 'gifts of the spirit.'

(3) There is little or no help here towards a theory of the ministry in the primitive Church. Neither the attempt (by Neander) to prove that at the beginning there were no officials, these only arising when in course of time holders of χαρίσματα passed away, nor the opposite effort to identify each χάρισμα with a Roman or Corinthian church-officer has been successful. The discussion does not centre in the ministry but in the Church; few members, if any, would be absolutely without χαρίσματα, and, of course, any one taking a leading part in worship or administration would have the 'gifts' especially befitting the part he took.

This may be a convenient point for noticing the passage in Eph 4$^{7-12}$, at least a secondary authority for the Apostolic age. Here the words are χάρις (bestowed on each according to the measure of the gift [δωρεά] of Christ) and δόματα (given by the ascended Lord to men). And the enumeration is one not of χαρίσματα as in Cor. and Rom., but of offices—apostles (cf. Cor.), prophets (cf. Cor. and Rom.), evangelists ('missionaries,' cf. Ac 21^{8}, 2 Ti 4^{5}), pastors (ποιμένες; cf. ὁ προϊστάμενος of Rom.), teachers (διδάσκαλοι; cf. Cor. and Rom.). Although this passage thus has several points of contact with our primary authorities, and the Epistle in other places (*e.g.* 5^{18}) bears witness to the vivid enthusiasm which pervaded the early Church as 'filled with the Spirit,' it does not materially advance our study of the question immediately in hand. With the προϊστάμενος we may compare not only the ποιμήν of Eph. but the ἡγούμενος of He 13^{7}.

(4) It is with the gifts of utterance that the most crucial questions arise; and, as has been indicated, they fall into three subdivisions, of increasing difficulty, and possibly of decreasing worth.

(*a*) διδασκαλία and παράκλησις present no trouble. The former implies systematic Christian instruction, the latter the tactful persuasion, the 'wooing note' that wins men to life's finer and higher issues. λόγος σοφίας and λόγος γνώσεως are intimately related. The former should be interpreted in the light of 1 Co 2$^{6.10}$; it is the power to receive and to expound the 'deep things of God' (cf. Ro 11^{33}), His ways of salvation, which can only be taught and learned as the Spirit aids. It is teaching that appeals to the intuitional faculty—the food of the mystic. The latter appeals to the reason, and shows how rational the intuition is. γνῶσις is the buttress of σοφία. How closely indeed the two are bound together is seen by Schmiedel's explanation of γνῶσις as 'the knowledge of what is perceived in an ecstatic condition' (see 2 Co 4^{6}), in short, an intuition; σοφία, again, if interpreted on the analogy of the 'wisdom of the world,' becomes in turn a synonym for reasonable understanding and intelligent consideration. Both words seem thus to be concerned as much with reception as with interpretation; they are methods of appropriating knowledge.

(*b*) προφητεία.—In the Early Church it would seem that the ancient word of Moses, 'Would God that all the Lord's people were prophets' (Nu 11^{29}), had been fulfilled. This conspicuous endowment of the Hebrew folk found expression in John the Baptist (Mt 11^{9}) and in Jesus Himself (Mt 13^{57} 21^{11}, Lk 24^{19}). Since 'the testimony of Jesus is the spirit of prophecy' (Rev 19^{10}), it was natural that prophecy, like other charismata, was an endowment of the Church as a whole (Ac 19^{6}, cf. 2$^{17f.}$; 1 Co 11$^{4f.}$), while manifesting itself especially in certain individuals. Outstanding examples are Agabus, Judas, Silas, the four daughters of Philip (Ac 11^{28} 21^{10} 15^{32} 21^{9}), and doubtless these and others similarly 'gifted' moved about from place to place, ranking in importance next to the apostles (1 Co 12^{28}, Eph 2^{20} 3^{5} 4^{11}). Their ministry was apparently confined to believers, and it was distinguished: (1) from that of the teacher by its spontaneity and freshness (like their OT predecessors, they spoke by 'revelation' [1 Co 14$^{6.26.30}$]; sometimes this took the form of a definite announcement of the Divine will, as in Ac 13$^{1ff.}$); (2) from that of the 'speaker in tongues' by its intelligibility. As was the case with the OT prophets, there was comparatively little definite prediction (Ac 11^{28} 21$^{10f.}$) in their utterances, the primary note being a searching appeal that resulted in conviction, comfort, instruction, and edification (1 Co 14$^{24.3ff.31.19}$). Half a century later (according to the *Didache*) the prophet, now apparently more itinerant, retained his importance, taking precedence of the local officials, even at the Eucharist, and yet—as is

confirmed by the evidence of Hermas and Lucian—his sun had begun to set. The regular local administrative order was coming to the front place, and besides there were many counterfeit prophets who were bringing the gift into disrepute. As time went on, victory fell to the regular and permanent element, and, in spite of a continuation of the gift of prophecy such as is witnessed to by Ammia of Philadelphia and Quadratus of Athens (Eus. *HE* V. xvii.), and strenuously attempted by the Montanists (though perhaps their 'prophecy' was more like 'glossolalia'), the enthusiastic and extemporaneous could not hold its own as an institution. The gift passed (it was transformed in passing) to the regular ministry. The great preachers like Chrysostom are the true descendants of the NT 'prophets.' Justin Martyr indeed (*c.* 150) speaks of προφητικὰ χαρίσματα (*Dial.* 82), and the last orthodox contemporary witness is Irenæus (*c.* 185). That the prophet was regarded as Divinely possessed appears from the charisma mentioned in close connexion with prophecy in 1 Co 12^{10} (cf. 1 Th 5^{20}, 1 Jn 4^{1}), that of 'discerning of spirits.' This must be taken as referring to the wide-spread belief in spirits, good and evil, and of varying degrees of power. What tests were applied in this is not clear; that of 1 Co 12^{3} does not carry us far, and the difficulty of finding sure and fitting standards of judgment is well illustrated in the precepts of the *Didache* (chs. xi., xii.).

(*c*) γένη γλωσσῶν.—For our data in regard to this 'gift' we are restricted almost entirely to 1 Co 14, where St. Paul institutes a comparison between the different χαρίσματα, and especially between prophecy and tongue-speaking. It is easier to define this 'gift' negatively than positively, but investigation leads to the following conclusions: (*a*) It is unintelligible (except when interpreted), and bears the same relation to prophecy that discordant music bears to harmony. It is therefore unedifying and unfruitful to the Church, though it has a certain value for the speaker himself (vv.$^{2. 4. 17. 28}$), and as a sign (perhaps a mark of displeasure) for any heathen who might be present at the service, and who would not unnaturally regard the tongue-speaker as mad (v.^{23}). The utterances would be disjointed, varying in tone and pitch. (β) It may have included prayer and praise (see vv.$^{14-17}$; 'blessing' probably covers both these forms). (γ) It is not a foreign speech; for these St. Paul (v.$^{10f.}$) apparently uses φωναί. And it is unlikely that 'interpretation' of a foreign language would have been regarded as a χάρισμα. The antitheses to γλώσσῃ, viz. νοΐ, ἐν γνώσει, ἐν προφητείᾳ, and so on, also preclude such a supposition, to say nothing of the ecstasy rather than the practical evangelizing use that marked the glossolalia. (δ) The explanation of this χάρισμα as 'unusual, archaic, figurative' speech is not satisfactory, though supported by Ernesti, Herder (*SK*, 1829, pp. 3–79; 1830, pp. 45–64), Bleek, and Baur (*ib.* 1838, 618–702). Bleek gives many instances from late Greek writers of γλῶσσα = ἰδιότητες διαλέκτων, but they only prove that the word was a technical grammatical term. More helpful is the use of γλῶσσα to denote an ecstatic oracular response. The 'outsiders' of v.^{23} might well have reckoned the tongue-speakers to be possessed, comparing them with the Pythia (cf. also Virgil, *Aen.* vi. 40–101). (ε) There remains the suggestion put forward by Eichhorn and Meyer, that γλῶσσα here is to be taken in the literal sense of the bodily member. The Spirit so takes possession of a man's faculty of physical speech that, unconsciously to himself, he utters inarticulate cries. Bunsen (*Hippolytus*, 1852, i. 11) describes the λαλεῖν γλώσσαις as 'a convulsive utterance, a nervous affection.' The comparison between the tongue and instruments like the pipe, harp, and trumpet (vv.$^{7-9}$) supports this view. The γλῶσσα is an organ which can be used to produce alike intelligible 'prophecy' and unintelligible 'glossolalia.' In the former the νοῦς plays a large part, in the latter none at all. The tongue-speech might have been described as πνεύματι λαλεῖν (as contrasted with νοΐ λαλεῖν), but that the πνεῦμα was regarded as producing all the other χαρίσματα. The difficulty about this interpretation is that St. Paul applies the plural not only to more speakers than one (12^{30} $14^{22f. 39}$), where alone it is appropriate, but to one speaker ($14^{8\,(18)}$; cf. $12^{10. 28}$ 13^{8}). It also hampers a solution of γένη γλωσσῶν or ἑρμηνεία γλωσσῶν. Hence Schmiedel's proposal to pass from the instrument to the product by interpreting 'tongue' (in every place except 14^{9}) by 'tongue-speech,' *i.e.* speech which seems to be produced by the tongue alone. Something of this kind is compelled by 14^{26}, which enumerates the definite items of utterance at a religious service.

There is little doubt that such 'tongue-speech' was of an ecstatic kind. Here, as in the Montanists, the Jansenists, the early Quakers, and the revivals of the 18th cent., 'we recognise a sudden awakening of the spiritual nature, and intense emotions of overwhelming fear and rapturous joys' (T. C. Edwards, *Com. on 1 Cor.* p. 222). Jonathan Edwards speaks of 'the extraordinary views of Divine things and the religious affections, attended with very great effects on the body' as accompanying the Northampton (Mass.) revival in 1735 (*Thoughts concerning the Present Revival in New England*, 1742, i. § 5), and the journals of Wesley and Whitefield are full of testimony to the physical effects that resulted from their preaching. The case of the Irvingite 'prophets' is less to the point, as their attempt to repeat the phenomena of the Apostolic age was conscious and deliberate. On the question of 'the Little Prophets of the Cevennes,' see R. Heath's article in *Contemp. Review*, Jan. 1886; A. Wright's *Some NT Problems*, 1898, p. 292 ff.; and P. W. Schmiedel's criticism in *EBi*, col. 4764.

(*d*) ἑρμηνεία γλωσσῶν.—Just as the μάντις, whose understanding was in abeyance while he delivered his oracles, needed a προφήτης to give the inquirer a rational interpretation of the Divine utterance, and just as to-day there is a distinct place for those who can interpret to the lay mind some great musical or artistic composition, the 'tongue-speaker' needed as his complement the 'interpreter.' Sometimes (14^{13}), like G. F. Watts, he could do this himself; oftener perhaps it was done by others (12^{10} 14^{26-28}). As to the degree of exactness attained by such interpreters we have nothing to guide us. Probably the 'tongue-speeches' were more or less of the same pattern, and the interpreter would follow general lines, getting his clues partly from the tone, the gestures, and the recurrence of certain sounds. The Apostle gave sound counsel in v.^{13}, when he advised the 'tongue-speaker' to foster the additional 'gift' of self-interpretation, which we gather from v.^{15} that he himself possessed.

A word must be said on St. Paul's instructions for the use of the charismata. He speaks of them (1 Co 12^{5}) as διακονίαι, opportunities for service; they are not given for self-satisfaction, but for the service and edification of the whole community. The teaching is the same in ch. 14 and in Ro 12. So in Eph 4^{11} those who are endowed are themselves spoken of as the Lord's gifts to the Church. It is necessary, therefore: (1) that the use of the charisma be regulated and orderly (1 Co $14^{40. 32}$, Ro 12^{6}); in particular, he gives careful rules respecting tongue-speech, and utterly condemns its indiscriminate use; (2) that a proper estimate be formed of the value of the respective charismata.

In the Apostle's opinion (cf. Plato, *Timæus*, 72) the abnormal gifts are inferior in value to the less startling, but more ethical and edifying, manifestations of the Spirit. While he does not forbid 'tongue-speech' (1 Co 14[39]; cf. perhaps 1 Th 5[19]), and for obvious reasons does not suggest in its case any διάκρισις such as is applicable to prophecy, he yet thinks far less of it than of the intelligible forms of utterance—teaching, and the inspired and inspiring preaching called prophecy—as well as of the different forms of government and ministry. The reaction against ecstatic and unhealthy forms of worship thus instituted by St. Paul was largely successful, and succeeding generations completed it, though in a direction which had its dangers, that of hyper-emphasis on ecclesiastical organization.

It is significant that the Pauline notices of 'tongue-speech' are concerned only with the Corinthian Church. The Greek belief in mantic ecstasy and the Greek affection for the mysterious and the eloquent explain the predominance of the question in this community. The phenomenon appears not to have been known at Rome [1] or in any of the other centres to which the Apostle wrote. May it not be that in this church were a few persons of the type we call 'mediums,' and that their utterances were similar to those of Helen Smith of Geneva as described by Victor Henri (*Le Langage martien*, Paris, 1901) and commented upon by F. C. Conybeare (*HJ* i. [1903] 832)?

This medium in one of her trances was an inhabitant of Mars, and herself translated—with the help of another subliminal self-called Esenale—some forty sentences (containing 300 words) of the Martian language spoken during the trances, into French. Analyzing these, M. Henri allots to French sources the syntax and more than a third of the vocabulary of the 'Martian' language, to Magyar some 55 words, to German 25, and to English and Oriental sources 3 and 5 respectively.

Schmiedel connects St. Paul's exercise of the 'gift' with the attacks of his malady (epilepsy), and it is possible that at Corinth there were others similarly afflicted. At the beginning of the 2nd cent. Clement of Alexandria speaks of a language of the demons, and Conybeare refers to a 5th cent. hagiologist's report of a church near Bethlehem where the *daimonizomenoi* or *energumenoi* prayed 'in their own language.'

The fact that Helen Smith in another subliminal mood was an Arab princess and talked Sanskrit may serve as a transition to the narrative of Ac 2, where there is little doubt that, whatever the real nature of the Pentecostal phenomenon, it was regarded by the narrator (Luke, *c.* 95 A.D.) as the power of speaking foreign languages. As time went by, and as the story was told further afield, what was probably the first case of Christian glossolalia (see a short excursus in J. V. Bartlet, *Century Bible* ed. of 'Acts,' p. 384 f.) was interpreted, under the influence of a current belief as to the inauguration of the Old Covenant, as the Divine voice assuming the forms of different national languages. The other cases in Acts (Cornelius, 10[46], and the disciples at Ephesus, 19[6]) are clearly instances of 'tongue-speech,' and have nothing to do with dialects or languages. The author of Acts could never have witnessed the phenomenon himself.

Having dealt with the more direct references in St. Paul's letters to the Corinthians, Romans, and Ephesians, and in the Acts, we must now notice briefly the other allusions to χαρίσματα in early Christian literature.

1 Co 7[7]. St. Paul here says that he is possessed of such self-control as not to need marriage, and describes this self-control as a χάρισμα of God to him. Others may not be so endowed, and he may lack some χάρισμα that has been given to others.

[1] In writing to Rome, St. Paul is throughout more concerned to lay down broad principles won from past experience than to meet in detail difficulties arising from special circumstances.

1 P 4[10]. This Epistle makes no reference to the phenomena described by St. Paul, and in the passage in question the context points to our regarding money, the means of hospitality, as a χάρισμα (cf. Ro 12[8] ὁ μεταδιδούς).

1 Ti 4[14], 2 Ti 1[6]. Here the word must be interpreted of the capacity, spirit, and zeal for evangelistic work, or, as Ramsay ('Hist. Comm. on 1 Tim.,' *Exp.*, Apr. 1910) expresses it, the power of hearing the Divine voice and catching the Divine inspiration, imparted to Timothy when first he was selected as St. Paul's coadjutor. Timothy is reminded that the χάρισμα was not an inalienable office, but was an actual Divine endowment given for a definite purpose, a capacity liable to be 'extirpated by disuse.'

Didache, 1, 5:

'To every man that asketh of thee, give, and ask not back; for the Father desireth that gifts be given to all ἐκ τῶν ἰδίων χαρισμάτων' (= bounties, temporal as well as spiritual).

Ignatius, *Ep. ad Smyr.* superscription:

'Ignatius . . . to the Church of God . . . which hath been mercifully endowed ἐν παντὶ χαρίσματι.'

Ep. ad Polycarp. ii. 2:

'As for the invisible things, pray that they may be revealed unto thee; that thou mayest be lacking in nothing, but mayest abound (περισσεύῃς) παντὸς χαρίσματος.'

The two passages from Ignatius find closest parallel in Ro 1[7]. Justin Martyr (*c.* 150) in his *Dialogue with Trypho* (ch. 39) says that disciples receive gifts,

'each as he is worthy. . . . For one receives the spirit of understanding, another of counsel, another of strength, another of healing, another of foreknowledge, another of teaching, and another of the fear of God.'

The first three and the last of these are taken direct from Is 11[2f.]. Compared with the Pauline list, we have 'understanding' (σύνεσις) answering to 'knowledge' (σοφία), 'strength' (ἰσχύς) answering to 'power' (δύναμις), and in more identical terms 'healing' (ἴασις) and 'teaching' (διδασκαλία). 'Foreknowledge' (πρόγνωσις) takes the place of NT προφητεία, and the change shows how that gift had deteriorated. In ch. 82, Justin speaks of προφητικὰ χαρίσματα, no doubt meaning prediction, but says nothing about tongue-speech.

Mk 16[17]. The words γλώσσαις λαλήσουσιν καιναῖς must mean 'they shall speak in languages newly acquired by them,' and, like the rest of the section (vv.[9-20]), are no part of the original gospel, but depend on Acts and other NT literature.

Irenæus (*c.* 185), *Hær.* II. xxxii. 4:

'Those who are in truth His disciples, receiving grace from Him, do in His name perform (miracles), so as to promote the welfare of other men, according to the gift which each one has received from Him. For some do certainly and truly drive out devils . . . others have foreknowledge of things to come [cf. Justin], they see visions, and utter prophetic expressions. Others still, heal the sick by laying their hands upon them. . . . Yes, the dead even have been raised up. . . . It is not possible to name the number of the gifts (χαρίσματα) which the Church . . . has received, . . . and which she exerts day by day.'

Ib. V. vi. 1:

'In like manner do we also hear (or have heard) many brethren in the Church who possess prophetic gifts, and who through the Spirit speak all kinds of tongues, and bring to light for the common benefit the hidden things of men (cf. 1 Co 14[24f.]), and declare the mysteries of God, whom also the apostle terms spiritual.'

In the first of these passages there is no mention of 'tongues'; in the second, this gift is mentioned, but (1) in close connexion with prophets; and (2) without clear intimation as to whether it is foreign languages or 'tongue-speech' that is meant.

Tertullian (*c.* 200), *adv. Marcion.* v. 8, after comparing the χαρίσματα enumerated by Isaiah and by St. Paul, invites Marcion to produce anything like them among his followers:

'Let him exhibit prophets such as have spoken not by human sense but with the Spirit of God, such as have predicted things to come, and have made manifest the secrets of the heart [cf. Iren.]; let him produce a psalm, a vision, a prayer—only let it be by the Spirit, in an ecstasy, that is, in a rapture, whenever an interpretation of tongues has occurred to him.'

The whole passage is based on 1 Co 14[25f.]. Tertullian does not say that there was 'tongue-speech' in his day, and his account (*de Anima*, ix.) of the sister who had the charisma of ecstatic revelation is spoken of as prophecy. Miltiades, according to Eusebius (*HE* v. xvii. 1), wrote an anti-Montanist work, περὶ τοῦ μὴ δεῖν προφήτην ἐν ἐκστάσει λέγειν ('On the need for a prophet to refrain from ecstasy'). As 'tongue-speech' and ecstasy became absorbed in prophecy, so prophecy in turn was superseded by the fixed official ministry.

LITERATURE.—Besides the commentaries on Rom., 1 Cor., and the other passages in question, see D. Schulz, *Geistesgaben*, Breslau, 1836; W. R. Cassels, *Supernatural Religion*, London, 1877; Gunkel, *Wirkungen des heil. Geistes*, Göttingen, 1888, [2]1900; Beversluis, *De heilige geest en zijne werkingen*, Utrecht, 1896; Weinel, *Wirkungen des Geistes und der Geister . . . bis auf Irenœus*, Freiburg, 1899; P. W. Tylor, *Primitive Culture*[3], 1891, ii. 141, and other literature cited in the course of the article.

A. J. GRIEVE.

CHARITES (Χάριτες, *Gratiœ*, 'Graces').—**1. Mythology.**—Originally the Charites were Nature-goddesses, and of this we shall find traces in their worship. But in mythology they are the personifications of grace and charm, and it is in this character that they form a distinct and lovely expression of the Greek genius. When they meet us in Homer, they are humanized, indeed, but still shadowy, conceptions with which poetic fancy has only begun to play. Charis, *the* Grace, is the bride of Hephæstus (*Il.* xviii. 382), and Pasithea is mentioned as one of a whole family of Charites (xiv. 267), who may be compared with the Nymphs in Virg. *Aen.* i. 71, but beyond this we hear of nothing definite regarding them—neither names, number, nor parentage. Hesiod, whom later writers generally follow, is much more definite. He tells of three Charites—Euphrosyne, Thalia, and Aglaia—daughters of Zeus and Eurynome (*Theog.* 907–9). Pindar mentions the same three (*Ol.* xiv. 13), and speaks of Zeus as their father. Their mother he does not name. As figures in national Greek religion the Charites remained a triad, and bore for the most part their Hesiodic names. But, according to the conception of the Charites uppermost in the poet's mind, religious fancy played freely with the question of their parentage. Thus Hera, Aphrodite, and many lesser divinities are named as their mother, while Dionysus, Uranus, and Helios dispute with Zeus the honour of their paternity. Sometimes mythology takes a very different turn. Thus Cicero (*de Nat. Deor.* III. xvii. 44) describes Gratia as a child of Erebus and Night. This seems to belong to the same circle of ideas as Hom. *Il.* xiv. 269 ff., where Hypnos (Sleep), referring to Hera's promise to give him Pasithea for his bride, bids the former swear to him by the inviolable waters of the Styx. According to a scholiast on *Il.* xiv. 276, Lethe was called mother of Charis, because gratitude (χάρις) is so easily forgotten.

2. Symbolism.—In general the Charites are a symbol of grace or charm. They reflect the characteristically Greek ideal of a life, whether human or Divine, from which ugliness and pain are banished. As their names indicate, they are associated chiefly with life's festive aspect. Euphrosyne speaks of mirth, Thalia of abundance, Aglaia of splendour. In the hour of dance and song, of feasting and carousal, the Charites give free course to joy, loosening the bonds of unsocial restraint; but they are equally the foes of licence. According to Panyasis (*c.* 489 B.C.), the first cup at the banquet belongs to the Charites, the Horæ, and Dionysus; the second to Aphrodite and Dionysus; but with the third come Hybris and Ate (wanton excess and baneful rashness) (Athen. ii. 36). The witness of Horace is still clearer: 'tres prohibet supra Rixarum metuens tangere Gratia' (*Od.* III. xix. 15). But the influence of the Charites does not end here. They give its charm to everything which makes life glad, full, and beautiful. 'What has man that is lovely and desirable,' says Theocritus, 'without the Charites?' (*Id.* xvi. 108 f.). As the chaste Charites aid the gods themselves in ordering dance and feast, and preside over all their works, so they give to mortals the sweetness and the joy 'if one be skilled in song, or comely, or of fair renown' (Pind. *Ol.* xiv. 5 ff.). It is their wreath which graces the victor's brow, their choir which sounds his glory (Pind. *Ol.* iv. 10, vii. 12 f., xiv. 4 ff.; *Nem.* v. 54, vi. 38; *Pyth.* v. 48). Their love of song they share with the Muses, dwelling with them upon Olympus (Hes. *Theog.* 64; Eurip. *Herc. Fur.* 673, etc.). But the Muses are more sedate than the Charites. So in Olympus, Apollo harps, the Muses sing, but the Charites, with the Horæ, Aphrodite, and other youthful goddesses, dance (*Hom. Hymn. in Ap. Pyth.* 10 ff.). The same link that bound the Charites to the Muses bound them closely to Apollo. They had their seat beside the Pythian Apollo (Pind. *Ol.* xiv. 10), while the statue of the Delian Apollo held three Charites in its hand (Paus. IX. xxxv. 1, etc.). With Aphrodite their connexion is especially close. They give love its charm, and especially the finer grace which alone can make it lasting. So, as her handmaids, they bathe and anoint the goddess, dress her for the banquet in perfumed robes of their own working, animate her by dance and song (Hom. *Il.* v. 338, *Od.* viii. 362 ff., xviii. 192 ff.; *Hom. Hymn.* iii. 61; Sappho, *ap.* Himer. i. 4; Hes. *Opp.* 72 f.; Paus. VI. xxiv. 5, etc.). Nor was it only for Aphrodite that they wrought fair garments, but for Dionysus also and other gods (Apol. Rh. iv. 424 ff.).

This may suggest to us the relation of the Charites to art. They supply the charm without which the artist's skill and labour are vain. Hence it was that Charis became the bride of the smith Hephæstus (see above). Nor is it otherwise with literature. Even Athene depends on the Charites, who give grace to learning, for which reason Plato counsels his pupil Xenocrates to offer to the Charites. To the poet they are indispensable, as are the Muses. But the latter speak rather of the source of the poet's inspiration, the former of his power to please. It was from this point of view that Pindar described himself as tilling the garden of the Charites (*Ol.* ix. 27), and that Theocritus spoke of his poems as 'my Charites' (*Id.* xvi. 6). They also, it would seem, symbolized the charm of winsome speech. This is probably implied by their frequent association with Hermes (on the connexion, see Furtwängler, in Roscher, *s.v.* 'Chariten'; cf. also Cornut. *de Nat. Deor.* chs. xvi. xxiv.; Eudoc. *Viol.* p. 153). Often, too, they are mentioned in company with Peitho, the goddess of persuasion (Hes. *Opp.* 73; Pind. frag. c. 10; Plut. *Conjug. Præc. Proœm*, etc.), and Hermesianax actually named her as one of the Charites (Paus. IX. xxxv. 1, where, however, the text seems doubtful). Lastly, a word may be said on their frequent association with the Horæ (or Seasons). It must suffice to observe that they are usually, though not always, related to the Horæ, as the life of man is to the life of Nature. Thus, while the Horæ ripen the vine, the Charites help man to enjoy it (cf. Athen. ii. 38); while the Horæ crown the divine child Pandora with flowers, the Charites adorn her with golden necklaces (Hes. *Opp.* 73). But the spirit of both is the same. The Charites, like the Horæ, delight above all in flowers, and love, and vernal freshness (cf. above; and also, for the Charites, Stesichorus [Bergk's *Poetæ lyrici græci*[4], iii. 221]; Ariphron [*ib.* iii.

597]; Hor. *Od.* I. iv. 6, xxx. 6, IV. vii. 5; Ov. *Fast.* v. 215 ff.).

3. **Worship.**—It is in local cult rather than in national mythology that the oldest Greek religious conceptions are found. The Charites are no exception to this rule, for their worship affords distinct traces of their original character of Nature powers. The most important seats of their worship were the Minyan Orchomenos in Bœotia, Athens, and Sparta. At Orchomenos we read that Eteocles was the first who sacrificed to the Charites, and that they were represented by natural stones which were said to have fallen to him from heaven. Further, we are told that their sanctuary was the oldest in Orchomenos, and that Eteocles 'instituted three Charites'—whose names, however, the Bœotians did not remember (Paus. IX. xxxv. 1, xxxviii. 1; Theocr. *Id.* xvi. 104). Now, at Athens only two Charites were originally worshipped, and at Sparta they were always two (Paus. IX. xxxv. 1), while the above somewhat ambiguous references to their worship at Orchomenos suggest that there also two may have been the original number. In view of these as well as of other facts relating to the Charites, J. E. Harrison observes:

'The ancient Charites at Orchomenos, at Sparta, at Athens, were two, and it may be conjectured that they took form as the Mother and the Maid'—the ordinary twofold aspect of Nature goddesses (*Proleg. to Study of Gr. Rel.* 287).

Much of what follows in this paragraph points in the same direction. At Orchomenos the temple of the Charites stood near the city, in the rich vale of the Cephissus. In its neighbourhood was a temple of Dionysus, and a spring sacred to Aphrodite (Serv. *ad Virg. Aen.* i. 720)—both, as we have seen, closely related to the Charites. To the temple of the Charites the peasants of the countryside brought a priestly tithe. In honour of the goddesses there was a festival (the Χαριτήσια) with musical contests, of which records are still extant (*CIG*, nos. 1583, 1584). The Χαριτήσια were, further, celebrated with nocturnal dances, after which cakes of roasted wheat and honey were distributed (Eustath. *ad Hom. Od.* xviii. 194). This worship as a whole (and notably the last-named feature) points clearly to goddesses of natural plenty and fertility. At Athens, as already noted, the original Charites were two. Their names, Auxo and Hegemone, are such as belong to spirits of vegetation. Auxo is the goddess of growth, Hegemone the 'conductress' of the growing plant, as Furtwängler puts it, 'to light and bloom and fruit.' They were invoked along with Helios, with Thallo and Carpo (the Horæ of Spring and Autumn), and Pandrosos, goddess of dew (Paus. IX. xxxv. 1; Pollux, viii. 106). In front of the Acropolis stood the images of three Charites, said to be the work of Socrates, but associated with them was one of those secret cults which belong especially to Nature-worship (Paus. IX. xxxv. 1). In Aristoph. *Thesm.* 300 the Charites are invoked in company with agrarian deities, and at the Eleusinia they received an offering along with Hermes (A. Mommsen, *Heortol.*, 1864, p. 257), 'whose worship as the young male god of fertility, of flocks and herds, was so closely allied to that of the Charites' (J. E. Harrison, *op. cit.* 291). At Sparta the two Charites were known as Cleta and Phaenna (sound and light)—names which speak of Nature, while also suggesting the life of man. The Spartans built a temple for them on the river Tiasa (Paus. III. xviii. 4, etc.), and at Sparta itself was a temple of the Charites and Dioscuri (*ib.* xiv. 6). We read also of cults of the Charites in Paros, Thasos, Cyzicus, Elis, Olympia, and Hermione.

4. **Art.**—The treatment of the Charites in art is a large subject, of which only the barest outline is here attempted. The representations may be divided generally into the two great classes of the draped figures and the nude. These were the productions respectively of an earlier and a later age (Paus. IX. xxxv. 2). The triad of Charites was early represented in art. Sometimes they figured in independent groups, and sometimes as the adjuncts of some superior deity, as in the case of the Zeus of Pheidias, above whose throne were, on the one side, three Horæ, on the other, three Charites (*ib.* V. xi. 7). In the earlier period no attempt seems to have been made so to arrange the figures as to express a single unifying idea. They stood separate from each other, and were sometimes distinguished by separate attributes. Thus the Charites on the hand of the Delian Apollo (see above) held, the first a lyre, the second flutes, and the third a syrinx at her lips. Later on we meet with a type in which they hold one another's hand, tripping the while lightly to the left in a solemn dancing measure. We have examples of this type on relief fragments and on coins. It was the Hellenistic age which, in its search for sensuous charm, developed the naked type of Charites, but it seems to have been preceded by a period when a composite type prevailed, in which the figures are only partially draped. Thus Seneca, referring to a type of Charites, which was apparently known in the time of Chrysippus (3rd cent. B.C.), describes them as 'manibus implexis solutaque et perlucida veste' (*de Benef.* i. 3). But that even in the 3rd cent. the nude type had been introduced is rendered probable by a fragment of Euphorion (*c.* 221 B.C.), in which he alludes *χάρισιν ἀφαρέσσιν*. Once introduced, the nude type attained such vogue that for the Roman period we cannot point with certainty to any example of the other. The figures do not in this, as in a previous type, stand in a line with hands joined. The arrangement rather suggests a circle, in which two Charites face the beholder, while the third and central figure is seen from behind, the whole forming a charming composition. Examples of it are found chiefly on wall-pictures and cut stones.

I. F. BURNS.

CHARITY.—**1. Its nature.**—Charity is a species of goodwill or benevolence, and, therefore, attaches itself to the amiable and generous side of human nature. It is a fixed attitude of the soul; no mere mood or passing impulse, but a disposition, showing itself outwardly in kindly sympathetic deeds. It is essentially social and unselfish; and the principle of it is, 'I am a man, and take an interest in everything pertaining to humanity' (*homo sum, humani nihil a me alienum puto*, Ter. *Heaut.* I. i. 24). Consequently, it is magnanimous: it thinks the best of human beings, and has for its end their interests and welfare. It is joined also with humility, not grudging to stoop if only it may serve. It acts in a twofold way, positively and negatively—it confers benefits, and it refrains from injuring; on the other hand, when itself injured, it is swift to forgive. It is thus no mere emotion, but involves, besides, both intellect and will. It is feeling that issues in doing; but, as the doing is of the nature of beneficence, it is regulated by wisdom and discretion. Hence, charity may sometimes assume an austere and even apparently an unsympathetic aspect towards its object. When that object's real good cannot be achieved without inflicting pain and suffering, charity does not

shrink from the infliction: it will even refuse to be tolerant, if tolerance means simply complaisance that would work harm. It is, further, in league with justice, and eschews favouritism and partiality, not allowing itself to be misled by mere fondness. Moreover, a sharp distinction must be drawn between charity and amiability or good nature—the latter of which is frequently a weakness and may be detrimental to true charity, although it may also be turned to account in its service.

'There is a softness and oilkiness of temper,' as an 18th cent. writer quaintly puts it, 'that cannot say nay to anything; but he that can never refuse a favour, can hardly be said ever to grant one: for it is wrested from him, not given; he does it to rid himself of an opportunity, and save the trouble of a denial, in which case it is a weakness rather than a virtue. Hence good nature is often called, and sometimes really proceeds from, folly, which gets no thanks when it proves most beneficial: for men applaud themselves for having gained a compliance by wheedling or pressing, and secretly laugh at the silly thing that could be won by such artifices' (Tucker, *The Light of Nature Pursued*, i. 252).

From all this it will be seen that charity presupposes the exercise of the sympathetic imagination—the power of entering into the experiences of others and making them one's own; the power of realizing (not only understanding, but also appropriating) others' circumstances, point of view, ideas, purposes, aspirations, motives, pleasures and pains, joys and sorrows. Only thus can it be effective, rejoicing with them that rejoice; weeping with them that weep (Ro 12[15]).

Now, this which holds good of charity regarded as a moral excellence is applicable also to Christian charity. But there are specific differences. Charity as 'the royal law,' 'the perfect law, the law of liberty' (Ja 2[8] and 1[25]), has its own distinctive features. In the first place, in Christian charity, goodwill is transformed into love (ἀγάπη)—love in the highest and purest sense of the term, in contradistinction to the tender emotion of that name which is associated with passion. In the next place, Christian charity draws its inspiration from a religious source: it is not begotten of men, but of God. Lastly, the actuating motive of it is religious also.

We may glance at these characteristics in turn:

(1) First, *the transformation of charity into love* is the elevation of a merely virtuous disposition, altruistic and unselfish, into a Christian grace or 'theologic virtue.' For love, in the NT, is set forth as constituting the essence of God; and it is represented also as a Divine gift to man which the Spirit of God has breathed into his soul. As thus conceived, it is based on reverence, and so is the great cementing force between man and man; for man is now viewed as formed in God's image, and every human being is regarded as having in him great potentialities—he is a 'brother' in the truest sense, and possesses native worth and dignity, however much obscured they may be in fact. Yea more, he is the object of the Saviour's love and of His redemptive work, and may be 'renewed in the spirit of his mind' (Eph 4[23]), and thus become a member of the Christian kingdom. The mere appreciation of the solidarity of the human race might secure charity as fellow-feeling, but charity is transformed into love only when we realize that we 'are all one *in Christ Jesus*' (Gal 3[28]).

(2) In the next place, charity as love *draws its inspiration from above.* It is not, in the first instance, regard or even affection of human beings for each other—*that* might arise from the natural feeling of fellowship or from the necessities of social intercourse; it springs from the realization of man's primary relation to God as son to Father, and so is love of man *for the sake of God*: 'this commandment have we from him, that he who loveth God love his brother also' (1 Jn 4[21]). Hence the Christian's charity can be wide and liberal. As it is directed towards men as God's sons, it is based on and imitates that of God Himself, who 'is kind toward the unthankful and evil' (Lk 6[35]), who 'maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust' (Mt 5[45]). Hence, also, it is stable and unceasing, and not merely fluctuating and uncertain.

(3) But, thirdly, *the motive of it is devotion to Jesus as man's Saviour*—attachment to His person, and eagerness to please and to serve Him. Consequently, it is a 'new' love—new in kind and new in measure: 'A new commandment I give unto you, That ye love one another; *as I* have loved you, that ye also love one another' (Jn 13[34]). The motive makes all the difference. For charitable deeds may spring from desires that strip them of their spiritual value. Deeds there must be in *all* cases of charity—the enthusiasm of humanity will and must manifest itself in outward conduct; but, though beneficent, they may not be intrinsically worthy. It is a mistake to identify charity with beneficence. Of this St. Paul was quite aware when, in the famous passage on charity in 1 Co 13, he says, 'And if I bestow all my goods to feed the poor, and if I give my body to be burned, but have not charity, it profiteth me nothing.' In other words, even almsgiving and ministering to the wants of the needy, which at first sight appear to be pre-eminently Christian charity, and which (judging from the present use of the term as the equivalent of 'almsgiving') seem now, not unfrequently, to be regarded as exhausting it, may be nugatory: concern for the poor, laudable though in itself it is, may spring from a wrong motive, and thus be vitiated. So also self-sacrifice, unless its motive be right and noble, may be futile. Charity certainly means 'going about doing good'; but it is not Christian unless there be in it a distinct reference, direct or indirect, to the will and the intent of the Saviour, and unless it be measured by the love that He bears to men; not forgetting that He accepts service to our fellow-men as service to Himself—'inasmuch as ye did it unto one of these my brethren, even these least, ye did it unto me' (Mt 25[40]).

But, estimated in this way, certain things become distinctive of it. (*a*) Note its relation to hate. Love is the opposite of hate: the two are antithetic—where the one is, the other is shut out. And yet, according to the psychologist (see, *e.g.*, Bain's *Dissertations on Leading Philosophical Topics*, 1903, pp. 84–104), both are native to human nature; and they react on each other. It is a commonplace of Psychology (see, *e.g.*, Spinoza's *Ethics*, pt. iii.) that hatred of a person whom one formerly loved is intensified by the very fact of the previous love; just as previous dislike of a person may intensify our affection for him, once we are drawn towards him. But Christian love excludes hatred—hatred of persons (misanthropy)—absolutely. If it were lawful to hate any one, it would surely be one's enemies; and yet the Christian is commanded, 'Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you' (Mt 5[44]). The meaning of this is that both the measure and the nature of love are estimated from the standpoint of the love of Christ; and if the disciple is to be as his Master, hatred must be expelled from his heart. And if hatred is expelled from his heart, along with it are expelled all the malignant emotions—anger, retaliation, revenge, envy, jealousy, and the like. Meekness is now raised to a supreme position, and to it is the final victory promised: 'Blessed are the meek: for they shall inherit the earth' (Mt 5[5]).

(*b*) Christian charity is not to be limited by considerations either of merit or of gratitude in the

recipient. As it is required to be after the pattern of Christ's love, it must proceed on the lines of generosity and mercy, not on those of strict legal justice. Had Christ waited till mankind merited salvation, salvation would be still to seek. Had He insisted as a preliminary condition that His work must be repaid with immediate gratitude, the world would be heathen still, sitting in the darkness of the shadow of death. But what He did was quite different. Apart from merit and apart from gratitude on the side of the recipients, He poured out His love upon mankind, and sealed it with His death; and, on the cross, He pardoned even before His mercy was asked: for those who crucified Him, even at the very moment of their ignoble glorification in their unholy deed, He prayed, 'Father, forgive them; for they know not what they do' (Lk 23^{34}). His was 'an all-embracing love, not swayed by feelings or emotions or preferences'; and the command to His disciples is, '*As I* have loved you, that ye also love one another' (Jn 15^{12}).

(*c*) In the last place, Christian charity, on its practical side, is to be guided by the golden rule, 'All things whatsoever ye would that men should do to you, do ye even so to them' (Mt 7^{12}). This is no mere dictate of prudence: it is not only a counsel of humanity and fellow-feeling and a check to individual selfishness (as such, the rule is virtually common to all great ethical systems of whatsoever age and whatsoever country); it is an acknowledgment also that every human being is the creature of God formed in His image, and, as formed in His image, is the object of Jesus' love, and that no one is to regard himself as, of personal right, dearer to the Creator than another, or of more intrinsic worth—each is a human soul (none more, none less) bearing the Divine stamp and potentially an heir of the promises. Yea, for each equally Christ died, so that all may become members of the same Body. Under any view of it, the brotherhood of mankind is an organic unity; but, in the Christian conception, it is organic in a special sense—namely, because Christ is the Head of humanity, and so binds men together by first binding them to Himself, and imparting to them of His own life.

Christian charity, then, is love of men for the sake of God (God as revealed in Christ), and is stimulated by the love of Christ for man. This implies that love to God comes first in our estimation, and that in this love the other has its origin and its significance: brotherly affection (in the Christian sense) is founded on piety. What, then, is the relation between Christian charity and the allied Christian graces—faith and hope? Clearly, charity is the atmosphere in which they live and thrive; or it is the motive-power by which they are actuated. If 'faith' means acceptance of Christ's word and trust in His person, then, of necessity, it 'worketh by love' (Gal 5^6), and is really effective only when love is supreme. If, in like manner, we mean by 'hope' expectation based on the Divine promises, then again love becomes the moving force; for expectation could not be kept up in the face of earthly troubles—in the face of delay and hindrances and disappointments. Much less could it increase, as it usually does, as the believer's life advances, if it were not prompted and sustained from this source. Love is not only (what St. Paul calls it) 'the greatest' of the Christian graces (1 Co 13^{13}); it is also the stimulator and the indispensable condition of the other two.

2. **Consequences.**—That being so, let us see the practical consequences of Christian charity. As its basis is love to God issuing in love to man for God's sake, obviously Christian charity is the supreme dissolvent of all barriers (opinions, feelings, habits, customs, prejudices, principles alike) that would keep man apart from man—of all distinctions that are of the nature of caste, and that would foster self-importance in the individual and lead to injustice and contempt towards others. For the same reason, it overflows in good works—in deeds of practical beneficence, including, of course, the negative beneficence of restraint, or refraining from insult and the infliction of injury when revenge is in our power. In this way, it goes far beyond even what was attained by 'the high-minded man' of Aristotle, who 'readily forgets injuries . . . and is not apt to speak evil of others, not even of his enemies, *except with the express purpose of giving offence*' (εἰ μὴ δι' ὕβριν, *Nicom. Ethics*, iv. 3. 30 and 31).

Perhaps it may be thought that the sentiment of universal brotherhood (such, for instance, as the Stoics cherished) would do the same thing. But the difference lies here—the sentiment of universal brotherhood is simply on the plane of morality and natural or social affection; Christian charity rises higher and grounds the sentiment in religion, in apprehension of the Fatherhood of God and the universal redemption wrought out by Christ. The point of view in the two cases is entirely different; but the results achieved are different also. The cosmopolitanism of the Stoics, though noble in many ways and conducive to tolerance and sympathetic regard for others, did not effect any wide-spread reformation in the world: it was very much a doctrine and a sentiment of the philosophers, confined, therefore, to the few and not practically operative for the many. But Christian charity, inspired from above, and directed to Divine ends, is no mere philosophical doctrine; it appeals to all mankind, has effected great things, and has in it the energy to effect more. To it, civilization owes an enormous debt. It has been largely instrumental in the elevation and emancipation of women, and in the abolition of slavery in the world; it has broken down race antipathies of long standing, and shown the true nature of class distinctions; and it has made friends of foes in many instances when war and hostile opposition would only have embittered enmity and made hatred all the more intense. What, still further, it has done on the side of philanthropy and charitable institutions (thus taking under its wing the poor, the degraded, and the needy) and of humane treatment both of human beings and of the lower animals, and how it has entirely changed men's views of human life, impressing them with the notion of its sacredness and of the duty of conserving it—need only to be mentioned. If, notwithstanding, 'the parliament of man, the federation of the world' has not come and seems long in coming; if, even in Christian countries, great social questions are still unsolved and oppression has not fled the earth; if capital and labour are still at feud, and 'man's inhumanity to man makes countless thousands mourn,' that is not the fault of Christian charity, but arises from the imperfect appreciation of what Christian charity really is, by many of those who profess adherence to the Christian faith. It will come when men fully realize the meaning of the two sayings—'If a man say, I love God, and hateth his brother, he is a liar: for he that loveth not his brother whom he hath seen, cannot love God whom he hath not seen. And this commandment have we from him, that he who loveth God love his brother also' (1 Jn $4^{20f.}$); and 'By this shall all men know that ye are my disciples, if ye have love one to another' (Jn 13^{35}).

3. **The term 'charity.'**—This is the English equivalent, through French, of the Latin *caritas*. Now, *caritas* in Latin originally meant 'preciousness,' 'high price,' 'dearness'; and, in its secondary

sense, it was applied (so Cicero tells us) to love of the gods, of one's parents or one's country, and the like, while love of wives and children and brothers was more properly designated *amor* (*Part. Or.* xxv. [88]). If that is so, then *esteem* is the essence of the sentiment, and the idea of *value* attaches to the object of it. In that way, it is a term particularly suitable for the Christian vocabulary, and may very well be used to translate the NT ἀγάπη —in which, rather than in any synonymous Greek term (such as ἀγάπησις or φιλία), the same two ideas of *worth* or *value* and *esteem* are prominent, and where also the application is first made to man's attitude towards God. 'Charity' is very proper English for ἀγάπη (derivation and classical English usage alike conforming); and it may be doubted, without carping, whether the RV of the NT has done well in uniformly translating ἀγάπη by 'love.'

On the other hand, it is perfectly obvious how the term 'charity' should have come to contract its present narrow meaning of consideration for the poor, the outcast, the needy, the infirm; so that 'a charitable contribution' is a contribution in behalf of one or other of these, and 'a charitable institution' is one maintained by voluntary liberality for their benefit. The poor, the outcast, the needy, the infirm, were Jesus' peculiar care, and He left them as a special heritage to His followers. Nevertheless, while it is 'charity' to help the needy whom evil fortune has overtaken, or to minister to the wants of the afflicted and the weak who cannot adequately provide for themselves, it is no less charity to try to prevent the need for such help, and to remove the conditions of society which bring members of the community into straitened and harrowing circumstances. By the figure of synecdoche, a part has been put for the whole; but the wider meaning of the term is the correct one, and it may fitly be retained.

LITERATURE.—Thomas Aquinas, *Summa Theologiæ*, Pars ii. Quæstiones 23–32; A. Tucker, *The Light of Nature Pursued* (1837), chs. on 'Benevolence' and 'Charity'; J. Butler, *Sermons*, ix., xi.–xiv.; W. CHARITY, ALMSGIVING (Primitive).—By 'Charity' is here to be understood that kindly and unselfish feeling of benevolence towards others which is covered by the term 'Altruism' (*q.v.*), introduced by Comte, and popularized by Herbert Spencer. It thus answers to the sentiment of charity and love of our neighbour which is illustrated by the parable of the Good Samaritan, and expounded almost for the first time in the Pauline and other NT writings. Owing, no doubt, to the impressive character of these documents, and to their intimate association with the higher forms of religion, it is generally supposed that the altruistic sense is not an attribute of early man, but a later development fostered by the growth of the more advanced religious systems. That it constitutes a conspicuous feature of these systems is admitted, and will be fully dealt with in connexion with the treatment of all the great religions. The present article will therefore be confined to the lower races, and its main object will be to show that the feeling in question is not limited to cultured peoples, but is an attribute of humanity itself, one which goes back to the rudest societies, which share it in common with many animals—many groups of birds and mammals, and even of insects (bees, ants).

After devoting years of study to this universal instinct of solidarity and sociability, Prince Kropotkin asks whether it may not be taken 'as an argument in favour of a prehuman origin of moral instincts, and as a law of Nature,' thus mitigating the harshness of the *homo homini lupus* of Hobbes, and the 'teeth and claws of red' of some recent Darwinists *à outrance* (*Mutual Aid*, Introduction). It is here shown that Huxley's 'Struggle for Existence and its bearing upon Man' may be largely superseded by 'Mutual Aid as a Law of Nature and a Factor of Evolution,' where 'mutual aid' may be taken as practically equivalent to 'altruism' and 'charity' as above defined. It should be noted that, in the subjoined instances of unselfish sympathy and pity drawn from savage or uncultured peoples, religious sanction is in most cases to be understood, even where it is not specially mentioned as a dominant motive. All such practices acquire by heredity the force of tribal law, which in the early stages of society always enjoys a kind of religious sanction. 'The *adat* (custom) is our religion'—a remark often made by Oriental peoples —sums up this aspect of the subject. A case in point is the custom of depositing the personal effects of the dead with them—a custom which was kept up after the original motive had been forgotten, because it later became a religious observance. 'It receives a mystical interpretation, and is imposed by religion' (Kropotkin, *Mutual Aid*, p. 98). So also with tabu, the totem, hospitality, and many other tribal observances.

In his *Descent of Man*[2] (p. 63 f.), Darwin points out that the physical weakness of man is more than counterbalanced partly by his intellectual faculties and partly by his social qualities, which lead him *to give and receive aid from his fellow-men*. This principle of 'give and take,' from which sprang pure altruism in remote times, prevails throughout the New World, and is conspicuous especially amongst the northern Amerinds.

Thus Dellenbaugh, quoting Powell, writes that 'no friendly stranger ever left an Amerind village hungry, if that village had a supply of food. The hungry Indian had but to ask to receive, and this no matter how small the supply or how dark the future prospect. It was not only his privilege to ask, it was his right to demand. The Amerind distribution of food was based on long custom, on tribal laws; food was regarded, like air and water, as a necessity that should in distress be without money and without price. Hospitality was a law, and was everywhere observed faithfully till intercourse with the methods of our race demolished it. Among isolated tribes it is still observed; among the Mokis (Pueblo Indians) a hungry man *of any colour* is cheerfully fed. . . . At first, too, the Amerind extended the law of hospitality to the new-comers, and the Europeans would have starved to death in some instances had it not been for the timely aid of the race in possession of the soil, and whose reward was subsequent destruction' (*The North Americans of Yesterday*, pp. 354 f., 447).

How largely this tribal law was based on religious grounds is seen in the *Mandans*, a now

nearly extinct Siouan tribe of the Middle Missouri Valley, whose custom it was to share the captured game with any one who might come to the home of a successful hunter and ask for it.

'The Mandans were a very liberal and hospitable people; food was practically common property in the village. No man could become a chief without much giving of presents, and giving was considered a great honour, the gifts which a man had made being painted on his robe along with his deeds in war. The hospitality of the Mandans is mentioned by every visitor. Verandrye speaks particularly of his kind reception, their custom being to feed liberally all who came among them, selling only what was to be taken away. Even their worst enemy, when once in their village, had nothing to fear, and was treated with all kindness' (Will and Spinden, *The Mandans*, 1906, p. 127).

Like the Muskhogeans of Georgia, the Mandans declared that this and many other customs were taught them thus, and consequently they always did them a certain way (*ib.*). In other words, the teachers were Divine lawgivers, like Quetzalcoatl and Wotan, and the usages came to be regarded as of Divine origin.

It was much the same with the *Eskimos* and *Aleuts* of the extreme north, and even amongst the degraded *Fuegians* of the extreme south. Eskimo society is essentially communistic, the sense of individuality not having yet been developed. Each person looks upon himself, not as an independent unit, but as a member of one 'body politic,' so that the altruistic sense is diffused throughout the community. Hence the idea of personal property scarcely exists, except for arms and the like, and wealth is accumulated not for the benefit of the individual, but in the interest of the tribal group.

'When a man has grown rich he convokes the folk of his clan to a great festival, and distributes among them all his fortune. On the Yukon river, Dall saw an Aleut family distributing in this way 10 guns, 10 full fur dresses, 200 strings of beads, numerous blankets, 10 wolf furs, 200 beavers, and 500 zibelines [sables]. After that they took off their festival dresses, gave them away, and, putting on old ragged furs, addressed a few words to their kinsfolk, saying that, though they are now poorer than any one of them, they have won their friendship. Like distributions of wealth appear to be a regular habit of the Eskimo, and to take place at a certain season after an exhibition of all that has been obtained during the year' (Kropotkin, *op. cit.*, p. 97).

And Rink is quoted as stating that the principal use of the accumulation of personal wealth is for *periodically* distributing it, and as mentioning the destruction of property for the same purpose of maintaining tribal equality. The present British Trade Unions, also communistic, aim at the same results by preventing the best hands from earning more wages than the less skilful or more indolent. But there is a great difference from the altruistic standpoint, since what one does from a genuine feeling of fellowship the other does from purely selfish motives. The Eskimo is obstructive at the lowest rung of the social ladder, and the Unionist is destructive at the highest.

Of the Aleutian Islanders in their primitive state we have an excellent account from Veniaminoff (*Notes on the Islands of the Unalaskan District* [in Russian], 1840), who tells us that in times of prolonged scarcity their first care is for their children, to whom they give all they have, though they may have to fast themselves. Indeed, the devotion of parents to their offspring, though rarely expressed in words or fondlings, is comparable with that of the New Hebrides mothers and aunts who, on the loss of a specially beloved child, will kill themselves in the belief that they will thus be able to continue nursing it in the next world (W. Wyatt Gill). Veniaminoff mentions a personal incident which illustrates the forbearance and generosity of the Aleut natives. Some dried fish presented to him by one of them, but forgotten at his sudden departure for another district, was kept by the donor for over two winter months of great scarcity, and on the first opportunity restored to him untouched.

Similar accounts of the extreme altruistic sentiment characteristic of many Siberian aborigines are given by Middendorff, Schenck, Finsch, Sieroshevski, and other trustworthy observers.

Samoyedes, Ostiaks, Yakuts, Tunguses, and most other Hyperboreans are animated by the mutual-aid spirit, which everywhere influences the social organization, and often forms part of their religious systems. Such customs as doing to death the aged and the infirm, which are regarded with horror by more advanced peoples, are based on distorted altruistic motives, while the voluntary victims themselves submit to the sacrifice in the supposed interests of the community. 'When a savage feels that he is a burden to his tribe; when every morning his share of food is taken from the mouths of his children; when every day he has to be carried across the stony beach or the virgin forests on the shoulders of younger people, he begins to repeat what the old Russian peasants still say, "I live other people's life; it is time to retire." And he retires. So the savages do. The old man himself asks to die; he himself insists upon this last duty towards the community, and obtains the consent of the tribe; he digs his own grave; he invites his kinsfolk to the last parting meal. The savage so much considers death as part of his *duties* towards his community that he not only refuses to be rescued, but when a woman who had to be immolated on her husband's grave was rescued by the missionaries, she escaped in the night, crossed a broad sea-arm swimming, and rejoined her tribe to die on the grave. *It has become with them a matter of religion*' (Kropotkin, p. 103).

But, besides this *negative* kind of tribal almsgiving, *positive* and absolutely disinterested succour of the needy and helpless prevails throughout the whole of Siberia. Thus the Samoyedes are full of pity for the poor, with whom they are ever ready to share their last crust. Friends or relatives reduced to destitution are always hospitably treated and provided with food and lodging, and orphans are frequently adopted who might otherwise be doomed to perish of want.

Still more significant in this respect is the action of the Turkish *Yakuts*, who occupy a wide domain in the Lena basin. Thanks to their benevolent nature, the very poorest live through the hard winter months, especially in the northern districts, where the primitive customs still survive, and where the struggle for existence is most severely felt. In the more advanced southern parts,

'the custom is already coming in to sell food to travellers, and even to neighbours, but in many parts of the north they consider it a shame to trade with food. Even the poorest think it an offence if it is proposed to them to take money for lodgings or food. Travellers in winter take hay from the stacks on the meadows, with which to feed their animals, and it is regarded as right. . . . Care for the poor and unfortunate has always been regarded as an obligation of the *sib* [clan or family group]. Impoverished families are cared for in their houses, while the helpless and paupers go about amongst the householders and take their places at the table with the members. . . . According to the notions of the people, it is sinful to despise the unfortunate, who are, however, distinguished from professional beggars living on alms. . . . Even now they are inclined to regard the dwelling as a common good. Any one who enters may stay as long as he will. A traveller has a right, according to their notions, to enter any house at any hour of the day or night, and establish himself so as to drink tea or cook food, or pass the night. The master of the house does not dare to drive out, without some important and adequate reason, even one who is offensive to him' (M. Sieroshevski, 'The Yakuts,' *JAI* xxxi. 69 f.).

A far more extensive territory between the Lena and the Pacific Ocean is roamed by the nomad Mongoloid *Tunguses*, whose Manchu cousins have given her present dynasty to China. All observers are unanimous in their praise of the moral qualities of the Tunguses proper, who are described as a 'heroic people' whose altruistic sense is so highly developed that they would almost seem to care more for others than for themselves. In the pagan state, long before their nominal conversion to Russian orthodoxy, tribal usage made hospitality the first of duties, permitting all strangers, without exception, to share alike in the food of each. The sense of personal property is now well developed; but formerly there were neither rich nor poor, and everything, even the hunting and fishing grounds, was held in common, as it is still amongst the Eskimos and many other primitive peoples. But

the unselfish spirit engendered by the communistic social system still survives, and is another signal proof that the feeling of fellowship is not an aftergrowth, but perhaps lies at the very basis of all human societies.

On both sides of Lake Baikal dwell a Mongoloid people collectively known to the Russians as *Buriats* (*q.v.*). A long-standing unwritten law of these Siberian Mongols, who have no private property in land, requires that when a family has lost its cattle, the richer members of the *ulus* (village community) shall give it some cows and horses that it may raise fresh stock, and thus be saved from abject want. On the other hand, a really destitute man without a family takes his meals in the huts of his neighbours.

'He enters a hut, takes—by right, not for charity—his seat by the fire, and shares the meal which always is scrupulously divided into equal parts; he sleeps where he has taken his evening meal. The Russian conquerors of Siberia were so struck by the communistic practices of the Buryats that they gave them the name of *Bratskiye*, the "brotherly," and reported that with them everything is in common; whatever they have is shared in common. The feeling of union within the confederation is kept alive by the common interests of the tribes, their folkmotes, and the festivities which are usually kept in connexion with the folkmotes. The same feeling is maintained by another institution, the *aba* or common hunt, which is a reminiscence of a very remote past, and the produce of which is divided among all the families. In such *abas* the entire Buryat nation revives its epic traditions of a time when it was united in a powerful league' (Kropotkin, p. 140).

The feeling of sympathy towards strangers is universal amongst the Buriats and all their Mongol kindred. Bastian tells us that the Mongol who refuses shelter to strangers is liable to the full blood-compensation, should they suffer therefrom (*Der Mensch in der Geschichte*, iii. 231). Thus is altruism legalized, so to say, throughout the vast Mongol domain.

Coming to Africa, we are at once reminded of the classical episode in the life of Mungo Park, who was rescued from dire distress by the motherly devotion of a lowly Negroid woman. On seeing his sad plight, she took him to her home, revived him with a refreshing meal, and then as he slept the women-folk resumed their spinning, singing the while far into the night how

'The winds roared, and the rains fell,
The poor white man sat under our tree;
He has no mother to bring him milk,
No wife to grind his corn';

with the refrain,

'Let us pity the white man,
No mother has he.'

Surely no more touching picture of unselfish compassion is recorded in history; and that it was not an exceptional case is shown by that other incident of a passing female slave who, struck by the traveller's famished look, at once supplied him with food, and was gone without waiting for a word of thanks. This is almsgiving in the truest sense of the word. Nor is it confined to the Upper Niger districts traversed by Mungo Park. The neighbouring *Wolofs* of the Lower Senegal river are equally distinguished for their boundless hospitality towards friends and strangers, and all travellers meet with a hearty welcome. 'The unfortunate, the helpless, and the infirm are objects of commiseration; they are received in every household with the greatest alacrity, and are instantly provided with food, and even with clothing if their condition requires it' (Featherman, *The Nigritians*, p. 349). This trait appears to be unquestioned, although in some other respects a somewhat dark picture of the moral character of these Senegambians has been drawn by Le Maire, Barbot (in Churchill, *Collection of Voyages and Travels*, London, 1732, vol. v.), and other early writers. The *Fulahs* of the same region are generous and hospitable to their own people, and always ready to relieve the wants of the infirm and aged. Of the *Hausas* also, the dominant nation of Central Sudan between the Niger and Lake Chad, we read that the wealthy classes are reputed to be extremely charitable and benevolent, and that in Kano and other large cities they daily distribute a certain measure of rice and milk to the poor. Most of the Hausas, however, have long been Muhammadans, so that this custom should perhaps be credited to the teachings of the Qur'ān, with which we are not here concerned. But the formerly powerful *Bakunda* nation south of the Congo are still pagans; yet at the command of their ruler, the Muata Jamwo, they treated all strangers and white travellers with the utmost kindness and hospitality, freely supplying them with an abundance of provisions without expecting anything in return. Similarly the *Wagogo* of the seaboard east of Lake Tanganyika not only mutually entertain each other at friendly gatherings, but also give passing strangers a generous welcome.

'The visitor is greeted with the usual salutation of *yambo*; a stool is offered to the guest, while the master of the house is seated on the ground. A meal is instantly prepared, and the stranger is regaled with the best the larder affords; and, on parting, a goat or a cow is sometimes offered to him as a present, if the host is sufficiently wealthy' (Featherman, *op. cit.* p. 96).

This picture applies equally to many of the *Zulu-Xosa* tribes, and still more to the *Hottentots*, who display towards children that extreme devotion which we have already seen exemplified amongst the Siberians and Melanesians. Early observers tell us that the Hottentots readily divide their food with the hungry, and that a mother will give her famished offspring the last morsel without tasting it herself. They were noted for their unselfish liberality and attachment to friends and kindred, with whom they would share their last stock of provisions, though starvation stared them in the face.

'While they treated their enemies with the greatest barbarity, they manifested the utmost generosity towards their relations and the members of their own tribe, and even visiting strangers were welcome to the hospitalities of the kraal' (Featherman, p. 501).

The Hottentots of Great Namaqualand display extreme kindness towards strangers; and so natural with them is the exercise of hospitality that they look with contempt on the selfish members of the community who eat, drink, or smoke alone. Although the aged and infirm are generally cared for, yet circumstances may arise when they have to be abandoned to their fate. They are not, however, put to death or buried alive, as amongst the Siberian aborigines (see above), but, when the tribe has to remove to some distant camping ground, those who, through physical helplessness, cannot follow are placed in an enclosure of bushes, and, if possible, supplied with a quantity of food and water, after which they are left to perish in the wilderness.

We cannot speak of the *Vaalpens*; but the *Bushmen*, next lowest in the social scale, have by recent observers been vindicated from the indiscriminate charges of brutal savagery brought against them by their former European exterminators. They are shown to have been originally as gentle and humane as other inoffensive aborigines, and by no means destitute of the altruistic sentiment. Featherman had already pointed out that they were originally a mild, well-disposed, happy, and contented people, and in private life kind, generous, and hospitable. But their character was greatly modified by the violence and oppression of the whites, who took possession of their territory and drove them into the interior, where they were compelled to find subsistence, as best they could, on the borderland of barren and inhospitable deserts.

All this is now fully confirmed by G. W. Stow, whose *Native Races of South Africa* (1905) deals more particularly with the Bushman aborigines. His general conclusion, based upon a close association of many years with the survivors, is that

they were at first both more intelligent and of far more gentle and friendly disposition than has hitherto been supposed. Later, however, to save themselves from extinction, they developed a cruel and revengeful spirit, while still preserving much of their naturally kind and sympathetic nature, as is frankly admitted by those white settlers, travellers, and others who treat them well, and to whom they in return render faithful service as guides or attendants, and in other capacities. Their fondness for children is as sincere and unselfish as that of so many other primitive peoples. Thus a strong altruistic feeling can no longer be denied to these 'human wastrels.'

Although the *Kabyles* of North Algeria and Morocco are now Muhammadans, a reference may here be made to their peculiar social organization, which dates from pre-Muslim times, and has been elaborated in the best interests of all the members of the community.

Everything is regulated and controlled, not by the theocratic *shaikh*, as amongst the surrounding Arab tribes, but by the *jamʿa*, or public assembly, which is framed somewhat after the manner of the early English *Witenagemót*. Only it is more democratic, all adult males being admitted to its meetings, and having a voice in its decisions. This is because the Jamʿa is not a national but a tribal or village gathering, from which no member of the tribe could very well be excluded. Mutual help on a communistic basis, and with special regard for the poor and destitute, is the ruling principle; so that, for instance, certain garden plots and fields, sometimes cultivated in common, are set apart for the lackland members of the community. And, as many of these cannot afford to buy food, supplies are regularly bought with the income derived from fines, public grants, the tax levied for the use of the communal olive-oil tanks, and other sources, and distributed in equal parts amongst them. Even when a sheep or bullock is killed by a family for its own use, the fact is often proclaimed by the village crier, so that the sick and needy may come and help themselves. All strangers have a right to housing in winter, and their horses may graze on the 'common' for at least one day and night. But in times of general distress all may reckon on almost unlimited succour. During the famine of 1867–68 the Algerian Kabyles sheltered and fed all comers, natives and Europeans alike. While the people were perishing of hunger in other districts, not a single death from starvation occurred in the Kabyle territory. The Jamʿas, stinting themselves, had organized a regular system of relief without applying for help to the French Government, considering their action merely as 'a natural duty.' In the European settlements, but not in Kabylia, stringent police measures had to be taken to prevent the disorders caused by the influx of famished strangers; the Jamʿas needed neither aid nor protection from without (Hanoteau and Letourneux, *La Kabylie et les coutumes kabyles*, ii. 58). Yet no decadents or thriftless proletariat classes have been generated by this apparently reckless almsgiving. The mutual-aid principle, continued for long generations, has, on the contrary, fostered a high sense of honour and fair play, a sentiment specially characteristic of the Berber people.

By Brough Smyth the moral character of the *Australian* in general is thus summed up:

'He is cruel to his foes, and kind to his friends; he will look upon infanticide without repugnance, but he is affectionate in the treatment of the children that are permitted to live; he will half murder a girl in order to possess her as a wife, but he will protect and love her when she resigns herself to his will. He is a murderer when his tribe requires a murder to be done; but in a fight he is generous, and takes no unfair advantage. He is affectionate towards his relatives, and respectful and dutiful in his behaviour to the aged. He is hospitable' (*The Aborigines of Victoria*, vol. i. p. xviii.).

Thus here also we have affection, kindness, hospitality, and the usual love of children, which are the essential elements of the altruistic sense. Several instances are given of wives refusing to survive their husbands and conversely, and even of men sickening to death on the loss of a friend. Of two Portland Bay natives imprisoned in Melbourne, one fell ill and died, and the other, till then in good health, felt the stroke so keenly that he too was found dead in his cell next day. A young woman of the Mount Macedon district was so grieved at the loss of her husband that she burnt and mutilated herself, sat night and day moaning most plaintively, refused all food, declared she would follow him to the grave, and so pined away, and in a few days was laid by his side (*ib.* i. 138).

E converso, an old man of the Middle Swan district died literally of a broken heart on the death of his wife, to whom he was devotedly attached. The case is recorded of a white man who was known to be hostile to a fierce tribe on the north coast; hence, when captured by them, he expected instant death. 'They, however, led him to their camp, fed him until the following morning, when they took him in safety to his companions' (ii. 229). They commiserated him because he was helpless and hungry, and thus showed their fellowship with our common humanity.

Space forbids more than the barest reference to similar acts of kindness and generosity, as to Buckley, who lived for over thirty years with the Victoria natives; to the shipwrecked Murrell, who lived with the Queensland people for seventeen years, and was treated by them with extraordinary kindness; to Thomas Pamphlet and to King, who had the same experience when entirely at the mercy of the Cooper's Creek tribe. A tragic instance is mentioned of a native who lost his life through his attempt to rescue a child from the enemy. But the love of offspring is so general that it needs no illustration, and the conclusion may be confidently accepted that

'the Australian native is kind to little children, affectionate and faithful to a chosen companion; shows exceeding great respect to aged persons, and willingly ministers to their wants; he has great love very often for a favourite wife; he is hospitable, and he can be generous under very trying circumstances' (i. 25).

Of the *Papuans*, with whom may here be included both the *Melanesians* and *Polynesians*, it must suffice to state, on the high authority of the Russian traveller Miklukho-Maclay, that when well treated they are very kind. Their love of music and the dance bespeaks a sociable disposition which is itself akin to the altruistic sense.

In Europe fresh light is being constantly shed on the social relations that must have prevailed during the Stone Ages. Here the chief centre of human activities appears to have been France, and it is natural to find that the French archæologists are continuing the study of Palæolithic and Neolithic times so brilliantly begun by Boucher de Perthes and his immediate successors. The collections of the indefatigable M. Ed. Piette, late President of the French Prehistoric Society, have raised Palæo-ethnology to the dignity of a science, and shown that the horse, if not other equidæ, had undoubtedly been tamed by the art-loving cave-men of the Dordogne in the Pleistocene epoch. But here we are more interested to learn that these cave-men were already constituted in organized communities on the mutual-aid principle. They formed social groups in the Lourdes, Mas d'Azil, and other spacious caves, whose contents reveal steady progress in culture from period to period—animals harnessed and slaughtered for food, the hearth (showing a knowledge of fire), conventional carvings, 'le symbole sacré, en realité le premier rudiment d'écriture,' and so on (*L'Anthropologie*, Jan.–April, 1906). Clearly these Dordogne troglodytes were sociable, and we have now learnt that sociability is inseparable from solidarity and the altruistic sentiment—an attribute of humanity itself

A. H. KEANE.

CHARITY, ALMSGIVING (Biblical).—**I. In OT.**—While we have in the Book of Genesis not infrequent reference to hospitality, we have no mention of alms either asked for or received. The first mention of any form of relief is to be found in that part of Exodus which is known as 'the Book of the Covenant,' which is certainly very ancient, written, as Driver remarks, for a people in a simple and primitive stage of agricultural life. In this it is enjoined that the produce of the Sabbatical year, during which the land is to lie fallow, is to be reserved, 'that the poor of thy people may eat' (Ex 23^{11}). The next notice occurs in Lv 23^{22}—a part regarded by most critics as also ancient, belonging to what has been described as 'The Law of Holiness'—and provides that, when the Israelites reap the harvest of their land, they shall not reap the corners of their fields, neither shall they gather the gleaning of their harvest, but shall leave them for the poor and the stranger (see also 19^{10}). In a later chapter there are various provisions made as to the help which a poorer member of a family is to receive from its better-to-do members: his possessions which he has sold are to be redeemed; if he has become incapable of work, he is to be supported; if he has sold himself into slavery, he may and should be redeemed (25$^{25ff. 35. 47ff.}$). Deuteronomy represents a still later development in the history of Hebrew legislation. By many it is regarded as dating in its present form from the reign of Josiah and the re-finding of the Law. Any way, the legislation relating to the relief of the poor and destitute is much more precise and full than any we have yet met with. In ch. 15 it is enacted that in the seventh or Sabbatical year, every creditor shall release, *i.e.* remit, everything that he has lent to his neighbour; he is not to exact repayment either of his brother or of his neighbour 'because the Lord's release has been proclaimed.' There will not, it is promised, if God's commandments are observed, be many poor in the land; but, inasmuch as the poor will never cease out of the land, the wealthy man is not to grudge his poor brother the help he needs, even though the year of release be close at hand, but it is God's command that he open his hand unto his brother, to the needy and the poor that are in the land (Dt 15$^{9-11}$). In the Book of Job, in the Psalms, and throughout many of the Prophetical books the position assigned to the poor, and the obligation of the rich and powerful towards them, are more difficult to make out, for the word *'ānī*, 'poor,' is employed in a different sense from that which we have been hitherto considering, and at times another word, *'ānāw*, is used, denoting not so much those who are needy, as those who are meek and humble and gentle. It is the oppression of such by the great and powerful which prophet, psalmist, and preacher alike deprecate (see art. 'Poor' in Hastings' *DB* iv. 20). But, while this is so, the humble would be for the most part actually poor also; and the earnestness with which consideration and care for them are enforced in these books does show an ever-increasing regard for the 'poor'; and one cannot doubt the anxiety alike of psalmist and prophet to redress their wrongs and to make their lot more endurable than it then too often was. In the earlier days of the monarchy, while we hear, indeed, of rich and poor, wealthy and needy, the complaint of the poor can scarcely make itself heard, and appears seldom in the Historical books dealing with this period; but with the advent of the prophets this ceases to be the case, and almost all the Prophetical books ring with denunciations of the oppression of the poor by the powerful, and of the evils which the tyranny and wrong-doing of the rich impose upon them (*e.g.* Am 2$^{6. 7}$ 8^6, Is 3$^{14. 15}$ 10^2 32^7). But for the cure of this state of things the prophets looked to the establishment of a righteous rule, the sway of a just and benevolent king, rather than to any system of private charity or almsgiving. They recognized keenly the evils from which the poor suffered, but invoked legislation or improved social conditions rather than individual generosity to effect a remedy.

Something of the same kind may be said of the references to the poor in the Book of Job. Their tyrannical conduct towards the poor is one of the charges which Job most constantly brings against the prosperous rich; the oppression of those who were humble and meek, and so poor in that sense, is one of the main causes that make the prosperity of the wicked so difficult and grievous a problem to him; on the other hand, he regards the consideration and assistance he had himself ever extended to those who were in need or want—to the widow, the fatherless, the naked, the afflicted—as one of the chief claims he had upon God for better treatment at His hand (Job 31$^{16-23}$). In such a passage as this we get a distinct recognition of almsgiving as a duty, and also of the esteem in which, when this book was written, it was already beginning to be held. Very similar to this passage are many in the Book of Proverbs. On the one hand, the poor are regarded as liable to be oppressed and ill-treated by the powerful and prosperous, but as persons also on whom, as compared with the powerful, the blessing of God rests; on the other hand, there is a growing consciousness throughout these writings that the relief of the needy, the succour of the oppressed, is an act meritorious in itself, acceptable to God, bringing down upon the performer of it both the favour of God and the praise of men (Pr 14$^{20. 21. 31}$ 21^{13} 28^8). It is to be observed in this connexion that there had grown up in the LXX version of these books a specific word ἐλεημοσύνη (the origin, of course, of the word 'alms') denoting at once the pitifulness and kindly feeling from which almsgiving should spring, and the acts of mercy and kindness in which that feeling expresses itself. The emergence of this word is itself an important testimony to the increasing value which was set alike upon the feeling and the acts to which it gave rise (see Hastings' *DB* i. 67). The remnant who returned from the Captivity seem not to have been for the most part wealthy men; there was consequently much poverty among those who settled in Palestine, and Nehemiah complains of the hardships the poor suffered from the mortgages which they were compelled to make of their properties, and from the slavery they had to incur in their own persons or in those of their children, when they found themselves unable to meet the debts they had contracted (Neh 5$^{1-13}$). The result was that in the centuries that follow the return from the Captivity, almsgiving fills a larger and ever larger part among the religious observances which were encouraged or commanded. In all the Books of the Apocrypha, but particularly in Tobit and Sirach, it is much insisted upon as a duty, as a meritori-

ous act, and as an atonement for sin (To 12^{8-10} $14^{7,11}$, Sir 3^{30} 7^{10} 16^{14} 31^{11} 40^{17}). In the Talmud it holds even a higher place, being often identified with the whole of righteousness,[1] and being regarded as the sum and summit of excellence. It was the reputation which came thus to be attached to it as the very highest of all the virtues that caused it to be practised for those purposes of ostentation and self-glorification which our Lord in the Sermon on the Mount so severely condemns (Mt 6^{1-4}). See, further, art. CHARITY (Jewish).

2. In NT and the Apostolic Church.—Christ in the Sermon on the Mount and elsewhere in His teaching enforces, at least as earnestly as the Jewish Rabbis, the duty of almsgiving. It is assumed that His followers are to do alms, only their almsgiving must be done out of pure charity (Christians seeking to be perfect even as their Father which is in Heaven is perfect), not from any desire for display, or praise, or self-aggrandizement (Mt $6^{1ff.}$). In the parallel sermon recorded in Lk. the injunctions are even more numerous and express: 'Give, and it shall be given unto you'; 'Give to every one that asketh thee; and of him that taketh away thy goods ask them not again'; 'Love your enemies, and do them good, and lend, never despairing; and your reward shall be great, and ye shall be sons of the Most High: for he is kind to the unthankful and evil' (Lk 6^{30-38}). That which He enjoined He promoted also by His example, spending much of the time of His public ministry in alleviating the ills from which men suffer, going about doing good, and healing all that were oppressed of the devil, because God was with Him (Ac 10^{38}).

Yet we must not think of Christ as a weak philanthropist. Just as He tells men in their own case that they are to seek first the kingdom of God and His righteousness, and that all other things shall be added unto them, so in helping others, He would have His followers show more regard to the care of the souls of their fellow-men than to the relief of their bodies; and He Himself, in effecting cures or giving aid, seeks not the immediate relief, but the ultimate improvement of those whom He assists. There is another point which it is necessary to bear in mind, viz. that the ground on which our Lord bases the duty of mutual help among Christians is the relation in which all men stand to God and to Himself; this at once constitutes them brethren; and inasmuch as all are ideally members of a society which is pervaded by a common spirit, all are bound in virtue of that membership to help one another. 'Bear ye,' says St. Paul, in the spirit of the Master, 'one another's burdens, and so fulfil the law of Christ' (Gal 6^2). But it is obvious that, in so far as benevolence and almsgiving are prompted by such a motive and inspired by such an ideal, boasting or display of any kind would be out of the question.

Let us turn next to consider how the teaching of Christ and His example took effect in the conduct and teaching of His earliest disciples. The immediate result of the outpouring of the Spirit which took place on the day of Pentecost was the establishment of a voluntary self-imposed system of communism, the richer members of the community contributing all, or almost all, their goods to relieve the necessities of their poorer neighbours (Ac $2^{44,45}$). Not every one, it would seem, sold his goods; those who had not more than enough for their own necessities supported themselves; but those who had a superfluity of possessions sold or used them for the common good ($4^{34,35}$). Charity on such an heroic scale as that did not, and could not, last; the instance of Ananias and Sapphira shows that the spirit which should have prompted it was sometimes counterfeited; and perhaps the evils which are sure to result from supporting people in idleness quickly showed themselves in the Church at Jerusalem, as we know from St. Paul's warnings that they began to do in other churches as well (2 Th $3^{10ff.}$). But, while the charity of the early days was not continued on the same heroic scale when the first enthusiasm had passed away, an active, practical, unstinted almsgiving continued long to be a very marked feature of the Christian churches, and ultimately of the Christian Church. The brethren, when they extended to St. Paul the right hand of fellowship, and recognized that the mission of him and Barnabas was to be to the Gentiles, added the proviso that they should remember the poor, a proviso which St. Paul himself was anxious to observe (Gal 2^{10}). Accordingly, in order to carry this out, and thereby to knit more closely into one community the divided Churches of Jews and Gentiles, we find him organizing most carefully, both in the churches of Macedonia and in those of Achaia, a collection and contribution of alms of which he was to be himself, though accompanied by representatives of the different churches, the bearer to the brethren which were at Jerusalem (2 Co 8 and 9). The direction which he gives (1 Co 16^2) for a weekly collection of alms in this case seems to have been the origin of a custom which was largely followed in the different churches, and has continued in force to our own day.

Nor was the need of almsgiving and of showing pity to the poor less insisted on by the rest of the Apostolic College than it was by St. Paul. Not only does St. James denounce in strong terms the oppression of the poor by the rich (Ja 5^{1-6} 2^6), but he sums up the whole of religious service in these words: 'Pure religion and undefiled before our God and Father is this, To visit the fatherless and widows in their affliction, and to keep oneself unspotted from the world' (1^{27}). The author of the Epistle to the Hebrews (13^{16}) concludes his practical advice to those whom he addresses with these words: 'To do good and to distribute forget not: for with such sacrifices God is well pleased.' Lastly, St. John puts the duty in the clearest light, connecting most closely the service of man with its originating motive in the love of God: 'Whoso hath the world's goods,' he says (1 Jn 3^{17}), 'and beholdeth his brother in need, and shutteth up his compassion from him, how doth the love of God abide in him?' We see then how in the teaching of our Lord Himself and of His immediate followers almsgiving, or the relief of the poor, was recognized as one of the primary duties of the Christian life, one which grows immediately out of the relations in which men stand through Christ to God, which is the immediate result and outcome of the recognition of that relation. See, further, art. CHARITY (Christian).

CHARITY, ALMSGIVING (Buddhist).—The early Buddhists adopted Indian views on this subject, which forms no part of the teaching peculiar to themselves. Almsgiving (*dāna*) is not mentioned in the Eightfold Path, or in the Five Precepts for laymen. When the author or editor of the *Dhammapada* made that anthology of verses on each of twenty-six subjects important in Buddhism, *dāna* was not one of them. But *dāna* occurs in several passages of the older books. It is one of the really lucky things (all ethical, *Sutta Nipāta*,

263). The five right ways of giving are to give in faith, to give carefully, to give quickly, to give firmly, and to give so as not to injure oneself or the other (*Aṅguttara*, iii. 172). Another set of five are to give carefully, thoughtfully, with one's own hand, not a thing discarded, and with the hope that the donee will come again (*ib.*). The theory is that the merit of a gift grows in proportion with the merit of the donee (*Aṅguttara*, i. 162; *Dhammapada*, 357-9). As Buddhology began its fatal course, *dāna* was made one of the *pāramitās* (not found in the older books), that is, of the qualities in which a Buddha must, in previous births, have perfected himself. It is in this connexion that we have the well-known stories of the extremes of almsgiving, such as that of King Sivi who gave away his eyes, and of Vessantara who gave away not only his kingdom, but all that he possessed, and even his wife and children. These legends, both of which have a happy ending, are most popular among the Buddhist peasantry. The ethics of the Vessantara story, which is much open to doubt, is discussed in the Milinda (ii. 114-132 of Rhys Davids' tr.). The same book tells of ten gifts which must never be given—intoxicating drinks, weapons, poisons, and so on. But best gift of all is the gift of *dharma*, which may be roughly translated, in this connexion, by 'truth' (*Dhammapada*, 354), and the Five Great Gifts are the five divisions of one's own virtuous life (*Kathā Vatthu*, 7. 4) regarded, from a similar point of view, as gifts to others. T. W. RHYS DAVIDS.

CHARITY, ALMSGIVING (Christian).—**I. Early period.**—The first period begins with the epoch of the Flavian emperors. Up to that time poverty was not wide-spread in the Empire, but after that date conditions changed for the worse. The yeoman disappeared before the encroachments of the *latifundia*, or large country estates. His place was taken by slaves, and those who had formerly been free labourers drifted into the idle mobs of the towns. At the same time the pomp and, therefore, the costliness of the Imperial court were increasing, and taxation was becoming proportionately heavier. This combination of causes produced a poverty with which the early Church was bound to deal. In the methods adopted it is possible to trace a clear development from simple congregational relief to a more complex system in which the management of the funds set apart for charitable ends was centralized, and relief was officially administered in institutions built for the purpose. The transition from the one to the other was made in the 4th century. The official recognition then accorded to Christianity at once allowed a far greater freedom to organize than had hitherto been possible, and this was felt in the department of charity as elsewhere.

During the first three centuries there were two methods in vogue in the Church by which alms were collected for the use of the poor. One of these was an imitation of the monthly collection allowed by law to the recognized *collegia* in the Roman Empire. A chest (*arca*) was kept in the church, and into this every member was expected to put a contribution at least monthly; the amount was left to the conscience of the giver (Tert. *Apol.* 39). These offerings were expended on the relief of the poor, provision of funeral expenses, education of boys and girls, and the care of shipwrecked mariners, and of such as were in prison or committed to the mines for the cause of Christ. Besides this *arca* there were also the collections at the Eucharist, which were called oblations. At first composed of all kinds of natural products, they were later confined to bread and wine. When enough had been taken to supply the sacred elements needed for the celebration, the rest was distributed among the poor. It is probable that money was also offered at the same service. Justin (*Apol.* i. 67) speaks of money deposited with the 'president' for purposes of relief. Besides these sources there were other offerings, conspicuous among which were gifts from rich men, *e.g.* Cyprian. As yet all such gifts were voluntary, the only exception to this being the law of firstfruits, which had already received recognition at the period of the *Didache* (c. 13). Tithes, although mentioned with commendation by Cyprian (*de Unit.* 26) and Origen (*Hom. in Num.* xi. 1), were not yet required by a fixed law of the Church.

The distribution of these oblations and alms was entrusted to deacons. It was their duty to make diligent search for those who were in affliction or need, and report their names to the Bishop. A list of such names was kept, called the *matricula*. The independence of the deacons in allotting relief was limited and made strictly subordinate to the judgment of the Bishop (*Const. Apost.* ii. 31, 32, 34). When it was necessary to carry relief to women, recourse was had to the ministry of widows or deaconesses. These two classes are not to be confused. For the first three centuries the work was performed by widows. At the end of the 3rd cent., in the East, deaconesses began to replace the widows, but this example was not followed in the West.

The effects of the liberality of this period were far-reaching, and touched many classes. Foremost among those who received support were the widows and orphans. Then came the sick and disabled. It was also the duty of the deacons to visit any of the brethren who were cast into prison and to minister to their necessities—a task sometimes involving danger. To these charitable offices must be added the burial of those who left no means for the purpose, and also the care of slaves, and the duty of showing hospitality to Christians on a journey. Lastly, the *Didache* has revealed to us the fact that it was held to be one of the offices of the Church to provide work for those of its members who lacked it (c. 12).

The ethical aspect of almsgiving during this period was characterized by simplicity. The motive which inspired its charity was love of one's fellow-men (cf. *e.g.* Clem. Alex. *Pæd.* iii.). Here and there we meet the opinion that almsgiving was a work of merit which brought spiritual gain to the giver; this appears as early as Tertullian (*de Monog.* 10). But this does not as yet find general acceptance. Nor were benefactors required to look too strictly into the deserts of the recipients. While the *Didache* (c. 1) recommends some caution in this matter, Clem. Alex. forbids any very close scrutiny. Such differentiation as was exercised concerned the source rather than the destination of a gift. Contributions were not accepted from tainted sources. Marcion brought 200,000 sesterces into the Church, but it was returned when he fell into heresy.

With the middle of the 4th cent. we enter upon the second part of the early period. Simultaneously the need of charity and the means of supplying it were greatly increased. The larger need arose through the changing circumstances of the Empire. Court luxury and the pressure of external foes demanded a constant growth of taxation, which resulted in wide-spread distress. The sermons of the great preachers of the period are full of evidence for this (Greg. Nyss. *de Paup. Amand.* Orat. ii.; Chrysost. *Sermo de Eleemos.*). A typical instance may be found in the Church at Antioch, where, of 100,000 Christians, Chrysostom

reckoned that 10,000 were very poor (*Hom. in Matt.* lxvi. 3).

To cope with such extraordinary necessity it was no longer enough to trust to individual benevolence, and the Church had to organize a regular system of relief on a scale much larger than anything hitherto attempted. The earlier congregational method was now replaced by one which may be called diocesan. All the churches of one city, and also those of the surrounding neighbourhood, were subordinated to the Bishop of the city for this as for other purposes. Now that Christianity was allowed by the State, there was no lack of resources. Gifts of all kinds flowed in abundantly, and a permission first granted by Constantine to make bequests to the Church allowed the dead as well as the living to be contributors. Also, as this period advanced, the duty of paying tithes came more and more into prominence, until at the Synod of Macon in 583 it was embodied in a rule binding on all Christians.

The relief of the poor was no longer effected by each congregation acting for itself through its deacons, but by the Bishop, either in person or through his steward. He worked upon the principle that the poor had a primary claim upon the property of the Church—a rule which received formal recognition in the law that Church revenues should be divided into four parts, of which one at least should be devoted to almsgiving. This rule was especially insisted upon by Gregory the Great (*Epp.* iii. 11, iv. 42), whose management of Church estates is well illustrated by his preparations for the conversion of England, for which he drew upon the patrimonium of the Church in Gaul (see his letters collected in Mason's *The Mission of St. Augustine*, 1897). Every Bishop was expected to give freely of his revenues for the relief of the poor, and, though there were some exceptions, yet, as a whole, the episcopate lived up to this expectation. Chrysostom, *e.g.*, supported as many as 7000 persons, and Ambrose was noted for his liberality to the needy. Although in theory this charity was not bestowed on the unworthy (Basil, *Ep.* 150; Ambrose, *de Offic.* ii. 16), in practice there was but little discernment, and the general view was that expressed by Greg. Naz. (*Orat.* 19), when he declared that it was better to err by giving to the undeserving than by failing to give to the deserving. To be deserving it was not even necessary to be a Christian, for the Emperor Julian bears witness that the heathen were included among those who received alms from the Church (*Ep.* xxx. 49). The Bishop had in a manner taken the place of the old Roman noble, and distributed largess after the same fashion as his prototype—a comparison which illustrates the change from the early days of the Church, when almsgiving was exercised by the congregation of a church with simplicity and in a sphere which was comparatively limited.

It was in this period that Christian benevolence began to make provision for the helpless by the erection of hospitals, using the name in its widest sense. It is doubtful whether this can be carried back to the days of Constantine, but that the institution was known in the time of Julian is clear from that Emperor's efforts to imitate it (Soz. v. 16). Refuges were established for the sick, the poor, the orphans, the aged—in a word, for all who were unable to help themselves. They were supported either from the general revenues of the Church or by benefactions specially made for the purpose. For a time the State also gave some assistance, but eventually the task of maintaining the hospitals was left entirely to the Church. At first these institutions were under the direct control of the Bishop, and he supervised those who served in them, called in the East the *parabolani*. But, as time advanced, they became independent, and those who ministered in them received a clerical status and a common rule—a change which foreshadowed the coming of the Hospitallers of the Middle Ages.

But it was not only in the outward forms of the distribution of alms that this era witnessed a transition; there were also developments in doctrine which powerfully affected the theory of almsgiving. These displayed themselves in the view taken of the origin of private property, and in the increasing tendency to regard almsgiving as a good work which earns merit in the sight of God. The possession of private property was frequently alluded to by the Fathers as a perversion of God's law. A typical instance of this is found in Ambrose, when he says, 'Natura jus commune generavit, usurpatio fecit privatum' (*de Off.* i. 28). Similar statements are found in Basil (*Hom.* xii. 18), Jerome (*Ep. ad Helvidium*), and Chrysostom. But it is clear from history and from other Patristic passages that this opinion was not carried to the logical conclusion, which would have been the prohibition of all holding of private property. Just as in the earlier days the declaration of the *Didache*, οὐκ ἐρεῖς ἴδια εἶναι (c. 1), and Tertullian's rhetorical flourish (*Apol.* 39), 'omnia indiscreta apud nos, præter uxores,' must be read in the light of the *Quis Dives salvetur* of Clement—where the misuse, but not the mere possession, of wealth is condemned—so now, whatever the abstract theory, it was allowed that wealth might be held without sin so long as the claims of the poor were remembered (*e.g.* Augustine, *Sermo* 50, § 7). Community of goods was not demanded as a matter of obligation for the ordinary Christian. For him was now laid down the distinction between necessary and superfluous goods, accompanied by the direction to give alms freely of the second class. This division, implying, as it did, that no claim for almsgiving could be made except on superfluities, was productive in later ages of results ethically vicious. Sidgwick (*Hist. of Ethics*, 1886, iii. sec. 4) compares the attitude of Christian leaders of this period towards property with their attitude towards slavery. Neither property nor slavery was accepted as compatible with an ideal condition of society, but both were looked upon as unavoidable accompaniments of society as it then was. The practical effect of this was that those who avoided the possession of wealth by lavish bestowal of their substance in almsgiving were accounted to have chosen the higher life, and this was in itself a powerful incentive to charity.

This point of view was reinforced by the development of a doctrine which had already appeared in earlier days, but did not bear its full fruit until this epoch. Polycarp (*Ep.* 10) had written that almsgiving frees from death, quoting Tobit 12⁹. Hermas (*Simil.* ii.) teaches that almsgiving procures reward from God by reason of the prayers of the grateful recipients. Origen developed this theory, and Cyprian still further emphasized it in his *de Opere et Eleemosynis* (see Benson's *Cyprian*, 1897, ch. v.). He asserts that almsgiving can bring renewed cleansing to souls which have lost their baptismal purity (2), can make prayers efficacious, and free souls from death (5). This doctrine, when combined with that of Tertullian on the satisfaction rendered to God by penance (*de Pœnit.*), accounts for the views prevalent in the 4th and following centuries. Chrysostom praises the presence of beggars at the church door as giving an opportunity to those entering to cleanse their consciences from minor faults by almsgiving (*Hom. in 2 Tim.*). Ambrose

reckons almsgiving as a 'second bath of the soul' (*Sermo de Eleemos.* 30). Augustine also teaches its efficacy for obtaining forgiveness for light offences (*de Fide et Oper.* 26). With this Father comes in the addition which was to mean so much in later days, namely, the belief that almsgiving could atone for the sins of the departed as well as for those of the living. In the *Enchiridion* (110) he places the bestowal of alms side by side with the offering of the Eucharist for this purpose. But in treating of this subject he is careful to limit the efficacy of charity to those whose lives were acceptable to God. It availed nothing for living or dead who were of evil reputation. But, however carefully Augustine and his contemporaries might guard this doctrine, it is obvious that here was the germ of later abuses. As the belief in Purgatory grew, it became part of the common creed that almsgiving would secure large abatement of the torments awaiting men in that state; and, on the epitaphs of the period, charity is now recorded in connexion with the *redemptio animi.* From this it is but a step to the system of the Middle Ages.

2. Mediæval period.—The history of almsgiving during this period is distinguished by two characteristics. The Church was the only channel of charity; secular government did not undertake to supply the needy or to succour the distressed, but left the task to ecclesiastical organizations. This was the first mark of this epoch. The second was the total lack of any attempt to co-ordinate the activities of the various agencies by which alms were distributed. The ecclesiastical bodies and monastic orders received and gave help without any regard to the possibility that others might be doing the same work among the same people. This was even more true of the Continent than of England, for the parochial system, which took firm root in England and did in some measure serve as a local centre for charitable work, was not a practical factor in the Church life of the Continent.

That this lack of organization was not felt to be an evil was largely due to the tendency prevalent throughout this period to regard almsgiving solely from the standpoint of the giver. The chief object of charity was to secure eternal life for the bestower, and it mattered little who might be the recipient. There are, no doubt, writers who remembered that charity must retain as its chief objects the *gloria Dei* and *utilitas proximi* (St. Bernard, *Trac. de Mor. et Off. Episc.* 3), but they are the exception. The habit of looking at an alms solely as a passport to salvation grew so steadily, that although Thomas Aquinas still treats of 'eleemosyna' under 'charitas,' by later doctors it is transferred to 'pœnitentia,' where it stands as one of the three elements of 'satisfactio.'

In the *Summa* of Aquinas (ii. 2, quæst. 66) the opinion of Ambrose on the question of private property is taken up and developed. It is declared to be unlawful to regard anything as a private possession *quoad usum,* but lawful to do so *quoad potestatem procurandi et dispensandi*; that is, a man may not so appropriate wealth as to prohibit others from asserting any claim upon it. Property may become an *impedimentum charitatis,* or even, as later writers put it, *incendii infernalis materies.* Poverty is the higher state, and the beggar is more meritorious than the rich man. These statements are the complement of the detailed treatment of almsgiving given previously in ii. 2, quæst. 32 of the *Summa.* 'Eleemosyna' is there divided into the two classes, *corporalis* and *spiritualis.* There are seven species in each class, expressed in the lines, 'Visito, poto, cibo, redimo, tego, colligo, condo, Consule, castiga, solare, remitte, fer, ora,' the seventh spiritual alms being teaching, which is included in 'consule.' *Eleemosyna spiritualis* is adjudged superior to *corporalis,* for the characteristic reason that it brings greater reward to the bestower. The extent of the obligation to bestow alms is decided by reference to the capacity of the giver and the need of the recipient. The goods of the almsgiver are distinguished as supporting either his life (*vita*), his position (*status*), or his appearance in the eyes of the world (*decentia*), and in each of these divisions there are some things which are *superflua* and others which are *necessaria.* Similarly, the need of the recipient may be either *extrema, gravis,* or only *communis.* To refuse *superflua decentiæ* or *status* to any one in extreme or grave necessity is a mortal sin, but outside these limits almsgiving is a counsel to be followed rather than a command to be obeyed under pain of penalty.

In estimating this teaching, the lawlessness of the age to which it was addressed must be taken into consideration. Definite and detailed commands alone secured attention. Nevertheless, such minute rules were mechanical, and opened the way to the danger of evasion which awaits all such systems. It was only requisite for a man to maintain that all his possessions were *necessaria,* to escape altogether from the obligations of charity. This perversion actually took place, and it became needful in later times to anathematize the opinion that not even of kings could it be said that any of their wealth was superfluous.

In the practical recognition of almsgiving the earlier part of this period was conspicuous, but the later part, although by no means lacking in the virtue, showed distinct signs of deterioration. Of the institutional methods of exercising charity, the most prominent may be noted under the following heads:—

(1) *Monasteries.*—Among the ideals of early monasticism a high place was assigned to self-denial, which threw worldly possessions into the common stock to be used for the glory of God in the service of men. From the money so gathered the poor were relieved, the sick supplied with food and medicine, schools erected for children, and hospitality provided for travellers. This charity was guided by the wisdom which could alone make it truly effective. It was administered by a special official, the almoner, and he was bidden to select carefully the recipients of his alms, to spare the feelings of those who had seen better days, to visit the sick, and to give no relief permanently without consulting the head of the monastery (see, *e.g.,* the Augustinian rule in *Observances in Use at the Augustinian Priory at Barnwell,* ed. J. W. Clark, 1897). The most remarkable expression of this spirit was that which appeared in the lives of St. Francis of Assisi and his followers. To the saint who saw no merit in the saving habits of the ant (*Sayings of Brother Giles,* ch. vii.) the highest ideal was an absolute poverty, which left perfect freedom to minister to others. Among the many charitable exploits of the Franciscan Order, mention must be made of the establishment of the *monts de piété,* lending-houses which were founded to advance loans, either without interest, or at a very low rate, to poor people who otherwise would have been the victims of Jewish usury (Grote, *Hist. of Greece,* 1846–56, pt. ii. ch. xi. App.).

As the centuries advanced, decay attacked both elements of the earlier monastic rule. Charitable deeds were supported not from the common fund, but by donations granted for the special purpose, and no trouble was any longer taken to discern between worthy and unworthy among the applicants. Hospitality decreased, and the right to entertain travellers was let out to neighbouring

innkeepers (*e.g.* at Glastonbury). By the time of the Reformation these defects had deprived monastic charity of much of its virtue. While the monks, no doubt, assisted many who deserved their help, they also demoralized many more by the indiscriminate bestowal of doles.

(2) *Hospitals.*—These foundations, which were exceedingly numerous, although governed by the Knights Hospitallers, were of a religious character, the rule of the Augustinians being usually observed within their walls. The black cloak of this Order is still worn, *e.g.*, by the bedesmen of St. Cross. From their original connexion they were sometimes known as 'Commanderies,' of which a typical instance is to be seen in the still existing Commandery at Worcester. In such houses travellers were entertained, and a refuge provided for the sick and infirm. To this might be added the relief of the local poor. (For a magnificent example of this see the account of St. Leonard's, York, in Cutts' *Parish Priests and Their People*, 1898, p. 505.) The Hospital was placed under the charge of a Master or Warden assisted by chaplains or canons, among whose duties was the obligation of saying mass for the soul of the founder. The decay of these institutions set in when they came to be regarded as preferments for the support of the clergy, and the greater part of their funds was diverted for this purpose.

(3) *Chantries.*—These were not, as is commonly supposed, established merely to provide masses for the souls of the departed. The larger part of the income attached to them was frequently assigned to the relief of the poor (see Gasquet, *Parish Life in Mediæval England*, 1906, p. 96).

(4) *Gilds.*—Often named after some church or patron saint, these societies existed primarily for religious purposes, but included in their scope many works of charity. Help was given to brethren in want, or sick, or wrongfully cast into prison; girls were furnished with dowries; and money was found for the funerals of departed members.

(5) *The Parish.*—In England parochial organization made the relief of the poor one of the special objects of care. One-third of the tithe was especially reserved for charitable uses, and this was augmented by collections in church, and by free-will offerings and bequests bestowed not only by the rich, but by all classes of the parishioners. It was the duty of the churchwardens to administer these funds by making grants or loans to worthy applicants. A common method of laying out such money was in the purchase of a few kine and sheep to form a common parochial stock, the young animals and the milk being sold and the proceeds devoted to charity.

Beside these institutional charities must be noticed the private exercise of almsgiving, of which the obligation was generally allowed by men of substance throughout this period. Among the Saxon kings the almoner was already a regular member of the court (see story of Oswald in Bede, *HE* iii. 7). The custom of appointing a similar official in episcopal households was made a law binding on all Bishops by a constitution of Stephen Langton. At the doors of ecclesiastical and secular notables it was common to have a daily distribution of doles of money or food carried out on a lavish scale. We hear of a Bishop of Ely giving warm meat and drink daily to 200 people; and, as late as the time of Henry VIII., Thomas Cromwell is found showing a like generosity to the multitudes who crowded at his gate. Nor was charity confined to men of great estate. Latimer's father, with a farm at £4 a year, was not forgetful of it (see First Sermon before King Edward VI.). In the supply of such doles a large part was played by testamentary bequests. By the Council of Chelsea (816) it was decreed that a tenth of a Bishop's possessions should be given to the poor after his death, and this model was widely copied. John of Gaunt ordered that his body should not be buried for forty days, and that fifty marks should be distributed on each of those days, and 500 on the last day. In such bequests the rule of 'first come, first served' was the only one which was followed, with the result that funerals were the happy hunting ground of professional mendicants. The only qualification needed to obtain the dole was attendance at the dirge of the testator. This instance forms a fitting close to our review of the mediæval period; for, while it shows that there was no lack of almsgiving during that era, it illustrates also the weaknesses which made it so ineffective as a cure for social evils—namely, the concentration of attention on the supposed profit it brought to the bestower, and the total neglect of the character of the recipient.

3. Modern period.—The transition from mediævalism to the modern view began on the Continent sooner than in England. This was the natural result of the peculiarity which marked the course of the Reformation in England, where it was first political and then religious—an order which was reversed on the Continent. While Henry VIII. and Edward VI. were making it their chief concern to effect a permanent breach with Rome, the German and Swiss Reformers were developing the ethical and religious tenets of the new movement. It is in Germany that we meet with the first direct contradictions of the mediæval principles of charity, shown in three well-defined instances. In 1388 at Nuremberg a charitable fund was opened, from the management of which ecclesiastics were expressly excluded. In 1428 at Frankfort a board was established for the relief of the poor, and directions were given that they were to conduct a strict inquiry into the fitness of applicants for help. In 1520, Luther, in his *Appeal to the Christian Nobility of the German Nation*, denied the right of mendicancy to be esteemed a natural feature of society. The application of these principles where the Reformation prevailed led to the transference of Church property to charitable and public uses. A striking instance of this was seen at Zürich, where Zwingli appropriated the monastic funds for educational purposes, while at the same time he suppressed beggars and allowed relief only for the infirm and aged.

In England, on the other hand, the immediate result of the Reformation was the practical extinction of charity for the time being. The religious houses had, however imperfectly, recognized the duty of almsgiving; but when they were dissolved the revenues were squandered by the king and his worthless courtiers, who seized the estates without any sense of the responsibilities attached to them. The strongest witness to the deplorable results of this may be seen in the sermons of Latimer, of whose laments a sentence from the sermon *On the Ploughers* is a fair summary: 'Charitie is waxed colde, none helpeth the scholer, nor yet the pore.' The attempts of historians to controvert this by adducing the names of schools founded by the early Tudors effect nothing. The sums allotted to such purposes were a mere drop in the great pillage. The results of such a violent revolution were for a time disastrous. It is not fair to say that it created the multitude of beggars who now appeared, for they were largely the offspring of the previous system of doles, by which (in the words of Fuller) 'the abbeys did but maintain the poor they made.' But the dissolution of the religious houses suddenly flooded the country with hosts of homeless people

before the nation had had time to set up a Poor Law, or private consciences had been trained to dispense alms not only with liberality but also with wisdom. An attempt to remedy this was made in 1536, when an Act was passed ordaining 'that no person shall make any common dole, or shall give any ready money in alms otherwise than to the common gatherings.' But for the moment the country was full of 'valiant rogues' and 'masterless men,' whose threats made this enactment inoperative (see Bosanquet, *Aspects of the Social Problem*, 1895, ch. xiii.). Before the end of the reign of Edward VI. a better day began to dawn. Private charity revived, and individuals took up the good works formerly performed by the religious bodies, *e.g.* the building of hospitals and the making of roads (cf. G. Herbert, *Thanksgiving*, 'I'le build a spittle, or mend common wayes'). In 1551 a legal distinction was drawn between the 'rogues' and 'those who are poor in very deed' (see Fowle, *Poor Law*[2], 1893, ch. iii.), for whose support a weekly collection was ordered to be made in every church. From this time forward the public relief of the poor belongs to the story of charity organization, and all that remains for the purposes of this article is to record some expositions of the principles which have been held to underlie almsgiving by private individuals.

An examination of typical opinions shows that men have only slowly learned to consider almsgiving from the point of view of the recipient. Although it may not be in the mediæval terms, yet there is always a tendency to give too much prominence to the consequences to the giver. The *Homilies* of Edward VI. and Elizabeth illustrate this. In the First Book almsgiving is treated under 'Good Works,' and it is proved that without faith it is of no effect, that is, to the bestower. In the Second Book, containing a special discourse on almsgiving, we are still confronted with the same point of view. Alms are to be given as pleasing to God, deserving of merit, and productive, through God's approval, of prosperity in this world. This one-sided theory received a notable correction in the writings of Jeremy Taylor. In *Holy Living* (ch. iv. sec. 8) we reach the more balanced consideration which includes both sides. The almsgiver is to acquire a 'true sense of the calamity of his brother,' and those in want are to receive in proportion to their need. No alms are to be given to vicious persons if such help might enable them to continue in their sin. Among the persuasives to almsgiving, the love of God and the example of Christ are the most effectual. Taylor thus marks a great advance towards the recovery of the primitive doctrine which based charity on the debt of the Christian to his Lord, and the right of the needy to ask help. That his teaching was not universally accepted is evident from the pages of another famous book, the *Serious Call* of William Law. In ch. viii. the portrait of the virtuous life of Miranda is completed by a reference to her method of dispensing charity. While her motive is the reflexion that the poor are as dear to God as she is herself, she declines to regulate her gifts by any consideration of the deserts of the recipients. After quoting the text that God makes His sun to rise on the evil and on the good, Law proceeds: 'This plainly teaches us that the merit of persons is to be no rule of our charity.' It is known that he put this principle into practice at King's Cliffe with disastrous results. The only instance in which such a disregard of the character of the recipients could be condoned was in the case of those in prison. The barbarity of the age, as John Howard afterwards discovered, left these poor creatures dependent on private almsgiving for many of the necessaries of life, and their relief was a duty frequently undertaken by the charitable.

This survey of theories of almsgiving points to the conclusion that the true law for it will be found in the gathering up and harmonizing of the teachings of the past. With Ambrose the Christian regards property as a trust, not as an absolute possession. With Thomas he learns that much can be saved for charitable uses by a strict discernment between the *necessaria* and *superflua* among his needs. To this he adds from Jeremy Taylor the motive which differentiates Christian charity from mere benevolence—the sense of a debt owed to the Saviour. This corrects the mediæval mistake; for almsgiving is seen to be not a way of earning redemption, but a natural activity of men already redeemed. The modern contribution seems to lie in taking up and developing the spasmodic attempts of former ages to consider the recipient as well as the giver. The closer study of the example of Christ in the Gospels has shown that true charity must make its first aim the permanent raising of character. This at once deprives of any title to be called charitable all easy bestowal of doles which rests on no knowledge of the recipients. True charity demands careful study of character and personal history, and patience to follow through any effort to help until some lasting result has been produced. The emphasizing of this side of the question is the peculiar achievement of our own time in this sphere (cf. C. F. Rogers, *Charitable Relief*, 1904, ch. i.; Peabody, *Jesus Christ and the Social Question*, 1901, ch. v.).

LITERATURE.—Besides the books mentioned in the article, see Uhlhorn, *Die christliche Liebestätigkeit*[2], 1895 (tr. of first part, *Christian Charity in the Ancient Church*, 1883 [a masterly survey]), and the same writer's art. 'Die Liebestätigkeit in Mittelalter' (*Zschr. f. Kirchengesch.* iv.); Harnack, *Ausbreitung*, 1902 (tr. *Expansion of Christianity*, 1904, vol. i. ch. iii.); Lecky, *Hist. of European Morals*[9], 1890, i. 62–100; Ashley, *Economic History*[3], 1894, bk. i. ch. v.; Ratzinger, *Gesch. der kirchl. Armenpflege*[2], 1884; art. 'Charity' (Loch), in *EBr*[10]; B. K. Gray, *A Hist. of Eng. Philanthropy*, London, 1905, p. 1; R. L. Ottley, *Christian Ideas and Ideals*, London, 1909, p. 226; W. P. Paterson, in the *Expository Times*, vol. vi. [1895] p. 108; and, for modern Rom. Cath. view, art. 'Aumône,' in Vacant, *Dict. de théol. Catholique*, Paris, 1905.

C. T. DIMONT.

CHARITY, ALMSGIVING (Greek).—The practice of almsgiving among the ancient Greeks cannot be deduced from any general religious or philosophic principle. That is to say, it was not inculcated as an item of a national ideal of conduct, reflected back upon the individual as a command of religious or philosophic sanctity. So much is true, at any rate, of the Greeks of the great age, in whom the instinct of generosity existed only in rudimentary form. It was also affected by their fundamental conception of the relationship between the individual and those various groups (of family, clan, and State) apart from which he was, if not inconceivable, at least shorn of the major part of his *raison d'être* in the world. Hence in Hesiod (*Works*, 327 ff.) the list of principal offences against the social order, all equally exciting the wrath of Zeus, stands as follows: (1) injuring a suppliant or guest,[1] (2) seducing a brother's wife, (3) defrauding an orphan, (4) unfilial conduct to an aged parent. All these turn upon the injury of some member of the household. This group-relationship hardly taught social morality, says Lotze, speaking in particular of family life. For 'special and unique relations bind the members of a family together by feelings which do not flow from general duties of men towards their fellows;

[1] Similarly in Homer beggars and vagrants are under the protection of Zeus Xenios, no less than 'strangers,' *i.e.* visitors of higher social rank. See *Od.* xiv. 56 ξεῖν', οὔ μοι θέμις ἔστ', οὐδ' εἰ κακίων σέθεν ἔλθοι, | ξεῖνον ἀτιμῆσαι· πρὸς γὰρ Διός εἰσιν ἅπαντες | ξεῖνοί τε πτωχοί τε. Here by courtesy the epithet ξεῖνος is bestowed upon Odysseus, who to look on is but a beggar. See also vi. 207, xiv. 389 and 404 ff., xvii. 483 ff.

these feelings do indeed incidentally enrich life . . . but, so far from illuminating men's consciousness of general moral duties, they only obscure it' (*Microcosmus*, tr. Hamilton-Jones, 1885, ii. 497).

Almsgiving therefore necessarily, so far as the Greeks are concerned, was but a small special derivative of that general form of conduct which may be summed up as hospitality (see HOSPITALITY [Greek]). And even after the birth of ethical speculation the view was too narrowly focused upon the self to lead to any wide conception of the claims of poverty upon wealth. The dignity of his own personality is the lodestar of the 'liberal' (ἐλευθέριος) and 'magnificent' (μεγαλοπρεπής) man of Aristotle's classification. Not until the rise of Stoicism do we find insistence upon the duty of mercy in dealings with fellow-men, based upon an obligation as fundamental as that of justice (Zeller, *Stoics*, etc., tr. Reichel, 1870, p. 296).

In the Homeric world the 'worthless outcast' (*Il.* ix. 648, ἀτίμητος μετανάστης [with Leaf's note]) is an enemy of society (*ib.* 63, ἀφρήτωρ ἀθέμιστος ἀνέστιος, 'banished from tribe and law and home'), and may be slain with impunity. Safety must be found by entering within some other family group, under the regulations and conditions prescribed by custom (cf. xvi. 573 [with Leaf's note], also the story of Adrastos and Crœsus [Herod. i. 35]; Themistocles at the palace of King Admetos [Thuc. i. 136]). The bond of hospitality is a means whereby the individuals of two naturally unconnected groups may be brought into intercourse. One party assumes the rôle of protector of the other. It is from this relationship, the practical exhibition of which was satisfying to the vanity which formed so large an ingredient in the ancient Greek character, that there sprang, on a lower plane, the phenomena connected with beggars and almsgiving exhibited in the somewhat advanced society depicted in the *Odyssey*.

In the *Odyssey* the professional beggar is a recognized inevitable adjunct of the great house (xviii. 1 ff., Iros the πτωχὸς πανδήμιος [with Monro's note]; cf. xviii. 48). He runs on errands, but otherwise is of little use. He is naturally resentful of any intrusion upon his 'pitch' (cf. Hesiod, *Works*, 26, πτωχὸς πτωχῷ φθονέει: hence the quarrel between Iros and Odysseus). The significant emblems of the trade were the staff, the wallet hung by a cord, and the ragged, dirty garb (*Od.* xiii. 434 ff.; cf. Aristoph. *Clouds*, 921 f., *Ach.* 432 and 448, ἀτὰρ δέομαί γε πτωχικοῦ βακτηρίου).[1] Equipped with these, the beggar is described as 'going louting through the land asking alms' (*Od.* xvii. 227 f., πτώσσων κατὰ δῆμον βούλεται αἰτίζων βόσκειν ἣν γαστέρ' ἄναλτον), or else 'stands about and rubs his shoulders against many doorposts, begging for scraps of meat' (*ib.* 220; cf. 339 f., ἶζε δ' ἐπὶ μελίνου οὐδοῦ ἔντοσθε θυράων, | κλινάμενος σταθμῷ).[2] Naturally it is food chiefly for which the beggar looks; and Telemachus sets an example to the suitors by giving the pretended beggar Odysseus a 'whole loaf, and of flesh as much as his hands could hold' (*ib.* 343, cf. 365 ff.); but a suit of clothes is promised by Penelope as reward for tidings (*ib.* 557). Odysseus (in *Od.* xv. 319) offers menial service of 'handy man' in return for his keep; so that there were varieties of beggars even then. Iros was evidently a bad specimen, and famous only for his belly (xviii. 2 f., μετὰ δ' ἔπρεπε γαστέρι μάργῃ, | ἀζηχὲς φαγέμεν καὶ πιέμεν). And so we find Homer familiar with the tramp who lies glibly for entertainment (xiv. 124), and with the 'sundowner' and loafer who will not work (xviii. 357 ff.).

As civilization advanced and the primitive hospitality decayed, the lot of the beggar must have become harder the more almsgiving came to depend upon the capricious impulse of the individual. The ruthlessness of ancient society, in which one must be hammer or anvil, is largely concealed from us by the fact that, with few exceptions, it is only the class which enjoys wealth and power that is articulate; that is to say, ancient literature is mainly aristocratic in origin. Hesiod affords a glimpse of the poverty which subsists upon the grudging alms of neighbours until patience is exhausted (*Works*, 400 ff.). In Athens the ἔρανος, or collection taken up to relieve an acquaintance in difficulties, was a form of almsgiving that probably became at times very burdensome (cf. Theophr. *Char.* 6, καὶ ἐν τῇ σιτοδείᾳ δὲ ὡς πλείω ἢ πέντε τάλαντα αὐτῷ γένοιτο τὰ ἀναλώματα διδόντι τοῖς ἀπόροις τῶν πολιτῶν· ἀνανεύειν γὰρ οὐ δύνασθαι). Money so given was regarded as something between a loan and a gift; probably it often was but a thinly disguised alms.

The duty of private almsgiving must, in Athens at least, have been less imperatively felt, owing to the fact that there was in operation a State system of outdoor relief for infirm paupers (ἀδύνατοι).[1] Its origin was referred to the time of Solon or Pisistratus, *i.e.* as early as the 6th cent. B.C. (Plut. *Sol.* 31). Persons who were unable through bodily infirmity to earn a livelihood, and had less than three *minæ* (say £12 stg.) of private property, were given a small allowance by the State.[2] Originally this relief had been confined to those invalided through military service.[3] Probably certain other conditions were required to be fulfilled in addition to those specified by our authorities. Citizenship would certainly be requisite, and freedom from ἀτιμία (see ATIMIA); also it must have been required that the claimant had no near living relatives in a position to support him. On the other hand, it appears from the speech of Lysias on behalf of a claimant for relief that the words of Aristotle, 'unable to do anything to earn a living,' cannot have been taken *au pied de la lettre*. Public office was naturally forbidden to recipients of State relief (Lysias, *Or.* xxiv. 13). The list of claimants was scrutinized annually by the Council of Five Hundred, before which all appeared in person. The list of recommendations was then formally sanctioned by the Assembly (Lysias, *l.c.* § 22, ἡ πόλις ἡμῖν ἐψηφίσατο τοῦτο τὸ ἀργύριον).[4] The allowance seems to have varied in amount. In the time of Lysias (*c.* 400 B.C.) it was one *obol* a day (Lys. *op. cit.* § 26, περὶ ὀβολοῦ μόνου ποιοῦμαι τοὺς λόγους); in the time of Aristotle it was two *obols*; an intermediate sum (or possibly the adoption of a monthly dole) is implied in the 9 *drachmæ* (=54 *obols*) a month, of Philochoros *ap.* Harpocration.

LITERATURE.—The subject does not appear to have been treated hitherto. Scattered notices only are found in connexion with allied topics, as, *e.g.*, beggars in Homer in P. G. Egerer, *Homerische Gastfreundschaft*, 1881. On Athenian State-relief, see Böckh, *Public Economy of Athens*[2], 1842, i. 312 ff.

W. J. WOODHOUSE.

CHARITY, ALMSGIVING (Hindu).—Almsgiving (*dāna*) among the Hindus is primarily a

[1] As afterwards adopted by Diogenes and his brother Cynics (Diog. Laert. vi. 13 and 22, etc.).

[2] For this distinction between town and country begging, cf. *Od.* xvii. 18 f., πτωχῷ βέλτερόν ἐστι κατὰ πτόλιν ἠὲ κατ' ἀγροὺς δαῖτα πτωχεύειν. In the country, work might be the price of alms.

[1] It is not clear whether the term ἀδύνατος used in this technical sense refers only to bodily infirmity or included also the idea of poverty (Jebb, *Attic Orators*, 1876, i. 249, note 1). There seems no doubt that both ideas were necessarily included.

[2] Aristotle, *Ath. Const.* 49. 4, νόμος γάρ ἐστιν ὃς κελεύει τοὺς ἐντὸς τριῶν μνῶν κεκτημένους, καὶ τὸ σῶμα πεπηρωμένους ὥστε μὴ δύνασθαι μηδὲν ἔργον ἐργάζεσθαι, δοκιμάζειν μὲν τὴν βουλήν, διδόναι δὲ δημοσίᾳ τροφὴν δύο ὀβολοὺς ἑκάστῳ τῆς ἡμέρας.

[3] Plut. *Sol.* 31 [ὁ νόμος] ὁ τοὺς πηρωθέντας ἐν πολέμῳ δημοσίᾳ τρέφειν κελεύων.

[4] But the reference here may be to the original law ordaining the distribution of relief, while the annual scrutiny and authorization of relief may have been within the administrative competence of the Council without further reference to the Ecclesia.

religious obligation, and differs in some important respects both in conception and in practice from that which passes under the same name in the West. Of almsgiving, as the bestowal of gifts upon the poor and needy, prompted by a feeling of sympathetic compassion, Hinduism knows nothing. But the habit of generosity, of sharing possessions with others and relieving their wants, is perhaps more wide-spread in India than in any other country. It is clear, moreover, that only where such an obligation is universally recognized and acted upon can companies of wandering ascetics, as in India, move hither and thither without restraint throughout the land, confident everywhere of finding support and having their wants freely supplied. Manu also declares that liberality is the special virtue and duty of men in this Kali age.[1] The only rightful recipients of alms, however, are the Brāhmans and the various orders of ascetics. These alone have a claim to support and gifts (*dakṣinā*) from all other classes of the community; and from such donations merit accrues to the giver, the amount of which is in direct proportion to the value of the gift.

In India, therefore, almsgiving is inspired by a religious motive, the desire to secure personal advantages and reward in a future life. The theories and teaching of the Hindu books leave no room for the play of disinterested generosity; although many Hindus are in this respect better than their creed. And it is only among certain communities of monks, who devote a part at least of their time to charity and the relief of the poor, that anything approaching the Western conception of almsgiving is found.[2] There can be little doubt that here we should recognize the kindly and humane influence of Buddhism. At festivals also and on occasions of pilgrimage the abbot of a monastery will entertain all comers regardless of expense.[3] The underlying motive of the act, however, is in these instances still Indian, not Western or Christian. Generosity is, indeed, enjoined upon monks, as part of their vows. Those who can give nothing else must give their books. Ordinarily, however, monks and ascetics do not bestow, but receive.[4] And the need and opportunity for almsgiving in the wider sense, within the laity and among the non-Brāhmanical part of the population, have always been met to a considerable extent in India by the usages and institutions of caste and the joint family life, which throw upon the whole circle the burden and obligation of the support of each individual.

As early as the Vedic hymns, gifts (*dāna*, *dātra*, *dakṣinā*) take a prominent place in the thought and teaching of the poets; and the virtue and merit of the giver are repeatedly emphasized.[5] In the Vedic literature generally, and in the later *smṛtis*, especially in the Dharmaśāstras and Purāṇas, one of the chief duties incumbent upon a householder is charitable giving (*dātṛtā*, *dātṛtva*);[6] and careful, if not always consistent, definitions are given as to the persons (*dānapātra*) upon whom such alms may be bestowed.[1] Manu lays down distinct and ordered rules on the subject, which, except as interfered with or modified by European influence, govern Hindu practice to the present day.[2] Such gifts are said to be *dharmārtham*, 'for the purpose of (acquiring) religious merit'; a chapter of the Skanda-Purāṇa bears the title *Dānadharma-vidhi*, 'rules for almsgiving'; and Hemādri devotes the second part of his great work to the same theme.[3]

Thus all Hindu ascetics live by alms; in contrast with the laborious and self-denying lives of many similar communities in the West, they may not and do not in any case earn their living by work, but are dependent upon the charity of others. The institution and habitual practice of begging on a wide scale, together with the rules regulating it, are of great antiquity in India. And the burden of supporting an army of wandering mendicants, whose lives are unproductive, must always have pressed hardly upon the poorer classes of the population. It was from Brāhmanism that Buddhism inherited the duty of liberality towards those whose lives were devoted to the service of religion, developing and systematizing an ancient principle and placing it on broader foundations. Śākyamuni himself in a former birth had borne the title of *dānaśūra*, 'a hero in liberality.' Such practices, therefore, were no novelty in Buddhist ethical and social duties. Jainism also, the second great protestant community of the early centuries, while rejecting the extravagant claims of the Brāhmans, maintained the right of the devotee and ascetic to support at the public expense.[4] In neither case was a new principle introduced, but a long-standing custom was sanctioned and continued for the benefit of the ascetic orders and the teachers of religion.

Such gifts were, broadly speaking, of two kinds. Grants of landed estate, dwelling-houses, etc., taxes derived from villages, and tithes, held the first place. More irregular and occasional were the donations of money or food, which at all festivals, anniversaries, household ceremonies, etc., the Brāhmans received as their perquisites. To the latter class belong the contributions in kind, which the wandering mendicant exacts from the fears or superstitions of the ignorant villager.[5]

[1] Manu, i. 86: 'In the Kṛta age the chief (virtue) is declared to be (the performance of) austerities; in the Tretā, (divine) knowledge; in the Dvāpara, (the performance of) sacrifices; in the Kali, liberality (*dāna*) alone.' Cf. the description of Bhārata Varṣa (India) in *Viṣṇu Purāṇa*, ii. 3. 12:—*dānāni chāttra dīyante paralokārtham*, 'there also gifts are bestowed for the sake of the other world.'

[2] Barth, *Rel. of India*, p. 213, instances the Kāṇphāṭas of the Panjāb and Nepāl. But the same is true of other sects.

[3] See, for example, Oman, *Mystics*, etc. p. 260 ff.

[4] The direction of Vasiṣṭha, ix. 8, that the hermit 'shall only give, not receive,' is, we believe, entirely isolated, and as opposed to the general rule as it is to universal practice.

[5] e.g. *Rigv.* i. 13. 11, 'May the splendour of the giver be foremost' (*SBE* xlvi. 9). Cf. the praise of Rudra, 'the giver of many gifts,' ii. 33. 12.

[6] Vas. viii. 16, 'all mendicants subsist through the protection afforded by householders.' Liberality is the duty of the first three castes (Baudh. i. 10. 18. 2 ff., Vas. ii. 13 f., Āpast. ii. 5. 10. 4 ff., where Kṣatriyas and Vaiśyas are expressly prohibited from receiving alms; cf. *ib.* ii. 8. 20. 1 ff., Baudh. ii. 3. 5. 19, 7. 13. 5, Gaut. v. 32 ff.). Vas. xxix. 1, 'through liberality man obtains all his desires' (cf. 9 ff.); xxix. 17, 'he who gives to a Brāhmaṇa a vessel filled with water for sipping will obtain after death complete freedom from thirst' (cf. *ib.* viii. 6, Gaut. v. 20 ff.). So in the Upaniṣads and elsewhere 'sacrifice and almsgiving' are the special duties of the Brāhman as *gṛhastha* (Bṛh. 4. 4. 22, *Chānd.* 2. 23, *Taitt.* 1. 9, cf. Deussen, *Upan.*, 1906, p. 371 f.).

[1] Vas. xi. 17 f., the householder shall feed 'three ascetics or three virtuous householders . . . he may also feed pupils who are endowed with good qualities' (cf. *ib.* 27 ff., Gaut. xvii. 1 ff., Baudh. ii. 3. 5. 9 ff., 10. 18. 4 ff., 14, Āpast. i. 1. 3. 25 f., ii. 5. 10. 1 ff.). It is the special duty of the student (*brahmachārin*) to beg alms for his teacher (Gaut. ii. 8, iii. 14 f., Baudh. ii. 10. 18. 4 ff.); for the student not to ask for alms is a sin (Baudh. i. 2. 4. 7; cf. *Śat. Brah.* xi. 3. 3. 5 ff., *al.*).

[2] Manu, i. 88 ff., xi. 2 f. Among the six duties of a Brāhmaṇa are enumerated the giving and receiving of gifts, but the last again is forbidden to Kṣatriyas and Vaiśyas, x. 75 ff.; cf. iii. 95 ff., 125, 132, iv. 31 ff., 192. iv. 226 ff., 'Let him, without tiring, always . . . perform works of charity with faith . . . let him always practise . . . the duty of liberality. . . both he who respectfully receives (a gift), and he who respectfully bestows it, go to heaven'; cf. vii. 82, 85 ff., xi. 6; it is incumbent upon kings in particular to be liberal in gifts, vii. 79, 134–136, xi. 4, 22 f.—even to the extent of bequeathing all their wealth to Brāhmans, ix. 323.

[5] The facilities for travel afforded by the railways have greatly increased the numbers attending the more popular and celebrated festivals. It would have been expected that the

The *mahādāna* ('great gifts') were ten or sixteen in number. Of these gold was the most important, then estates, buildings, village-taxes, etc. Of gifts in gold the most costly, and therefore the most meritorious, was the *tulādāna* or *tulāpuruṣa.* The donor caused himself to be weighed in the scales against an equivalent of gold, which was then distributed in largess to the assembled Brāhmans. A king of Kanauj in the 12th cent. is said to have repeated this costly donation a hundred times; another example quoted is that of a minister of Mithila in the early part of the 14th century.[1] Hiuen-Tsiang gives a marvellous account of the benefactions of Siladitya, sovereign of Kanauj *circa* 640 A.D., who was accustomed once in every five years to give away in alms all that he possessed.[2] A similar act of lavish charity was occasionally performed with silver substituted for the more valuable metal. In certain initiatory rites connected with the assumption of the sacred thread a figure of a cow or sacred lotus made of gold plays a prominent part; and this after the ceremony is broken up and the fragments distributed to the Brāhmans or gifted to the temple.[3] Similarly after a banquet the royal or wealthy host will at times bestow upon his guests the costly dishes of gold and silver that have been employed in the feast. Grants of land or revenue to monastic institutions or to Brāhmans have always been frequent in India. Such grants are recorded as early as the inscriptions of Aśoka; and, according to the legend, the same emperor in his later life had to be restrained almost by force from ruining himself and his house by his extravagant generosity.[4] Similar gifts and dedications are far from being uncommon at the present day. To provide free meals for Brāhmans is also an act of great merit, the virtue of which increases with the number of Brāhmans fed. On a less scale this is done at every household ceremony, anniversary, or feast; and at the great festivals large provision is made, and numerous companies of pilgrims and ascetics gather together, and are entertained often for several days. The example of Uṣavadāta is quoted, who, in a cave inscription attributed to the 1st cent. of our era, boasts that he provided annually for the wants of 100,000 Brāhmans, with gifts of 100,000 cows, sixteen villages, pleasure-grounds, tanks, etc.[5] In ancient times such records are numerous of kings who maintained a number of Brahmans at their own cost for a prolonged period, or even for life. And, like the monastic orders of the Middle Ages in Europe, the Indian orders of monks became rich in the possession of estates, 'property belonging to the god,' *devasva, devasthāna*, in some instances a considerable proportion even of the land and revenue of a State passing into their hands.

In the North of India what might thus be termed systematic almsgiving, donations more or less in the nature of a regular contribution or tithe for the support of communities or individual teachers, *gurus*, holding official positions as recognized heads of a sect or school of thought, are now less usual than in the South. The *gurus* themselves exercise a less wide and powerful influence. In the South regular fees are exacted, and every means short of legal or actual compulsion is adopted to ensure payment. These *gurus* go on circuit through the principal cities of their dioceses, and their visits are made the occasion for demanding the recognized fees and gifts. The formal grants also to religious institutions more usually than in the North take the form of revenues assigned for the support of the resident monks or priests. And, as far as the motive and aim of the donor are concerned, such grants are hardly distinguishable from the more indiscriminate and irregular largess practised at the festivals or in the country districts.

In the case of private gifts the rule was laid down that no one was so to impoverish himself by his liberality as to leave wife or children destitute.[1] Other regulations prescribed a limit of a thousand cows,[2] defined the fees which might be required,[3] or forbade the acceptance by one of a gift which had been refused by another,[4] or the parting with a gift on the day on which it had been bestowed.[5] The recipients, moreover, were carefully graduated according to their worth;[6] and upon some it was altogether a sin to confer presents.[7] In theory also it is obligatory upon every twice-born man, after he has lived the life of a householder, *gṛhastha*, and begotten a son to carry on his line, to part with all his goods and possessions to Brāhmans, and to go forth homeless and resourceless, adopting the life of an anchorite in the forest, *vānaprastha*, and later that of a wandering mendicant, *sannyāsin*, begging his food from door to door. Such mendicants ordinarily possess nothing but an alms-bowl, made out of a coco-nut or sometimes of brass, with a water-pot, and in some instances a staff and rosary. Instances have not been unknown, even in recent times, of men of education and influence and wealth, who have elected to abandon all, and devote the closing years of their life to poverty and religious contemplation, dependent for support upon the charity of their fellow-countrymen.[8]

Almsgiving is also practised by Hindus in the form of gifts and endowments for hospitals for animals. These foundations are often of considerable antiquity. At Benares and elsewhere, sick, maimed, and diseased cows are provided with shelter and food by the munificence of pious donors and the daily offerings of the faithful.[9] The total volume of such charitable gifts in India must be very considerable.

CHARITY, ALMSGIVING (Jewish).—The teaching of the Apocryphal literature faithfully reflects the spirit of the OT. Ben Sira exhorts to charity: 'Let it (thy money) not rust under the stone' (Sir 29^{10}). Alms 'shall fight for thee better than a mighty shield and a ponderous spear' (v.^{13}). But charity is to be thoughtful and considerate: 'Defer not to give to him that is in need,' for to do so is 'to add more trouble to a heart that is provoked (4^{3}; cf. 29^{8}). The quality and virtue of charity, too, are determined by the kindness that goes with it: 'Lo, is not a word better than a gift? And both are with a gracious man' (18^{17}). On the other hand, the needy borrower is reminded that he also has duties ($29^{2ff.}$); while the poor generally

fees to the officiating priests would have increased in like proportion. This does not seem to be the case. And the somewhat curious explanation is offered that the pilgrim now visits many shrines, and impartially distributes among them gifts which were formerly concentrated on one altar.

9 The Anna Purna, or Cow-temple, at Benares was erected in 1725 by a Rājā of Poona.

are taught the beauty of independence: 'Better is the life of a poor man under a shelter of logs than sumptuous fare in another man's house; it is a miserable life to go from house to house' ($29^{22,24}$). The Book of Tobit is an exhortation to almsgiving, which, it declares (To 4^{10} 12^{9}), 'delivereth from death.' The Maccabees, after victory, first set aside a share of the booty for the wounded and for the widows and orphans, and then divided the residue among themselves (2 Mac 8^{28}). Philo (*de Caritate*, 17-18) inculcates the broadest view of charity. It is a debt due to all men, including strangers, slaves, and enemies. Josephus, too, declares (*c. Apion.* ii. 29) that Moses laid down the following duties as due to one's neighbour without distinction: giving him fire, water, and food; showing him the road; burying the dead.

The obligation of charity is especially emphasized by the Talmudic Rabbis. It outweighs, they declare (*Sukkah*, 49*b*; *Baba bathra*, 9*a*), all other duties. It is one of the pillars of the world, *i.e.* of society (*Aboth*, i. 5). By the side of the poor stands God Himself, pleading for His hapless children (*Midrash Rabbah* to Lv 25^{25}); and he that feeds the hungry feeds God also ('Agadath Shir Hashirim' in *JQR* vi. 696; cf. Lowell: 'Who gives himself with his alms feeds three: himself, his hungry neighbour, and Me'). Charity blesses the giver even more than the recipient (*Gittin*, 61*a*). Even the poor must give charity (*ib.* 7*b*). But the widest interpretation is put upon charitable duty. Greater than almsgiving, says the Talmud (*Sukkah*, 49*b*), is *gemiluth chasadim*, i.e. benevolence in the largest significance of the term, especially that which takes the form of personal service. It comprises seven things: feeding the hungry, clothing the naked, tending the sick, burying the dead and comforting the mourner, ransoming captives, educating orphans, and dowering poor brides. The soul is asked concerning these duties at the last judgment (*Midrash Tehillim* to Ps 118^{19}; cf. the interesting parallel in Mt $25^{35ff.}$). In three things, add the Rabbis, *gemiluth chasadim* surpasses almsgiving: no gift is needed for it but the giving of one's self; it may be done to the rich as well as to the poor; it may be done not only to the living, but to the dead (*Sukkah*, 49*b*). He that studies the Law, but fails to do these acts of love, lives without God (*Abodah zara*, 17*b*). Benevolence, moreover, must be proportionate to the circumstances of the giver and the recipient alike. The giver must devote to charity at least a tenth of his income, but not more than a fifth, lest he come to seek charity himself (*Kethuboth*, 50*a*). Clothing must be given to the naked, furniture to him who lacks it, a spouse to the unmarried (*ib.* 67*b*). If the man has fallen from affluence to indigence, and was wont to ride a horse, and to have a slave running before him, he must have both horse and slave. But, say the Rabbins, 'thou art commanded to give him only "sufficient for his need" (see Dt 15^{8}); thou art not enjoined to enrich him' (*Kethuboth*, 67*b*).

Appeals for charity must be scrutinized in order to defeat imposture, but not too strictly. A stranger who says he is hungry, and asks for bread, is to be relieved without inquiry; if he asks for clothes, investigation must precede relief (*Baba bathra*, 9*a*). But, according to one Rabbi, 'We ought to be grateful to impostors, seeing that, by assisting them, we atone for our neglect of the deserving' (*Kethuboth*, 68*a*). Among these impostors, sham cripples are mentioned (*Peah*, viii. 9; *Kethuboth*, 68*a*). Itinerant beggars should be relieved with small gifts only (*Baba bathra*, 9*a*). If they ask for food, they should be given a loaf of bread of not less than a specified value; if they ask for lodging, they should be given a bed, oil, and pulse, to be supplemented on the Sabbath by three meals, fish, and vegetables (*ib.* 9*a*; Mishn. and Toseph. *Peah*, viii. 7). If the applicant is well known, the assistance must be commensurate with his former station (*Kethuboth*, 67*b*). If a poor man is averse to accepting a gift of money, it must be offered to him under the pretext of a loan, or of a present sent by a friend (*ib.*). But if a man has money, and asks for charity in order to save it, he must not be assisted (*ib.*).

The niggardly who refuse to give charity, or to give proportionately to their means, must be coerced by the authorities (*beth din*), who, if need be, must have the offender beaten until he does their bidding (*Kethuboth*, 49*b*). On the other hand, they must forbear to apply to a man who gives when he cannot afford to do so (*Baba bathra*, 8*b*). Even children must give small sums in charity (*Baba ḳamma*, 119*a*). Charity, moreover, begins at home. One's parents come first, then brothers and sisters, then the poor of one's town, lastly those living elsewhere (*Baba mezia*, 71*a*; *Tana d'be Eliyahu*, 17). A woman must be helped before a man, age before youth, the weak before the strong (*Menorath Hamaor*, iii. 7. 2, 8). He who goes on business to another town must help to support the poor of the place (*Megilla*, 27*a*). Charity must be extended equally to Jew and Gentile (*Gittin*, 61*a*). The duty of ransoming captives takes precedence in all benevolent obligation (*Baba bathra*, 8*b*); the materials for building a synagogue may be sold in order to fulfil this duty (*ib.* 3*b*). In giving charity, regard must be had for the self-respect of the recipient. 'Greater is he that lends than he that gives, and greater still is he that lends and, with the loan, helps the poor man to help himself' (*Shabbath*, 63*a*). Maimonides (*Hilc. Mattenoth Aniyim*, 10. 7 ff.) enumerates eight degrees of benevolence, the highest of which he assigns to the kindly help that saves the poor from pauperism. Nor is charity sufficient in itself; kind thoughts and words must go with it. To give liberally to the poor, but with sullen look, is to rob the deed of all virtue; to be able to give nothing, but to add to the confession of this inability a word of sympathy for the applicant, is to make 'the heart' of the needy 'sing' (*Baba bathra*, 9*b*; *Midrash Rabbah* to Lv 25^{25}; Maim. *op. cit.* 10. 4-5; cf. *Aboth d' R. Nathan*, ed. Schechter, Vienna, 1887, 24*b*). The best charity is that done in secret (*Baba bathra*, 9*b*); and it is related (*Sheḳalim*, 5. 6) that in the temple there was a chamber called the 'Chamber of the Silent,' where the rich placed their alms, and the poor received them, in ignorance of each other's identity. 'He that gives alms publicly is a sinner' (*Ḥagiga*, 5*a*). The denunciation in the Gospels (Mt $6^{2ff.}$) of the hypocrites who sound a trumpet when they give alms was echoed or anticipated by the Rabbis. Almsgiving was a special feature of the observance of a fast-day; another was the sounding of the *shophar*, or horn (*Sanh.* 35*a*; *Berakhoth*, 6*b*). Possibly this will explain the above statement in Matthew, which charges the hypocrites with sounding a trumpet when giving charity.

But, while benevolence is extolled, the poor are exhorted to suffer all possible privation rather than accept charity. Independence and self-help are Talmudic ideals. 'Flay a carcass in the street for a pittance, and be beholden to no man' (*Pesahim*, 112*a*). And the Jewish grace after meals includes a supplication to be spared the shame of having to accept 'the gifts of flesh and blood.' 'Among the greatest Rabbis,' says Maimonides (*loc. cit.* 10. 18), 'were hewers of wood and drawers of water, builders' labourers, ironworkers, and smiths; they asked nothing of their congregation, and would take nothing when aught was offered to them.' But

great as charity is, integrity is better still. One must be just before one is generous. 'Pay thy debts,' says a mediæval writer, 'before thou givest alms' (*Sepher Chasidim*, Warsaw ed. 1879, § 454).

A highly organized system of poor-relief existed in the Talmudic period. Its main features were a daily distribution of food and a weekly dole of money. The former was called the *tamchui*, or 'dish,' the latter the *kuppah*, or 'chest' (Mishn. *Peah*, viii. 7; Jerus. *Peah*, viii. 7). The funds for both distributions were compulsorily collected from the community by two or three men of unquestionable probity, and their administration entrusted to three others, who carefully investigated the merits of the applicants (*Baba bathra*, 8*a*; *Shabbath*, 118*b*; *Abodah zara*, 17*b*). They were expressly enjoined to perform their duties with all possible consideration for the feelings of the poor (*Kethuboth*, 67*b*). Both distributions survived to a much later age (Maim. *loc. cit.* 9. 3). In the pre-Christian and early Christian centuries hospices also existed, which provided shelter and food for necessitous wayfarers (*Aboth d' R. Nathan*, ed. Schechter, 34; *Sota*, 10*a*). Further, the *hekdesh*, or hospital, is met with (in the 11th cent. for the first time), which served all through the Middle Ages both as a poorhouse and as a hospital for the sick and the aged as well as for the stranger. These institutions (the need of which was increased by the number of Jews made homeless by the Crusades), aided by private charity, gradually superseded the *tamchui*; but the *kuppah*, in some form, necessarily survived. Offerings for its maintenance were made in the synagogue, especially on joyous or sad occasions, and collections in its behalf were taken at banquets and funerals. A special charity-box was carried about from house to house when a death occurred in the congregation. A similar box was carried round the synagogue during service on week-days. Pious Jews, moreover, made a point of giving alms before beginning their morning prayers. The more convivial among them would 'tax their pleasures' for benevolent objects. Thus a 15th cent. Jew is mentioned who 'gave a gold piece in charity for every extra glass of wine he drank.' But he taxed his self-denial also; for, if he pretermitted one of the obligatory three meals on Sabbath, he paid half a gold piece. He carried the practice into almost every phase and incident of his life, and so 'salted his wealth with charity.' The Scriptural ordinance of the tithe was also scrupulously obeyed by the devout Jew in the Middle Ages. In the 13th cent. societies began to be established in various parts of Europe for one or more of the seven objects enumerated above in connexion with the term *gemiluth chasadim*, and cognate organizations exist in Jewish communities all over the world at the present day. These societies, together with the old-fashioned hospitality offered to the poor (*Aboth*, i. 5), tended to keep down begging, which was rare in mediæval Jewry. But the practice had greatly increased by the 17th cent., and speedily grew into an intolerable evil. The *schnorrer*, or professional beggar, became a familiar and disagreeable figure in every Jewish community. His importunities and impudence have been immortalized in Zangwill's *King of the Schnorrers*. Modern charity organization among the Jews of civilized countries has now, however, almost deprived him of his occupation.

MORRIS JOSEPH.

CHARITY, ALMSGIVING (Roman).—The earlier literature of Rome contains but few statements bearing on either the theory or the practice of relieving the necessities of the poor out of the superfluity of the rich; but beneficence, in whatever form, was as necessary to the existence of an ancient as it is to the existence of a modern State. In the dim early time the need for almsgiving was to a great extent obviated by the strong bonds which linked men together in associations such as the *gens*, the tribe, and the family. Later, when organizations became less and the individual more, poverty was alleviated by public assistance in many forms, such as the distribution of corn, provisions, and many other necessaries, at the cost of the exchequer, not only at Rome, but in other cities. The volume of this assistance grew continually to the end of the 3rd cent. of the Empire. The municipal life of the Roman Empire, and the *collegia*, or gilds, which were closely connected with it, flourished mightily during the same period, and caused a great outflow of private wealth into public channels. Probably in no age, not even in our own, have men spent their accumulated resources so freely for the benefit of their fellow-men. But many of the objects sought by the rich men, such as the provision of amusements and the beautification of the cities, have no connexion with the subject of this article.

The ancient Roman view of life was narrow and hard, and the ancient Roman religion had few ethical precepts. But, although neither Greek nor Roman religion did much to inculcate benevolence, its practice has never been entirely severed from religious sanctions. As soon as the old Roman type of character, exemplified by Cato the Censor, began to be softened by the influences of Greek culture, the deeply-rooted idea that *parsimonia* was the most cardinal of virtues gave way before the increasing moral attraction of benevolence. The great orator, Crassus, supporting, in 106 B.C., the cause of the Senate against that of the Equestrian body, eulogized the senators for the use which they made of their wealth in the redemption of captives and the enrichment of the poor (Cic. *de Off.* ii. 63). But not until Hellenism had thoroughly penetrated Roman educated society was beneficence generally regarded as virtuous. Horace's question, 'Why is any one in want who does not deserve it, while you have property?' (*Sat.* II. ii. 103), would have appeared hardly sane to the ordinary Roman two centuries earlier.

This revolution in sentiment, visible far and wide in the later literature, was due mainly to the spreading influence of Greek philosophy, which permeated society and subtly changed the thoughts even of men who loathed its very name. But it was Stoicism, in its later forms, when it acquired more and more of a religious tone, which, almost exclusively, urged on the educated Romans (and through them the uneducated) in the path of humanity. It does not concern us here to show how the Stoics reconciled the individualistic and the altruistic elements of their faith, which at first sight seem to stand in glaring contrast. The derivation of the human race from God, and, as a corollary, the brotherhood of men, whether Greeks or barbarians, bondsmen or freemen, were fervidly preached by Stoic masters, and by their Roman disciples. 'The whole duty of man is to fear the gods, and to help his brother men' (Marc. Aur. vi. 30), 'even the sinner' (vii. 21, etc.). 'We are all members of a great body; Nature has made us akin by birth,' said Seneca, and 'you must live for others, if you wish to live for yourself.' By Epictetus the duty of humanity was pressed so far as to be hardly practicable, and to be, as a recent writer has said, 'Quaker-like.' The practical outcome of these doctrines was a real sense of responsibility for the employment of wealth, which became characteristic of the propertied Roman, from the good Emperors downwards. The mitigation of

the bitterness of poverty was now regarded as the first duty of the State. The fashion of bestowing this world's goods for the benefit of those who had little of them affected widely those in whom the love of notoriety was the strongest motive. But many inscriptions attest the practice of beneficence in its purest shapes. The *Corpus Inscriptionum* supplies the best corrective to Juvenal's envenomed account of the relations existing in his time between rich and poor. Among motives which prompted benefactions, the desire to perpetuate the memory of the beloved dead was, as in our time, not infrequent. These benefactions take different directions; they provide for many material advantages, such as food and clothing, wine and oil; more rarely for education or for medical aid; very frequently for the nurture of free-born boys and girls. We must not forget that for one inscription recording such liberality, which has come down to our time, a hundred may have perished, and for one charitable action originally recorded, a thousand may have been carried out without record. The range of practical benevolence in the early centuries of the Roman Empire has rarely, if ever, been realized by historians.

The foundations known by the generic term *alimenta* are attested by inscriptions more numerous and important than any others. The decline of population in Italy led to many private, as well as public, efforts to arrest the evil. In the age of Augustus, who established permanently the famous *ius trium liberorum* (of which a rudimentary form had appeared in the legislation of Philip V. of Macedon, and in Cæsar's agrarian law of 59 B.C.), a citizen of Atina in the Volscian country gave property, the revenues of which were to be distributed to the poor, as inducements to rear children, instead of exposing them, according to the horrible Roman custom, or selling them, a proceeding legalized in extreme cases even by Constantine (*CIL* x. 5056). A coin of the Emperor Nerva, of the date A.D. 97, commemorates a similar act of generosity on the part of that Emperor. Nerva, seated on his chair of state, points with his right hand to a young boy and young girl, while a female figure representing Italy stands between them. The inscription is 'tutela Italiæ,' which avers that the Emperor protects Italy's future by providing for a succession of free citizens. Nerva's liberality was greatly extended by Trajan, on the same lines. A well-known relief discovered in the Forum in 1872 gives a vivid presentation of the Emperor's generosity. Two inscriptions, one from Veleia, in the valley of the Po, the other from the neighbourhood of Beneventum, give some details of the Imperial foundation, which seems to have benefited every district of Italy (*CIL* xi. 1114, ix. 1457). Another inscription describes Trajan as having thus taken thought for 'the eternity of Italy,' and some of his coins bear the legend 'Italia restituta.' We know that the example set by Nerva and Trajan was followed by Hadrian, by Antoninus Pius, whose wife Faustina gave her name to girls who were beneficiaries ('puellæ Faustinianæ'), by Marcus Aurelius, and by Alexander Severus. (The reliefs in the Villa Albani at Rome, picturing the *puellæ Faustinianæ*, are familiar to every visitor who is interested in the Imperial history.) But by the time of Constantine these foundations had been swept away, mainly by the civil commotions. It is of interest to note that the children who benefited were not massed together in orphanages, but were left in the hands of their parents. Supervision was exercised by officials of the municipalities, who administered the revenues, which were charged on land. Even private benefactions of the kind were naturally entrusted, in accordance with the Roman temperament, to municipal authorities. Doubtless the desire of Nerva in authorizing local corporations to accept inheritances and legacies, was to encourage rich private persons to imitate his example. Unfortunately the decay of the municipalities involved the ruin of the foundations also. Pliny the Younger gives us in one of his letters an interesting account of his own liberality to Comum, his native town (*Ep.* vii. 18). There is reason to believe that many such foundations were established by citizens not only inside, but outside Italy. Sometimes alimentary as well as other benefactions were attached to the *collegia* or gilds (see art. GILDS [Roman]). In connexion with these gilds, it must be mentioned here that they were not, in themselves, charitable institutions, though, indirectly and incidentally, they did much to soften the hardships of poverty, and even of slavery.

The common idea, therefore, that charity as a *duty* was not recognized in the ancient world is mistaken. But, of course, benevolence received an infinitely stronger, purer, and more universal impulse when Christianity prevailed. The famous forty-ninth letter of the Emperor Julian is proof that the best men of the heathen world keenly felt the superiority of Christian as compared with non-Christian beneficence. See also CHARITY (Christian).

CHARMS AND AMULETS (Introductory and Primitive).—An *amulet* is a material object worn or carried on the person, or preserved in some other way, for magico-religious reasons, *e.g.* to cure disease, to give strength, 'luck,' or general protection to the possessor, or to defend

him or her from specified dangers or misfortunes.

A *charm* (*carmen*) is, properly speaking, a magical formula which is sung or recited to bring about some result conceived as beneficial, *e.g.* to confer magical efficacy on an amulet for the cure of disease. But in popular English usage the same word is used to describe the incantation and the object which is 'charmed' for magical use. Thus, a 'wise woman' undertaking the cure of a case of fever might enclose a spider in a nutshell, 'charm' it by reciting a 'charm' (formula), and finally hang the 'charm' (material object) by a thread round the patient's neck, prescribing the period for which it should be worn. Again, written copies of charms (formulæ) are very commonly carried for luck or protection.

This article will deal with the uses of the material objects above described, which, to avoid confusion, will be called *amulets*. See, further, MAGIC.

A. C. Haddon (*Magic and Fetishism*, 1906, p. 29) makes a further distinction between *talismans* worn for good luck or to transmit qualities, and *amulets*, which are preventive in their action; but, as will be seen, the application of all these names is exceedingly elastic.

The use of amulets is almost universal among savage and semi-civilized peoples, and among the less educated classes in civilized countries. Not only are they worn by men and women on their persons in the form of necklets, girdles, bracelets, or anklets, and attached to these as pendants, carried in bags or pockets, and sewn to clothing; they are also attached to children and domesticated animals, affixed to buildings, household furniture, tools, and weapons, and placed near fruit-trees and growing crops. In Europe the use of amulets is most strongly developed in the Mediterranean countries (including Syria and North Africa), where it co-exists with various 'survivals' of non-Christian religious belief and practice; but it would probably be incorrect to treat the use of amulets as a merely traditional survival of paganism. On the contrary, there is reason to think that it represents a universal tendency in human nature, which is always likely to reach practical expression if not checked by other tendencies. Of these controlling factors education seems to be the most important. Where belief in witchcraft or in the evil eye is strong, there is always a corresponding development of protective amulets. Again, in all countries the members of certain classes whose occupation involves a degree of social isolation tend to develop, or perhaps merely to preserve, a more intensive use of amulets: in Europe and India this tendency has been observed in fishermen, shepherds, miners, sailors, hunters, actors, jockeys, beggars, gipsies, and the criminal and immoral classes; in uncivilized societies, our present knowledge of professional specialization is too imperfect to permit of any generalization.

In spite of certain differences (arising out of local variation in the supply of materials, the general level of native art, and the pressure of local needs) there is a general resemblance in the types and applications of amulets in every age and country. The following classes of objects, natural and artificial, are very commonly used: stones (especially those of a curious shape or naturally perforated), stone implements (celts and arrowheads); curious vegetable growths, roots, leaves, seeds, nuts; horns, teeth, claws, and other parts of animals and insects, shells, human hair and teeth, relics of the dead; medicinal substances; substances believed to have been extracted from the sick in magical cures; iron, gold, silver, rock crystal, alum, salt, coral; red, blue, and white things; strings, threads, and rings; representations of human and animal forms, phallic emblems, representations of eyes, hands, horns, and crescents; beads, imported ornaments; written charms, quotations from sacred writings, inscribed objects, medals, coins; obsolete weapons and ornaments; relics and mementoes of holy persons and places, portions of offerings, and dedicated things.

The purposes for which amulets are used may also be classed under certain common types, such as the cure and prevention of disease; protection in general, and from specific dangers (*e.g.* death in battle, wounds, drowning, shipwreck, lightning, failure of crops, attacks by dangerous animals, evil spirits, witchcraft, the evil eye); the acquisition of physical strength, fertility, 'luck,' wealth, magical powers; and the fulfilment of special wishes, *e.g.* for success in hunting, fishing, trade, love, and war.

Anthropological attempts to explain the use of amulets fall into two chronological groups, of which the earlier is connected with the general theory of magic put forward by E. B. Tylor (*Early Hist. of Mankind*, 1865, [2]1870, [3]1878; *Primitive Culture*, 1871, [2]1873, [3]1891, [4]1903), and developed by J. G. Frazer (*GB*[2], 1900; *Lect. on the Early Hist. of the Kingship*, 1905). For a discussion of this, see art. MAGIC; here it need only be said that the belief in magic, according to Frazer (*Kingship*, 52), depends on 'a misapplication of the association of ideas by similarity and contiguity.'

'Manifold as are the applications of this crude philosophy . . . the fundamental principles on which it is based would seem to be reducible to two; first, that like produces like, or that an effect resembles its cause; and second, that things which have once been in contact, but have ceased to be so, continue to act on each other as if the contact still persisted' (*GB*[2] i. 9).

By this explanation of magic, attention is concentrated on certain logical errors said to be characteristic of the thought of uncivilized or uneducated man. The savage, as Tylor has frequently said, is apt to mistake the subjective connexion set up by the association of ideas in the mind for an objective or causal connexion; to believe, for instance, that a stone which resembles an eye must have some occult effect on the human eyesight, or that the courage and keen sight of the eagle can be secured along with a tuft of its feathers (*Early Hist. of Mankind*[3], 131). These logical errors are exemplified in the savage and popular use of amulets, the following cases being typical:

The 'desert goat' (*Nemorhædus Swettenhami*) is the most surefooted animal known to the Malays of the Lower Siamese States; and they believe that if it falls over a cliff it immediately licks itself whole. Accordingly, the tongue of the desert goat is carried as a powerful amulet against falling, and also as a sure cure for wounds caused by falling if rubbed on the part affected; and a rib of it is used to tap or rub any bruises or cuts in order to make them heal (MS Catalogue Annandale Collection, Pitt-Rivers Museum, Oxford, 1901-2, no. 24). Again, the Dutch in South Africa hang strings of greyish seeds, which they call *tande kraale* ('teeth beads'), round the necks of their children to help them in teething. 'Such notions were elaborated into the old medical theory known as the "Doctrine of Signatures," which supposed that plants and minerals indicated by their external characters the diseases for which nature had intended them as remedies. Thus the Euphrasia or eyebright was, and is, supposed to be good for the eyes, on the strength of a black pupil-like spot in its corolla, the yellow turmeric was thought good for jaundice, and the blood-stone is probably used to this day for stopping blood' (Tylor, *Early Hist. of Mankind*[3], 123).

Explanations of this sort may be used, more or less legitimately, to cover many specialized uses of amulets. But there are other types to which they do not apply; nor are they sufficient, in themselves, to account for the practice of using amulets as a whole. To do this, it is necessary to follow up a second line of inquiry, which has been pursued in France by Hubert and Mauss ('Esquisse d'une théorie générale de la magie,' *ASoc* vii. [1904]); in America by Miss A. C. Fletcher (various works), Hewitt ('*Orenda* and a Definition of Religion,' *American Anthropologist*, new ser., iv.

33–35), and Lovejoy ('The Fundamental Concept of the Savage Philosophy,' *Monist*, xvi. 357–382); in England chiefly by R. R. Marett (*The Threshold of Religion* [essays dated 1900–1909], London, 1909), and E. S. Hartland (Presidential Address, section H, British Assoc., York, 1906). According to this later theory, the explanation of the savage belief in magic is to be sought not in savage errors of logic, but in the savage's conception of magical power or efficacy. Evidence for this conception has been found in the vocabularies of many uncivilized peoples, in the existence of a class of words of which *mana*, the Polynesian-Melanesian expression for 'mysterious or supernatural efficacy,' has been generally accepted as typical (see MAGIC).

'This is what works to effect everything which is beyond the ordinary power of men, outside the common processes of nature; it is present in the atmosphere of life, attaches itself to persons and to things, and is manifested by results which can only be ascribed to its operation.' This *mana* is not fixed in anything, and can be conveyed in almost anything; but spirits, whether disembodied souls, or supernatural beings, have it and can impart it; and it essentially belongs to personal beings to originate it, though it may act through the medium of water or a stone or a bone (Codrington, *The Melanesians*, 1891, p. 118 f.). 'Among many uncultured races the chief concern of the individual is to absorb as much of this force or to get into his possession as many objects charged with it as possible' (Lovejoy, *op. cit.* 360).

It is in such conceptions of magical efficacy (*mana*), explicit or implicit in uncivilized and uneducated thought, that the most comprehensive explanation of the use of amulets is to be found. All amulets have at least this in common, that they are credited by their possessors with a quality, virtue, or efficacy which makes them valuable; without which, in fact, they would not be amulets at all. It has been shown above that they are of various forms and materials; how do they come to be regarded as having *mana*? Primarily, because they have attracted attention; like human beings of striking personality, they have detached themselves from the vague undifferentiated background of the uninteresting, and impressed themselves upon the eye and upon the mind. As soon as an object has proved attractive enough to make a man carry it away with him, it is on the way to becoming an amulet. It is not so much that amulets are kept and carried because they have *mana*, as that they have *mana* because they are kept and carried.

From an examination of the amulets which are actually used, it is possible to see what it is that qualifies an object for this sort of selective attention. Generally speaking, it must be small, portable, and not fixed to its place of origin. If a small stone of remarkable shape catches a man's attention, he carries it away with him, and it is likely to become an amulet; whereas, if it is large, he will more probably observe it whenever he passes, invent a myth to account for its peculiarities, and perhaps set up a habit of visits and offerings. The magical object, then, must be portable and detachable, and it is especially attractive if it is capable of being strung or tied to a string. *Stones* form a test case for this simplest type of amulet. In many parts of the world they excite a peculiar interest (Marett, *op. cit.* 19 ff.), and if they have any singularity in shape or colour they are sure to attract attention. In British Guiana a natural hollow concretion with a loose stone rattling inside is shaken by the Arawak magician to relieve the pains of childbirth. In Italy madreporite is worn as a protection against sickness and against witches, serpentine for the prevention and cure of snake-bite, limonite to protect pregnant women. In the Eastern Island of Torres Straits smooth water-worn pebbles are used as *omabar*, 'love-charms' (Haddon, *Reports of the Camb. Anthropol. Exped. to Torres Straits*, vi. [1908] 221, and pl. xxi.). Naturally perforated stones are specially attractive, being curious, portable, and easy to preserve. In Ireland, for example, they are hung round the cattle-byre or on the stakes to which cows are tethered, 'to keep evil from the cows,' 'to keep pixies from stealing the milk,' or 'for luck.' English peasants (Wiltshire, Hertfordshire, etc.) and Scotch fishermen hang them at the house door 'to keep away witches.'

Vegetable growths which present any abnormality are valued in the same way. In Italy double walnuts and almonds are carried as amulets against the evil eye and witches, against headache, and to bring good luck. In the Lower Siamese States a branch of unusual shape is hung over the hearth; 'spirits are afraid of it'; and the knotted stem of a creeper is hung over the house door to keep out *pōlōng*, 'familiar spirits' (MS Cat. Annandale Coll., Pitt-Rivers Mus., Oxford, 1901–2, nos. 236, 244). The tumour-like detachable growths sometimes found embedded in the trunks of oaks are carried by Surrey labourers as 'cramp balls' to ward off cramp.

Most attractive of all are stones and other natural objects in which a resemblance may be traced to something of another kind. Thus, flint nodules resembling shells were preserved in a pre-dynastic Egyptian tomb at el-Amrah. The mandrake and the ginseng root are credited with wide and undefined powers in Asia and Eastern Europe because of their fancied resemblance, generally improved by art, to a human being (Tylor, *Early Hist. of Mankind*[3], 123). In a Malay house in Lower Siam a natural growth of wood resembling a bird was hung up for use as a clothes peg, but also to bring luck; and powder scraped from it was administered to children suffering from internal parasites: it was called *kayu-jadi-burong*, 'wood become bird' (MS Cat. Annandale Coll., no. 239).

Another claim to attention lies in any sort of paradoxical or abnormal quality in things. For instance, a chank shell is sometimes found with the whorls turning the reverse way; in Southern India such a specimen is regarded as a magical and fortunate possession (Walhouse, *JAI* xvi. 164). Catlin describes the mantle of a medicine-man of the Blackfeet, on Yellowstone River, 1833–40, as follows:

'Besides the skin of the yellow bear (which, being almost an anomaly in that country, is out of the regular order of nature, and, of course, *great medicine*, and converted to a medicine use), there are attached to it the skins of many animals which are also anomalies or deformities, which render them, in their estimation, *medicine*; and there are also the skins of snakes and frogs and bats—beaks and toes and tails of birds—hoofs of deer, goats, and antelopes; and, in fact, the "odds and ends," and fag-ends, and tails, and tips of almost everything that swims, flies, or runs, in this part of the great world' (*N. Amer. Indians*, Edinburgh, 1903, i. 46, and pl. 19).

Mere rarity is also valued (see Hubert and Mauss, *ASoc* vii. 102). Nodules of very compact black stone are occasionally found embedded in a coal seam; one such 'coal-nut' was kept by three generations of miners at Pendleton, Lancashire, as their most treasured possession; they considered that it protected them from accident, nor would they venture down a mine without it. By an extension of this desire for rarities, many amulets are supposed to have been obtained in some impossible way or from some mythical animal. In English folk-lore, fern-seed, if it could be found, would confer invisibility on the possessor. In Epirus it is said that, if a man boils eagles' eggs and puts them back in the nest, the eagle will fly to the Jordan, fetch a pebble, and put it in the nest to assist incubation. The man secures this pebble, which is called a 'stone of loosing,' and serves to cure diseases, especially the effects of the evil eye. Stones purporting to have been obtained in this way are actually carried

(Papacostas, *Man*, 1904, no. 81). A native of Kachal, Nicobar Islands, carried a ring about 1¼ inches in diameter, of a bone-like substance, and told a story about it of some large jungle-dwelling animal from whose eye or eye-socket it was made: 'it was bigger than a pig, and very scarce'; further than that he was not intelligent enough to give a description (C. Boden Kloss, *In the Andamans and Nicobars*, 1903, p. 111). In India and Japan certain transparent pebbles are said to have fallen from the heads of cremated corpses or of snakes.

Pre-historic stone implements are popular as amulets wherever they are found; their history being unknown, and the finding of them usually sudden and accidental, they are believed to be of supernatural origin—either fallen from the sky, or the work of mythical beings (J. Evans, *Ancient Stone Implements of Great Britain*[2], London, 1897, pp. 56-65). In most countries they are said to be 'thunderbolts,' and are therefore kept to preserve people, cattle, and buildings from lightning. They are also used to effect magical cures; water poured over neolithic celts and arrowheads is given to cows in Ireland to cure the 'grup'; in Italy they are hung round children's necks to keep away illness and the evil eye; the Malays carry them as lucky objects to sharpen their krises and cock-spurs, and as touchstones for gold. In Arabia, amulet-necklets of arrowheads are used, and manufactured arrow-shaped pendants of cornelian, agate, and glass are worn as 'good for the blood,' and exported from Mecca to south-eastern Europe. Similarly, natural pebbles resembling celts or arrowheads, and manufactured pendants of the same shape, are worn as amulets, *e.g.* at Lozère (France), to facilitate childbirth. Other substances found in the ground are similarly prized: belemnites, called 'thunder-stones' in France, Germany, and England, are powdered and given as medicine; staurolites (silicate of baryta and alumina) are valued by Breton peasants for their cruciform shape, and credited with supernatural origin and powers. Nodules of iron pyrites are often called 'thunderbolts,' *e.g.* in Switzerland, and are kept to protect houses from lightning. Antique beads found in the soil are valued in Europe, India, and West Africa as amulets for the cure and prevention of disease. Rock-crystal attracts attention wherever it is found; and alum seems to be a substitute for it in Persia and the Mediterranean countries. The metals, and iron in particular, are in almost universal estimation, partly from the difficulty of obtaining them, and partly from the traditional mystery of the smith's craft (cf. 'Indian' section of this art.).

But, apart from such special claims, it seems that any object which is small, complete in itself, definite, of homogeneous material, portable, and tolerably durable, which attracts attention, and can be taken as a personal possession, is likely to be treasured, and credited with unusual qualities simply in virtue of the attention it has excited. It remains to show how this idea of magical efficacy is developed.

First, the mere keeping of a small object for any length of time is enough to invest it with a special interest. If it is lost after it has become familiar, there is a considerable amount of mental discomfort, which may easily become associated with other misfortunes happening about the same time; and, by contrast, past prosperity will be associated with the possession of it. Ornaments habitually worn become linked with daily tasks, with mental effort, especially with exertions of eloquence; the loss of them may therefore be accompanied by a sensation of loss of power. Again, conspicuous ornaments or objects constantly carried become associated with the wearer's personality in the minds of other people; if he is remarkable for eloquence, shrewdness, or success, the existence of his 'mascot' or 'luck' is a convenient tangible circumstance which concentrates the attention of minds not much accustomed to analyze their impressions, and serves as an easy 'explanation.' The great man is not unlikely to be said to derive *mana* from the very object on which, in fact, he confers it.

But, further, when a man carries about with him some object which has caught his attention, he is generally obliged to justify his liking for it, to himself if not to others. 'What good is it to you? What do you keep it for?' In many cases the resemblance to something else, by which the object first attracted him, suggests an answer. Thus, the Melanesians, who value any stone of peculiar appearance, give explanations of this sort:

'Any fanciful interpretation of a mark on a stone or of its shape was enough to give a character to the stone . . . the stone would not have that mark or shape without a reason. . . . A stone with little disks upon it . . . was good to bring in money'; a stone surrounded by little stones, like a sow among her litter, would bring an increase of pigs (Codrington, *op. cit.* 181 f.). Jimmy Dei, a native of the Murray Islands (Torres Straits), had in 1898 an irregular oblong piece of vesicular lava; it was supposed to resemble the head of a *tabu* snake, and, as snakes prey upon rats and mice, he kept it in his garden to prevent rats from eating the bananas (Haddon, *Rep. of Camb. Anthrop. Exped.* vi. 220). Similarly, red stones in many countries are said to be good for the blood, white stones for the skin, crystals for the eyes, and cloudy agates to increase the milk of nurses.

Utilitarian explanations of this sort, based on the universal passion for detecting resemblances and analogies, are sufficient to convince those who use them that there is some real though vaguely-conceived connexion between the amulets they carry and the desired objects to which, by way of justification, they refer them. But to say, with Frazer, that uncivilized people are guided in such matters by the 'laws' of a pseudo-science is to credit them with more logical system than they really employ. The choice of the object in the first place, and the utilitarian application of the likeness perceived, are both dictated not by system, but by the accidents of local supply and local needs. The Haida seal-hunter is interested mainly in seals; therefore he is quick to notice any stone whose natural shape reminds him of a seal, and for the same reason he makes the practical application that it is good for seal-catching; a Melanesian gardener would probably say of a similar stone that it would be good for growing yams. Note, again, how elastic is the method of application: a twisted root in the Malay Peninsula, a seed-capsule (*Martynia*) and a beetle's horn (*Dynastes sp.*) in Upper Burma, and a nut (*Ophiocaryon paradoxum*) in British Guiana, all used locally as amulets, have each sufficient likeness to set up a generalized idea of snakes; and, as snakes are undesirable, it is decided in each case that they must be useful against snakes and snake-bite. But if snakes were needed, the same objects would be said to attract them. In New Guinea a stone shaped like a dugong is an amulet for catching dugong; another which recalls a shark is an amulet for escaping sharks. In the Murray Islands the *nam zogo*, which primarily was for the purpose of securing success in catching turtle, could also be used to prevent turtle from being caught (Haddon, *op. cit.* vi 51, 213, 219). The Nicobarese set up images of ships to attract traders when their coco-nuts are ready for sale, and images of crocodiles to prevent crocodiles from attacking them while bathing. There is no need to credit savage thought with any definite principle of 'similia similibus curantur'; such 'laws' belong to a late stage of systematization.

It is worth noting that the special application of amulets is often left undecided by the owners

until their efficacy has been tried. Codrington (*op. cit.* 183) says that in Melanesia a piece of water-worn coral-stone

'often bears a surprising likeness to a bread-fruit. A man who should find one of these would try its power by laying it at the root of a tree of his own, and a good crop would prove its connexion with a spirit good for bread-fruit. The happy owner would then for a consideration take stones of less marked character from other men, and let them lie near his, till the *mana* in his stone should be imparted to theirs.'

At Kampong Jarum, Ulu Rhaman (Malay Peninsula), a smooth black pebble was in use in 1901 to make the rice grow, water in which it had been washed being sprinkled over the young plants.

'The story of this stone was as follows:—Some years ago a man came to the village and said that he had lost a charm—a black stone—for making rice grow, on his way from Patani, which is about 60 miles away. A man from Jarum, passing along the same path a few days later, found the present specimen quite close to the village, and concluded it was the lost charm. He sprinkled his rice-fields with water in which the stone had been washed, and had a good crop that year. The fame of the stone was thereby established, and I had some difficulty in persuading him to part with it' (MS Cat. Annandale Coll., no. 243).

Where there is no resemblance to suggest the answer to the utilitarian question, there may be merely an assertion in general terms (tending to stiffen into tradition) that the object is 'lucky'; but very often a special application is determined by special need. 'I like it—ergo, it is good for something—ergo, it is good for what I want; for if not, what good is it to me?' This comes out quite clearly from a consideration of the amulets—in reality the large majority—of rather unspecialized character: whatever need is most pressing for a locality, class, or sex, determines the magical use of seeds, stones, bone, coral, or whatever objects are locally available and attractive. Thus, Hindus use beads, black seeds, bony plates from a crocodile's back, and carved pieces of bone—all against headache. Conversely, the Shans of Burma use elephants' nail for medicine in general; amulets of the same are hung on the children to protect them from disease; Shan women 'who are bewitched' carry part of an elephant's tail, and mothers who have lost a child wear a finger-ring of elephants' hair in the hope that the next infant may live. A collection of amulets now at the Horniman Museum, collected in Huntingdonshire, Bedfordshire, and Hampshire, between 1856 and 1892, shows that pieces of worn flint—all naturally grooved or perforated, and so attractively portable—have been carried by a gipsy to ensure good luck, by a poacher as 'lucky stones' but also as weapons, by a gipsy woman to protect her against 'the devil's imps,' by shepherds to ensure good luck during the lambing season and to keep foot-rot from the sheep, by the keeper of a raffle at country fairs to prevent customers from throwing high numbers, by a horse-breaker 'to keep the devil out of the horses,' by a farm-labourer to protect him from the witch Ann Izzard of St. Neots, who died about 1855, and by a woman to protect her from witches and evil spirits; to prevent and cure nose-bleeding; to ward off nightmare; to protect against lightning; to protect against being tossed and gored by cattle. Similar stones were hung up in a stye to protect the pigs from swine-fever, in a stable to keep the horses from having nightmare, and in a gipsy van to prevent the loss of horses by death. The amulets themselves were quite undifferentiated; the special applications were dictated by the owners' needs. The same thing is seen in a set of amulets from Lifu (South Pacific), forming part of the Hadfield Collection in the Manchester Museum; stones of any kind are rare on the smaller islands, and smooth pebbles and irregular fragments of lava were carried by the natives, with the most widely varying objects—to produce water, yams, and taro, to improve sling stones with which they were kept, to secure the death of an enemy, to catch crabs, to give strength to the knee for mountain-climbing, to give ability and success and remove infertility, and to give confidence in addressing a chief. Protection against the evil eye, wherever the dread of it prevails, is made a secondary application for amulets of many kinds, although it has developed special remedies (see below). Thus, at Perugia a double walnut is carried 'for good luck against the evil eye and headache,' and a boar's tusk 'against the evil eye and witches, and to assist children in teething'; at Aquila, a heart-shaped piece of bone is efficacious 'against heart-complaint and the evil eye.' Hubert and Mauss say (*ASoc* vii. 103):

'The notion of special properties never stands alone in magic; it is always confused with a generalized idea of power and nature. True, the idea of the effect to be produced is always precise, but the idea of the special qualities [in the amulet] and their operation is always rather obscure. On the other hand, we find in magic a very distinct conception of substances which have undefined virtues: salt, blood, coral, fire, crystals, and precious metals . . . all incorporate general magical power, susceptible of any particular application or utilization.'

It will have been suggested by the foregoing examples that certain classes of amulets are credited, primarily, not with inherent magical power, but with a borrowed virtue acquired from some person or thing regarded as sacred or mysterious. In Melanesia all manifestations of *mana* are explained by reference to personal beings: 'if a stone is found to have a supernatural power, it is because a spirit has associated itself with it; a dead man's bone has with it *mana*, because the ghost is with the bone'; and, further, many such amulets can be used only by men who know the appropriate magic chant communicated by a spirit or by a former owner (Codrington, *op. cit.* 56, 57, 119). Magical power is everywhere conceived as a quality highly transferable: sacred persons and places can impart it by definite process or by mere local association. In Southern Europe, relics of saints, portions of the True Cross, medals and pictures of saints, and sacred objects are perhaps the most highly esteemed of amulets. In Muhammadan countries amulets made of earth from Mecca or of the sweepings of the Ka'ba are worn. In Burma, bricks from sacred buildings are kept for protection (see the 'Indian' and 'Japanese' sections of the present art.). There is a tendency, also, to reinforce the supposed efficacy of an amulet by bringing it into contact with something of superior efficacy: in Europe, relics and medals are more prized if bought at a place of pilgrimage, or blessed by a priest or bishop, while amulets not licensed by the religious authorities are often hidden under the altar, or in the clothes of an infant at baptism, so as to receive consecration. In Brittany, halters and bundles of cow-hair, blessed by a priest or allowed to lie on the altar of a church, are used to protect cattle from disease (Baring Gould, *A Book of Brittany*, 1901, pp. 276–278). Again, dead men and all the associations of death are everywhere held to be a magical source of power; hence, in Europe, the amuletic uses of coffin-nails, pieces of shroud, hangman's rope, and personal relics of saints and executed criminals. Strangers, and neighbours of unfamiliar type or less advanced civilization, are credited with magical power, which may be extended to everything which they own or produce. The Arunta (Central Australia) regard the tribes north and west of their own district in this way, so that the ordinary girdles worn by the Warramunga men are traded to the Arunta as powerful amulets (cf. Tylor, *Primitive Culture*, 1871, i. 102–104).

The detachable *parts of animals*—feet, horns, claws, teeth, scales, and so forth—form a large class of amulets. To some extent they fall within the more general categories of the small, compact,

portable, and rare; but a special application is often dictated by their association with the corresponding parts of human beings; thus,

'the headman of Naukauri (Nicobar Islands) was much interested in a kingfisher that was being skinned [by a naturalist], and begged for the eyes, which he said formed a valuable specific in cases of sleeplessness' (C. B. Kloss, *op. cit.* 76).

This is not, however, a universal rule; for example, monkeys' paws are used as vermifuge amulets in Formosa, moles' paws to keep off cramp in England, porcupines' feet by Chawia women (North Africa) for protection during pregnancy, and by Arab women against sore breasts. Very often the object seems to be chosen for its connexion with the most impressive of the local animals, which are themselves credited with mysterious power. To this type belong the crocodile scutes worn in Bengal and Torres Straits; the leopard and lion skins of Africa; tigers' claws and whiskers, bears' teeth, and eagles' claws; or the various products of the elephant. The connexion may be reinforced by making a likeness of the animal; the elephant-nail amulets of the Shans are sometimes cut in the shape of an elephant. Sometimes the amulet is intended to transfer some desirable quality, as when in South Africa a kite's foot is worn to give swiftness, a lion's claw for security (Tylor, *Early History*[3], 131; Haddon, *Magic and Fetishism*, 32, and references there given); but quite as often the magical efficacy is unspecialized, and the application dictated by need.

With all amulets, in fact, *nomination* is of immense importance, although nomination may be guided by tradition; when the owner of an amulet of undefined virtues decides to connect it with some particular need, he thereby makes it a charm for that purpose (Tylor, *op. cit.* 126). He has only to think so and to say so, and it becomes for him and all his circle a rain-charm, a pig-charm, or a safeguard against the evil eye (see Jetté, 'Medicine-Men of the Ten'a,' *JAI* xxxvii. 165).

It is obvious that the demand for amulets may exceed the supply of suitable natural objects, especially where tradition has fixed the type. It becomes necessary to make as well as to find them. The first steps in this direction are easy, for, when natural objects are valued for their likeness to something else, there is always a tendency to improve the likeness by art, for the maker's own satisfaction or for a purchaser. From this it is a natural advance to make amulets which are entirely artificial; and these, being made to meet a demand, have generally a fairly definite application, though many are intended to be simply 'lucky.' Leaving aside manufactured objects (such as antique beads and coins) which are merely selected, as natural objects are, for magical use, we may classify *artificial amulets* under four heads:—(i.) Imitations of natural objects, already in use as amulets, *e.g.* of horns (Italy, Portugal, etc.), teeth (large numbers made in Austria for African trade), 'seahorses' (Naples), or coral (all Mediterranean countries, and Africa north of Equator). (ii.) Representations of 'lucky' or sacred objects and protective gestures, *e.g.* of the fish (Manchuria), the pig (South Bavaria), a hunchback (Italy), crosses and figures of saints (Europe generally), the chalice (Rhone Valley), or hands with the fingers in the attitudes called 'making horns' and 'mano in fica' (South Europe and N. Africa). (iii.) Objects made of materials credited with magical efficacy, *e.g.* loops and crosses of rowan-twigs (Scotland), wood of sacred trees (India), jade (Asia), gold, etc. (iv.) Inscribed objects and written charms. Nomination plays an important part in conferring magical efficacy on artificial amulets; frequently the process of manufacture is conceived as a magical rite, in the course of which a charm is repeated, indicating, and thereby conferring, the specific power desired. For example, a Lengua (Paraguay), when he wishes to hunt rhea or huanaco, makes a rough likeness, or rather suggestion, of the game by wrapping a bird's bone in grass or cloth; he sets this up before him and 'sings over it' to give it power (cf. Henry, *La Magie dans l'Inde antique*[2], Paris, 1909, p. 89 ff.). A similar rite is often performed, either by the beneficiary or by an expert, when the amulet is first put on or fixed in its place (cf. Maclagan, *Evil Eye in the Western Highlands*, 1902, p. 141 ff.). Where no attempt is made to produce a resemblance, nomination is all in all, and the amulet seems little more than a means of focusing the wish; as, for instance, in a pendant of carved jade worn by a Bengali 'as a cure for drooping spirits in adversity.'

It should be noted in this connexion that many amulets are worn in fulfilment of a prescription or vow by which their special application is indicated. A Haida magician (Queen Charlotte Is., British Columbia), when engaged in a magical cure, wears a necklet with a number of ivory or bone pendants; after the séance one of these is given to the patient, and others are sold to the bystanders as a protection against the disease in future. To cure an attack of fever, the Nicobarese *menluana* ('magician') prescribes the painting of a *henta* ('magical picture') by the village artist, and if the patient recovers, it is kept in the house as a potent charm against further attacks (C. B. Kloss, *op. cit.* 85). Peasant women near Bologna make a vow, in church, to the Virgin, that they will wear garters or girdles under their clothes for the cure of diseases.

Inscribed amulets and charms—a very important class of artificial amulets—may be classified as: (i.) Inscribed objects valued as such apart from the meaning of the inscription. The art of writing always raises a presumption of magical power where the population is mainly illiterate; hence, objects with accidental markings resembling written characters are prized, as well as mere scribbling in imitation of writing (Sudan, etc.). The use made of ancient coins (Europe, Asia) is possibly connected with this, but in some cases (*e.g.* China, Japan, Korea) they are valued for their association with the persons whose names appear on them; Chinese sword-sheaths made of coins are meant to convey the supernatural power and beneficence of all the emperors represented. Hence they should perhaps be placed in the next list. (ii.) Objects inscribed with sacred and magical names, designs, and figures (see 'Christian,' 'Jewish,' 'Indian,' sections of this art.). (iii.) Objects with inscriptions indicating their application; many of the charms distributed at Japanese temples are merely papers stamped 'for protection,' 'against thieves,' 'for easy delivery,' etc. (see 'Japanese' section). (iv.) Copies of sacred texts to which magical efficacy is ascribed (see 'Jewish' and 'Muhammadan' sections). (v.) Copies of prescriptions and curative charms; these are of frequent use in European folk-practice, the prescription being first carried out or the charm repeated, and the copy worn or preserved until the cure is complete. Sometimes, however, the formula is not repeated or disclosed, but only written out by an expert and given to the patient (see *FL* and other publications of the Folk-Lore Society, London, *passim*). The popularity of classes (iv.) and (v.) has given rise in many countries to the manufacture of various charm-cases—leather cases (Syria, Muhammadan Africa), silk and cotton bags (South Europe, India, Japan, etc.), metal cylinders (India, Tibet, etc.), or rolls of lead-foil

(Burma)—and there is a tendency to credit these with amuletic efficacy irrespective of their contents.

Amulets against the evil eye constitute a special class, although, as has been said, all other kinds tend to receive a secondary application to this danger wherever the fear of it prevails, children, pregnant women and nursing mothers, domestic animals, ripe crops, and, in short, whatever is likely to arouse envy being considered in special need of protection. Co-extensive with the spread of the belief along the European and African shores of the Mediterranean and through Italy into Central Europe, along parts of the Atlantic seaboard, up the Nile, and through Syria, Turkey, and Asia Minor into Asia, is a marked development of the use of amulets, some intended to fortify the possessor against the effects of the evil glance, and others to intercept or divert it. They include (1) representations of eyes, and natural objects resembling eyes; (2) representations of hands making prophylactic gestures; (3) phallic representations; (4) representations of hunchbacks, death's-heads, and other singularities; (5) almonds, nuts, seeds, shells, and representations of them (these are often supposed to break when the glance falls on them, and earthen pots are placed near crops on the same principle); (6) boars' tusks, canine teeth of wolves and other carnivora, horns, and artificial representations of any of them, and various crescentic objects, especially representations of the moon; (7) crystal and alum; (8) coral, imitations of it, and other red materials; (9) blue materials, *e.g.* glass, porcelain, beads, woollen yarn, turquoise, and imitations of it. (For discussions of the significance of these and other types, see bibliography for works by Bellucci, Elworthy, Leland, Maclagan, Ridgeway, and Westermarck.)

Certain other instruments of magical practice should be studied in connexion with amulets and charms. Implements of *divination* are often kept for repeated use, and credited with a magical power of bringing about events as well as indicating them. Again, it is often difficult to draw the line between amulets and *fetishes*, especially when these are natural objects (or artificial reproductions of them) chosen, as amulets are, for their singularity or their accidental resemblance to other things, valued as personal possessions, and credited with magical power. The difference seems to lie in the nearer approach to personification in the case of the fetish, which becomes the object of rites which at least resemble prayer and offering (see Frobenius, *Childhood of Man*, 1909, p. 186, fig. 195; Cushing, *Zuñi Fetiches, passim*; Haddon, *Reports of the Cambr. Anthrop. Exped. to Torres Straits*, vol. vi. section xiii. [1908]). The use of material objects, especially images, in *sorcery*, to do magical harm to persons or property depends on the same general idea of magical power, in this case not inherent, but conferred by a rite. Great emphasis is laid on resemblance between the instrument and the subject of attack, and in this connexion the ideas of 'sympathetic magic' are most strongly and systematically developed; there are, however, cases in which the image is regarded not as representing the subject, but as the embodiment of the sorcerer's magical power or wish (Henry, *La Magie dans l'Inde antique*[2], Paris, 1909, pp. 169–173, 227–230). The primary function of certain other magical objects (*e.g.* 'wish-bones' in Europe, sorcery-concoctions with lock and key in West Africa) is to focus, or register, the operator's wish, though there is a constant tendency to credit them with power to fulfil it. Connected with these are many kinds of *votive offerings* deposited in holy or 'lucky' places; and these again must be compared with such amulets as are worn in fulfilment of a vow and to obtain a specified benefit (see above).

CHARMS AND AMULETS (Abyssinian).—

1. Appearance.—Abyssinian charms or amulets are made of from one to three strips of parchment or leather, which varies greatly in thickness and quality, sewn together with thongs of the same material, the whole forming a strip from *c.* 50 cm. to 2 m. in length, and from *c.* 5 cm. to 25 cm. in width. Many specimens have lost the beginning or end. The scroll thus formed is rolled tightly together, and bound with cord, or inserted in a telescoping capsule, or sewn tightly in leather. Convenience or the conservatism of magic has given the roll-form the preference, though magical works, containing legends and spells, and evidently designed, like the scrolls, to be carried rather than read, are often found in small bound volumes with heavy wooden covers. Capsules and leather-covered rolls of this sort are often strung together, to the number of five or six, and ornamented with beads.

Upon this material the Abyssinian *dabtarā* ('canon') writes the legends, spells, words of power, secret signs, and other devices which are to make the charm effective. The appearance of such scrolls is unique. At the top is usually a picture of the archangel Michael or Gabriel with sword in hand, accompanied by smaller angelic figures or faces. Curious spider-like forms, eyes (doubtless representing the evil eye), the fish, the serpent, the lion (or dog [?]), the cross with sun and moon on either side, and indescribably fantastic figures combine with geometric designs in endless yet characteristic array. The 'Seal of 'Eskeder,' or Alexander, so designated by a subscription, in the form of an interlaced figure, appears in one instance, and suggests a similar interpretation of the unintelligible figures above mentioned. Only very rarely is there an illustration bearing upon the accompanying text, as in the pictures noted

in three instances of the saint Sūsneyōs mounted and attacking the demoness Werzelya. The name of the possessor of the scroll appears many times throughout the roll. The space for the insertion of the name is left blank by the maker, the name being afterward filled in for the purchaser, and subsequently changed as many times as need be, when the roll passes from hand to hand, which is very often the case. Not only at the top but at the end, and in the middle, once or twice, such figures are placed, again without any reference to the text.

The substance of the spells is written in a script generally very much debased, and in some instances assuming a character attributable only to a desire for the bizarre and mysterious, mixed with magical signs, suggesting, on the one hand, Abyssinian or Arabic letters, on the other, the signs which are found in Coptic and late Greek magical texts. The language is a more or less successful attempt at Ge'ez, the ancient, ecclesiastical, and literary language of Abyssinia, commonly known as Ethiopic. The Amharic-speaking scribe is everywhere evident; and in some instances the writer passes completely into the latter language.

2. Age.—The dating of the texts is very difficult. A few are possibly as old as the 15th cent. A.D., and magic scrolls continue to be written in Abyssinia to-day. There is every reason to believe that, however much these texts have accumulated through contact with Muslim and European influences,[1] much or most that is in them goes back to the Byzantine Christian magical texts and books.

3. Use.—Abyssinian charms are worn about the neck, or merely kept in the house, of the possessor. It would seem from the texts that the presence of the roll is in itself sufficient for complete protection—a fetishistic idea which is familiar. But there is also frequent mention of the immunity that comes to him who 'reads the book.' A peculiar form of amulet, described by Turayeff (*Lefāfa-Ṣedeq*, St. Petersburg, 1908), and reminding one strongly of the Egyptian Book of the Dead, was buried with the body to procure for its possessor complete justification in the next world.

4. Contents.—The text of the scrolls, besides the figures, etc., above described, contains both simple spells and words of power, the whole being accompanied by legends explaining how they originated, were first used, and came to have their efficacy. The latter device is well known in magic literature, from earliest Babylonian times onward. It will be necessary to speak first of the legends.

(*a*) *The legend of Sūsneyōs and Werzelyā* is the most common. It tells how a man named Sūsneyos marries a wife and begets a child, to which a certain demoness (or witch, or old woman with the evil eye), called Werzelyā, comes in the house, and, departing, causes its death. She goes into a lonely place where she meets her companions, the unclean spirits and demons. The mother complains to the father, Susneyōs, regarding what has happened; he mounts his horse, and with spear in hand starts in quest of Werzelyā to kill her. Not knowing where she is to be found, he inquires of an old woman (witch [?]) at the roadside, who says that she has gone into a 'garden' which lies straight before him. He meets her there, surrounded by demons in large numbers. He prays to Jesus Christ for help in the contest with these supernatural foes; and, after hearing a voice from heaven which announces the granting of his petition, he advances against Werzelya and pierces her side. At this point the texts are at variance. An exorcism by the 'seven ranks of archangels' follows, which seems to be an essential part of the legend; but it is uncertain by whom, with what purpose, and with what result it was uttered; and the close is variously treated. There are five different versions, as follows: (1) The fate of Werzelyā is not stated. It is not expressly mentioned that she dies; and she does not promise 'not to go where his name is found.' This form is incomplete. (2) Werzelya is not killed by the stroke, and presumably continues to live; but she promises not to harm any one who stands under the protection of the name of Sūsneyōs. The exorcism by the seven archangels is uttered by Werzelyā with the result of saving her life. This form is the commonest, and doubtless the original one. Werzelyā is an ever-living semi-human personality, which continues to harm such as are not protected by the name of the hero who vanquished her. The exorcism has a purpose in the narrative. (3) The demoness dies, and is consequently no more able to harm. The exorcism has no effect or purpose. She makes no promise to refrain from evil; but in death she is once for all disposed of. As in the foregoing form, she is not a ghost but a demoniac human being. This form cannot be original, because Werzelyā must be accounted for as an ever-present agency. (4) Werzelyā dies, but promises nevertheless not to assail the protégés of the hero. Here it is the ghost of the slain woman that continues to harm, unless prevented by the charm. But this form may be merely a mixture of (2) and (3), and in any case leaves the exorcism without purpose. (5) It is Sūsneyos, and not Werzelyā, who pronounces the exorcism, and for the purpose of saving his life (?)—a possible but very unlikely version, which leaves the question of Werzelyā's fate unsettled.

This legend is a combination of a pagan superstition and the story of a Christian martyr. Of the night-hag who kills little children more will be said below; the idea is found everywhere. The name Werzelyā has not been satisfactorily explained. It has been connected with Hebrew בְּרוּלַי, בָּרוּל (O. von Lemm, *Kopt. Miscellen*, St. Petersburg, 1907); and thought to be of Cushitic African origin (Littmann, 'The Princeton Ethiopic Magic Scroll,' *Princeton Univ. Bulletin*, xv. 1, 1903, pp. 31-42). It is found in Coptic texts (cf. the *Hymn to Sousennios*, in which the name *Berzelia* occurs [von Lemm, *op. cit.*]; also Crum, *Catal. of the Coptic MSS in the British Museum*, 1905, p. 253, no. 524). There is probably no connexion with Ursula, as is maintained by Fries ('The Ethiopic Legend of Socinius and Ursula,' *Actes du huitième Congrès Intern. d. Orient.*, sec. i. B, Leyden, 1893, pp. 55-70); but the matter has not yet been definitely settled (see Littman, *op. cit.*; and especially Basset, *Les Apocryphes éthiopiens*, iv., Paris, 1894). Of the identity of Sūsneyos with the Greek Sisinnios there can be no doubt. There were several persons of that name in the 5th century. The original was the martyr who lived in the reign of Diocletian (Basset, *op. cit.* p. 10 f.), and who in Antioch killed his sister for murder and intercourse with Satan. Only in one of the MSS used by Fries (*op. cit.*) is this sister named Werzelyā. It is easy to see how a saint, famous for his slaying of a monstrous woman, might become the slayer of the dreaded night-hag. In the Slavic legends we have a story of Sisoe and his sister Meletia (Gaster, *FL* xi., 1900, 129-162)[1] similar to that of Susneyos and Werzelya. According to Basset (*op. cit.*), the successor of Mani, the Manichæan Sisinnios, is the real opponent of the night-hag, and the confusion with the martyr is later. We know that Babylonian, and therefore probably Manichæan, beliefs were

[1] Rochus (Roqō)—once mentioned, died 16th Aug. 1327, and was canonized in 1414 at the Council of Constance. The name came to Abyssinia probably through the Portuguese.

[1] Meletia is the *sister* of Sisoe and the *mother of children* who at birth are *stolen* by the *Devil*; not the *demoness* who *kills* the *one* (*firstborn*) *child* of the *saint and his wife* (unnamed). The search of the mounted saint, the meeting, the prayer, are all represented. The evil spirit promises not to approach the place where his name is found. There is no oath by the archangels. The Devil is made to vomit up the swallowed children by the saint who, after prayer, is able to perform the miracle demanded, and vomit up his mother's milk. This last feature, and the questioning of the trees on the road (instead of the old woman) are characteristic of the Slavic and the Greek legends (see below). The story of a demoness Vestitza, who kills newborn children, and who is overcome by the archangel Michael, is also reported by Gaster (*op. cit.*).

full of the idea of this female demon; but the notion is one widely diffused and possibly of independent origin.[1]

Greek amulets have the same *motif*, and even the name Sisinnios. One example (Leo Allatius, *De templis Græcorum recentioribus*, Cologne, 1645, p. 126 ff.) contains the account of how the saints Σισύνιος and Συνίδωρος, in behalf of their stricken sister Μελιτήνη and with the help of God, pursue with many adventures the demoness Γυλοῦ, the harmer of little children. After her capture she promises under punishment not to come near those possessing the amulet. Γυλοῦ, Γελοῦ, Γελλώ, Γιλλώ is the Jewish Lilith, the Babylonian *Lilītu*, echoing still the Bab. name *Gallū* (cf. Kohut, 'Jüdische Angelologie,' in *Abhandlungen für die Kunde des Morgenlandes*, iv. [1866] 87; and C. Frank, 'Zu babylonischen Beschwörungstexten,' in *ZA* xxiv. 161 ff.), and has here the rôle of Werzelyā. Similar is the story of the meeting of Michael and Βασκανία (-οσύνη, 'witchcraft'; *e.g.* Reitzenstein, *Poimandres*, Leipzig, 1904, p. 295 ff.), where the place of Sisinnios is taken by the archangel. This Hellenistic *motif* of the saint who slays the *Baskania* found, possibly in Egypt, definite employment in a literary legend-amulet of *Sousennios* and *Berzēlia* (cf. von Lemm, *loc. cit.*) for the use of women in childbed. This may have come to Abyssinia in the 14th or 15th century. It came also into other lands (cf. Mai, *Script. Vet. Nova Collectio*, Rome, 1821, iv. 314, MS clxxiv. 5 and 69, where an Arabic MS from Aleppo is mentioned containing the Sisinnios legend with exorcism).

(*b*) *The Legend of the Fish-net of Solomon* is of frequent occurrence. It begins with the formula: 'The names of Salōmōn: how he scattered the demons as a fish-net (is thrown out), saying . . . [here follow magical words].' The narrative follows of how the demons seize Solomon and bury him, and bring him before the 'king' (*i.e.* of the demons; see below), who challenges him to a contest of power. Solomon proves victor over the 'blacksmiths' (*i.e.* demons; see below), who attack him, by uttering the word 'Lōfḥam.' The 'king' is then constrained to reveal all his 'signs' by which his activity may be known, *e.g.* miscarriage, madness, death (especially of women and children), and secret commerce with women followed by the birth of monstrous children. Of these latter a long list is given, consisting of the names of domestic animals and, in some MSS, of wild animals. Solomon curses the demon and exorcizes him again. At the close there is a prayer:

'I seal my face (with the sign of the Cross) against the great terror of the demons and blacksmiths. . . . I take refuge in "Lōfḥam," thy (magic) name . . . that I may scatter my enemies, and become their enemy . . . (names of demons) . . . that they may not come to me, and not approach my soul and my body, who am Thy servant N. N.'

It is impossible to restore the precise form of this story, as it is badly confused and fragmentary.

(*c*) *The Legend of 'Āinat* relates how Jesus and His disciples at the Sea of Tiberias meet with an old woman of terrible appearance, having a flame issuing from her mouth, and eyes as red as the rising sun. When questioned about her, Jesus says that she is 'Āinat, and describes the evils which she causes—shipwreck, falling of rider and horse, the ruining of milch cows, and the separation of mother and child—and pronounces two magic words which render her powerless. The disciples burn her (or her eye), and scatter her ashes to the four winds of heaven. At the close is the petition: 'May her memory be destroyed, and may the memory of 'Āinat be destroyed from Thine handmaid N. N.'

The name 'Āinat is connected with *'ain*, 'the evil eye'; the presumption of an Arabic origin or mediation is confirmed by the title: 'The prayer of Nad(a)rā' (=Egyptian-Arab. *an-Naḍrah*, or classical Arab. *an-Naẓrah*, 'the evil eye'). The Arabic original from which the Abyssinian version was prepared is perhaps represented by the legend, agreeing in almost every detail, which is described in the *Catalogue of the Coptic MSS in the John Rylands Library, Manchester*, ed. by W. E. Crum, 1909, p. 238 f., no. 467 E. Like Werzelyā, 'Āinat is a native demoniac figure, given a foreign name and story.

(*d*) *Other legends* are found in the bound magical works, and in the scrolls buried with the dead (see above); such are the accounts of how Mary revealed the secret names of Christ (*Tell Me Thy Name; The Names of Our Lord; The Disciples*), the *Prayer of the Virgin among the Parthians, at Golgotha, in Egypt*, and the *Prayer of Cyprian*, which seem to have been written in the reign of the famous reformer and opponent of magic, Zar'a Ya'qōb (1434–1468). All these legends are of Christian literary origin, and closely related to the miracle stories, out of which, in the process of degeneration, they have gradually emerged as magical literature—the Christian dress of an unconquerable pagan tendency.

(*e*) *Shorter and simpler spells*, standing midway between the literary legends and the mere words of power, occur in large numbers. A few typical examples are the following:

(*α*) Biblical in origin are, *e.g.*, Ps 1^{1-3} (because of the occurrence of 'wither': there follows the application 'thus may not wither the fruit of the womb of thine handmaid, N. N.'), Ps 91 (Septuagint 90). Because of the catalogue of evils, and the promise of God's protection, this is much used, and furnishes many expressions found elsewhere. The following are employed because they contain the word 'blood,' the application being that the quotation will save the person concerned (from bloodshed [?] or) from barrenness (the continued menstruation, or the hemorrhage of disease, are both spoken of as the failure of the child to 'solidify'): Ps 5^6 9^{12} 16^4 30^9 50^{13} 51^{14} 58^{10} 68^{23} 78^{44} 79^3 139^{19} (often so much modified as not to be easily recognized), Dt 32^{42}, Ro 3^{15} (cf. Is 59^7, Pr 1^{16}). Also, to aid conception: Jn 1^{14} ('And the Word became flesh' . . .), Mk $5^{25ff.}$ (the woman with an issue of blood). Jn $1^{5ff.}$ is used to ward off demons ('apprehended,' κατέλαβεν, is rendered by Eth. *yĕrakĕb*, which means 'came upon' or 'attacked'; the prayer follows: 'May the demons not attack . . .'). There are exorcisms by the Twenty-four Elders (Rev 4^4), the Four Beasts (4^6), the Twelve Apostles, the four Evangelists, and the Fifteen Prophets; and, though extra-Biblical in this connexion, the Three Hundred and Eighteen Orthodox (who gathered at Nicæa).[1]

(*β*) Muslim and Arabic in origin is, *e.g.*: *Lā ḥawla walā quwwata illā billāhi l-'aliyi l-karīm* ('There is no Power and no Might except with God the Exalted, the Glorious!'), which appears in Ethiopic translation, not in phonetic imitation, like those given below.

(*γ*) Miscellaneous.—The formula, 'In the Name of the Father, and of the Son, and of the Holy Ghost,' is used as a spell by itself; and is regularly employed in introducing each new division of text (called *ṣalōt*='prayer'). It may sometimes, though certainly not always, be used merely as a common Christian formula, and without other intention. Remarkable, and characteristic of Abyssinia, are the hymns called *salāms*. They are well known in legitimate literature, and seem to appear in amulets partly as borrowed lore of the Church, possessing for that reason magical efficacy, partly as modified or newly invented hymns, with a magical purpose in view from the first. They begin with the words *salām laka*, 'Hail to thee . . .!' and celebrate some saint, or angel, or deed of valour. Such are, *e.g.*, the hymn to the archangel *Rūfā'ēl*, the 'opener of the womb'; to *Fānū'ēl* (Heb. פְּנוּאֵל='Face of God'; the meaning is remembered by the Abyssinians), who drives away the demons from before the face of God, where they assemble to accuse mankind of his evil deeds (cf. Satan in the prologue of the Book of Job), and who drives away the demons upon earth. He is the Angel of Forgiveness. This hymn is very common, and varies greatly in length and in the order of the verses. It contains a reference which indicates that it was composed for magical purposes. The hymn to the *Lance of Langinōs* is used against the disease called *weg'at* ('stitch in the side'), from the circumstance that the word *wag'ō* (='pierced it') occurs. The idea is found elsewhere; see, *e.g.*, Cockayne, *Leechdoms, Wort-cunning, and Starcraft of Early England*, London, 1864–6, pp. I, 393, where a spell against stitch is given: 'Longinus miles lancea ponxit dominum et restitit sanguis et recessit dolor.' There are many exorcisms composed of the names of demons and their qualities and evil works, as in Bab. ritual texts; and of the epithets and attributes of God and of the Cross.

(*f*) *Magical formulæ, or words of power*, fill a

[1] Gaster (*op. cit.*) gives parallels, from Hebrew sources, of the Sūsneyōs-Werzelyā type, which he regards as the ancestors of the Slavic legends. We incline to the opinion that the Greek-Slavic legends of Europe are not derived from the Greek-Coptic legends of Africa (the postulated ancestors of the present Abyssinian stories), but that both are separate developments of the Hellenistic *motif*, ultimately Heb.-Bab. (cf. the contest of Marduk-Bel with Tiamat and her demons). At present, however, nothing definite can be said about it.

[1] Gaster (*op. cit.* p. 142) has: '360 holy fathers of the Council of Nicæa.' The theoretical Babylonian year has 360 days, on 318 of which the moon would be visible to the average eye (cf. Winckler, *Geschichte Israels*, 1900, ii. 27, regarding the Eliezer Gematria [318] of Gn 14^{14} 15^2). The remarkable and hardly casual number of persons (317+1) who went from Mitanni to Egypt in connexion with the marriage of Kirgipa (Gilukhipa) and Amenhotep III. (see Breasted, *Ancient Records*, London, 1906, ii. 347 f.; Winckler, *Tell-el-Amarna Letters*, Berlin, 1896, 16. 5; 41. 42) has never been noticed in this connexion; nor the traditional year of the appearance of the heresies of Arius (318). For this symbolic number in Christian writers, see the reference in *HDB* iii. 567; *PRE*, *s.v.* 'Zahlen.'

large rôle in the texts. They are meaningless in themselves, except to the initiated. Many are invented apparently on the spur of the moment by the writer of the scroll; others seem to be passed along with more or less accuracy, though in themselves unintelligible. A large number, however, can be traced to a definite source. Foreign words and proper words, because unintelligible, or by reason of some association, are taken over, and then modified by omission, or addition, or the reversal of the consonants. More frequently the writer pretends to know the meaning of the words, and translates incorrectly. While despising each other, Muslims and Christians borrow phonetically the formulæ used in the strange religion—a phenomenon well known to anthropologists.

E.g. ARABIC: *Bismi 'l-lāhi 'r-raḥmāni 'r-raḥīm*, 'In the Name of God, the Compassionate, the Merciful'; reminiscences or fragments of *Sūra* cxii. of the Qur'ān . . . *lam yalid walam yulad* . . . 'He begetteth not, neither is He begotten'; *A'ūdhu billāhi mina 'sh-Shaiṭāni 'r-Ragīm*, 'I take refuge with God from Satan the accursed' (*Sūra* xvi. 100); *Fayakun*, 'So let there be' (the mighty word by which the world was created); *Yā rasūla 'l-lah*, 'O Apostle of God'; and many other Arabic words and expressions.

HEBREW are: *Eh'yē asher eh'yē*, 'I am that I am' (Ex 3^{14}; cf. Goldziher, in *ZA* xxi. 244, and xx. 412); *Elshaddai*, *Ṣ'bā'ōth*, *Adōnai*, *Yahwē*, *Elōhīm*,—names of God; *Bersābeḥelyōs*, *Bersābeḥel*, the greatest of the names of Christ (perhaps with Littmann [*Gesch. der äthiop. Litteratur*, Leipzig, 1907, p. 238] = *Be'ērsheba'*, 'Beersheba,' with the magic ending *-ēl* and the Gr. ending *-ōs*); *Lōfḥam*, and the reverse, *Meḥafelōn* (the mighty word used by Solomon, and suggesting the etymology מְחַבֵּל, 'destructive'); *Salōmōn* in its Greek form, and the reversed and modified forms: *Mēlōs*, *Mēlyōs*, *Malīs*, *Malulīs*, *Lās*, *Malalyōs*, *Milalyōs*, *Mōlīs*, *Lamelōs*, *Nemlōs*, *Neblōs*.

GREEK are: *Theos* (*Tā'ōs*); *Messias* (*Māsyās*); *Pneuma* (*Ebnōbyā*); *Alfā* (Rev 1^8 21^6 22^{13}; cf. Ludolff, *Hist. Aethiop.*, Frankfort, 1681, *Commentarius*, 1691, p. 359); *Beta Iōta* (*Bōṭā Yōṭa*; perhaps for βασιλεὺς τῶν Ἰουδαίων, Mt 27^{37}); *Elōi, Elōi, lama sabachthanei* (Mk 15^{34}. These Aramaic words in Greek letters are distorted variously in the Abyssinian magical texts, but are accurately transliterated in the Ethiopic NT. The magician adds learnedly: '. . . which, in its interpretation, is: "God, my God, see me and hear me! Lord, my God, see me and hear me!"').

LATIN is found in *Antiquus* (*Antīkōs*); and in the famous SATOR formula,[1] which appears with some variations, *e.g.*:

Sadōr	*Aladōr*	*Danāt*	*Adērā*	*Rōdās*
Sādar	*Aladar*	*Danāt*	..	*Rōdas*
Sādōr	*Arodā*	*Dānād*	*Adērā*	*Rōdas*

(Ludolff, *op. cit.* p. 351, where they are called 'the five wounds of Christ').

In this word-magic the Christian elements are prominent. The unintelligible words may conceal pagan African elements unknown to us. There is little to suggest the Gnostic magical literature (*e.g.* the seven vowels αεηιουω), though the repetition of monosyllables is common.

(*g*) *The wizards and demons of the texts* are partly literary Christian and partly popular in origin. The Septuagint and the New Testament often furnish the starting-point not only for the terminology, but even for the underlying ideas. Ps 91 has been alluded to (see above). Whatever may have been the teaching of the first missionaries to Abyssinia, the magical texts clearly show how the demonological passages in the Gospels were understood. The following is a brief outline of the kinds of wizards and demons, with examples:

i. Wonder-workers of olden time: *Salōmōn*, *Esk̄eder* or *Askater* (Alexander), *Qōpreyānōs* (Cyprian).

ii. Wizards of various origin, called 'kings'; witches capable of assuming animal form. Such are: *Nakabī*, *Ṭabīb* (smith); *'Aqabē šerai* (medicine man); *Būda*, *Zar* (demoniac forms assumed by smiths); *'Ainawarq* (= *Būda* ?); *Nobā*, who leads the dust-demons (whirlwind [?]); *Qumaña* (wizard); and others.

iii. Demons proper, for whom there are many general terms: *Ganēn*, *Saiṭan*, *Ṣalim* (black), *Ṭekūr* (black), *Qayyeḥ* (red), *Akmosis* (laughing [?]), *Qatalai* (killing), *Mel'at* (for *Methat*: phantasm), *Aguer'e* (speaking badly, or in frenzy [?]), *Algūm* (not answering).—(1) Demons with individual names, not causing specific diseases; (*a*) Biblical: *Diyablos*, *Saiṭan*, *Mastema* (cf. Book of Jubilees, where it is a name of Satan), *Demon of Noonday* (Ps 91^{6b}), *Unforeseen Evil* (Ps 91^{6a}), *Legewon* (Lk 8^{26-33}. The titles in the Eth. NT show the beginnings of this). (*β*) Non-Biblical: These are very numerous; among others *Werzelyā* (see above), *Be'ānāt* (= *Werzelyā* [?]. The word is probably from vulgar Arabic: **Bō'ōne*, بوونة [classicized بؤونة], an attempt to write Coptic *Boone*, which means *Invida*), *'Ainat* (see above). *Dabbas*, *Dask*, and *Ṭafant* are popular names of demons. (2) Classes of demons bearing a collective name: (*a*) Diseases: *e.g.* modern vernacular words for *Pest*, *Epilepsy*, *Headache*, *Sharp Pains*, *Stitch*, *Consumption*, *Diphtheria* (?), *Oppression of the heart*, *Stomach worms*, *Colic*, *Fever*, *Rheumatism*, *Insanity*, *Malaria*, *Miscarriage*, *Pneumonia* (?), and *Kidney disease* (?). The identification is often uncertain. The disease is identical with the demon.—(*β*) Elements: *Air*, *River*, *Dust*, and *Ocean*.—(*γ*) Localities designated by a tribal or ethnic name: *Barya*, *Felašā* (also *'Esrā'ēl*), *Gallā*, *Manšō*, and many others.

LITERATURE.—In addition to that given in the text of the article: W. H. Worrell, 'Studien zum abessin. Zauberwesen,' in *ZA* xxiii. [1909] 149 ff., xxiv. 59 ff. [to be completed in following numbers]; E. Littmann, art. ABYSSINIA in present work, also 'Arde'et, the Magic Book of the Disciples,' in *JAOS* xxv. [1904] 1; N. Rhodokanakis, 'Eine äthiop. Zauberrolle im Museum der Stadt Wells,' in *WZKM* xviii. 3 ff.; B. Turayeff, art. 'Ethiopic Magic Prayers,' in Chwolson's *Festschrift*, Berlin, 1899 [Ethiopic and Russian]. Ignazio Guidi, *Vocabolario Amarico-Italiano*, Rome, 1901, contains many names of demons and diseases. A facsimile of an Ethiopic amulet, with description, will be found in F. T. Elworthy, *The Evil Eye*, London, 1895, pp. 390–4.

W. H. WORRELL.

CHARMS AND AMULETS (American).

—While charms and amulets are diffused among all the aborigines of the New World, a systematic consideration of them is beset with serious difficulties. To classify them by external features, such as shape or construction, would be manifestly artificial; but it is hardly better to group them on the basis of function. While some charms are doubtless invested with specific virtues, many serve the most diverse purposes at the same time. The most profitable method of approach will be to pass from one culture area to another, and to correlate, wherever possible, the superstitions attached to the use of the charms with the fundamental religious conceptions of their owners.

1. Eskimos.—Beginning in the north, we find among the Eskimos a variety of usages centring in the world-wide belief in sympathetic and imitative magic. The 'Polar' Eskimo near Cape York, Greenland, carries with him his *arnuaq*, which is supposed to confer certain qualities and to guard against danger. Hawks being the surest slayers of their prey, parents sew the head or feet of a hawk into a boy's clothes in order to make him a great hunter. Because the black guillemot is clever in catching cod, men wear its foot to become great slayers of *their* quarry—whales or narwhals. To endow children with the strength of a bear, parents sew into the boys' caps the skin from the roof of a bear's mouth. Similarly, a piece of a fox's head, or of old dried fox-dung, is sewed into a person's clothes to impart the fox's cunning. While fire is considered very powerful, an old hearth-stone is regarded as still stronger, because it has withstood the fire; accordingly, bits of hearth-stones are sewed to clothing to secure long life and fortitude for the wearer. The women of this division of the Eskimos rarely use amulets, but when they do, the same conceptions appear. The kittiwake lays very small eggs; accordingly, a girl having a kittiwake head sewed into her clothes will not give birth to large children. In all the cases cited, care must be taken that the animals have not been killed by men; the bear-charm, for example, is made when an old bear-cranium has been found.[1] The Greenlanders

[1] SATOR
AREPO
TENET
OPERA
ROTAS

This palindrome, well known in European folk-lore, seems to have originated in the early Middle Ages. It may have reached Abyssinia through the Portuguese; but the form *Arōda*, found in Coptic texts, makes the mediation of Egypt probable. The place of its origin is, we believe, unknown. See R. Köhler, *Kleinere Schriften*, Berlin, 1900, iii. 564 ff., and literature cited.

[1] Rasmussen, *The People of the Polar North* (London, 1908), p. 138 f.

farther south also formerly employed a multitude of amulets. A piece of a European's clothing or shoe was believed to instil European skill. In other cases the psychology of the practice is less clear. Pieces of old wood or stone, beaks and claws of birds, leather bands for the forehead, chest, or arms, were all worn as a protection against spirits, disease, and death; they were considered especially effective in preventing the departure of children's souls during a thunderstorm. Whalers attached a fox's head to the front of their boat, while the harpoon was furnished with an eagle's beak. To prevent a kayak from capsizing, a small model kayak with an armed mannikin was attached to the boat, this model being sometimes replaced by a dead sparrow or snipe, a piece of wood, or other small objects.[1] The navel-string was considered an effective amulet for restoring a child to health and promoting longevity.[2]

Like their eastern kinsmen, the Hudson Bay Eskimos sew pieces of skin or cloth on their under garments to avert disease. The tip of a caribou's tail sewed to the coat ensures good luck in caribou hunting, and many boys use this charm in order to become good hunters. The hair of a successful hunter is sought for the same purpose, so that a native woman begged of Captain Comer a lock of hair from each of his temples for her boy, in order that he might get an abundance of game in later years. Strips of caribou skin put round little girls' wrists will make them skilful in cutting and sewing skins. Shirts are sometimes equipped with such charms, and bears' teeth on a boy's shirt, secured by Captain Comer, are believed to make the wearer fearless of bears, while a seal's teeth will ensure success in sealing. A piece of whale skin prevents the boy's kayak from capsizing, and rabbit ears enable him to approach caribou unseen. A wolf's lip will make him howl like a wolf; this will cause the caribou to run into the ponds, where they can be easily captured from the kayak. A seal's nose on the front of the jacket will entice the seal towards the wearer. A woman who wishes her child to have a white skin sews a white stone to its clothing. Bugs and bees, when similarly attached, are supposed to prolong life; a piece of flint sewed in the sleeve strengthens the arms and hands. Oil drippings are highly valued as amulets against supernatural enemies and as hunting charms. Accordingly, the drippings from lamps are placed around the edges of walrus holes in order to make the walrus return to these holes, and suction of a gull's feather dipped in oil drippings, followed by expectoration into the holes, is supposed to keep from the walrus the knowledge of the hunter's approach. Common to the Central and Smith Sound Eskimos is the belief in artificial monsters endowed with life in order to effect the destruction of their maker's enemies. These *tupilak* are driven away by the protective qualities of oil and lampblack, as well as by magical whips formed of the skin of a male wolf or the bone of a bear, the latter being used particularly for the protection of children. An interesting amulet of quite different character is used to drive away thunder: the skin of a stillborn seal is made into a jacket, which must be taken off and struck against the ground when thunder is heard.[3]

Essentially related conceptions appear among the Alaskan Eskimos, of whom the natives of Point Barrow may be selected for consideration. Rudely flaked flint representations of whales are extremely common amulets in this area; they give good luck in whaling, and are suspended round the neck by a string, or worn on the breast of the jacket. In deer hunting, reliance is placed on the unbranched antler of the reindeer. Personal amulets include bunches of bear or wolverine claws, or the metacarpal bones of the wolf. Possibly corresponding to the use of an eagle's beak on the Greenlander's whaling harpoon is the attachment of a tern's bill to the seal-spear of the Alaskans; Murdoch suggests that the underlying motive is the attempt to give to the spear the surety of a tern's aim. Objects acquire special value through contact with certain persons or supernatural beings. Heavy stone objects, sometimes weighing over two pounds, thus come to be carried about as amulets, and the consecration of ancient implements in this way seems to have done much for the preservation of old specimens of Alaskan material culture.[1]

2. Eastern Indians.—Underlying most of Indian belief is the conception of what the Algonquins call *manitou*, the Sioux, *wakan*. If the Indian experiences an emotional thrill at the sight or sound of an object, this object becomes invested for him with a sacred character—it is recognized as *manitou*.[2] The relation of the native to the object in a given case is determined by specifically tribal conceptions, or even by individual experiences in visions or dreams. It cannot be doubted that a great number of charms and amulets in North America must be conceived as special cases of the basic *manitou* principle. This appears with great clearness in early accounts of the eastern Indians. The Hurons, we are informed in the *Jesuit Relation* of 1647–48, regarded everything that seemed unnatural or extraordinary as *oky*, i.e. as possessing supernatural virtues. Such objects were kept for good luck. If a Huron had had difficulty in killing a bear or stag, and, after slaying the animal, found a stone or snake in its entrails, the thing found was conceived as the *oky* that endowed the creature with more than ordinary strength, and was henceforth worn as a charm. If, while digging near a tree, a Huron discovered a peculiar stone, he believed that it had been forgotten there by certain demons and called it an *aaskouandy*. Such objects were supposed to change their shape, a stone or snake turning into a bean, a grain of corn, or the talons of an eagle. The owner would become lucky in the chase, in fishing, in trade, and in playing. Dreams decided the particular sphere of the charm's usefulness. Still more powerful were the *onniont*, which were believed to be derived from a sort of serpent that pierced everything in its way —trees, bears, and rocks. On account of their peculiar virtues, they were distinguished as 'genuine *oky*,' and the Hurons were willing to pay the Algonquins exorbitant prices for infinitesimal fragments of *onniont*.[3] This last case is especially instructive as illustrating the complexity of the psychological processes that must often be assumed to account for the use of a given charm. As the Hurons are said to have obtained all their *onniont* from the Algonquins, their use of it is not directly due to mystic experiences, but to the processes underlying imitation and borrowing. That the Algonquins themselves did not venerate the *onniont*, *because* they were supposed to be derived from the serpent, is quite clear in the light of modern research into the relation of myth and observance. It is fairly probable that the ultimate reason for the use of *onniont* as charms by the Algonquins is identical with that which prompted

the Hurons to look upon certain finds as *oky*. Nevertheless we must not shut our eyes to the possibility of another origin. Predominant as was the concept of *manitou* among the Algonquins, the less mystical notions described in connexion with the Eskimos are not lacking. Le Jeune tells of the Montagnais wearing at the bottom of their garments ornaments of bears' claws in order to preclude injury from bears, and to be enabled to kill these animals with greater ease.[1] The unconscious reasoning processes connected with the belief in sympathetic and imitative magic must thus be kept in mind as possible alternatives in the explanation of the application of charms where detailed information is lacking.

The mystic thrill characteristic of a *manitou* experience is often actively sought by means of fasts intended to induce visions, and many amulets, whatever may have been their ultimate origin, are believed to be the direct outcome of the supernatural communications thus received. Thus, if the being which appears to the dreamer is an animal, the skin of the animal may henceforward be carried about as a bringer of good luck; or the visitant may give specific instructions as to the use of certain objects as charms. The foregoing considerations will facilitate some insight into the psychology of many Indian charms, though undoubtedly much must still remain obscure.

To resume our geographical survey: the Algonquin Montagnais, according to Le Jeune's *Relation*, had a number of amulets of rather problematic function. A shaman gave a woman a pattern of a little sack cut in the form of a leg, which she used to make one of leather filled with beaver hair. It was called 'the leg of the *manitou*,' and was hung in the cabin for a long time. Afterwards it passed into the hands of a young man, who wore it suspended from his neck. In the same tribe the slayer of a bear received the 'heart-bone' of the animal, which he carried about his neck in a little embroidered purse.[2] The Hurons, beside the charms already mentioned in connexion with the *manitou* concept, had charms composed of bear claws, wolf teeth, eagle talons, stones, and dry sinews, all of which were thrown by dancers at one another. The person falling under the charm was supposed to be wounded, and blood poured out of his mouth and nostrils.[3] The Iroquois, according to oral communications of Alanson Skinner, still carry about their persons miniature canoes as a safeguard against drowning; and this amulet is used especially by people who have had dreams of drowning. Small clubs were similarly used as war-charms. Small wooden masks ('false faces') are carried about by both sexes, but particularly by pregnant women; small husk-masks are carried about for good luck. Witches and sorcerers often had dolls carved of wood and antler, and sometimes had roots covered with tiny carved faces, which were supposed to impart the power of changing at will from human to animal form. Clay pipes with such faces have been found on ancient Iroquois sites, and may have served the same use. People who have seen the mythical dwarf stone-rollers carve tiny images of these people and keep them as charms. A peculiar love-charm occurring among the western Cree was described to the present writer while he was passing through the territory of this tribe. The lover makes a small effigy both of himself and of the woman he loves, and wraps them up together with some medicinal roots. After a few days the woman thus charmed surrenders herself to the charmer.

In the south-east of the United States the overshadowing importance of incantation did not eliminate the use of material charms. Among the Yuchi a small whitish root is carried in a bag to keep away sickness. To the neck of a child there is attached an insect larva sewed tightly in a buckskin covering, decorated on one side with beadwork. The amulet symbolizes a turtle, of which the hind legs and tail are represented by little loops of beads. Its special function is to bring sleep to the wearer, through the use and representation of two creatures that spend much of their life in a dormant condition. Children were shielded from harm by some small white bones wrapped up in buckskin and tied to their necks or hammocks, and such bones also prevented children from crying in the night. Men wore small objects obscurely related to the events in their career, 'in the belief that the things would prove effectual in protecting and guiding them in some way.' War parties of the Creek carried with them bundles of magic herbs and charms. One of the latter was supposed to consist of parts of the horns of a mythical snake that was captured and killed by the people after long-continued suffering from its attacks. These horns were believed to impart immunity from wounds.[1]

3. Plains Indians.—Among the warlike aborigines inhabiting the Plains, charms were naturally often associated with martial pursuits. The buffalo-hide shields regularly carried in battle were supposed to owe their efficacy to the medicine objects attached to them or to the designs painted on their outside rather than to their natural properties. The Dakota Sioux were particularly fond of protective shield designs representing supernatural powers. In many of these cases there was a mixture of two motives: on the one hand, the design derived its supernatural power solely from its revelation in a dream or vision, but at the same time there was a symbolical representation of the power desired, which recalls the phenomena of imitative magic. Thus, spiders, lizards, and turtles are frequently represented on war garments, because they are hard to kill, and it was supposed that this property would be transferred to the wearer. In addition to the painted design, a shield might bear a braid of sweetgrass and a buckskin bag with charms. Before going into battle, the Sioux burnt some of the sweetgrass and chanted songs pertaining to the shield.[2] Among the Assiniboine, war charms were exceedingly common. They were prepared by shamans from ingredients supplied by the prospective wearer, who was also informed in advance of future happenings in battle. One man used the dried and fleshed skin of a bluebird with jackrabbit ears sewed to its neck, the whole attached to a piece of raw hide painted red. Another warrior might employ a bird skin, a weasel skin, a bonnet of weasel-skin, and a square piece of buffalo hide; still another, a large knife with a bear-bone handle to which were tied little bells and a feather.[3] The Gros Ventre often carried their sacred war paraphernalia in cylindrical raw hide cases. One specimen was painted with designs in colour representing the bird dreamt of by the original owner. The case contained a bag, and in the bag there was a necklace with 'medicine' roots. There were also skins worn at the back of the head to prevent injury, and a bone whistle was blown for the same purpose. If the Gros Ventre dreamt of a man battling successfully

while wearing the skin of some animal, the same kind of skin was adopted by the dreamer. For a corresponding reason an Assiniboine once wore a fool-dance costume before entering a fight.[1] Among the Arapaho amulets collected by Kroeber there is a bracelet of badger-skin with a gopher skin, an owl claw, some bells, feathers, seeds, and skin fringes. The badger skin is believed to increase the speed of the rider's horse; the claw helps to seize an enemy; the motion of the feathers drives away the enemy; and the bells represent the noise of the fight. A scaly turtle tail or fish back mounted on stuffed buckskin was worn on the head—the feathers for speed, the hard scales to cause invulnerability.[2] When an Hidatsa went to war, he always wore the strip off the back of a wolf skin, with the tail hanging down the shoulders. A slit was made in the skin, through which the warrior put his head, so that the wolf's head hung down upon his breast. The head, claws, stuffed skin, or some other representative of his medicine was carried about the person as a protective charm.[3]

While war-charms are thus seen to have been extremely important among the Plains Indians, daily life was also attended with the use of numerous charms. The wide diffusion of navel amulets bears testimony to this fact. Among the Arapaho, the navel-strings of girls are preserved and sewed into small pouches stuffed with grass. These are usually diamond-shaped and embellished with beadwork, and the girl keeps this amulet on her belt until it is worn out. The Sioux often make navel charms in the form of turtles, the turtle being supposed to preside over the diseases peculiar to women. Similar charms occur among the Assiniboine.[4] An elderly Arapaho woman kept a number of pebbles tied up in a bag. Some of them were pointed, others relatively round, the former representing the canine teeth, and the latter the molars. 'The stones, being loose, represent the possessor's wish to reach that period of life.' Three other stones were kept on account of their resemblance to a turtle, a bird, and a skunk, respectively. The turtle stone was said to have been procured from inside a horse's body, and was placed on the abdomen as a cure for diarrhœa. The skunk stone was held in the hand by sick people while sleeping; similarly the bird amulet was placed at the head of the sick. Two curious natural stones were painted red and treasured by the owner in a bag of incense. At the sun-dance, they were exposed and deposited near incense. They were called 'centipedes.' Much of the belief in amulets among the Arapaho seems to centre in sympathetic and imitative magic. Beans of different colours are used to produce colts of certain colours; a smooth and slippery shell aids in delivery; 'beads in the shape of a spider web render the wearer, like the web, impervious to missiles, and at the same time ensure the trapping of the enemy, as insects in a web.'[5] The symbolism so characteristic of Plains tribes is illustrated by a curious charm worn among the Caddo in the southern part of the Prairie area. It consisted of the polished tip of a buffalo horn, surrounded by a circle of downy red feathers within another circle of badger and owl claws. The owner regarded the charm as the source of his prophetic inspiration. The buffalo horn was 'God's heart,' the red feathers contained his own heart, and the circle of claws symbolized the world.[1]

As perhaps the most typical of hunting charms in this area may be mentioned the Blackfoot *iniskim*, or buffalo rocks. These were usually small ammonites, or sections of baculites, or sometimes oddly shaped flint nodules. They were found on the prairie, and the person who secured one was considered very fortunate. Sometimes a man riding along heard a strange chirp, which made known to him the presence of a buffalo rock. Searching for it on the ground, he would try to discover it. If he failed, he would mark the place and return the next day to resume his quest. The tribal hunt of the buffalo had for its object the driving of the game into an enclosure. On the evening of the day preceding a drive into the corral, a medicine-man possessing an *iniskim* unrolled his pipe and prayed to the Sun for success. The origin of these charms is traced to a mythological period of starvation when a woman encountered a singing buffalo rock, which instructed her to take it home and teach the people its song. As a result of her compliance with these instructions, a great herd of buffalo came, and the Indians were saved.[2] Several years ago an old Blackfoot of Gleichen, Alberta, unwrapped a bundle for the present writer, disclosing some small stones which he described as *iniskim*. Whenever he was in need of food in the olden days, he explained, he used his *iniskim*, and in consequence never went hungry.

4. Mackenzie and Plateau Areas; California.—Among the Northern Athapascans of the Mackenzie River basin the simplicity of ceremonial life throws into relief the customs attached to everyday pursuits, such as hunting and fishing. The Dogribs carry bunches of antler points while hunting game, because they believe this will aid the wearer in luring deer or moose within range of his rifle, and the same power is ascribed to a piece of birch or a deer's scapula.[3] The Chippewayan women cut off a small piece of the newborn child's navel-string and hang it about their necks, presumably for a charm.[4] Fishing nets always had fastened to them a number of birds' bills and feet, while at the four corners the Chippewayan tied some otter and jackfish toes and jaws. Unless these objects were attached, it was deemed useless to put the net into the water, as it would not catch a single fish. In angling, similar superstitions were observed. The bait used consisted of a combination of charms enclosed within a bit of fish-skin. The objects included fragments of beaver tails and fat, otter vents and teeth, musk-rat guts and tails, loon vents, human hair, etc. The head of every family, as well as other persons, always carried a bundle of these articles, as it was considered absurd to attempt to angle without their aid.[5]

The Thompson, Lillooet, and Shuswap Indians may be taken as representatives of the culture of interior British Columbia. The head of a fool-hen was used by the Thompson Indian as a hunting charm. After praying to it for help, he tossed it up, and took the direction of its beak to indicate that of the game. A second trial of the same kind, if confirmatory of the first, was considered a sure sign of the locality to be visited. That night the charm was placed under the hunter's pillow, with the head pointing in the proper direction.

The tail of a snake was worn by grizzly bear hunters to ward off danger while hunting their game. It was fastened to the belt, to the string of the short pouch or powder-horn, or to the bow or gun itself. If a deer had been wounded, but not severely enough to be readily overtaken, the skin of a mouse was laid on the tracks. A deer thus charmed could not travel far, but soon perished. By chewing deer-sinew, a hunter could cause the sinews of a wounded deer to contract so that it could be easily overtaken. Gamblers' wives suspended an elongated stone above their husbands' pillows. To put an end to bad luck, a woman turned it rapidly round, thereby causing a reversal of luck. To secure luck at gambling, she might also drive a peg into the ground near their pillows, or sit on a fresh fir-bench during the game. These Indians made a rather obscure distinction between 'male' and 'female' plants. For a love-charm, the male and female of some plant were tied together with a hair from the head of the parties concerned, and buried in a little hole. Another charm for a similar purpose also consisted of the male and female of a plant, but these were mashed fine and mixed with red ochre. The charmer repaired to running water at sunset or daybreak, painted a minute spot on each cheek with the mixture, prayed to the plant for success, and finally sewed the charm up in a buckskin bag worn on the person. This charm was employed by both sexes. If not properly prepared, it might cause insanity in either the charmer or the charmed individual. Some men used the heart of a fool-hen to attract women. The love-charms of the Lillooet were quite similar to those just described. The Shuswap frequently obtained plants from the Thompson and Okanagon Indians, especially one plant with a strong odour and emitting a kind of steam. It was worn on the person as a necklace during the day, and placed under the pillow at night. Before sleep, the charmer must think of the woman coveted and pray that she might love him as a result of the plant's power. The same plant was used to scent a present to the woman loved; and if a man carried it about while walking against the wind, the women were forced to follow him. The Shuswap rubbed another plant on the brow or the soles of the feet to ensure luck in hunting, and wore snakes' tails to prevent headaches. A child's amulet in use among the Thompson Indians consisted of the piece of the infant's navel-string outside the ligature, which was sewed up in a piece of embroidered buckskin. This was tied to a buckskin band round the head of the cradle, and was decorated with numerous appendages. If the piece of navel-string was not found, or was lost, the child became foolish, or was likely to be lost during a journey or hunting trip. Branches of wild currant in the bottom of the cradle tended to quiet a child, while the dried tail or lower part of a silver salmon's backbone prevented frequent micturition.[1]

The Plateau region south of the Salish tribes just discussed was occupied by the Nez Percé and Shoshonean tribes. The Nez Percé frequently made use of charms, which generally consisted of small stones of odd shape or colour. Stones with holes were deemed especially powerful in bringing good luck, and a boy who found a curious stone might carry it on his person for life. Rarely these stones were carved or artificially modified. Bear claws and wolf teeth were worn about the neck as charms. An old Indian was found to wear a gypsum spear-head suspended about his neck. Shamans sometimes carved their stone amulets, one of which, reproduced by Spinden, seems to represent an animal's head.[1] The Shoshone powdered spruce needles, crammed them into a buckskin bag, and hung the bag round a baby's neck as a preventive of illness. Adults use white weasel skins, buffalo horns and manes, or the foot of a white weasel for the same purpose. A very old woman was found to keep two small fragments of obsidian as eye medicine, though occasionally she used to scratch her arms with them. Some men have a charm enclosed in a little piece of cloth and tied to the middle of either the front or the back of a beaded necklace. In a myth, Coyote overcomes a pursuing rock by extending his arm with a beaded charm on it. Love-charms are popular. One informant wore a weasel foot in his hat in order to 'catch a squaw.' For the same end, shavings of wood or bark are rubbed on the neck, tied up in a bag, or attached to a belt. Similarly, spruce needles are chewed and rubbed on the charmer's head. A certain root is tied to a little stone and thrown at the woman coveted. Several nights elapse, and then the woman comes to visit her lover. This charm has been repeatedly used with success, and has been sold for a dollar and a half. The Wind River Shoshone believe that the tail-feathers of a flicker ward off disease, and that the male of a kind of sage-hen imparts the gifts of a shaman. Weasel skins and feathers served as a protection against missiles. Many roots and other objects were cherished as amulets because they had been revealed to the owner in a vision or dream.[2]

Among the Hupa of California we again meet with the custom of placing parts of the umbilical cord in a buckskin bag round a baby's neck, where it is kept for years. A small dentalium shell is also tied to the infant's ankle, but must be removed as soon as the mother resumes her customary matrimonial relations. The Maidu in the central part of the State employed various charms for hunting and gambling. Stones found inside a deer were the favourite charms of deer-hunters, who wore them suspended from the neck. Perforated gambling-charms of approximately diamond-shaped surface were similarly suspended, but were stuck in the ground before their owner during a game. Any strangely shaped or coloured object found was picked up and tested as to its powers. Subsequent good luck of any kind was ascribed to its magic potency, and the owner treasured it for the specific use indicated by his experiences. Shamans used charms which they gently rubbed on the seat of pain after the extraction of the pathogenic agent, these charms usually consisting of obsidian knives hung from the neck. The frame of mind that leads to the adoption of certain objects as amulets is well illustrated by the attitude of the Shasta Indians. When a member of the tribe found a type of stone pipe different from that now used, the unfamiliar form was considered as mysterious, and magic functions were ascribed to the find.[3]

5. North-west Coast.—The Thlinket and Haida may be taken as the principal representatives of old North Pacific Coast culture. Typical of primitive hunting-charms was a medicine used by the Thlinket of Alaska to ensure the capture of sea-otters. The prospective hunter was obliged to abstain from intercourse with his wife for an entire month, and was careful not to let any one else touch his chamber-pot. At the expiry of this

period he killed an eagle, detached the foot, and tied to it a flower called 'grabbing medicine.' Next he made a model canoe with a figure of himself in the act of aiming at a sea-otter. The eagle's talon was made to clasp the seat in order to ensure good aiming. When approaching the sea-otter, the hunter blew some of his urine towards it, this being intended to confuse the animal and cause it to swim in his direction. If a man had infringed the nuptial tabu, his arm would shake and he would miss his quarry. In the case just cited the significance of the medicine employed is obscured by the number of regulations connected with its successful use. Of these, the application of imitative magic in the construction of the canoe is of special interest. In another Thlinket hunting-charm, sympathetic magic plays the dominant part. In order to shoot a doe the hunter removed hairs from the pubic region of a doe already slain, fastened them to the 'grabbing medicine,' and attached both to the barrel of his gun. Waving this as he approached his game, he would succeed in enticing the animal towards him. Corresponding notions enter into the practices incident to avenging the murder of a friend: the person seeking revenge wrapped up a bundle of a certain plant with an effigy of his enemy, thus securing his destruction.[1]

The Haida lover fasted, sought a certain kind of medicine, rubbed it upon his palms, and then put it upon the person or the clothing of the woman desired in marriage. Complete sets of observances were connected with this love-charm, of which the following is typical. The lover fasted from two to five days, then went to a salmon-creek, removed his clothes, and looked for spruce cones. If he found two old cones lying near each other and half sticking in the ground, he seized one with each hand, pronounced his own name as well as the woman's, and declared whether he merely loved her or wished to marry her. This statement was repeated four times in an increasingly loud tone of voice. Then the man went into the creek until the water was on a level with his heart, put both cones as far upstream as he could, let them float towards him, again seized one in each hand, and repeated aloud what he wanted. After three repetitions of this act, he took the cones into the woods, made a pillow, laid one on each end of it, and covered them with leaves of the salal-berry bush, mentioning his wish four times more. Then he went home, broke his fast, and waited for the woman's message of love. A curious charm for acquiring riches had to be obtained by theft in order to act efficaciously. It consisted of a sheet-copper figure, which was guarded with great secrecy. To make it work, the owner stuffed the space between the front and back plates of the charm with stolen clippings from articles of value. Thus crammed, it was hidden in the box containing the owner's blankets and clothing. Whether it was ever directly addressed in prayer seems to be subject to doubt.[2]

6. South-west.—Among the Apaches numerous varieties of charms were in vogue. Captain John G. Bourke was impressed with the very general occurrence of little buckskin bags, usually attached to the belts of the warriors and guarded with great care by their wearers. Inspection of the bags disclosed a quantity of yellow powder, the *hoddentin*, or pollen of the tule (a variety of the cat-tail rush), for which some pulverized galena was sometimes substituted. The use of these substances in connexion with war amulets is but a special instance of their ceremonial employment by the Apaches.

[1] Swanton, 'The Tlingit Indians,' in *26 RBEW* (1908), p. 447 f.
[2] Swanton, 'Contributions to the Ethnology of the Haida,' in *Jesup North Pacific Expedition*, v. pt. 1, p. 45f.

Both served as a face-paint and as offerings to the cosmic forces, and each phase of everyday life was accompanied by a sprinkling of *hoddentin*. The first act of an Apache on rising was to blow a pinch of the pollen to the dawn. A bag of *hoddentin* was secured to every baby's neck or cradle; at the girls' puberty ceremonies the powder was thrown to the sun and strewn about the novices; patients were sprinkled with the pollen in cases of serious illness; and the dead bodies were subjected to similar treatment. When starting on a hunt, when commencing the planting of corn, or when seeking to propitiate animals viewed with religious veneration, the Apaches uniformly made their offerings of *hoddentin*. Galena, while reserved for occasions of special solemnity, was used in essentially similar circumstances. The ceremonial significance of both substances accounts for the fact that no Apache warrior would go on the war-path without his buckskin bag of *hoddentin* or galena.[1] A still more distinctly talismanic character was, however, ascribed to the *izze-kloth*, or sacred cords. These were simply cords decorated with beads and shells, bits of sacred malachite, wood, claws, *hoddentin* bags, or splinters of lightning-riven wood. Only the shamans of highest standing could make them, and on occasions of extraordinary moment the medicine-man wore them hanging from the right shoulder over the left hip. 'These cords will protect a man while on the warpath, and many of the Apache believe firmly that a bullet will have no effect upon the warrior wearing one of them.' This did not by any means, however, exhaust the value of the *izze-kloth*, for their owner was enabled to cure the sick, to help along the crops, and to determine the thief of his own or his friends' property.[2] These additional virtues connect the cords with sacred objects of quite different construction. Thus, the wearer of a buckskin medicine-hat could tell who had stolen ponies, foretold the future, and was able to aid in the cure of the sick. A flat piece of lath decorated with drawings of a human figure and snake-heads was believed to indicate the right direction to travel, to bring rain in case of drought, and to show where stolen ponies had been taken.

The Navahos, nearest of kin to the Apaches in point of habitat and linguistic affiliation, and, like them, intermediary between the Pueblo and Prairie cultures, also make use of an abundance of charms. Indeed, even their deities are thought to possess charms, and the very sacredness of their character is often derived from the possession of such articles. If a man escapes from danger unscathed, the natural conclusion is that his charm must be strong. The mythological sons of the Sun, before setting out on the perilous journey to their father, secure for their talisman feathers plucked from a live bird. Such feathers are supposed to preserve life, and are used in all the rites. Hastseyalti, the most important deity impersonated in the tribal Chant ceremony, is represented with his healing talisman — four willow sticks attached to one another so that they may be readily spread into a quadrangle and folded up again. In the ceremony the actor approaches the patient, opens his talisman to its quadrangular form, and places it four times around the sufferer's body. The veneration for pollen so marked among the Apaches is equally characteristic of the Navahos. Pollen, both of the cat-tail and of other plants, is considered emblematic of peace, prosperity, and happiness, and is believed to secure these blessings. It is generally kept in buckskin bags, carried alike by priests and laymen. A stone fetish of a horse is at

[1] Bourke, 'The Medicine-Men of the Apache,' in *9 RBEW* [1892], pp. 500–507, 548.
[2] *Ib.* pp. 550–553.

times fed with pollen to ensure good luck to the herds.[1]

The difficulty of classifying religious phenomena by the aid of current concepts becomes obvious in a consideration of the Pueblo area. According to Zuñi mythology, the twin sons of the Sun, after leading mankind from their infernal abodes to the world now occupied by them, once more took pity on men, and, in order to stay an undue multiplication of their natural enemies, transformed animals of prey into stones. Natural concretions or strangely eroded rocks resembling animals are looked upon, in harmony with these mythological beliefs, as representatives of the undying spirits of the prey-animals. The success of beasts of prey is ascribed to a magical force by which they cast a spell upon their quarry. Their power is preserved in the petrifactions, which are, therefore, venerated as 'fetishes.' Guarded by special officers when not in use, the fetishes are assembled, sprinkled with prayer-meal, and supplicated by members of certain societies at a New Year's festival, while corresponding solemnities precede the great tribal hunts. The use of fetishes in the chase is deemed indispensable to success; only by their supernatural efficacy is man believed capable of overcoming the otherwise unconquerable larger game. Few hunters, accordingly, set out without a fetish, which is carried in a little buckskin bag suspended over the left breast. In the course of his journey, various ceremonies must be observed by the hunter. The fetish is taken out and addressed in prayer, and is ultimately restored to its keeper.

Complicated as the usages referred to appear when compared with those ordinarily attached to amulets, it seems artificial to separate them psychologically from ordinary charms. Such charms are, indeed, by no means lacking among the Zuñi. A person finding a concretion suggesting the prey-gods will regard it as his special 'medicine,' and will almost always prefer it to the other fetishes. A find recalling an organ of the human body is highly prized as the phallus of some ancient being, and becomes a charm in matters sexual: the young man will use it as a love-charm, the young woman to ensure male offspring. Another object may be interpreted as the relic of a god's tooth or weapon, and is entrusted to the custody of the warrior order. A little of it rubbed on a stone and mixed with much water is considered a powerful protection in battle, and is accordingly used by the warrior as an unguent before entering battle. A somewhat intermediate position seems to be held by the so-called war-fetishes. Roughly resembling the hunting fetishes, not only in appearance but in the rites attached to their employment, they are akin to amulets in being constantly carried about by the owners. An arrow point placed on the back of these fetishes seems to have a purely protective character; it is emblematic of the Knife of War, and is believed to shield the wearer from the enemy from behind or from unexpected quarters. The root idea in all these fetishes is apparently nothing but that of the Algonquin *manitou*. Objects of extraordinary appearance—petrifactions, in the case at hand—impose on the beholder a condition of emotional exaltation which leads to their being regarded as sacred. Experiences of this sort are assimilated with the pre-existing mythological conceptions; the existence of the petrifactions is interpreted in the light of the transformer cycle. Finally, the systematizing tendency of priestly speculation sets in, unifying relevant beliefs into the dogma that *all* fetishes are traceable to the same origin. 'It is supposed by the priests of Zuñi that not only these, but all true fetishes, are either actual petrifactions of the animals they represent, or were such originally.' Parallel with the development of these theoretical views goes the association of the amulets with established ceremonial observances. The rites connected with the use of a fetish by the Zuñi warrior or hunter are only the reflexion of the ceremonialism characteristic of Zuñi life; the fetishes are merely amulets saturated with the culture of a Pueblo people.[1]

7. Mexico.—The complexity of religious life in ancient Mexico tends to eclipse the importance of amulets, yet their significance in the everyday life of these people is established beyond doubt. Thus, the Mexicans believed that neither an *enceinte* woman nor her husband might walk about at night; in the former case, the child would cry incessantly, in the latter it would be smitten with heart disease. To guard against these disasters, the prospective mother took care to carry with her some small pebbles, some ashes from her fireplace, or a little native incense, while the father used small stones or tobacco. Ashes seem to have been carried especially in order to prevent the sight of ghosts. Great value was attached to parts of the body of a woman who had died in childbed. Soldiers cut off the woman's hair and the middle finger of her left hand, and carried them on the inside of their shields to the field of battle. They believed that such charms would render their owners intrepid, and would ensure the capture of enemies. Blanket vendors used as a charm the hand of a female monkey, being convinced that, thus armed, they would readily dispose of their wares on market days. Hucksters who had failed to sell their commodities put two kinds of spices with them on returning home at night, declaring that 'after eating of the spices' the wares would allow themselves to be sold more readily than before.[2] The magicians of Sinaloa carefully guarded some translucent stones in a little leather pouch.[3] Among the modern Aztecs some superstitious practices have survived to the present day. Mothers hang little pouches with *chapopotl*, or bitumen, about their children's necks to guard them against disease and injury; sometimes the bags may be worn in pairs at the wrists. The *chapopotl* is purchased of Indian dealers in medicinal herbs.[4] See, further, 'Mexican and Mayan' section of this article.

8. South America.—Our knowledge of South American ethnography does not yet permit a systematic discussion of the charms employed within this immense territory. All that can be attempted is to cull a few characteristic examples from some of the areas hitherto studied.

In the West Indies—ethnologically a part of South America—warriors going into battle attached to their foreheads finely carved objects of stone, shell, or bone perforated for suspension from the person, and stone amulets are particularly common in archaeological collections. Many of them are representations of the human form, others are effigies of animals, while some show partly human, partly theromorphic traits. The amulets of human form may be subdivided into two principal types—one characterized by the elevation of the arms and hands to, or above, the level of the ears; the other distinguished by the mummy-like juxtaposition of the legs. Whether the golden breast ornaments reported to have been worn by

[1] Matthews, 'Navaho Legends,' *Mem. Amer. Folk-Lore Society*, v. [1897] 109, 192, 249, 250, 'The Night Chant, a Navaho Ceremony,' in *Mem. Amer. Mus. of Nat. Hist.* vi. 10, 58, 69, 11–34.

[4] Starr, 'Notes upon the Ethnography of Southern Mexico' (*Proc. Davenport Academy of Natural Science*, 1900), p. 19.

chiefs combined the function of amulets with that of insignia of authority it is impossible to determine at the present day. Stones extracted by a shaman from the body of his patient as pathogenic intruders were highly prized and carefully stowed away in little baskets; they were deemed especially valuable in helping women in labour. It is possible that, besides the frontal war amulets, larger figures were likewise attached to the top of the head.[1]

The burial grounds of Las Guacas on the Pacific coast of Costa Rica have yielded an unusually large number of amulets. Most of these are celt-shaped, some being plain celts with one or, more rarely, two perforations, while others represent human and bird forms. In the anthropomorphic amulets the head is shown *en face*, the eyes being usually indicated by means of two circular drilled pits, which are often united by a transverse groove. The upper arms are parallel with the body, while the forearms are horizontal, the hands either meeting on the abdomen or being placed one a little above the other. Usually only the upper half of the body is sculptured, but a few of the charms show the entire figure. The ornithomorphic amulets represent exclusively parrots and (less frequently) owls. According to Hartman, the crests and ear-tufts of the bird are generally emphasized by the artist, but in many cases the conventionalism is such that the bird-like features wholly disappear. Amulets perforated for suspension in a horizontal position include alligator and fish forms.[2]

Of the ornaments worn by the Peruvians, the necklace consisting of puma teeth, human teeth, bones of monkeys, and birds' beaks may have served as an amulet.[3] In southern Peru and Bolivia a class of Indians, presumably connected with the Callahuayas to be mentioned below, gather and hawk objects of medicinal and talismanic virtue. The tapir's claws served to prevent sickness, while the teeth of poisonous snakes, carefully fixed in leaves and stuck into the tubes of rushes, are regarded as specifics against headache and blindness.[4] The greatest interest attaches to the *canopas* used by the ancient Chimu of Peru. They differed from the communal *huaca* in being the property of a single family or of an individual. In the former case they descended from father to son, in the latter they were buried with their owners. An Indian finding any stone of extraordinary shape or colour immediately sought the advice of a shaman. If the latter declared the object to be a *canopa*, it was at once treated with superstitious regard. Some *canopas* consisted of bezoar stone (*quicu*), others were little crystals (*lacas*). There were special *canopas* of maize and potatoes, and some, in the shape of llamas, served to increase the herds of their owners.[5]

The Araucanians of Chile wear large breast ornaments and heavy chains of disks with pendants consisting of little crosses and human figures, which reflect both Christian and pagan influences.[6]

The Bakairi dwelling on the banks of the Kulisehu and Rio Batovy in Central Brazil are very fond of necklaces of shell-disks and beads. These are worn especially by children and by pregnant women, from which fact their talismanic character has been inferred. The chiefs of the Paressi, who inhabit the region north-west of Cuyaba, suspended about their necks jasper-like polished stones, in the shape of a Maltese cross, which may possibly have been worn as amulets. The Bororo wear breast-ornaments of large jaguar teeth and of small monkey teeth. These ornaments are supposed to increase the strength and skill of the wearer. The teeth and lower jaws of enemies are similarly worn, and the hair of a deceased person is spun and corded, and is then used as an amulet.[1]

The Abipones suspended from their neck or arm the tooth of a 'crocodile,' believing that it would prevent them from being bitten by serpents. Little stones found in the stomach of the same animal were pulverized and drunk to alleviate kidney trouble. This superstition is mentioned in this place because it shows a use of stones somewhat different from that of genuine charm-stones, such as have been noted in N. America.[2]

In the Argentine Republic there has been found a lanceolate stone-amulet with a central rectangular cross enclosing a plain cross of two mutually perpendicular lines. It was intended to be worn about the neck, but Quiroga supposes that it was believed to bring rain.[3] The Indians of the Argentine plateaux attach to their fingers, and especially to their little fingers, a string twisted towards the left. This, it is believed, will prevent adversity and disease during the following year. Some individuals tie similar strings to their arms and legs. Archæological investigation of this region has unearthed numerous *pendeloques*, some of which probably served as charms. One of the smaller finds of this class represents a bird, another consists of the fruit of *Martynia angulata*, with a woollen string by which it was attached to a garment or necklace. Some of the charms are of stone, others of copper, and there has been figured a single *pendeloque* of silver. In the Diagita portion of the territory, triangular and animal-shaped charms have often been discovered. The half-castes now occupying the country still make use of small figures of sculptured white stone representing domestic animals. The carvings (*illas*) serve as talismans to protect the herds of cattle or llamas against every kind of danger and to ensure their multiplication. Another sort of *illa* frequently found consists of a hand enclosing a baton-shaped object; the interior of the hand is sometimes decorated with a circle symbolizing money, and the charm as a whole is believed to bring wealth to its possessor. All these charms are obtained from itinerant Aymara medicine-men called *callahuayas*, who reside in the villages of Charazani and Curva, in the Province of Muñecas, Bolivia.[4]

In the Bandelier collection of the American Museum of Natural History, there are a number of *callahuaya* charms deserving some brief description. A dirty rag containing a piece of alabaster, a bit of llama tallow, and bits of a plant (*uira koua*) is used for finding treasures, and a piece of alabaster with some yellow vegetable substance, very small black seeds, a red and black berry, bits of mica and gold leaf, serves the same purpose. To keep wealth already secured, the *callahuayas* peddle alabaster carved to represent a hand holding a circular object, bits of gold leaf and mica, and very small black seeds. A charm intended to unite those engaged to be married and to render them wealthy, consists of a piece of alabaster carved into two hands, bits of thin gold, silver, and mica, and very small black seeds.

Résumé.—A few words will suffice to sum up the essential traits of North and South American charms. While in a considerable number of cases the reasons for assigning special potency to a given object are far from clear, two main principles have operated in a majority of the cases cited, and seem sufficient to account for the phenomena not yet definitely known to fall under the same head. (1) We have found the principle of symbolic magic, which is particularly prominent among the Eskimos. (2) We have had to reckon with the *manitou* principle—the fact that objects which happen to produce on the beholder a curious psychological effect are credited with supernatural power. Naturally objects revealed during a conscious effort to secure some power belong to the same category. So far as the American field is concerned, the theory, recently broached, that amulets and charms are degenerate fetishes—fetishes that retain their supposedly magical power but are no longer the objects of a distinct cult—does not seem to hold. Not only do Pechuel-Loesche's recent investigations in Africa tend to efface the line separating fetishes from other magico-religious objects, but among the Zuñi, where conditions are especially favourable for a comparison, the 'fetishes' have been found to be nothing but specialized forms of magical objects. As for charms and amulets in general, it must be apparent that they also do not form a distinct unit from a psychological point of view, but are merely magical articles worn on the person.

LITERATURE.—This is given in the footnotes.

ROBERT H. LOWIE.

CHARMS AND AMULETS (Assyr.-Bab.).—In discussing Assyr. charms it is exceedingly difficult to avoid repetition of incantations which are properly included under Medicine. The writer of the present article has therefore touched as lightly as possible on the purely medical texts, referring the reader to the article DISEASE AND MEDICINE (Assyr.-Bab.) for this branch of the subject, and has attempted to describe only those which are less obviously prescriptions for sickness. But it is almost impossible to draw a distinct line, since many of the ailments in ancient times were attributed to the magic of sorcerers, the attacks of demons, or the wrath of the gods; and even the simple medical tablets, which prescribe in the baldest manner the quantities of various drugs to be used as remedies, are not without incantations of the most superstitious kind.

The hostile wizard or witch is described by some such words as *kaššapu*, *epištu*, and *muštepištu*, which are never used for the more legitimate quacksalvers. On the other hand, it was quite permissible to 'lay a ban' in no underhand manner, for the 'sabbaths' in the Assyrian hemerology texts (*WAI* iv. 32) are described as being unfitted for making a curse. But the methods for casting such spells as love-charms or hatred-charms appear to be wanting in the tablets hitherto discovered. After all, these charms belong to an order of magicians lower than the official priesthood, and it is more natural that the writings of the latter class should have come down to us.

The eight tablets of the series *Maklu* ('Burning') are devoted to charms which have been written counter to the machinations of hostile wizards and witches. The man who imagines himself bewitched repairs presumably to the nearest friendly wise-man or wise-woman for aid in working magic which shall defeat his oppressor. The whole series constitutes such a *grimoire* of spells that it is well worth examining in detail.

First, the victim of the wizard's malignity makes invocation to the 'gods of night,' and then lays before them his troubles:

'For a witch hath bewitched me,
A sorceress hath cast her spell upon me,
My god and my goddess cry aloud over me,
Over the sickness (?deafness) wherewith I am stricken.
I stand sleepless night and day,
For they have choked my mouth with herbs,
And with *upuntu* have stopped my mouth,
So that they have lessened my drink.
My joy hath turned to grief, and my delight to mourning.
Rise up, then, O ye great gods, and hear my plaint,
Grant me a hearing, and take cognizance of my way.
I have made a figure of the man or woman who hath bewitched me.'

There appears to be an echo of one of these lines in the Talmud. If a person meet witches, he should say, among other invectives, 'May a potsherd of boiling dung be stuffed into your mouths, you ugly witches' (*Mo'ed Katan*, fol. 18, col. i., quoted by Hershon, *A Talmudic Miscellany*, London, 1880, p. 49). It is possible, too, that there is a connexion between this and another passage in the *Maklu* (Tablet viii. 87–88): 'Make two meals of dung (?), one each for the figures of sorcerer and sorceress, and make invocation over the food.' This, however, depends on the translation 'dung' for the Assyr. word *lî* (Thompson, *Sem. Magic*, p. 203).

In the lines quoted from the *Maklu* series the hostile magician is evidently credited with having made a waxen image of the suppliant, which has been subjected to the treatment described in lines 6–8 (lines 9–11 of the tablet). The counter-method of making an image of the magician is consequently resorted to, and various rituals are performed, after which the bewitched man ends the first division of his charm with the words spoken against the sorceress:

'Her knot is loosed, her works are brought to nought,
All her charms fill the open plain,
According to the command which the gods of night have spoken.'

The 'knot' refers to the usual practice of tying knots during the repetition of an incantation (see DISEASE AND MEDICINE [Assyr.-Bab.]). The next is a short invocation:

'Earth, earth, O earth,
Gilgameš is lord of your *tabu*.
Whatever ye do, I know;
But what I do, ye know not;
All that the women who have bewitched me have done
Is annulled, loosed, and me, and is not.'

Two late Hebrew charms from a book which the writer obtained in Mosul (*PSBA*, 1907, p. 330, nos. 93 and 94) show a similarity to this use of 'binding' and 'loosing':

'*To bind a man against his wife.*—Write these names on a parchment, and bury them between two graves: "In the name of Šaphriel, 'Azriel, Gabriel, Šerikiel, that ye bind and fetter N., son of N., that he be not able to have union with his wife N., daughter of N., Šl Šid 'Irt W'asgitt Wswrh Wtr Wrrgit. bind and fetter N., son of N.; and let no man have power to loose him from the bond until I loose it myself, and he shall feel no love towards N., daughter of N.; bind and fetter him."'

'*To loosen a bond.*—Let him write his name and the name of his mother on parchment, and let him carry the parchment on his person, and hang it round his neck. And this is what he shall write: "Hu Hut Nptl Nptl Krat Krat Mk Ytun Kṭ Lub Nṭl Ubkl Ṭob Mn Mn Mnr Pur Ksp Ksp Tor Tor—by the purity of these names (I adjure you) that ye loose all limbs of N., son of N., towards N., daughter of N."'

The lines in the *Maklu* quotations indicating that the patient knows his enemy's movements are in accord with the usual practice of magic in this respect. The next step is apparently to recite the following over something that serves as the model of a village:

'My city is *Sappan*, my city is *Sappan*,
There are two gates to my city *Sappan*,
One to the east and one to the west,
One towards the rising sun and one towards the setting sun.'

The procedure described in the lines that follow is to perform a ritual of shutting up the city, that the sorcery may be excluded from the bewitched man's abode (for a parallel to this method of making a model house in magic, see Victor Henry,

La Magie dans l'Inde antique, Paris, 1904, p. 142, which is quoted in Thompson, *op. cit.* p. xxviii). Ultimately the little figures of the hostile wizard are burnt, with appropriate and exceedingly long incantations to the fire-god. With this ritual the first tablet ends.

The second tablet continues this procedure, and defines the material of which the images of the sorcerer shall be made, with the proper invocation for each. Tallow, bronze, dung (?), clay, bitumen, bitumen overlaid with plaster, clay overlaid with tallow, and various woods are among the components prescribed.

The third tablet begins with a description of the witch:

'The witch who roameth about the streets,
Entering the houses,
Prowling about the towns,
Going through the broad places;
She turneth backwards and forwards,
She standeth in the street and turneth back the feet;
In the market-square she hindereth passage;
She snatcheth away the love of the well-favoured man.
She taketh the fruit of the well-favoured maiden.
By her glance she carrieth away her desire;
She looketh upon a man and taketh away his love,
She looketh upon a maiden and taketh away her fruit.'

After this description of the witch, the bewitched man is shown how to combat her evil with various rituals.

The fifth tablet begins with a similar description of the hostile wise-woman:

'The sorceress and witch
Sit in the shadow of the house-wall,
They sit there working magic against me,
And making figures of me.
Now I am sending against thee *ḫaltappan*-plant and sesame,
I will annul thy sorcery and turn back thy charms in thy mouth.'

Enough has been quoted to show the methods used in this exceedingly primitive but wide-spread practice of wax-figure magic.

In working any magic of this kind, it was of great advantage to have secured something belonging to the intended victim. The first tablet of the *Maḳlu* shows this clearly (131 ff.):

'Those (witches) who have made images in my shape,
Who have likened them unto my form,
Who have taken of my spittle, plucked out my hair,
Torn my garments, or gathered the cast-off dust of my feet,
May the warrior Fire-god dissolve their spell.'

All these ingredients of a charm are so well known to anthropologists that it is unnecessary to quote parallel instances from either savage or civilized nations.

From these incantations over waxen figures of a living man the transition to similar images made to lay a ghost is easy. The principle is the same:

'When a dead man appeareth unto a living man . . . thou shalt make [a figure] of clay, and write his name on the left side with a stylus. Thou shalt put it in a gazelle's horn and its face . . . and in the shade of a caper-bush or in the shade of a thorn-bush thou shalt dig a hole and bury it: and thou shalt say . . .' (*PSBA* xxviii. 227).

A ritual for the same is also prescribed in a tablet (K. 1293, Harper, *Letters*, 1900, no. 461) which begins: 'The figure of the dead man in clay.' There are other charms to avert the evil of returning ghosts, which need not be quoted here (*PSBA* xxviii. 223 ff.; Thompson, *op. cit.* p. 32 ff.).

Just in the same way the Babylonians believed that sorcery might break out in a house (*WAI* iv. 59. 1), and part of the charm against it runs as follows:

'Break the bonds of her who hath bewitched me,
Bring to nought the mutterings of her who hath cast spells upon me,
Turn her sorcery to wind,
Her mutterings to air;
All that she hath done or wrought in magic
May the wind carry away!
May it bring her days to ruin and a broken heart,
May it bring down her years to wretchedness and woe!
May she die, but let me recover:
May her sorcery, her magic, her spells be loosed,
By command of Ea, Šamaš, Marduk,
And the Princess Bêlit-ili.'

(For the possible connexion of the remainder of this text with the Levitical 'house in which leprosy breaks out,' see Thompson, *op. cit.* p. 187.)

Another ritual in connexion with buildings is that published by Weissbach (*Bab. Miscellen*, Leipzig, 1903, p. 32 ff.) for the re-building of a temple when it has fallen.

We now come to what may be considered as amulets proper—objects with a prophylactic significance which are to be hung up in some exposed position or carried on the person. The most obvious are probably those with charms written upon them, so that there is no doubt as to their meaning; and these have actually been found in the excavations of Assyrian sites. There are two such made of clay and inscribed with the legend of Ura, the plague-spirit, in the British Museum; and these are pierced laterally in order that they may be hung up on the wall of a house (L. W. King, *ZA* xi. 50; for others, see Thompson, *op. cit.* p. 85). In the Babylonian room of the British Museum is exhibited the upper half of a similar tablet in stone, probably dating from the 7th cent. B.C., with two figures in relief. The one on the left is that of the well-known lion-headed spirit, with weapon upraised, while that on the right is some god. Above them in a separate register are the emblems of the moon, sun, and Venus, and a head-dress (the symbol of Anu) (no. 1074–91899; on the head-dress being the symbol of Anu, see Frank, *LSSt* ii. 2, 8). Another (Case H, No. 231) is a bronze plaque pierced for hanging up on a wall, with a rampant demon in relief.

This is such a common form of exorcism in the East that only a few parallels need be quoted. The Jews in Palestine hang up a paper written in cabalistic Hebrew, together with rue, garlic, and a piece of looking-glass (Masterman, *Bibl. World*, xxii. [1903] 249; see also Scott-Moncrieff, *PSBA* xxvii. [1905] 26, for a photograph of a Hebrew amulet of this nature from Morocco). In Asia Minor the writer was presented with one of two amulets written in Arabic on small scraps of paper and nailed to the doorpost of an inner chamber of a house ('A Journey by some unmapped Routes of the Western Hittite Country,' *PSBA* xxxii. [1910]).

From these hanging amulets it is no great distance to the little figurines of gods which have been found buried under the thresholds of Assyrian palaces, and were obviously intended to guard the building. Several of them are now in the British Museum (Bab. Room, nos. 996–1009; see the figure in G. Smith, *Assyrian Discoveries*[7], London, 1883, p. 78). Another form of them, although exactly how it was used is uncertain, is the bronze demon-figure (Bab. Room, no. 574) pictured on the frontispiece of Thompson's *Devils and Evil Spirits*. This is a lion-headed human figure with the right arm raised; the feet and right hand are missing, but there is no doubt that it is the same spirit as is portrayed on the stone amulet (no. 1074) mentioned above. Now this same figure is found on the Nineveh sculptures and elsewhere (*RA*, new ser. xxxviii. [1879]; Frank, 'Babylonische Beschwörungsreliefs' [*LSSt* iii. 3], cf. art. DISEASE; King, *Bab. Rel.* p. 39), where a pair of them are apparently attacking each other. They have exactly the same lion-heads and human bodies, and their feet are birds' claws; the upraised right hands brandish daggers, and the left hands, held close to the side, hold maces. It is possible that the two are intended to be in alliance against a common foe, only that the exigencies of Assyr. technique, which forbade a sculptor to represent any one full face, have compelled the artist to present them in this guise. At any rate, the reason for the presence of such a sculpture in the palace of Ashurbanipal seems to be much the same as that which induces the ordinary householder to hang up his little amulet near the door. It is naturally on a larger scale, but it serves the same purpose (for a long discussion of this scene, see Frank, *LSSt* iii. 3, 49 ff.). Indeed, the figures of

the winged bulls at the great gates are nothing more than protecting amulets, and they are described in the Assyr. texts as such (*WAI* ii. 67, *r.* 29).

Several demons or protecting spirits of this class are mentioned in the cuneiform tablets, and full directions for their position in the house are given in a ritual tablet published by Zimmern (*Ritualtafeln*, Leipzig, 1901, p. 168 f.).

From the inscribed house-amulets the transition is easy to uninscribed objects which have a magical virtue, such as the rue and garlic mentioned above. One of the Assyr. incantations against a demon shows the same precautions taken as in the Hebrew charm:

> Fleabane (?) on the lintel of the door I have hung,
> St. John's wort (?), caper (?), and wheat-ears
> On the latch I have hung' (Thompson, *Devils*, i. 137).

Now, if the plant *pir'u* (which may be the Syriac *per'a*, 'hypericum') be really the St. John's wort, this charm will be found to be the forerunner of many mediæval superstitions. Frazer says (*GB*[2] iii. 334) that

> 'gathered on Midsummer Eve, or on Midsummer Day before sunrise, the blossoms are hung on doorways and windows to preserve the house against thunder, witches, and evil spirits. . . . During the Middle Ages the power which the plant notoriously possesses of banning devils won for it the name of *fuga dæmonum*.'

Frank, however (*LSSt* iii. 3, 36–38), translates *pir'u*, 'Schössling.'

Another form of Assyr. house-amulet was the clay fist, many specimens of which have been found in excavating the palaces (B. M. Bab. Room, nos. 867–875), and they are presumably the origin of the hand which decorates the walls of the modern houses in the East (see the chapter on 'Amulets' in Fossey's *La Magie assyr.* pp. 104–121).

In the same way amulets were carried on the person among the ancient Assyrians. In the cuneiform series written against the *Labartu* (some kind of female demon who attacks children), the tablets actually prescribe an incantation which is to be written on a stone and hung round the neck of a child exposed to her malignity (*WAI* iv. 56, i. 1; Myhrman, *ZA* xvi. 155; for an instance of such an amulet, discovered in excavating, see Weissbach, *Bab. Miscellen*, p. 42). The Hebrews have similar charms:

> 'If thou wishest to protect a young babe from an evil spirit and from the host of Mahalath, write these angels on a tablet of gold in Assyrian writing (*Ashuri*) and carry it with thee, and thou needst not fear any evil either from (for) a big man or a small child' (Gaster, *PSBA*, 1900, p. 340).

Besides these written directions for amulets, the graven sculptures of the Assyr. kings bear testimony to the importance attributed to these phylacteries. It is a common thing to see the kings portrayed with a necklet to which are attached four or five pendants—clearly the sun, moon, Venus, the levin bolt of Adad, and frequently the horned head-dress of Anu (*e.g.* B. M. Assyr. Transept, no. 847). The writer has seen worn round the neck of a Persian boy a circlet of silver strung with the crescent moon and two hands, which appear to be the lineal descendants of the thunderbolt of Adad.

It is unnecessary to go deeper into the question of earrings, armlets, etc., in this article. The Assyrian kings wore both earrings and armlets; but whether they did so because they still adhered to the savage idea of protection remains to be proved. Nevertheless, on the upper arm above the elbow, where the Assyrians wore an armlet, the modern Hadendoa wears his leathern purse-amulet, containing its paper charm inscribed in Arabic. We may now pass to certain figurines other than those described above, which have been discovered from time to time in the excavation of Assyr. and Bab. sites. These are, for the most part, of clay, and are either very crudely fashioned or turned out of moulds (see B. M. Babylonian Room, Wall Cases, 34–40). One of the most frequent is that of a naked female figure holding both breasts. Another is that of a female figure holding a babe; and this appears to be referred to in a cuneiform tablet which gives a detailed description of several mythological beings (Thompson, *Devils*, ii. 147; see *Semitic Magic*, 63):

> 'The head (has) a fillet and a horn . . . ; she wears a head-ornament; she wears a fly (?); she wears a veil; the fist of a man. She is girt about the loins, her breast is open; in her left arm she holds a babe sucking her breast, inclining towards her right arm. From her head to her loins the body is that of a naked woman: from the loins to the sole of the foot scales like those of a snake are visible: her navel is composed of a circlet. Her name is Nin-tu, a form of the goddess Mah.'

It is quite possible that both these were used by barren women as votive offerings or charms to obtain children.

Of a different class are these fairly common clay heads of demons which are described by Frank (*Rev. d'Assyriol.* vii. [1909] 1). They are about an inch or two high, of hideous aspect, and sometimes inscribed with a long incantation against some power of evil. Lastly, we find what is apparently a wooden image prescribed, with appropriate ritual (Thompson, *Devils*, i. 197):

> 'Set alight, both in front and behind, a tamarisk *ḫulduppû* (image ?) of a fiend, whereon is inscribed the name of Ea, with the all-powerful incantation, the Incantation of Eridu of Purification.'

R. CAMPBELL THOMPSON.

CHARMS AND AMULETS (Buddhist).—The use of charms and amulets (Skr. *kavacha*) is universal in Buddhist countries. The custom is most marked in the lands where pure Buddhism has degenerated into Lamaism.

In Northern Buddhist countries almost every man, woman, and child constantly wears an amulet, or string of amulets, round the neck, or on the breast. These amulets are generally ornamental receptacles, sometimes made of copper, wood, or bone, but more frequently of silver, often artistically embossed and jewelled with turquoise. The shape of the amulet varies; it may be square, circular, or curved. Those which are curved round to a point are probably intended to represent the leaf of the sacred fig-tree. These boxes are the receptacles of a variety of charms—the supposed relics of a saint, a few grains of wheat, a torn scrap of a sacred *kataq*, a picture, or a prayer formulary. The amulet is a prized ornament as well as a trusted charm. The workmanship of those worn by the rich is frequently finished and artistic. The turquoise, which is the only precious stone used for the ornamentation of the amulet, is itself a charm. It is of the lucky colour, and is supposed to avert the evil eye. About a year after the birth of a child a religious ceremony is held, at which prayers are said for its happy life, and an amulet, consisting of a small bag, containing spells and charms against evil spirits and diseases, is suspended from its neck. Women of position in Tibet wear a chatelaine, depending from a small silver casket, which usually contains a charm or charms. When a Tibetan leaves his home to undertake a distant or difficult journey, or on business, a written

charm is not infrequently tied upon the sleeve of his coat, and this is not removed till after his safe return, or the satisfactory accomplishment of his purpose.

As the person of the Northern Buddhist is protected by charms, so is his house. Near the door a prayer-pole is erected, or prayer-flags flutter on the roof; juniper twigs are burnt in earthenware utensils, for demons are supposed to have a particular objection to their smell, and consequently remain at a distance; a collection of pieces of cloth, leaves, and sprigs of willow is prepared to attract the spirits of disease and prevent their crossing the threshold; and a white and blue *swastika*, surmounted by sacred symbols, is drawn upon the doorway. In addition to these charms, which are regarded as efficacious in warding off evil from the Buddhist family, roughly printed prayer formularies, taken from blocks kept in the local monastery, are frequently pasted on the outside of the door or the inner walls of the house.

In Burma the tatuing of the body with mystical squares, cabalistic diagrams, and weird figures seems to be regarded as an effectual charm.

The use of charms, by the priests, in Buddhist worship is common. The *dorje* is a part of the equipment of every monk in Tibet. It is the Skr. *vajra*, or thunderbolt. The original *dorje* is supposed to have fallen direct from Indra's heaven, in the neighbourhood of Lhasa. The imitations are made of bronze and other metals. They are used for exorcizing and driving away evil spirits, especially in the performance of religious ceremonies and prayers. But they are regarded as equally efficacious in warding off evils of all descriptions. The Bodhisattva Vajra-pāṇi, 'the subduer of evil spirits,' is always represented with a *dorje* in his hand. The *drilbu*, or prayer-bell, with its handle ornamented with mystic symbols, is used in worship, with the twofold object of attracting the attention of good spirits and frightening away evil ones. The *prayer-flags*, which wave outside every Buddhist monastery and almost every house, are inscribed with various prayer formularies, together with figures of the 'flying horse'=Lungta (strictly *rLuṅ-rta* = 'wind-horse'), and other symbols, *e.g.* the Norbu gem, or 'wishing stone.' Some flags bear the representation of an animal at each corner—the tiger, lion, eagle, and dragon. The prayer-flags are, in most cases, regarded by the peasantry as charms to protect the village from malicious ghosts and demons, who are believed to haunt the atmosphere and swarm everywhere. The *sacred drum*, shaped like two hemispheres joined on their convex sides and encircled by cowrie shells, is also used to frighten away evil spirits, who are regarded as disliking noises of all kinds. The drum is sounded by means of buttons attached to two pendulous strips of leather.

The *phurbu*, or nail, is another weapon used by the lamas against demons. It is generally made of wood. In form it is wedge-shaped and triangular, eight or ten inches long, with the thin end sharp-pointed, and the broad end surmounted with a head. This weapon is sometimes made of cardboard, and inscribed with mystical sentences, which usually end with the syllables *hūm phat*, the potency of which, in scaring evil demons, is irresistible. The most efficacious *phurbus* are inscribed with mystic syllables and words composed by either the Dalai Lama or the Panchen Lama.

Prayer, among Northern Buddhists, is regarded in common practice as an effective charm, and is generally used as such.

The *maṇi*, or jewel prayer, '*om maṇi padme hum*,' is depended upon as the first and greatest of all charms. Every Tibetan believes that 'it is the panacea for all evil, a compendium of all knowledge, a treasury of all wisdom, a summary of all religion' (Monier-Williams, *Buddhism*, 1889, p. 373). The meaning of the sacred syllables is not understood, but, even as their repetition is believed to secure blessing, so it will also thwart evil. In like manner, the use of the manual prayer-wheel, the setting in motion of the prayer-wheels which line the walls leading to the temple-doors, and the turning of the large cylindrical prayer-wheel which is to be found in most shrines are popularly regarded as useful charms.

In Lāhul harvest operations, the 108 volumes of the Buddhist encyclopædia are used as a charm, being carried over the fields by women before the crops are sown, to drive evil spirits away. When the grain sprouts, pencil cedar-wood is put in the ground and burnt, to charm away another demon and ensure each grain springing up with many ears.

The great Tibetan work, the *Kah-gyur*, the sacred book of the *Mahāyāna*, or Great Vehicle, contains a repository of charms, etc. In the *Gyut* (Tib. *rgyud*, Skr. *tantra*), the last division of the *Kah-gyur*, which is devoted to mystic theology, there are descriptions of several gods and goddesses, with instructions for preparing the *mandalas*, or circles, for their reception; offerings or sacrifices for obtaining their favour; prayers, hymns, and charms addressed to them. The virtue of the various *mantras* is far-reaching, as the headings show: for obtaining any kind of specified prosperity; for assuaging specific diseases; for securing abundance; for obtaining security from robbers; for protection from fire, water, poison, weapons, enemies, famine, untimely death, lightning, earthquakes, and hail; and from all sorts of demons and evil spirits. The required qualities of a teacher who may officiate at *tantrika* ceremonies are detailed; there is also a description of ten several substances to be used in the sacrifices, such as flowers, incenses, perfumes, lights or lamps; together with the periods, by day or night, when the various ceremonies are effective.

Throughout the Northern Buddhist world it is believed that, by virtue of some charm, every evil being may be successfully resisted and every evil averted.

J. H. BATESON.

CHARMS AND AMULETS (Celtic).—Most of the magical acts performed by the Druids, or other wielders of magic among the Celts, were accompanied by charms, spells, or incantations—usually in poetic form. Their power lay in the magical virtue of the spoken word, or, in the case of spells for healing, in recounting a miracle of healing, in the hope that the action would now be repeated by virtue of mimetic magic. The Irish *filid*, or poets, had to learn traditional incantations (O'Curry, *MS Materials*, Dublin, 1861, p. 240), and many of the verses which Cæsar (*de Bell. Gall.* vi. 14) says the Druids would not commit to writing were doubtless of a similar nature.

The earliest Celtic document bearing on Celtic paganism—a MS preserved in the monastery of St. Gall and dating from the 8th or 9th cent.—contains spells appealing to the 'science of Goibniu' to preserve butter, and to 'the healing which Diancecht left' to give health (Zimmer, *Gloss. Hib.*, 1881, p. 271; see also Zeuss, *Gramm. Celt.*², 1871, p. 949). Thus the pagan gods were still appealed to in the charms used by Christian Celts. In later times the charms which are still

in use appealed no longer to the old gods but to the Persons of the Trinity, to the Virgin, or to the saints, but they are quite as much magical incantations as prayers, and they apply to every action of life, while they bear a close resemblance to Etruscan and Babylonian spells which can hardly be accidental (cf. any collection of Celtic spells with those given in Leland, *Etruscan Roman Remains*, 1892; and Lenormant, *Magie chez les Chaldéens*, 1874). Probably such spells passed from country to country in very early times, the appeal being made in each country to the native divinities. After the introduction of Christianity, relics of the saints, hymns composed by them or in their honour, and the Gospels were also used as charms (Joyce, *Social Hist. of Ancient Ireland*, 1903, i. 247 f., 382–386).

All Druidic rites of magic described in the sagas were accompanied by spells, *e.g.* control of the elements, transformation, discovery of hidden persons or things, etc. Druids accompanied each army to discomfit the enemy, or to bring strength to their friends by means of the spells uttered by them. The Druids could also remove barrenness through spells and incantations; they could heal deadly wounds, or raise the dead to life (Windisch-Stokes, *Ir. Texte*, 1880–1905, i. 127, iii. 393, iv.*a* 242, 245, *Táin Bó*, 5484; Leahy, *Heroic Romances of Ireland*, 1906, i. 137; Kennedy, *Legendary Fictions*, 1866, p. 301). Women also used powerful spells among the Celts, and were in consequence much dreaded. The 'spells of women' were feared even by St. Patrick, as they had been in earlier times by the pagan Celts (*Ir. Texte*, i. 56; d'Arbois de Jubainville, *Cours de littérature celtique*, v. 387), while in modern survivals in Celtic areas it is mainly women who make use of charms and spells. In repeating a spell or charm a certain posture was adopted—standing on one leg, with one arm outstretched and one eye closed (see CELTS, XIII. 5). The reason of this posture is unknown; possibly it was intended to concentrate the magical force, while the outstretched arm would point to the person or thing over whom the charm was repeated.

The continuance of the belief in the power of spells down to modern times in rural Celtic areas is one of the most marked examples of the survival of Celtic paganism. Usually they are known only to certain persons, and are carefully handed down from generation to generation, sometimes from male to female, and from female to male. They are used to heal diseases (sometimes the disease itself being personified), to cause fertility, to bring good luck, or a blessing; or, in the case of darker magic, such as was practised by witches, to cause death or disease, or to transfer the property of others to the reciter (Sauvé, *RCel* vi. 67 ff.; *Celtic Magazine*, xii. 38; Camden, *Britannia*[2], 1806, iv. 488; Carmichael, *Carmina Gadelica*, 1900, ii. 2–21, 124; Joyce, *op. cit.* i. 629–632). See also BARDS (Irish).

A great many kinds of *amulets* were used by the Celts. If the wheel carried by the statues of the Celtic god with the wheel be taken as a symbol of the sun or the sun-god, then it is probable that the numerous small disks or wheels of metal, clay, or wood, found in Gaul and Britain, were protective amulets, bringing the wearer under the care of the god. A stele found at Metz in 1749 represents a person with a necklace to which is attached such an amulet. In other cases they appear as votive offerings to a river-god, many of them having been found in river-beds or fords (Gaidoz, *Le Dieu gaulois du soleil*, Paris, 1886, p. 60). Other amulets—white marble balls, quartz pebbles, models of the tooth of the wild boar (a Neolithic amulet), and pieces of amber—have been found buried with the dead, probably as protective amulets (*RA* i. [1873] 227; Greenwell, *British Barrows*, 1877, p. 165; Elton, *Origins of English History*, 1882, p. 66; Renel, *Religions de la Gaule avant le Christianisme*, 1906, pp. 95 f., 194 f.). Phallic amulets were also worn, perhaps as a protection against the evil eye (Reinach, *Bronzes figurés de la Gaul romaine*, Paris, 1900, p. 362). Pliny speaks of the Celtic belief in the magical virtues of coral, either worn as an amulet, or taken in powder as a medicine; and archæological research has shown that the Celts, during a limited period of their history, placed coral on weapons and utensils, apparently as an amulet (Pliny, *HN* xxxii. 2, 24; *RCel* xx. 13 ff.). Pliny also describes the method of obtaining the 'serpent's egg,' formed from the foam produced by many serpents twining about each other and thrown into the air. The seeker had to catch it in his cloak before it fell, and flee to a running stream, beyond which the serpents could not pursue him. Such an egg was believed to cause its owner to gain lawsuits, or obtain access to kings. A Roman citizen was put to death in the reign of Claudius for bringing such a Druidic talisman into court. This egg was probably some kind of fossil, and was doubtless connected with the cult of the serpent, while some old myth of an egg produced by divine serpents may have been made use of to account for its formation (Pliny, *HN* xxix. 3, 54; 12, 52; see CELTS, X.). Rings or beads of glass, such as are found in tumuli, etc., are still popularly believed in Wales and Cornwall to have been formed by serpents in much the same way as in Pliny's description. They are called *glain naidr*, or 'serpent's glass,' and are believed to have magical virtues, especially against snake-bite. This virtue is also credited to stone rings (generally old spindle-whorls) in the Scottish Highlands (Hoare, *Modern Wiltshire*, 1822, p. 56; Brand, *Popular Antiquities*, 1870, iii. 246, 315), while 'healing stones' both for man and beast are to be found in Ireland and in Scotland alike (Joyce, *op. cit.* i. 628 f.). Many little figures of the boar, the horse, the bull, with a ring for suspending them from a necklet, have been found, and were amulets or images of these divine animals (Reinach, *op. cit.* pp. 286, 289).

LITERATURE.—This has been cited throughout the article.

J. A. MACCULLOCH.

CHARMS AND AMULETS (Christian).—I. Historical survey.—Christianity came as a religion of the spirit into a world given over to superstition and magic. To these Christianity set itself in strong opposition, expelling with irresistible power the illusions under which the religion of Nature had held men's minds in bondage. Ac 19[19] relates that, as the result of St. Paul's missionary preaching in Ephesus, magical books to the value of fifty thousand pieces of silver were publicly burnt; and it would be wrong to suppose that, while burning the books, the people retained their belief in magic. Ancient Christian preaching went the other way to work, and dealt with thoughts first, and things afterwards. This temper lasted long. The more the Christians felt themselves inspired by the Holy Spirit and gifted with miraculous powers, the less willing or able were they to believe in the magical power of lifeless things. The belief is mentioned in ancient Christian literature only to be attacked as an error of heathendom, especially Phrygian and Celtic (Gal 5[20] φαρμακεία, cf. 3[1] βασκαίνειν; *Didache* ii. 2, iii. 4, v. 1; Justin, *Apol.* i. 14; and, still later, Origen, *Peri Archon*, II. xi. 5; Euseb. *Dem. Evang.* iii. 6, 9 f.; cf. 2 K 21[6], 2 Ch 33[6], Asc. Is. 2[5]). It is from the pen of a Christian (Hippolytus, *Refut.* iv.) that we have the most powerful refutation of the artifices of astrology and magic; and Apuleius found more than his

match in Augustine (*de Civ. Dei*, viii. 16–22). Not until later times did belief in magic find its way into Catholic communities and gain the recognition of the Church herself.

Nevertheless the Christians had always lived under the suspicion of practising forbidden magic rites (κακοποιός, 1 P 4[15]; 'superstitio malefica,' Suet. *Nero*, 16). This they inherited from Judaism. Pliny did not succeed in proving anything of the kind against them; but yet in Hadrian's rescript to Servian (as given by Vopiscus, ch. 8) we find Christian elders associated with rulers of the Jewish synagogues and Samaritans as *mathematici, haruspices, aliptæ*. As a matter of fact, there were among the Christians, and especially among the Gnostics of Egypt, zealous devotees of magic. What we know of Gnostic worship, with its incomprehensible formulæ, its use of strange objects, and its insistence on ceremonial correctness, shows affinity with magical practices. Forms of conjuration and amulets have come down to us whose origin is undoubtedly Gnostic; and Origen turned upon the Gnostics the accusations of magic brought against the Christians by Celsus (vi. 21–40). But it was not confined to the Gnostics. It must be admitted that the Catholic Church was not quite free from the taint. On the walls of the catacombs, Jesus Himself is depicted holding a magic wand, though the theologians lay stress upon the absence of all magical means from His miracles (*e.g.* Arnobius, *adv. Gent.* i. 43 f. [*CSEL* iv. 28 f.]). The antithesis between Divine and demoniacal is clearly shown in the apocryphal accounts of the contest between Simon Peter and Simon Magus—the magician kills, the Apostle makes alive; but otherwise the means employed are the same (cf. Joh. Malalas, *Chron.* p. 252, ed. Bonnet; Georg. Mon. p. 366, ed. de Boor). To the questions of a Christian every demon must give an answer (Tert. *Apol.* 22, 23); even the breath of a Christian was enough to stay the working of a heathen charm (Dionys. Alex., *ap.* Euseb. vii. 10. 4).

Three things render difficult an exact estimate of the dissemination of this superstition among Christians in the earliest times: (1) Christian literature is nearly silent; (2) objects cannot be dated with certainty: and (3) Divine names of Jewish and Christian character were used also by heathen magicians.

With the 4th cent. magical belief began to take a firmer hold within the Church, although synods (*e.g.* Elvira [A.D. 300 or 313?], can. 6; Ancyra [A.D. 315], can. 24; Laodicea [*c.* 360], can. 34–36) and the great leaders of theology continued to protest against the adoption of superstitious means in sickness or for the recovery of lost articles. Chrysostom is especially emphatic (see *adv. Judæos*, hom. viii. 5 [*PG* xlviii. 935], *ad Pop. Antioch.*, hom. xix. 4 [*ib.* xlix. 196], *ad Illum. Catech.* ii. 5 [*ib.* xlix. 239], hom. *in 1 Co* 7[2] [*ib.* li. 216], *in Ps* 9, ch. 7 [*ib.* lv. 132], *in Joh.* hom. xxxvii., lv. [*ib.* lix. 207, 301], *in 1 Cor.* hom. xii. 8 [*ib.* lxi. 105], *in Gal.* com. i. 7 [*ib.* lxi. 623], *in Col.* hom. viii. 5 [*ib.* lxii. 358], *in 1 Thess.* hom. iii. 5 [*ib.* 412]. Of Western preachers cf. pseudo-Augustine (Cæsarius of Arles (?), *Sermo* 168. 3, 265. 5, 278. 279. 4 f. [*PL* xxxix.]; cf. Caspari in *ZDA* xxv. [1881] 314–316, and *Kirchenhist. Anecdota*, i. [1883] 193–212, 213–224); Martin of Bracara (*Correctio rusticorum*, ed. Caspari, 1883; see also the *Capitula* of Martin of Bracara in *PL* cxxx. 575 ff.]); Pirminius (*Scarapsus*, 22 [*PL* lxxxix.; cf. Caspari, *Kirchenhist. Anecdota*, 151–192], *Vita S. Eligii*, ii. 15 [*PL* lxxxvii. 528, ed. Krusch, *Mon. Germ. Hist. Scr. rer. Merov.* iv. 705, 753]; Nürnberger, *Aus der litter. Hinterlassenschaft des hl. Bonifatius*, 1888, p. 43). But their protests assumed the reality of the wonders of magic, condemning them only as ungodly and devilish (cf. Aug. *de Civ. Dei*, xxi. 6, *de Trin.* iii. 7, 12), and supposed the existence of a higher form of magic that was Divine. After the rise of martyr-worship and the Invention of the Holy Cross, the Church possessed a number of sacred objects from which protection and all blessings might be expected. This belief flourished extraordinarily from the 6th to the 8th century. Pope Gregory the Great furthered it with his example and sanctioned it with his authority; for France, Gregory of Tours is typical. And it was further advanced through the incursions into the Roman Empire of the barbarians, whose Christianity had not penetrated beneath the surface. The Frankish synods and the Anglo-Saxon *libri pœnitentiales* (collected by Wasserschleben, 1851, and by H. J. Schmitz, 1883) had to lay heavier and heavier ecclesiastical penalties on proscribed heathen uses. Under Charlemagne the matter was taken in hand by the State (cf. *Capitularia regum Franc.*, ed. Boretius [*Mon. Germ. hist.*], i. 25, 45, ii. 44). A collection of all these decrees is given by Burchard of Worms (*Decret.* lib. x. [*PL* cxl. 831–854]). But the clergy themselves lent support to the practice, and similar usages, but thinly cloaked in Christian and ecclesiastical guise, were embraced even by bishops. The more rationalistic tendencies of the iconoclasts in the Byzantine Empire and of individual theologians like Agobard of Lyons or Claudius of Turin in the West were quickly and effectively suppressed.

In the Middle Ages, Europe presents a spectacle similar to ancient Rome. As there magic was nominally forbidden, and yet flourished, and in many ways received even official recognition, so here it is possible to point to a whole series of civic and ecclesiastical prohibitions (e.g. *Cod. Just.* lib. ix. tit. 18; *Decr. Grat.* ii. ch. 26, qu. 5), which serve only to prove the opposite of that which one would gladly conclude from them. They show not that there was no magic, but that magic was suspiciously rife, and in certain forms even sanctioned. The few enlightened spirits that arose appear only as isolated figures, and the two forms of magic—that which the Church sanctioned, and that which it proscribed—continued to increase side by side. Contact with the East and the Crusades strengthened the inclination towards the use of protective and remedial charms. In connexion with the suppression of the Albigensian and Waldensian heresies the Inquisition developed an unbounded activity against black magic, which, however, only led to the firmer establishment of that sinister superstition.

In the 15th and 16th cents., while enlightenment and culture spread more and more among the upper classes of society, the Renaissance advancing from Italy brought in its train new forms of superstition. The same Humanism which sought to free itself from the superstitions of the despised monks turned with unstinted admiration to the ancient modes of thought, and gave a new life to astrology and all the practices that accompany it. In opposition to this, the Reformation, taking its stand upon Apostolic Christianity, and resting everything upon the spiritual power of the living Word, sought to put away superstitious inclinations from the hearts of the people. This did not happen all at once. Luther himself was as convinced as any theologian of the Middle Ages of the power of the devil, and he shared many monastic beliefs which his Humanistic friends had already rejected. But he recognized no counter-charm save faith and prayer; and with him, above all men, it is clear that these notions of the Middle Ages were nothing but survivals. All Churches alike have joined in the persecution of witches; but it is easy to see how the Protestant conception of religion, with its insistence upon the word of God on the one hand and upon faith on the other, left ever less and less room for superstitions. Calvinism succeeded perhaps better than Lutheranism. Everywhere, however, the conservative mind of the peasants held tenaciously to the expedients of magic, and even modern enlightenment has not been able completely to eradicate them.

2. **Underlying ideas.**—The basis of magical practice is a conception of the world which thinks of everything as animate, and therefore as a vessel of some spiritually operating power. Those operations are not supposed to be psychological or ethical,

but essentially physical. The modern conception of electro-magnetic influence affords the best analogy. We may call it 'Panpsychism'—a form of Animism as far removed from the belief in an omnipotent, all-working God as it is from the physical point of view of the ancient philosophy of nature, or of modern natural science. Among the Jews of the restoration, still under Persian influence, and the Greek philosophers of the Hellenistic age, this primitive conception took the form of an extraordinarily extensive belief in angels and demons. The object originally thought of as the source of power became only a vessel and an instrument in the hand of a powerfully operating personality. The derivative nature of this belief appears in the purely accidental association between the two. It is true that an affinity is asserted between certain good or evil spirits and certain objects, formulæ, or ceremonies; but not only has every spirit many different instruments of power at his disposal, but the same instrument serves many different spirits. As in religion, so here we note a tendency to something like henodæmonism: at a given moment man is concerned with but one spirit whose power he wishes to repel or to win for himself. At the same time there appears a division into good and bad, benevolent and harmful, spirits, into angels and demons. The whole use of charms rests upon belief in the superior power of the former; a few forms of magic only have their origin in an opposite belief (black magic).

The Neo-Platonists, especially Iamblichus, had already systematized these popular notions, and had attempted to justify them philosophically. Christian theology adopted their theories, while far more eager than they to reconcile the whole angelology and demonology with monotheistic views (Joh. Damasc. *de Fide Orth.* ii. 4). On the one hand, demonstrations were offered to prove the existence of an inward connexion between every spirit and a definite object or formula; the name, picture, or symbol is not merely a human form of expression, but possesses an objective value as a form of manifestation in which the spirit is wholly or partially operative. Christian theology sought support for these theories in the great thought of the Incarnation of God. If the greatest of all powers, Omnipotence itself, was manifested to our sense in human shape, could not the lower powers similarly become incarnate, and embody themselves in men, or even in lower forms? Next to the purely spiritual beings stand the saints (*q.v.*), bound through their own past life to the world of sense, who have left behind them in the shape of relics (*q.v.*) vessels of their spiritual power. On the other hand, all possible emphasis is laid upon the sovereign freedom of the will of God, whose command or permission alone renders possible any exercise of power (Lactantius, *Inst. Div.* ii. 14, 15; Aug. *de Divinatione Daemonum* [*CSEL* xli. 597–618], *de Civ. Dei*, xii. 25, *de Trin.* iii. 8, 13; pseudo-Aug. *Sermo* 278. 4 [*PL* xxxix. 2270]).

This is the teaching of the Greek theologians, as well as of the Latins (cf. John of Damascus, and Thomas Aquinas, *Summa*, ii. 2, qu. 91–96, *quodlib.* xi. 10). We cannot make these great theologians responsible for all the writings that bear their names; to such names as Gregorius Thaumaturgus and Albertus Magnus a whole literature of magic has been attached. Leo the Wise, whose *Novella* lxv. outdoes all earlier State ordinances against magic, became in popular rumour himself an arch-magician, and the like happened with Pope Sylvester (Gerbert). In the Middle Ages any serious student of mathematical or scientific problems—like Roger Bacon or Raymond Lull—gained this reputation at once. But Magic could yet appeal with some right to the theologians whose theories had been made her justification. How difficult was the position of the ecclesiastical theology—compelled to admit the underlying theories of magic, and yet unwilling to sanction the practice—appears most clearly in the writings of Gerson. The Church herself made war, under the title of magic, sorcery, and witchcraft, only upon that part of the whole phenomenon whose methods and aims were outside ecclesiastical control, and were suspected of connexion with heresy—Manichæan, Albigensian, or Catharian. The general principles are laid down in the Papal bulls (Gregory IX., *Vox in Rama*, A.D. 1233; Innocent VIII., *Summis desiderantes*, A.D. 1484, *Bullarium Romanum* [1743], iii. 3. 191 [Mirbt, *Quellen zur Gesch. des Papsttums*, 1895, p. 165]; Alexander VI., 1494; Julius II., 1507; Leo X., 1521; Hadrian VI., 1523; Pius IV., 1564), and detailed directions are given in the *Directorium inquisitorum* of the Spanish Grand Inquisitor, Nicolaus Aymericus (1358) (1376?), and in the famous *Malleus maleficorum* (composed A.D. 1487 by Krämer and Sprenger, and printed at Cologne, 1489, 1494, 1496, 1511, 1520, etc., best ed. in 4 vols., Lyons, 1669, Germ. tr. by J. W. R. Schmidt, 1906); and in the works of the Jesuits M. Delrio (*Disquisitionum Magicarum libri vi.*, 1606) and P. Binsfeld (*Tractatus de confessionibus maleficorum et sagarum*, 1591).

We must not, of course, presume that men consciously entertained these underlying ideas, or that they were acquainted with the philosophical and theological theories about them. Charms are applied by ancient custom no less (indeed, perhaps more) generally by those who do not understand their meaning. Incomprehensibility and irrationality are often important factors in their use. It frequently happens that the original meaning of a charm disappears altogether, and enlightened times subject everything to an ingenious rationalization; yet the use of charms and their application remain as before, and at any time the original meaning may be revived.

Tatuing, for example, had undoubtedly at first a magical, prophylactic import, and it is possible that this import is retained in the practice of tatuing with religious marks which is still found among the Christian peoples of Italy and Bosnia. But among modern sailors it survives only as a meaningless convention, a kind of ornament, as is at once obvious from the subjects chosen. A horse's head on a stable, a pair of antlers on a ranger's house, are in Germany at the present day common symbolic ornaments pointing to the nature of the building. In former times horses' skulls were highly valued among the Germans as defensive charms—a use against which, on account of its connexion with heathen sacrifices, the Church waged energetic warfare. So, too, among the Greeks ox-skulls were originally a charm which later on developed into the so-called *bucranium*-ornament: we do not know what is the meaning of the numerous ox-skulls found to-day in villages of Asia Minor (see H. Rott, *Kleinasiat. Denkmäler*, 1908, p. 82; and art. ÆGEAN RELIGION).

Under these circumstances it is often difficult to fix the boundary between charms and ornaments or curiosities. What appears at first sight to be merely a decoration may have significance for its wearer as a means of protection. At the present time there is an inclination to give exaggerated recognition to this fact, and to attribute to every possible object a magical character and purpose, of which very likely neither its maker nor its possessor has ever dreamed. We must remember that in this province, as everywhere, nothing is stationary or universal; nor is the path of human progress a straight line leading ever upwards from superstition to enlightenment, but a tortuous road that sinks as often as it rises. Moreover, at one and the same time, different communities in a nation—the country folk and the town dwellers—as well as different classes—the educated and the uneducated—think very differently upon the subject. Remembering this, we cannot be too cautious in our conclusions.

3. Terminology and classification of charms.—Even in ancient times the Egyptians had organized the science of charms into a complete system (see Wallace Budge, *Egyptian Magic*[2], 1901). Celsus (*ap.* Orig. vi. 39) incidentally enumerates the following as practised and taught by Christians: *καθαρμοὺς, ἢ λυτηρίους ᾠδάς, ἢ ἀποπομπίμους φωνάς, ἢ κτύπους, ἢ δαιμονίους σχηματισμούς, ἐσθήτων, ἢ ἀριθμῶν, ἢ λίθων, ἢ φυτῶν, ἢ ῥιζῶν, καὶ ὅλως παντοδαπῶν χρημάτων παντοῖα ἀλεξιφάρμακα*, and, further, *βιβλία βάρβαρα, δαιμόνων ὀνόματα ἔχοντα καὶ τερατείας*. Augustine (*de Doctr. Christ.* II. xx. 30) mentions as 'molimina magicarum artium': (1) aruspicum et augurum libri; (2) ligaturae atque remedia, sive in praecantationibus, sive in quibusdam notis quas characteres vocant, sive in quibusque rebus suspendendis atque illigandis, vel etiam aptandis quodammodo. This terminology is based partly upon the objects employed as charms, partly upon the manner of their application, and partly upon the purpose. These different bases of classification are seldom distinguished; we often find as parallel species *φυλακτήρια, περίαπτα, ἐπῳδαί, χαρακτῆρες, incantationes, ligaturae, remedia, phylacteria, characteres, succini, herbae*. Generic names are: *τὰ περίεργα* (*e.g.* Ac 19[19]; Iren. I. xxiv. 5), *μαγεία, magia, μαγγανεία, γοητεία, φαρμακεία*. (According to Suidas, *μαγεία* is distinguished as the invocation of good spirits for beneficial purposes, *γοητεία* as the conjuration of the dead, *φαρμακεία* as the administration of magical potions. This contradicts Bingham's [vii. 25] definition of *μαγεία* as harmful magic—*veneficium* and *maleficium*—and of *incantamentum* as the use of salutary charms.) All these terms deal only with active or 'working' magic, in distinction from the various methods of inquiry into the future—passive or 'seeing' magic (*μαντεία, divinatio*). The latter plays the greater part—see the list of heathen *μαντεῖαι* (to which the corresponding list of *μαγεῖαι* is unfortunately lacking) in Josephus Christ. *Hypomnesticon*, 144 [*PG* cvi. 160); the list, which Isidore of Seville, *Etymol.* viii. 9 [*PL* lxxxii. 310], draws up from Augustine (*de Doctr. Christ.* ii. 21, *de Civ. Dei*, vii. 35, xxi. 8), Jerome (*in Dan.* 2[2] [*PL* xxv. 521]), and Lactantius (*Div. Inst.* ii. 17 [*PL* vi. 336]),—cf. Rabanus Maurus [*PL* cx. 1095],—and the *Indiculus Superstitionum et paganiarum* from *Vat. Pal.* 577 (last published by Boretius, *Capit. reg. Franc.* [*MGH* i. 222 f.], and commented upon by Hefele, *Conciliengesch.*[2] iii. 505–511, and Saupe, in *Programm des städtischen Realgymnasiums zu Leipzig*, 1891), confuse the two forms (see art. DIVINATION).

Magic is nowadays mostly divided into 'white' and 'black,' according as the help of good or of evil spirits is called in. This distinction generally coincides with that between the ends desired—help or harm, defence or offence. Others define white magic as supernatural working on another's behalf, and black as that for one's own good. Schanz gives a more modern sounding definition (but cf. Aug. *de Doctr. Christ.* ii.), dividing magic into natural and artificial—the one harmless (white), the other harmful (black), and passing, with the aid of demoniacal powers, beyond the natural. Kiesewetter (ii. 701) propounds a different distinction: white magic is a development of the intuitive faculties, with the object of attaining the mystic Kenosis; natural magic is the application of rudimentary physical and chemical knowledge; black magic is witchcraft; and theurgy is the raising of spirits, including necromancy and invocation of the devil.

4. Purposes.—A. *DEFENSIVE CHARMS.*—(1) *Prophylactic.*—The most important and commonest purpose of charms is that of averting evil, to which the class name of 'apotropaeic' is given by modern scholars. This appears in the names for charms—*φυλακτήριον* (also *φυλακτόν* among the Byzantines), which in Latin is either transcribed as *phylacterium* or translated by *servatorium* (see Suicer and Ducange, also Loewe-Goetz, *Corp. Gloss.* vii. 86). *Amuletum* has the same meaning. This word has no connexion with the Arabic, either with *hamala*, 'to wear' (von Hammer), or with *hamāil*, 'sword-belt' (Dozy; against this see Gildemeister, *ZDMG* xxxviii. 140 ff.), but is genuine Latin. So comparatively early a writer as Varro (*Rer. divin.* bk. xiii. *ap.* Charisius, *Gramm.* 105, 9, ed. Keil) cannot explain it; Pliny uses it frequently (xxiii. 20, xxv. 115, xxviii. 38, xxix. 66, 83, xxx. 82, 138, xxxvii. 51, 117), and always in the sense of a protective or defensive object, of whatever kind. According to the glosses, it is derived from *amolimentum* (*Corp. Gloss.* vi. 63, 65; cf. also Walde, *Etymolog. Wörterb.*, 27). The Greeks speak continually of *ἀλεξητήριος, ἀλεξίκακος, ἀλεξιβέλεμνος, ἀλεξιφάρμακος*.

The evils to be averted are all possible harmful influences, especially that of the evil eye (*βασκανία, fascinatio*—hence *προβασκανία*), and further demoniacal possession, fever, illness of all kinds, wounds, sudden death, fire, drought, attacks of robbers, and all other evils by which mankind is threatened. The instruments by which they may be averted are small objects hung upon the body (*περίαπτα, περιάμματα, ligaturae*, Old Germ. *Angehenke*, 'ligatures'—also *περιτραχήλια*). The special name given to these nowadays is 'amulet,' also 'talisman' (an Arab. form from *τέλεσμα*).[1]

From the East was derived the form of the medallion or small plaque (*πέταλον*), often in gold with jewels or enamel. In Rome the little lead tube (*bulla*) had its home; and in later times a small casket or locket (*capsa, capsella*). Under Christian influence these amulets took the form of the cross, but the medallions also survived.

The ancients had a most exhaustive system of defence by magical means (Jacob Burckhardt, *Die Zeit Constantins des Grossen*, 210). To every limb and every kind of disease a special charm was allotted. Immediately a child was born, it was decorated with amulets—commonly bells or magic knots—and its chair and cradle were surrounded with all manner of charms (Chrys. *in 1 Cor.* hom. xii. 7 [*PG* lxi. 105]; Theodore of Studium, *Laud. fun. in matrem suam*, 2 [*PG* xcix. 885]). The rattle and little bell given to babies for amusement nowadays may have originated in this custom.

It was soon sought in Christian circles to set these phylacteric objects on a level with the *tephillin* which were ordained in the OT, and which later Judaism was no longer content to regard, in accordance with the teaching of Dt 6[8] 11[18] and Ex 13[9, 16], as mere tokens of remembrance, but found in them, as indeed the original wearers had probably done before them, protective charms; hence the Greek rendering *φυλακτήρια* (Mt 23[5]; see Schürer, *GJV*[3] ii. 484). The Fathers contested this co-ordination (*e.g.* Epiphanius, *Haer.* 15 [*PG* xli. 245]), and the earlier synods laid the penalties of the Church upon the manufacture of phylacteries by the clergy. But in the East a change of opinion began with the 6th cent., and was completed with the iconoclastic controversy. The Patriarch Nicephorus (*Antirrh.* iii. 36 [*PG* c. 433]) speaks of the wearing of gold or silver crosses, often with pictures from the life of Christ, as a primitive Christian custom, the rejection of which by the iconoclasts only served to convict them of apostasy.[2]

[1] In the *Westostlicher Diwan*, Goethe distinguishes between 'talisman,' a magic mark on a precious stone, and 'amulet,' a form of words (often of some length) written on paper; but this distinction is without historical basis.

[2] Cf. Theophanes, p. 446 [ed. de Boor], on the persecution of *φυλακτήριον*-wearers at the time of Constantinus Copronymus). At the present time the so-called *encolpia* worn by all dignitaries of the Orthodox Church are generally regarded as decorative insignia, and their pattern is strictly regulated according to the rank of the wearer. But Nicephorus says clearly that they were called *phylacteria*, and served for the protection and

The development in the West was similar. It is true that the decrees of the Councils were ratified and continued (cf. above, § 1; Fulgentius Ferrandus [*PL* lxxxviii. 824]; Crisconius Africanus [*ib.* 876]; Schmitz, 312 ff.), and Pope Nicolaus I. forbade the manufacture of *ligaturae* among the Bulgarians. But it was always heathen charms alone that were meant; Christian charms were in continual use. The Western clergy, too, wore crosses, and by no means for mere ornament. The presents sent from Gregory to Theodelind all have the character of amulets; some of them are still preserved in the treasury at Monza—a cross-pendant with a relic of the Holy Cross, a Gospel lectionary in a Persian case, three rings with hyacinth and albula stones (*Ep.* xiv. 2 [*PL* lxxvii. 1316]). Gregory of Tours wore such a cross, and periodically changed the relic it contained. The *Lives of the Saints* are full of miracles wrought by these *phylacteria*.

In the later Middle Ages the practice of indulgences extended the working of charms to a new province—the fate in Purgatory—and therewith gave them an enhanced interest; many things intended to effect indulgence became charms in popular use (see 5 C (8)).

Here, too, mention must be made of the scapulary. Introduced by the Carmelites in 1287 and supported by Papal privileges (*Privilegium sabbatinum*, 1320), it was to enjoy so great a popularity as to arouse the competition of other monastic orders. The scapulary is a strip of cloth, suggesting the cowl, which is wrapped round the dying in order to ensure him a blessed death and immediate freedom from Purgatory. A comparison may be drawn with the legend that Pilate was protected against the Emperor's wrath as long as he wore Christ's seamless coat (*Leg. Aurea*, liii.).

Modern Roman Catholicism, with the numerous insignia of its brotherhoods, its medals struck in commemoration of ecclesiastical festivals, its medallions in memory of different shrines, and especially of pilgrimage-centres, has done much to encourage this faith. To all these objects, which generally take the form of crosses or medallions to be worn round the neck, the consecration of the Church and contact with sacred things (relics and images) impart protective power; and in the popular regard far more weight is laid upon this than upon the purely memorial significance. The present writer met at Nancy in 1909 a driver who was firmly persuaded that the safety of his horse and carriage was guaranteed by a little medallion showing the portrait of the Madonna du Bon Secours which he had in his pocket.

But even in Protestant circles, especially among the country-folk, there is no lack of amulets. There exists in Germany a great quantity of *Schwertbriefe* (also called *Himmelsbriefe*, from the belief that they have fallen from heaven), containing an abundance of prayers, formulæ, names, and characters, and lavishly decorated with crosses, which are worn round the neck or in the pocket, for protection against sword-cuts. In recent wars many soldiers are said to have put their trust in the protective power of such papers, or of coins and other objects, as they went into the field (see Schindler, *Aberglaube des Mittelalters*, 1858, p. 131).

Amulets are used for the protection not only of men but also of cattle, which form to some extent man's most valuable possession, and are as liable as he to the attacks of demons. The application of *ligaturae* to cattle is mentioned, among others, by Eligius and Ebendörfer (see below, 5, introd.). In later times the so-called Antonius medallions found special favour, for Antony of Padua has been the patron of horses and asses ever since the adoration by an ass of the Host which the saint held in his hand. To swine Antony's greater namesake, the ancient Egyptian hermit, affords protection. Cowbells, like the bells hung on infants, had originally a protective significance, and were intended to frighten away evil spirits; their use as a means of recognition by the herdsman is a later idea.

The same purpose as that of amulets or talismans worn on the person is served by apotropaic inscriptions on buildings (cf. Dt 6^9 11^{20}; pseudo-Aristeas, *Ep.* § 158, ed. Wendland; Euseb. *Præp. Evang.* VIII. ix. 27; see, for further details, 5 C (6)). Men desire to protect not only their bodies, but their houses. Even individual pieces of furniture and household ware are equipped with their inscriptions and magic characters (Chrysostom, *in 1 Cor.* hom. 43 [*PG* lxi. 373], mentions a εὐαγγέλιον hanging on the couch).

(2) *Counter-charms.*—The use of charms is not only protective: a demonic enchantment must be removed by a counter-charm. In such cases the first business is to determine the nature of the enchantment in question (ἀνεύρεσις φαρμακειῶν ἤτοι μαγειῶν), and then to nullify its operation (κάθαρσις γοητειῶν; Zonaras on Ancyra, can. 24 [*PG* cxxxvii. 1192]). This procedure, however, was held to be heathen. Christians were concerned mostly with the thwarting of demonic miracles through Divine power. Simon Magus, borne heavenwards through the air by demons, was brought to earth by the Apostles' prayers; *i.e.* the power of the demons was removed, and thereupon the magician fell headlong and was dashed to pieces (*Acta Apostolorum Apocrypha*, ed. Lipsius and Bonnet, i. 82, 166; cf. Arnobius, *adv. Gentes*, ii. 12). The apocryphal *Acts of the Apostles* are full of such miracles. That they were ascribed to the action of a holy magic, and not merely to the power of prayer, is shown by the case of St. Peter, who caused Simon's demoniacal hounds to vanish by means of some pieces of consecrated bread lying hidden in the sleeve of his cloak (*Mart. Petri et Pauli*, 24 ff.). Some heretics, who by the assistance of demons were walking over a river, were made to sink, not by prayer or by conjuration, but by Hosts thrown into the stream (Cæsarius of Heisterbach, *Dial. Mirac.* ix. 12). In isolated instances the sanction of the Church was obtained even for the resistance of black magic by black magic. A German bishop on a journey back from Rome was bewitched by his mistress, and lay sick unto death until he gained the consent of the Pope to allow him to call in another witch, who turned the enchantment upon its author; then the bishop immediately recovered, and the mistress died (*Malleus malef.* ii. 2). But in general the Church tolerated such counter-magic, which was practised only by those who made a trade of it, as little as she tolerated witchcraft itself (cf. Ferraris, *Bibliotheca Canonica*, *s.v.* 'Superstitio,' § 74). The only licensed form was that contained in the magic working of the Church's *sacramentalia* (see 5 C (10)).

(3) *Curative charms.*—Akin to counter-charms is a use of charms which is both more extensive than any other and more fully illustrated by the literary records of antiquity, namely, that for the purpose of healing. Sickness was held to be the working of a demonic power, of some magic—an alien spirit has taken possession of the man and must be driven out. To this end, besides the

assurance of life, for the health of soul and body, for healing in sickness, and for the averting of attacks by unclean spirits. The Emperor and high Imperial officials also wore such *phylacteria*; and they were sent as pledges of safe conduct (cf. Anastasius Sinaita *in Ps.* vi. [*PG* lxxxix. 1112], of Emperor Mauricius; pseudo-Symeon, p. 631, 2, and Georgius Mon. *Cont.* p. 795, 3 [ed. Bonn.], of Emperor Theophilus; see, further, Ducange on *Alexias*, ii. [*PG* cxxxi. 204]).

recitation of formulæ, breathing upon the patient, or anointing him with oil—a much-used medium in magic, supported in Christian practice by Ja 5^{14}—magical objects could also be applied; for example, the Solomon's ring (see 5 B (4)). But, in addition to possession by demons, all bodily ailments were attributed to bewitchment, and so the application of remedial charms was a panacea for all sickness.

Magic formed a very large element in the medicine of antiquity, and has its share in the popular medicine of to-day. Any legitimate remedy may easily become a charm. For example, breath may often have a directly physical effect, warming and softening; but when water that has been breathed upon in the morning is supposed in the evening to have a healing virtue, there is present the notion of the magical transference of power. To drink an herbal powder for colic is a reasonable course of action; but when the herb is hung round the neck, that is magic, says Augustine, and with truth (*de Doctr. Christ.* II. xxix. 45). Then the idea is that the sight of the antidote affrights the demon.

The chief remedial measure is to bind the demon so that he can do no harm. This is done partly by the methods of sympathetic magic—some object is formally bound and certain knots are tied—and partly through conjuration. Gregory of Tours (*de Virt. S. Juliani*, 45, ed. Krusch, p. 582) gives a graphic description of how, in a case of sudden illness, a *hariolus* is called in and 'incantationes inmurmurat, sortes iactat, ligaturas collo suspendit.' Chrysostom's account is similar; in cases of sickness the conjurer (ἐπαοιδός) is sent for, or an old woman who, to the accompaniment of various formulæ, hangs an amulet with magic characters round the patient's neck. These practices must have been very wide-spread among the Christians. Chrysostom preaches repeatedly against them: they are idolatrous, and, if death follows upon their renunciation, it is to be counted as martyrdom (cf. also Basil *in Ps* 45^2 [*PG* xxix. 417]).

The form of conjuration consists of a short speech addressed in commanding tones to the disease in question, often in verse, commonly without sense or meaning. But longer forms were also used, and the tone passed imperceptibly into that of prayer, a special succourer being invoked for every illness. In case of poisoning the help of Anastasia φαρμακολυτρία was implored; if the patient could not sleep, a prayer (that is, a form of conjuration) was used, in which the names of the Seven Sleepers of Ephesus appeared (Vassiliev, *Anecdota graeco-byzantina*, i. [1893] 327), and so on. Often the desire was expressed that the disease should depart into some other being; and to bring about the transference certain ceremonies were performed upon a tree, or an animal, most commonly a cock. The notion entertained is sometimes that of a purely physical transmission, and sometimes that of the migration of an evil spirit (cf. the Gerasene swine, Mk 5^{12}). Another method was to expel the sickness by contact with a higher remedial power. As the demons fled before the presence of Christ and His saints, so the disease retires when anything sacred, be it man or thing, touches the affected portion of the sick man's body (see 5 A (2)). Then there are the images of diseased members, deposited or hung at a holy place (*in trivios et ab arboribus vel alio*, according to the heathen custom; see Pirminius, *Scarapsus*, 22 [p. 175, ed. Caspari]), and later in churches and chapels, to attract healing virtue to the particular limb. The significance of these images shifted from charms to *ex votos*—thank-offerings for recovery vouchsafed; but these were generally promised beforehand; and originally the wooden and waxen limbs were supposed to effect the cure.

Finally, names have here, as upon *phylacteria*, a compelling force. A sufferer from epilepsy—the falling sickness—can be cured by wearing on his person the names of the three kings who fell in worship before the infant Christ. And something of this name-magic can be traced in the common practice of giving certain medical prescriptions under the names of great magicians and saints (cf. 5 C (4)).

(4) *Detective magic.*—On the threshold that divides 'working' from 'seeing' magic (charms from divination) stand the methods employed to detect the guilty among a number of suspects, and to establish guilt or innocence where only one is accused. If it was desired, for example, to discover who was the thief among a body of suspected persons, an eye was painted on the wall, and the suspects were led past it; he whose eyes filled with tears as he went by was the thief. If this method was not at first successful, a magic nail was hammered in as well (Vassiliev, 341). The throat was another treacherous member; pieces of bread and cheese were given to the suspects, and he who choked over them was guilty. Of course, the bread and cheese must have been consecrated with special ceremonies; bread consecrated on Maundy Thursday was a particular favourite with the Greeks (Balsamon on Trull. can. 61 [*PG* cxxxvii. 724]; Synod of Constantinople, A.D. 1372 [*Acta Patriarch.* i. 595]; Vassiliev, 330), and also in the West (see Ducange, *s.v.* 'Corsned'). In Novgorod, after 1410, bread was used that had been consecrated before the image of the Edessene saints Gurias, Samonas, and Abibos (Vassiliev, lxv.; cf. the miracle of these saints [*PG* cxvi. 145-161]). In the 16th cent. this method lost its religious character and became more akin in form to divination. Women kneaded pieces of paper, containing the names of the suspected, into balls of dough, and threw them into a basin of water. The dough was dissolved, and the paper released; the first that came to the surface gave the name of the guilty (Pictorius of Villingen, *De rebus non naturalibus* [c. 1540]). Similar is the use of an axe or sieve placed in equilibrium, through the motion of which the guilty person was shown—a practice used in the trial of witches in France during the 16th century. A very ancient practice in cases of murder was to lead the suspected person to the bier, not in order to observe his demeanour in the presence of the victim, but in the expectation that the approach of the murderer would cause the dead man's wounds to bleed anew.

With this last method we come to the means by which it was sought to establish guilt or innocence in cases where a definite accusation was lodged. This form of procedure, known in the Middle Ages as the 'ordeal' (Germ. *Gottesurteil*), and very widely used for judicial ends, is both ancient and universal. Nu $5^{11ff.}$ prescribes the so-called 'water of bitterness' for cases of suspected adultery (cf. *Protevang. Jacobi*, 16); and the use of bull's blood among the priestesses of Achaia (Pausanias, VII. xxv. 8) is similar. Christianity believed from a very early time that the most efficacious means of revealing guilt was the Holy Communion (see, *e.g.*, *Acta Thomae*, 51, p. 167 [ed. Bonnet]). The magic element shows itself in the expectation that judgment and punishment will coincide. The use of the lot is pure divination; but the ordeals by fire and water lie within the province of working magic. In the former the accused must touch or carry red-hot iron; in the latter, either he had to plunge his hand into boiling water without being scalded, or he was bound and thrown into a river; if he sank, he was innocent; if the water would not receive him, he was held to be guilty. The chivalresque form of settling guilt or innocence by means of a fight is well known from Sir Walter Scott's splendid description in *Ivanhoe*. Deprived of its original meaning, it still survives in the modern duel.

B. *PRODUCTIVE CHARMS.*—(5) *Fertility.*—Charms can also be used for positive ends—the promotion of the forces valuable to man. By far the most ancient and most general application is for the furtherance of the forces of propagation either of the earth, that wood, meadow, and crops may grow, or of beasts and men, that they may be multiplied. Christianity found such usages everywhere in existence among the country people, especially the Germans, and in the beginning sought to do away with these heathen rites; but later here, too, the approved course was adopted of retaining what could not be uprooted, while clothing it in a form suitable to the Christian Church. Carlovingian *capitularia* still forbade the boundary processions (*rogationes*, 'beating the bounds'); but later they were led by the priest in solemn train with the sacrament; and in this form they have remained down to the present time. The most famous example is the *Blutritt* of Weingarten, in Württemberg—a procession on horseback with a relic brought from the East, blood from the wound in Christ's side. In time of severe drought a procession with the relics of St. Rolendis is said always to have produced a good effect (*AS*, May, iii. 242); good harvest weather is to be ensured by a procession with the relics of St. Florentia of Poitiers (Dec. 1).

A kind of magical manuring was also in use: holy water was sprinkled on the land before and during the sowing. There are even instances of the use—certainly not with the Church's approval—of consecrated wafers for this purpose. Here and there a peasant woman would scatter them over her cabbages for protection against grubs, or Hosts were put in bee-hives to render them more productive. Petrus Venerabilis (*de Mirac.* i. 1 [*PL* clxxxix. 852 ff.]) and Cæsarius of Heisterbach (*Mirac. Dial.* ix. 8) affirm that in one such case the bees built a regular chapel of wax. There is a similar legend of Drei Ähren, near Colmar.

Fertility must also be assured for beasts. To this end shepherds and huntsmen used bread or herbs that had been consecrated with magic forms, hiding them in trees or at cross-roads (Rouen, can. 4 [Burchard, x. 18; *PL* cxl. 836]).

(6) *Weather charms.*—Closely connected with the fertility charms are those for the regulation of the weather, whereby the various conditions of rain or sunshine that are most suitable for the growth of crops are produced, or the destructive forces of drought, hailstorm, and the like are malevolently called into action. To cause rain, some water from the brook was sprinkled in the air, or vessels of water were poured over the earth. A naked maid, with a henbane on her right foot, was conducted to the river and there sprinkled by other maidens (Burchard of Worms, xix. 5, qu. 194; Schmitz, *Bussbücher*, ii. 452). In the Middle Ages the statues or relics of Christian saints—at Perpignan, for example, the relics of St. Galderic—were bathed, like the statues of the gods in ancient times. In these practices sympathetic magic is obviously preponderant; less so when the relics of St. Exsuperius or the garment of St. Eutychius were simply carried in time of drought round the land. Another clear instance of this species of magic appears in a story of St. Benedict's sister. The saint was on a visit to her, and, as she wished to keep him longer by her side, she covered her head with her hands, as though for prayer, and poured forth floods of tears; immediately torrents of rain descended from heaven in response (*Vita S. Bened.* ch. 33; *Leg. Aurea*, xlix. 16 [p. 212, ed. Graesse]).

The belief that it was possible to bring bad weather by casting stones into certain mountain-lakes was supported by official laws against such action. Mt. Pilatus near Lucerne was one of these localities, and here the superstition was only gradually uprooted by Vadian, Gesner, and Platter in the 16th century.

As always happens, popular imagination busied itself mostly with malevolent magic. It was believed that certain individuals could direct the weather, and use it to the injury of others (they are called νιφοδιῶκται [ps.-Justin, *Quæst. ad orth.* 31; Conc. Trull. can. 61, where Balsamon's explanation, that divination by the clouds is meant, cannot be accepted], Lat. *tempestarii* [Charlemagne, *MGH Capit. reg. franc.* i. 59 (65), 104 (40)], and *immissores tempestatum* [*PL* cxl. 961; *Lex Visigoth.* vi. 2, 4; Schmitz, *Bussbucher* i. 308, 479, etc.]). Hail-clouds were supposed to come from a country named Mangonia, and with them came people who carried off the damaged fruits back through the air to their home. At the time of Agobard of Lyons († 841) this belief was particularly rampant: men claimed to have found such people who had fallen from the sky. The bishop had great difficulty in pacifying the populace ('contra insulsam vulgi opinionem de grandine et tonitruis' [*PL* civ. 147–158]). The superstition, however, remained, and played a sinister part in the trials of witches, who were believed not only to bring rain and hail by sprinkling water, but also to be able, aided by the devil, to steal corn, milk, butter, and other farm produce, drawing it by enchantment through the air.

To avert threatening storms, charms are again the means. Fires were kindled and various things (possibly as sacrificial offerings) thrown upon them; a cross was pointed to the four quarters of the heavens, and holy water was sprinkled in the air (Mengus, *Flagellum Dæmonum*, London, 1604, p. 208). Bell-ringing and shooting were also, without doubt, originally intended to affright the storm-demons; it was quite a later development to say that the one had the edifying purpose of calling the people to prayer, and the other the physical effect of breaking up the clouds.

(7) *Birth and capacity.*—To be fertile and to leave issue behind him is the dearest desire of man, and for its attainment various charms were used. Among these are throwing peas into the lap of the bride, eating the fruit of a tree bearing for the first time, drinking fresh birch-sap, and the simple possession of mandrakes—Heb. *dûdâ'îm* (Gn. 30[14]), mandragora, Germ. *Alraun* (cf. Physiologus, xliii. [p. 272, ed. Lauchert]). The girdle of St. Maginus of Tarragona was also useful, and, in general, the invocation of certain saints, of whom Kerler (*Patronate der Heiligen*, 1905, pp. 118 ff., 123 ff., 372 ff.) gives a list of extraordinary proportions. The means of effecting easy and safe delivery were also very numerous—many in universal use, such as crawling through something (see 5 A (2)), opening the locks of doors and chests, opening the blades of knives; and many peculiar to the Church. Among the last may be mentioned the girdles of St. Margaret, St. Hildegund of Mehre, and St. Licinius of Angers, the hair-girdle of St. Ludgardis, the shirt of St. Maria of Oignies, the staff of St. Dominic, dust from the body of St. Norbert (taken as medicine or laid on the neck), and so forth.

Immediately after the birth of the child, besides the inquiry by divination into its future, and the prophylactic rites mentioned above, there began a series of productive-charm processes to ensure it long life, health, bodily strength, and intellectual capacity. In naming the child an effort was made to gain for it a powerful patron by choosing the name of a famous saint, but further methods were adopted to affect directly the length of life. Different names were attached to a number of candles, which were then set alight, and the name on that which burnt longest was chosen (Chrysostom, *in* 1 *Cor.* hom. xii. 7 [*PG* lxi. 105])—another

form of magic standing on the boundary between divination and charm. At Béziers, protection against epilepsy was gained for the child by having it baptized in the font connected with the tomb of St. Aphrodisius. A St. Vitus's stone in Jura, which Monnier supposes to be the remains of an ancient phallus, imparted strength to children placed upon it. If a boy's sight was bad, it could be improved by the ceremonial ablution of the effigies of saints in the churches, accompanied by the recitation of many prayers and passages of Scripture. Similar methods were helpful also when a child was slow to learn: he was taken to church during Mass, and given wine and water to drink in a glass vessel inscribed with the names of the twenty-four heavenly elders (Vassiliev, 342). Special talent often appears in legend as due to the grace of Heaven vouchsafed in a particular revelation, generally through the Virgin; and so it was held possible, through the invocation of saints, to impart some understanding even to idiots, and to unlettered persons the capacity to read and understand texts of Scripture. In Italian churches there may still frequently be seen votive thank-offerings for success in examinations. Martin of Bracara [† 580], *Capitula*, ch. 76 [*PL* cxxx. 587] mentions various foolish practices used by women over their spinning and weaving (cf. Wuttke, *Der deutsche Volksaberglaube der Gegenwart*, 619).

(8) *Love-charms.*—Closely related to these are the various charms for producing, regaining, or securing love. This form of magic, inspired by passion, and often by jealousy, went so far as to aim at the death of the person loved, if he could not be won. Love-charms were much used in the heathen world—sometimes the magic top on which the head of a wryneck was tied (see Suidas, *s.v.* ἴυγξ), sometimes magic potions (φίλτρα). Jerome (*Vita Hilarionis*, 21 [*PL* xxiii. 39]) tells of a virgin who was rendered mad with love by means of Egyptian 'characters' buried by her lover under her threshold. Jewish exorcists were supposed to have special skill in this matter (cf. Jos. *Ant.* XX. vii. 2). One of these may be the author of the love-spell discussed by Deissmann in *Bibelstudien* (1895), 21–54, where, as in the case of *defixiones* (below, C (9)), the charm is inscribed on a roll of lead; the spell by which the demon is conjured consists of five series of names for God and acts of God taken from the Bible. The lover in this case may have been a heathen woman; but the practice of love-magic by Christians is proved by the warnings of Chrysostom, the prohibitions of the Synod of Agde, can. (4 Burchard, x. 29), and the *Penitentiaries* (Schmitz, *Bussbücher*, p. 306). The charms used were for the most part of heathen character: *e.g.* magic potions; leaves sewn together, of course with spells; apples or candles into which needles were stuck crosswise (by these a visit from the loved one was enforced); love-clasps made of frog's bones; four-leaved clover (cruciform); rose-apples secretly attached to the beloved's person (Wuttke, 550 ff.); and, most effective of all, something from the lover's own body mixed with the other's food—they even went so far as to use *semen virile* and *sanguis menstruus* (Burchard of Worms, xix. 5, 39–164; Schmitz, *op. cit.* pp. 314, 459). Wax images and candles were also used (cf. Lea, iii. 657, on a trial of the Inquisition, A.D. 1329). So long as a light burnt in a certain cloister, the Emperor Matthias remained bound to his mistress (Stüve, *Wittelsbacher Briefe*, vii. 682). But sacred things were also abused for this purpose. Cæsarius of Heisterbach tells of a priest who hoped to win the forbidden love of a woman by kissing her with a consecrated wafer in his mouth.

Similar methods were effective in conjugal quarrels. The demon of discord was conjured; husband and wife had to wear amulets with certain magic formulæ; and a magnet was cut in two and each was given a half, that they might be drawn together (Vassiliev, 340). This seems also to have been the purpose of golden rings with ὁμόνοια and Jn 14[27] engraved round the hoop (Dalton, *Catal. of Early Chr. Antiq. in the Brit. Mus.*, nos. 130, 132). Instances likewise occur of charms intended to convert love into hatred, and attempts to bring upon men by magic the enmity of all their friends. The table of curses from Puteoli, now in the Berlin Museum (published by Hülsen in the *Archäol. Zeitung*, 1881, p. 309 ff., and by R. Wünsch in Lietzmann's *Kleine Texte*, xx. 7 ff.), affords an example. In order to estrange a bridal pair, a handful of earth taken from a place where two cocks had been fighting was thrown between them. Similar instances might be multiplied.

C. (9) *MALEVOLENT CHARMS.*—How easy is the passage from the useful to the harmful has already been seen in the defensive and protective charms. Magic was pressed into service by the passions of hate and envy, as it had been by the desire for the good things of life; but now we see it employed for purely destructive purposes. The object was to bring ruin upon the health, the possessions, and the reputation of an enemy. We possess from antiquity a vast number of curse-tablets, mostly made of lead, and rolled up as letters, which were buried with the dead in order to ensure their safe delivery to the gods of the under world, into whose power it was desired to hand over the enemy. These tablets, on account of the binding which they were intended to effect, were called κατάδεσμοι, Lat. *defixiones* or *dirae*. They exhibit the same medley of heathen, Jewish, and Christian formulæ as the language of magic always does. Their dispatch was often accompanied by a ceremony of binding; or a symbolical figure, as that of a cock in bonds, was drawn upon the tablet itself. The curse is generally directed against a particular individual mentioned by name (it is characteristic that the mother's name as well is nearly always given—*pater incertus, mater certa*); but in a large number of instances its operation is contingent upon the committal of a certain act ('if any one . . . may he . . . '). This last is the form of ecclesiastical curse—the ἀνάθεμα—to which bodily as well as spiritual effects were attributed, and which certainly exercised a very perceptible social influence under the Christian Empire.

In racing circles, charms were a favourite method of laming one's opponent, or, in the circus, the horses of the opposing party (cf. Arnobius, *adv. Gent.* i. 43). Jerome recounts with all his subtle *naïveté* the story of a Christian jockey who protected his horses against hostile charms by water drawn from the pitcher of St. Hilarion: 'so Christ triumphed over Marna'—the local deity of Gaza (*Vita Hilar.* 20 [*PL* xxiii. 38]).

Every one believed that by means of charms he could bring all kinds of disease, especially demoniacal possession, upon his enemy, depriving him of bodily and intellectual power, and rendering him impotent. The belief that it was possible to turn men into beasts was as wide-spread in the Middle Ages as in antiquity, and continued from Circe to the witch-trials. In cases of demoniacal possession, the first step in the process of exorcism prescribed by the *rituale Romanum* was the removal of the enchantments under which the victim suffered. The source of greatest danger was the man who sought by charms to destroy his enemy's life. The rumours about the death of Germanicus (Tac. *Ann.* ii. 69) illustrate the great part played by this kind of magic in the ancient world; and Christians cannot be acquitted of the charge of having em-

ployed it. The most prominent method was that of sympathetic magic. In order to reach the heart of an enemy, the heart of an animal or an effigy to which his name was attached was transfixed ('per punctionem imaginum,' Pope John XXII.; see 5 A (1)); human bodies were buried under his door, or a piece of charred wood was deposited before his house.

These methods, though in themselves un-Christian, became another occasion for the misuse of the name of Christ, as well as of Biblical and ecclesiastical formulæ and the invocation of saints and angels. We know, moreover, from the penal ordinances of a synod at Toledo (xvii. [A.D. 694] can. 5 = *Decr. Grat.* ii. c. xxvi. qu. 5, c. 13) that clerics, when reading the *missa pro defunctis*, used to introduce the names of living men, whose death they sought thereby to encompass. An official adoption of this form of magic by the Church was the ceremony wherein a burning candle was put out or thrown to the ground in order to extinguish the life and blessedness of the victims of its condemnation. This was done, for example, in the proceedings against unrepentant excommunicates (*insordescentes*) at a synod at Limoges (A.D. 1031). It is a well-attested belief of the Middle Ages that death was in some cases caused by an enemy's prayer (Germ. *Mortbeten*, *Totbeten*; see Schönbach on Berthold von Regensburg, in *SWAW*, 1900, p. 55). This malevolent magic was generally so far conscious of the ungodliness of its acts as to avoid contact with the Church and ecclesiastical consecration, which would keep off or cripple the Satanic powers; indeed, the sign of the cross and consecrated things served as counter-charms against it. But the forms and instruments of church-worship were, none the less, regarded by it as effective weapons; and this resulted in the travesties of ecclesiastical ritual which appear in Satanism (*q.v.*). Such was the so-called Black Mass, and such was said to be the Mass of the Beardless among the Byzantines (see Krumbacher, *Gesch. der byz. Literatur*², p. 809; A. Heisenberg, *Byz. Zeitschr.* xii. 361, xiv. 661), though the beardlessness was probably adopted by the iconoclasts merely in opposition to the monastic fashion, and was later stigmatized by the orthodox as a token of homage to the devil.

It is further characteristic of this magic to pervert the order of things (*e.g.* psalms were read backwards); or it abbreviates instead of expanding in the repetition, as in *Abracadabra* or *Sator arepo tenet opera rotas* (see, *e.g.*, H. Rott, *Kleinasiat. Denkmäler*, 231; Wulff, no. 1669), repeated with the omission of a letter each time. The ceremonies of walking backwards round a churchyard wall, or throwing something backwards over the shoulder are of the same tendency, and also the custom of turning the mill in the opposite direction (Schmitz, *Bussbucher*, ii. 451).

5. The various means, Christian and non-Christian.—Christianity found innumerable charms of all possible kinds existing in the Græco-Roman world; and, with its extension among the Celts, Germans, and Slavs, more were added. The Christians adopted all these so far as they were consistent with their religious views; but the Church declared war upon everything that seemed to be connected with idolatry, especially upon the use of the names of heathen gods, certain symbols of heathen worship, and heathen places of sacrifice, which were supposed to be the habitation of demons. It is worthy of notice that certain obscene rites — for example, the wearing of a phallus as an amulet—seem to have died a natural death: at least we find no further denunciations of them; the obscene did not re-appear until later in the heretical magic and in witchcraft.

On the other hand, Christianity itself contributed a great number of sacred charms, the permissibility of which was always upheld in opposition to the forbidden charms of heathendom. From the 4th cent. onwards we meet with comparatively few Christian writers who recognize that not only certain forms of magic but the thing itself is un-Christian and idolatrous, and that the use of the Christian name of God, of Biblical formulæ, and so forth, by which it was sought to justify the practice, does not affect the real issue. Chrysostom recognizes this, denouncing the practice of hanging amulets round the necks of sick children even when the name of God is uttered, and when the old woman entrusted with the business passes for a good Christian (*PG* lxi. 105, lxii. 358; cf. Zonaras, *ib.* cxxxvii. 721). So also Eligius of Noyon, according to the biography of Dado or Audoën (*MGH Scr. rer. Merov.* iv. 705, 753, *PL* lxxxvii. 528), says that no one ought to hang *ligamina* round the necks of men and animals even if they have been made by clerical hands and are supposed to be sacred objects containing Biblical texts. Under the influence of Gerson, the Sorbonne in 1398 expressed similar views, maintaining that the use of sacred words could not justify the practice of magic (*Collectio iudiciorum*, i. 2, 154; *Historia Univers. Paris*, iv. 864; P. Féret, *La Faculté de théologie de Paris*, iii. [1903] 188, also in Gerson's *Opera*). Gerson, when met with the objection that the Church herself did the like in pilgrimages and processions and on other occasions, could not altogether deny it:

> 'Fateor, abnegare non possumus, multa inter Christianos simplices sub specie religionis introducta esse quorum sanctior esse: omissio, tolerantur tamen quia nequeunt funditus erui et qu fides simplicium . . . regulatur tamen et quodammodo rec ficatur' ('de erroribus circa artem magicam et articul reprobatis,' *Opera*, ed. Paris, 1606, i. 622e).

In a similar way Thomas Ebendörfer, an Austrian theologian († 1464), declares in his tract, *de Decem Praeceptis*:

> 'Contra hoc (primum) præceptum faciunt non solum qui colunt pro Deo creaturam, sed etiam qui colunt eum sed modo indebito in vanis et stultis observationibus ut orando contra infirmitates ut febres dolorem dentium aut capitis aliquot Paternoster, sed solum ante ortum solis aut solum tribus quintis feriis vel flectendo genua,' etc. (Schonbach, *ZVK* xii. [1902] 7).

On the other hand, the authority of Martin of Bracara, can. 72 [75], as recognized by the *Decretum Gratiani*, ii. c. 26 qu. 5, ch. 3, acknowledges as lawful the use of Paternoster and Creed in collecting herbs. And John of Salisbury (*Polycraticus*, ii. 1 [*PL* cxcix. 415 ff.]), with all his repudiations of *inania carmina* and *superstitiosae ligaturae*, decided in favour of the application of Christian charms, quoting the Apostolic authority of Col 3¹⁷ and the example of attested miracles. It was imagined to be God's working against Satan; but in reality it was nothing but driving out devils by Beelzebub, when a copy of the Gospel was substituted as a Christian charm for heathen *ligaturae* (Augustine, see above 4 A (3)), when, instead of amulets, a Christian mother used simply the sign of the cross (Athanasius [*PG* xxvi. 1319]; Chrysostom [lxii. 358]; Theodore of Studium [xcix. 885]; see above, 4 A (1)), or when Gregory's niece Eustenia, when called to a sick person, removed the *ligaturae* which the foolish Arioli had applied and brought oil from the tomb of St. Martin in their place (Greg. of Tours, *Miracula S. Martini*, iv. 36). But these were the methods employed by leading members of the Church, who had a real horror of all pagan and demoniacal magic, and believed themselves to be fighting against it. Elsewhere we meet with the most extraordinary hybrids. The old charms are retained, but labelled, so to speak, as Christian. In incantations the names of heathen deities yield to the names of Jesus and His Apostles, of angels and saints—if

the two are not actually placed side by side. Magic words are displaced by, or combined with, Biblical, the latter often in a language unintelligible to the people, and therefore impressing them as magical. The use of precious stones as charms was continued and based upon Ex $28^{17ff.}$ and Rev 21^{19}. Medicinal herbs were found to contain Christian symbols. The oak-mistletoe, which was sacred to the Druids, was now discovered to be cruciform and was called 'Holy Cross wood'; the fern was called 'Jesus Christ plant,' possibly from the sectional markings on the stalk; the orchid root gained the name of 'St. John's hand'; and the red juice of the St. John's wort was said to come from a drop of Christ's blood.

Through such new interpretations and new colouring, and through the addition of Christian symbols and formulæ, the old charms were supposed to be sanctified, and their heathen origin was quickly forgotten. Christian and un-Christian are often so interwoven that it is difficult to trace the true source of the single threads. Moreover, in spite of all ecclesiastical prohibitions, many purely heathen charms remained, and formed the principal component of the whole extensive apparatus of the antagonistic black magic and witchcraft. Finally, the appearance of a retrograde movement must be noticed. Because coins which in Byzantium and under the Frankish kings often bore the sign of the cross and representations of Christ and the saints were therefore used for magical ends, and because modern Roman Catholicism has a number of consecrated medallions, coins which bear no such symbols and medals which are not consecrated are used as talismans, especially in Germany at the festival-marches of rangers and soldiers.

A. *CHARMS OF NON-CHRISTIAN ORIGIN.*—(1) THINGS.—A general survey of the charms used in the ancient pagan world is given by Riess in the art. 'Aberglaube' in Pauly-Wissowa², i. 29–93. There is no stone, metal, plant, or animal, and no member of the human body, that had not its special function. Every atmospheric phenomenon, every time of day and season of the year, and every point of the compass had its significance. Numbers and geometrical figures were all effective. As has been said, all this was adopted and further developed in Christianity.

(*a*) *Stones.* — The preference for amethysts in *encolpia* and episcopal rings is connected with the ancient belief in the magical properties of this stone. Heliotrope, together with the plant so named, could produce invisibility (Gervasius of Tilbury, iii. 28). Amber was a favourite amulet against fever and gout (Pirminius, *Scarapsus*, 22 [p. 173, ed. Caspari], 'Karactires, erbas, sucinos'). On the power of stones cf. Epiphanius (*PG* xliii. 371 ff. = Anastasius Sin. *Quaest.* 40 [*PG* lxxxix. 588]), Josephus Christ., *Hypomnesticon*, 167 [*PG* cvi. 176], and Michael Psellus [*PG* cxxii. 888–900].

(*b*) Among *metals*, gold gained from its freedom from rust a preservative, lead from its dullness a destructive, significance; and the metals had also an astrological meaning, each one corresponding to one of the planets. Connected herewith is the use of rings cast under different *constellations* and then used as talismans or for purposes of divination. Apollonius of Tyana is said to have had a different ring for each day of the week. The astrological inclinations of the 16th and 17th centuries gave new life to this form of belief. (Perhaps something of the kind is meant by the 'apotelesmatic astronomy' of which Sozomen [iii. 6] speaks with reference to Eusebius of Emesa, unless he means simply astrology in general.) The signs of the zodiac, especially the Lion and the Scorpion, also had magical influence. On a charm containing the names of the planets, see *CIG*, 2895; Schürer, *ZNTW*, 1905, 20 ff., and Deissmann, *Licht vom Osten*, 1908. (A Christian interpretation of all this was attempted in early times by Zeno of Verona, ii. 43 [*PL* xi. 494].) A curious belief was that a nurse could ensure a child against the evil eye by bringing dirt or mud from the baths and smearing it upon his forehead (Chrysostom [*PG* lxi. 106]).

(*c*) *Herbs and plants* naturally served for purposes of healing. They were, however, used rather as charms than as medicine (Rouen, c. 4 = Burchard, x. 18 [*PL* cxl. 836], cf. the oath of purgation under suspicion of malevolent herb-witchcraft, *PL* lxxxvii. 770, 836 = *MGH Leg.* v. 'Formulae, ordines,' etc., p. 194 f. Zeumer). Roots, especially the mandrake, were readily connected with Solomon or with the 'root of Jesse.' The plant most used as a charm was verbena; betony was a favourite counter-charm (cf. St. Hildegard, *Physica*, I. cxxviii. [*PL* cxcvii. 1182]; Schönbach, *op. cit.* p. 35 ff.).

(*d*) *Animals* (cf. vol. i. p. 495).—As among the Egyptians, so in the Middle Ages many animals were held to afford protection. Ornaments such as a scarabæus or a medusa's head—an apotropæic charm much used by the ancients—are often found in Christian graves (P. E. Newberry, *Scarabs*, 1906). The Church had to combat the use of the horse, the sacrificial animal of the Germans. In Greece the ox-skull was apotropæic; in the north the image of the rapacious wolf was worn as an amulet against attacks of the devil (cf. *ThLZ*, 1908, p. 299). The fly was the type of demons ('Mart. S. Viti,' *AS*, June, iii. 503). Snakes and mice were highly valued for remedial purposes. The swine is supposed to be a lucky sign by many even to-day. In Byzantium it was the fashion to procure pieces of fur from bear-leaders, mostly as a charm against ophthalmic disease (Trull. can. 61, with the comm. in *PG* cxxxvii. 720). Crossbills and bullfinches could take the disease upon themselves. Owls gave protection against lightning.

(*e*) *Parts of the body.*—The phallus, so important in antiquity, now disappears. Eye and hand had apotropæic significance. But most important were the hair and nails, which have not inappropriately been called 'the external soul' (Frazer, *GB*² iii. 389 ff.; Hartland, *LP* ii. 30). To work effectively for or against any one, without possessing a fragment of his hair or nail, was well-nigh impossible. Blood of men or animals was eminently endowed with magical properties: smeared on a doorpost it protected the house (Ex 12^{13}); as a bath it cured leprosy (Sylvester legends). Most potent of all was the blood of Christ: that is, drops of blood preserved as relics, which were often derived not from Golgotha but from miraculously bleeding crucifixes or from miracles occurring at Mass; to these were attributed workings that were thoroughly magical, and by no means merely religious, in character. Next to the blood, which was regarded as the firmest cement of friendship, and so forth, inherent magical power was ascribed to man's excrement, spittle, urine, etc. In black magic the embryo played so important a part as to lead to the most hideous crimes (cf. *e.g.* Nicephorus, *Chronogr.*, *ad ann.* 717 [p. 53, ed. de Boor]). A harmless development was the practice of Byzantine clergy, who received from mothers the present of their infants' swaddling-clothes to wear as amulets (Balsamon [*PG* cxxxvii. 721]).

(*f*) *Colours* [cf. vol. i. pp. 485, 821] have, of course, significance for magic. Red, the colour of blood, may portend evil, but can also frighten away sickness; blue, the colour of the heavens, is protective, and so on.

(*g*) On *Sounds*, see A (2).

(*h*) *Implements of sympathetic magic, images*, etc. —The use of waxen images for magic purposes was known from the earliest times in Egypt, and a

similar use is found among many peoples, *e.g.* the Ainus (see vol. i. p. 248). The intention is to act upon a man or a thing by acting upon his representative figure. So, Nectanebo was said to have sunk a whole fleet of his enemy by means of waxen boats. It seems that this form of magic was introduced, through Jewish intercourse, to the West, where it was held in special favour during the 13th and 14th centuries. Philip of France was shown a wax figure which, he was told, was so intimately connected with him by immersion and spells that its destruction would cause his death. The king threw it into the fire and remained unhurt (Gerson, *Opera*, i. 624). On the other hand, Pope John XXII. believed that his life and that of his cardinals was seriously imperilled by the existence of some effigies of this kind, and persecuted the people who had made them. And it was supposed to be possible, by sticking needles into a waxen figure, to bring sickness upon any given person, which would leave him only when the figure was destroyed (*Malleus Malefic.* ii. 11).

These effigies belong for the most part to malevolent magic; but images also played an important part as protective charms. According to the principle 'like repels like,' the best scarecrows were held to be figures of crows set up, if possible, in the four corners of the field; flies were driven away by the representation of a fly upon the signet-ring. These methods were ancient but current in the Middle Ages (cf. Greg. of Tours, *Hist. Franc.* viii. 33, on the brazen images in the *cloaca* of Paris). In the later Middle Ages, Vergil was credited with the invention. He was said to have expelled every fly from Naples by setting up a brazen fly on the city-gates, to have prevented the meat from decaying by adorning the slaughter-house with the representation of a piece of meat; and, by fixing two heads, one laughing and the other weeping, on the Porta Nolana, to have secured for those who entered such issue to their business as they deserved (Gervasius of Tilbury, iii. 16 ff.; cf. Liebrecht, *Gervasius von Tilbury*, p. 98, note, and p. 104, with the parallel instances from all lands). Similarly it was believed that thieves could be kept away by a figure cloaked in black, provided that in the making of the charm a fixed time was observed and its purpose was declared in a solemn formula (Antoine Mizauld, *Memorabilium sive arcanorum omnis generis centuria*, 1574).

(2) ACTIONS.—On the magic which relied upon the power of things without the necessity of personal activity there follows that which works by movements and actions. A number of gestures first call for notice: such are movements of the hand, mostly of a parrying and defensive character (hands modelled in such a position appear also as amulets); then ways of holding the thumb (*pollicem premere*, or *ut dexterâ manu sinistrum pollicem teneas*), of which Augustine makes sport (*de Doctr. Christ.* ii. 20). As late as the 19th cent. many people in Rome are said to have secretly made such defensive signs while kneeling on the street to receive the Pope's blessing, because an accidental meeting with the Pope was held to be unlucky. As a charm against the evil eye and against infection, spitting was held in esteem. The gesture of touching the pudenda, important in Egyptian magic, was the origin of the well-known obscene ceremonies of witchcraft.

Touching was the most important of all actions in magic, and through touch healing was effected; here the original conception of the transference of power is clearly seen. The most primitive belief attributed the strongest magical power to the tribal chief. Later, the king was regarded as a Divine personage, whose touch therefore had healing virtue, as related of the Roman emperors (Suet. *Vespas.* 7; Spartianus, *Hadr.* 25. 1-4), and also believed of the kings of France and England. The royal touch was particularly efficacious against scrofula. Most miraculous cures effected by the saints are said to be due to their touch. The mere invocation of a saint was held to be inadequate—one must touch his bones or his grave. In Padua the rule is to walk round the grave of St. Antony, resting the hand on the marble slabs of the tomb. Touching often took the form of stroking, an action in which a hypnotic is added to the magical effect. Transference of power is the original intention of the laying on of hands (χειροθεσία, *manuum impositio*), which is partly protective (an act of blessing), partly a transference of the gifts of the Holy Spirit, productive of special capacity.

Akin to touching is the action of crawling through, or under, some object, which was largely used by pregnant women in order to procure a fortunate delivery. In Arabia and Persia they crawled under a camel, in Sweden through so-called 'elf holes' (openings formed by boughs of trees), elsewhere under stones or through barrel-hoops. Sick children also were drawn three times under an animal or through a hollow in the earth. In love-magic it was the practice to draw some object three times under one's own arm. Another action is swinging or moving in a circle, to make the influence of the charm reach a greater distance through the air. The carrying of a charm round a certain area has a different meaning. Here the purpose is not so much to extend as to limit its action. This was the object of walking round the land which was to be protected and rendered fertile.

A very special importance attaches to the action of binding (hence the names *ligamen*, *ligatura*, etc.). It was performed, of course, with magic words and signs, partly to chain the harmful demon, relying on the fact that a stronger power—Solomon, Michael, Christ, or the Saints—was supposed to have chained him already, and partly with the object of binding the limb of an enemy—his evil tongue, for example. Healing could be wrought by this action, which could also be used malignantly to cause illness. The act of binding is perpetuated as an enduring source of protection in the case of magic knots, mostly adorned with magic characters, that were worn round the neck. The use of the πούγγια of silken thread was forbidden by the Trullan Council (692), can. 61 (see Balsamon, *PG* cxxxvii. 721). An allied form is to bury something from the body of a sick person (hair or nail) or a piece of his clothing, with the object of removing the illness from him. This reminds us of the attempts to transfer a disease (cf. 4 A (3)); often a piece of money was dropped somewhere, in the hope that whosoever picked it up would take over the disease with it.

Anointing, another act of magical significance (cf. vol. i. p. 549 ff.; on χρίειν see Deubner, *de Incubatione*, 22), has an official place also in the rites of the Church, at baptism, confirmation (χρῖσμα), and in extreme unction. Here thoughts of bodily healing are present along with purely spiritual intentions. The act of anointing was much used in healing generally (cf. Mk 6^{13}, Ja 5^{14}). But unguents have also an important place in the paraphernalia of witchcraft. Witches used them upon their own persons in order to acquire power to fly (ride on a broom or drive in a trough through the air), and they anointed others to turn them into beasts or do them some other ill.

Bathing and cleansing were such important ceremonies in magic that the word περικαθαίρων was used in a comprehensive sense to include magicians in general, to whose sacrificial exorcism, etc., lustration with consecrated water was a necessary preliminary (see Harnack on *Didache*, iii. 4). The

whole province of counter-charms falls under this head. Of course it was not the washing in itself that was effective, but washing with certain ceremonies, in certain places, and with certain liquids. Chrysostom (*de Pseudoproph.* 7 [*PG* lix. 561]) mentions such ceremonies in springs by candle-light. Certain springs were considered specially effective. For baptism, water from the Jordan was highly valued. Instead of water, blood or wine was sometimes used for magical purposes.

The use of exciting vapours (Pythonism) and narcotic drinks, made of opium, stramony, hemp, and henbane, is preparatory, and belongs to divination rather than to active magic. So do the exciting motions such as turning, dancing, or mere raging and howling. Noise plays a great part in the affrighting of evil spirits. This is the explanation of the wearing of bells as amulets by men or beasts (see 4 A (1)), ringing bells or shooting in bad weather (4 B (6)). Especially during eclipses of the sun and moon it was thought necessary to make a noise in order to prevent magicians from doing harm to the stars (Arles, can. 5 = Burchard, x. 33; pseudo-Aug. *Serm.* 265, 5; Maximus of Turin, *Hom.* 100 [*PL* lvii. 485]; Rabanus Maurus, *Hom.* 42 [*PL* cx. 78 ff.]; Ebendörfer, p. 5). In Germany it is the custom also, in order to frighten away evil influences, to make a great noise on the evening before a wedding, and to shoot and crack whips during the bridal procession.

(3) WORDS.—Of special importance is the magic word, the magic formula, whether spoken, or written, or engraved. Magic in general is often named ἐπαοιδή, *incantatio*, 'enchantment.' The zeal of the early Church was directed above all things against the use of magic formulæ (*e.g.* cf. Irenæus, I. xxv. 3, II. xxxii. 5; Hippolytus, *Refut.* ix. 14 f., x. 29). We possess a great number of ancient forms of conjuration—heathen, Jewish, and Christian in stamp. A characteristic of them all, which has not received sufficient notice from their editors, is the ceremonial and stereotyped solemnity of form. The same words are repeated at least three times, and generally five. There is a conventional introduction in narrative form like the 'Vol und Votan fuhren zu Holze' of the well-known formula of Merseburg (ed. J. Grimm, 1842); or 'three angels went to Mount Sinai: there met them seven demons of sickness' (Bartels, *Germania*, xviii. 45 f.; Steinmeyer, *ZDA* xvii. 560; Vassiliev, lxvii. 331, 336). Bartels rightly finds in this something similar to the 'indigitamentum' (Usener). A momentary god is to be created, who is useful for the particular end in view. Then follow mysterious invocations, which are repeated at the end. Between these comes the spell, repeated five times with slight variations. The third is generally the most prolix, and the fifth often corresponds with it. The last nearly always (and very often the first or the middle) contains a declaration of the urgency of the business: 'Haste, haste, quick, quick!' The main purpose is repeated as nearly as possible in the same words. In prophylactic amulets the dangers against which protection is desired are enumerated as fully as possible, *e.g.* the 72 diseases (Vassiliev, 323 ff.); and so are the members of the wearer's body, so that protection may be afforded to them all (Reitzenstein, 295). The parts of the formula on which its working most depends are the names of the god (or saint) by whom the demon is conjured, the demon himself, and the arch-magician whose authority is relied upon. The chief masters of magic we meet with are the Egyptian prophets Sochos, Hermes Trismegistus, Psenosiris, and Nectanebo, and most often of all, Alexander the Great, whose cult flourished most vigorously from the time of Alexander Severus, and continued under the Christian Empire. His reputation as a magician lived throughout the Middle Ages, and gave a charm-value to his coins (cf. Chrysostom, *PG* xlix. 240). Along with names of gods or as part of their titles, a number of barbarian words were used, of which few have any meaning. For the most part it is through their incomprehensibility that they are believed and intended to be effective. Chrysostom (*in Col.* hom. viii. 5 [*PG* lxii. 358]) speaks of the names of rivers as much used. The evil that it is desired to heal is often personified, or the evil eye against which protection is sought—βασκανία—is personally addressed. Imperatives containing the actual purpose of the charm become proper names, as in a blood-staunching spell from east Prussia (H. Frischbier, *Hexenspruch und Zauberbann*, 1870, no. 36):

'Es gingen drei heilige Frau'n
Des Morgens früh im Tau'n
Die eine hiess Aloë,
Die zweite hiess Blutvergeh,
Die dritte hiess Blutstillesteh.'

Besides these names, among which inconceivable mutilations of words borrowed from Egyptian and Hebrew are common, we find single letters and groups of letters—in spoken spells, as in the gibberish of Gnostic glossolaly, mostly vowels in all imaginable combinations, and sibilants. In written charms the rarer letters ΞΧΨ, etc., are generally used, frequently in a row of seven or nine, as ΞΨΧΕΤΡΔ or ΧΖΟΠΞΨΧΤΨ. Such are found in the magic papyri (Parthey, 154; Wessely, *DWAW* XXXVI. ii. 91), and also in the letter of Abgar (*ZWT* xliii. 443).

This longer and fuller form of conjuration enjoyed undiminished popularity among the Greeks from pre-Christian times till the 16th cent. (cf. the publications of Deissmann, Reitzenstein, and Pradel, cited in lit. at end of art.). By its side stand the short charm-formulæ, which were generally in poetical shape.

B. *CHARMS OF JEWISH ORIGIN.*—(4) THE NAMES OF GOD, ANGELS, SOLOMON.—The most important contribution of Jewish magic to the store of charms consists in its various names for God, which often appear in combination with heathen names. In the first place are all imaginable transcriptions of the holy ineffable Tetragrammaton יהוה, the Greek ΠΙΠΙ, over which Christian theologians indulge in extraordinary speculations (Lagarde, *OS*² 228 f.), the renderings Ἰαουε Ἰαω, and so forth (A. Deissmann, *Bibelstudien* [1895], 1–20), and its equivalents *Adonai*, often *Adonai sabaoth*, *Eloi*, *Sadai*, and also 'God of Abraham, Isaac, and Jacob.' And much was given out to be from the Jewish Scriptures that was nothing of the kind (Jerome, *PL* xxii. 687: 'Magis portenta quam nomina, quae . . . quasi de hebraicis fontibus hauriunt'). This is the case in particular with many of the Angel names, in which Jewish magic is most rich, and which were intermingled with the names of heathen gods. The most prominent are Michael, the conqueror of the dragon [Rev 12⁷], who also exercised healing functions (W. Lueken), Gabriel, Raphael, and Uriel. Irenæus (II. xxxii. 5) repudiates all *invocationes angelicas et incantationes*, assigning them to the Gnostics (I. xxiv. 5), and the *Decretum Gelas.* forbids *phylacteria omnia quae non angelorum ut illi confingunt, sed daemonum nominibus consecrata sunt*. But all these things were soon accepted by Christian magic. In Egypt, Enoch as the heavenly clerk took the place occupied in former times by Thoth (cf. O. von Lemm, *Kleine Kopt. Studien*, liv. [1908] 521).

From Jewish magic was derived also the important place given to Solomon, who sometimes appears by the side of Alexander the Great and sometimes in his place as the lord and ruler of

spirits. He was said to have shut them in a great bottle, which was exhibited at Jerusalem (*Itinera Hierosol.*, ed. Geyer, p. 21. 8, 153. 10) along with his ring. This was shown by the side of the relics of the cross on Golgotha (*ib.* 88. 24, 107. 13, 154. 4). Solomon was said to have discovered the wonder-working roots which were placed in the magic rings used as early as Vespasian's time by Jewish exorcists to drag the demons out through the noses of sick people (Jos. *Ant.* VIII. ii. 5; cf. Fabricius, *Cod. pseudepig. Vet. Test.* i. 1032 ff.; Migne, *Dict. des apocryphes*, ii. 829 ff.). He was also supposed to have been the first elucidator of the virtues of stones and plants (Anastasius Sin. *Quaest.* 41 [*PG* lxxxix. 589]; Glycas [*PG* clviii. 349]). Much use was made of the name of Solomon, his seal, and also his portrait. He was represented on horseback as a dragon-slayer, like the Egyptian god Horus and later St. George (G. Perdrizet, σφραγὶς Σολομῶνος, in *REG* xvi. [1903] 42–61; Dalton's *Catalogue*, nos. 155, 156; Wulff, nos. 436 f., 825, 827, 1120).

C. *CHARMS OF CHRISTIAN ORIGIN.*—Among charms of Christian origin it is noteworthy that the spiritual are the most prominent. First come the name of Jesus, Biblical texts, liturgical formulæ, and prayers. In the second rank stands the sign of the cross, and only a subordinate position is held by properly material objects—just the reverse of the heathen order. This reverse order is here followed.

(5) THE NAME OF JESUS.—The name appears everywhere as the vehicle of the personal powers. He who knows the name of a spirit is its master, and by naming it he awakens its powers to activity. Therefore the names of God were veiled in a certain mystery, especially among the Jews of the Hellenistic era. The magic papyri, on the contrary, seek to win the mastery over them. In the name of Jesus the Christians believed themselves to possess a weapon of quite extraordinary power (cf. Ph 2[10]), which could serve alike for healing (cf. Ac 3[6] 14[10] [Cod. D] 16[18], Mk 16[17]) and for cursing (1 Co 5[4]). This testimony of the Apostolic times is abundantly confirmed by the Christians of the 2nd and 3rd centuries (*e.g.* Justin, *Apol.* ii. 6, *Dial.* 30, 49, 85, 121; Irenæus, II. xxxii. 3–5; Orig. *c. Cels.* i. 6 [i. 59, ed. Koetschau]); *Acta Johannis*, 31. 41; *Acta Philippi*, 136); the name of Jesus is expressly set in opposition to all heathen spells. And the heathen magic papyri themselves use the name 'Jesus, God of the Hebrews.' To the literary evidence we may add a great mass of inscriptions: in these the name is generally represented by the monogram . The most important testimony to the weight attached to the name of Jesus is the fact that even Jews use it as an amulet along with the names of the three Magi (see Berliner, *Aus dem Leben der deutschen Juden im Mittelalter*, 1900, pp. 97, 105). H. Suso, the great German mystic, is said to have had the name of Jesus tatued on his breast. Is this a talisman or a love-charm? The cult of the name of Jesus was given a special impetus by Bernardinus of Siena († 1444), who always carried before him the sign IHS on a flaming disk. This was not only an abbreviated form of preaching, but a magic sign, as is shown by its appearance on amulets; and the same may be said of the Christ-monograms, and, since the time of the Jesuits, the Jesus-monograms on churches, houses, tombstones, and elsewhere; these stand not merely for marks of faith or for ornament, but have rather an apotropaic significance (cf. Index lxix. in *PL* ccxix. 484 ff.).

(6) BIBLICAL FORMULÆ.—After the name of Jesus it was in the Gospels that His power was supposed in a special degree to reside. On the use of the Gospels in the administration of oaths and in acts of consecration, see art. BIBLE IN THE CHURCH, vol. ii. p. 611. Chrysostom (*in Matt.* hom. 72 [*PG* lviii. 669]) and Isidore Pelus. (*Ep.* ii. 150 [*PG* lxxviii. 604]) inform us that Christian women used to wear little Gospels round their necks after the manner of Jewish *tephillin*; but these were very likely only single texts from the Gospels (cf. E. Nestle, *ZNTW* vii. 96). John of Salisbury (*Polycr.* ii. 1 [*PL* cxcix. 416]) testifies in the 12th cent. to the efficacy of *capitula Evangelii gestata, vel audita, vel dicta*. Most to be recommended was the prologue to St. John, either the first fourteen verses or only the first verse (cf. A. Franz, *Die Messe im deutschen Mittelalter*, 1902, pp. 595, 150). The Lord's Prayer is second to it. On the potsherd of Megara, for example (Knopf, *ZNTW* ii. 228; E. Nestle, *ib.* 347), as well as in many inscriptions, it certainly has an apotropaic significance; it occurs in nearly all Christian spells, often to be repeated more than once; it is written ἀντιστρόφως καὶ ἐναλλάξ (Vassiliev, p. lxxi); it must be recited during the gathering of herbs to give them healing virtue (this is expressly stated in *Corp. Juris Can. decr.* ii. c. 26, qu. 5, c. 3 = Martin of Bracara, c. 75). For purposes of cursing, texts from the Psalms were esteemed, for the Psalter was held to be a powerful defence against demons. A number of leaden tablets containing Psalms have lately been found. St. Barsauma the Naked († 1317) wrote out Pss 20 and 27 as amulets for his visitors (W. E. Crum, *PSBA*, 1907, pp. 196, 198). For a 'slaying prayer' (cf. 4 C (9)), Ps 108, 'Deus laudem,' was most used, also Ps 109 or 94. And the lessons for certain feast-days served special purposes (Vassiliev, 341). Apocryphal texts were also used. The Epistle of Christ to Abgar enjoyed great popularity as an apotropaic charm. The legend states that this epistle, affixed to the gate of Edessa, saved the town from a Persian attack (v. Dobschütz, *Christusbilder*, 1899, p. 103 f.). It is found on the door-lintels of 5th cent. houses and churches in Asia Minor (for Ephesus, see Heberdey, *Jahresheft des oesterr. archäol. Instituts*, 1900, pp. 90–95; for Gurdja, Anderson, *JHS* xx. [1900] 156 ff.). How serviceable it proved in this way throughout the Middle Ages we learn from the many assurances at the end of Greek, Coptic, Slavic, and Latin texts, which show that it was worn as an amulet against bewitchment, hail, lightning, etc., and employed as a remedial charm in sickness (see, *e.g.*, *ZWT* xliii. 470):

> 'Et salvus eris, sicut scriptum: qui credit in me salvus erit, sive in domo tua sive in civitate tua sive in omni loco. Nemo inimicorum tuorum dominabit, et insidias diaboli ne timeas et carmina inimicorum tuorum distruentur et omnes inimici tui expellentur a te, sive a grandine sive a tonitruo non noceberis et ab omni periculo liberaberis. Sive in mare sive in terra sive in die sive in nocte sive in locis obscuris, si quis hanc epistolam secum habuerit securus ambulet in pace.'

The custom of inscribing the Epistle to Abgar in houses survived in England even into the 18th cent. (v. Dobschütz, *Christusbilder*, 179, no. 6).

(7) LITURGICAL AND ECCLESIASTICAL.—The liturgy provided magic with a very considerable number of powerful formulæ. Many of them are certainly of Biblical origin; but their use in magic is due to their position in the liturgy. An example is the *Trisagion*, the Angels' song, which easily held the first rank in importance; the threefold קדוש is found also on Jewish amulets. Biblical in origin, and liturgical in use, are the name 'Emmanuel' or 'Deus nobiscum'; the forms IC XC NIKA, 'Christus regnat,' 'Christus vincit' (which occur also on coins); and the words from Rev 5[5] ἐνίκησεν ὁ λέων ὁ ἐκ τῆς φυλῆς Ἰούδα, ἡ ῥίζα Δαυείδ. A favourite among the many Trinitarian formulæ was 'God is my hope, Christ is my refuge, the Holy Ghost is my defence' (cf. Sābas, *Vita S. Joannicii*, ch. 10 [*AS*, Nov., II. i. 341]). Christ very

often forms a triad with the angels Gabriel and Michael—an interpretation of Gn 18². This is probably the meaning of the much-used character ΧΜΓ, which has been taken also to represent Χριστὸν Μαρία γεννᾷ, or by *gematria* = 643 = ἅγιος ὁ θεός or ἡ ἁγία τριὰς θ′ (= θεός) (see J. Krall, *Corp. Pap. Rayn.*, Kopt. Texte, i. 5 [1895]; Dalton's Catalogue, no. 958; *Berl. phil. Wochenschr.*, 1906, p. 381 ff. [Nestle], 510 [Dieterich]; W. E. Crum, *Arch. Rep. of the Egypt. Explor. Fund*, 1905–6, p. 76; 1906–7, p. 74). ἀββᾶ ὁ πατὴρ ἐλέησον occurs on amulets (*ARW* x. 398). The Benedictus-medallions contain the initial letters of *Crux Sacra Sit Mihi Lux: Nunquam Draco Sit Mihi Dux*; and *Vade Retro Sathana, Nunquam Suade Mihi Vana, Sunt Mala Quae Libas, Ipse Venena Bibas* (Beringer, *Ablässe*, 350 ff.). Spells sometimes contain the κύριε ἐλέησον, and also liturgical formulæ such as the cry of the deacon: στῶμεν καλῶς, στῶμεν μετὰ φόβου Θεοῦ. In Western Christianity the Apostles' Creed holds a position parallel with the Lord's Prayer. It is used for healing, especially in exorcism (John of Salisbury, *Polycr.* ii. 1 [*PG* cxlix. 416]).

(8) Prayers.—Even more use was made of prayers. However certainly true prayer is something quite different from the desire to exercise magic influence upon the Deity, the formulæ of prayer are readily converted into magic spells. This has been seen in the magic use of the Lord's Prayer. The boundary between prayer and spell is always indistinct. Vassiliev (323 ff.) reproduces a document which begins as a prayer and ends as a spell, with a long invocation of saints between. The prayers of Christian magic are generally constructed after the heathen pattern (see 5 A (3)); only an attempt is made, through the Biblical predicates by which God is invoked, and through abundant references to Biblical history, to give them the stamp of legitimate Christianity. Many of them bear famous names, such as that of St. Gregory, where the most obvious reference is to Gregory Thaumaturgus, though it may also be Gregory of Nazianzus, or, in the West, Pope Gregory I. Prayers were often taken from the legends of the saints for this purpose, *e.g.* the prayer of Judas Kyriakos from the legend of the Invention of the Cross (in *Papyrus d'Anastasy*, 9), the dying prayer of the Theotokos from the Koimesis, prayers of St. Paphnutios, St. George (cf. *Byzant. Zeitschr.* xii. 547), or Cyprian the magician. A healing virtue was attributed to the prayers said to be composed by the Apostle Paul (against the bite of snakes, Ac 28³ [Vassiliev, 330]), or by Luke the Evangelist and 'beloved physician' (Col 4¹⁴).

The introductory narratives of these magic prayers are often touchingly naive (cf. 5 B (3)): Uproar arises in heaven; all the angels hurry hither and thither, till Christ asks what is amiss; it is a woman who cannot be delivered; then He sends forth the angels, and so on. Or Christ is walking with Peter: He hears complaints, and learns from Peter that a woman is confined, and bids her be summoned to Him. Or Christ coming from Paradise sees a hind, etc. (O. von Lemm, *Kleine Kopt. Studien*, liv.).

In the later Middle Ages, prayers endowed with special indulgences, as those addressed to Christ's napkin (Veronica), to the blood of Jesus, His seven wounds, His measure, and also invocations to the saints, were much used as protective charms, as may be seen from the notices appended to them. This was the purpose of many of the earliest printed pamphlets—sheets containing such prayers—which were produced in great numbers in Italy.

(9) The Holy Cross.—The Holy Cross, as the protective charm most used by Christians, deserves a special notice. There is no need here to discuss what significance may have been attached in pre-Christian times to various forms of the cross (see art. Cross), for in any case Christianity gave a prominence to this symbol above all others, loaded it with Christian thoughts, and claimed it for its own peculiar possession. It soon became a conventional form, dominating the ground-plans of churches, appearing in processional crosses, crosiers, *encolpia*, votive crosses, crosses engraved or scratched on wood, stone, and metal. Crosses let into the floor were forbidden, because it would be unseemly to tread upon them (*Cod. Just.* i.; Conc. Trull. [A.D. 692], can. 73 [Mansi, xi. 976]). In the Greek Church a cross was erected (σταυροπήγιον) where a piece of ground was to be sanctified. Three crosses drawn in the sand by St. Hilarion prevented Epidaurus from being flooded by a stormy sea. Most of the monastic saints worked their miracles by their cruciform staffs, σιδηροῦν σταυρίον, σταυρότυπος σιδηρᾶ βακτηρία (*e.g.* Joannikios, *AS*, Nov., II. i. 344, 402). Mediæval justice used, among other ordeals, the trial of the cross: the opposing parties were stationed against crosses with their arms outstretched; he who first let his drop was guilty. Even sorcery dragged the crucifix into its service, though only as an object of insult: to shout at a crucifix on Good Friday was a means of becoming a *Freischütz*; pieces broken from a crucifix render their wearers invulnerable.

But far more general is the practice of making the sign of the cross with the hand on breast, forehead, and all parts of the body, for protection against all kinds of danger. With the sign of the cross the Christian is sealed (σφραγίς) in baptism, and secured at once against all malevolent witchcraft. This belief is as early as Tertullian (*de Cor. Mil.* 3): 'ad omnem progressum atque promotum, ad omnem aditum et exitum, ad vestitum et calciatum, ad lavacra, ad mensas, ad lumina, ad cubilia, ad sedilia, quaecumque nos conversatio exercet, frontem signaculo terimus.' In a similar way, Cyril of Jerusalem describes to his catechumens how the whole Christian life is permeated by the sign of the cross: it was made at rising, dressing, going out, at table, and on going to bed (cf. Cyr. *Catech.* xiii. 36 [*PG* xxxiii. 816]: μέγα τὸ φυλακτήριον). It was the surest defence against demons, and the remedy for all diseases. There are a number of *enkomia* (*e.g.* pseudo-Chrys. *PG* l. 819; pseudo-Ephr. *Opp. gr.* ii. 247; ancient Nubian text, ed. H. Schäfer and C. Schmidt, *SBAW*, 1907, xxxi.; Joh. Damasc. *de Fide Orth.* iv. 11) in which the cross is called τρόπαιον κατὰ δαιμόνων, διαβόλου νῖκος, ναῶν καθαίρεσις, βωμῶν ἀνατροπή, κνίσσης ἀφανισμός, νοσούντων ἰατρός, λεπρῶν καθαρισμός, παραλυτικῶν σφίγξις, etc. These phrases may originally have been intended figuratively to clothe a purely spiritual thought, but later they were understood quite literally. Then we read of a temple falling in ruins before the sign of the cross made by an Apostle. Ignatius (*ad Eph.* 9) speaks of the cross as the μηχανὴ Ἰησοῦ Χριστοῦ which lifts us up on high (spiritually); in the *Mart. Matthaei*, 26, it is the coffin containing the Apostle's body which is lifted up from the bottom of the sea by means of a miraculous cross. John makes the sign over a cup of poison, and drinks it in safety; Benedict causes the vessel of poison to fly in pieces by means of this sign; a cancer is healed by it (Aug. *de Civ. Dei*, xxii. 8); by a mere sign of the cross St. Martin turns aside a tree that was falling upon him, keeps fire away, and drives the flames against the wind. St. Columban opens locks and bolts by its means; Eligius increases a quantity of wine miraculously, and heals a blind man (*PL* lxxxvii. 500, 503); Bernardinus of Siena keeps off a storm of rain that threatens to interrupt his preaching. Even Julian the Apostate is said, in fear of his demon, to have made the sign of the cross and learnt its power (Greg. Naz. *Or.* iv. 55

[*PG* xxxv. 577]). The symbol acquired special importance in the Crusades; it adorned the coats and arms of the crusaders, not merely as a badge of faith, but as a means of security and victory. Its protection was extended even to their relatives at home, as when the wife of one of them was assisted in her travail by her husband's crusader's cloak (Cæsarius of Heisterbach, *Dial.* x. 22).

The cross is inviolate; a fire that burnt to ashes a house and all that it contained spared the piece of a garment on which a cross was embroidered (*ib.* 32, 33). The emblem of the saving cross was found everywhere in Nature (Physiologus, xl. [p. 270, ed. Lauchert]).

(10) THE SACRAMENTS.—Though the significance of the acts of worship named by the Greek Christians 'mysteries,' and by the Latins 'sacraments,' is properly wholly spiritual, it was extended in the popular religion to the natural life. The official teaching of the Church could not prevent a magical interpretation being given even to their religious effects. Baptism was held to cleanse *ipso facto* from all sin; children who die after baptism attain immediate blessedness; the unbaptized are doomed to hell, or at least to a *limbus infantium*. The communion administered as *viaticum* serves to ensure blessedness in the future life (*exitum munire*), and so does extreme unction. Moreover, to both sacraments thoughts of bodily healing were attached. By baptism a doctor loses his gout, and an actor his paralysis (Aug. *de Civ. Dei*, xxii. 8). In the Sylvester legend the Emperor Constantine becomes free from his leprosy in baptism; this may be an answer to the criticism of Julian the Apostate, who complained of the absence of such physical effects in baptism (*adv. Christ.* i. 209, ed. Neumann). Cæsarius of Heisterbach (x. 43–45) relates similar instances, with the just comment: 'licet enim baptismus medicina sit animae, multi tamen illius virtute sanitatem corporis consecuti sunt.' The communion is equally effective: instead of reciting *praecantationes* and employing *characteres, fumigare, fascinum*, the sick man should rather come to church, receive the body and blood of Christ, and use the holy oil (pseudo-Aug. *Serm.* 279, 5 [*PL* xxxix. 2273]); in the church is to be found the twofold cure for soul and body (*ib.* 265, 3 [p. 2238]). A communicant is for the next day safe against all malevolent magic (Anast. Sin. *Narr.* 48, 50; *Oriens Christ.* iii. 68, 70), and even certain of victory in a duel (Cæsarius of Heisterbach, ix. 48). Many a knight setting out for the wars, and many a soldier too in modern times, has thought through the communion to render himself impervious to sword and shot. The way in which this sacrament was regarded is shown by the use of the elements as amulets (*e.g.* Anast. Sin. *Narr.* 43, 63), and even as fertility- and love-charms (see above, 4 B (5) and (8): this is most profusely illustrated for the 13th cent. by Cæsarius of Heisterbach, *Dial. Mirac.* dist. ix.). They were also used for the conviction of accused persons, or to prove innocence; cf. *e.g.* Lotharius II. before Pope Hadrian, A.D. 869 (Regino and Hincmar, *ad ann.* 869). This *purgatio canonica* in clerical trials took the place of the oath of purgation. The reception of the communion by Gregory VII. and Henry IV. at Canossa was so understood by the people (see Lambert's Annals, *ad ann.* 1077).

The *sacramentalia* had the same attributes, especially the holy oil; it was repeatedly found necessary to prohibit the priests from supplying holy oil *ad iudicium subvertendum* (Metz [A.D. 888], can. 6 = Burchard, iv. 80; Regino, i. 72 [*PL* cxxxii. 206]). Holy water, incense, consecrated salt, and wax from the altar candles were much used; for remedial purposes, holy water, oil, or bread was serviceable (for some examples among hundreds see *Vita S. Cuthberti*, 25, 29, 30, 31 [*PL* xciv. 765 ff.]). Even the water with which the priest washed his hands after Mass was used by the devout as an antidote against sickness, or as a fertility-charm. Cæsarius of Heisterbach, however, after relating for the edification of his readers a long series of these anecdotes, declares that it is not well-pleasing in the sight of God, *si ad aliquos usus temporales sacramenta illa convertantur.*

(11) RELICS.—Among the material instruments of Christian magic, the relics of Christ and the saints call for first notice (cf. art. RELICS). Of these, pieces of wood from the Holy Cross were most treasured, after its supposed discovery by Helena. Gregory's sister Macrina wore an iron cross as an amulet (Gregory of Nyssa, *PG* xlvi. 989), but later we find wooden crosses (Jerome on Mt 23⁵ [*PL* xxvi. 175]). Most *encolpia* contained them (Anast. Sin. *Narr.* 45, 53; *Oriens Christ.* iii. 65, 79).

Nails even from a gallows were supposed to be effective charms, and, of course, the holy nails from the cross possessed extraordinary virtue. Yet the ancient legend did not shrink from relating that Helena had them worked into the bridle and stirrups of her son Constantine as talismans and for a profane purpose; later they were greatly revered as relics. But every saint possessed healing and protective power, and this power resided in every particle of his body; so λείψανα ἁγίων were worn as phylacteries (Theophanes, p. 446, ed. de Boor). The relics of St. Gratus quenched a forest fire at Aosta in 1542. On the death of a revered monk in Byzantium, a struggle ensued among the populace for possession of his cloak and even his hair and teeth, which they desired as talismans (e.g. *Vita Eustratii*, 39 [Papadopoulos Kerameus, *Anal.* iv. 393]). In the West such dismemberment of dead saints was, at least in theory, forbidden. As substitutes, any objects served which had been in contact with the saint himself, his dead body, or his grave. As specially gifted persons could heal by a touch of their hands, so garments worn by them could convey this healing power (Ac. 5^{15} 19^{12}; cf. *e.g.* Cæsarius of Heisterbach, *Dial. Mirac.* x. 5, 6). But it sufficed merely to have brought one's own garments into contact with the saint's grave and then to lay them over a dying man in order to save his life; or to touch with a flower first the reliquary and then the eyes of a blind man (Aug. *de Civ. Dei*, xxii. 8). Oil from a saint's grave (*i.e.* from the lamps burning there) was much esteemed: *e.g.* from the shrine of St. Stephen at Uzala (Aug. *Sermo* 32); but in the legend it became a miraculous spring of *myron* flowing from the shrine. Such oil was sent far and wide. At Golgotha all manner of things were consecrated by contact with the sepulchre. A similar production of relics was carried on, on a great scale, at the graves of the Apostles Peter and Paul, which were particularly suited thereto, because it was possible to reach the deep-lying sarcophagus through holes in the covering slab of marble (H. Grisar, *Analecta Romana*, i. 271 ff.). A great number of pieces of wool, cloth, or whatever it might be, were consecrated by contact with the Holy Sepulchre and then called *eulogia* (Drews, *Zeitschr. f. prakt. Theol.* xx. 18 f.), and in the West *brandea*, to be used as charms for various purposes, especially as amulets. But the grave of any saint could serve the purpose, and the nature of the object used was quite immaterial. Gregory of Tours (*de Virt. S. Juliani*, 45) says very characteristically: 'accedite ad Martyris tumulum et aliquid exinde ad aegrotum deportate,' and in fact a little dust brought and administered to the patient in water proved most effective. Dust from

the rock of the oratorium of St. Calminius or from the grave of St. Felix of Bourges, taken in water, was a remedy for fever. Thus it is quite a natural development whereby modern Roman Catholicism no longer allows actual relics to fall into private hands, and offers as substitutes consecrated rosaries, medallions, etc. Where this consecration is not merely sacramental, accomplished by their use at Mass or immersion in holy water and so forth, it is derived from contact with a shrine, a martyr's grave, or a relic.

(12) PICTURES, etc.—The power of a saint extended from objects connected with his person to pictures and statues, which were regarded by no means as aids to contemplation, but as signs of the actual presence of the saint himself. Greek theologians proved, with the help of Neo-Platonic mysticism, the real association of *archetypos* and *ektypoma*. Their use as charms was most prominent among the Greeks and, under Greek influence, among the Slavs. It is very interesting to observe how in the legend of Edessa the portrait of Christ superseded the letter to Abgar as protector of the town; it was placed over the city-gate, and, when an attempt was made to set fire to the town in time of siege, some oil from the lamp that burnt perpetually before it was sprinkled upon the flames, which it turned against the besiegers. Byzantine ships nearly always carried images of the Madonna for protection against storm, as the heathen ships had carried *palladia* or images of the Dioscuri. In Rome, figures of St. Symeon Stylites guarded every workshop (Theodoret, *Relig. Hist.* 26 [*PG* lxxxii. 1473]; Joh. Damasc. *de Imag.* i. 27 [*PG* xciv. 1253]). No Greek or Roman house was without its saint, which took the place of the ancient *penates*, as the protective genius of the home. Famous pictures and images were washed at high feasts, and the water, sanctified in the process, was scattered over the congregation for their benediction (in Edessa as in Rome; cf. v. Dobschütz, *Christusbilder*, pp. 66, 163, 112**). In Edessa this water was used as a lotion for the eyes. Water with which portraits of saints had been washed, or into which some colour had been scraped off them, was administered to invalids as medicine.

The Western peoples were at first rather timid of such uses; but after the 9th cent. the belief in images was established among them also. Statues of patron saints erected over town- and castle-gates, pictures on the walls (in churches, pictures by preference of Michael or Christopher; in private houses, of Florian and Agathe, who kept off lightning and fire), and representations on amulets, all had apotropæic significance. In time of pest appeared painted or, later, printed sheets with pictures of St. Sebastian or St. Rochus, often with prayers and, in some cases, hygienic directions appended, which certainly were intended to give protection, and not merely as devotional objects (P. Heitz, *Pestblätter des XV. Jahrh.*, Strassburg, 1901).

Special virtue was, of course, assigned to pictures of miraculous origin, and also to copies of them. This and the indulgences connected with it are the causes of the extensive circulation of the shroud portrait (Veronica). Another important charm in and after the 15th cent. was the so-called measure of Christ, a length taken presumably from the holy sepulchre (G. Uzielli, *Misure lineari medioevali*, 1899). It was employed, *e.g.*, in witch trials (*Malleus malefic.* iii. 16); joined with a prayer it served as an amulet (Uzielli, *L'Orazione della Misura di Cristo*, 1901, p. 10).

6. The application of charms.—(1) *Preliminary requirements.*—The satisfaction of a number of personal conditions is as necessary a preliminary to charm-working as it is to worship; the chief is freedom from sin and especially from sexual pollution, wherefore children were frequently entrusted with the operation, *e.g.* in drawing lots (cf. in early times Apuleius, *de Magia*, ii. 47, ed. Bipont.) and in clairvoyance; pregnant women were also employed. A preliminary fast, such as was necessary to the reception of a revelation, was also frequently required.

A peculiarity of magic is its fear of knots: every knot represents a binding, and may therefore carry a counteractive force. Therefore the clothing must be free from all knots; complete absence of clothing was abhorred in the Christian Church, though common in black magic. For similar reasons it was generally necessary to hold the breath; and silence was ordained, since any word might break the spell or introduce the disturbing influence of another spell. Above all, no names might be mentioned, for they are to a special degree endowed with magic powers. This is the explanation of the endeavour to write spells so that they could not easily be read, either in foreign letters (for a Greek spell in Latin characters, see G. Maspero in *Collections du Musée Alaoui*, i. 101 ff.; for an Italian spell in Greek letters, Pradel, *loc. cit.*). This custom may prove the magical purpose of the well-known copies of the Apostles' Creed, Greek in Latin characters in the Aethelstan Psalter, Latin in the Codex Laudianus.

Time and place are, of course, important; charms are especially, and sometimes exclusively, efficacious if applied before sunrise; midnight is the hour of spirits; certain days in the year, once heathen festivals, such as the winter and summer solstices, and later converted into Christian saints' days, are significant for certain forms of magic; and lastly come the phases of the moon.

Magic had also its holy places. In heathendom these were springs, trees, and cross-roads, where gods or demons were supposed to have their abode. But the Church regarded them askance, and erected crucifixes at such places to break the evil spell. The magic which enjoyed the Church's approval naturally gave the preference to consecrated spots, churches, and chapels, or clung to their neighbourhood in churchyards.

During the preparations the purpose must never be forgotten; the Lord's Prayer must be recited during the collection of herbs; the manufacture of wax effigies must be accompanied by the express declaration of the purpose for which they are to serve. Great stress is always laid, as in the Church's sacramental teaching, on the intention. Certain conditions regulated the material employed. For amulets the skin of unborn calves (*pergamentum virgineum*), and, next to it, leather from a lion's skin were most valued; for curses, leaden tablets or old potsherds. Things taken from a churchyard or a gallows were precious to black magic, especially if they were stolen or acquired by irregular means.

(2) *Manner of application.*—According to the nature of the effect contemplated, the application of a charm may be a single act or the establishment of a permanent condition; protective charms are thus permanently operative. The mere fact of their presence is sufficient, and there is no need for them to be seen, known of, or believed in. Fertility of the land is also secured by the mere presence of relics (*e.g.* the relics of SS. Abdon and Sennen in Arles), without the necessity of special processions at every season. It is, indeed, presumed that reverence is paid to them, and the omission to celebrate their festivals may have evil consequences. Apulia was punished by St. Mark with drought for this reason. Neglect can turn a beneficent charm into a source of injury.

But generally the application of a charm pro-

ceeded through a number of actions, carrying, touching, etc. (see 5 A (2)), and, above all, through recitation (*ib.* (3)). These ceremonies generally bore the character of a senseless hocus-pocus, calculated only to impress the superstitious. But originally they must have been inspired by magic thoughts, *i.e.* by the desire to work upon the spirits. How much actual fraud they contain, and whether the charm-working magicians themselves believed in the efficacy and necessity of all their operations or practised with fraudulent intention upon the credulity of their adepts, are questions which altogether elude the researches of scientific inquiry.

(3) *Manner of working.*—The working of a charm is generally conceived to follow immediately *ex opere operato*: the amulet protects, the spell banishes the disease, the love-potion works love, and so on. Belief in their efficacy on the part of those who use them is, of course, assumed; but it was originally supposed that they could work upon people who neither knew of them nor believed in them. Only afterwards, when the desired effect failed to appear, the explanation offered itself that unbelief on the other side hindered the working; but generally failure was attributed to a counter-charm. The instructions often reckon with the possibility that the effect may not be immediate, and in such cases direct more frequent repetition, a stronger formula, or the adoption of an additional charm. The experience that not every charm is at once efficacious was the cause of the multiplication and mixing of different charms and formulæ.

It is an important principle, moreover, that the charm does not work directly only upon the person to whom it is applied. It was possible to undergo the ordeal as a substitute for another; and there is an instance of some water which had been poured over a copy of the prayer of St. Paul being administered vicariously to the messenger who announced that some one else had been bitten by a snake (Vassiliev, 331).

The working is often subject to certain conditions. St. Benedict freed a cleric from a demon so long as he neither ate flesh nor performed priestly functions; so soon as he broke either of these conditions, the demon again took possession of him. Bartels calls this making terms with the devil. Those who made such compacts rejoiced to outwit the foolish devil by fixing an impossible date for his return, *e.g.* when Christ is born again of Mary, or when Christ shall write a new Gospel.

On the other hand, it is demanded in many cases that a time-limit shall be set to the working of the spell, which must be loosed at a certain moment: *e.g.* in the enchantment of wasps, which must last only so long as the peasant is out in the fields with his cattle. Then the wasps must be freed, that their lives may be preserved.

The science of the *Aufklarung* declared all these charm-workings to be humbug, ghost-stories, old wives' tales, and completely devoid of reality. But Romanticism took a new interest in them, set about collecting the materials, and to some extent revived beliefs in their actuality. The modern science of religion has no cause to deny that in many cases a real effect was wrought; but it seeks to explain such effects psychologically by suggestion, physiologically by the action of narcotics, and so forth. The important task which must first be accomplished is to collect and arrange the abundant material, not overlooking the differences amongst the many similar phenomena occurring in different races and at different times, and with great caution to determine the mutual influences of the different civilizations.

E. VON DOBSCHÜTZ.

CHARMS AND AMULETS (Egyptian).—

Egyptian religion is so intermingled with magic, that it is difficult to separate the properly religious elements from mere charms and incantations. Magical spells or charms occur in considerable numbers. We have whole books of them, and they often appear in the medical papyri.

If we consider first the spells which have chiefly *a protective character*, the so-called magic papyrus Harris furnishes good examples of them. It consists of two parts. The title of the first is: 'Chapter of the songs which disperse the immerged' (*i.e.* all dangerous animals lurking in the water). The spell is a long hymn to the god Shu:

'Hail to thee, divine flesh of Ra, elder son issued from his ody, selected by him previous to his birth.'

The hymn is interesting by reason of its style, and of what we learn about the religious doctrine, in sentences such as this:

'O unique Lord issuing from the Nu (water)! O divine substance self-created! O maker of the substance which is in himself!'

Sometimes his defensive power is alluded to:

'Thou repellest the crocodile coming out of the abyss, in that name which is thine, Repeller of Crocodiles.'

The reptile itself is addressed:

'Stand back, crocodile Maka, son of Set, do not steer with thy tail, do not move thy arms, do not open thy mouth; be the waters before thee turned to a burning fire.'

Occasionally we find a rubric like this:

'This chapter is recited, an egg from . . . being given into the hand of a person at the prow of the boat; anything coming out of the water is thrown again into the water.'

All the first part contains formulæ for closing the mouth of the crocodile and preventing dangerous beings from coming out of the water. The second part, called 'Book of the spells for remaining in the country,' is meant to protect the inhabitants of the country against wild beasts, such as lions, hyænas, and leopards. Regarding neither of the two parts do we know by whom it is to be read, or on what occasion it may be effective. Magical spells of the same description are found, more or less, among all nations of antiquity, and are not peculiar to Egypt.

Another kind of charms may be called *medical spells*. They are intended to ensure that a remedy shall be effective. We find many examples in the medical papyri, the largest of which, the papyrus Ebers, has been called the pharmacopœia of the ancient Egyptians. The following formula dispels white spots from the eyes:[1]

'When there is thunder in the southern sky in the evening, and storm in the northern sky; when the pillar falls into the water, then the seamen of Ra flourish their stakes, but their heads fall into the water. Who is it who will bring and find them? I am he who brings them, I am he who has found them. I bring you your heads and I raise your necks. When I have put in its place every thing which has been cut off from you, then I shall bring you that you may expel the god of fever and of death. To be said over the brain of a turtle mixed with honey which is put on the eyes.'

Here is one which seems to act by its own magical power.[2] It is taken from a collection of such spells:

'Another incantation for the head. The head belongs to Horus, and the place of the head to Thoth. My mother Isis and her sister Nephthys are keeping watch over me. They give my head. . . . This chapter is said over threads made in knots and put on the left foot of a man.'

We might quote a great number of similar charms. A papyrus of the Museum in Berlin contains nothing but spells for the birth of a child, for the milk of the mother, and for illnesses of the infant.[3] Generally there are mythical allusions, often very fragmentary and obscure; then comes a rubric like this:

'This spell is to be said over three beads—one of lapis-lazuli, another of jasper, and another of malachite—threaded together; they are to be hung to the neck of a child.'

We hardly understand the mythical names or allusions which are contained in those spells; and it is doubtful whether the Egyptians themselves understood them better. We must remember that it is the characteristic of magical words to be obscure and mysterious; otherwise they would lose most of their virtue.

A curious kind of incantations are those which consist not of more or less disconnected sentences, but of a myth or story with a definite purpose.

We hear, for instance, of the goddess Isis, who desired to be equal in power with her father Ra.[4] The only means of having her wish fulfilled was to know the mysterious and hidden name of her father. She therefore devised a stratagem. She caused Ra to be bitten by a serpent; the pain of the wound was so intolerable that the voice of the old king reached the sky and all the gods flocked around him. Ra is described as expatiating at great length upon his sufferings, which the crafty goddess does not attempt to relieve until her father consents to be searched by her, so that she may get hold of his mysterious name. Then only does she call on the venom to go out of the body of Ra. The narrative ends here; but we are told that this story is to be said to, or, as the Egyptians say, over, figures of Tum, Horus, and Isis, which will thus be made talismans against the serpents. This story is to be written also on the piece of cloth put around the neck of a person. It is then a powerful remedy.

[1] Pap. Ebers, pt. lviii. 7.

[2] Pleyte, *Étude sur un rouleau magique du Musée de Leyde*, 1866, p. 54.

[3] Erman, *Zaubersprüche für Mutter und Kind*, 1901.

[4] Lefébure, 'Un chapitre de la chronique solaire,' *ZÄ*, 1883.

We see that the purpose of this myth is not literary; it is medical, as is the case with several Egyptian myths. We might quote another, where Horus, the son of Isis, is restored to light by Thoth. This narrative is said to be a talisman used by the inhabitants of Buto against bites of scorpions and serpents.[1] This is undoubtedly the most interesting class of charms, since in a certain measure they bear a literary character, which we did not find before, and which does not exist in the most common kind of spells, the amulets.

An *amulet* is properly an ornament with a magical power, which is worn as a preservative against mischief and evil. This definition would hardly apply to the considerable number of objects which are found in Egyptian tombs, and which very often are models on a small scale of tools or instruments of ordinary life. Generally the name 'amulets' has been applied to a great part of the paraphernalia which are given to the mummy, or drawn on the coffin of the deceased and on the walls of the tomb. It is not every one of these objects that possesses magic influence; they are not all supposed to be preservatives or to be symbols. They certainly were not so at the beginning. In later times they assumed a religious meaning, and became either magical or symbolical. Thus we read in a Roman text from the temple of Denderah, that, on the festival of the burial of Osiris, 104 amulets made of gold and precious stones were given to him. Every one of them was supposed to have a special virtue which we do not know; in the case of most of them, we are not in possession of the mystical formulæ explaining why they were amulets and what was their meaning. When these formulæ are extant, as is the case with several mentioned in the Book of the Dead, we can hardly say that we fully understand them, and that we have discovered the esoteric meaning. The words under which this meaning is hidden are simple enough, but the translation does not always yield a really intelligible sense.

Most of the Egyptian amulets are destined either for the dead, whose life in the other world they are to influence, or for the gods, to whom they are as necessary as to mortals. In order to understand the benefit conferred on the deceased by his amulets, it is necessary to consider briefly the ideas of the Egyptians as to a future life.

The human personality was not regarded as single; it consists of four, or even more, elements, but the most important are three: the body, the soul, and a third, called by the Egyptians the *ka*—a word which has been translated in various ways: 'the double,' 'the living image,' 'the genius' of each man, which springs into existence at the same time as himself and grows with him. The *ka* is not always seen; nevertheless, it always accompanies a living man, and, when it is represented, it often assumes his exact appearance. It is what the Greeks would call his εἴδωλον. Very often also the *ka* is spoken of as present, though invisible, or there is a symbol in its stead.

The *ka* was believed to be an indispensable constituent of every being which had life; the gods and the kings were even supposed to have more than one—as many as fourteen. After having been indissolubly united during life, *ka* and body were separated at death; the body was mummified and placed in a coffin; the *ka* became independent, and continued to live in the other world. Since it could not restore life to the body, it was supposed to animate the statues which were in the tombs, and on which it rested. The *ka* was the living element of the human being; but its existence was conditional upon that of the body. If the body was destroyed either by violence or by corruption, the *ka* also would perish, and the whole personality would disappear. This was the motive for mummification, and for the care which the Egyptians took to preserve the body, because thereby the continuance of the life of the *ka* in the other world was ensured. Occasionally the *ka* might visit the embalmed body and enjoy the gifts and offerings of all kinds which were brought to the tomb.

During life, the *ka*, though not seen, is inseparable from the body. It is even its most powerful preservative, its best talisman. It is supposed to be always behind the person. We very often see it represented as following the king in the form of a man of smaller size, having in his hand a cane, at the top of which is a head. The head is sometimes surmounted by the hieroglyphical signs meaning 'royal *ka*.' In many cases it has the symbolic form of a fan, which is made of feathers or assumes the shape of a leaf. The fan is often the substitute for the whole person, and is placed on a throne; but it is constantly seen as the protecting *ka*; *e.g.* in battle scenes, where a fan is certainly out of place, it is sculptured over the head of the fighting king. When the *ka* is absent, it is very rare for the formula to be omitted declaring that its protecting power surrounds the king.

Since the *ka* was to live for ever, it was desirable that its life should be as pleasant as possible, and that it should enjoy not only all the comforts and luxuries of its former existence, but additional ones. There was a certain, and comparatively easy, way of endowing the deceased with wealth and abundance. This was based on what is called imitative magic, the idea being that the representation of the image of an object causes it to come into existence. Everything has its *ka*, its double, which may exist in the other world like the *ka* of man. The mere fact of making a picture or a model of it, however small, is the means of calling it into existence in the other world—one might even say of creating it. The deceased does not like solitude; therefore wooden or porcelain figures will have to be put in his tomb, sometimes in great numbers, to constitute his society or his attendants. In the same way he will have to be provided with all kinds of objects of the ordinary life which the living *ka* will use—weapons, ornaments, musical instruments, tools for building, such as saws and knives, borers, the mason's square, and the level. These objects are generally called amulets; some of them, in the course of time, may have acquired a symbolical meaning, but the present writer believes that originally they were nothing but what the deceased was supposed to need in his new life.

One series is more directly connected with religious ideas; they are the insignia of Osiris, the king of the lower world, the judge before whom the deceased may have to appear. They consist of small models, in porcelain or hard stone, of the different diadems of the god, of his sceptres, and of his emblems of royal power. The motive for their being given to the deceased is that one of the numerous transformations he will have to undergo, one of the prospects he has before him, though it is not always necessary, is a complete assimilation to Osiris. 'I am Osiris, brother to Isis,' says the deceased. 'He who rescueth me, together with his mother, from all my adversaries, is my son Horus.' Since he will be a king, it is necessary that he should wear the crowns, and hold the sceptre and other emblems belonging to the sovereign of the lower world.

The life of the *ka* is not safe from all perils. It may be assailed by all kinds of genii or evil beings, endangering its existence, even threatening it with

[1] W. Golenischeff, *Die Metternichstele*, 1877.

destruction. In that respect the deceased is in the same condition as the gods themselves, especially Osiris, who every night is overcome and cut in pieces by his brother Set, and restored to life again by his son Horus. As preservatives, the *ka* uses magic formulæ or amulets, the most usual of which we shall now describe. The magic text referring to them is generally contained in the Book of the Dead.

The scarab is the image of the *Ateuchus sacer*, a kind of beetle very common in the region of the Mediterranean. The Egyptians supposed the scarabæus to be male, and to be born again from the egg which it had made alone. This we find expressed in the following way. Among the formulæ of praise to Ra, this god is called 'the beetle that folds its wings, that rests in the lower world, that is born of its own body'—or, as we should say, 'its own son.' The Greeks translated the Egyptian legend by *αὐτογενές ἐστι τὸ ζῶον*, as we know from Horapollo, and also by *ἐκ μόνου πατρὸς τὴν γένεσιν ἔχει ὁ κάνθαρος*. It is not surprising that this creature became the symbol of resurrection. There are scarabs of various sizes. Small ones are found by thousands in porcelain, steatite, and hard stones like cornelian or amethyst. They were deposited in the tombs with the mummies, but they were also worn by the living as ornaments that were considered to have a preservative virtue. Larger ones sometimes have figures engraved on their backs: the boat of the sun, Osiris with flail and crook, Harmakhis with a hawk's head. The large scarabs, which are sometimes as much as 5 ins. long, are chiefly the funereal or heart scarabs. When the deceased was mummified, the heart was taken out of the body to be embalmed separately, and afterwards either put in a so-called canopic vase—a jar with a cover in the shape of a jackal's head—or left on the legs and bandaged with them. The heart, as with other nations of antiquity, was supposed to be the seat of the moral side of the individual—one may even say of conscience, since it appears as the accuser. There are two words for 'heart': one meaning strictly the heart itself, and the other the heart with its envelopes, the cavity of the heart. It was necessary that the *ka* should have a heart; therefore there are no fewer than four chapters in the Book of the Dead relating to the heart; some of them even have two different versions. According to a papyrus, each of them is connected with a particular gem cut in the form of a heart and worn as an amulet: lapis-lazuli, green felspar (or opal), cornelian, and serpentine. We have amulets in the form of a heart; they are usually of cornelian. The magic words of these chapters are pronounced when the heart is supposed to be given, or rather restored, to the deceased; they prevent its being taken away after it has been put back in its place. One of these chapters is particularly important, since it refers to one of the most interesting scenes of the Book of the Dead—the judgment. The deceased appears before Osiris, who sits as judge. The heart is being weighed in a balance against the deceased himself, or, more frequently, against the emblem of the goddess of truth and justice. Then the deceased is supposed to appeal to his heart:

> 'Heart of my mother, heart of my birth, heart which I had on earth! do not rise as witness against me, do not be my adversary before the divine powers, let not there be a fall of the scale against me, in presence of him who keepeth the balance!' Further, the deceased invites his heart to 'come forth to the place of bliss towards which they go.'

This chapter, which is called 'The chapter of preventing the heart of the deceased from opposing him in the nether world,' is often engraved on a large scarab of green stone, put either outside or inside the chest, at the place of the heart. These large heart-scarabs are found in all museums. The Egyptians liked to give them to their dead. It was a token for them that they were justified, that their heart spoke truth, that their limbs were pure, that all their body was free from evil. When they had this scarab, they might exclaim: 'I am pure, I am pure.'

The question which naturally arises here is, Why did the Egyptians give the heart the form of a large scarab? The answer is that the scarab is the emblem of resurrection. The Egyptians considered that life proceeded from the heart; that this organ was the centre of vital power. It was, in fact, the living being which animated the whole body. Therefore they gave the heart the appearance of a being having life and motion by itself, whereas a heart of stone would have represented something quite motionless, and absolutely deprived of any activity. Scarab and heart are two amulets relating to the resurrection and the restoration and re-constitution of the body. To the same category may be assigned the *dad* and the buckle.

The *dad* has been explained in various ways. It has been called the four pillars which support the four corners of the sky. They are seen one behind the other, so that their capitals seem to be on the top of each other. Maspero thinks that in its original form the *dad* was the trunk of a tree from which sprang four cross branches cut short near the bole. Certain vignettes in the Book of the Dead seem to make it quite certain that the *dad* is a conventional way of representing the human skeleton, the backbone to which the ribs are attached and which stands on two legs. Frequently a human head wearing feathers is placed on this skeleton, and arms are attached to it, holding the insignia of Osiris. The *dad* has become the emblem of Osiris, as the buckle is that of Isis. The two figures are often used together as ornaments on shrines or furniture, or in religious sculptures, to indicate that the objects on which they are seen are under the protection of Osiris and Isis. As an amulet, the *dad* has an influence on the restoration of the deceased, as we know from the text which refers to it.[1] 'Here is thy backbone, O still heart. Here is thy spine, O still heart; I put it at thy place . . .' And the rubric says that, if this amulet is put on the neck of the deceased, he will be perfect and appear at the festivals of the New Year among the followers of Osiris. The *dad* to which this formula refers is made of gold. There are a great number in porcelain, and many in cornelian.

The buckle is generally red in colour, of cornelian or of glass. It is the emblem of Isis, and its effect is chiefly protective, as we know from the text.[2]

> 'The blood of Isis, the virtue of Isis, the magic power of Isis, are protecting this the Great One; they prevent any wrong being done to him. This chapter is said on a buckle of cornelian, dipped into the juice of the *ankhamu* plant, inlaid into the substance of sycomore-wood, and put on the neck of the deceased. Whoever has this chapter read to him, the virtue of Isis protects him; Horus, the son of Isis, rejoices in seeing him, and no way is barred to him.'

The *uza*, or sacred eye, is the human eye outlined with *kohl*. This amulet is, next to the scarab, the commonest of all. The eye has various meanings. It may be the right or the left one. Both eyes often occur at the top of the stelæ, as where they seem to represent the two periods of life, the ascending and the descending one. The two eyes of Ra are the sun and the moon. The 'filling of the eye' may be either the sun in the summer solstice, or the full moon. The eye of Horus gave birth to all useful substances—oil, wine, honey, sweet liquors, milk. It had an independent exist-

[1] Book of the Dead, ch. clv.
[2] *Ib.* ch. clvi.

ence. As an amulet the eye seems to have given to the living, as well as to the dead, health and soundness of sight. Maspero has shown that the figure of the eye, which is read *uza*, is an ideogram of the word *uza*, which means 'flourishing,' 'healthy.' Whoever wears this amulet will come out of all the dangers which might threaten his health, just as was the case with the eye of Ra. Chapter clxvii. of the Book of the Dead, which explains what is the virtue of the eye, mentions a wound having been inflicted on it by Ra. Another chapter speaks of the eye being in distress, or being obscured by a hairy net. It is probable that the eye is here a heavenly body, the moon, and that this is the mythical way of speaking of an eclipse. The eye is wounded by Ra; a shadow called the hairy net obscures her, but the shadow is removed, and, as she comes out quite sound and healthy, so will the wearer of the *uza* come out of all dangers. This seems to be the sense to be attributed to the text of ch. clxvii.: 'When Thoth had brought the eye, he appeased the eye; for, after Ra had wounded her, she was raging furiously; and then Thoth calmed her after she had gone away raging, "I am sound, she is sound, the deceased is sound."' Thoth appeased or calmed the eye, because, as we read in another chapter, not only did he deliver the eye from the veil of darkness which oppressed her, but he carried her off, 'in life, health, and strength, without any damage.' This effect the amulet will produce. The eye was bound on the knuckles, neck, or heart of the mummy, or placed within the abdomen. It is found in gold, lapis-lazuli, felspar, wood, glazed ware, and other materials.

The little green column belongs also, like the eye, to what might be called *figurative amulets*, the names of which represent the benefits conferred upon the wearer. The word *uaz*, the name of the column, means 'to be green,' 'to grow,' 'to sprout.' The amulet was generally made of a green stone such as felspar, and was put on the neck of the deceased. The formulæ referring to it, which constitute two chapters of the Book of the Dead, are very obscure. The effect of this amulet seems to be similar to that of the eye. He to whom it has been given is safe, and preserved from any injury or wound.

The head-rest or pillow is an object made of wood or of stone, and very often found in the tombs. It is used at the present day by the Nubian women to prevent their hair from draggling in the dust. We sometimes see mummies the heads of which are supported by such pillows. Miniature head-rests in hæmatite or other stones occur as amulets. They have generally been considered as the means whereby the deceased is assured of a peaceful slumber. The present writer believes the purpose of this amulet to be quite different. Its virtue is much more powerful; it is a token for the deceased that he will not be dismembered, and that his body will be raised up again quite intact like that of Osiris. The head-rest is a substitute for the stone heads which were sometimes put in the tombs during the Old Empire. They are both protests against the original custom of taking the body to pieces, of dismembering it as Set had done to Osiris. The proof of this lies in the fact that the chapter referring to the pillow is nearly identical with another called 'Chapter whereby the head of a person is not severed from him in the Netherworld.' It runs thus:

'Awake! Thy sufferings are allayed, thou art awaked, when thy head is above the horizon; stand up, thou art triumphant by means of what has been done to thee. . . . Thou art Horus, the son of Hathor, the flame born of a flame, to whom his head has been restored after it had been cut off. Thy head will never be taken from thee henceforth, thy head will never be carried away.'

Several amulets are ornaments, like the collar which the Book of the Dead says is to be made of gold and put on the neck of the deceased on the day of his burial. The words of ch. clviii. seem to be of a late date. We find the gift of a collar made not only to a deceased person, like King Seti I., but to the gods in general. When man or god has put it on, his nature changes; he becomes Tum, the great god of Heliopolis, and is addressed as such. Therefore we can hardly call the collar an amulet; like all the vestments and ornaments given to the gods, it has a magical sense and a magical effect. The collar is a ritualistic object, and has its place in the ceremonies of the worship of the gods and of the deceased.

The above are the most important and most common amulets. There are a great many more. Some of them are figures of a god or a goddess, like the vulture, or the frog—which seems to be an emblem of immortality. Others are figurative, like the cartouche, which stands for the name. The name is indissolubly linked with the personality; 'creator of one's name' means 'creator of one's person.' There are many, like the two fingers, whose meaning is unknown to us. It seems evident that, in Greek and Roman times, the number of amulets increased considerably, or rather that a magical sense was attributed to many objects of common use. Egyptian religion under the Roman Empire was known chiefly through its magic.

ED. NAVILLE.

CHARMS AND AMULETS (Greek).—The use of charms and amulets among the Greeks, as among all other peoples, is to be derived from the desire of influencing the course of nature or events, of creating or counteracting certain effects. This sort of influence is regarded at a later stage as supernatural; but, no doubt, a primitive people saw nothing supernatural in it. There are three categories of such influence, all of which may be found simultaneously in use: certain words, certain actions, and certain objects or their image, for to primitive belief an object and its image are identical. For us the third category only is important.

The reasons why certain objects are used as charms or amulets are various. There are a great many objects which are regarded as endowed by nature with special forces. (They are not, however, on that account to be considered as habitations of gods or souls [cf. Kropatscheck, *De amuletorum usu*, p. 18; Abt, 'Amulette,' in Schiele, *Religion*, i. 1908, 448].) The great number of ways in which it was possible to make use of certain charms proves that their powers were not confined to one kind of effect only. Apion, *e.g.*, taught (Pliny, *HN* xxx. 18) that the herb *cynocephalia* was potent against every kind of magic spell (cf. *ib.* xxiv. 103, 'contra perniciem omnem'). Furthermore, we must lay stress upon the fact that the same means that are used to attract blessings are, at the same time, able to dispel ill luck. Where there is good luck, ill luck cannot enter; and health enters where illness has been driven out.

The common snapdragon (ἀντίρρινον) is a remedy against sorcery, if worn round the neck; it beautifies, if applied as an ointment, together with oil from the lily (Dioscorides, *De mat. med.* iv. 131 [130 Wellm.]). One remedy against sorcery is to drink a tea of peonies; on the other hand, this tea promotes the secretion of milk for nursing women (Pradel, 'Griech. Gebete,' *op. cit. infra*, iii. 367). The agate renders fields fertile ([Orpheus], *Lith.* 238 ff.), and athletes invincible (Plin. xxxvii. 142); and it possesses manifold other apotropæic and magic forces (*ib.* 139 ff.). Cf. also the promise of Priapus, in an inscription on a rock of Thera (*IG* xii. 3, 421*c*), to bring the inhabitants of the island unbounded wealth and to be their companion-in-arms.

Thus there is no fundamental difference between the apotropæic amulet and the charm with its power to attract the positive blessing (φάρμακον, cf. Abt, 'Apol. des Apulejus,' *op. cit. infra*, iv. 186 ff.; W. Havers, 'φυσικόν,' *Indogerm. Forsch.* xxv. [1909] 375 ff., cf. Weidlich, *Sympathie in der antiken Litteratur*, p. 68). It is, however, conceivable that a certain differentiation soon took place, and that the amulet came to play a much more important part than the object used as a charm. For, in order to attain a positive effect, one makes use of a momentary magic device; but, if one desires to be safe at every moment against every kind of evil, one must make the magic remedy a constant one; and this explains the fact that the number of amulets far outweighs that of charms. As the amulet was mostly worn on a cord, the Greeks called it περίαμμα, περίαπτον, περιδέραιον (Kropatscheck, *op. cit.* 10). But this is not the only thing the ancients designate by the word 'amulet'; the term comprises everything that is used for protection against any kind of harm. In this sense the amulet is called φυλακτήριον, ἀποτρόπαιον, ἀλεξιφάρμακον, etc. Thus we find this word applied to everything we are accustomed to term 'apotropæic.' And, last of all, the same remedies that have a prophylactic use, *e.g.*, to protect against an illness, are used to cure the disease when it has set in; and we often find that in such a case the remedy against the illness that has already developed is worn as an amulet in its more restricted sense, on a ribbon round the neck (Jahn, *SSGW*, 1855, pp. 40, 43; Heim, *op. cit. infra*, p. 506, cf. *ib.* no. 132 with 507, 133; Kropatscheck, *op. cit.* 42). We thus see that the vast domain of popular medicine bears the closest affinity to our subject, and therefore a minute classification of their different functions cannot be attempted here when discussing the several charms. The detailed analysis of each case, which would be necessary, has never yet been undertaken, and would not be possible within the scope of this article. A full treatise on popular medicine is contained in the article DISEASE AND MEDICINE.

In all probability there was originally hardly anything, animate or inanimate, to which men did not attribute some specific force. Kropatscheck (*op. cit.* 20) is right in saying that there is hardly anything existent that has not at some time been used as an amulet; cf. also a like remark by Otto Jahn about the animals endowed with powers of magic (*op. cit.* 100). Magic functions were probably often specialized by means of differentiation. In other cases a charm had a special function to begin with, based on the popular idea of sympathy and antipathy of most, perhaps even all, animate and inanimate things in the world (cf. Weidlich, *op. cit. passim*). Lemon and cucumber, fig and rue, are good friends; therefore the lemon thrives better if cucumber is planted in its vicinity (Pallad. iv. 10, 15), and the rue grows more abundantly under the shade of the fig-tree (*ib.* 9, 14). Cabbage and vine do not agree, therefore one must eat cabbage to be safe from inebriety (Riess in Pauly-Wissowa, *s.v.* 'Aberglaube,' pp. 58, 62 ff.). The scorpion fears the lizard; its bite is therefore cured with a remedy in which the lizard plays a part (Weidlich, *op. cit.* 21). The charms whose effect can be described by the words 'similia similibus' bear a close affinity to these (Kropatscheck, *op. cit.* 44, 1). The yellow bird Charadrios or Ikteros (Riess, *op. cit.* 69, 2; 73, 68; Weidlich, *op. cit.* 56) is a help against jaundice, but the bird itself perishes (a case of transferred illness). A specific against headache is an olive-leaf tied round the head and bearing the name of Athene, who sprang from the head of Zeus (*Geopon.* ix. 1, 5), or a herb grown on the head of a statue (Riess, *op. cit.* 59, 26); against colic, the hair from the belly of a hare (Marcell. Empir. xxix. 35); against disease of the eye, the eye of a fish (Ael. *Nat. An.* xxiv. 15); against toothache, the corresponding tooth of a dead horse (Plin. *HN* xxviii. 181). A positive influence is reached on the same principle: the tongue of a frog makes the woman suspected of adultery speak the truth (Plin. xxxii. 79); urine from a eunuch stops fertility (Plin. xxviii. 65); the sinews of a crane are a help against fatigue (Plin. xxx. 149). The mere name of an object is also sufficient to make it suitable for certain sympathetic purposes (Apul. *de Mag.* 34 f.; Abt, *op. cit.* 213 f.). Thus the plant called *lysimachia* is used to calm a quarrelsome team of horses (Plin. xxv. 72); the *satyrion* excited sexual desire (Riess, *op. cit.* 65, 18); the amethyst was a remedy against drunkenness (Abt, *op. cit.* 214, 4). Occasionally also its magic use may have been the reason for giving the object its name.

A number of charms owed their efficacy to the place at which they were to be found. Thus it was related that the famous athlete Milon of Kroton had rendered himself invincible by means of stones, the size of a pea, which had all been found in the stomachs of cocks (Plin. xxxvii. 144); a stone found in the stomach of a hen helps soldiers to courage and victory (Weidlich, *op. cit.* 61); concerning stones from the stomachs of swallows, cf. Kropatscheck, *op. cit.* 24 f. A grain found in the horns of snails makes teething easy (Plin. xxx. 136). A bone out of a horse's heart helps against toothache (Plin. xxviii. 181); a stone that 'grows' in the Nile, of a pea-like aspect (cf. above, the stone of Milon), is a charm against barking of dogs and frenzy. Perhaps the latter example is already influenced by the idea of the sacredness of the place, which is expressed when a plant growing on a boundary or a crossway is considered to possess magic power (Riess, *op. cit.* 47, 5. 24). A similar notion underlies the belief that a plant from the margin of a stream or river is a remedy against tertian fever (Plin. xxiv. 170); the power of flowing water which cleanses and washes away all evil (Abt, *op. cit.* 114, 7) allows the beneficent powers of the plants to develop undisturbed. In like manner, whatever has come into contact with lightning is endued with special powers. Wood struck by lightning helps against toothache (Plin. xxviii. 45); the stone *ceraunia* is sought after by magicians, because it is found only in places that have been struck by lightning (Plin. xxxvii. 135).

Anything connected with death or the dead has a special importance in magic (Riess, *op. cit.* 92, 13; Fahz, *op. cit. infra*, ii. 148 ff.; Abt, *op. cit.* 268, 5). Human bones and skulls (Abt, *op. cit.* 215) are used for various magic manipulations; with a torch from the funeral pyre of a dead man dogs are silenced (Ael. *Nat. An.* i. 38); a garment worn at a funeral is safe from moths (Plin. xxviii. 33); the words of an imprecation become especially potent when engraved on the fragment of a tombstone (Wünsch

in Bliss-Macalister, *Excavations in Palestine*, 1898–1900, pp. 173, 187). The influence of uncanny objects connected with a dead body was greatly enhanced when the death had been a violent one (Riess, *op. cit.* 92, 50). The underlying idea seems to be twofold: on the one hand, it was supposed that the remains of a βιαιοθάνατος retain something of the full vital energies that were his up to the moment of his sudden death (Riess, *op. cit.* 92, 51); and again, that one who has died before his time, and still longs for life, lets his demonic powers pass with greater energy into this world. When the eye-tooth of an unburied corpse is prescribed as an amulet against toothache (Plin. xxviii. 45), the latter thought is uppermost; the unburied man, too, has no peace, but hankers after life in this world; and so do the ἄωροι (cf., for these notions, Norden, *Æneis*, vi. [1903] 10 ff.). Everything that has any connexion with the βιαιοθάνατος has special powers—the rope of the hanged person, or a nail from the cross. Even the place where the man died is charged with a power that can be transferred; hence diseased pigs were fed with oats that had lain at such a place for a night (Plin. xxviii. 8); in a love-charm of the Parisian magic papyri (Fahz, *op. cit.* 167, l. 4), one is told to throw some of the dirt from such a place into the room of the beloved. When, according to the London magic papyrus (121, l. 657 f., Wessely), some relic from a stranded ship is required, we again meet with the notion that, where uncanny powers have been at work, special magic forces attach themselves to the objects concerned.

Many charms have an apotropæic character only. Foremost among these are the images of ghastly forms intended to paralyze the menacing evil charm; above all, the Gorgoneion (Gruppe, *Griech. Mythologie*, 1906, p. 902, 3; Kropatscheck, *op. cit.* 27, 5; Wolters, *Bonn. Jahrb.* cxviii. [1909] 262, 3), and its counterpart, the head of Phobos (Weizsäcker in Roscher, *s.v.* 'Phobos'; Wolters, *op. cit.* 269 ff.); cf. also the apotropæic face on the back of a leaden amulet (*Rev. des ét. gr.* v. [1892] 79). The curious (ἄτοπα) and ridiculous (γελοῖα) preventives (Jahn, *op. cit.* 66 f.) of which Plutarch (*Qu. Conv.* p. 681 f.) and Pollux (vii. 108) speak belong to this group—caricatures and the like, with regard to which the present writer would suggest that the apotropæic character of the ridiculous may have originated at the very moment when the formidable phantom came to be considered a mere grimace (cf. also Perdrizet, 'L'Hippalektryon,' *Rev. des ét. anc.* vi. 7 ff.; Wace, 'Grotesques and the Evil Eye,' *British School Annual*, x. [1905] 103 ff.).

Another method of protecting oneself against incantation is to turn the tables against the enemy by bringing him into subjection. His evil intents are thus, in a way, forestalled. A species of grasshopper was said to be infested with the evil eye (Jahn, *op. cit.* 36, 30), and its image was erected on the Acropolis by Pisistratus (*ib.* 37, 31; cf. Weinreich, 'Ant. Heilungswunder,' *Religionsgesch. Vers. und Vorarb.* VIII. i. 162 ff.). The hail, which was pernicious to the peasant's harvest, was a preventive of thunder if hailstones were put into the hatching-straw (Colum. viii. 5, 12; perhaps specifically Roman). The owl, on the one hand, was considered a bird of evil omen (Riess, *op. cit.* 70, 23; cf. Perdrizet, 'Le folklore de la chouette,' *Bull. de la société nat. des antiquaires de France*, 1903); but, on the other hand, it was a protective against hail (Pallad. i. 35, 1). The clearest example of this kind of protection by forestalling the enemy is that of the apotropæic eye. This does not oppose the evil eye with the power of the 'good eye' (Daremberg-Saglio, *s.v.* 'Fascinum,' p. 987), but it defeats it with its own weapons, and keeps off all kinds of evil powers (cf. also Wolters, *op. cit.* 269 f.). The idea that he who carries upon him parts of a dog is safeguarded against dogs must be interpreted differently (cf. Riess, *op. cit.* 73, 12); for it originates in the belief that whosoever has power over a part can conquer the whole. In both cases like is dispelled by like. But the like can also repair the misfortune that has occurred (Gruppe, *Griech. Mythol.* 669). The most famous example of this belief is the tale of Telephos (ὁ τρώσας καὶ ἰάσεται). The bite of a shrew-mouse is healed by a shrew-mouse, and best healed by the same shrew-mouse (Plin. xxix. 89; Riess, *op. cit.* 80, 30). And the close connexion of this belief with that mentioned before is best illustrated by the fact that a live shrew-mouse in a clay casket was worn round the neck as an amulet against the bite of these animals (Riess, *op. cit.* 80, 32).

We mentioned above that words and actions, formulæ and rites, came within the scope of magic charms, as well as objects. They do not in themselves belong to the matter here treated, but cannot be ignored in so far as they have become fixed objects, *i.e.* the actions are depicted, the words written down.

To these apotropæic figures belong the numerous scenes in which an eye is represented as surrounded by hostile animals and men (Bienkowski, 'Malocchio,' *Eranos Vindobonensis* [1893], 285 ff.; *Arch. Anz.* [1903] 20; *Oesterreich. Jahresh.* vi. [1903], Beiblatt, p. 23, fig. 3; Wolters, *op. cit.* 263, 1). The evil eye is to be robbed of its powers by the fixed representation of the attack against it. This is still more effective than the using of these animals as amulets, for by means of the image of the eye itself the evil eye is imprisoned and spellbound.

When on the marble block from Xanthus a *phallus* is threatened instead of the eye (Bienkowski, *op. cit.* 289), this is probably due to an inadvertent adherence to the former scheme. Occasionally the eye is pierced by a lance. This brings us to the picture of Herakles throttling the lion, found on an amulet against colics (Heim, *op. cit.* 481, 60). The same image is used for the protection of vegetables against weeds, ὀσπρολέων (*Geopon.* ii. 42, 2), where the sympathy of name also has some weight. A protective against gout shows the image of Perseus with the head of Medusa (Heim, *op. cit.* 480 f., 59). On Byzantine amulets, Solomon on horseback, piercing with a lance the female demon of disease, who lies on the ground, is a favourite theme (Schlumberger, *Rev. des ét. gr.* v. [1892] 73 ff.; Perdrizet, *ib.* xvi. [1903] 42 ff.). Cf. the encounter of Michael with Βασκανία (the personification of witchcraft) in a new amulet-text (Reitzenstein, *Poimandres* [1904], 297 ff.); and the legend told, in Abyssinian magic-scrolls, of the saint Sūsneyōs, who kills the witch Werzelyā from his horse, because she caused his child's death; see also, in the same scrolls, the scene depicted in closest analogy to the Solomon pictures (Worrell, *ZA* xxiii. [1909] 165, and pl. ii. 4). On the marble relief of Bedford, which formed the starting-point of Jahn's famous treatise on the superstition of the evil eye (*SSGW*, 1855, p. 28 ff.), a man sits above the eye with bare hind part, in an unmistakable attitude (Jahn, *op. cit.* iii. 1, p. 86 ff.). This is generally explained as a sign of disdain, and classed along with the baring or depicting of the genitalia in order to ward off a spell (Jahn, *op. cit.* 68 ff.; Gruppe, *op. cit.* 896, 1; Kropatscheck, *op. cit.* 27, 4; Abt, *op. cit.* 211, 14; *Thera*, iii. [1904] 186). The obscene female figures of Naukratis (*JHS* xxv. [1905] 128) belong to the same category (against J. E. Harrison's opinion, who explains the gesture of Baubo as a προβασκάνιον [*Prolegomena to the Study of Greek Religion*, 1903, p. 570, note 1]; cf. Diels, *Miscellanea Salinas*, 1907,

p. 9, 1). In the same way as the uncovering of the genitalia may be replaced by special imitative gestures with the hand (*digitus infamis* and *fica*), so, too, the *fica* is formed into an apotropæic object. Shells are also considered images of the *cunnus* (Jahn, *op. cit.* 80; Abt, *op. cit.* 211, 15). The present writer doubts whether the original purpose of this kind of apotropaia was to express disgust or disdain. He would prefer to bring them into relation with the 'Zauber der Körperöffnungen' (cf. Preuss, *Globus*, 86, 321 ff.). Those who wish to retain the notion of disdain as the prominent one must ascribe these apotropaia to a later stage of development; primitive humanity certainly had no comprehension of this feeling. The ithyphallic apotropaion (Wolters, *Bonn. Jahrb.* cxviii. 262, 263, 266 ff., pl. x. f.) must be explained differently, as is already indicated by its much more frequent occurrence, compared with that of the anithyphallic (hardly correct; Jahn, *op. cit.* 73) and female (Jahn, *op. cit.* 79) apotropaion. The ithyphallic apotropaion is a symbol of strength, blessing, luck. On the Pompeian house a phallus was depicted with the inscription: 'Hic habitat felicitas' (Heim, *op. cit.* 510, 143). Where there is good fortune, misfortune cannot enter, as we have already remarked (cf. also Wundt, *Völkerpsychologie*, ii. [1905] 2, 405; Schwenck, *Myth. d. Röm.* 1855, p. 141; *ARW* x. [1907] 296 f.). Strength, or the image of any kind of strength, has apotropæic power (cf. also Prott, *ARW* ix. [1906] 93); therefore Herakles is the dispeller of evil *κατ' ἐξοχήν*. Thus Priapus also has changed from a god of fertility into a protector of gardens, and—yet another change—into a scarecrow!

Like the magic act, the magic word also becomes fixed. It is written on different substances, and, as durability was desired, small metal tablets were preferred, especially as this substance heightened the magic power. Thus we find the use of gold, silver, and tin (Siebourg, *Bonn. Jahrb.* ciii. [1898] 125 f., 134 ff., cf. *ib.* cxviii. [1909] 158; Audollent, *Defix. Tab.*, Paris, 1904, p. xxxiv ff.; Kropatscheck, *op. cit.* 25; Wünsch, *ARW* xii. [1909] 24), lead (in harmful incantations; Wünsch, *Defix. Tab. Att.* [1897] p. iii, *Seth. Verfluchungstafeln* [1898], 72, 76; Audollent, *op. cit.* p. xlvii ff.), stones and linen (Wünsch, 'Antikes Zaubergerät,' *Archæol. Jahrb.*, Ergänzungsheft vi. 39), sherds (Pradel, *op. cit.* 379, 1), shells (Abt, *op. cit.* 218 f.), and also the less durable papyrus (Wilcken, *APF* i. 420 ff.; Kropatscheck, *op. cit.* 26 f.; cf. *Geopon.* xiii. 5, 4). The words written down were various kinds of magic formulæ (cf. art. MAGIC), 'Ephesia Grammata' (Wessely, *Ephesia Grammata*, 1886; Weidlich, *op. cit.* 64 f.; Wünsch, *Seth. Verfl.* 80; Audollent, *op. cit.* p. lxvii; Gruppe, *op. cit.* 884, 2; Tambornino, 'De antiquorum dæmonismo,' *Religionsgesch. Vers. und Vorarb.* VII. iii. 80; W. Schultz, *Philol.* lxviii. [1909] 210 ff.), alphabets (Dieterich, *Rhein. Mus.* lvi. [1901] 77 ff., *Mithrasliturgie*[2], 1910, p. 221), anagrams (Heim, *op. cit.* 530, 1; Wünsch, 'Ant. Zauberg.' p. 36), cryptograms and *isopsepha* (Prentice, *Amer. Journ. of Archæol.* x. [1906] 146 ff.), Homeric verses (Kropatscheck, *op. cit.* 18. 29; Wünsch, *ARW* xii. [1909] 2 ff.). Their place was taken, in Christian times, by Psalms (Pradel, *op. cit.* 381) and texts from the Gospels (Kropatscheck, *op. cit.* 29); also whole prayers, sometimes of considerable length, were written down for magic purposes (*ib.* 30 ff., cf. *ZA* xxiii. [1909] 158 ff.). Sometimes the texts were written from right to left (Wünsch, *Defix. Tab. Att.* p. iv; Münsterberg, *Oesterr. Jahresh.* vii. [1904] 143), or some other game was played with the letters (Wünsch, 'Ant. Zauberg.' 28 f.); a triangle of magic import is formed by writing down a magic word as many times as the word has letters, and always dropping a letter in each word till only one is left (Kropatscheck, *op. cit.* 29). In the Egyptian room of the National Museum of Athens (no. 864) the present writer saw an amulet on which the anagram ΑΚΑΑΝΑΘΑΝΑΑΚΑ[1] had been formed into a triangle by the successive subtraction of the first and last six letters. Besides formulæ, the names of powerful gods are found (Jahn, *op. cit.* 45 ff.; Reitzenstein, *Poimandres*, p. 19, note); above all, that of the great Jewish God Iao (Abt, *op. cit.* 254, 1). Mere knowledge of the name has the power to protect (Kropatscheck, *op. cit.* 19 f.). The Jewish angels, too, have this power (Prentice, *op. cit.* 143), as well as the spirits of the planets, which are designated by the seven vowels *α ε η ι ο υ ω* (Heim, *op. cit.* 540, note; Siebourg, *Bonn. Jahrb.* ciii. 140 ff.; Audollent, *op. cit.* p. lxxiii; Wünsch, 'Ant. Zauberg,' 29 f.). Instead of words we also find special magic symbols on magic objects, the so-called 'characters' (Audollent, *op. cit.* p. lxxii), whose affinity to Egyptian hieroglyphics has been traced by Wünsch ('Ant. Zauberg.' 31 ff.). In many cases the substance itself, on which the magic words are engraved, is endowed with magic power, so that the effect is heightened, and still more so if there are magic emblems in addition to words. Kropatscheck (*op. cit.* 35 f.) holds that magic objects obtained power only through the medium of the words engraved on them, and that afterwards the formulæ (or symbols) were omitted, and the objects alone worn as amulets. But this is certainly not the case, for surely some objects had magic power attributed to them at the outset, without their bearing a single magic inscription.

Another group comes within our scope, which we would term 'derived charms.' The idea connected with them is that of spell-binding. The nail which is used on manifold occasions to fasten some evil, or to lame an enemy, finally becomes imbued with magic forces. Thus, for example, iron nails protect the hatching-nests of hens against thunder (Riess, *op. cit.* 50, 60).

Numerous magic nails of this kind have been preserved down to our time (Jahn, *op. cit.* 106 ff.; Hubert in Daremberg-Saglio, *s.v.* 'Magia,' p. 1508, 25; Gruppe, *op. cit.* 895, 7; Kropatscheck, *op. cit.* 25, 5; Prentice, *op. cit.* 144). The specimen from the Asklepieion of Paros, with the inscription ΠΥΡ (*Athen. Mitt.* xxvii. [1902] 229), seems to have the special mission of protecting against fire.

The key plays much the same part as the nail. As the action of locking in bears an affinity to that of spell-binding, the key becomes endowed with magic powers. In order to protect a field against hail, many keys from different buildings are tied all round it (*Geopon.* i. 14, 6; cf. also Heim, *op. cit.* 541, 236 f.). The use of the thread and knot goes still further (Frazer, *GB*[2] i. 392 ff.; Hubert, *op. cit.* 1508, 23; Wolters, *ARW* viii. [1905], Usenerheft, 1 ff.; Gruppe, *op. cit.* 885, 6–8; Kropatscheck, *op. cit.* 25; Abt, *op. cit.* 148 ff.). More especially, coloured, three-coloured, and red threads were preferred as enhancing the effect (cf., besides the above, Deubner, *De incub.*, 1900, p. 25; Kropatscheck, *op. cit.* 70). Whatever is enclosed by a ribbon, thread, rope, or the like, is, according to very ancient belief, thereby safeguarded against every kind of evil. The evil cannot step over the magic boundary. For this reason the thread or ribbon itself acquires magic importance, possessing not only apotropæic, but also positive, power. Only thus can we understand the rite whereby, in the case of an illness already present, the patient is fettered, and thus believed to be saved (cf. *e.g.* Diog. Laert. iv. 56). The influence of the knot must be explained differently. The knot is not really a derived charm, but a part of the action of binding which has been stereotyped, and by which the evil is fixed. The

[1] In this reading, instead of the usual *αβλαναθαναλβα*, the present writer has been confirmed by the kind verification of Dr. Karo.

same effect may be obtained by encircling limbs with threads, whereby the inimical force is likewise bound fast. The human limbs chosen for this ceremony play quite a secondary part. In this sense we must interpret Ælian (*Nat. An.* iv. 48), according to whom a furious bull can be pacified only if a man whose right knee is bandaged with a fillet goes to meet it. The same idea of binding predominates in the ring (Daremberg-Saglio, *s.v.* 'Amuletum,' p. 255, 97; Frazer, *GB*² i. 401 f.; Wünsch, 'Ant. Zauberg.,' 42 f.; Kropatscheck, *op. cit.* 16 f., 26, 1), for it is a band of metal. Aristophanes (*Plut.* 883 f.) is already acquainted with rings as potent against evil, and mentions the name of a man Eudamos (cf. schol. *ad loc.*) who traded in such rings. Alexander of Tralles recommends an iron ring, engraved with magic formulæ, as a charm against colics (Heim, *op. cit.* 480, 57); Schlumberger (*op. cit.* 85) reproduces a golden ring, engraved with a snake and 'Ephesia grammata,' Wünsch (*ARW* xii. [1909] 19) one in bronze; Teukros recommends rings, engraved with constellations, for apotropæic purposes (Westermann, *Paradoxogr.* [1839] 148, 3).

It is, of course, exceedingly difficult to determine in each case why the object in question has come into use as a charm or amulet. Often it is not for a single reason; a whole series of beliefs may attach to an object. A more detailed classification could be undertaken only on the basis of an exact and repeated analysis of the whole vast subject-matter. This work has still to be done, and requires careful studies in different forms of belief. The present writer must content himself with giving a summary of magic objects, in so far as they have not already been mentioned above.

[The Literature which is given in the following list is, as a rule, not mentioned elsewhere in the article.]

MINERALS AND THE LIKE: Moon-dew (*virus lunare*), perhaps only Roman (Dedo, *De antiquorum superstitione amatoria*, p. 3; Fahz, *op. cit.* 153); moon-shaped amulets (Jahn, *op. cit.* 42, 48); earth (Plin. xxix. 131; Marcell. Emp. xxxii. 20); Lemnian earth (*Ath. Mitt.* xxxi. [1906] 72 ff.), γῆ κρητηρία (*Pap. Lond.* cxxi. 169); Ebusian earth, earth from carriage-tracks and footmarks (Riess, *op. cit.* 46, 46 ff.); water (Riess, 44, 3; *Pap. Paris*, 224 ff.; Wessely, *Neue gr. Zaub.* 1893, p. 15); rain-water (Riess, 43, 55); sea-water (Riess, 44, 27), hallowed water (Christian: Wünsch, *Seth. Verfl.* p. 75); fiery flame (Abt, *op. cit.* 239, 3); metals (*Rev. des ét. gr.* xx. [1907] 364 ff.; Tambornino, *op. cit.* 83 f.); gold (Siebourg, *Bonn. Jahrb.* ciii. 129 f., 130, in whose underlying mythical idea the present writer has no faith; Riess in Pauly-Wissowa, *s.v.* 'Amulett,' 1985, 60); silver (*Geopon.* xiii. 9, 2); bronze, pre-eminently used on grounds of ritual conservativism (Wunsch, *Defix. Tab. Att.* p. iii f.; Abt, *op. cit.* 159 f.); iron (Riess, 'Abergl.' 50, 40; Dedo, *op. cit.* 13 f.; Abt, *op. cit.* 161, 1; cf. also the sword which wards off ghosts [Pradel, *op. cit.* 382]); lead (cf. above, and Riess, *op. cit.* 51, 38); stones and jewels (Daremberg-Saglio, *s.v.* 'Amuletum,' p. 252; Wessely, *l.c.*; Abt, *op. cit.* 189 f., 264 f.; Tambornino, *op. cit.* 83); gems, covered, especially at a later stage, with signs and pictures for magic purposes (Daremberg-Saglio, *s.v.* 'Abraxas'; Riess in Pauly-Wissowa, *s.v.* 'Abrasax'; Furtwängler, *Die antiken Gemmen*, 1900, iii. 361 f., 363; Kropatscheck, *op. cit.* 28, 2; Wunsch, *ARW* xii. [1909] 22); pre-historic stone-axes (Wünsch, 'Ant. Zauberg.,' p. 40, *ARW* xii. [1909], 33; cf. a small axe made of thin bronze, from Crete, *ib.* vii. [1904] 265); magnet (Wunsch, 'Ant. Zauberg.' p. 40); coral (Jahn, *op. cit.* 43, 51; Daremberg-Saglio, *s.v.* 'Amuletum,' p. 253; Riess, 'Aberglaube,' p. 50, 37); salt (Plin. xxxi. 101; Wessely, *Griech. Zauberpap.* 1888, Index, *s.v.* ἅλς; Hubert, *op. cit.* 1506, 16; Gruppe, *op. cit.* 889, 3; Pradel, *op. cit.* 363 f., 365).

PLANTS (Plin. xxv. 13; 'Carmen de viribus herbarum,' ed. Haupt, *Vorlesungsverz. Berlin*, 1873–4; Riess, *op. cit.* 51 ff.; Daremberg-Saglio, *s.v.* 'Amuletum,' p. 253; Hubert, *op. cit.* 1506; Wessely, *Neue gr. Zauberpapyri*, 1893, p. 15; Kropatscheck, *op. cit.* 41 ff.; Pradel, *op. cit.* 361 ff.; Abt, *op. cit.* 145 f., 163 ff., 182 f., 208 f.; Tambornino, *op. cit.* 85 f.; Eitrem, 'Hermes und d. Toten,' *Christiania Vidensk. selsk. Forh.* v. [1909], 24 ff.), especially from Thessaly (Hubert, *op. cit.* 1499, 8; Dedo, *op. cit.* 5): asparagus (Dioscor. *De mat. med.* ii. 151 [125 Wellm.]); cherry-stones (Marcell. Emp. viii. 27); honey (Deubner, *op. cit.* 46); incense (Abt, *op. cit.* 147, 205 ff., 271 f.); juniper (Gruppe, *op. cit.* 889, 6); laurel (Abt, *op. cit.* 151 ff.); linen (Kropatscheck, *op. cit.* 25; Abt, *op. cit.* 289 f.; cf. Marignan, *La Médecine dans l'église au sixième siècle*, 1887, p. 7, 3); mandragora (Randolph, *Proc. of Amer. Acad. of Arts and Sciences*, xl. [1905] 485 ff.; Gruppe, *op. cit.* 852, 6); peonies (Pradel, *op. cit.* 364 ff.); sea-onion (Gruppe, *op. cit.* 889, 7); wine (Deubner, *op. cit.* 45; Pradel, *op. cit.* 368); frankincense (Wessely, *l.c.*; Pradel, *op. cit.* 362 f., 372 f.; Tambornino, *op. cit.* 83), coal from the censer (Pradel, *op. cit.* 365); perfumes (Wessely, *l.c.*); bread (Pradel, *op. cit.* 365 f.); eatables (Abt, 136 f.).

ANIMALS (Riess, 'Abergl.' 68 ff.; Wessely, *l.c.*; Tambornino, *op. cit.* 86, 88 f.; Eitrem, *op. cit.* 30 ff.): ape (*ARW* viii. [1905] 521); birds (*ARW* viii. [1905] 521; Abt, *op. cit.* 295, 1); boar (Abt, *op. cit.* 138); chameleon (Plin. xxviii. 112); cock (Deubner, *op. cit.* 47); cricket (Lobeck, *Aglaophamus*, 1829, p. 973); dog (Roscher, *Kynanthropie*, 1896, pp. 27, 66; 45, 125; Deubner, *op. cit.* 46); fish (Abt, *op. cit.* 141 ff., 229); frog (Dilthey, *Arch.-epigr. Mitt. aus Oesterreich*, ii. [1878] 55 f.; Dedo, *op. cit.* 6); hare (Abt, *op. cit.* 137); hyæna (Weidlich, *op. cit.* 24 f.); lion (Jahn, *op. cit.* 49 f.; Abt, 'Amulette,' 451); lizard (Dilthey, *op. cit.* 53; Hubert, *op. cit.* 1506, 23; Abt, 'Apulejus' 183 ff., 275 f.); owl (Hubert, *op. cit.* 1506, 21); stag (Wolters, *Bonn. Jahrb.* cxviii. [1909] 262 f.); triton-shell (*Brit. School Annual*, viii. [1903] 368, *ib.* ix. [1904] 291, 6; *ARW* viii. [1905] 525); vulture (Heim, *op. cit.* 552, 1); wolf (Roscher, *op. cit.* 45, 125; 56, 161; Pradel, *op. cit.* 372).

PARTS OF ANIMALS (Riess, *l.c. passim*; Abt, 'Amulette,' 452 f.): ashes (Alex. of Tralles, i. 443, 445 [Puschm. 1886]; Kroll, *op. cit.* 24); blood (Plut. *Qu. Conv.* 700 f.); eyes (Fahz, *op. cit.* 154 f.); feet (*Geopon.* xiii. 14, 9); fleece (Riess, *l.c.*, *passim*; Gruppe, *op. cit.* 823; Nilsson, *Griech. Feste*, 1906, p. 6; cf. art. FLEECE); heads (Jahn, *op. cit.* 58); hippomanes (Abt, *op. cit.* 166); liver (Marcell. Emp. xxii. 41); tooth (Fahz, *op. cit.* 142, 8); wool (Abt, 'Apulejus,' 144 f.).

PARTS AND EXCREMENTS OF HUMAN BEINGS (Riess, *op. cit.* 53 ff.; never in the magic papyri; Kropatscheck, *op. cit.* 27): hand (Dilthey, *op. cit.* 63 f.; cf. Wilhelm, *Oest. Jahresh.* iv. [1901], Beibl. 16 f.; Deissmann, *Philol.* lxi. [1902] 255; Weinreich, 'Antike Heilungswunder,' *Religionsgesch. Vers. und Vorarb.* viii. 1 ff.; esp. 17, 3; 48); foot (Weinreich, *op. cit.* 70 ff.); in both cases the independent magic power of the members is a derived one—originally they were only the conductors of these powers (cf. the analogous remarks of Bienkowski, *op. cit.* 298); dirt from the sandal (*Pap. Lond.* cxxi. 492); blood and seed (Apollod. *Bibl.* ii. 152 W.); saliva (Abt, *op. cit.* 260 f.); marrow and liver (Horace, *Epod.* v. 37 f.); fœtus (Fahz, *op. cit.* 111, 3).

Hearth (Riess, *op. cit.* 49, 11); door (Plin. xxviii 49); sieve (Riess, *op. cit.* 96, 67); purse-string (*Pap. Lond.* cxxi. 209); clay from the potter's wheel (*ib.* 935); bell (Cook, *JHS* xxii. [1902] 5 ff.; Pease, *Harvard Stud.* xv. [1904] 29 ff.; Abt, *op. cit.* 264, 2; Wolters, *Bonn. Jahrb.* cxviii. [1909], 262, 1; *IG* xiv. 2409, 5; Daremberg-Saglio, *s.v.* 'Tintinnabulum' (not yet published); wheels (M. Bieber, *Das Dresdner Schauspielerrelief*, Bonn, 1907, p. 21, note); small magic-wheels (ἴυγξ) in love-incantation (Hubert, *op. cit.* 151 f.; Abt, *op. cit.* 172 f., 178 f.); statuettes of women and children with special gestures (Jahn, *op. cit.* 47 ff.); gladiators (Wolters, *Bonn. Jahrb.* cxviii. [1909] 268); images of Alexander the Great (Daremberg-Saglio, *s.v.* 'Amuletum,' p. 258; Weinreich, *op. cit.* 75).

IMAGES OF GODS (Jahn, *op. cit.* 45 ff.; Wünsch, 'Ant. Zauberg.' 42 f.; Kropatscheck, *op. cit.* 28, 1; Abt, *op. cit.* 298; cf. Daremberg-Saglio, *l.c.* 256): Aion (Wünsch, *ARW* xii. [1909] 32); Aphrodite (Abt, *op. cit.* 195 f.); Apollo (Plut. *Sulla*, 29; Abt, *op. cit.* 299); the Ephesian Artemis in an ædicula, surrounded by 'Ephesia grammata' (Daremberg-Saglio, *l.c.* 255); Eros in love-magic (Lucian, *Philopseudes*, 14; *Pap. Paris.* 1843); Hecate (Jahn, *op. cit.* 88; Abt, *op. cit.* 204, cf. 200 ff.); Herakles, fashioned in touchstone, therefore doubly potent (Wunsch, 'Ant. Zauberg.' 40); Hermes (Dilthey, *op. cit.* 55; Abt, *op. cit.* 282 f., 300 f.), ithyphallic, the phallus ending in the head of a ram, in a Delian shop (*BCH* xxx. [1906] 591, fig. 37; cf. Jahn, *op. cit.* 79, 206; Wolters, *Bonn. Jahrb.* cxviii. [1909] 268); Selene (*Pap. Lond.* cxxi. 937).

SYMBOLS: geometrical figures (Hubert, *op. cit.* 1519; Prentice, *op. cit.* 138); Kerykeion (Dilthey, *op. cit.* 47); lightning (*ib.* 48).

PARTS OF SACRIFICES (Fahz, *op. cit.* 142, 9).

The potency of a charm may be enhanced in two ways: by the addition of other ingredients, or by adherence to special prescriptions as to rites to be performed when using them. Kropatscheck (*op. cit.* 69 f.) has enumerated several cases in which plants, combined with other matter, are used. The effect of the phallus was enhanced by tying on bells (Jahn, *op. cit.* 79; Wolters, *Bonn. Jahrb.* cxviii. [1909] 267 f.). Against fever, a caterpillar, wrapped in a piece of linen, tied round thrice with a thrice-knotted thread, was used, with recitation of a special magic sentence (Plin. xxx. 101). Against a cough the name 'Ialdabra' was written on a blank sheet, in which was wrapped a stone that had been taken out of a new sponge (Pradel, *op. cit.* 380 f), and the whole was worn round the neck (Heim, *op. cit.* 587, 23). The so-called 'votive hands,' which were formerly regarded as an extreme example of the accumulation of magic ideas, should most probably be excepted here if we accept the interpretation of Blinkenberg (*Archæol. Stud.*, 1904, 66 ff.), which brings them into close connexion with the Phrygian cult of Sabazios; on the other hand, a remarkable golden amulet in the shape of a heart has been found in Crete (*ARW* vii. [1904] 265),

covered with different symbols: hand, snake, spider, scorpion, spiral, rosette (or shell) (*ib.* 273 f., viii. [1905] 523). A good example of the complication of rituals is given by Pliny (xxvi. 93). He records that a remedy is specially potent when applied by a naked (Jahn, *op. cit.* 93; Deubner, *op. cit.* 24; Abt, *op. cit.* 246, 1), sober (Abt, *op. cit.* 113 f.) virgin (Pradel, *op. cit.* 377) to a sober patient. The virgin thrice recites a magic formula, holding her hand in a prescribed position (Dilthey, *op. cit.* 62, 39 f.), and both expectorate (Abt, *op. cit.* 260 f.) thrice. The virgin is especially powerful on account of her purity, which quality, together with that of chastity, is indispensable to the efficacy of magic remedies (Abt, *op. cit.* iii. 115, 237, 241, 246, 258 f., 263, 330; cf. art. PURITY). Another remedy (Plin. xxiv. 172) is especially effective when rubbed in to the right (Abt, *op. cit.* 273 ff.; cf. Wünsch, *Defix. Tab. Att.* p. iv) by three men of three different nationalities.

A passage of Pliny (xxviii. 46) shows how the idea of a remedy becomes mingled with that of magic by transmission. Against fever a piece of nail or rope from a cross was worn round the neck as an amulet. When healed, the person hid this amulet in a place which the sun's rays could not reach. The notion was that the nail or rope had absorbed the disease; and yet these objects possessed healing power only in so far as they were connected with the dead, and therefore had apotropæic force. We also find cases in which the amulet changes its function. The scarab from Tusculum edited by Wünsch (*Bull. Com.*, 1899, p. 289 ff.) is inscribed with a Greek magic formula, containing the invocation of an unnamed demon, for the purpose of a nocturnal oracle—thus a positive, spell-binding invocation. Wünsch is right in remarking that the proprietor of Tusculum is not likely to have used the scarab for purposes of incantation. It is more probable that he wore it as an amulet, after it had come into his hands in some way, for that is the usual form in which scarabs were used in Rome (Wünsch, *op. cit.* 294).

The forms in which the powers of a charm were concentrated on the possessor were manifold. On a tablet from Knidos (Wünsch, *Defix. Tab. Att.* p. xii, no. 91, 14 f.; cf. *ib.* xxiii[b]) the chief possibilities are combined: *φάρμακον ἢ ποτὸν ἢ κατάχριστον ἢ ἐπακτόν*, where the noun *φάρμακον* is limited consecutively by three verbal adjectives. The charm might be drunk (Fahz, *op. cit.* 132 ff.; Dedo, *op. cit.* 4; Pradel, *op. cit.* 372): even magic words written on some eatable substance, or dissolved in a potion, were eaten or drunk (Pradel, *op. cit.* 380 f.; Kropatscheck, *op. cit.* 19); even the act of licking sufficed—a practice to which the kissing of an amulet bears affinity (Kropatscheck, *l.c.*). Furthermore, the remedy might be applied as an ointment (Kehr, *Quæst. Mag. Specimen*, 1884, p. 19; Dedo, *op. cit.* 3 f.; Abt, *op. cit.* 143) or in the form of a powder (Pradel, *op. cit.* 363, 369). And lastly, one could bring it into contact (*ἐπάγειν*, cf. Eur. *Hipp.* 318; *Phœn.* 343) in any other way with the person to be bewitched, if evil was purposed. The remedy could also be effective by being merely worn (Pradel, *op. cit.* 375). Here the favourite form was the real amulet (cf. above), which is also prescribed most frequently by Dioscorides when he gives sympathetic remedies (Weidlich, *op. cit.* 67). Kropatscheck has discussed the different forms in which the amulet was worn (*op. cit.* 33 ff.; cf. Jahn, *op. cit.* 41). It was wound round the head (which is important for the signification of the wreath), the neck, the right or left arm; or it was held in the hand (cf. Riess, *op. cit.* 52, 60; 65, 18). There is also a curious prescription to wear a golden or silver leaflet *στρατιωτικῶς*, which Kropatscheck interprets as a mode of wearing it like a military neck-ring (perhaps more correctly 'like the phaleræ'). There are still other fashions: phylacteries are worn under the feet (Wünsch, 'Ant. Zauberg.' p. 39), under the tongue, or in the mouth (Theophrastus, *Char.* 16, 2; Fahz, *op. cit.* 138; Rohde, *Psyche*, i.², 1898, 237), or under the pillow (Riess, *op. cit.* 57, 23). Even the mere looking at a charm may be effective (Riess, *op. cit.* 59, 22; 69, 60; 74, 2; Weinreich, *op. cit.* 169 f.), and the knowledge of the god's name alone has the power of protecting against evil (Kropatscheck, *op. cit.* 19 f.). Without any loss of efficacy (Bienkowski, *op. cit.* 298), charms are often enclosed in linen, or leather (Kropatscheck, *op. cit.* 34 f.), or in metal caskets: from this custom, as from the wearing of amulets in general, the use of ordinary jewellery originated (Daremberg-Saglio, *s.v.* 'Amuletum,' 254, 257; Riess, 'Amulett,' in Pauly-Wissowa, i. 1986; cf. Trendelenburg, *Blätter f. d. Mitglieder d. Wiss. Centralvereins*, no. 1, Berlin, 1909 [*Wochenschr. f. klass. Philol.*, 1909, p. 1025]). Not infrequently the proprietor may have had the intention of thus protecting his charm against contrary charms (Riess, *op. cit.* p. 1985; cf. Abt, *op. cit.* 282 f.), but the practical purpose must have been at least as frequently prevalent: the tongue of a fox or the heart of a lark cannot well be worn *in natura*, therefore we find for both the prescription to wear them in a bracelet (Plin. xxviii. 172, xxx. 63). If this is golden, as in the latter case, there is a conscious heightening of the magic powers. The same remedies are often found prescribed for eating, or for wearing (Kropatscheck, *op. cit.* 43), so that the mode of their use is not that which is significant. The variety of uses of one remedy recorded by Dioscorides has been quoted above (p. 434[a]).

The Greeks endeavoured to protect not only themselves and their children (Jahn, *op. cit.* 40, 42) but also their entire household from evil powers: their cattle (Riess, 'Aberglaube,' 45 f., 'Amulett,' 1988; Kropatscheck, *op. cit.* 37; Pradel, *op. cit.* 377), the horses (Riess, 'Amulett,' 1986, 1988; Weidlich, *op. cit.* 61 f.), the stables (Pradel, *op. cit.* 379; Prentice, *op. cit.* 138), the dove-cot, the hatching-places of the hens, the wine-casks, the grain, and the trees (Weidlich, *op. cit.* 73 f.), above all, the house itself and its entrance (Riess, 'Abergl.' 48, 3, 'Amulett,' 1988; Heim, *op. cit.* 509 f.; cf. Dedo, *op. cit.* 30, 1; Wünsch, *ARW* xii. [1909] 36), the workshops (Jahn, 66 f.; Prentice, *l.c.*), the implements of daily life (Jahn, *op. cit.* 159, 100; Riess, 'Amulett,' 1986 f.; Bienkowski, *op. cit.* 298), the clothes (Jahn, *op. cit.* 60), shield and weapons (Riess, 'Amulett,' 1986; Karo in Daremberg-Saglio, *s.v.* 'Ocrea,' p. 147; *Journ. intern. d'arch. numism.* ix. [1906] 5 ff.), towns, walls (apotropæic eyes on the town wall of Limena (Thasos), *JHS* xxix. [1909] pl. xviii. e), gates and public buildings (Jahn, *op. cit.* 59; Kropatscheck, *op. cit.* 20) sanctuaries, altars, graves (Riess, 'Amulett,' 1988) and the dead themselves (Kropatscheck, *op. cit.* 16). There is a tendency tectonically to unite the amulet with the object thereby protected—implements, weapons, clothes, buildings, and the like (the amulet thus becomes an apotropaion in its more restricted meaning). Lastly, the magic practice itself is protected by phylakteria against harmful anti-magic (Hubert, *op. cit.* 1516; Wünsch, 'Ant. Zauberg.' 38 f.; Kropatscheck, *op. cit.* ii ff.). Even animals were believed by the Greeks to make use of certain prophylactic means (Kropatscheck, *op. cit.* 37; Plin. xxiv. 174, whose testimony is, however, doubtful [cf. Riess, 'Abergl.' 57, 63]).

In many passages of magic literature the wonderful results attendant on the possession of certain charms are enumerated. Kropatscheck has made a selection of some (*op. cit.* 13 ff.; cf.

Hubert, *op. cit.* 1495; Abt, *op. cit.* 130), from which we obtain an impression of the good things the Greeks most desired to possess, and the evils they were most desirous to escape: love (φίλτρα, Abt, *op. cit.* 175 f.), renown, victory in battle or in contests or in lawsuits (*ib.* 130 f.; cf. Hellwig, *Globus*, xcv. [1909] 21 ff.), honour, riches, legacies, greatness, popularity, friendship [especially of influential people], life, and health (cf. a Byzantine bronze amulet with the inscription ΥΓΗΑ ΣV ΔΟΡΙΤΕ = ὑγείαν σοι δωρεῖται [*Journ. intern. d'arch. num.* x. 1907, 333 f.]), well-being, power, luck, success, peace, quietude, invulnerability, good looks, credit, memory, discernment, goodness, beauty, knowledge, many children, quick and easy birth, the gift of foreseeing the future, of exciting fear and admiration, of transforming oneself, of opening doors, of rending fetters and stones, of breaking magic spells, of becoming invisible or indiscoverable (the wish of runaway-slaves), of spell-binding the enemy, and of harming him, of getting and knowing everything one wished to have or know. The Greeks protected themselves against: the evil eye (Gruppe, *op. cit.* 878, 1; Daremberg-Saglio and Pauly-Wissowa, *s.v.* 'Fascinum'; S. Seligmann, *Der böse Blick und Verwandtes*, 1910, esp. i. 29), being bewitched by evil tongues (Abt, *op. cit.* 130), sufferings and illnesses of all sorts, such as fever, coughs, etc.; stress and danger by land and by water, storms and lightning, demons, ghosts and nightmares, somnambulism and frenzy (Tambornino, *op. cit.* 75 ff.), poisonous animals, especially snakes and scorpions, vermin of every kind (*Geopon.* xiii. 14, 9; Heim, *op. cit.* 478, 47; Riess, 'Aberglaube,' 89, 50), enemies and enmity, accusers, robbers, wrathful kings, lords, chiefs, and ruling powers (Abt, *op. cit.* 129), thieves (cf. Westerm. *Parad.* 145, 1 f.: βρῶμα κλεπτέλεγχον]), impiou sdeeds, and spells.

How much of the matter here enumerated is genuinely Greek cannot now be ascertained. Jahn (*op. cit.* 110) had already drawn attention to the great difficulty of obtaining 'eine Einsicht in den Gang der historischen Entwickelung.' Dilthey (*op. cit.* 65) considered a large part of ancient superstition to be of alien origin, and this supposition has only been strengthened by the researches of recent years. Especially Egypt, the old home of magic, transplanted its beliefs into Greece from the earliest times. In the *Odyssey* (iv. 219 ff.) an Egyptian charm is mentioned, and the scarab was a well-known form of amulet in Hellas (Daremberg-Saglio, *s.v.* 'Amuletum,' p. 257). It is also impossible to make an exact division between Greek and Roman belief within the classical period, seeing that these countries stood in continual and close contact (Kroll, *op. cit.* 5), though no doubt the greater part of superstitious beliefs must have been imported into the matter-of-fact Roman mind. Riess ('Amulett' p. 1989) assumes the possibility of a classification into periods and nations by exact statistical work. Whether this will ever be realized remains to be seen. It is more important to recognize the primitive forms of belief, and to marvel at the tenacity with which old heathen forms have found refuge under the mantle of Christianity. The following striking example may stand for many. An old heathen house-benediction (Kaibel, *Epigr.* 1138, cf. *Eph. arch.* 1909, 22) reads as follows: 'Here lives the all-powerful Herakles, the son of Zeus; may no evil enter!' and on an early Christian house in Syria (cf. Prentice, *op. cit.* 140) we find the inscription: 'Here lives our Lord Jesus Christ, the Son, the Word of God; may no evil enter!'

LITERATURE.—(1) For the ancient writers, see Hubert in Daremberg-Saglio, *s.v.* 'Magia,' p. 1501; cf. also *Hermes*, iii. [1869] 1–30; *Catalogus codd. astrolog.* iii. [1901] 41 ff.; *Oxyrh. Pap.* iii. [1903] 75, no. 433 (Blass, *APF* iii. [1906] 279, 213). The most important magic papyri are enumerated by Wünsch on p. 19 of his book cited below.

(2) Modern literature: the best compilation in Hubert, *op. cit.* 1494 ff.; also Jahn, 'Über den Aberglauben des bösen Blicks' (*SSGW*, 1855, p. 28 ff.); Dieterich, 'Papyrus magica' (Fleckeisen's *Jahrb.*, Supplementband xvi. [1888] 747 ff.); Heim, 'Incantamenta magica' (*ib.* Supplementband xix. [1893] 465 ff.); Weidlich, *Die Sympathie in der antiken Litteratur* (1894) Kroll, *Antiker Aberglaube* (1897); Dedo, *De antiquorum superstitione amatoria* (1904); Fahz, 'De poetarum Romanorum doctrina magica,' *Religionsgesch. Vers. u. Vorarb.* [*RVV*] vi. 3 [1904]; Wünsch, 'Antikes Zaubergerat aus Pergamon' (*Archæol. Jahrb.*, Erganzungsheft, vi. [1905]); Pradel, 'Griech. u. südital. Gebete' (*RVV* iii. 3 [1907]); Kropatscheck, *De amuletorum apud antiquos usu* (1907); Abt, 'Die Apologie des Apulejus' (*RVV* iv. 2 [1908]); Riess, 'Aberglaube' and 'Amulett' in Pauly-Wissowa, i. 30, 1984; and Daremberg-Sagio, i. 1, 1877, *s.v.* 'Amuletum,' with the bibliography at the end.

L. DEUBNER.

CHARMS AND AMULETS (Hebrew).—1. In the OT the references to charms and amulets are, from the nature of the canonical literature, of a more or less incidental character. Still, such as they are, they suffice to show that alongside of the official religion, so to say, of Jahweh, there survived the antique and ineradicable belief in the efficacy of amulets which is so prominent a characteristic of the Eastern peoples, and of none more than of those of the Semitic group. The first of such references is found in Gn 35[4], where the association of the ear-rings of Jacob's household with 'the strange [better 'the foreign'] gods which were in their hand'—for these see below on the results of the recent excavations—shows that the ear-rings were regarded as of the nature of charms or amulets. The possession of such articles, and the belief in their efficacy which it implied, the Hebrew historian rightly regarded as inconsistent with whole-hearted devotion to Jahweh. In early times, indeed, it may be said that every ornament was an amulet (cf. the Aram. *ḳĕdāshā*, 'holy thing' for 'ear-ring'). The venerable custom of wearing jewellery, in short, is believed to be less the outcome of female vanity than the result of a desire to secure the various orifices of the body against the entrance of evil spirits (see W. R. Smith, *Rel. Sem.*[2], 1894, p. 453 and footnote).

Among the articles of female adornment in Is 3[18-23] we find, in addition to the more easily identified jewels, such as the 'nose jewels' of v.[21]—originally amulets to guard the nostrils—mention of articles which the etymology of the original (*lĕḥāshîm*) shows to have been charms pure and simple, hence RV rightly has 'amulets.' Their precise nature and form cannot be determined. According to Ibn Ezra (*Comm. on Isaiah, in loc.*), they were 'writings written upon gold or silver after the manner of a charm.' To judge from the context of the original term in Ec 10[11], the *lĕḥāshîm* may have been charms in the form of miniature serpents—a world-wide form of amulet (see last paragraph of this art. for illustrations). Another article in Isaiah's list is the *śahărôn* (v.[18]), literally 'little moon,' Vulg. *lunula*, RV 'crescent.' Golden crescents, which derived their potency as 'defensatives' from their association with the moon-god, were not only worn by the Midianite chiefs in the days of Gideon for protection in battle, but were hung, as amulets, about the necks of their camels (Jg 8[21. 26]). Numerous specimens of such crescent ornaments have been found in the recent excavations.

Again, in 'the stone of grace' (Pr 17[8] AVm), or rather 'stone of favour,' we may recognize a stone worn as a charm to procure favour or good luck for the wearer. The universal belief in red coral as an amulet is perhaps sufficient justification for finding a reference thereto in La 4[7] (RVm). For the view that the obscure word rendered 'pillows' in Ezk 13[18. 20] should rather be rendered 'charms' or 'amulets,' see W. R. Smith, *JPh* xiii. 286.

Passing to the deutero-canonical writings, we find a striking instance of the use of amulets as protection against the risks of battle in the story of certain soldiers of Judas Maccabæus, who lost their lives in an engagement, and were afterwards found to have worn under their garments 'consecrated tokens (ἱερώματα) of the idols of Jamnia, which the law forbids the Jews to have aught to do with; and it became clear to all that it was for this cause that they had fallen' (2 Mac 12[40] RV). These ἱερώματα were probably small images of the heathen deities. An earlier parallel to this practice is found in 2 S 5[21], which tells of the Philistines bringing 'their images' (*'ăṣabbêhem*, read: 'their gods' [*'ĕlōhêhem*], according to the original text preserved in 1 Ch 14[12]) with them as charms to the field of battle. In Ben Sira's day (*c.* 180 B.C.) it was a common practice to wear amulets on the wrist, as appears from the figurative language of the original Heb. text of Sir 36[3] (EV 33[3]): 'A sensible man understands the Word, and the Law is for him an amulet (*ṭôṭepheth*), a band upon the hand' (so Smend).

2. In addition to the direct witness of the passages cited in the foregoing section, another important line of indirect evidence for the popular belief in the efficacy of charms and amulets among the Hebrews is to be found in the legislation regarding the three great 'signs' of Judaism, the phylacteries (Ex 13[9. 16], Dt 6[8] 11[18]), the *mĕzūzā*, or doorpost symbol (Dt 6[9] 11[20]), and the fringes or tassels at the four corners of the upper garment (Nu 15[37ff.], Dt 22[12]). This is not the place to discuss the origin and nature of these 'signs' (see the relative artt. in *HDB*); it must here suffice to say that modern scholars, reasoning from the existence of similar practices among the neighbouring peoples of Egypt and Syria, and from the analogy of similar adaptations in other religions, including Christianity, are inclined to explain the place of the 'signs' among the sacred laws of the Hebrews as due to the desire of the Hebrew legislators to find a place within the national religion for certain immemorial and deeply-rooted religious customs of heathen origin and associations. To enable this to be done, the customs in question were infused with a new significance and a worthier motive consistent with the religion of Jahweh. Indeed, as regards the first of these signs, the word of the original (*ṭôṭāphôth*), which our EVV render by 'frontlets,' can mean only 'jewels,' or, more probably, 'amulets' (see Sir 36[3] cited above), worn upon the forehead ('between thine eyes') and the wrist ('upon thy hand'). Similarly the NT name for the sign in question, φυλακτήρια, *i.e.* 'amulets,' shows that the wearing of strips of leather or parchment inscribed with words of special potency as charms must have been an old and familiar custom.

The antiquity of the 'phylactery' is proved by the recent discovery of small tablets, which the Minæans were wont to wear, inscribed with the words 'Wadd^{m} Ab^{m},' *i.e.* 'Wadd (the national deity of the Minæans) is father'; see Nielsen, *Altarab. Mondreligion*, Strassburg, 1904, p. 192, with illustrations.

Further, the practice of inscribing doorposts and lintels with sacred names and texts in order to guard against the entrance of evil spirits is attested for many countries, and particularly for Egypt (Wilkinson, *Anc. Egyptians*, ed. Birch, i. 361 f.; Trumbull, *The Threshold Covenant*, 1896, p. 68 ff.). Later evidence of the special virtue popularly ascribed to both these 'signs' is afforded by the Targum on Ca 8[3], which the paraphrastic translator interprets as signifying that the phylacteries and the *mĕzūzā* have power to prevent evil spirits from doing any manner of harm.

With regard, finally, to the third of the signs in question, the tassels (Heb, *ṣîṣîth*), the representations of Syrians and other Asiatics on the monuments of Egypt (see Wilkinson, *op. cit.* i., coloured plate ii. b), show that these ornaments were a feature of the dress of Israel's neighbours from an early period. Their position at the corners of the upper garment was doubtless due to superstitious ideas regarding corners, which have left their traces in other provisions of the Hebrew legislation; in short, the tassels were originally charms. That healing virtue was ascribed to them in NT times is seen from the incidents recorded in Mt 9[20], Mk 6[56]. Here may be mentioned the bells upon the skirts of the high priest's robe of office (Ex 28[33f.] 39[25f.]), now usually explained as 'a survival, like the gargoyles in our churches, of the primitive practice of the employment of charms to frighten away demons and evil spirits' (McNeile, *The Book of Exodus*, 1908, p. 185). The custom referred to in Zec 14[20] of hanging bells on the foreheads and necks of horses also belongs to the same circle of ideas. Numerous small bronze bells, such as are here mentioned, have been found at Gezer in strata known, on other grounds, to be post-exilic (*PEFSt*, 1904, p. 353, illust. plate iv. nos. 4, 5).

3. A flood of fresh light has been thrown upon the great popularity of amulets in Canaan at all periods, even in the pre-historic, by the excavations of the last twenty years. Every site excavated has yielded its quota to the list of amulets worn by the living and buried with the dead. One of the oldest yet discovered comes from Gezer, in the shape of the 'metacarpal bone of a kid,' perforated with two holes for suspension, which was found in the cremation cave of the Neolithic inhabitants (*PEFSt*, 1902, pp. 343, 348, illust. 350). In the following Canaanite period black slate was a favourite material for amulets. In shape these were 'either oval, rectangular, or sinker-shaped, generally flat, and always perforated for suspension' (*ib.* 343, with illust.). In this department of the ancient life of Canaan the predominance of Egyptian influence is very marked, especially, as we might expect, in Southern Palestine. Thus in addition to the countless scarabs in every variety of material, hundreds of amulets were found of an exclusively Egyptian type, such as the 'eye of Horus,' images of Osiris, and, in particular, of 'the bandy-legged Bes' (Erman, *Egyp. Religion*, Eng. tr., 1907, p. 75). The latter was regarded both as a talisman against serpents and other harmful creatures, and as a tutelary guardian of the home. While such purely Egyptian amulets as the figures of Ptah and the so-called 'dad' column, the symbol of Osiris (see *PEFSt*, 1903, p. 212, plate ii. 28), were probably imported, the greater number were doubtless of native manufacture. Thus a mould for the making of Bes amulets was found at Gezer (*ib.* p. 214). For illustrations of these figures of Bes, see Bliss, *A Mound of Many Cities*, 1894, p. 40 (with a ring attached to the head); Bliss and Macalister, *Excavations in S. Palestine*, 1902, plate lxxxiii. f.; Sellin, *Tell Ta'annek*, 1904–6, figs. 99, 124.

Under the head of amulets the present writer would include both the plaques of Ashtart (Astarte), the goddess of fecundity, and the small figures, in the round, of the same deity, which have been found in such numbers at all the sites. They appear to be too small to have been used as proper objects even of domestic worship. Such images, however, help us to understand the nature of the 'strange gods' favoured by Jacob's household (see above).

The excavations further show that from the earliest times, shells of all kinds were reputed to possess prophylactic virtue. Even at the present

day in Northern Arabia 'almost every woman, every child, every mare and she-camel wear shells round the neck, for these protect from the evil eye' (Musil, *Arabia Petræa*, 1908, iii. 314). This venerable and universal superstition no doubt had a place among the popular beliefs even in Bible times, as it certainly had in the later Talmudic period (Hamburger, ii., art. 'Böser Blick'). For every death due to natural causes, it was believed that there were ninety and nine caused by the evil eye. The desire to be safeguarded against its baneful influence explains the vast numbers of beads of various materials and colours found in the excavations. Blue was evidently a favourite colour then as now; in Palestine, at least, flat, circular beads, blue with white in the centre, are to-day the favourite amulet, especially for the protection of animals.

This recalls an artistic silver amulet, found at Gezer, in the shape of a pill-box, covered in part with a deep blue enamel with a white spot in the centre. It was filled with white earth—small bags with earth from some sacred spot, such as a weli's tomb, is a favourite present-day amulet—and fitted with a loop for suspension (*PEFSt*, 1903, p. 303 f. with illust.). With this pendant may be associated another of yellow glass, whose former use as a charm is placed beyond question by the Greek inscription which it bears *in reversed letters*: *εὐτυχῶς τῷ φοροῦντι*, 'with good luck to the wearer' (*ib.* 1904, p. 354 with illust.—where see for other amulets, including a tiny fish [a symbol of fertility?] in ebony, plate iv. no. 13, said to be of Maccabæan date).

Serpents have in all ages been reckoned as powerful charms—a fact which justifies our placing here the miniature bronze serpent found at Gezer (illust. *ib.* 1903, p. 222). It can scarcely be separated from similar bronze models of serpents found by Glaser in Southern Arabia, with a hole through the head for a cord by which they were hung about the wearer's neck (Nielsen, *op. cit.* p. 190, with illust.).

LITERATURE.—This has been given in the article.

A. R. S. KENNEDY.

CHARMS AND AMULETS (Indian).—In no region of the world, except perhaps W. Africa, is the use of various protectives against malignant spirit influence more common than among the natives of India. These races are constantly beset by the fear of danger from spirits of various kinds and from the evil eye, and to these agencies they attribute most of the diseases and other misfortunes to which they are exposed. Their strong faith in the efficacy of ritualistic cultus leads them to adopt various magical and semi-magical devices which they believe capable not only of securing protection, but of being used offensively to destroy an enemy. An examination of the various forms of domestic ritual, those practised at marriage, conception, birth, puberty, initiation, and death, shows that they largely consist of a series of charms and other magical devices intended to protect bride and bridegroom, mother and child, youth and maiden, and the mourners for the dead (see Colebrooke, *Essays*, London, 1858, p. 76 ff.; Grierson, *Bihār Peasant Life*, Calcutta, 1885, p. 357 ff.; *BG* ix. pt. i. 31 ff., pt. ii. 227 ff.; Padfield, *The Hindu at Home*, Madras, 1896, p. 94 ff.; Dubois, *Hindu Manners and Customs*[3], Oxford, 1906, p. 212 ff.).

The word 'charm' (Lat. *carmen*) primarily denotes 'the chanting or recitation of a verse supposed to possess magic power or occult influence' (*OED*, *s.v.*); in other words, what is commonly called a spell. In its secondary significance it includes material things credited with magical properties, worn on, or in close connexion with, the person whom it is designed to protect; and in popular acceptance it is extended to various magical devices intended to effect the same object. Besides being protective, charms may be offensive, devised, as those used in the Tāntrik school, to injure or destroy an enemy. The 'amulet' belongs to a sub-class of the physical charm. It is usually defensive, and is worn about the person protected, in a case which is generally made of some metal. In order of date it is probably later than either the spell or the physical charm.

The word 'charm' has thus a very wide connotation, and it is difficult to arrange in orderly sequence the numerous devices of this kind used by the races of India. In general they are all based on the principles of Animism current among all classes of the population. The charms used in the official ritual of Brāhmanism do not, in principle, differ from those employed by the non-Aryan races or by foreign immigrants, like the Muhammadans or the Parsis. They are common to believers in all the existing religions—Hinduism, Buddhism, Islām, Judaism, and Zoroastrianism—and many have been retained by native Christian converts. In this article the tribal and religious variances will be defined so far as it is possible to do so; but distinctions of race and religion do not, in themselves, furnish a basis for classification.

1. The spell or spoken charm.—The general name for these spells is *mantra*—a term which in the Vedic age was applied to hymns and prayers addressed to the gods, though at a later time it came to acquire a magical meaning. But, as the Vedas are comparatively late in the development of Indian religions, this may not represent the actual course of evolution, which was probably in the reverse direction, that is to say, from spell to prayer (see R. R. Marett, *FL* xv. 132 ff.; Jevons, *Introd. to the Study of Comparative Religion*, London, 1908, p. 151 ff.). In the later use of the word the *mantra* is all-powerful. 'The universe is under the power of the gods; the gods are under the power of *mantrams*; the *mantrams* are under the power of the Brahmins; therefore the Brahmins are our gods' (Dubois, *op. cit.* 139). In a similar class are the *bīja*, or 'seed,' the mystical letter or syllable which forms the essence of the *mantra*; and the *dhāranī*, which is the term applied to spells in Buddhist literature (Waddell, *Buddhism of Tibet*, London, 1895, p. 146 f.). *Mantras* are of various kinds, the greatest being the *gāyatri*, or invocation of the sun-god Sāvitri (Rigveda, III. lxii. 10)—the most universal of all Vedic prayers or invocations (Monier-Williams, *Brahmanism and Hinduism*[4], London, 1891, p. 19). The Tāntrik *mantras* originating in the corrupt Sākta cultus fall into a different class. *Mantras* accompany every Hindu religious rite, and form a necessary part of every domestic ceremony. They assume many varied forms, being sometimes an adjuration to the deity in whom the suppliant believes, or who is supposed to be competent to secure the desired result; sometimes the appeal is made to some hero or deified saint; or it is addressed to the spirit producing disease or other calamity whom the worshipper desires to scare or prevent from doing further mischief.[1]

Similar spells are used by Muhammadans, of which the most potent is the *Bismillāh* (*q.v.*), which is used before meals, at the putting on of new clothes, at the commencement of books, and when any new business is undertaken. In an

[1] The *mantras* used in the domestic rites are given by Colebrooke, *op. cit.* 76 ff.; Thurston, *Ethnographic Notes in S. India*, Madras, 1906, p. 259; L. K. Anantha Krishna Iyer, *The Cochin Tribes and Castes*, Madras, 1909, i. 163 ff.; for the Tāntrik *mantras*, see Monier-Williams, *op. cit.* 197 ff.; for those used by the Himālayan Buddhists, Waddell, *op. cit.* 141 ff., 214, 217.

abbreviated form, omitting the attributes of mercy ascribed to the Creator, it is used at the slaughter of animals and at the opening of a battle, with the object of averting blood-guilt.

2. **Substances out of which charms are prepared, and other substances and devices used for similar purposes.**—The list of substances out of which charms are prepared is extensive, and here only a selection, for purpose of illustration, can be given.

(*a*) *Various natural substances.*—To this class belong the branches, leaves, fruits, flowers, etc., of various sacred trees and plants. Such are the fig, mango, *tulasī*, or sacred basil, the *bel* (*Ægle marmelos*), the bamboo, and many others. Thus, special trees are selected to form the pavilion in which the marriage rite is performed; leaves and flowers are hung round the necks of the bride and bridegroom, or on the mother during the pregnancy rites, or are placed in the room in which the marriage is consummated, or in that in which the child is expected to be born. At the marriage of Rājputs and some other tribes a coco-nut is sent to the bride as a fertility charm. Various kinds of grain are used in the same way. Rice, wheat, or barley is scattered over bride and bridegroom, and used in many other family rites. A compound of various kinds of grain is specially efficacious: women in N. India, in order to avoid the attack of demons, put under their pillows seven kinds of grain; each of these, by a later development, is supposed to represent one of the seven sisters of the malignant Mother-goddess (*NINQ* iv. 160; and, for the belief in the efficiency of various kinds of grain, see *BG* ix. pt. i. 389 ff.; Campbell, *Notes on the Spirit Basis of Belief and Custom*, Bombay, 1885, pp. 94, 456). Mustard seed is often used in this way. In N. India demons are believed to fly before the stench of salt and mustard burnt in a fire of the wood of the sacred *nīm* tree (*Melia azadirachta*); the ghost of the dead clinging to the Nāyar mourners in Malabar is repelled by rubbing them with oil in which the seeds of sesamum have been mixed (*NINQ* iv. 197; *Bull. Madras Museum*, iii. 351).

(*b*) *Substances derived from animals.*—These are believed to confer upon the wearers the courage, agility, cleverness, etc., of the creatures from which they have been taken. Among these may be mentioned the claws, teeth, fat, milk, rudimentary clavicles, and skin of the tiger or leopard (Dubois, *op. cit.* 112, 183; *NINQ* v. 200; Campbell, *op. cit.* 280; Thurston, *op. cit.* 265). At the coronation of an ancient Hindū Rājā he was sprinkled with the water of holy rivers mixed with the essence of holy plants, and he stepped on a tiger skin (for details, see art. ABHIṢEKA). The five products (*pañchagavya*) of the sacred cow—milk, curds, butter, urine, dung—and the extract (*gaulochan*) prepared from her urine are used in charms and various rites (Dubois, *op. cit.* 43, 152 f.). The Nāmbūtiri Brāhman youth in Malabar wears a strip of the skin of the yak attached to his sacred thread (*Bull. Madras Museum*, iii. 41). The skin of the black buck (*Antilope cervicapra*), the sacred animal of the Aryans, forms the seat of the ascetic, and, when a man dying abroad is cremated in effigy, the leaf figure representing him is bound with a strip of the hide (Colebrooke, *op. cit.* 99). Hair from the tail of the elephant, the pearl (*kuñjaramaṇi*, *gajamuktā*) said to be found in its forehead, and another extracted from the brain or stomach, possess protective qualities and are used in charms (*Bull. Madras Museum*, iii. 221; *NINQ* iii. 53; Crooke, *PR* ii. 240; Waddell, *op. cit.* 208); bracelets of ivory are protectives for married women (Campbell, *Notes*, 20; *BG* ix. pt. i. 376). The horn of the rhinoceros detects poison and cures epilepsy (Shway Yoe, *The Burman*, 1896, ii. 325; Fryer, *New Account of E. India and Persia*, London, 1698, p. 288). The hair of the bear and the gall-bladder, worn by children, ward off diseases (Thurston, *op. cit.* 265; *NINQ* v. 180). In the Panjāb the horn said to be found in the head of the leader of a pack of jackals saves the wearer from being scolded, and in Madras realizes desires and secures jewellery from robbers (Blanford, *Mammalia of India*, London, 1891, p. 142; *PNQ* i. 89; Thurston, *op. cit.* 269 f.); its flesh cures asthma, and the head of a hyæna, buried in the stall, prevents cattle disease (Thurston, *op. cit.* 275 f.). The eye of the loris (*Loris gracilis*) is used in necromancy, and the small musk-rat, worn on the person, renders a man invulnerable to sword-cuts and musket-balls (*ib.* 270, 274). The custom of hanging the skulls of animals over the house-door and at the entrance of the village as a charm is common to many hill-tribes (Gurdon, *The Khasis*, London, 1907, p. 35; Thurston, *op. cit.* 271; Waddell, *op. cit.* 484 n.).

Some birds possess similar virtues. The flesh of the species *buccros*, if hung up in the house, is believed to bring prosperity, and the bones attached to the wrists of children repel evil spirits (Hislop, *Papers relating to the Aboriginal Tribes*, Nagpur, 1866, p. 6). Chicken bones are worn in the same way by the Was of Upper Burma (*Gazetteer*, i. pt. i. 505). The fat of the peacock, which moves gracefully, is, on the principles of mimetic magic, a cure for stiff joints; and smoking a feather in a pipe keeps off snakes (Thurston, *op. cit.* 275; *NINQ* i. 15). The habit of wearing feathers, common among the forest tribes, is probably due more to a desire for protection than for ornament (Lewin, *Wild Races of S.E. India*, London, 1870, pp. 284, 309; *Gazetteer Upper Burma*, i. pt. i. 461). The wearing of boar tusks in the head-dress, as among the Abors and Nāgas of Assam (Dalton, *Descriptive Ethnology of Bengal*, Calcutta, 1872, plates xiii., xvi.), has been assumed by Ridgeway to be the origin of the Turkish crescent (*Man*, vii. 144, cf. *JAI* xxxviii. 241 ff.); but the moon seems to be sometimes used in charms, as when crescents of gold, with the points turned upwards, are worn as protectives by children in S. India, or when Mādhava Brāhmans in the Deccan make an image of the crescent moon on the marriage altar (Thurston, *op. cit.* 263 f.; *BG* xxii. 79; cf. Tylor, *JAI* xix. 54 f.; Elworthy, *The Evil Eye*, London, 1895, p. 181 ff.).

Reptiles also are used in charms. Alligator flesh, particularly the testicles, is in repute as a restorative. A man in S. India who has been stung by a scorpion sits with an iron bar in his mouth, and applies chopped lizard flesh to the puncture; an equally effective remedy is the excrement of a lizard fed on scorpions (Thurston, *op. cit.* 274). In the Bahāwalpur State the sand-lion is known as *chor*, and is hung round the neck of a child suffering from a fever called by the same name; another insect hung round the child's neck cures convulsions (Malik Muhammad Dīn, *The Bahāwalpur State*, Lahore, 1908, pp. 12, 187).

(*c*) *Stones.*—Perforated stones are specially valued as protectives. An ancient perforated stone implement was found hung round the neck as a cure for goitre in the Central Provinces (E. M. Gordon, *Indian Folk Tales*, London, 1909, p. 75; cf. Crooke, *PR* ii. 19, 164; *JAI* xvii. 135 f.). This, combined with the idea of fertility, is the probable explanation of the use of the potter's wheel and the household grindstone at Hindu weddings as a charm (Campbell, *op. cit.* 164, 335). In the orthodox Brāhman ritual the bride treads upon a stone with her right foot, while the bridegroom says: 'Ascend this stone; distress my foe; be firm like this stone.' Similar rites are performed

at the present day among the higher castes in N. India, as well as among the forest tribes (Colebrooke, *op. cit.* 135; Dalton, *op. cit.* 194, 234, 252). In the same way old flint implements are valued. They are stored at Saiva shrines, where they represent the *lingam*, and in S. India at the temples of Vighneśvara the elephant-god, who averts evil; the Burmese use them for medicinal purposes, powdered celt being considered a cure for pain in the stomach and for inflamed eyes (Thurston, *op. cit.* 351; Crooke, *PR* ii. 12, 164; cf. W. Johnson, *Folk Memory*, Oxford, 1908, p. 121 ff.).

(*d*) *Precious stones.*—The same feeling attaches to many precious stones. They are most valued in special combinations. The collection of nine (*navagraha*)—ruby, pearl, coral, emerald, topaz, diamond, sapphire, amethyst, and cat's eye—and of five—gold, amethyst, diamond, emerald, pearl (*pañcharatna*)—are most efficacious. Jade, possibly under Chinese influence, is used as a charm, especially in the Burmo-Tibetan region; it diverts lightning and cures heart palpitation; when thrown into water it brings snow, mist, and rain; and, if poison be poured into a cup made of it, the cup cracks (Gray, *China*, London, 1878, ii. 356; Gibbon, *Decline and Fall*, ed. W. Smith, 1854, iv. 196 n.; *NINQ* iv. 198). If a man bathes while wearing a turquoise, it is believed in N. India that the water which touches it protects him from boils and snakes; it is inserted as a charm in the forehead of images of Buddha, and, if large enough, it is engraved with a formula or the figure of a dragon (*NINQ* iii. 53; Waddell, *Lhasa and its Mysteries*[3], London, 1906, p. 349). Coral wards off the evil influence of the sun, and purifies mourners from the death tabu (Campbell, *op. cit.* 69; Colebrooke, *op. cit.* 101). Similar protective powers are attributed to other precious stones (Campbell, *op. cit.* 119 ff.; Crooke, *PR* ii. 17 ff.).

(*e*) *Beads.*—The protective value of beads depends partly upon the substances of which they are composed, partly on the fact that they are perforated, and thus exposed to the entry of spirits. Those worn by Śaivas are made of the 'Rudraeyed' (*rudrākṣa*), the berry of the plant *Elæocarpus ganitrus*; those of the Vaiṣṇavas of the wood of the sacred basil (*tulasī*), both bringing the wearer into communion with, and under the protection of, the deity. The shell of the cowrie (*Cypræa moneta*) is similarly hung on the necks of women, children, and cattle, and it is supposed to crack when the evil eye falls upon it (Campbell, *op. cit.* 126 ff.; Crooke, *op. cit.* ii. 17). The blowing of the conch shell (*Turbinella rapa*) scares evil spirits from the temple-offerings, from the married pair, and from the corpse (Campbell, *op. cit.* 126). When the coils of the shell are turned to the right (*dakṣiṇāvarta*), it is specially valued (Risley, *Tribes and Castes of Bengal*, Calcutta, 1891, ii. 223).

(*f*) *Metals.*—i. *Iron.*—The demons and evil spirits of India come down from the Age of Stone, and for this reason they dread the influence of metals. Iron is specially valued as a protective (cf. Johnson, *op. cit.* 169 ff.). When a child is still-born, the Burmese place iron beside the corpse, with the invocation: 'Never more return into thy mother's womb till this metal becomes as soft as down' (Shway Yoe, *op. cit.* i. 3). The Vadvāls of Thāna, in order to guard against the spirit which attacks the child on the sixth day after birth (an unconscious recognition of the danger from infantile lockjaw, caused by neglect of sanitary precautions), place an iron knife or scythe on the mother's cot, and an iron bickern at the door of the lying-in room—a custom which also prevails in the Panjāb (Campbell, *op. cit.* 387; Malik Muhammad Din, *op. cit.* 98). An iron bracelet is worn by all Hindu married women, those of high rank enclosing it in gold (Rajendralala Mitra, *The Indo Aryans*, London, 1881, i. 233, 279; Risley, *op. cit.* i. 532, 533, ii. 41). In the form of the sword it has special power. When a birth occurs among the Kachins of Upper Burma, guns are fired, knives (*dhā*) and torches are brandished over the mother, and old rags and chillies are burnt to scare demons by the stench (*Gazetteer*, i. pt. i. 399). The Muhammadans of N. India wave a knife over a sufferer from cramp, with the invocation: 'I salute God! The knife is of steel! The arrow is sharp! May the cramp cease through the power of Muhammad, the brave one!' (*NINQ* v. 35). On the Irrawaddy river in Burma iron pyrites are valued as a charm against alligators (Yule, *Mission to Ava*, London, 1858, p. 198). A curious belief in the sanctity of iron appears among the Doms (*q.v.*), a criminal tribe of N. India. They inherit from the Stone Age the belief that it is unlawful to commit a burglary with an iron tool; any one disobeying this rule is expelled from the community, and it is believed that the eyes of the offender will start from his head (*NINQ* v. 63).

ii. *Copper.*—Copper is a sacred metal with Hindus, and many of the sacrificial utensils are made of it. In the Panjāb a couple of copper rings or ear-rings scare the spirit which brings sciatica (*PNQ* iv. 149). The Lingāyats of Dhārwār, with the same intention, place over the corpse twenty-one small pieces of copper, on which sacred formulæ have been engraved (*BG* xxii. 115; cf. European superstitions regarding the use of bronze [Johnson, *op. cit.* 120]).

iii. *Jewellery.*—The same beliefs extend to precious metals in the form of jewellery, the use of which was in India prophylactic before it came to be ornamental. This is shown by the fact that jewels are used to guard the orifices and other parts of the body most exposed to the entry of spirits—the ears, nose, temples, neck, hands, feet, waist, and the pudenda. Further, among the forest-tribes, ornaments take the shape of the leaves, flowers, fruits, or berries of the sacred trees which were originally used for the purpose of protection; and to these are added the bones, teeth, or horns of animals, the virtues of which are thus communicated to the wearer (Campbell, *op. cit.* 20 ff.). The ring, in particular, is supposed to possess special power. In the folk-tales we find that a charmed ring, placed on the ground in a clean square, and sprinkled with butter-milk, secures the attainment of any wish (Temple-Steel, *Wideawake Stories*, Bombay, 1884, p. 199). In Burma, Kachin women wear, as protectives, on the front of the hair a silver crescent held up behind by cowrie shells, and on the upper part of the ear a silver circlet with a cock's feather (*Gazetteer*, i. pt. i. 395). A ring of the *kuśa* or *darbha* grass (*Poa cynosuroides*) is worn on the fourth finger by Hindus during sacred rites, and is known as 'the purifier' (*pavitra*), that is to say, the protector from evil influences (Dubois, *op. cit.* 150 f.). That worn by the Nāmbūtiri Brāhmans of Malabar is usually of gold in the shape of the figure 8; it must be worn during certain rites, and those who do not possess a gold ring make one of the *darbha* grass for each solemnity (*Bull. Madras Museum*, iii. 41). All Hindus and many Muhammadans wear at marriage a crown of precious metals or tinsel as a protective.

iv. *Coins.*—Coins are used as protectives partly on account of the metal out of which they are made, and partly because Hindu coins are engraved with the figures and symbols of deities, Muhammadan with sacred texts. But it is only those of the older dynasties, not those of British mints, which are valued. In Nepāl, the local rupee, covered with Śaiva emblems, is shown to a woman

when her delivery is protracted, and in N. India the coin of the Emperor Akbar, known as that of the 'four friends' (*chāryārī*), because it is engraved with the names of the four successors of the Prophet —Abū Bakr, 'Umar, 'Usmān, and 'Alī—is used in the same way (Crooke, *PR* i. 116). The Deśast Brāhmans of Dhārwār, when child-birth is delayed, dose the woman with water in which old gold coins have been placed (*BG* xxii. 74). In Malabar, Nāmbūtiri Brāhman boys wear amulets containing the *chakram* coin, of which 28 make one rupee, and Venetian sequins are also worn to bring good luck (*Bull. Madras Museum*, iii. 42, 41, 196). In Gujarāt, children of the Kāyasth caste are made to lick a little rice and milk from a rupee as a prosperity charm (*BG* ix. pt. i. 61). Coins of Queen Victoria were valued by Himālayan Buddhists, because the image was supposed to represent the mild goddess known as the Great Queen; but they refused to accept those of King Edward VII., which they believed to represent the head of the Lāma (Waddell, *Lhasa and its Mysteries*[3], 354).

(*g*) *Salt.*—Salt, probably on account of its preservative qualities, is often used in charms. The Rautias of Bengal repel the evil eye by waving mustard seed and salt round the patient (Risley, *op. cit.* ii. 209). In Gujarāt it is deemed specially lucky to buy salt on New Year's Day; to be freed from the death throes a dying person makes a gift of salt to a Brāhman; on the great spirit day in October, Hindu women make marks with salt at the cross-roads (*BG* ix. pt. i. 349). Salt is part of one of the elaborate Toda charms (Rivers, *The Todas*, London, 1906, p. 263 f.).

(*h*) *Colours.*—Special colours are prescribed in many charms. Yellow, red, and black are obnoxious to evil spirits. The belief in the virtue of yellow is one of the reasons why both Hindus and Muhammadans smear the bride and bridegroom with turmeric. The same explanation probably accounts for the use of the substance known as 'milkmaids' sandalwood' (*gopichandana*) for marking the forehead. Vermilion is used to mark the forehead, and is also applied as a protective to new clothes. The virtues of black are illustrated by the almost universal custom of smearing the eyelids of women and children with lampblack, partly because spirits detest black, and partly as a disguise against the evil eye (Campbell, *op. cit.* 63 ff., 458).

(*i*) *Strings, threads, knots.*—These are used as charms to produce union, and also to bar the entry of hostile spirits. All castes knot the clothes of the bride and bridegroom as a marriage charm. In a marriage in S. India an important part of the rite is the tying of the 'lucky thread' (*mañgala-sūtram*), a saffron-coloured thread or cord attached to a small gold ornament, fastened round the neck and hanging down in front, like a locket. It is worn, like the European wedding-ring, by all married women, who never part with it during life; it is cut at the death of the husband, and its absence is a sign of widowhood (Padfield, *op. cit.* 126 f., 239). Analogous to this is the rite of tying the *tālī*, which, as its name imports, was originally a leaf of the palmyra palm (Skr. *tāla*) (Dubois, *op. cit.* 224; Thurston, *op. cit.* 121 ff.). Among the Todas its place is taken by the 'bow and arrow touching' (*pursūtpimi*), represented by a blade of sacred grass and the twig of the shrub *Sophora glauca* (*Bull. Madras Museum*, ii. 159; Rivers, *The Todas*, 319 ff.). The tying of the marriage wristlet (*kañkaṇa*), which often consists of blades of *kuśa* grass, is common in most parts of the country (Dubois, *op. cit.* 222; *Bull. Madras Museum*, iii. 62; *BG* ix. pt. i. 45). Another form of this sacred thread is the Brāhmanical cord (*yajñopavīta*), with which the high-caste youth is invested at the rite of initiation (*upanayana*) (Dubois, *op. cit.* 160 ff.; *BG* ix. pt. i. 36 ff.). It is fastened with the special 'Brahma knot' (*brahma-granthi*). In another form of the rite in S. India the thread is reinforced with a strip of the hide of the male deer; or a long strip of it is worn as a sash (Padfield, *op. cit.* 77). During the rite of initiation a saffron-coloured thread is tied to the wrist of the neophyte (Dubois, *op. cit.* 165).

Another charm of the same class is the *rākhī* (Skr. *rakshika*, root *raskh*, 'to guard'). It is tied by women or by Brāhmans on the wrists of men at the Salono or Rakshābandhan feast held on the full moon of the month Śrāvaṇa (July–August). It is closely connected with the Brāhmanical cord, a new cord being annually assumed on the same date at which the *rākhī* is tied (Padfield, *op. cit.* 78; Crooke, *PR* ii. 293). This is one of the symbols which mark brotherhood (see art. BROTHERHOOD [artificial], vol. ii. p. 862[b]). A similar rite among Muhammadans is the 'year knot' (*sālgirah*), a string tied on the wrist of a child on its first birthday, which is replaced each succeeding anniversary (Herklots, *Qanoon-e-Islam*, Madras, 1863, p. 26; Blochmann, *Āīn-i-Akbarī*, Calcutta, 1873, i. 267).

Similar uses of threads and knots as charms are numerous. Barren women, in the hope of obtaining offspring, tie knots of coloured thread on the marble tracery of the Saint's tomb at Fatehpur-Sīkrī (*q.v.*). The Burmese wear coloured string wristlets as a protection against cholera (Shway Yoe, *op. cit.* ii. 108). The Kāmi woman in E. Bengal, when she names her child, ties seven threads round its wrist, saying, 'Be fortunate, be brave, be healthy' (Lewin, *Wild Races of S.E. India*, London, 1870, p. 229). Among the Mrūs of the same region, every one attending a wedding has a thread tied round his wrist by the oldest woman of the bride's family; this must remain on the wrist until it decays and falls off (*ib.* 234). The Grand Lāma ties knots of silk round the necks of his votaries (Waddell, *Buddhism of Tibet*, 321). If a Mālā child in Madras grinds its teeth in sleep, a piece of broken pot is brought from a graveyard, fumigated with incense, and tied round the child's neck with a string rubbed with turmeric, or with a piece of gut (Thurston, *op. cit.* 265).

(*j*) *Fire and light.*—Lights scare evil spirits. Among the Kachins of Upper Burma torches are waved over a woman after her delivery (*Gazetteer*, i. pt. i. 399). The Nāyars of Malabar place lights, over which rice is sprinkled, in the room in which the marriage is consummated (*Bull. Madras Museum*, iii. 234; cf. Dubois, *op. cit.* 227). Among the Savaras of Bengal the bridesmaids warm the tips of their fingers at a lamp, and rub the cheeks of the bridegroom (Risley, *op. cit.* ii. 243). The Muhammadan Khojas of Gujarāt place a four-wicked lamp near a young child, while the friends scatter rice (*BG* ix. pt. ii. 45). In Bombay the lamp is extinguished on the tenth day, and again filled with butter and sugar, as a mimetic charm to induce the light to come again and bring another baby (*PNQ* iv. 5). The folk-tales often refer to jewel-lamps guarding young children (Somadeva, *Kathāsaritsāgara* [tr. Tawney, Calcutta, 1880], i. 189, 246, 305). The Śrigaud Brāhmans of Gujarāt at marriage wear conical hats made of leaves of the sacred tree *Butea frondosa*, and on the hat is placed a lighted lamp (*BG* ix. pt. i. 19; and cf. *ib.* 272).

Fire is commonly used for the same purpose. The fires lit at the Holī spring-festival are intended as a purgation of evil spirits, or as a mimetic charm to produce sunshine. Touching fire is one of the methods by which mourners are freed from the ghost which clings to them. When an Arer woman

of Kānara has an illegitimate child, the priest lights a lamp, plucks a hair from the woman's head, throws it into the fire, and announces that mother and child are free from tabu (*BG* xv. pt. i. 215). The rite of fire-walking practised in many parts of the country appears to be intended as a means of purging evil spirits; and the fire lighted by all castes in the delivery-room seems to have the same object. Such use of fire is naturally common among the Zoroastrian fire-worshippers (Shea-Troyer, *The Dabistān*, Paris, 1843, i. 317).

(*k*) *Shouting, gun-firing*, etc.—Noise is a charm against evil spirits. When epidemic disease appears in Burma, 'the whole population break out into yells, and make as much noise as they can, with the view of scaring away the evil spirit who has brought the disease' (Shway Yoe, *op. cit.* i. 282). Bell-ringing, drum-beating, and other forms of music have the same effect (Campbell, *op. cit.* 45 f., 108 ff., 407).

(*l*) *Incense and foul smells.*—The burning of incense and the production of foul smells act in the same way. In the Himālayas a mixture of incense and butter is burnt to scare demons (Waddell, *Buddhism of Tibet*, 432 n.). In N. India, bran, chillies, salt, mustard, and sometimes the eyelashes of the patient, are waved seven times over a sick child; when these things are burned, if a foul smell is produced, as is necessarily the case, the infant is believed to be freed from the effects of the evil eye (*PNQ* i. 51).

(*m*) *Blood.*—Blood is used as a prophylactic against evil spirits, and marks the blood-covenant. At a Kachin marriage in Burma the blood of fowls is scattered on the bride and her attendants, and along the path by which she comes to the house of her husband (*Gazetteer*, i. pt. i. 407). At animal sacrifices in Gujarāt, the blood is sprinkled on the image of the goddess, and on the floor and door-posts of the temple (cf. the Passover rite, *HDB* iii. 689); if the offering be made for the good of the community, it is rubbed on the gates of the town and on those of the chief's palace or hall, and on the foreheads of the bystanders; the exorcists and barren women drink cups of the blood, and the person making the offering takes to his house a portion, in which he mixes grain of various kinds, and this is scattered in the rooms of the house and laid in a corner of his field; even Brāhmans keep cloths steeped in the blood of the victim, as a charm against natural and spirit-sent diseases (*BG* ix. pt. i. 407).

(*n*) *Abuse and indecency.*—The custom of using foul abuse and indecency at various religious and domestic rites seems to be practised with the same object. The abuse of the bridegroom and his party by the friends of the bride, commonly explained as a survival of marriage by capture, is probably based on the desire to protect the married pair from evil spirits. In some cases, as a propitiatory charm, people submit to gross abuse, as when, on the feast day of Gaṇeśa, men who have to go out and risk the danger of seeing the moon fling stones at the house of a neighbour, in the hope that he may abuse them and thus remove the evil (Forbes, *Rās Mālā*, London, 1878, p. 610; Crooke, *PR* i. 16 f.; cf. Frazer, *Pausanias*, 1900, ii. 492; Farnell, *CGS* iii. 104, 172). Mock fights, which are often a mimetic representation of the victory of the powers of good over those of evil, are probably intended to secure the same object (Crooke, *PR* ii. 321; cf. Farnell, *op. cit.* v. 194; Crawley, *The Mystic Rose*, London, 1902, p. 290 ff.).

3. Charms written, engraved, or inserted in the flesh.—Charms of this kind fall into several classes.

(*a*) *The yantra*, 'that which holds, restrains, fastens,' is a combination of mystical symbols and diagrams, drawn on copper or other metallic plates, and supposed to possess occult powers. One worn by a Nāmbūtiri Brahman of Malabar had a pattern engraved on a silver plate, and the wearer alleged that its use relieved him from a feeling of heat in the cool season—a symptom which he attributed to the influence of an evil spirit (*Bull. Madras Museum*, iii. 41, 305 ff.). Another *yantra* represented, on a sheet of metal, the enemy that the wearer wished to destroy; and it contained a threat that bodily injury or death would overtake him; to effect the same object, nails are thrust into the body of a live frog or lizard, which is enclosed in the shell of a coco-nut—the death of the animal and of the enemy being supposed to occur simultaneously (*ib.* iii. 51). For other examples of similar *yantras*, see L. K. Anantha Krishna Iyer, *The Cochin Tribes and Castes*, i. 307, 317. Witchcraft by means of such images is common (Herklots, *op. cit.* 215 ff.; Crooke, *PR* ii. 278 ff.).

(*b*) *Cabalistic squares.*—Such squares, in which the total of the figures in each column amounts to 15 or some other mystic number, are very commonly used. For examples, see Shway Yoe, *op. cit.* i. 15, ii. 127 f.; *BG* ix. pt. ii. 147; Herklots, *op. cit.* 246 ff.; Waddell, *Buddhism of Tibet*, 457, 467.

(*c*) *The triangle and the pentacle.*—Mystic marks of this kind are used in N. India in the ornamentation of domestic vessels, which they are supposed to protect (*PNQ* ii. 29; Crooke, *PR* ii. 39). The pentacle is also used as a charm against scorpion-stings and fever (*PNQ* iii. 205; *NINQ* ii. 10). In Bombay the pentacle, when enclosed in a series of circles and curves, prevents a child from crying (Campbell, *op. cit.* 391). Muhammadans believe that by it Solomon was able to work magic. The trigrams used by Himālayan Buddhists fall into the same class (Waddell, *Buddhism of Tibet*, 395).

(*d*) *Representations of the eye.*—These are drawn on ships and boats as a sort of mimetic charm to enable them to see their way at night and avoid shoals and rocks. They are largely used by the Burmese and Siamese (Shway Yoe, *op. cit.* i. 81; Bowring, *Siam*, London, 1857, i. 393; cf. Frazer, *Pausanias*, ii. 17 f.).

(*e*) *The swastika.*—The symbol of the *swastika* (Skr. *svasti*, 'welfare,' 'health') is known in Europe under the name of fylfot, cross cramponée, etc., and it is the *gammadion* of Byzantine ecclesiastical ornament. For its origin and significance, see art. Cross; T. Wilson, *The Swastika*, Smithsonian Institution, Washington, 1896; G. d'Alviella, *The Migration of Symbols*, London, 1894, p. 32 ff. It appears on the early Iron Age pottery of S. India. At the present day it is drawn on textile fabrics, on religious and domestic utensils, on representations of the footprints of Buddha and other Divine and saintly personages, and on the opening pages of account-books, etc., where it is believed to be a charm against all evil influences. In the normal form the arms bend to the right; in Buddhism they are 'always bent in the respectful attitude, that is, towards the left' (Waddell, *op. cit.* 389; Wilson, *op. cit.* 767).

(*f*) *The labyrinth.*—The labyrinth (Skr. *chakravyūha*) is used as a mimetic charm in cases of protracted labour, a figure of it being drawn and shown to the woman (*PNQ* ii. 114).

(*g*) *The charmed circle.*—The charmed circle, when made with substances like milk or ashes, which possess mystic powers, protects the person enclosed within it from malevolent spirit agencies. Thus it protects cattle from disease, and in the folk-tales we frequently find that a circle made of ashes is used to protect persons from demons (*PNQ* ii. 148; Crooke, *PR* ii. 41 f.; Somadeva, *Kathasaritsāgara*, tr. Tawney, i. 337). The *maṇḍala*,

or magic circle of Buddhism, is of the same type (Waddell, *op. cit.* 397 f.).

(*h*) *Handmarks.*—The mark of the hand made upon a house or any article in one of the lucky colours (see above, 2 (*h*)) is a protective charm (*NINQ* v. 115; cf. Elworthy, *op. cit.* 233 ff.). The handmark of a *satī* on her way to death is regarded as specially fortunate, and is preserved to this day on the gates of forts in Rājputāna.

(*i*) *Tatu.*—Ornamentation of the skin in the form of the tatu is probably based on various principles, one being its use as a prophylactic (*JAI* xvii. 318 ff., xxx. supp. 116, xxxi. 29; Crawley, *op. cit.* 135). In Burma, where the practice is most common, it appears in the form of various cabalistic and protective marks, as, for instance, in love charms, and to alleviate the pain of flogging (Shway Yoe, *op. cit.* i. 48 f., 50 f.). In Bengal it is a cure for goitre, and in Madras for muscular pains and other disorders (Risley, *op. cit.* i. 292; *Bull. Madras Museum*, ii. 116).

(*j*) *Charms embedded in the flesh.*—The custom of inserting in the flesh various substances as charms is wide-spread in Burma, and it was used by the Japanese to protect themselves against the armies of the Great Kaan (Marco Polo, ed. Yule, London, 1871, ii. 205, 207 f.; Shway Yoe, *op. cit.* i. 51; Yule, *Mission to Ava*, 208 n.; *Gazetteer Upper Burma*, ii. pt. i. 79). It is occasionally used by Rāmoshī (*q.v.*) thieves in W. India; and natives believe that the famous Madras mutineer, Muhammad Yūsuf Khān, had a magic ball inserted in his thigh, and that he could not be executed until it was extracted (*BG* xviii. pt. iii. 36 n.; Wilson, *Hist. of the Madras Army*, Madras, 1882–89, i. 386).

4. Charms connected with sacred persons, places, etc.—Some charms are connected with deities, holy men, and holy places. Hindus often wear round their necks little metallic lockets containing an image of the goddess Devī, or of some other divinity. In the same class fall the ammonite (*śālagrāma*) used in the worship of Viṣṇu and Kṛṣṇa, which is regarded as holy, either on account of its whorls, or because of the interstices which Viṣṇu, in the form of a worm, is said to have made on its surface; and the *liṅgaṁ*, or phallic symbol, of Śiva. Both are valued as protective charms, and small images of the *liṅgaṁ* are worn for this purpose by the Liṅgāyat (*q.v.*) order. In the same way the imprints of the footsteps of Buddha and Viṣṇu (*viṣṇupada*) are depicted on buildings and on various articles. In another class is the 'foot-nectar' (*charaṇmṛta*), or water in which the feet of holy men have been washed. This is often drunk or used as a charm, as is the water in which a sword has been plunged in the Sikh form of initiation (cf. Crawley, *op. cit.* 100 f.). The water from holy rivers, like the Ganges or Narbadā, is given to the dying, and is valued as a remedy. In the same way, Muhammadans use water from the sacred well Zamzam at Mecca. It is used to break the Lenten fast, applied to the eyes to brighten the vision, given to the dying, when Satan stands by holding a bowl of water—the price of the departing soul (Hughes, *DI*, p. 701). Secretions of holy persons are used in the same way, such as pills made from the excrement of the Grand Lāma (Waddell, *Lhasa and its Mysteries*, 397 n.; for similar holy pills, cf. the same author's *Buddhism of Tibet*, 323, 448); and the spittle of the Meriah victim of the Kandhs (*q.v.*) (Risley, *op. cit.* i. 405; Macpherson, *Memorials of Service*, London, 1865, p. 118), and of holy men in Gujarāt and Madras (*BG* ix. pt. ii. 127 n.; Dubois, *op. cit.* 132; Thurston, *op. cit.* 305). When cattle in Bahāwalpur are attacked with farcy and other diseases, earth from the tomb of the saint 'Ali Ashāb is thrown over them (Malik Muhammad Dīn, *op. cit.* 159). Clay from holy places, like that from the Karbalā or Mashhadu'l-Ḥusain—the great place of Shī'ah pilgrimage in Al-'Irāq—is given to the dying Khoja in W. India, to protect him from the arch-fiend (*BG* ix. pt. ii. 46). Dust from the footsteps of a cow was used to drive evil spirits from the infant god Kṛṣṇa; and, when a Hindu pilgrim bathes at a sacred place, he rubs the holy earth on his body, saying, 'Earth, free me from my sins, that, my sins being destroyed by thee, I may reach heaven' (Campbell, *op. cit.* 79). When a Mhār in the Deccan is possessed by an evil spirit, the officiant takes a little dust from his feet, and rubs it between the eyebrows of the possessed person, and the spirit leaves him; the Chitpāwan Brāhman boy at initiation has his hands rubbed with sand, and, when a girl arrives at puberty, she is rubbed with seven kinds of earth and then bathed; the Chambhārs of Poona put sand under the mother's pillow after childbirth; the seven kinds of sacred earth used in such rites are taken from a king's palace gate, from a hill, from under the foot of an elephant, from a place where four roads meet, from a cowshed, and from under the tree *Andropogon muricatum* (*BG* xviii. pt. i. 119, 141, 327). Pilgrims carry away with them from a sacred site in Assam scrapings of the rocks and soil, which they treasure as protectives, and place beside the corpse, in the belief that they protect the soul from transmigration into one of the lower animals (Waddell, *Buddhism of Tibet*, 309). Pilgrims to Tibet bring back with them dust of a rock near the temple of medicine at Lhāsa, which is swallowed as a charm (Waddell, *Lhasa and its Mysteries*, 376).

One of the chief sacred substances used in making charms is ashes. It is probable that these were originally the ashes of the sacrifice (*vibhūti*, 'great power'), which are still used by Śaiva ascetics to rub on the body and form their sectarial marks (Padfield, *op. cit.* 89). In the Himālaya one of the most potent charms against evil spirits is that known as the 'ashes formula' (*vibhūti mantra*), after the recitation of which some ashes are smeared on the forehead of the patient three times, and then rubbed off, so as to disperse the dangerous influence; and a patient of the Śaiva sect in S. India is rubbed with sacred ashes while a charm is recited (*NINQ* iii. 74 f.; Padfield, *op. cit.* 50). A bath of ashes is one of the modes of purification used by the Liṅgāyats (*q.v.*) (Dubois, *op. cit.* 181). The Mikirs of Assam use ashes as a cure to relieve blindness (Stack, *The Mikirs*, 51). The Todas, in order to avert the influence of demons, make a mark with ashes above the nose of the patient (Rivers, *op. cit.* 269). In Bombay, rubbing the head with ashes cures headache; a person excommunicated is relieved of the tabu by swallowing ashes administered by his spiritual guide; ashes from the censer of Māruti, the monkey-god, or some other guardian deity, scare spirits (*BG* xxii. 51, xxiii. 114). Ashes produced after the fusing of iron, copper, or silver, are regarded as the elixir of life (Campbell, *op. cit.* 21). Old women, both Hindu and Muhammadan, sprinkle ashes, with the recital of a formula, over the bridegroom when he retires with his bride, believing that this makes him subservient to her (*NINQ* v. 215). The ashes of the sacred fires, like that lighted at the Holī festival, and those maintained by various Musalmān saints and at Hindu temples, have high repute as prophylactics. In the folk-tales, the person exposed to witchcraft or spirit influence finds shelter within a magic circle of ashes (Somadeva, *op. cit.* i. 337).

5. Places where charms are most frequently used.—(*a*) *Cross-roads.*—It is a common habit to perform charms at the place where four roads meet.

In the orthodox Brāhmanical death-rites, lamps are placed at cross-roads (Colebrooke, *op. cit.* 102). At the marriage rite among the Bharvāds in Gujarāt, a eunuch flings balls of wheat-flour towards the four quarters of the heavens, as a charm to scare evil spirits; and in the same province, at the Holi festival, the fire is lighted at a *quadrivium* (*BG* ix. pt. i. 280, 357). In Bombay, seven pebbles, picked up from a place where three roads meet, are used as a charm against the evil eye (Campbell, *op. cit.* 208). Some of the Gujarāt tribes, apparently with the intention of dispersing the evil or passing it on to some traveller, sweep their houses on the first day of the month Kārttik (November), and lay the refuse in a pot at the cross roads (*ib.* 329). On the same principle, a common form of small-pox transference is to lay the scabs or scales from the body of the patient at cross-roads, in the hope that some passer-by may take the disease with him (Crooke, *PR* i. 164 f.). Many instances of such practices have been collected by Westermarck (*MI* ii. 256 n.), who comes to the conclusion that suicides were buried at cross-roads because the cross was believed to disperse the evil, so that this would be a favourite place where a person could divest himself of disease or other ills attributed to spirit agency.

(*b*) *Boundaries.*—Charms are often performed at boundaries, in order to protect the village from the entry of strange, and therefore hostile, spirits. The *baigā*, or medicine-man, of the non-Aryan tribes of the central hills, yearly makes a line with spirituous liquor along the village boundary to repel foreign spirits. The Kandhs, with the same object, used to offer animal sacrifices at their boundaries (Macpherson, *op. cit.* 366).

(*c*) *Cemeteries.*—Tāntrik charms, in which portions of corpses, human bones, or ashes from funeral pyres are used, are sometimes performed in cemeteries, which are believed to be the haunts of those demons whom it is the object of the charm to bring under control.

6. Conditions of charm-working.—(*a*) *Nudity.*—It is often an essential part of such rites that they shall be done in a state of nudity. A mason, in a state of nudity, sets up the 'magic stone' (*yantram rāyi*) in Madras (Thurston, *op. cit.* 264). In one of the folk-tales the conditions for working a charm are thus defined:

'Rise up in the last watch of the night, and with dishevelled hair and naked, and without rinsing your mouth, take two handfuls of rice as large as you can grasp with your two hands, and, muttering the form of words, go to a place where four roads meet, and there place the two handfuls of rice, and return in silence without looking behind you. Do so until the Piśācha [cannibal demon] appears' (Somadeva, *op. cit.* i. 255 f.; cf. 154).

This ceremonial nudity appears in many rites in India (*Journal Eth. Soc.* iv. 333 ff.; *JAI* v. 413; *PNQ* iv. 88, 197; Dubois, *op. cit.* 388). It perhaps represents profound submission to spirit power, or is based on the belief that clothes used in a sacred place or in magical rites become tabu and cannot be used again (W. R. Smith, p. 451).

(*b*) *Purity.*—The chief condition of successful charm-working is that the officiant must be in a state of personal purity. He must exercise extreme care in reciting the charm, lest, in the event of error, it may recoil upon himself. For this purpose he must be carefully instructed in the art. A person desirous of learning Muhammadan charms must repeat them several times for forty days, during which he should abstain from animal and certain other kinds of food (*BG* ix. pt. ii. 144). In a tale in the *Jātaka* (iv. 124 ff.) a man learns a charm from a Chandāla out-caste, and loses the power of working it because, through shame, he denies the source of his knowledge.

7. Methods of working charms.—The custom of waving things which are regarded as charms over persons exposed to spirit dangers is common. The technical name for the process is *ārti* (Skr. *ārātrika*), and it is commonly used in making offerings to idols, etc. (Dubois, *op. cit.* 148 ff.). In Bengal, when a Napit bridegroom comes to fetch his bride, women wave round him a basket containing five lamps, five lumps of coloured earth, a looking-glass, a box, vermilion, turmeric, rice, and grass (Risley, *op. cit.* ii. 126). The Malāi Vellālas of Madras swing a live fowl round the married pair, wring its neck, and give it to the musicians (Thurston, *op. cit.* 279). With this may be compared the Musalmān rite known as *taṣadduk*, in which a person takes upon himself the calamity impending over another. It is told of the Emperor Bābar that, when his son Humāyūn was dangerously sick, he walked thrice round him, took his illness upon himself, and from that time lost his health (W. Erskine, *Hist. of India*, London, 1854, i. 513 f.; cf. Manucci, *Storia do Mogor*, 1907, i. 217). It is said that his grandfather in this way removed the disease of the late Sir Salar Jung (Bilgrami-Wilmott, *Hist. Sketch of the Nizam's Dominions*, Bombay, 1883, i. 148). On the same principle, at Hindu and Muhammadan weddings, old women crack their fingers and touch their foreheads, thus taking upon themselves the danger which menaces bride and bridegroom.

A favourite mode of using charms is to write the formula on paper or on the inside of a cup, and then to dissolve the writing in water, which is administered to the patient. For the same purpose, charms are often engraved inside metal cups which are reserved for this special object (Thurston, *op. cit.* 357; *BG* ix. pt. ii. 57 n.; cf. Waddell, *Lhasa*, 377). Medical prescriptions, which are really charms, given by the Lāmas, are eaten by the northern Buddhists, who also drink the water in which the magical writing has been reflected (Waddell, *Buddhism of Tibet*, 401).

8. Charms and mimetic magic.—From the examples which have been given in this summary account of Indian charms, it will have been made clear how largely they depend upon the principles of white magic in the forms known as 'mimetic,' 'sympathetic,' or 'homœopathic.' Two ideas underlie magic of this kind: 'first, that like produces like, or that an effect resembles its cause; and second, that things which have once been in contact, but have ceased to be so, continue to act on each other as if the contact still persisted' (Frazer, *GB*[2] i. 9). The following examples illustrate these principles. The Burmese, in order to protect a person from drowning, tatu a representation of an egret or paddy-bird on the body (Shway Yoe, *op. cit.* i. 56). In N. India, wearing the bones of a wolf makes a child active (*NINQ* iv. 198). The Nāmbūtiri Brāhman husband in Malabar, at the 'male-production' rite (*puṃsavana*), feeds his wife with one grain of barley and two beans, symbolizing the genital organs of the male (*Bull. Madras Museum*, iii. 116). So in Bombay, cutting off and swallowing a portion of the foreskin of a newborn child produces male issue (*PNQ* iii. 116). In Bengal, at a Magh wedding, the bride and bridegroom eat some curry and rice from the same dish; what they leave is kept in a covered earthen vessel for seven days, during which the married couple may not leave the village or cross running water. On the eighth day the vessel is opened, and if maggots are found in the food, it is believed to show that the union will be fertile (Risley, *op. cit.* ii. 32). Ague is cured in N. India by enclosing parched grain in a marrow bone, which is buried in a hole just where the shadow of the patient falls, with the invocation: 'O fever, come when this grain sprouts again!' (*NINQ* ii. 9). In Madras, lumps of molasses are thrown into temple-tanks by

persons suffering from boils or abscesses, in the belief that the latter will disappear as the former are dissolved in the water (Thurston, *op. cit.* 352).

9. **Amulets.**—Amulets, which in the Tāntrik school are known by the name *kavacha*, which means 'a cuirass, breastplate, or body armour,' are formed out of the same substances as those used in charms. Passages from a sacred book, as by Muhammadans the sections of the Qur'ān known as 'The Daybreak' and 'Men' (Qur'ān, *sūras* cxiii., cxiv.), are often enclosed in cases made of silver or other precious metal, and are worn round the neck or on the parts of the body most liable to danger, physical or spiritual. Such cases are often beautiful specimens of the art of the jeweller (see illustrations from the Panjāb and Tibet in Baden Powell, *Handbook of Manufactures and Arts of the Punjab*, Lahore, 1872, p. 178; Waddell, *Lhasa*, 348). When General Nicholson was attacked by a Ghāzī fanatic, he was obliged to shoot his assailant; the ball passed through a sacred book which he had tied across his breast as a protective (Kaye, *Lives of Indian Officers*, London, 1867, ii. 452). A curious form of amulet, known as 'the crown of the co-wife' (*saukan morā*), is used in N. India. It is an image of his first wife worn by a man who has married a second time. All gifts made to the new wife are first laid before the image of her predecessor, lest, through jealousy, the latter may work mischief (*PNQ* i. 14; Campbell, *op. cit.* 171). Compound amulets, containing a collection of various protectives, are commonly used. The Himālayan Buddhists wear cases containing little idols, charms, and written prayers, or the bones, hair, or nail-parings of a Lāma (Hooker, *Himalayan Journals*, London, 1891, pp. 89 f., 141). Chin men in Upper Burma wear in their necklaces tiger and bear claws; women wear hog-deer teeth; children, claws of the wild cat; merrythoughts of fowls are worn to commemorate recovery from illness through the sacrifice of a fowl; in similar cases men wear cocks' feathers round the throat, or tigers' claws or cocks' feathers attached to their gaiters (*Gazetteer*, i. pt. i. 469). An amulet worn by a man in the Panjāb was found to contain a piece of an umbilical cord encased in metal; a tiger's claw; two claws of the great owl turned in opposite directions, and fixed in a metal case; a stone, probably tourmaline or quartz; and an evil eye destroyer in the shape of a jasper or black marble bead. These were all considered necessary. But, as an additional precaution, were added some gold, a whorled shell, an old copper coin, ashes from the fire of a Yogī ascetic, an iron ring, a cowrie shell, and the five ingredients out of which incense is made. The owner admitted that the last articles might advantageously have been replaced by a *yantra*, or magic copper tablet (*PNQ* iii. 186).

10. **Functions of women in connexion with charms.**—Women, owing to their greater susceptibility to spirit influence, are often appointed to priestly functions (cf. J. E. Harrison, *Proleg. to Gr. Rel.*, Cambridge, 1903, p. 260 ff.; Farnell, *op. cit.* v. 159 f.). It is old women of the family who usually perform the wave rite at marriage; and the same feeling accounts for the part taken in such magical rites by dancing girls and sacred slaves attached to the great Hindu temples (Campbell, *op. cit.* 336, 452 f.).

LITERATURE.—References to charms and amulets are found in many ethnographical works on the Indian races, some of which have been quoted in the course of this article. There does not appear to be any monograph on the subject. The most useful collections of charms are to be found in Sir J. M. Campbell, *Notes on the Spirit Basis of Belief and Custom*, Bombay, 1885; E. Thurston, *Ethnographic Notes in S. India*, Madras, 1906; *PNQ*, 1883–1887; *NINQ*, 1891–1896. The use of charms forms a considerable element in the folk-tale literature. See the standard collections, such as Somadeva, *Katha-sarit-sāgara*, tr. C. H. Tawney, Calcutta, 1880; *The Jātaka*, ed. E. B. Cowell, Cambridge, 1895–1907; Mrs. F. A. Steel and Sir R. C. Temple, *Wideawake Stories*, Bombay, 1884; J. H. Knowles, *Folk-Tales of Kashmir*, London, 1888; Lal Behari Day, *Folk-Tales of Bengal*, London, 1883; C. H. Bompas, *Folk-lore of the Santal Parganas*, London, 1909; M. Frere, *Old Deccan Days*, London, 1870; W. L. Hildburgh, in *JAI* xxxix. [1909], 368 ff.; A. N. Moberley, in *Memoirs As. Soc. Bengal*, i. 223 ff.

W. CROOKE.

CHARMS AND AMULETS (Iranian).—Although the name of the Zoroastrian priests, the Magi (on the meaning, see art. MAGI, and A. Carnoy, 'Le Nom des Mages,' in *Muséon*, new ser., ix.), has actually supplied the generic term for magic of all kinds, yet, as a matter of fact, 'witchcraft, incantations, and similar superstitions are indeed to be found among the ancient Iranian people, but apparently occupied no very extensive place' (Geiger, *Ostiran. Kultur*, Erlangen, 1882, p. 331). In this respect the Iranians stand in marked contrast to their Indian cousins, with their strong trend towards Tāntrik and other superstitious practices. On the other hand, as the same writer justly remarks, a system which, like the Avesta, considers the whole world as filled with evil spirits and noxious creatures must naturally be disposed to avert the malignant effects of such beings. Among such are constantly reckoned some species of sorcerers or witches, known by the names of *jatu*, *pairika*, etc.; and 'witchcraft' is denounced as an abomination. It is against them, as well as against various forms of disease, noxious animals, and other physical ills, that prayers (*mañthra*) and spoken or written charms (*nīrang*) are directed. The Parsis possess formulæ of incantations and magical prayers in abundance, and Anquetil du Perron published many in his second volume (Spiegel, *Traditionelle Literatur*, ii. 167, Vienna, 1860).

Several such efficacious prayers or conjurations against evil creatures occur in the Avesta itself; and certain Avestan passages were considered specially efficacious, and are written out even at the present day, e.g. *Yašt* xxxii. 5. Of material objects used as amulets there are fewer traces. The *locus classicus* in the Avesta is *Yašt* xiv. (the 'Bahram Yašt'). Therein Zarathuštra asks what remedy there may be if a man who hates him throw a curse upon him, or utter a spell against him. Ahura Mazda directs him to 'take a feather of the wide-winged bird *vārəñgana* (owl, or raven [?]), and with it rub thy body; with that feather thou shalt curse back thy enemies.' If a man hold a bone or a feather of this same bird, no one can overcome him, but he will be ever victorious over all foes (*Yašt* xiv. 33 ff., 'a most remarkable passage,' as Windischmann says [*Zor. Studien*, Berlin, 1863, p. 211]). But these feathers can also be used in divining the future. When two hostile armies are drawn up facing in battle array, the prophet is told either to throw or scatter four of the feathers in the space between the hostile ranks, and whichever of the two shall first worship the Genii of Strength and Victory shall gain the day. This spell is esoteric, and must be told to none except by father to son, brother to brother, or priest to pupil (*ib.* 43–46). The bird here referred to soon became identified with the mystic bird, Saēna, the Sīmurgh (see Casartelli, 'Cyena-Simurgh-Roc; un chapitre d'évolution mythologique,' in *Congrès scient. intern. des Catholiques*, Paris, 1891, vi. 79–87), whose feathers, in the *Shāh-nāmah*, cure both Rustam and his mother of their wounds.

Several formulæ of spells or amulets used by Zoroastrians have been published in recent years. J. J. Modi, in two papers read before the Anthropological Society of Bombay in 1894, described a charm for ulcer in the cornea of the eye, 'prepared by a respectable Parsee family of Nowsharee,' consisting of the root of a plant (*vār mogro* = *Jasminum pubescens*), plucked with very elaborate

ceremonial, bound round with yarn, and passed over fumes of incense. But the present writer doubts if this amulet, learned 'from a fakir,' is genuine Iranian. Modi also exhibited a stone amulet (marked with something like an eye) for the same disease. Again, he quoted a *taviz*, or written conjuration, against all diseases of the eye, written in a mixture of Avestan, Pazand, and Pahlavi, and to be tied on the left hand. In 1891 the same author published a Pahlavi spell against noxious insects, to be written with saffron water on deerskin or paper, and posted on the house door, whilst sand is blessed and sprinkled. He interprets an Avestan fragment (published by Westergaard [frag. 2]), whose obscurity has puzzled all translators, as (according to the heading of one old MS) 'a *nīrang* for forming friendships and companionships.' Three more such written charms are published by K. Edalji Kanga in the *Cama Memorial Volume*, Bombay, 1900, viz. one in Pahlavi, for the destruction of noxious creatures, including wolves; another, in Pāzand, against rats, cats, snakes, and wolves; a third, also in Pāzand, against fever, diseases, and the evil eye. Spiegel (*loc. cit. supra*) published two curious charms: 'In order to put a stop to cattle-disease, take the *rōj Ardibihišt* and write it out on a skin; cut off a little wool from the scrotum of a ram, then bind it up, and at the place where the sheep pass, bury it in the earth' (p. 167). Another is a *nīrang* 'to smite the evil spirit, the *dēvs*, magicians,' etc., and is a prayer, based on that of Zarathuštra in *Vend.* xix. 17 ff.

It is noteworthy that in nearly all these various conjuratory formulæ (most of which are preserved in Persian *rivāyats*) there is special mention of the great Iranian hero Thraētaona, the later Farīdūn, with whom are often combined the star Tištrya, and other heavenly bodies. This is probably owing to the fact that Thraētaona is specifically connected with the healing art and the origin of medicine, in the same way as the Greek Asklepios. It is interesting to learn from Williams Jackson that he found among the Zoroastrians of Yezd at the present day similar charms and amulets in use against the evil eye. The *mobeds* are frequently called in to read passages from the Avesta for this purpose (*Persia Past and Present*, New York and London, 1906, p. 379).

LITERATURE.—J. Darmesteter, 'Zend-Avesta, ii.,' in *SBE*, xxiii., tr. of *Bahram Yašt* and notes, *Le Zend-Avesta*, Paris, 1892–93, ii. 570 ff.; F. Spiegel, *Traditionelle Literatur der Parsen*, Leipzig, 1860, p. 167 ff.; W. Geiger, *Ostirān. Kultur im Alterthum*, Erlangen, 1882, p. 331 f.; J. J. Modi, *Charms or Amulets for Diseases of the Eye*, Bombay, 1894, *Two Amulets of Ancient Persia*, Bombay, 1901; K. E. Kanga, 'King Farīdūn and a few of his Amulets and Charms,' in *Cama Memorial Volume*, Bombay, 1900, pp. 141-145. L. C. CASARTELLI.

CHARMS AND AMULETS (Japanese).—There are comparatively few houses of the lower or middle classes in Japan where amulets are not to be found, either openly displayed upon an outer doorway, as a warning to ill-disposed spirits, or carefully preserved from contamination within the household shrine; and few families in which some, at least, of the members do not carry amulets upon their persons. The majority of them are more or less religious in character, for at almost every temple or shrine charms or amulets may be bought, often those issued by the temple itself, but perhaps more frequently, especially in the case of the smaller places of worship, those issued by greater temples, or by famous shrines, of the same sect. They are called *o-mamori* ('honourable protections'—a term applied to amulets of religious origin, but more particularly to those which are portable), and *o-fuda* (tickets of religious origin, to be affixed to some part of a structure), or *majinai* (a term including minor magical, or supposedly magical, practices, together with secular amulets), and may be divided, roughly, into amulets purely religious in conception; amulets which seem purely magical in conception, although they receive a religious sanction; amulets to which certain religious associations are attached; and purely secular amulets. The underlying feature, common to the amulets of both religious and secular origins, of most of the amulets, with the exception, of course, of those by which the beneficent influence of some deity is believed to be caused to be directed towards the possessors, is that of sympathy—a sympathy so wide that it embraces not only actual contact or association with the objects or vehicles of the ministrations, but also even a mere mental association, as in a play upon words. While the main principles of this sympathy are the same as those underlying the amulets and magical practices of most peoples, there are, in Japan, certain manifestations of it which appear to be peculiar to that country.

In Japan, contrary to the common usage in other countries, very few amulets are worn as ornaments, but probably we may ascribe this largely to the comparative absence of jewellery among the Japanese, there being but few objects worn by adults which could be replaced, in case of necessity, by others having an amuletic purpose. The rings, brooches, and pendants, which so often have served as media for amuletic intentions in other countries, are (except where of recent introduction) almost lacking in Japan. Combs and other hair-ornaments are occasionally amuletic, as in the case of those made from the horns of, or even with small effigies of, the Kasuga temple deer at Nara, which are worn against headache. But even *netsukes*, which might reasonably be expected to be found often used as amulets, show an almost negligibly small proportion so used; beyond the bottle-gourd (admirably adapted for a *netsuke* because of its shape), which is believed to protect its wearer from injury by falling, there seem to be very few *netsukes* which are amuletic by virtue of their design, and similarly few which are intrinsically amuletic. Few Japanese amulets are carried exposed to view—not, apparently, from the notion, found in other countries, that the efficacy of an amulet may be impaired if it be shown, but probably because the Japanese costume makes, except in the case of children, no provision for them. This opinion is strengthened by the fact that the amulets used for the protection of houses or their inhabitants are generally placed in such positions that they cannot fail to attract the attention of those concerned. The personal amulets, sometimes twenty to thirty in number, carried by adults are carefully wrapped up in the form of a small packet, often with a piece (even a mere fragment) of brocade to serve as their own amuletic protection against impairment of their virtues due to accidental contamination. Children's amulets,[1] however, such as the small bell, the bottle-gourd, the *maigo-fuda* (label with the child's address) with protective designs, or objects believed to be curative of various ailments, excepting the fragile ones carried in a special bag (the *o-mamori kinchaku*), are commonly worn exposed to view, attached to the girdle (*obi*) or hung from the neck.

Amongst the principal purposes to which Japanese amulets are commonly applied are: general protection; protection from the demons causing ill-luck or various diseases; against accidents in general or of specific kinds, or to bear the burden of an injury in the event of an accident; the protection of houses, crops, or domestic animals; the

[1] Cf. W. L. Hildburgh, 'Japanese Household Magic,' in *Trans. Japan Soc.*, London, 1908.

direct (supposedly medicinal) alleviation of various maladies in which the effects are not ascribed to demons; in connexion with the phenomena of gestation and childbirth; against bewitching; and for the bringing of good fortune or, very commonly, improvement in one's luck.

The earliest recorded Japanese amulets seem to be the mythical 'Tide-flowing Jewel' and 'Tide-ebbing Jewel,' given by the god of the sea to the heavenly grandchild, whereby the actions of the tide might be controlled.[1] The actual amulets of pre- and proto-historic times have left few distinct traces. So many foreign influences have since been at work amongst the assimilative Japanese, that it is almost impossible to determine which of the beliefs relating to amulets formed of perishable materials—wood, seeds, hair, skin, claws, etc.—are of native origin, and which of foreign or of late derivation. Presumably, the perforated teeth, perforated shells, and certain of the anthropomorphic figures and plaques, found in the graves, served, as amongst other primitive peoples, as amulets, although their purposes can only be guessed at, since, strangely enough, neither perforated teeth nor shells appear to be used (as amongst other peoples) as amulets by the present-day Japanese. The well-known *magatama* ('curved jewels') and *kudatama* ('tube-shaped jewels') of proto-historic times may possibly have been amuletic, but the present evidence of this is insufficient to enable them to be so classed with certainty. The printed charms seem to be Buddhist in origin, and to have been brought with Buddhism from the Asiatic continent, although they are also issued at present in great numbers by the Shinto shrines; the earliest specimens of block-printing in Japan were Buddhist charms, of which a million were printed, dating from A.D. 770.[2]

The charms sold at the temples and shrines consist, for the most part, of slips of paper, printed in black with a sacred text, or a more or less rude woodcut of the divinity whose aid is invoked, or the name of the shrine, or one or more of these, together with the purpose of the amulet; and they are generally folded up and enclosed in envelopes, often both the charm and the envelope bearing a red imprint of the seal of the shrine to attest their genuineness. Instead of the deity's picture, there may be given the picture of some animal or object intimately associated with the deity—the foxes of Inari, for example, or the wild-dogs of the deity at Mitsuminesan, whose likeness protects from burglary; or a horse, used by jinriksha coolies to increase their fleetness of foot; or a demon, the hand of Kobo Daishi, a fan, rice-bales, etc.—in virtue of which picture the charm may be used, because of its assumed sympathetic relations therewith, for purposes entirely unconnected with the divinity actually invoked. Some of the paper charms serve several purposes, such, for example, as those issued by the Suitengu shrines bearing five debased Sanskrit characters, which are carried for general protection, but which, a character at a time, may be eaten or drunk as remedial agents, or used in a domestic form of divination; or a certain picture of Daikoku bearing his sack, used as a traveller's amulet, or a draught for childbirth, or to represent the victim (a thief with his booty) in a ceremony for injury which is performed by perforating an image. Sometimes the charms are made of wood instead of paper, forming small tickets to be carried, or large ones to be fastened over doorways, upon ships, or in similar situations. At some temples, charms are issued for many different purposes; thus at the temple of Sensoji at

[1] Cf. W. G. Aston's *Nihongi* (Eng. tr.), London, 1896.
[2] B. H. Chamberlain, *Things Japanese*[5], London, 1906.

Asakusa, Tokyo ('Asakusa Kwannon'), the paper amulets to be carried (all alike in form and differing only in their inscriptions) included, in 1907, special amulets against lightning, dangers while travelling, dangers on shipboard, conflagrations, misfortunes in general, calamity due to sickness, burns or scalds, 'insects' (within the body, supposed to be the cause of certain ailments), and for the purpose of bettering one's fortune.

Other purely religious amulets sold at the temples include small images of the deities or their attendants, in wood, clay, or metal, or even carved from grains of rice; medals (a modern development, corresponding to the paper amulets for general protection); relics, such as fragments of the shrines periodically demolished at Ise; paper *gohei*; and food which has been offered to the deities. There are also preserved as amulets, although not commonly sold at the temples, *shari*, stone-like relics of Buddhist saints, which are generally kept in more or less elaborate tower-shaped reliquaries (*shari-to*), though they are occasionally carried upon the person.

The religious amulets are preferably obtained by their users, and during the course of a pilgrimage; but since a pilgrimage is not always feasible, a pilgrim will usually bring back with him a considerable number of amulets from the more famous and popular shrines for distribution among his friends. The cost of the paper amulets is generally very small, although amulets of finer materials may be fairly expensive. The paper amulets bearing Buddhist texts should be retained within their envelopes, and not taken out and read; this is probably intended merely to avoid danger of contamination. People prefer to renew their amulets yearly, if possible; and, when they have replaced the old amulets by new ones, they destroy the former in a 'clean' manner, by throwing them into running water or burning them in a fire of clean materials.

Of amulets, whose underlying conceptions seem purely magical, yet which receive a religious sanction and are sold by the priests, the charmed sand for the cure of disease and for protection, the fragments of stone to be carried by childless persons desirous of offspring, the parti-coloured girdles of paper to be worn as a protection during pregnancy, and the combs for straightening wavy hair may be cited.

The third category—amulets to which, although they are not sold by the priests, religious associations are more or less attached—includes a large and very curious class, of which only a few typical examples can be given here. Such are the small elongated packets of cooked food wrapped in leaves, thrown, tied together in bunches, from the processional cars at a great temple-festival at Kyoto to the spectators along the route, to be scrambled for eagerly, and thereafter, if not eaten, to be fastened up by doorways as a protection against thieves; the charred fragments of the wood used at certain fire-festivals; the lanterns affixed to the houses in honour of some religious festivals; and possibly, to a certain extent, the special toys or ornaments sold annually at various temple-fairs and placed within a shop to ensure its prosperity, or the sweepings of the outer platform of a popular temple, to be scattered in the morning just outside the shop, to ensure good trade for the day. As the extreme stage there may possibly be taken such amulets as the stick of holly with the head of a sardine stuck upon it, placed at the outer doorway at the Setsubun festival in order to prevent the demons from re-entering the house after having been magically driven out;[1] or various other objects, some genuinely religious, some

[1] W. G. Aston, *Shinto*, London, 1905, p. 313.

secular in character, used in connexion with the New Year ceremonies, and preserved, as protective, throughout the year.

Of purely, or apparently purely, secular amulets there are a multitude, of so many kinds that it is possible here to refer only to some of the principal varieties. Corresponding to the religious printed charms there are secular written charms for all sorts of purposes, some of which are merely verses, or notices intended for the attention of the offenders, or even meaningless formulæ, while others consist of certain ideographs repeated many times and arranged in some specified design, or of magical formulæ, interspersed with magical designs. Some of the simpler of these charms are commonly known; others may be obtained from printed collections of household recipes; others require preparation by a professional magician or diviner.

Puns, although used in connexion with amulets, are more common in other forms of magic. The use of *imori* (a kind of red-bellied newt) for the production of an amuletic love-powder is probably derived from a pun on *imo* ('woman,' or perhaps 'darling') and *ri* ('victory' or 'gain').[1] Another form of the principle is illustrated by a cure for a corn (one name of which is *mame*, 'a bean') on the foot, in which the ideograph for 'pigeon' is written thrice upon the corn and then (when the 'pigeon' has eaten the 'bean') is rubbed out.

Images of persons or animals inimical to the feared sources of danger are used. Thus, an image of Shoki, the slayer of demons, is placed upon a roof to frighten demons away from a house; or a picture of the *baku*, a mythical animal believed to have the power of swallowing evil dreams, is painted upon a pillow, as a charm against nightmare. An extension of the principle to paper amulets consists of the written name of an enemy of the particular demons feared, pasted above a doorway in order to give the idea that the house is his. Another extension seems to lie in the use of the imprint of the hand, actually or supposedly that of some influential personage, in ink upon paper; this application of the hand-imprint apparently differs in origin from that of the imprint of the hand of a prospective or possible victim (generally a child) of certain diseases, which may be similarly placed. Representations of the animals of the Chinese Cycle are used to preserve from harm persons born in their respective years, or at some fixed time (such as that of the seventh animal away) from their respective years; for example, children wear *maiyo-fuda* inscribed with a likeness of the animal of their birth-year. Living fish of a certain kind may be kept as amulets; the shells of molluscs or crustaceans are also used. Vegetables, fruits, flowers, seeds, and stems of certain kinds are used amuletically, principally about the house. Thus, in some districts a bulb (and stem) of garlic is fastened to the doorway, in order to protect the inmates from infectious diseases, presumably on the principle that the powerful odour of the garlic will overcome the odours believed to be connected with the diseases.

Certain coins and coin-like tokens are believed to have protective or curative virtues, due either to their composition (as in the case of the *bun-sen*, made from the metal of a Daibutsu destroyed by an earthquake), or to the inscriptions or designs, sometimes religious, sometimes secular, which they bear.[2] Children's toys of various kinds are used amuletically. For example, the *maneki neko* ('beckoning cat'), the image of a cat resting upon its haunches and having one forepaw raised as if in invitation, is an amulet commonly used to attract custom to a shop; and the tumbling toy, representing Daruma (a Buddhist ascetic whose legs dropped off through inaction) is used in a variety of ways, such as, because of its stability, to prevent a wrestler from being overthrown, or, because of its red colour, against certain diseases. Small bells, to whose tinkling the power of keeping demons away from a child is sometimes still ascribed, although the belief in their virtues is more often found at present in connexion with falling, are worn by children. The colour red, noted above, is often used in amulets or charms for general preservation, for the cure of several diseases, and for matters related to the blood. Certain magical properties are also attributed to purple, but in general there does not seem to be so great a reliance on the magical virtues of colours as is to be found amongst other peoples. The type of amulet in which the interests of numerous persons are combined in favour of the wearer of the amulet is well represented, one of its best illustrations being the girdle, commonly worn by soldiers in the Russo-Japanese war, of cloth containing 1000 knotted stitches, each made, with a short wish for the preservation of the future wearer, by a different woman.

In conclusion, attention should be directed to Western amulets, which are being introduced with Western culture. The medals now issued at several shrines have been noted, but a more striking example is that of the iron horse-shoe which, at seaport towns and in places where cavalry are stationed, may occasionally be found used as an amulet in European fashion.

LITERATURE.—W. G. Aston, *Shinto*, Lond. 1905; B. H. Chamberlain, 'Notes on Some Minor Japanese Religious Practices,' in *JAI* xxii. [1893], and *Things Japanese*[5], Lond. 1906; F. Brinkley, *Japan*, Lond. 1904, vol. v. ch. 6, 'Superstitions'; W. L. Hildburgh, 'Japanese Household Magic,' in *Trans. Japan Soc.* (Lond.) 1908; J. E. de Becker, *The Nightless City*[2], Yokohama, 1905; E. W. Clement, 'Japanese Medical Folk-Lore,' in *TASJ*, vol. xxxv. [1907]. Numerous references to charms and amulets are scattered throughout Chamberlain's *Murray's Handbook for Japan* (various editions); L. Hearn's *Glimpses of Unfamiliar Japan*, Boston, 1894; and J. C. Hepburn's *Japanese-English Dict.*, London, 1903.

W. L. HILDBURGH.

CHARMS AND AMULETS (Jewish).—It is necessary to define more accurately the meaning of the words 'charm' and 'amulet,' which are now used somewhat indiscriminately, though there is a profound difference between them. The field covered by both together is much larger than that by each of them separately, and they must therefore be treated separately if we are to gain a clear insight into this part of practical magic. The 'charm,' as the name denotes, is a *carmen* (from which the word is derived), an incantation, a mystical song or spoken spell. The 'amulet' is not the spoken word, but the written or engraved representative of it. It is worn as a protection, a talisman (*apotelesma*); it exercises a decided beneficial effect for the wearer, man or beast; it averts evil. The 'charm,' again, is the work of an expert: a priest, a wizard, one initiated, or one specially prepared and taught can perform it. It is of a twofold character: it may do good or it may cause evil. It may protect man from the attacks of unknown—and in some cases known—foes, human or superhuman; or it may inflict terrible diseases, nay, bring about the destruction of the enemy. It may also heal the patient by driving away the cause of illness, or it may transfer the illness to other persons. A charm may be only an incantation, the recital of a certain poem or a string of words,—some intelligible and some unintelligible to mortals,—and may be accompanied by some mysterious actions; or it may assume the form of a conjuration, a powerful oath binding the

[1] Hildburgh, 'Japanese Household Magic' (*loc. cit.*)
[2] Cf. N. G. Munro, *Coins of Japan*, Yokohama, 1904, for engravings of some of these.

forces of evil and compelling them to act according to the will of the 'conjurer.' The latter is credited with possessing the knowledge of words or 'spells,' which give him the mastery over such invisible powers; and he afterwards becomes the writer of the amulet or the maker of such mystical tokens and symbols, to which similar protective power is ascribed. And, just as there are unintelligible words in the charm, so there are unintelligible words and signs on the talismans. These are understood only by the man who draws them, and are dreaded by those powers which he wishes to subdue and make to serve his purposes, or whose aid he invokes in combating other inimical powers.

It was necessary to formulate at the beginning the theoretical aspect of the practical Kabbala, if this term be used in a wider sense, in order to explain the fundamental system of Jewish charms and amulets such as have been preserved to us and found in ancient books of magic and of mystical tradition. The names which charms and amulets bear in Hebrew are extremely suggestive. We, of course, eschew here everything referring to the magical practices mentioned in the Bible, for, on the one hand, they are things forbidden and not practised by the Jews, and, on the other, they belong to the art. MAGIC proper, whilst the charms and amulets are merely one part of the magical literature and practice of old. With the possible exception of the word *leḥāshîm* found in Is 3[20], where it seems to denote a certain ornament worn by women, there is no direct mention in the OT of any real charm. Nor could it find a place there. The underlying idea of all charms is more or less a negation of the Unity of God. It presupposes a number of evil spirits endowed with great power, bent on doing harm to man or beast; and also various ranks or degrees of powers among these spirits or demons, some greater, others smaller. Therefore, if one could obtain the help of the more powerful, one could by their assistance avert all the consequences of the machinations and attacks of inferior demons. One could also use that assistance to the detriment of one's foes. Such a hierarchy of evil spirits, nay, the very existence of a powerful evil spirit who from without could injure man, contradicts the very principle of the Unity of God, and thus it is no wonder if no mention of charms is made in the Bible.

A problem which has hitherto not been touched upon is, How did the notion of such evil spirits, of demons and *shēdîm*, enter into the conception and beliefs of post-Biblical Judaism? The question is raised here for the first time, and we shall deal with it as succinctly as possible—mainly for the purpose of helping us to understand how such a remarkable syncretism could arise at the time of the beginnings of Christianity and be found in the mystical speculations of the numerous Jewish sects that flourished in Palestine, Egypt, and Western Asia during the last centuries before and the first centuries after Christ. The regular process observed in the religious evolution of nations has been that, when they adopted a new teaching, the old was not entirely forgotten, but only relegated to a secondary place of consideration. The gods of the older religion became the spirits and then the demons of the later. European demonology is the best and most convincing proof of this evolution. The old practices are retained, but when they cannot be sufficiently assimilated to the new principles, they become 'superstitions' (that which 'remains standing over,' 'survivals'). We assume now that the process of evolution in ancient Israel followed the same line, for then it is easy to understand how the Israelites became acquainted in the first place with demons and *shēdîm*, and how the practice of conjuring them arose in their midst. The old gods of the aborigines and of the surrounding nations, and then those of the Babylonians and Egyptians, etc., became evil spirits, demons; and the ancient practices became 'the ways of the Amorites' (*Sanhedrin*, lxv. 6; *Shabb.* lxvii. 6), stigmatized as superstitions to be shunned, and rigorously forbidden to the observant Jew. Now the very essence of any 'god' and similarly of these 'gods' is the *name*. The knowledge of the name hands the god over to him who has obtained that knowledge, for with it he has obtained the full mastery over the god. If such is the case with the heathen god, it follows naturally that much greater would be the power of the operator if he obtained the knowledge of the names of the angels who minister before the true God, and still more if he could obtain the knowledge of the mysterious ineffable Name of God Himself, the creating Word, the power by which the heavens and the earth and the fullness thereof had been created. Everything and everybody short of God Himself—as the Name was only an outward manifestation of His creative power and not the sum and substance of His being—could then be made subservient to the wielder of that Name. The heavenly hierarchy, with its numerous angels and the manifold names of God, is set forth in the old book of the 'Heavenly Halls,' from which most of these names were drawn. A full discussion of the mysterious, ineffable Name of God, the Tetragrammaton, with its innumerable combinations, manipulations, and modalities, lies outside the immediate scope of this article. The whole Jewish magical literature, as well as the entire basis of Jewish charm and amulet, will be found, however, to rest on the use of that and other Names in the manner sketched above. The differentiation begins with the names and the *modus operandi*, but otherwise little difference can be found between one set and another.

The practices prohibited in the Bible, like the *yideʿônî* or *ḥôber ḥeber*, as well as the *mekhashshēph* (variously translated and no doubt erroneously), we pass over. Whether the 'singing' of David (1 S 16[16]), who thereby drove away the evil spirit, the *afflatus* (for that is the correct tr. of the Heb. *rûaḥ*) which had taken hold of Saul, was an 'incantation,' it would be difficult to say. It is not impossible, though no one has yet suggested it. We may recall that the daughter of Saul had 'teraphim,' which she placed in the bed to hide the disappearance of David (1 S 19[13]), and David himself put on an 'ephod' (2 S 6[14] and 1 Ch 15[27]) as if he were a priest. The operations of the 'witch' of Endor (1 S 28[7ff.]) are very obscure, but they remind one of the oldest forms of 'conjurations,' by means of which the dead are made to reappear in this world. But conjuration, casting out of evil spirits (by means of the Name), was an universal practice in the time of the Apostles; it must already have flourished long before among the various sects, and is referred to in the records of the NT. Not only heathen but also Jews exorcized demons (Ac 19[13]), and Justin Martyr in the 2nd cent. speaks of the Jews who exorcize demons (*Dial. c. Tryph.* 76):

'We exorcize all demons and evil spirits, [and] have them subjected to us.' Similarly ch. 85: 'But though you exorcize any demon in the name of any of those who were amongst you,—either kings or righteous men, or prophets, or patriarchs,—it will not be subject to you. But if any of you exorcize it in [the name of] the God of Abraham, and the God of Isaac, and the God of Jacob, it will perhaps be subject to you. Now assuredly your exorcists, I have said [ch. 76], make use of craft when they exorcize even as the Gentiles do, and employ fumigations and incantations.'

Some of these exorcisms and charms seem to have been preserved in the later form of the Tables of Defixion, and in the Greek texts found in the

Magical Papyri where the 'Logos Ebraikos' and 'Orkismata Ebraika' are mentioned. They are conjurations and incantations for the protection of the wearers, or for the benefit of those who ordered them, averting evil or inflicting harm. Of the same nature may have been the conjuration or the exorcism of the Essene Eleazar, who drove out an evil spirit from a demoniac (Jos. *Ant.* VIII. ii. 5 [45-49, ed. Niese]) by means of an incantation composed originally by King Solomon, and evidently forming part of the book in which he had left directions for expelling demons—'a method of cure of great force unto this day,' according to Josephus. The 'Logos Ebraikos,' mentioned above, of the Paris Papyrus (presumably of the 2nd cent. A.D.) has been shown by the present writer (*JRAS*, 1901) to be an abstract from the Book of Enoch, full of esoteric teaching, and considered to be a revelation of heavenly mysteries. The famous Table from Hadrumet is another exorcism preserved from ancient times, a real charm of purely Jewish origin, which gives us the very form and substance of these old charms and spells.

Another example of exorcizing a demon is contained in the Talmudical history of the journey of R. Simeon ben Yohai to Rome; he drives out a demon from the daughter of the Emperor, and thus obtains those favours for the people which he had been deputed to ask. The name of the demon was Ben Temalion (Bar Tolomæus!) (*Me'ila*, 17*b*). An incantation recited in the name of Jesus, son of Pandira, over a patient had the desired effect of healing the patient, though the man who uttered the exorcism was sternly rebuked for having used the name of Jesus in the exorcism (Jerus. *Shabb.* 14*d*). Apocryphal books, ascribed to Moses, Solomon, etc., and spells in Greek Papyri and Hebrew MSS which have thus far been preserved, allow us an insight into the form of these conjurations and incantations. They follow the general line. Mystical and magical names of angels and of God are invoked, and mixed up with them are incidents of Biblical history of a symbolical character; for it was expected that the reciting of an event in which God had saved either the whole nation or some individual, or healed one or many, would have the same effect of healing the patient to whom the words were addressed, and driving away the cause of the evil, the demon who possessed him. To certain passages and verses of the Bible a special symbolical meaning was attached: *e.g.* Ex 15^{26}, 'for I, the Lord, will heal thee,' is mentioned in an incantation in Mishn. *Sanh.* x. I. In *Sifra ad Levit.* 26^{6} we find that the recital of Ps 92 'drives the *mazzikim* (evil spirits) from the world.' More of this will be mentioned later, when the incantation and exorcism have become amulets.

In Hebrew MSS of a later age the present writer has discovered almost identical 'conjurations' (*hashbāōth*), into which also some astrological notions have crept. The sphere of good and evil powers expands. The magical 'pantheon' has no limits. Not only are the angels and God Himself appealed to, but in a special manner such angels and forces as are believed to inhabit the sun, moon, and stars; and in addition to them other invisible powers mighty upon earth and under the earth. The *apotelesmatic* literature and the 'Sabæan' mythology, reduced to magical formulæ, joined the other, in which only the names of the heavenly hierarchy were invoked. Such is the case in the 'Wisdom of the Chaldeans' (ed. Gaster, *PSBA*, Dec. 1900). In the so-called 'Testament of Solomon,' the Greek forms of such conjurations, going back to the first centuries of the Christian era, are found; and the Hebrew 'Sword of Moses' (discovered by the present writer, and edited, London, 1896) is a complete manual of charms and directions as to how each of the numerous mysterious names in which it abounds is to be used on the different occasions when it would be applied. In these books, as in some of the Papyri, it is no longer an incantation or a recitation of powerful names by word of mouth which is to have the desired effect; the *written* word takes the place of the *spoken*. The ancient 'charm' has become a formula, which is inscribed on bowls, on potsherds, on parchment; and the names of these powers, when written down, exercise the same influence upon the evil demon as the spoken incantation. The 'charm' has been turned into an 'amulet.'

In Hebrew literature the name *kemi'a* is given to the amulet, and also *s^egûlôth* (plural)—the latter apparently of a more recent origin. Contrary to the etymologies given hitherto to the word *kemi'a*, explaining it to mean 'a folded thing,' 'a satchel,' with mystical writings in it or with certain drugs and herbs, the present writer sees it in the 'cameo' of the Gnostics, the gem with the mystical inscription and with the seal. From the gem the inscription was transferred to the parchment, and with it also mystical and magical symbols. The human figure engraved on it was, of course, omitted as being contrary to the commandment not to have any graven image of anything, or the likeness of that which is in the heavens above, or on the earth, or under the earth. But all the rest was placed in the amulet as a means of protection. All that was spoken before was now written down, and in addition to the words—and, as we shall see, of the verses and chapters of the Bible—there was the 'seal.'

Next to a name there was nothing so personal, so precise in the characterization of the individuality of each demon and spirit, as the 'seal.' Just as no two persons, much less two angels or demons, have the same name, so also, it is conceived, no two demons could have the same seal or signature. Each one has a seal of his own, by which he ratifies the pact and 'seals' the doom. By it he is recognized and identified, and the knowledge of that seal gives to the magician or exorcist the same power over that demon as the knowledge of the name. It is the *sphragis* of the Gnostic teaching and of the old magical formulæ. The Hebrew word for 'seal' is *hôthām*, and this is the clue to the explanation of the other name which the amulet has in Hebrew. It is called *s^egullāh*, but more often *s^egûlôth*—a name which has hitherto baffled every attempt at explanation. For the Heb. word *s^egullāh* means 'select' or 'treasure,' which has nothing whatever to do with an amulet. But by way of popular etymology the Greek word *sigla* (also plural), meaning 'ciphers,' etc. (*i.e.* the mystical seals), taken over with the amulet, was transformed into the Heb. *s^egûlôth*. The seal of the demon was regularly inserted in the prescription, and often added at the end of the formula. Here also there was a constant evolution going on. The seal was originally the 'signature,' written, of course, with special 'demoniacal' signs, or letters, or combinations. The demons as well as the angels had thus alphabets of their own. Such alphabets were then invented, and in these strange characters the mysterious names were written. There are such alphabets found in old MSS ascribed to the angel Metatron; then there is an alphabet of the angels, of Moses, of Abraham, and also of other unknown authorities, but of equal potency in subduing evil spirits.

The oldest mention of 'amulets' worn on the body is in 2 Mac 12^{40}. 'Under the shirts of every one that was slain, they found things consecrated to the idols of the Jamnites which is forbidden the Jews by the Law'; and for this transgression in

wearing such things consecrated to the idols they were slain. The practice must have existed then in Palestine, for even the soldiers under the Maccabæan could not free themselves from it. If, instead of 'things consecrated to idols' or votive offerings (?) banned by the Law, they had carried the Name of God or of His angels, there would probably not have been any exception taken. We next find the *kemi'a* in the Mishna as a regular practice sanctioned by common usage; the only question raised was as to whether man or beast would be allowed to wear it on the Sabbath (*Shabb.* 78*b*, *Kiddush.* 73*b*). It is there described as a satchel or a folded piece of parchment, with writing in it and containing also drugs. The writing supposed to have been in the *kemi'a* was a series of names of God and of Biblical verses of symbolical character, which were to protect the wearer from any attack of evil demon or illness. Besides symbolical verses with sympathetic contents, other verses were used on the strength of traditional interpretations that they contained one or other of the mystical Names of God. Of all the verses in the Bible, Ex 14[19-21] are those of the highest magical and mystical importance. These three verses consist each of 72 letters, and one of the mysterious names of God consists also of 72 letters. Those three verses then are believed to represent the ineffable Name, and they are combined and transposed, and manipulated so as to form 72 groups of names of three letters each, one letter from each of the three verses. Nu 23[22. 23] begins with the word which may mean either 'God' or 'No,' and forms a palindrome, if the word is read backwards, as is done with some of the Biblical verses in the amulets, mentioned already in the Talmud (*Pesaḥ.* 111*a*). The formula of that prayer (amulet) alluded to in the Talmud has been preserved in full by R. Ḥananel of the 10th century. It runs as follows:

'Lord God save me from all evil, from all hurt and harm, for in Thine hand is strength and might, and Thou art God'; or, if the allusion is to Nu 23[19], 'Do *not* forsake me, my God, do not leave me. Take care of me as of the apple of the eye, fulfil my wishes, grant my request, hear me before I call unto Thee; say not *No*.'

In addition to the Pentateuch, the book of predilection for such use was the Psalter, and not only were whole Psalms considered efficacious against magic (*e.g.* Ps 92 mentioned above, Ps 91 known as 'the song against evil attacks' [*shîr shel p'ga'îm*], and others, like Ps 145, which, if repeated thrice in the course of the day, would open the gates of Paradise), but each Psalm was a specific against one illness or other; for in some of the verses of each of the 150 Psalms a mysterious Divine name was concealed. A book called *Shimush Tehillîm*, 'The mystical Use of the Psalms,' is mentioned from ancient times, and has been preserved. We find here an indication, at the head of each Psalm, of the good which may be accomplished by the recitation of it. The range of usefulness is very great. It covers many forms of illness; it affords help against robbers and evildoers; it provides support for one appearing before a judge or ruler; it secures favour and love, protection against evil spirits, assiduity in study, and a good and retentive memory. To this very day the Psalms are recited, and the whole book read, in case of serious illness. The best known amulet is Ps 67, written in the form of a seven-branched candlestick, in a peculiar manner, and with the initial and final letters combined to form mystical names. Similarly a book called *Shimush Tefillin* is mentioned in writings of the 8th cent., but no positive information has been preserved. The phylacteries (for that is the meaning given to *Tefillîn*) were considered as a protection against evil spirits as far back as the Targum to Canticles (8[3]), but even in the time of Justin Martyr they were not yet believed to be amulets (*Dial. c. Tryph.* 46). Their efficacy in protecting against demons rested on the Biblical passages written thereon. In outward appearance they look like amulet cases worn to this day by the Arabs and found also among the ancient Babylonians. The inscription on the parchment inside was the protection, especially as some of the letters had to have a peculiar ornamentation, *taggîn*, or 'crowns.'

More elaborate than the short incantations and amulets with Biblical verses and the names of God and His angels are those in which the astrological element had been added, and with it also foreign names whose heathen origin was entirely forgotten. Such are the 'Wisdom of the Chaldeans' mentioned above, where the guardian angels of the planets are fully described, and in some MSS also depicted; further, the so-called 'Key of Solomon' (the famous 'Clavicula'), and the 'Book of the Moon'—all full of the most extraordinary medley of Greek, Babylonian, Egyptian, and other ancient traditions, mixed up with Biblical quotations, and with references to the mysterious power of the combined letters of the various magical names, and having also *sigla* and other ornamented signs.

In more recent times the elaborate ancient amulet has given way to simpler forms—tablets, metal disks, medals with the names either engraved or stamped upon them, or small pieces of parchment to be worn round the neck, and consisting of Biblical verses disposed in magical intersecting circles, the corners being filled up with mystical names, and having, as a rule, the name 'Shaddai' in the centre, or Ps 67 written in the form of the seven-branched candlestick, with or without further additions from the Kabbalistic literature.

The history of Jewish charms and amulets has a romance of its own. In turns condemned and allowed, towards the middle of the 18th cent. the writing of certain amulets by a great Talmudical scholar not only brought him near excommunication, but almost divided Jewry against itself. R. Jacob Eibenshutz, the Rabbi of Hamburg, had written a number of amulets which, his antagonist Jacob Emden alleged, contained among the holy names also that of the false Messiah Sabbetai Tsebi, and hence the writer was accused of being a partisan of the false Messiah. Being written in a cryptic form, the amulets could be deciphered so as to read as Emden alleged. The controversy lasted many years, and helped to destroy the belief in amulets among European Jews.

In defining here as briefly as possible the principal elements of Jewish amulets and spells, we have deliberately refrained from mentioning any date. The study of the beginnings of the Kabbala and of mysticism among the Jews in general is either in its infancy, or is influenced by biased notions and preconceived ideas, in most cases unsympathetic towards it. Assertions are made that it is of comparatively modern origin—9th–10th century—in spite of overwhelming contradictory evidence, which forces us to recognize that it belongs to a very old stratum of popular belief, and that it also grew and developed on familiar lines, adopting and adapting many elements from other sources and moulding them in accordance with the fundamental principle of the Unity of God and of the limited power of evil spirits. Popular beliefs know no rigid dogma, and much of that which is held to be strong and efficacious among other peoples is taken over in the belief that it would be beneficial. The literature of this branch of mysticism, practical Kabbala, is still mostly in MSS. It is also found among the medical recipes as a recognized part of the medical practitioner, who would use drugs and amulets indiscriminately or conjointly, for the use of the amulet is as wide-spread as that of any other medicine. There is nothing for which one or

more amulets could not be prescribed, and the practice goes even further, for by means of amulets such results could be obtained as the drug alone could not effect: luck, good fortune and riches, favour and strength, the power of making oneself invisible, covering wide stretches of ground in an incredibly short time, preventing persecution, slaying wild animals and wilder enemies, holding communion with the dead, obtaining a sword that would fight the enemies, and many more wonderful things which no real drug could produce. The subduing of evil demons through the invocation of the aid of good spirits is only a materialization of higher spiritual truths. Faith is the underlying principle. One example may suffice to give an idea of such amulets, inasmuch as it contains also the directions for writing it.

Against Fever.

'Ab Abr Abra Abrak Abraka
Abrakal Abrakala Abrakal
Abraka Abrak Abra Abr Ab.

"And the people called unto Moses, and Moses prayed to God, and the fire abated" (Nu 11[2]). May healing come from Heaven from all kinds of fever and consumption-heat to N. son of N. Amen Amen Amen. Selah Selah Selah.

This Name which we have written down as a cure against fever must be written exactly as it is written in the scroll of the Law, on specially prepared parchment intended for the sanctification of the name of God. It must be written with square or "Ashuri" letters, so that no letter shall touch the next, leaving a free margin round each letter; and it must be written in purity and whilst fasting. It is good also, after writing it, to place it folded in a piece of hart leather or anything else that is proper, or one is to put it [sew it] in some cotton or some soft rag, and wrap it round with a piece of leather which has not come near any uncleanness. And, when thou hangest it round the neck of the patient, do it when he is not aware of it, or when he is asleep; and he is not to look at it all that day and the following night. The lines on the parchment must be drawn on the hairy side, and the writing must be on the flesh side; and it must be done in the name of the patient. The parchment must be cut in the name of the patient, and the drawing of the lines must be done likewise; and when he [*i.e.* the writer] dips the pen into properly prepared ink, he must say: "In the name of Shaddai who created heaven and earth, I, N. son of N., write this *ḳemi'a* for N., son of N., to heal him of every kind of fever." And then he must say the blessing of the *ḳemi'a* as follows: "Blessed art Thou, O Lord our God, who hast sanctified Thy great name and hast revealed it to Thy pious ones, to show its great power and might in the language [in which it is expressed], in the writing of it, and in the utterance of the mouth. Blessed art Thou, O Lord, holy King, whose great name be exalted"' (Cod. Gaster, 38 fol. 11, 'The Ets hada'ath of Elisha of Ancona' of 1536).

Here all the elements of the *ḳemi'a* are to be found: at the head the mysterious name which reminds one of the Abraxas; then the Biblical, symbolical, and sympathetic quotation; then an invocation in Aramaic; and the final threefold Amen and Selah. The writing and preparation are the same for every *ḳemi'a*. In others more of these mystical names occur, and *sigla* are added, besides the supposed figures of angels and demons, as well as signs and drawings—among them the so-called 'shield of David' (the hexagon), inscribed with various letters and holy names.

LITERATURE.—The books and MSS in which charms and amulets are mentioned are so numerous, considering that they form part of the practical Kabbala and are often referred to in the theoretical treatises on Kabbalistic teaching and speculations on the Name of God, that we limit the present bibliography to the most prominent books, in which prescriptions and formulæ for conjurations, spells, and amulets form the preponderating part, or are exclusively devoted to this branch of Kabbala. Most of the books and MSS mentioned in the Literature to art. BIRTH (Jewish) belong also to the present article. In addition the following may be given:—

PRINTED BOOKS.—Zunz, *Gottesdienstl. Vorträge der Juden*[2], Frankfort, 1892, pp. 172-179 (the whole of the Talmudical mystical literature); *Sefer Hechaloth*, and *Sefer Yetsirah*, numerous editions; *S. Raziel Hamalach*, 1st ed., Amsterdam, 1701, pp. 40-45*b* (the fountainhead of many modern amulets); *Harba de Mosheh*, 'The Sword of Moses,' ed. M. Gaster, London, 1896; 'The Wisdom of the Chaldeans,' ed. M. Gaster, London, 1900 (*PSBA*); 'The Logos Ebraikos,' by M. Gaster (*JRAS*, 1901); *Sefer Shimush Tehillim*, ed. Heidenheim, together with the Book of Psalms (Rodelheim, 4th ed. 1852) fol. 125[b], 135[a]); *Mafteaḥ Shelomo*, 'The Clavicula Solomonis,' ed. H. Gollancz, London, 1903; 'The Testament of Solomon,' Eng. tr. by Conybeare (*JQR* xi. [1899]); *Shem Tob Kaṭṭan*, by Benjamin Benish, Zolkiew, 1798; *Derech Yesharah* of Reuben C. Abraham, Leghorn, 1788; *Dubek Meaḥ* of Abraham C. Shalom Hamwee, Leghorn, 1874, and *Nifla'im Ma'asecha*, Leghorn, 1881; *Yalkut Eliezer* of Zusman Eliezer, Presburg, 1864-71, vol. iii. f. 88[a]-92[b]; R. J. Emden, *Sefat Emet Ve-lashon Zehorit*, 1752, with the copies of the alleged Eibenshutz amulets; Jacob Asheri, *Tur Yoreh Deah*, ch. 179; Joseph Karo, *Shulḥan Aruch, Yoreh Deah*, ch. 179, *Oraḥ Ḥayyim*, ch. 301, § 25-27; L. Blau, *Das altjüd. Zauberwesen*, Budapest, 1899. M. Schwab's *Vocabulaire de l'angélologie*, Paris, 1897, is misleading and valueless.

MSS.—Of these every library possesses a greater or smaller number, but not one has yet been studied thoroughly or even carefully described. We mention, in addition to those enumerated in art. BIRTH, the following in the possession of the present writer [some of them are copies made for him of MSS in other libraries]: 'Habdallah de R. Aḳiba,' Cod. 336 (Oxford, 1331); 'Sefer Ḥanoch' [entirely different from the well-known Book of Enoch], Cod. 521 (Br. Mus. Add. 15,299); 'Sefer ha-yashar' [attributed to the Gaon Samuel of Babylon], Cod. 334 (Oxford Cod. 1960); Cod. 38: 'Ets hada'ath of Elisha of Ancona, 1536; Cod. 213: Hebrew and Arabic charms (Yemen, 16th cent.); Cod. 214: amulets (Yemen, 16th or 17th cent.), Cod. 232: amulets (orient. Spanish hand, 19th cent.); Cod. 492: amulets, Heb. and Arab., from the Genizah, Cairo; Cod. 727: collection of conjurations, 16th-17th cent. (cf. Cod. 1299, Br. Mus. Add. 27, 141 f., 691 ff., in which only a portion of these conjurations has been preserved by an Italian scribe of the 17th cent.); Cod. 720: a large collection of Kabbalistic amulets, 1647 (orient. Spanish hand [Galilee]); Cod. 765: 'Meḳor ha-Shemoth' (Spanish hand 19th cent.; an alphabetical list of all the mystical names of angels, with indication of the Biblical passages whence they have been derived); Cod. 1000: collections of conjurations and amulets (orient. Spanish writing; many hands, 15th-18th cent.); Cod. 1285: from the Genizah of Aleppo (17th cent.). There may be added reference to the writer's Cod. 995—very likely the 'Almadel' (or Clavicula) of Solomon (Morocco hand, 16th cent., with illustrations); Cod. 590 (Br. Mus. Or. 6360); and 'Sefer ha-Lebanah'—the last two being astrological compilations with directions for conjurations.

M. GASTER.

CHARMS AND AMULETS (Mexican and Mayan).—As in other parts of America, the amulet was regarded in Mexico as a personal fetish. The wholesale manner in which everything pertaining to native worship or superstition was swept away by the Spanish Conquistadores renders a thorough knowledge of personal fetishism among the Nahua peoples impossible, but scanty notices in the writings of authors who lived in the generation immediately subsequent to the Conquest throw some light upon the description of charms and talismans in use among the Aztecs and kindred peoples. They appear to have been principally manufactured and sold by the priests of the various deities, in much the same manner as the medicine-men of the N. American tribes make and sell such articles. The use of charms was notable chiefly in connexion with the funerary customs of the Aztecs. On the death of a person, his corpse was dressed in the habiliments supposed to be worn by his tutelary deity, and was strewed with pieces of paper, which were regarded as charms against the dangers to be encountered on the road to Mictlan, the Mexican Hades. The papers in question contained written prayers or magical formulæ to ward off the dangerous spirits to be met on the way; and this is reminiscent of Egyptian funerary practice. From time immemorial the Nahua peoples made use of talismans of hard sand-polished stone, such as are still carried by the Indians of Central America. They were employed as oracles, and their possessors were supposed to see future events reflected in their polished surfaces, much in the same manner as modern crystal-gazers profess to discern events to come in the globes they consult. It has been thought that the principal god of the Aztecs, Tezcatlipoca, had his origin in the figure of death believed to be described in these stones before a demise took place. In the Dresden Codex the *pinturas* represent the deceased on the road to Mictlan as wearing a wooden collar, probably an amulet, to show that he belongs to one or other of the Nahua deities. For the same purpose, probably, he wears a plume on his head.

The principal objects which have either come down to us or are known to have served the purpose of personal or household talismans to the Nahua peoples are:—

(1) *Death-masks.*—These were probably the skulls of ancestors, and were kept in the houses of their descendants. They consist of two classes: one in which the skull of the deceased person has been inlaid with mosaic, and the other in which a conventional image of the deceased has been manufactured by inlaying mosaic upon jade. These death-masks are not to be confounded with the masks spoken of by many writers on Nahua custom as being used by the priests in religious ceremonial, or with those placed on the faces of the dead to ward off evil spirits. The mosaic work of which they are composed is often of very great beauty, and excellent examples of it are to be seen in the American Room at the British Museum. Specimens of such work are exceedingly rare, and are chiefly confined to those objects sent to Europe at a period immediately subsequent to the Conquest. Numerous small masks and heads which served as amulets have been discovered on the site of Mitla, the city of Mictlan, the god of the dead. Most of them are of terra-cotta, and of good workmanship.

(2) *The tepitoton, or diminutive deities.*—These were small figures of the Lares and Penates type, but not, as has been thought, of the class of the Egyptian *ushabtiu*, or servant figurines. They were probably relics of a shamanistic form of worship, and nearer to the ancestor-idol type than the little fire-and-food gods of the Romans, though they possibly partook of the characteristics of both. At the close of the great sun-cycle of fifty-two years, when the Nahua thought the universe was in danger of perishing, they broke those small figures in despair, believing they could no more seek aid from them.

(3) *Travellers' staves.*—These staves, decorated with feathers, were carried by all merchants whilst on a journey, and showed that they were under the protection of Quetzalcoatl, the culture-god of Mexico, or, as he has been more aptly named, 'Man of the Sun,' the great traveller. Sahagun (lib. i. cap. 5) gives an interesting account of the worship of these staves by the Mexican itinerant merchants. On coming to their evening halting-place they tied their staves in a bundle, and sprinkled them with blood taken from their ears, tongues, and arms. Incense was brought and burned before them, and food, flowers, and tobacco were offered to them. Although the name of the staff, *coatl*, means 'serpent,' it had, so far as its nomenclature was concerned, no connexion with the Sun-Man; and, indeed, when the staves were gathered together in a bundle, the name they collectively bore was *Yacatecutli*, the name of the patron of merchants or pedlars. Still, the staff was regarded as the invention of Quetzalcoatl, the culture-hero, and those using it practically placed themselves under his protection.

(4) *Amulets symbolic of the gods.*—These were probably numerous, but few are recorded. Chalchihuitlicue, the goddess of water, was worshipped under the likeness of a frog, carved from a single emerald or piece of jade, or sometimes in human form, but holding in her hand a lily-leaf ornamented with frogs. In the Mayan codices it appears as a symbol of water and rain (Codex Cortesianus, pp. 12, 17, etc.). Images of it, cut from stone or made from clay, have been frequently discovered. They were kept by the post-Conquest Indians as talismans. The symbol or crest of Huitzilopochtli, the Aztecan war-god, was, as is implied by his name, a humming-bird. This crest, the *huitziton*, was carried before his priests in battle, and it is probable that they and illustrious members of the warrior class wore the symbol as a talisman or decoration.

(5) *Flint talismans.*—As elsewhere, the thunderbolts thrown by the gods were supposed to be flint stones; and these were cherished as amulets of much virtue, and as symbols of the fecundating rains. The Navahos of New Mexico still use such stones as a charm for rain, and believe they fall from the clouds when it thunders (*Senate Report on the Indian Tribes*, Washington, 1867, p. 358). The Chotas of Mexico continued until comparatively recent times the worship of their triad—the Dawn, the Stone, and the Serpent (*Diccionario Universal*, App. tom. iii. p. 11).

(6) *Amulets depicted in the Mexican and Mayan 'pinturas' or native MSS.*—The Mexican and Mayan native MSS give representations of what are obviously ornaments and personal decorations of the nature of amulets in great profusion, but, owing to the careless drawing displayed in the Mexican *pinturas*, it is almost impossible to determine their exact nature. The highly conventional manner in which they are executed is also greatly against their elucidation. The comparative clearness of outline in the Mayan *pinturas* renders it much easier to speculate upon the nature of the objects represented therein. But it is only by induction that the character of these objects can be arrived at, the ruinous intolerance to which all native American *objets d'art* were subjected having long since destroyed their very names. It will be well, then, to glance at the Mayan MSS while we attempt to discover what were the amulets worn by the figures depicted in them. We find that these objects are usually worn by figures representing gods, but it is well known that the symbol or ornament of the god usually becomes the symbol or ornament of his special worshippers—the people of whom he is the tutelary deity. In Egypt the *ankh* (the cruciform symbol of life carried by all the gods) was worn very generally, as was the *uzat* (the symbolic eye of Horus, which protected the wearer from the evil eye, and against snake-bite), and the *thet*, the girdle-buckle of Isis. In early Scandinavia the raven-wings of Odin adorned the helmet of the warrior; and, not to multiply instances, which are numerous, we have already seen that the Aztecs wore amulets depicting the frog-shaped rain-goddess Chalchihuitlicue. Hence there is no reason to suppose that the special worshippers of other Nahua deities did not wear amulets depicting either their tutelary deity or some ornament supposed to have been worn by himself, and, perhaps, representing one of his attributes, like the staff of Quetzalcoatl, or the humming-bird of Huitzilopochtli. An examination of the three Mayan MSS which we possess—those of Dresden, Madrid, and Paris—shows that most of the deities therein represented are accompanied by certain distinct and well-marked symbols, which, it would seem, frequently decorate the figures of priests and people in the same MSS. The head-dress of Schellhas's 'God E,' the maize-god, for example, appears as a frequent symbol worn by persons represented in the MSS, and it is obviously correct to make of him a counterpart of the Mexican maize-god Centeotl, the latter deity being sometimes female, sometimes male, according as he takes the part of mother or son. 'God F,' again, the god of war and human sacrifice, who, Schellhas thinks, resembles the Aztecan god Xipe, but who, in the present writer's opinion, more nearly resembles the Aztecan war-god Huitzilopochtli, because of his general appearance, sometimes wears an ear-peg of huge dimensions—a common ornament in many Mayan sculptures. As each god in the Mayan MSS is represented with his monthly sign, it is not unlikely that his immediate devotees would have worn these much in the same manner as persons in Europe wear amulet-rings in which are enclosed stones typifying

the months of the year. The neck ornament of the frog-god 'P' seems to occur, too, with some frequency in the figures depicted in the Madrid codex, and the same may be said of several other apparent amulets.

(7) *Amulets among modern cognate tribes*.—The Zuñi of New Mexico, who are distantly related to the Nahua of Mexico, possess a peculiar belief concerning amulets or personal fetishes. They imagine, upon discovering a fossilized animal or other object, that they have met with great good fortune, and explain the fossilization of these objects by a myth which relates how the two Sun-children—two hero-gods of theirs—being displeased at the multiplicity of wild animals in early times, turned many of them into stone by striking them with lightning, at the same time giving them a magic power to assist the children of men. See 'American' section of this article, § 7.

Brinton, *Myths of the New World*, Philadelphia, 1868; E. J. Payne, *History of the New World called America*, Oxford, 1892–99; Marquis de Nadaillac, *L'Amérique préhistorique*, 1882 (Eng. tr. by N. D'Anvers, London, 1885).

LEWIS SPENCE.

CHARMS AND AMULETS (Muhammadan).

—1. **Historical and legendary sources.**—In the so-called science of conjurations and talismans the Arabs show the same lack of originality as in the other sciences, *e.g.* Alchemy and Mechanics. They appropriated part of what had been already developed in this direction before their time, and did nothing beyond adding to existing formulæ a few invocations taken from the Qur'ān. The sources from which they drew their knowledge of the art of talismans are, pre-eminently, Gnostic and Talmudic.

In their legends it is the prophets, Biblical and other, who are credited with the invention of charms. To begin with, they trace this invention back to the time of Adam himself, to whom, they say, this branch of knowledge was revealed; Adam's daughter 'Anāḳ was the first, according to the *Summary of Wonders* (Fr. tr. by Carra de Vaux, Paris, 1898, p. 142),

'to reduce the demons to serve her by means of charms. God had revealed to Adam certain names which the spirits were forced to obey, and had told him to communicate them to Eve, so that she might carry them about on her person as a protection. Adam obeyed, and Eve kept these names and was safeguarded by them; but, while she was asleep, 'Anāḳ took her by surprise and robbed her of them, and, by means of them, conjured evil spirits, practised the magical art, pronounced oracles, and gave herself up openly to impiety.'

Solomon also, according to Musalmān legend, was a great magician. He controlled the beasts and the winds, and had the genii as well as the demons under his command. The legend, which is of Talmudic origin (see Seligsohn, in *JE* xi. 440), is introduced into the Qur'ān (xxvii.). The great king is seen reviewing an army composed of men, genii, and birds; talking with the ant; sending the hoopoe on an embassy to the Queen of Sheba; and making the throne of that princess be brought to him by means of an *'ifrit* (kind of genie).

Solomon's ring is celebrated in Arabian tales. In the popular tale of the fisherman (*Thousand and One Nights*) the hero draws up in his net a copper vase with a lid of sealed lead; he breaks the seal, and a genie escapes from the vase. This was a proud spirit who had once rebelled against Solomon, and had been imprisoned by the prophet-king in this vase and sealed with his seal. Descriptions of this famous ring[1] are given in the legends; it is the typical talisman, on which was seen inscribed 'the greatest name of God.'

The Berbers also were considered by the Arabic story-tellers as having been highly skilled in the art of talismans. In the *Summary of Wonders* (p. 307) we find the queen of the Berbers contending against the Egyptians by means of talismans:

'The queen was the oldest magician among this people. Her subjects said to her, "Make talismans for us against the land of Egypt and its inhabitants." . . . Then she composed charms to enchant the Nile. She confided these to certain of her subjects, commanding them to take them to Egypt, and scatter them all over, and throw some of them into the Nile above this country. The men proceeded to the frontiers of Egypt, and to the most fertile places, and there they threw their talismans. Thereupon the people saw the Nile swell more quickly than they had foreseen. The rising exceeded all bounds, and the waters, remaining for a long time on the earth, spoilt all the crops. Crocodiles and frogs multiplied, and all sorts of epidemics attacked the inhabitants. Foxes and scorpions appeared from all directions.'

The priests of Egypt themselves were also skilled in the art of magic; but they were not clever enough to annihilate the power of the Berber talismans, and the country would have been lost, if king Malik, who was then reigning, had not turned to the true God and embraced monotheism.[1]

2. **Arabic works on talismans.**—Various Arabic authors have written about talismans, the way to construct them, their use, the processes necessary for conjuring demons, and the suitable formulæ in the incantations. Among these authors we may mention Majrītī, Ibn-al-Waḥshiya, and al-Būni.

The scholar Maslama al-Majrīti († 1007), who was a native of Madrid, wrote on magic; he had travelled in the East, and brought back to Spain the writings of the 'Brethren of Purity.' The library in Vienna contains a book, under his name, entitled *Ghāyat al-ḥakīm* ('The Perfection of the Sage'), the aim of which is the construction of talismans.

The alchemist Ibn-al-Waḥshiya (second half of the 3rd cent. A.H.), an Arabic forger, who is known chiefly by his book on *Nabatæan Agriculture*, in which he unconsciously compares the ancient civilization of Babylon with the Arabic civilization, also wrote a treatise on the ancient alphabets of the various peoples, as well as a dissertation on the Egyptian priesthood, which was translated into English by J. Hammer, London, 1810.

The works of al-Būni are the best known as regards our present subject, and it is they that are used in our own day by dervishes and those who occupy themselves with talismans. They set out to explain the virtues of heavenly names, their use in talismans, the virtues of letters, etc. Muḥyi ad-Dīn Abū'l-Abbās al-Būni died in 1225. In the Bibliothèque Nationale in Paris there are some amulets composed by al-Būni, and others attributed to the famous scholar Ghazālī.

Besides these books by well-known authors, there are in our libraries various treatises on charms ranged under very strange names, which are supposed to be Greek, Persian, or Indian. In Paris, *e.g.*, there is a short treatise (Arab. no. 2630), very curious in point of angelology, which is attributed to Andahriush, or al-Dahriush,[2] of Babylon; another (no. 2634) is given under the name of the Hindu sorceress Cherasm, who cites among her sources a book by al-Osuṭās. In Budapest there are treatises by the Hindus Ṭomṭom and Chāniur, the latter representing himself as a commentator on Plato.

3. **Angelology.**—The purpose of incantations is to conjure the spirits that preside over the life of Nature and of men. In order to subject the spirits to himself and force them to serve him, the magician must, first of all, know them and know their names. Hence arises a complete science of angelology. This science began to take shape among the Gnostics. Thus we are told by St. Irenæus (I. xxiv. 3) that Basilides gave names to the angels inhabiting the different heavens; and in the system of Valentinus the names of the Æons are given. They are bizarre words, probably derived from actual terms corrupted in transmission, perhaps by systematic processes of 'cryptogloss,' but now quite unintelligible to us; at one time Matter tried in vain to explain them. Other magic names used in Gnostic initiations are found in the *Pistis Sophia*. Among them we can distinguish the name of the Æon of Light. It is formed by a series of words, some of which are repeated two or three times, sometimes identically, sometimes with slight variations, to make doublets.

[1] The talisman that is actually worn in the Arabic and Jewish world under the name of 'Solomon's seal' is the hexagonal star. See the figures in Schwab, 'Le Manuscrit 1830 du fonds hébreu de la Bibliothèque Nationale,' *Notices et extraits*, vol. xxxvi., and cf. Seligsohn, in *JE* xi. 448.

[1] According to Turkish tradition, the inventors of the art of magic were Adim, Sheddad, and certain legendary Egyptian or Persian princes. See one form of these traditions in d'Ohsson, *Tableau général de l'empire Othoman*, Paris, 1787–1820, vol. i. p. 357.

[2] This is probably the same name as we find in Africa under the form al-Andhrun. The bearer of this name was a magician-king, who is responsible for a kind of popular talisman in Africa (see Doutté, *Magie et religion*, p. 152).

It is this Gnostic tradition—which will be seen, on the other hand, to pass into the Kabbala[1]—that was followed by the Arabian magicians. We shall take as our guide here the manuscript treatise of Andahriush mentioned above. The author adopts, in the first place, the four great Islāmic angels: Gabriel, Michael, Azrael, and Isrāfīl. The names of these four great spirits often appear in talismans. According to the traditions of Islām, Gabriel, or Jibrīl, is set over the armies and the winds, and he also makes known the will of God to the Prophets; it was he who brought the Qur'ān to Muhammad. Mīkā'īl (Michael) presides over rain and plants. 'Azrā'īl is the angel of death; he seizes the souls of men when their 'hour' is come. Isrāfīl rules over these three archangels. He stands beside the throne of God, and guards the heavenly trumpet. The others receive their orders from God at his hands.[2]

But these four spirits, notwithstanding their importance in theological and popular tradition, seem to have somewhat lost their position in the occult theory of Andahriush, with which they do not harmonize very well. According to this theory, there are seven great angels by the throne of God, who have names inscribed on their foreheads, hands, and feet; the knowledge of these names gives great power in conjurations. The seven planets also have their angels, who appear to be quite distinct from the former seven. 'Aṭāṭīl is master of the power and light of the Sun. Biṭā'īl presides over the fires of Venus. Chamkhiā'īl is the angel of the sphere of Saturn. Meṭāṭron is assigned sometimes to Juppiter and sometimes to Mercury, although he also appears independently, and is identified with the archangel Michael. Meṭāṭron is of considerable importance in the *Zohar*, where he practically assumes the rôle of Demiurge.

The treatise of Andahriush gives names of angels for every day of the week. There are seven for each day. They are called *'ifrit*, a name frequently used in the *Thousand and One Nights*, and also employed as a proper name in the Qur'ān. In other parts of the treatise we can distinguish fragments of a different nomenclature, in which the angels were distributed according to the days of the month.

The seven *'ifrit* of the day and night of the Sabbath are called Yasheokūr, Shaushahr, 'Anjelūsh, Kalīlūsh, Balfiūsh, Madhiūsh, and Sherdūsh. The seven *'ifrit* of Sunday are called Hendāūsh, Bāriḳ, Shejfā, Markiūsh, 'Ardiūsh, Alish, and Sā'iḳ.

These strange names are sometimes, as in the time of Gnosticism, formed in doublets, in the same way as Gog and Magog in Biblical literature, and Yājūj and Mājūj, Hārūt and Mārūt in Arabic. Thus we find the following terms employed to invoke great spirits: Ṭalikh and Ilikh; Hīb and Hoyūb; Ḳaiṭar and Maiṭar; Ḳinṭash and Yāḳinṭash. See also the incantation of the scorpion given below.

In order to be an absolute master of the art of magic, it was necessary to know all these names, and the connexion of the spirits bearing them with different times and different objects. Next it was necessary to write suitable formulæ containing these names on appropriate material—silver, porcelain or silk—which was then sprinkled with the perfumes required in each case. Then the amulet had to be worn on a specified part of the body. In practice, however, it was very difficult to possess a special talisman for every individual case, and the people contented themselves with talismans having the general virtue of protection from all ills, or at least from a large category of ills; and the greater part of this science of angelology remained a dead letter.

4. The names of God.—A verse of the Qur'ān (vii. 179) says: 'God's are the most excellent names; call on Him then thereby, and leave those who pervert His names.' The commentators have given lists of these names, which are, in their opinion, adjectives such as: the Great, the Good, the Merciful, the Learned, the Wise, the Subtle, the Beneficent, the Manifest, etc. Tradition has it that there are 99 such names. Pious Musalmāns recite them on their rosaries, and the mystics meditate on the qualities expressed in them; Ghazālī, *e.g.*, wrote a treatise entitled 'The Most Excellent Names.'[3] These terms are employed in talismans; but 'the greatest name' of God—that name which possesses absolute magical virtue—is unknown to men. At the utmost it has been revealed only to prophets and saints. It is an ineffable name. This idea of a name of God that cannot be spoken or heard by men is clearly connected with the Jewish custom of declining to pronounce the name of JHWH, when reading the Torah, and substituting for it *Adonai* or some epithet.

[1] See S. Karppe, *Étude sur les origines et la nature du Zohar*, Paris, 1901, p. 79, and *passim*.

[2] Cf. the present writer's art. 'Fragments d'eschatologie musulmane,' in *Comptes Rendus du 3me congrès intern. scient. des Catholiques*, 2me section, 1895, p. 12; d'Ohsson, *loc. cit.* vol. i. p. 431.

[3] Tirmidhi, Ibn Māja, and others have given lists of these names. Tables of figures are also formed, representing the numerical value of their letters. For a poetic version of the theme, cf. Sir Edwin Arnold's *Pearls of the Faith*, London, 1883.

5. Various mythical beings.—The composers of Musalmān talismans employ the names of several other legendary personalities besides the names of angels. Those most commonly used are the Seven Sleepers and their dog; the angels Hārūt and Mārūt; and the collective beings, Gog and Magog.

The well-known legend of the Seven Sleepers belongs to several literatures, being found among Christians, among Jews, and among Musalmāns. The Qur'ān alludes to it in plain terms, and calls the Sleepers 'the Companions of the Cave,' while one *sūra* (xviii.) is entitled 'The Cave.' Mention is also made, it is said, in this passage, of the dog that accompanied the seven young men (verse 8: 'Hast thou reckoned that the Companions of the Cave and ar-Raqīm were a wonder among our signs?'). In the opinion of certain commentators, this *ar-Raqīm* is the name of the dog, but others think that the word designates an inscribed tablet, in accordance with the sense of the root *raqama*, 'to trace figures.'[1] The young men had fled from the persecution of Decius, and had taken refuge in a cave. Here they fell asleep, and did not awake again till two centuries later, in the reign of Theodosius the Younger. Their cave was situated either on the sea-shore near Ephesus, or beside Qurrah, where the cave of Kharemi is found (Mas'ūdi, *The Book of Warning* [Arab.], Fr. tr. by Carra de Vaux, Paris, 1896, p. 202; J. Koch, *Die Siebenschläferlegende, ihr Ursprung und ihre Verbreitung*, Leipzig, 1883).

Hārūt and Mārūt are mentioned in the Qur'ān (ii. 96): 'It was not Solomon who misbelieved, but the devils who misbelieved, teaching men sorcery, and what had been revealed to the two angels at Babylon, Hārūt and Mārūt; yet these taught no one until they said, "We are but a temptation, so do not misbelieve," . . . but they can harm no one therewith, unless with the permission of God.' These mythical beings belong to Talmudic tradition (cf. Hirsch, in *JE* v. 333). They were—so says an Arabian story-teller—two angels who, at the beginning of the world, had jeered at the weakness of faithless man, declaring that, if they had been put to the same test, they would not have been overcome. God allowed them to try the experiment, and they at once fell into sin. Then, having asked as a favour to undergo their punishment in this world, they were thrown into a pit near Babylon, where they were bound with their heads bent down, and where they must remain until the end of time[2] (Kazwini, *Kosmographie*, ed. Wüstenfeld, 1848, i. 61).

Gog and Magog (Yājūj and Mājūj) are mentioned in the Qur'ān (xviii. 93–99, xxi. 96). They were peoples of the North, who occupied vast territory and made incursions into the country of the South, spreading devastation everywhere in their course. Alexander stopped their progress by a wall of brass, which they are to overturn at the Last Day. This wall is located by some near the Caspian, by others in China. The historian Ibn Khorhadbeh tells of a journey that the interpreter Sallām made there at the command of the Khalif Wātik (*Ibn Khordadbeh*, tr. de Goeje, p. 124, note; cf. Kazwini, *op. cit.* ii. 400, 416; for a general summary, see Montgomery, in *JE* vi. 20).

6. Cabalistic letters.—In books of magic and in talismans, cryptographic alphabets of various forms are used. The majority of these alphabets, it appears, are not purely imaginary. We may recognize in their characters signs of the Hebrew or of the Cufic alphabet, somewhat deformed and altered by the addition of ornamentations. The author Ibn-al-Waḥshīya, whom we have mentioned above, gives a great number of cabalistic alphabets in his book, *Kitāb shauḳ al-mustahām* (see a notice by Gottheil on 'The Cabalistic Alphabets,' in *JA*, 1907). The twists or flourishes which often finish off the strokes in the magical writing are called 'lunettes' or 'crowns.' It is said in *Sepher Yeṣira* (tr. Mayer Lambert, p. 114) that every letter should have its crown, and that ancient amulet-makers thought the letters of no use whatever without their crowns.

The custom of using cryptographic alphabets among the Arabs was not confined to occultists. It appears even among scholars (see the alphabet in the mechanical manuscript of Oxford, which contains the Arabic text of the *Pneumatics* of Philo [no. 954; Marsh, 669; fol. 29]).

The theory of the power of letters had been

[1] In Arabic tradition the dog's name is Kitmīr.

[2] In Turkish tradition Hārūt and Mārūt are called Maḥle and Mehale, and are regarded as two famous magicians. On Hārūt and Mārūt, see also art. ARMENIA (Zor.) vol. i. p. 796a.

sketched out in the time of Gnosticism (see, *e.g.*, a treatise on the 'Mysteries of the Letters of the Alphabet,' quoted by Amélineau, *Gnosticisme égyptien*, Paris, 1866, p. 11). This theory was afterwards largely developed in the Kabbala. On this subject the *Zohar*, which belongs to the 11th cent., may be consulted. The Arabs do not appear to have made any very original use of it.

7. **Magic squares.**—The so-called magic squares are employed to a great extent in Musalman magic. The false art of talismans may be said to pay homage here to real science, the construction of magic squares being a nice and intricate question of arithmetic. This method of arranging numbers was known to the Arabs as early as the 10th cent. A.D., for it is evident from the writings of the 'Brethren of Purity' that they knew the squares of 3, 4, 5, 6, 8, and 9 parallel columns. The historian Ibn Khaldun was also acquainted with some of these squares. They do not appear in Greek literature till later, the earliest text where mention of them is found being the treatise of Moschopoulos devoted to them, which dates from the end of the 14th century.[1]

The Arabic manuscript 2,662, Paris, contains quite a number of magic squares of different appearance, but these are really nothing but the squares with 3 and 4 compartments in a row. The 9 or 16 consecutive figures employed in them do not start at unity, but begin with some higher number. One set, for instance, goes from 9 to 24, another from 10 to 25, and so on. They give the totals, each row, vertical or diagonal, of: 66, 70, 91, 131, 170, 258, 298, and 340. We give here the square constructed on the numbers from 9 to 24:

16	19	22	9
21	10	15	20
11	24	17	14
18	13	12	23

The total got by adding the figures vertically, horizontally, and diagonally is always 66.

Squares with 3 compartments in a row are not nearly so frequent in this treatise as those with four compartments. Here is one beginning with the number 1210:

1213	1218	1211
1212	1214	1216
1217	1210	1215

The constant total is 3642.

Sometimes talismanic squares have letters instead of numbers. Thus a square with 4 compartments in a row is made up of 4 letters which all occur in every row, in every column, and in every diagonal. Squares of this kind have no further scientific interest.

l	l	h	a
h	a	l	l
a	h	l	l
l	l	a	h

The square formed by the first nine numbers appears in the Jewish liturgy of Ibn Ezra, who did much to develop the *kabbala* of numbers connected with that of letters (S. Karppe, *op. cit.* p. 202).

[1] Paul Tannery, *Le traité manuel de Moschopoulos sur les carrés magiques*, Gr. text and tr., Paris, 1886; S. Gunther, *Vermischte Untersuchungen zur Gesch. der mathemat. Wissenschaften*, Leipzig, 1876, ch. iv.; Cantor, *Vorlesungen uber Gesch. der Mathematik*, Leipzig, 1880-98, vol. i.

8. **Signs from astrology and geomancy.**—Among the signs to be met with on amulets are also those belonging to astrology—viz. the signs of the planets and those of the zodiac—and sometimes those belonging to geomancy.

Geomancy, or the science 'of the sand,' *'ilm ar-raml*, is a process of divination by means of dots traced in sand.[1] Dots are made haphazard, with the fingers or a rod, along four lines marked on the sand, or else dots are made at regular intervals along these lines, and a certain number of them are obliterated haphazard. The remaining dots, grouped vertically, form figures to which various significations are attributed. Those that express lucky ideas may be used in talismans. There are Arabic treatises on geomancy in existence, and this process of divination is still in vogue among the Musalmāns of North Africa, although nowadays they do not trace the dots on the sand, but on tablets.

9. **Human figures; animals; the hand.**—Islamic law forbids the representation of the human figure. This law was carefully observed in Arabia, but was rejected in Persia, and was little regarded by the Turkish dynasties that had recourse to Persian artists. The talismans of North Africa show scarcely any figures, but great numbers are found on magical objects, mirrors, cups, seals, etc., made in Persia, or made for princes who were lovers of Persian art.

These figures may be those of angels, sometimes in the form of griffins with human heads (as, *e.g.*, in a mirror with a Cufic inscription in the collection of the Duc de Blacas),[2] or of persons and animals representing the signs of the zodiac, for instance, or various other fancies. Reinaud mentions an Egyptian talismanic plate on which a man is seen drawing something out of a well. If we connect this with what Ibn Khaldūn says, this talisman must have been meant as a guide to finding treasure. The Arabic MS 2764, Paris, intersperses rude figures of men and animals among its cabalistic characters.

Among the most popular objects credited with magical virtue in the Musalman world is the human hand, which is seen engraved on medallions, or employed separately as a pendant or jewel. At the feast of Ashūra, the Persians carry flags with their staffs surmounted by an open hand. On African soil the special use of this emblem is to ward off the evil eye, like horns of coral in South Italy. Shī'ite Musalmāns see in the five fingers of the hand the image of the five most sacred persons of their sect: Muhammad, 'Alī, Fatima (daughter of Muhammad and wife of 'Alī), and Ḥasan and Ḥusain ('Alī's two sons).

10. **Verses of the Qur'ān.**—Although this use of the sacred text is not at all in harmony with the spirit of pure Muhammadan teaching, nevertheless Musalmān peoples freely employ certain verses of the Qur'ān as amulets. The favourite verses are those contained in the two short *sūras* of the 'Daybreak' and of 'Men' (cxiii. and cxiv.), and the verse 'On the throne' (ii. 256). The two short chapters we have just mentioned are called 'the two preservatives' (*al-muawidatain*). They are so short that we may quote them:

'Say, "I seek refuge in the Lord of the daybreak, from the hurt of what He has created; and from the hurt of the night when it cometh on; and from the hurt of the wicked women [witches] who blow upon knots, and from the hurt of the envious when he envies."'

This one is supposed to have special power against the ills of the body, and the following against the ills of the soul:

[1] See an example taken from a Gnostic talisman published in the *REG*, vol. xx. [1907], p. 376, 'Talismans magiques trouvés dans l'île de Thasos,' by W. Deonna.

[2] This figure is reproduced in the *Magasin pittoresque*, 1872, p. 64. Cf. others in the same volume, p. 272.

'Say, "I seek refuge in the Lord of men, the King of men, the God of men, from the hurt of the whisperer, who slinks off, who whispers evil into the hearts of men!—from *jinn* and from men!"'

The verse 'On the throne' tells of the greatness of God, and al-Būni composed a whole treatise on the excellence of this verse.

The *sūra Yā Sīn* (xxxvi.) is also held in great veneration by pious Musalmāns, and extracts from this chapter are engraved on the cups that dervishes carry. In addition to this, numerous passages of the Qur'ān are employed in various circumstances. There are treatises that tell which extracts suit each occasion (see the Arabic MS 1219, Paris, which is of this kind). The verses most usually worn are those containing the word *ḥifẓ*, 'guard,' which are called *ayāt al-hifz*, 'preservative verses,' and the verses called *kawari*, which contain a malediction against Satan (see Ishmael Hamet, art. 'Amulettes en Algérie,' in *Bulletin des séanees de la société philologique*, 1905).

In cases of illness, it was the popular custom until quite recently, in Musalmān countries, and especially in Africa, to have recourse to the texts of the Qur'ān. The verse appropriate to the case was inscribed on bone, paper, or parchment, and a decoction of this was made in water, which the patient had to drink.

11. Use and form of talismans.—The name 'talisman' (*ṭilsam*, pl. *ṭalāsim*) is a literary word in Arabic. Amulets are more usually called *hirz* or *horūz* in Algeria; *ḥamaye* or *ḥāfiẓ*, *'udzah* or *ma'ādzah*, in the Arabian countries of the East; *yafta*, *nūskha*, or *hamaïl* in Turkey. They are generally made by people of a religious order, *e.g.* members of a brotherhood, shaikhs, or dervishes, who declare that they have no value unless they are received from their own hands. This gift brings them in return payments in money, goods, and commodities of every kind. Talismans are enclosed in square or circular purses or sachets of morocco, which are kept constantly on the person. The Turks carry them on their arms or under their turban, or sometimes hung round their neck under their jacket. The Bedawīn wear them quite openly hung round their neck above their clothing. Among the wealthier classes, they are enclosed in lockets, or engraved on plates of gold or silver, which are hung round the neck on chains of the same material. Fashionable young Bedawīn have several rows of them, making rich necklaces. An amulet that is very highly prized by young Bedawī girls is the *ḥūrz*. This is a little religious book 7 cm. long by 4 or 5 cm. broad, which is enclosed in a case of gold or silver, and worn like a locket. Children are provided with amulets when they are only forty days old. These are sometimes very trivial objects—a simple shell or a piece of bone, placed in a leather case under the left arm. Amulets are also put on animals, especially horses (Ishmael Hamet, *op. cit.*; Emily Ruete, *Mémoires d'une princesse arabe*, 1905, p. 64; d'Ohsson, *op. cit.* v. 681).

The amulets are sometimes jewels of great value. Fine specimens of these may be seen in Reinaud's work on the materials of the Duc de Blacas's Collection. Drawings of less artistic amulets, which are, nevertheless, interesting for their composition and text, may be seen in Doutté's *Magic et religion dans l'Afrique du Nord.*

Some years ago the present writer had an amulet prepared by a dervish of Constantinople. It was a long strip of paper on which were drawn, from the top downwards, seven magic squares. Above each square, as if for a title, was the name of a chapter of the Qur'ān. Round about the squares were the names of the four great angels, and in the angles these words: 'His word is truth, and power is His.' The following conjuration appeared below the squares: 'In the name of the merciful and compassionate God, I conjure you and I swear, O tribe of holy spirits, celestial and infernal, by the truth of your amir and your chief Sheldiūshi, Malkiūshi, Kahīj, Mahīj, Aṣbaot, al-Shaddai, Meṭāṭron.'

Among the uncivilized peoples of Muhammadan Africa, the science of talismans blends with fetishism, and the amulet is confused with the *gri-gri.*

12. Methods of incantation.—Arabian magic is not confined to the composition and wearing of talismans. It also includes a complete science of incantations, composed of formulæ according to fixed methods. This science is prohibited by Muhammadan theology, and those who devote themselves to it commit an act of impiety. The prophet condemns sorcery in a verse in which, it is true, he mentions only the consultation of fate by arrows,—a method practised by the pagan Bedawīn at the sanctuary of Mecca,—but the meaning of this verse can easily be made general:

'O true believers, verily, wine, and *el-māisar* [game of chance], and [the worship of] statues, and divining (arrows) are only an abomination of Satan's work; avoid them then that haply ye may prosper' (Qur'ān, v. 92).

Similarly, we may notice the invocation against witches in the *sūra* of the 'Daybreak' quoted above (cxiii. 4).

Notwithstanding these prohibitions on the part of orthodox theology, the Bedawī magicians have written treatises on witchcraft, in which the aim of the practices indicated is usually of evil intention; in a great many cases, it is a question of bringing an enemy into one's power, of making him die, or at least of harming him. Among these practices we find that special form of spell called by the French 'envoûtement,' which is so celebrated in the history of magic throughout the world. Sometimes the aim of the incantation is the satisfaction of love.

The Arabic MS 2662, Paris, edited in accordance with the tradition of al-Būni, gives numerous incantations applicable to all sorts of cases. We may now quote some of them.

If you want to send a scorpion to an enemy, you take the animal, shut it up in a glass to avoid being stung, and, while naming the person whom you want to harm, pronounce the following conjuration over it seven times: 'Aryūsh, Sharhūsh; He is a God so great that there is none beside Him. Barṭimā, Malṭimā, Azriān (*bis*). Understand and hearken to what I say, O scorpion born of a scorpion; otherwise will I give the fire power over thee. Ṭarīush, Nākhūsh, Lāhūsh, Bamkhūsh, Darḳianūsh, . . . by the glory of God and the light of His countenance, go to so-and-so and sting him in such-and-such a spot.' Then you let the scorpion go, and it makes straight (so they believe) for the person mentioned.

There is a conjuration of the shadow which is curious. A man conjures his own shadow, speaks to it as to a spirit, and prays it to give him power over his enemy. To do this, he must stay up the whole night on a Sunday or a Wednesday. When all noises have ceased, and every one is asleep, he stands all alone in an empty house. He has a lit candle which he lays down towards the West. He stands in front of the candle and faces the East; then he sees his shadow on the wall. He recites a long invocation to his shadow—an invocation given in the book—and burns incense. At the end of the conjuration, he prays his shadow to bring harm to his enemy, and, while uttering this prayer, he thinks over all the ills he would like to befall the person whom he hates.

'Envoûtement' is practised by means of a leaf of paper on which a human figure is drawn. On this figure they write the name of the person they wish to injure. Then they nail it on the wall head downwards, and recite verses of the Qur'ān (lxxii. 1–4, xlvi. 31, which, however, contain nothing in any way related to such practices). They then take an iron needle, make it red-hot, and stab the figure through the heart with it, saying: 'Take his sleep from him, and enter his body as this needle enters this image.' The enchanted person is bound to fall ill and remain so as long as the needle is left in the figure.

The 'envoûtement' must have been known at the very birth of Muhammadanism. A tradition says that Muhammad was enchanted by the daughters of the Jew Lubaid; they made a little wax figure of the prophet and pierced it with a great number of needles.

Finally, conjuration for the purpose of gaining the regard of a loved one is performed by means of a dove. A wild turtle-dove is taken and kept prisoner for a Tuesday, Wednesday, and Thursday; then on Friday, at the hour of Venus, a thin leaf is taken, and on it is written with a bodkin perfumed with musk and saffron: 'As this dove sighs for her mate, so may such-and-such a one sigh for so-and-so and desire him with the desire of love!' Then the leaf is tied to a thread, which is fixed to the dove's wing, during a long invocation. All the ardour of the passion one longs to see in the loved one must be described.

Then the bird is tapped on the head with a little stone—to make the charm penetrate into the person it is directed against—and set free.

LITERATURE.—See the authorities quoted throughout the article and in the notes, the two most important books being: Reinaud, *Monuments arabes, persans, et turcs du cabinet du duc de Blacas et d'autres cabinets*, 2 vols., Paris, 1828; E. Doutté, *Magie et religion dans l'Afrique du Nord*, Algiers, 1909. While profiting from the copious information contained in the latter volume, we are not to be taken as accepting the theory of its author, according to which religion had its origin in magic (p. 341, and *passim*).

B^{on} CARRA DE VAUX.

CHARMS AND AMULETS (Roman).—It was a belief among the Romans, as among all primitive peoples (Wundt, *Völkerpsychologie*, ii. [Leipzig, 1905] 2, 202 ff.), that many substances were endowed with supernatural virtue, and that this virtue might be brought under the control of any one possessed of the requisite occult knowledge. To this end the adept had recourse to magic, and his usual method was to bring the given substance under the influence of other forces, likewise of a magical, non-material kind. One of these was the spoken *word*, especially in rhythmical form. It was a Roman belief that the farmer might by a magic spell transfer his neighbour's corn to his own fields, and accordingly the XII Tables impose a penalty upon any one 'qui fruges excantassit' (Bruns-Gradenwitz, *Fontes iuris Romani*[7], 1909, p. 30). Here we have the origin of the magic formula (see art. MAGIC). A like virtue was supposed to reside in the human *action*; thus, a woollen thread in which knots have been tied will cure disease (Pliny, *HN* xxviii. 48). Here we have a typical example of the magic action (see art. MAGIC). The practice was to treat some amorphous material in such a way as to give it a form resembling a particular object or person; for, according to primitive belief, the original and its artificial semblance were identical, so that the one could be made by magic to suffer and to act in the same way as the other.

The magical virtues of the substances referred to were brought into requisition with a view to acquiring all that was deemed desirable—such things as wealth, beauty, riches, power, and love. If a man still lacked these gifts, he tried to force the hand of fortune, either negatively, by driving away existent evils (expulsive magic); or positively, by conjuring to himself the goods he lacked (beneficent magic). If, on the other hand, the objects of general desire were already his, the magically endowed substances became serviceable as a means of saving these from diminution. In the latter case the function of the substances in question was not so much to obtain benefit as to avert such evils as might threaten the possessor (prophylactic magic by means of amulets). Amongst these evils those due to the magical operations of one's fellow-men were special objects of dread. For, of course, a man may desire not only to benefit himself, but also to injure those who stand in his way, and may therefore seek to bring disease or death upon them. It was, in fact, against such maleficent magic that amulets were mainly used.

While such potent substances were used as amulets in various kinds of magic, it should be observed that no particular substance had its action limited to one single category of the occult art. On the contrary, most of the available substances were endowed with a many-sided efficacy. That which dislodged an existent evil would also act prophylactically against an apprehended evil; purslain, for instance, not only removed pain in the uvula, but could be used as an amulet to prevent headache (Pliny, *HN* xx. 215), while a substance which was efficacious in maleficent magic would also undo the mischief worked thereby (cf. in the 'Greek' section of this article the formula ὁ τρώσας καὶ ἰάσεται; also O. Jahn, 'Über den Aberglauben des bösen Blicks bei den Alten,' *Ber. d. sachs. Ges. d. Wiss.*, 1855, p. 61); and that which warded off disaster would also bring prosperity, as, *e.g.*, the mora fish, which both prevented premature birth and attracted gold (Pliny, *HN* xxxii. 6, ix. 80). Hence, when we come to treat of the various substances employed, we shall be unable to draw a rigid line between 'charm' and 'amulet.' If we speak more of amulets than of charms, that is because, as the liability to misfortune and danger was universal, negative (or prophylactic) magic was resorted to by nearly every one, while relatively few advanced to the practice of positive (or beneficent) magic.

We appear to be well informed regarding the substances to which the Romans ascribed magical powers and which they used for magical purposes. A vast number of such objects, particularly of amulets, have been found in Italy (cf. Gius. Bellucci, *Amuleti ital. ant. e contemp.*, Perugia, 1900, and *Il feticismo primitivo in Italia*, Perugia, 1907), and they are frequently referred to by ancient authors, *e.g.*, by writers in prose such as Pliny (*HN*) and the *Scriptores rei rusticae*, and by physicians like Marcellus Empiricus, while poets of the time of Augustus and his successors furnish numerous descriptions of magical proceedings. Only a very few of these discoveries and references, however, give any indication as to whether the superstitions attaching to the articles concerned were indigenous to the Roman people, or whether they were imported from exotic modes of thought. Again and again Rome felt the powerful influence of foreign civilizations; the neighbouring nations (especially the Etruscans), the Greeks, and eventually the peoples of the Orient, successively transmitted certain elements of their magic to Latium; and Roman writers speak of this imported magic just as if it were a native product. Thus Virgil (*Eclog.* viii. 80) tells of a love-spell performed with wax; but this is simply taken from Theocritus (ii. 28). Accordingly it is in most cases impossible to decide whether a particular charm was a thing of immemorial practice amongst the Romans, or a later importation. It is probable that primitive forms of all the principal varieties of magic were to be found in Latium from the outset, and that these subsequently coalesced with more highly developed types of foreign origin. In any case, this later stage of Roman magic is all we have to proceed upon; and, moreover, it is permeated by the leaven of Greek magic to such a degree that it seems hardly more than a mere offshoot thereof. To Roman magic accordingly applies almost everything that has been said in the 'Greek' section of this article. In what follows we give only such selected instances as are shown by some particular feature to have taken firm root in Rome, or, at all events, to have been practised by Romans. These instances are but few, and, few as they are, not always certain.

As an example of beneficent magic we have some information regarding a kind of rain-charm, performed by means of the *lapis manalis* (Festus, ed. Müller, p. 128). We have a more precise knowledge of the love-spell (O. Hirschfeld, *De incantamentis atque devinctionibus amatoriis apud Graecos Romanosque*, Konigsberg, 1863; R. Dedo, *De antiquorum superstitione amatoria*, Greifswald, 1904; L. Fahz, 'De poetarum Romanorum doctrina magica,' *Religionsgeschichtliche Vers. und Vorarb.* vol. ii. pt. iii. [1904]). But the Roman accounts of the actual charms employed are almost entirely dependent upon Greek sources.

Moreover, the love-spell is not a genuine example of beneficent magic. In order to arouse love in one who was meanwhile indifferent, he was subjected to internal pains till such time as he yielded to the wishes of the person in whose name the spell was cast. The torment thus involved in the love-spell seems rather to place the latter in the category of maleficent magic. An evidence of its being practised in Rome is found in the word *venenum*, 'poison,' which is connected with the name *Venus* (F. Skutsch, *De nominibus latinis suffixi -no ope formatis*, Breslau, 1890, p. 9), and originally meant 'love-potion.' It was of such a φίλτρον that Lucullus is said to have died (Plutarch, *Lucullus*, xliii.).

The simplest form of maleficent magic was the evil eye (S. Seligmann, *Der böse Blick und Verwandtes*, Berlin, 1910). Even without accessories this could work injury to health and property (Daremberg-Saglio, *s.v.* 'Malocchio'; Pauly-Wissowa, *s.v.* 'Fascinum'). Tacitus, *Annal.* ii. 69, dealing with the death of Germanicus, is the classical passage for a more elaborate malignant spell performed with all the requisite materials:

'Reperiebantur solo ac parietibus erutae humanorum corporum reliquiae, carmina et devotiones et nomen Germanici plumbeis tabulis insculptum, semusti cineres ac tabo obliti aliaque maleficia, quis creditur animas numinibus infernis sacrari.'

The principal appliances of this kind of magic were the well-known *tabellae plumbeae*, and such tablets, inscribed with menaces directed against all that the object of the spell counted dear, have been discovered in large numbers (A. Audollent, *Defixionum tabellae quotquot innotuerunt*, Paris, 1904). Even this practice, however, was not native to the soil, but was borrowed from the Greeks as late as the 1st cent. B.C. (*Rhein. Mus.* lv. [1900] p. 271).

In cases where a man was suffering harm in person or property, he resorted to exorcism as a means of expelling the injurious thing. In most instances the evil took the form of a disease, and it was no uncommon thing to attack it by magical remedies. This was, in fact, the function of *medicina popularis* (see art. DISEASE AND MEDICINE), regarding which we are specially well informed by Pliny (*HN*; cf. *e.g.* xxviii. 47 ff.). We are not sure, indeed, whether or not Pliny availed himself of Greek sources, but we find a reference to a native remedy in Cato, *de Agri Cult.* 160, where it is said that a dislocation can be cured by binding upon the injured place a reed that has been blessed with a magic formula.

As the unknown perils to which a man was exposed were manifold, he did not wait till the blow had actually fallen, but sought to safeguard himself beforehand by making use of such articles as had a recognized protective virtue; and in this way the object utilized in the practice of exorcism became an *amulet*. The prevalence of this form of magic amongst the Romans is reflected in the number of terms signifying 'amulet' found in their language from the very infancy of their literature. One of these is *fascinum*, connected either with Latin *fari*, 'to cast a spell,' or with Gr. βάσκανος (A. Walde, *Etymol. Wörterb.*, p. 209). The derivatives of *fascinum*, viz. *fascinare* (Catull. vii. 12: 'mala fascinare lingua'), and *fascinatio* (Pliny, *HN* xxviii. 35: '[saliva] fascinationes repercutimus'; xxviii. 101: '[hyaenae] frontis corium fascinationibus resistere'), show that at one time the word meant 'a malignant spell'; and, as a matter of fact, it was in the main applied to the baneful action of the evil eye (Virgil, *Eclog.* iii. 103: 'oculus mihi fascinat agnos'; cf. Jahn, *op. cit.* p. 70 ff.). The actual *fascinum* was nearly always an amulet, and in most cases took the figure of the phallus, which, it was believed, would by its very impropriety avert the evil eye, or even render it innocuous by the beneficent influence of the reproductive principle. A *fascinum* hung round the neck was worn as an amulet by boys (Plautus, *Miles*, 1398 f.: 'quasi puero in collo pendeant crepundia'); and when the conqueror made his triumphal entry into the capital —the occasion on which he might well dread the malign glance of envy—a *fascinum* was tied to his chariot (Pliny, *HN* xxviii. 39). The soil of Italy has also yielded numerous *fascina* in stone and metal, which may have been either worn upon the person, or built into tombs, houses, city-walls, etc., as a means of protection (Jahn, *op. cit.* p. 73 ff.). In the same sense was used the word *muttonium* (derived from *mutto*), which also means 'phallus' (Usener, *Götternamen*, 1896, p. 327): the scholia render it by πέος or προβασκάνιον (*Corp. Gloss. Lat.* ii. 131, iii. 351). The word *scaevola* likewise, according to F. Marx (*Lucilii rel.* i. p. xliv—a reference suggested to the writer by L. Deubner), seems originally to have denoted an amulet in the form of a phallus.

The child's *crepundia*, however, embraced more than the phallus. The word *crepundia* comes from *crepere*, 'to rattle' (Walde, *op. cit.* p. 150), and was originally applied to the small metal rattle which served not only to amuse the child, but also to protect him from demonic influence, as it was supposed that evil spirits were afraid of the jingling of metals, especially of bronze (A. B. Cook, *JHS* xxii. [1902] p. 14 ff.); gold and silver, however, were also efficacious. Plautus (*Rudens*, 1156 ff.) enumerates the *crepundia* of a girl as follows: a golden sword, a silver knife, two hands clasped together, and a miniature pig (the material of the last two is not specified); finally (1171), 'bulla aurea est, pater quam dedit mi natali die.' The statue of a boy in the Vatican Museum (Daremberg-Saglio, fig. 301) shows upon the shoulder a strap embossed with a whole series of such prophylactic figures, while an ornament of similar character is preserved in Vienna (*ib.* fig. 2066). The idea of warding off evil, in fact, came to be so closely associated with *crepundia* that the word was at length used to denote, not a child's rattle only, but an amulet of any kind (Apuleius, *Apologia*, 56).

The origin of many of these pendants is probably to be sought in Greece and Etruria. Plautus, in the passage quoted above, is translating from a Greek comedy, while the *bulla* mentioned by him is regarded by all investigators as Etruscan (see artt. in Daremberg-Saglio and Pauly-Wissowa). The word itself is Latin, and means 'water-bubble' (*bullire*, 'to boil up'), and then any object of like form (Isidore, *Origines*, xix. 3, 11). In most cases the *bullae* used as amulets were of gold; many of them took the form of a heart—as the seat of life—or of the moon, to which great magical virtue was ascribed (Pauly-Wissowa, i. 39 f., *s.v.* 'Aberglaube'). The usual form, however, was that of a bubble or convex disk, and there was perhaps some mental association between such a golden *bulla* and the sun as the source of life. *Bullae* of this kind were worn by Etruscan youths (Daremberg-Saglio, fig. 892), women (*ib.* fig. 893), and demons (*Archäol. Zeitung*, 1846, plate 47, at the foot), on a strap round the neck, as also by the Etruscan kings (Festus, ed. Müller, p. 322). In all probability, therefore, the Roman practice was borrowed from the Etruscans. The general himself wore the golden *bulla* on the day of a triumph (Macrobius, *Saturnal.* i. 6, 9), but with this exception it was worn mainly by boys of distinguished birth (Festus, p. 36), those of humbler origin having to be content with a makeshift ('lorum in collo,' Macrob. i. 6, 14), while the

bulla of a girl is but seldom referred to (cf. the passage quoted above, Plautus, *Rudens*, 1171). It may well be the case that the simple leather strap (*lorum*) of the humbler ranks was at one time universally worn by the Roman youth, and that it was afterwards discarded by the higher classes for the golden *bulla* of the Etruscans. Juvenal (*Sat.* v. 164) contrasts the 'Etruscum aurum' with the 'nodus tantum et signum de paupere loro'; for the significance of this 'knot' cf. P. Wolters, 'Faden und Knoten als Amulett' (*ARW* viii. [1905], Beiheft, p. 19). Children were presented with these amulets on the day of their birth (Plautus, *loc. cit.*), and wore them during the tender years in which they were unable to guard themselves against the evil eye and kindred perils. On reaching the age of puberty they dedicated the *bulla* to the Lares (Persius, v. 31).

From the specimens discovered we learn that in most cases the *bulla* was composed of two convex disks of gold, which could be fastened closely together by means of the overlapping hooks on their edges (Daremberg-Saglio, fig. 895). In the hollow space thus formed the Romans used to keep things 'quae crederent adversus invidiam valentissima' (Macrob. i. 6, 9), as instances of which Marcellus Empiricus (viii. 50) mentions the eyes of a green lizard. A *bulla* discovered in the grave of a soldier at Aquileia (Heydemann, *Mitt. aus d. Antikensammlungen in Ober- u. Mittel-Italien*, 1879, p. 27, cited by Pauly-Wissowa) was found to contain hair: it was a popular superstition among the ancients that hair was a protection against head wounds (Pliny, *HN* xxviii. 41). It would appear that the various articles that might be deposited in the *bullae* were grouped under the general term *praebia*—a word which, according to Varro (*de Ling. Lat.* vii. § 107), had been already used by Naevius. Varro himself derives its meaning 'a praebendo ut sit tutus, quod sint remedia in collo pueris,' and Festus (p. 238) speaks of *praebia* composed of dirt taken from the folds in the robe of a certain temple-statue.

The most familiar and most comprehensive term of this class was *amuletum* (see artt. in Daremberg-Saglio and Pauly-Wissowa). The word is of uncertain etymology, being either an early adaptation—possibly from the Etruscan—or else a genuine Latin form in *-eto* (cf. Walde, *op. cit.* p. 27); on the latter alternative it is probably derived from *amulum*, and would thus mean 'food of coarse meal' (*Glotta*, ii. [1910] 219 ff.). There is no available evidence, however, for its usage in this sense; in every known instance it answers to φυλακτήριον. It is nevertheless quite possible that a word which primarily meant 'strengthening, farinaceous food' should at length come to signify 'a protection against evil.' Of a dish prepared with meal, Pliny (*HN* xxv. 128) says: 'iis qui cotidie gustent eam, nulla nocitura mala medicamenta tradunt.'

Charms and amulets could indeed be made of any kind of material (Hubert, art. 'Magie,' in Daremberg-Saglio, p. 13) possessed of some outstanding quality beneath which supernatural virtue might conceivably lurk. The conceptions which suggested the association of abnormal powers and magical effects with particular substances have been discussed in the 'Greek' section of this article, and need not again be entered upon here. Among terrestrial things—the sun and the moon have been dealt with above (p. 462b)—*plants* and *animals* were specially regarded as the media of magical power. Sometimes the particular object was used as a whole, sometimes a definite portion thereof was taken; and in the latter case the part was supposed to have special influence just because it was a part, or else to contain a portion of the power pervading the whole. The available records of vegetable and animal substances employed in this way would of themselves easily fill a lexicon; a beginning has been made by E. Riess (art. 'Aberglaube' in Pauly-Wissowa, i. cols. 51-83). The few typical instances given below will suffice to show that the Romans likewise shared in the superstitions regarding them.

With reference to *plants* used as amulets, it seems unlikely that there was any importation in cases where the magical influence is associated with their *names*—a phenomenon by no means infrequent (Apuleius, *Apologia*, 35)—and where this association holds good only in Latin. Pliny (*HN* xxvii. 131; cf. R. Heim, 'Incantamenta magica graeca latina,' in *Jahrb. f. Philol.* Suppl. xix. 478, no. 49) informs us that the plant called *reseda*, growing at Ariminum, will expel all kinds of inflammation if invoked with the formula 'Reseda morbos reseda,' where the name of the plant is also the imperative of *resedare*. Many of the examples given by writers *de Re Rustica*, again, have a genuinely Italian flavour; *e.g.* an oak log ('robusta materia,' Varro, i. 38. 3; Columella, ii. 15. 6) hidden in a dung-heap is a protection against serpents. Breaking one's fast upon cabbage is recommended by Cato (*de Agri Cult.* 156) as a cure for intoxication, while Varro advises that at the beginning of autumn the figure of a grape-cluster should be placed in the vineyard as a defence against bad weather (Pliny, *HN* xviii. 294). In a comedy of Titinius one of the characters declares that strings of garlic ward off witches—a saying that points to a popular superstition of ancient Italy (*Scaen. Rom. poes. Fragm.*, ed. O. Ribbeck [1897-8], ii. 188). The torches used in marriage processions at Rome had to be of hawthorn (Festus, p. 245; E. Samter, *Familienfeste der Griechen u. Römer* [1901], p. 16), while Ovid (*Fasti*, vi. 129) refers to the same shrub as a prophylactic. Likewise, the custom of touching the threshold and door-post with a sprig of the strawberry plant (*arbutus*) as a means of driving away witches (Ovid, *Fasti*, vi. 155) is regarded by W. Mannhardt (*Baumkultus*, Berlin, 1875, p. 299) as indigenous to Rome.

Similarly with regard to *animals*, popular etymologies sometimes enable us to recognize certain practices as of native Roman origin; thus, it was believed that the ashes (*carbo*) of three crabs that had been burned alive would counteract *carbunculus*, a disease of plants (Pliny, *HN* xviii. 293; Riess, *op. cit.* col. 74). Other instances connected with animals are given by prose authors as observed among the practices of their age. Pliny tells us that the snouts of wolves were fixed upon the door as a means of guarding against *veneficia* (*HN* xxviii. 157); Palladius (i. 35; cf. Apuleius, *Metamorphoseon*, iii. 23) says that owls with outstretched wings were nailed to the house as a protection from hail; and, again (i. 35, *ad fin.*), that the skull of a mare or she-ass was placed in gardens to ensure fertility. Varro (*de Re Rust.* ii. 9. 6) adopts from Saserna the suggestion that dogs may be made faithful if they be given a boiled frog to eat. In order to avoid being struck by lightning, the Emperor Augustus always carried the skin of a seal (Suetonius, *Augustus*, 90).

Magical virtues were in like manner ascribed to certain parts of the *human body*. We have already spoken of the *fascinum*; a similar purpose was served by a representation of the female vulva, effected either by means of a gesture (Ovid, *Fasti*, v. 433), or by a drawing (Jahn, *op. cit.* p. 79 f.). An invalid that Vespasian touched with his foot was restored to health (Tacitus, *Hist.* iv. 81). The hand, too, had peculiar efficacy; it could ward off evil from what it grasped (Persius, ii. 35), but

could also cause death (Bücheler, *Carm. lat. epigr.* ii. [1897] no. 987; O. Weinreich, 'Antike Heilungswunder,' in *Rel.-gesch. Vers. und Vorarb.* vol. viii. pt. i. p. 58 f.). Even the nail-parings of one who had fever were used as a means of magically transferring the disease to another (Pliny, *HN* xxviii. 86). Analogous properties were attributed to the various secretions of the human body. The spittle was regarded as a preventive; a Roman spat upon his breast when praising himself, in order to avert the jealousy of the gods; and, when engaged in the operation of magical healing, he sought to ward off hostile influences by the same action (Pliny, *HN* xxviii. 36; cf. Varro, *de Re Rust.* i. 2, 27; A. Abt, 'Die Apologie des Apuleius,' in *Rel.-gesch. Vers. und Vorarb.*, vol. iv. pt. ii. p. 261).

Stones and *metals* were likewise used as amulets, though but seldom in their natural state. In most cases the selected stone was subjected to special preparation; it was inscribed with some magically potent figure, or with a form of words, and in this way efficacy was given to the stone, and durability to the spell. Belief in the virtue of particular stones was a relatively late growth in Rome, and was probably of foreign origin. The oldest surviving 'stone-books' are Greek, *e.g.* the *Lithika* ascribed to Orpheus (Abel, *Orphica* [1885], 109 ff.), and the sources used by Pliny in this connexion are likewise non-Roman (cf. 'Damigeron' in Pauly-Wissowa). Stones thus carved and inscribed give us the so-called 'Abraxas gems' (cf. 'Abrasax' in Pauly-Wissowa; A. Furtwängler, *Die antiken Gemmen*, 1900, plate xlviii.), which were worn in all kinds of jewellery, and especially rings. The practice of making boys wear an amber bead as an amulet was also brought from abroad (Pliny, *HN* xxxvii. 50).

With regard to *metals*, again, we have seen that bronze was supposed to have the power of driving away evil spirits. The Italian museums contain numerous objects exemplifying the practice of using bronze for prophylactic purposes (cf. *e.g.* Bellucci, *Amuleti*, p. 11, nos. 10, 11, 'pesce in bronzo'; p. 12, no. 14, 'fallo in bronzo'; no. 15, 'vulva in bronzo'—all from the Iron Age). The use of silver and gold for the same purposes has already been referred to. These metals were brought to Italy at a relatively early period, and the Roman superstitions associated with them may therefore be fairly ancient. A thin plate of either substance was made an amulet by having engraved upon it a prophylactic text (M. Siebourg, 'Ein gnostisches Goldamulet aus Gellep,' *Bonner Jahrb.* ciii. [1898] 134 ff.). Iron also could ward off evil spirits (Virgil, *Aen.* vi. 260; cf. E. Norden's ed. [1903], p. 201). An iron nail was driven into the ground at the place where an epileptic had fallen, the idea being that the demon of epilepsy was thereby riveted to the spot (Pliny, *HN* xxviii. 63). An iron nail also served to add efficacy to the *defixiones* inscribed upon leaden tablets (see above); to pierce with a nail the tablet containing the name of one's adversary was to impale the adversary in person. Nails used in this way, however, were sometimes formed of other metals; a well-known example is the bronze nail which, with its inscription, warded off the wild dogs of Domna Artemix (*Archäol. Jahrb.*, Ergänzungsheft, vi. [1905] 43).

The stone and metal figures used as talismans were in most cases representations of the deities that preserve men from calamity. Sulla carried in all his battles a golden miniature of Apollo which had been brought from Delphi (Plutarch, *Sulla*, xxix.). A kindred phenomenon is the respect subsequently accorded to the figure of Alexander the Great (*Script. Hist. Aug.* 'xxx Tyr.' xiv. 4), which was worn in rings and all sorts of ornaments. Magic virtues were ascribed also to the characteristic symbols of the gods; thus, on a prophylactic clay slab found in Naples (Jahn, *op. cit.* plate v. no. 3, p. 52), we recognize, among other objects, the *kerykeion* of Mercury, the trident of Neptune, the club of Hercules, the bolt of Juppiter, the lyre of Apollo, the bow of Artemis, and the tongs of Vulcan. Pictures of grotesque and horrible appearance were also used by the Romans, as were the *Gorgoneia* by the Greeks, for the purpose of keeping impending evils at bay (*Bonner Jahrbücher*, cxviii. [1909] 257). A stone head with the tongue thrust out was found beside a tower in a Roman fort in Hungary (*Österr. Jahreshefte*, vii., 1903, Beiblatt, p. 116, fig. 36 [communicated by L. Deubner]).

The method adopted for appropriating the magical qualities of the various substances was not always the same. Vegetable materials were often taken inwardly as food; thus, the stinging nettle, used as *cibus religiosus* (Pliny, *HN* xxi. 93), gave a whole year's immunity from disease. Or the substance could communicate its beneficent quality by being rubbed into the object for which protection was sought. Hence the bride rubbed the door-posts with wolf's fat (Pliny, *HN* xxviii. 142). In some cases it was enough merely to touch the object, as with the *arbutus* (see above), but the usual course was to bring the protective material into permanent connexion with the thing to be protected, so that the virtue of the former might flow continuously into the latter. This end was best secured by binding the prophylactic to the object, and accordingly the amulet was in later times called *alligatura* (Filastr. *Div. Her.* 21. 3). The simplest method was to carry it by a string round the neck, as was the case with the *bulla*. In local ailments the specific was bandaged to the affected part (Cato, *de Agri Cult.* cap. 160: 'ad luxum aut ad fracturam alliga'). When once the remedial substance had done its work, it was probably dedicated to the gods; the *bulla*, as we have seen, was given to the Lares, while the 'remedia quae corporibus aegrorum adnexa fuerant' were taken to the temple of Febris (Valerius Maximus, ii. 5, 6). But most amulets were worn throughout life, and were not removed even at death, as is shown by numerous 'finds' in tombs.

Moreover, not only human beings, but animals as well, were safeguarded or healed by means of these pendants. The *phalerae* worn by horses closely resemble the *crepundia* of children (cf. Rich, *Illustr. Wörterbuch d. röm. Altertümer*, 1862, *s.v.* 'Phalerae'). Cattle were similarly provided with clay figures within which a living shrew-mouse had been immured (Columella, vi. 17). As already indicated, even inanimate things, such as gates, houses, gardens, tombs, and city-walls, were protected by amulets. Amulets for the house, in particular, have been found in great profusion; pavements with figures—*e.g.* of magically potent animals—designed to arrest the eye (P. Bienkowski, 'Malocchio,' *Eranos Vindobonensis*, p. 285 ff.; cf. the 'Greek' section of this art.), or inscriptions (Bücheler, *Carm. lat. epigr.*, no. 26: '[Felicitas] hic habitat; nil intret mali'). Such inscriptions were regarded as specially effective against fire (Pliny, *HN* xxviii. 20; Festus, p. 18). Here, too, figure and writing were brought into immediate contact with the object they were meant to protect, being either imprinted upon or inserted into the wall, and thus becoming a component part thereof.

Belief in charms and amulets did not expire in Rome with the ancient period. It remained active even after Italy was Christianized (cf. the art.

'Amulette' in Schiele, *Rel. in Gesch. u. Gegenwart*, i. [1908] 454 ff., and in *DACL*, i. [1904] 1784 ff.); it was vigorous in the Middle Ages (J. Burckhardt, *Die Cultur der Renaissance in Italien*, ii.[3] [1878] 279 ff.), and survives to-day with scarcely diminished force (Bellucci, *Amuleti*; Gius. Pitrè, *Bibliot. delle tradiz. popol. siziliane*, Palermo, 1875, vols. xvii., xix.; Th. Trede, *Das Heidentum in der röm. Kirche*, 1891, iv. 'Amulette,' p. 475, 'Zauber,' p. 498).

LITERATURE.—The more important works have been cited above, and under the 'Greek' section of this article.

R. WÜNSCH.

CHARMS AND AMULETS (Slavic).—In no other quarter of Europe has magic, in all the various forms assumed by it from the dawn of history to the present day, exercised so great a sway as in the Balto-Slavic countries. In this article, however, the writer proposes to confine the inquiry almost entirely to Russia, partly because he is more conversant with this narrower area, and partly because it may be taken for granted that the conditions prevailing there extend also to the other Slavic countries and to the Baltic districts as well.

In connexion with Russia, a phenomenon that strikes us at once is the large variety of equivalents provided by the language for the word 'magician'—terms which, so far as their etymology can be definitely traced, afford a suggestive glimpse into the magician's mode of procedure. Thus we find that he is the 'maker,' *i.e.* the one who performs the magic actions; or he is the 'speaker,' who mutters the incantation; or, again, the 'knower,' the man who is learned in the magic rites.

To the first category belongs the Russ. (properly Old Bulg.) *carodejĭ*, 'magician,' from *cara*, 'magic,' and *dejati*, 'to make.' Originally the root *cara*, corresponding precisely to Old Iran. *cārā*, 'means,' 'remedy,' signifies simply 'making,' being cognate with Skr. *kṛṇoti*, 'he makes,' and *kṛtya*, 'action,' 'magic' (cf. art. ARYAN RELIGION, vol. ii. p. 40). The same idea underlies the term *potvórnikŭ*, 'magician' (now obsolete in this sense), connected with *potvórny*, 'magical,' *potvorstvo* and *potvóry* (plu.), 'magic'; and all are derived from Russ. *tvoritĭ*, 'to make' (cf. Ital. *fattura*; O. Fr. *faiture*, 'witchcraft,' from Med. Lat. *factura*; O. Norse, *gorningar* (plu.), 'magic,' from *gora*, 'to do).' The 'speaker,' 'babbler,' is denoted by Russ. *volchvŭ* and *volšebnikŭ*, 'magician,' from O. Slav. *vlusnati*, 'balbutire.' To these we may add the dialectical Russ. forms, *báchari*, 'magician,' from O. Slav. *baju*, *bajati*, cognate with Gr. φημί, Lat. *fari*; *obajánnikŭ*, *obajanščikŭ*, 'magician,' from *obájatĭ*, 'to chatter,' and *obavnikŭ* (in the *Domostroj*[1]), probably also connected therewith. Finally, the 'knowers' are designated *vedúnŭ* (obsolete), from *vedatĭ*, 'to know,' and *znachárĭ*, from *znatĭ*, with the same meaning. No definite explanation has as yet been provided for O. Russ. *kudésnikŭ* (cf. *kudésŭ*, 'the masked one,' *kudesi*, 'magic,' 'witchcraft,' 'Christmas,' etc.); or *koldúnŭ*, which in all probability is not, as was stated in art. ARYAN RELIGION, vol. ii. p. 45, a native Russian word, but rather an importation from the Finnish. In the Karelian dialect, at all events, this term is in common use (Georgievskij, *Russian-Karelian Dictionary*, St. Petersburg, 1908, p. 53); and the Karelians, be it remembered, have from time immemorial been recognized in Russia as adepts in the occult art. Thus, for instance, when the Grand Prince Ivanovic took as his second wife the young Gluška, he resorted to certain Karelians for such magical expedients as would enable him to have offspring.

We shall find occasion below to refer to other Russian terms for 'magician.' All those already mentioned have, of course, their respective feminine forms (*e.g.* *carodejka*, *vedĭma*, *znachárka*); and in Russia, indeed, as elsewhere, women, especially when old, were and still are believed to be specially versed in all manner of magic. During the 17th cent., for example, certain women belonging to Moscow gained so great a reputation in the art that their names have not yet been forgotten. It is worthy of note that the Russian magicians formed themselves into special gilds (*cechi*), by means of which the peculiar methods of the craft were handed on from one generation to another.

The *aims* of magic are of two kinds. Those who practise the art may intend thereby to secure some advantage either for themselves or others; or, again, they may seek to work injury upon others. Under the former class will fall the special case where recourse is had to magic as affording protection against the magical practices of one's enemies, such hostile machinations being called in Russian *porča*, 'enchantment,' from *portitĭ*, 'to damage.' The means used by the adept in furtherance of his designs may be *things* or *actions* or *words*. It is certainly impossible to regard these three categories as furnishing an exact classification of the extraordinary variety of available accessories, as in actual practice any single species seldom occurs alone, but is in most cases combined with one or both of the others; and, in particular, the selected things or actions sometimes acquire their potency only after an incantation or spell (*zagovórŭ*, *nagovórŭ*, from *govoritĭ*, 'to speak') has been uttered over them. Nevertheless, we must so far avail ourselves of the triple division indicated, if for no other purpose than to introduce some degree of order into the huge mass of material. Some consideration must also be given to the question whether, amid this jungle of delusion and absurdity, there may not be places where the presence of rational, or at least intelligible, elements is to be seen.

(1) Amongst the *things* manipulated for magical purposes, mention ought, first of all, to be made of plants and plant-substances. We find, indeed, a distinct order of magicians bearing the name *zeléjščiki* or *zelejniki* (in the *Domostroj*), from *zélije*, 'herb,' 'plant.' These were regarded as experts in herbs and roots. Every member of the order had his own 'plant-book' (*trávnikŭ*, from *travá*, 'plant,' 'herb'), which was bequeathed to his successor. Such *trávniki* may still be found in Russian villages, though very rarely; for it is believed that, if copies of them are made, the plants named in them will lose their efficacy. They are also exposed to other dangers (see below). They are handed down as precious heirlooms from one generation to another. These books give, first of all, the native name of the plant; then a description frequently very precise; then the locality where it may be found; and, finally, its medicinal properties. They often contain observations of this kind: 'it is good in cases where a person has become insane, or has been imbecile from childhood; steam yourself with it and drink the juice, and you shall be well' (cf. Kulikovskij, *Dictionary of the Dialect of Olonetz* [Russ.], St. Petersburg, 1898, p. 121). Many of these plants and their virtues have become known to us from the statements of a Siberian magician who was commanded by the Czar Alexej Michailovic to send an account of them to the authorities. Throughout Russia the Eve of St. John's is recognized as the peculiarly appropriate time for picking or digging such herbs. This holds good, above all, of the fern or brake—Russ. *páporotĭ*, a word which, representing the Indo-Germanic name (cf. Gr. πτερίς, O. Gall. *ratis*, from **pratis*, Lith. *papártis*, etc.), indicates the ancient repute of the plant. It was believed to be specially effective in the breaking of locks and the unearthing of treasure.

While the employment of vegetable substances for magical purposes may have some basis of reason in the gradually discovered remedial properties of plants, we look in vain for any such ostensible ground of rationality in the innumerable other things used in the operations of the magician—water and fire, bones and belemnites, stones and bears' claws, dead men's hands and winding-sheets, etc., although in another aspect, as will be explained more fully below, these things, too, may in some cases show a certain rational connexion with facts. Latterly, an outstanding significance was attached by the adept to certain objects which existed only in the sphere of imagination, such as serpents'

[1] *i.e.* 'The Book of Household Management,' composed in the reign of Ivan IV.

horns, the 'eagle stone' (a stone alleged to have been found in an eagle's nest), and the fabled horn of the unicorn. It is recorded that in 1655 the Czar Alexej Michailovic purchased three of these horns for a sum of 10,000 roubles.

To give effect to the virtues of the various objects named, the substances themselves—so far as they could in some form or another be eaten or drunk—were administered to the sick person by the magician, incantations being in most cases recited during the process. They were likewise freely used as ointments, in the mixing of which the most preposterous substances were employed—'turpentine, naphtha, arsenic, human blood, milk of women and animals, honey, dewdrops, sulphur, pitch, hops' (as given in an old MS in the Rumjanzow Museum). Besides these magical articles, roots and slips of paper inscribed with magic formulæ were often worn as amulets, the usual name of which (as in O. Russ.) is *náuzŭ*, from *navjazátĭ*, 'to attach' (*náuznikŭ*, 'wizard,' *náuzitĭ*, 'to practise witchcraft'; O. Russ. *nauzotvorĭcŭ*, 'amulet-maker' = magician).[1] Similarly, letters in which are written the Greek names of the various fevers are often worn as amulets, meant either to heal or to guard. Fevers, like most other diseases, are regarded as evil spirits—as the twelve daughters of Herod, virgins with dishevelled hair, whose supreme lord is the *besŭ trjašca* (*besŭ*, 'devil,' O. Russ. *tresĭca*, 'fever'). A connexion of the closest kind, extending even to the names, exists between the amulet (*náuzŭ*) and the knot (*úzelŭ*), which is used as a means of 'binding' one's enemy or his hostile actions. An ancient spell runs thus:

'Five knots will I tie for every unfriendly and unfaithful shooter (*strelĭcu*)—on the guns, on the bows, on every weapon of war. O knots, shut against the shooter all highways and byways, close up the guns, put all the bows out of order, string together all weapons of war; in my knots let there be a mighty virtue.'

(2) Passing now from things to *actions*, we would note at the outset one of the principal adjuncts of the *pórca* (see above), viz. the 'evil eye' of envy and malice (Russ. *sglazŭ* or *prizórŭ*; Gr. ὀφθαλμὸς πονηρός; Goth. *augô unsêl*; cf. Mk 7[22]). By means of the evil eye—as also of the evil formula (*urókŭ*)—it is possible to bring upon people, especially children, who are peculiarly susceptible to its influence, all manner of diseases, and in particular the symptoms of epilepsy (*klikúšestvo*, from *klíkatĭ*, 'to scream') and hiccup (*ikóta*). It will hardly be denied that the dread of the evil eye has a partial justification in observed fact. In the circle of our own acquaintance, for instance, we may be able to recall some individual the very cast of whose eye makes us ill at ease in his presence (cf. S. Seligmann, *Der böse Blick und Verwandtes*, Berlin, 1910).

Another proceeding that was greatly dreaded was the 'secret bestowal' (*podmĕtŭ*) of objects fraught with occult dangers. In 1598 the Russians pledged their oath to the Czar Boris—

'that neither in eating nor in drinking, neither in their clothing nor in anything else, would they attempt to devise evil [against him]; that they would not send to him any of their people bearing sorcery or noisome roots; that they would not hire wizards or witches; that they would not efface his footprints with any magical design; that they would not by means of magic send any evil upon him by the wind' (see below), etc. In particular, all admission to the Imperial stables was forbidden, 'so that no evil-disposed person should place noxious herbs or roots in the Emperor's saddle, bridle, belt, gloves,' etc. We thus see that the Czars of that period had no less cause for apprehension than their successors in our own times.

A further method of inflicting evil upon any one was that just mentioned in the oath given to the Czar Boris, viz. 'conveyance by wind' (*nasylka po vetrú*). Sorcerers, being lords of weather and wind, are called 'cloud-dispellers' (*oblako-progonniki*) and 'cloud-preservers' (*oblako-chranitelĭniki*). For a sorcerer, therefore, invested with such power, it was a simple matter, by means of a magic word, to make the wind veer in any desired direction, to throw dust into the air, and cause the wind to carry the dust to any person he chose, so that the victim 'might become crooked, wrinkled, be blown asunder and desiccated.'

There is another large group of magic actions which become intelligible only in the light of the facts adduced in the art. ARYAN RELIGION, vol. ii. p. 40, regarding the nature of magic in general. It was explained there that the magic action, in its genuine form, has its roots in symbolism. To put the matter concretely: an action is performed which in some way suggests the real object of desire, and is thus supposed to help towards its attainment. This fundamental characteristic of all magic manifests itself very prominently in the extraordinary operations of the Russian sorcerer and sorceress. When a person goes to law, he must take from a birch-tree a trembling twig (? *pereperŭ*, otherwise *pérepelŭ*) and say: 'As this twig trembles, so may my adversary at law and his tongue tremble.' When a woman feels that she is being neglected by her husband, the sorceress gives her a root, which must be placed upon a mirror with the words: 'As I look into this glass and do not tire of seeing myself, so let such an one never grow tired of seeing me.' When a merchant has difficulty in selling his goods, the sorceress casts a spell upon a piece of honey, and says: 'As the bees of the hive (? *jarosja*) swarm around [this honey], so let purchasers flock to this merchant because of his wares.' The merchant must then smear himself with the honey.

(3) The same symbolism—but transferred from the realm of action to that of speech—pervades the third category of Russian magic distinguished above, viz. the class of *magic formulæ*. This is, without doubt, the most interesting group of the phenomena under consideration. The magic formula, resting upon a perfectly intelligible belief in the determining, soothing, and even healing power of human speech (cf. art. ARYAN RELIGION, vol. ii. p. 40), developed in Russia into an altogether unique species of popular poetry, to the study of which the scholars of that country have long devoted their attention. Our knowledge of these magic formulæ is derived from oral and written tradition. At present, it is true, both sources of supply show a tendency to languish. By reason of the multiplication of schools and the growing dissemination of the knowledge of written and printed characters—once, in village life, the monopoly of the adept—it is now difficult for the inquirer to find a person who will condescend, even for money, to unfold the treasure of magic formulæ stored in his memory; and the difficulty is augmented by the belief that the formula loses its virtue when communicated to another. Chap-books (*tetrádki*) containing such incantations, notes of charms, etc., like the plant-books (*trávniki*) already referred to, must formerly have had a wide circulation in Russia, while they are now gradually being brought to light in manuscripts—dating in some cases from the 17th cent.—rescued from the dust of archives and libraries. Of written memorials of this kind, however, there has recently appeared in village life a dangerous enemy, viz. the inclination of the peasantry to turn every available piece of paper into *cigárki* (cigarettes).

In what follows, the reader will find a few speci-

[1] Cf. the Germ. renderings of *amuletum* given in F. Kluge, *Etymolog. Worterbuch der deutschen Sprache*[7], Strassburg, 1909, *s.v.* 'Amulett': 'Artzney so man ann Hals henckt,' and 'Anhängsel.' According to R. Wunsch, *Glotta*, 1910, ii. 219 ff., *amuletum* is not derived from *amoliri*, 'to drive away,' but from Gr. ἄμυλον, 'starch-flour,' which, if taken as food, was believed to have magical effects; cf. the Roman section of this art., p. 463a. The Lith. term is *seitai*, i.e. 'amulets and suspended things that have been consecrated by a Seitone' (on this word cf. art. ARYAN RELIGION, vol. ii. p. 54).

mens of magic formulæ drawn from a collection recently published by N. N. Vinogradov in the *Zivaja Starina* (see the Literature at end of art.). The selection has been guided mainly by the desire to present such examples as exhibit the *comparison* which here takes the place of the symbolic magic action.

(1) *An incantation used as a love-charm* (Vinogradov, 1907, no. 54): 'I, the servant of God, Vasilius, will rise up, blessing myself; I will walk, crossing myself, out of the room by the door, and out of the forecourt by the gate, across the square before the gate, through the wicket in the fence; I will go out into the open country; in the open country is the blue sea, in the blue sea lies a white stone, beside this white stone stands a withered tree, and by this withered tree stands a withered man; he hacks the withered tree and lays it on the fire. As soon and as swiftly as the withered tree flames up in the fire, so soon and so swiftly may the heart of the handmaiden of God [so and so] flame up for the servant of God [so and so], etc. . . . Of all my words may the key be in the sea, the lock in my mouth,—I shut, I bar to all eternity. Amen.'

(2) *Incantation for extinguishing love* (*ib.* 1907, no. 32): 'I, the servant of God [name], will rise without blessing myself; I will walk without crossing myself, out of the room, not by the door, out of the forecourt, not by the gate; I will go into the open country, to the blue sea; I will stand upon the beam of the ground flat; I will glance, I will gaze towards the north; in the north lies an island of ice; on the island of ice stands a cabin of ice, in the cabin of ice are walls of ice, a floor of ice, a roof of ice, doors of ice, windows of ice, window-glass of ice, a stove of ice, a table of ice, a seat of ice, a bedstead of ice, bed-clothes of ice, and there sits the emperor of ice himself. In this cabin of ice, on this stove of ice, sits a Polish cat, sits an over-sea dog; they sit with their backs turned towards each other. When the Polish cat and the over-sea dog turn their noses towards each other, they tussle and bite each other till blood flows. So may the servant of God [name] and the handmaid of God [name] nag and bite each other till they have blue marks and bloody wounds, etc. Amen.' The person must repeat this thrice, spitting each time.

(3) *Incantation against fleas, bugs, beetles, and other insects* (*ib.* 1908, no. 70): 'Fleas, bugs, beetles, and all such creatures, behold, I come to you as a guest; my body, as bones; my blood, as pitch; eat moss, but not me. My word is sure. Key. Lock. Amen, Amen, Amen.'

(4) *Incantation upon gun and powder* (*ib.* 1908, no. 46): 'Adam comes upon the street. In his hands he carries a cudgel. Powder—dung! Shot—dust. *Mingo* [Lat.] upon him; he shall not kill me, but he shall not escape from before my shot. Now and ever, and to all eternity. Amen.'

(5) *Conclusion of an incantation designed to turn a maiden against a youth* (*ib.* 1908, nos. 73, 74): 'According to this incantation, let a person take a forked twig, break it in two, and, burning one piece, hide the other in the earth, with the words: "As those two pieces do not grow together, and will not again come together, so may the servant of God [name] and the handmaid of God [name] not come together or meet each other to all eternity."'

(6) *Incantation against bleeding* (*ib.* 1908, no. 75): 'I will rise up, blessing myself; I will go, crossing myself, into the open country, upon the blue sea. In the open country, upon the blue sea, is a blue stone, and upon it a brown horse; on the horse sits an old man; he holds in his hand a golden needle, a silken thread; he sews, sews up the wound, stanches the blood, takes away gout and rheumatics, wards off evil eyes and enchantment (*prizory, prikosy*) from the servant of God [name]. Thou, O blood, stop, flow not, and do not drop from the servant of God [name]. To all eternity. Amen.' This must be repeated thrice, and a needle drawn thrice round the wound. Then the needle is thrown into the river or well.

Even these few examples of Russian incantations will serve to show that we are here in touch with some of the very oldest elements of magic, and, at the same time, with some accretions of later growth, and probably not of Russian origin at all. The frequent reference to Biblical persons and occurrences, or to the mysterious stone *latyri*, the marvellous island of Bujan, etc., which cannot be brought into direct relation with the Russian people, seems rather to bespeak a foreign, and in the main an Eastern, source of influence. It does not fall within the scope of this article, however, to enter upon this aspect of our subject, which, be it remarked, re-emerges in various ways in the fields of the popular legendary poetry of Russia, *i.e.* the *bylini*. Suffice it meanwhile to draw attention to a recent work by V. J. Mansikka, *Über russische Zauberformeln*, etc. (see the Lit.), which puts the reader in possession of the latest information on the wider questions referred to.

The practice of magic, as carried on by means of objects, actions, and words, pervades every phase of ancient Russian life. A suggestive inventory of the magic devices to be guarded against by the devout Christian when he is sick is given in the *Domostroj* (16th cent.), ch. xxiii. ('How the good Christian should cure himself of disease and all ailments'). It was a rooted conviction of the popular mind that all things are possible to the proper employment of occult power. Certain sections of life were supposed to be peculiarly open to the influence of *porcu*, as for instance—besides health of body and mind—the day of one's marriage. On that day the presence of the *koldúnŭ* was simply indispensable, while the *drúška* also—the master of ceremonies for the time—must needs be an expert in all the arts of magic (cf. P. V. Sejn, *The Great Russian in his Songs, Rites, Customs, Superstitions, Tales, and Legends* [Russian], 2 vols., St. Petersburg, 1898, 1900). The same phenomena meet us everywhere: charm and counter-charm, sorcery pitted against sorcery. In ancient Russia, as we learn, the rivalry of magicians often resulted in actual pitched battles.

The special form of occult art which is concerned with the divination of the future need not be dealt with here, as it has already been discussed with some fullness in the article ARYAN RELIGION, vol. ii. p. 54 f., with special reference to the Baltic peoples.

LITERATURE.—N. Kostomarov, 'Sketch of the Domestic Life and Customs of the Great Russians in the 16th and 17th Centuries,' ch. 21 (Beliefs), in *Sovremennik*, vol. lxxxiii. p. 529 ff. [Russian]; N. N. Vinogradov, 'Spells and Blessings,' in Appendixes to the *Zivaja Starina* (1907, 1908) [Russian]; V. J. Mansikka, *Über russische Zauberformeln mit Berucksichtigung der Blut- u. Verrenkungssegen* (Helsingfors, 1909); on pp. vii–ix of the last-named work will be found an extensive list of Russian works dealing with the subject.

O. SCHRADER.

CHARMS AND AMULETS (Tibetan).—Charms are very extensively, almost universally, used in Tibet, owing to the intensely superstitious character of the people and their inveterate animistic beliefs. In their hard struggle for life amidst some of the fiercest and most awe-inspiring environments in the world, the Tibetans see in the storms of hail, and in the floods and avalanches which wreck their homes and scanty crops and vex them with disaster, the work of malignant spirits infesting the air and water and locality. They attribute to these spirits also all other misfortunes—accidents, disease, and untimely death. They are ever haunted by the fear of harm from those unseen evil agencies, and to ward it off they seek protection in charms, especially those supplied to them by their Buddhist priests. Indeed, the chief attraction which Buddhism possesses for the populace is the mastery which it is supposed to afford votaries over the evil spirits and devils which beset them on all sides. In this way it happens that the charms in use in Tibet are mostly borrowed from Indian Buddhism, and incorporate largely, as the present writer has shown (*Buddhism of Tibet*, p. 404), ancient Vedic ritual of the nature of sympathetic magic. This the Tibetans seized on eagerly, and have preserved, as it presents so much in common with their own native animistic beliefs.

These ancient Vedic charms, with their preparatory incantations, readily lent themselves to be adapted by the later Buddhists, who, by an extension of Buddha's nihilistic idealism, taught that, where nothing really exists and all is the product of illusion, the name of a thing, spoken or written, is to be regarded as being as real as the thing itself. A charm thus may be in the form of an uttered, or even unuttered, incantation with cabalistic gestures; or, as is much more common, a concrete objective one containing inscribed charmed sentences or letters. The written charms are prepared in cabalistic fashion, with special enchanted material, according to set prescriptions. Thus, for

the *charm against weapons*, the directions are as follows:

With the blood of a wounded man draw the annexed monogram [this is an ancient Sanskrit character, and seems to read *dsam*—possibly, in the opinion of the present writer, intended to express onomatopoetically the hum of a spear or a sling-stone], and insert it in the centre of the diagram entitled 'the Assembly of Lamas' hearts.' The sheet should then be folded and wrapped in a piece of *red* silk, and tied up with string and worn around the neck or on an unexposed portion of the breast immediately next the skin, and never be removed.

Again, *for kitchen cooking smells offensive to the house-gods*:

With the blood of a hybrid bull-calf write the monogram GAU [='cow'], insert it in the print, and fold up in a piece of hedge-hog-skin. [This last may be compared with the Western Aryan myth of the Greek hearth-god Vulcan, whose mother Hera as Io is represented as a cow.]

In others, the charmed Sanskrit sentence or formula (*mantra*) is extracted from the later Mahāyāna Buddhist scriptures of the Yoga and Tantrik era (c. A.D. 500 onwards), and consists of apocryphal sayings in corrupt Sanskrit ascribed to Buddha—often an unintelligible jargon of exclamations and incantations like the 'Fe-fo-fum' of the nursery tales. Such sentences or formulæ are termed *dhāraṇī*, as they are supposed to 'hold' magical power. Sometimes a single letter only is used, in which case it is the 'germ,' or *bīja*, of the *mantra*. These letters or sentences are usually inserted in a diagram or *yantra*, which frequently is inscribed with the orthodox 'Buddhist Creed.'

The more indigenous charms usually contain Chinese astrological and geomantic signs and symbols; for misfortune is ascribed also to unfavourable planetary influences. In these, as well as in those imported from India, if they are to be worn on the person, an important part of the protection depends on the manner in which the folded charm is tied up into a packet with many-coloured threads in geometrical patterns. This is done according to the rites of the pre-Buddhist religion, the *Bön*.

Thus prepared, the charm is worn on the person or affixed to the house, or to a dangerous rock, or is tied on bridges or cairns at the top of passes, or on bushes by the river's edge, or is hoisted on tall flags. For wearing on the person, if for under the dress, the packet is stitched up in a case of cloth and covered with flannel, to be hung from the neck, or it may be worn as a sash or attached to the upper arm; and several different kinds may be fastened together. When worn outside the dress, charms are usually carried in a metallic amulet box.

The amulet box, termed *gaū*, may be of copper, silver, or gold, according to the wealth of the wearer. It is in two pieces, a front and back hinged together by one or two wooden plugs at the two sides. The size averages about 2 inches square and about ⅝ of an inch deep; but some are much larger. The commonest shape is somewhat oblong, with an acuminate tip to its arched top, which may possibly be intended to represent the form of a leaf of the Bo-tree (*Ficus religiosa*). It is usually embossed with the '8 lucky symbols' (*aṣṭa-maṅgalam*) or other signs. Others are ovoid, and many are inlaid with turquoise. Several are glazed in front to expose the features of the central image, which most of them contain.

The *contents* of the amulet box are varied. The objects which are put in are supposed to be such as are dreaded by evil spirits. They are: (1) the charmed sentence as a magical spell, tied with thread as above described. (2) Miniature images of the chief Buddhist deities and saints, usually as clay medallions or arched plaques, occasionally of metal. The favourite image is Amitābha Buddha, the god of the Western paradise, and his son Avalokita of the *Om mani* spell, and supposed to be incarnate in the Dalai Lama; also Avalokita's consort Tārā, the queen of heaven; less frequently the patron saints Padmasambhava and Tsongk'apa, and the demoniacal protectors of Buddhism, the king-devils, varying according to the sect, *e.g.* Vajrabhairava, etc.; Buddha himself is seldom carried. These images are wrapped in bits of silk or other cloth, leaving the face uncovered. (3) Sacred symbols, some of the 8 lucky emblems, etc. (4) Relics of holy lamas, shreds of robes, hair, and nail-parings, as fetishes. (5) Grains of consecrated barley, pills, and cake from altars. (6) Earth and small pebbles from holy sites. (7) Incense and musk. These amulet cases are worn by nearly every individual in Tibet. Most commonly they are suspended from the neck, often more than one, and sometimes they are so large that they form small breastplates. Laymen may have four or five strung on a sash which buckles over the shoulder. Smaller ones are occasionally fixed as an ornament on the top-knot of the hair. The people rest their faith implicitly on the efficacy of these charms, and may be seen to fondle them affectionately. The talismans are to them both mascots and fetishes.

CHARMS AND AMULETS (Vedic).—Current English usage, restricting 'amulet' to the meaning of a talisman attached to the human body, although probably based in part on a false etymology (cf. Pauly-Wissowa, *Encyc.* i. 1984), is of service in the study of Vedic magic, because the use of such amulets is there so frequent that the ideas connected with them must have presented themselves to the mind of a Vedic Hindu as a separate group. The designation of this group was *maṇi*, a word exactly equivalent in meaning to 'amulet' as defined above, except for the fact that it is also employed in the broader sense of 'ornament.' Etymologically *maṇi* is connected with Latin *monile*, 'necklace,' and in the parent word we may see the designation of the neck-ornaments of the pre-historic period, which were undoubtedly intended for magic rather than for ornamental purposes (cf. Schrader, *Reallex. der indogerman. Altertumskunde*, 1901, *s.v.* 'Schmuck'). A synonym for *maṇi* is *pratisara*, which in the Atharvan literature, however, always designates the amulet that turns the spells of a sorcerer against himself, in accordance with its etymology, 'going against,' 'counter-magic.'

i. SOURCES.—The use of amulets is not confined to the Atharva; but, as the fullest picture of the Indian use of such charms is contained in the works of that school, it seems best to present first the practices of the Atharvan priests, and afterwards supplement this treatment by the statements from other sources.

1. Amulets in the Atharva-Veda.—The Atharva-Veda Saṁhitā itself comprises a number of hymns which more or less avowedly betray the fact that they were intended to accompany operations in which amulets were the chief factor. Such are especially the hymns that contain invocations of amulets or praises of them (i. 29, ii. 4, 11, iii. 5, 9, iv. 10, viii. 5, 7, x. 6, xix. 28, 30, 31, 33, 36, 46). In other cases incidental statements reveal the same fact (i. 35. 1: 'The gold which the kindly Dākṣāyaṇas bound on Śatānīka, that do I bind on thee, that thou mayest have long life, lustre, strength, long life of a hundred autumns'). In ii. 9. 1 we have the invocation of a being made of ten trees (*daśavṛkṣa*), which is manifestly an

amulet. ii. 27 is the invocation of a plant, but the third stanza shows one method of its use by saying, 'Indra placed thee upon his arm in order to overthrow the Asuras.' Other examples are iv. 9, v. 28, vi. 81, xi. 4. 26, xix. 26, 32, 34, 35. The ritual literature, in its description of the ceremonies at which these hymns are employed, invariably bears out these indications, and prescribes, besides, similar practices in connexion with i. 1, 2, 3, 9, 22, 34, ii. 3, 7, 8, 9, 11, 27, iii. 6, 7, 21, 22, iv. 37, v. 1. 7, 13. 11, 23. 1, vi. 4, 11, 15, 38, 39, 43, 72, 85, 90, 91, 101, 142, vii. 6, 43, 56, 76, 82, viii. 2, x. 6, xix. 27, 29, 37, 44, 45. In most of these cases the internal evidence of the hymns, by their resemblance to those of the previous classes, supports the ritualistic tradition.

(*a*) *Theory of the efficacy of the amulet.*—Upon this point we are but badly informed, as the ritual texts merely state the material of which the amulet is to be made, the occasion on which it is to be used, and the hymn with which it is to be fastened on; while the hymns are much more concerned in their vague rodomontades with the wonders which the amulet will achieve than with the method by which it will effect them. The crudest view is perhaps that the amulet contains a being of supernatural power who works on behalf of its possessor. According to Oldenberg (*Religion des Veda*, 1894, p. 514), this view in all its crudeness is not found in the Veda. Nor is this gainsaid by the fact that the Atharvan frequently speaks of the amulet itself as if it were a living thing. So in iv. 10. 7, in praising an amulet of pearl: 'The bone of the gods turned into pearl; that, animated, dwells in the waters'; in xix. 34. 1: 'Thou art an Aṅgiras' (a semi-divine being); and in the same hymn it is said that the gods thrice begot the amulet, with which is to be compared the 'god-born' amulet of x. 6. 31. In xix. 33, *deva* (god) is applied to the amulet as an epithet; cf. xix. 34. 6, vi. 142. 2, and note that in viii. 2. 28, an amulet is styled 'the body of Agni.' In two hymns it is spoken of as a man, as a hero (*vīra*): 'This attacking talisman, (itself) a man, is fastened upon the man . . . as a man it advances against sorceries and destroys them' (viii. 5. 1 2, cf. iii. 5. 8). Note also that it has a thousand eyes with which it is invoked watchfully to destroy enemies (xix. 35. 3), or two horns (xix. 36. 2), with which it pierces demons. It dwells in the house like a guest, and its actions are compared with those of a seer (viii. 5. 8), or of Indra (x. 3. 11, xix. 28. 3). Frequently it is directly invoked to accomplish the desired object, thus xix. 28 and 29 are made up of verses of the type: 'O *darbha*-grass, pierce my rivals, pierce my foemen, pierce all my enemies, pierce them that hate me, O amulet'—the changes being rung on 'cut,' 'split,' 'crush,' 'grind,' 'burn,' 'slay,' and other unpleasant imperatives; cf. also ii. 11. Such passages, however, must not be taken too seriously. In reality they are nothing but a result of the readiness to see life in everything, combined with the Atharvan tendency to elevate in the most extravagant fashion the various portions of its ritualistic apparatus (for similar tendencies, cf. Bloomfield, *The Atharva-Veda*, 1897, p. 87).

In a soberer vein the Atharvan looks upon an amulet as a weapon or an instrument in the hands of the sorcerer, *ṛṣi*, or god; cf. i. 29; ii. 4. 4; iv. 10. 2, 3; viii. 5. 3, 5, 6; x. 3. 2, 6. 9, 12, 13; or as an armour for its wearer, cf. viii. 5. 7, 10, 14. In this sense may be understood the statements that it will protect on all sides (ii. 4. 2), or from straits or the missiles of the gods and Asuras (iv. 10. 5); that it will beat off sorceries (viii. 5); that it will ward off or protect from various dangers (x. 3. 4 ff.); and even the frequent statement that it will prolong life may in part belong to the same category.

These metaphors, however, are the expressions of a more advanced stage of belief. The primitive idea on which the use of amulets was based is that all qualities can be transferred by contact—an undue generalization from certain familiar facts of experience—combined with the further principle of magic that the part may be substituted for the whole, or the symbol for the thing symbolized. This idea may still be seen governing the choice of the material of which amulets are made (cf. below), and is clearly expressed in viii. 5. 11–12: 'Thou art the highest of plants, as it were a bull among moving creatures, a tiger as it were among wild beasts. He in truth becomes a tiger, likewise a lion, and also an uprooter of enemies who wears this amulet.'

The Vedic practices, however, have advanced beyond this simplest form of belief. This advance is shown in the attributing to the amulet of secondary effects in addition to that which, on the above principle, it was primarily intended to produce. This is due to the fact that one blessing frequently implies another; so, *e.g.*, an amulet that bestows long life must guard its wearer from diseases and demons, from the charms of hostile sorcerers, and from the attacks of human enemies, and thus bestow the prosperity without which long life would be unendurable. Another evidence is the complicated structure of some amulets (cf. below), due partly to the wish to secure several objects at the same time, and partly to the effort to take every chance for success. Finally, and most important, is the effort to reinforce by ceremony and spell the effect which the amulet was originally supposed to produce by natural means. Every investiture with an amulet involved an elaborate religious, or at least quasi-religious, ceremony (cf. below), and the hymns themselves show the same tendency by frequently ascribing to the amulets a superhuman origin, or by recounting the wonderful achievements which the gods accomplished with them. The extreme of such tales may be seen in x. 6. 6–22; but viii. 5 also furnishes abundant illustration; cf. also i. 29, 35, ii. 27, iii. 5, vi. 81. 3, xix. 30, 34, 35. Note also how the hymns mingle prayers to different deities with invocation and laudations of the amulets, or in some cases, *e.g.* vii. 6, 82, are apparently nothing but prayers. In short, we have not merely sympathetic magic, but magic in the guise of religion.

(*b*) *The tying on of the amulet.*—This in itself is a ceremony of some elaboration. From the general rules (*paribhāṣās*) of the Kauśika Sūtra, 7. 15–21, we learn that the amulet is first steeped for three days in a mixture of curds and honey, an oblation of ghī (*ājya*) is next made by the priest while reciting the required hymn, and, while the person who has the ceremony performed (*kārayitṛ*) stands behind him and touches him with blades of *darbha*-grass, the leavings of the oblation are put upon the amulet, and the amulet is blessed with the hymn, the *kārayitṛ* standing as before. The priest then ties the amulet upon the *kārayitṛ* (generally upon his neck, in one case upon his finger, while bracelets and earrings also serve as amulets), and gives him the curds and honey to eat.

The elaborateness of the ceremony is greatly increased, if with Caland we understand that the whole performance is to be included in that of the New and Full Moon sacrifice. To this view a certain support is given by the precept that the steeping of the amulet shall begin on the thirteenth day of the half month, but it leads to doubtful consequences (if strictly applied), inasmuch as it is difficult to understand how the *kārayitṛ* would in cases of pressing need wait for the change of the moon. The question, however, involves other magic practices, and accordingly will be discussed under MAGIC.

Frequently the tying on of an amulet is but one of a series of magic rites (cf. Kauśika, 11. 19–20;

13. 46; 25. 6, 10; 26. 16, 43; 27. 5, 29; 28. 20; 29. 14; 35. 10; 38. 20-21; 39. 1; 43. 1, 16; 48. 3, 24), or it enters into a ceremony of a more strictly religious nature, *e.g.* at the *medhājanana*, a ceremony to produce wisdom (10. 2); at the *nāmakaraṇa*, naming of a child (58. 15); at the *upanayana*, initiation of a youth into the Brāhmanical community (58. 8); at the wedding ceremony (76. 8); and at the *mahāśānti*, a ceremony to avert evil portended by prodigies, a different amulet being prescribed in the 19th section of the Śāntikalpa for each of its thirty forms.

(*c*) *Materials employed and objects to be gained.*—(1) The vegetable kingdom furnishes the greater portion of the amulets, and these produce a wide variety of effects. The symbolism intended often remains obscure, especially when, as is sometimes the case, it is impossible to identify the plant. To obtain long life are employed amulets of the *pītadāru*-tree, *Pinus deodora* (Kauś. 58. 15; Śānt. 19), or of rice and barley (Śānt. 19). For the closely allied wish of prosperity we find in use amulets of *parṇa*-wood, *Butea frondosa* (Kauś. 19. 22), a tree of peculiar sanctity, to which the myths ascribe a heavenly origin; of *talāśa*-wood (Kauś. 19. 26), an unknown plant which perhaps owes its auspicious properties simply to the assonance of its name with *palāśa*, a synonym of *parṇa* (the hymn vi. 15 points rather to the subjection of enemies than to the attainment of prosperity which the ritual states is the purpose); of barley (Kauś. 19. 27); of the *sraktya*-tree, *Clerodendrum phlomoides*; of the *varaṇa*-tree, *Cratæva Roxburghii*; and of the *khadira*-tree, *Acacia catechu* (19. 22). The last three trees are employed largely on account of their names, which are connected by popular etymology with the roots *var*, 'to ward off,' and *khād*, 'to chew,' while *srāktya* as an epithet of an amulet would mean both 'made from the *sraktya*-tree' and 'bristling.' Victor Henry's suggestion that the latter was the primary meaning, and that the amulet was shaped like a six-pointed star, is most attractive. Whether Kauś. 11. 19; 52. 20 means an amulet made of two *kṛṣṇala*-berries (*Abrus precatorius*, Linn.) or their weight in gold is doubtful; the hymns and commentators both favour the latter alternative.

Against diseases in general are employed: in Kauś. 26. 37, a *varaṇa*-amulet (Dārila limits the purpose to the cure of consumption, but both the hymn and Keśava indicate a wider scope); in 28. 20, an amulet of barley; in 26. 40, an amulet made of chips from ten different kinds of holy trees, glued together and wrapped with gold wire; cf. also 13. 5, where the same amulet bestows lustre. More interesting are the amulets employed for the cure of particular diseases: in 25. 6, for the cure of excessive discharges, the head of a stalk of *muñja*-reed, *Saccharum munja*, with a string derived, according to the commentators, from the same plant; in 25. 10, for constipation or retention of urine, substances promoting micturition (the commentators cite as examples gall-nuts or camphor); in 26. 43, for the cure of hereditary disease, *kṣetriya*, one sews together in the skin of a freshly-slain animal powder of a plant supposed to destroy the *kṣetriya*, brown barley with white stalks, blossoms of sesame, mud, and mud from an ant-hill, and binds it on the patient; in 32. 13, three pieces of fallen bark of the *vīriṇa*-tree, *Andropogon muricatus*, form one of the amulets for the cure of *jāyānya*, syphilis (?); in 29. 14, the *alābu*-plant, *Lagenaria vulgaris*, is employed against the poison of serpents. According to Keśava, on 29. 20, a root of reed grass (*Capparis aphylla*, Roxburgh) is employed as an amulet against worms in a child; the Kauśika itself, however, speaks only of an oblation of this substance.

Against disease conceived as due to possession by demons is employed, in Kauś. 27. 5, the amulet of splinters from ten holy trees; in 26. 35, a barley amulet is employed in case of danger from (disease-producing) demons, curses, or the evil eye—at least such is the interpretation given by the commentators (cf. Bloomfield, p. 285) to the word *mantrokta* 'mentioned in the hymn'; but the word 'barley' does not occur in the hymn, and the Śāntikalpa sees in *sahasrakāṇḍa*, 'having a thousand shoots,' of stanza 3 the most characteristic designation of the plant. Demons are slain in Kauś. 42. 23 with an amulet of the *jaṅgida*-tree (*Terminalia arjuna*), the string of which must be of hemp; and in 43. 1, with an amulet of the *aralu*-tree (*Colosanthes indica*), the thread must be reddish; in 35. 20, they are kept from a pregnant woman by means of white and yellow mustard. Sorcery is repelled in 39. 1 with the *srāktya*-amulet, and in 48. 24 by a *tārchha*-amulet, the commentators disagreeing as to whether this is of bone or *palāśa*-wood. An amulet of the last-named wood is prescribed in 43. 16 when a person is believed to be plagued by the presence in his house-fire of *kravyād agni*, the flesh-devouring Agni of the funeral fire. For triumph over human enemies is ordained in 48. 3, with transparent symbolism, an amulet made from an *aśvattha*-tree (*Ficus religiosa*) that grows upon a *khadira*-tree (*Acacia catechu*); for success in debate, the root of the *pāṭā*-plant (*Clypea hernandifolia*) is employed in 38. 20.

At the wedding ceremony (76. 8) the bridegroom ties on his little finger an amulet of liquorice to make himself agreeable to the bride; the string must be coloured red with lac, and the knot made on the inside of the hand. An amulet of *darbha*-grass is employed in 36. 32, according to Keśava, in order to appease the wrath of a woman, and in 40. 16 to promote virility an amulet of *arka*-wood (*Calatropis gigantea*) with a thread derived from the same tree.

To this list of substances from the vegetable kingdom, the Śāntikalpa adds amulets of *udumbara*-wood (*Ficus glomerata*), of the *ajaśṛṅgī*-plant (*Odina pinnata*), and perhaps of the *śatāvarī*-plant (*Asparagus racemosus*).

(2) The animal kingdom is not nearly so well represented. We have already met the use of the skin of a freshly-slain animal as the covering for mud, and certain plants in a charm for the cure of *kṣetriya* (Kauś. 26. 43, where Caland is of the opinion that the plants constitute a separate amulet); the same amulet without the plants serves in 32. 6 to cure the poison of serpents, scorpions, and insects. *Kṣetriya* is also attacked (27. 29) by an amulet consisting of the horn of an antelope, the efficacy of which depends upon the pun between *viṣāṇa*, 'horn,' and *vi ṣyati*, 'he loosens.' For the cure of jaundice and related diseases, Kauś. 26. 16 employs an amulet made of the part of the hide of a red bull which was pierced by a peg when it was spread out for a seat, the desire of the operator being to fasten upon the patient a healthy redness. Most characteristic is the amulet employed (10. 2) at the *medhājanana* (ceremony to produce wisdom); it is constructed with evident symbolism from the tongues of three birds—the parrot, a certain species of crow (*sārika*), and a lark (*kṛśa*). Long life is sought (13. 1–3) with an amulet of ivory and elephant's hair wrapped with gold wire; or, instead (13. 4), the amulet may consist of hairs from the navel of a *snātaka*, a lion, a tiger, a goat, a ram, a steer, and a king, all pasted together and wrapped with gold wire. The same purpose is effected in 58. 9 by means of a pearl shell. An amulet of the skin of a black antelope, fastened on with hairs from its tail, is employed in 40. 17 to promote virility, and

one made from the wool of a male animal wrapped round pieces of *Prosopis spicigera* and *Ficus religiosa* is supposed (35. 10) to secure the birth of a male child. There is also the possibility mentioned above that the *tārchha*-amulet is of bone.

(3) Objects from the mineral kingdom are only rarely used in their natural condition. The employment of mud has already been mentioned, as has also the possibility that the weight in gold of two *kṛṣṇala*-berries is intended, not the berries themselves; likewise the fact that gold wire was employed to bind various substances together. Apart from these instances there occurs only the triple amulet of Athar. Ved. v. 28, probably identical with the unconquerable (*astṛta*) amulet of xix. 46, consisting of three pieces of gold, three of silver, and three of iron, employed to obtain long life in Kauś. 58. 10, and for a variety of purposes in the Śāntikalpa.

(4) Finally, there may be classed together a number of amulets made from manufactured objects, or in which the shape given to the material is significant. To secure victory for a king, the amulet is made (Kauś. 16. 29) from the felloe of a chariot wheel encased in iron, lead, copper, silver, or red copper, the centre of the case being of gold. Salve is employed as an amulet (58. 8) to secure long life. A spear-point furnishes (31. 7) an amulet against various sharp pains ascribed to the missiles of Rudra; and *jāyānya* (syphilis?) is healed in 32. 11 by tying on part of a lute by means of one of its strings, the instrument taking the place of the woman who played it, and the treatment being on homœopathic principles. In 23. 10 one who is about to divide an inherited estate ties on a bowstring as an amulet. In 35. 11 a bracelet is employed to ensure conception, but whether it is put on in the usual fashion, or tied around the neck as amulets usually are, is not clear. The Śāntikalpa 19 employs gold earrings, put on in the usual method, at the *āgneyī śānti*, *i.e.* when there is danger of fire, or for one who desires all blessings. An amulet in the shape of a ship ensures a safe voyage (Kauś. 52. 11). The head of an axe, or an amulet in the shape of an axe, and made of *palāśa*-wood, iron, red copper, or gold is employed in 46. 2-3 to restore an unjustly slandered man to honour. Prosperity is secured in 19. 23 by an amulet consisting of four pieces of *khadira*-wood, each made in the shape of a plough and put upon the string in a peculiar fashion.

2. Amulets in other branches of Vedic literature.—In passages in which there is simply an allusion to a *maṇi*, it is frequently impossible to determine whether an amulet or an ornament, a jewel, is meant; but for the period in question the two ideas must have been at least nearly synonymous. So in Rig-Veda, i. 33. 8 (the only occurrence of the word in the Rig-Veda), Indra is said to have vanquished the Dasyus 'adorned with golden *maṇis*,' *i.e.* in spite of the magical assistance of their amulets. Compare the taking away of ornaments or amulets from the Asuras accomplished by certain methods of sacrificial technique in Aitareya Brāhmaṇa, 4. 6, and note that the night-walking demons of Hiraṇyakeśin (*Gṛhya Sūtras* [HGS.], 2. 3. 7), and the demon of disease (*ib.* 2. 7. 2) wore ornaments, undoubtedly of magic power. Other passages that may be cited are Vājasaneyī Saṁhitā, 24. 3, 30. 7; Pañchaviṁśa Brāhmana, 20. 16. 6; Śatapatha Brāhmaṇa, 12. 3. 4. 2; Chhāndogya Upaniṣad, 6. 1. 5; but in *pratisara* of Śat. Brāh. 5. 2. 4. 20, 7. 4. 1. 33, the present writer can see no allusion to an amulet, the word having the more general sense of 'counter-charm.'

A clear example, however, is found in Vāj. Saṁ. 34. 50-52, the hymn for the putting on of the golden *dākṣāyaṇa* amulet, elaborated in Athar. Ved. 1. 35, and recurring in Rig-Veda *Khilani*, 10. 128; cf. Vaj. Saṁ. 19. 80. An amulet is mentioned in the *anubhunnāmokā mantraḥ* (Taittirīya Saṁhitā, 7. 3. 14. 1). At the *aśvamedha* (horse sacrifice), Katyāyana (*Śrauta Sūtra*, 20. 5. 16) directs that each of three wives of the king shall weave securely into the mane and tail of the horse a hundred and one golden amulets, which Śat. Brāh. 13. 2. 6. 8 interprets as symbolical of the king and the hundred years of life he wishes to attain.

In the Gṛhya Sūtras [GS.], the practice, as was to be expected, is better represented, though still without reaching the prominence attained in the Atharva. Differences are observable between the different Sūtras, but appear to rest more upon different degrees of minuteness in reporting details, than upon actual differences in the prevalence of the practices.

In the widest sense of the word the different parts of the costume of the *brahmachārin*, especially his girdle and cord, may be considered as amulets; at any rate they are handled in accordance with such magic potency. The verses with which, in HGS. 1. 4. 2, the new garment is put on the pupil at his initiation, are comparable in tone to a charm of the Atharvan to secure long life. The staff, too, must be carefully guarded, and in particular no person must be allowed to come between it and its bearer; and when the girdle is worn out a ceremony is necessary before it can be replaced. That golden ornaments have a magic power (an idea already alluded to) is shown by the formula employed at the wedding ceremony (Gobhila GS. [GGS.] 2. 2. 14; Khādira GS. 1. 3. 27; Mantra Brāhmaṇa, 1. 1. 8; cf. 1. 3. 8-11, 'Auspicious ornaments this woman wears'); and by the direction that a woman must wear them at the times when she is peculiarly exposed to the attacks of demons, thus during the three nights after her wedding (HGS. 1. 23. 10), and after her courses (*ib.* 1. 24. 8)—times when for the same reason chastity is prescribed. In line with this is the wearing of gold ornaments at the *sīmantonnaya* (the parting of the hair of a pregnant woman to secure easy child-birth), prescribed by HGS. 2. 1. 3, and permitted by Śaṅkhāyana GS. [SGS.] 1. 22. 17; and the direction, in GGS. 2. 10. 7, HGS. 1. 1. 7, to deck the youth with golden ornaments before his initiation, religious ceremonies being of a peculiar magical and *ipso facto* dangerous potency. Compare also the tying on of an ornament with the formula prescribed in Manava GS. 1. 9. 24, as part of the *arghya*-ceremony (reception of a guest).

In addition to these, there are a number of more special cases. At the wedding ceremony the bridegroom gives to the bride a porcupine quill and a string twisted of three threads; her relatives tie on her a red and black woollen or linen cord with three gems, and the bridegroom *madhūka*-flowers (word-symbolism); cf. SGS. 1. 12. 6, 8, 9. According to the same Sūtra (1. 22. 8-10), the father at the *sīmantonnaya* ties to the mother's neck, with a string twisted from three threads, three unripe fruits of an *udumbara*-tree; cf. Pāraskara GS. 1. 15. 6; GGS. 2. 7. 1, and the similar proceedings at the *puṁsavana* (ceremony to secure the birth of a male child), MGS. 1. 16. At the *jātakarman*, (ceremony on the birth of a child) SGS. 1. 24. 11-14 directs that a piece of gold be bound with a hemp string to the child's right hand. There it remains during the time of the mother's impurity, after which it is given to the Brahman, or may be retained by the father. The intention is evidently to furnish the child with a means of defence against the demons supposed to be hovering about the mother at that time.

At the *samāvartana* (the ceremony at the close of his study, when the pupil is about to leave his teacher's house) various amulets are employed. The use of earrings is clearly attested; jewellery, gold, or an amulet made of a perforated piece of sandal wood or *badarī*-wood overlaid with gold is used, or an amulet of this wood in conjunction with another amulet of gold; cf. for details Āśvalāyana GS. 3. 8. 10, 21; SGS. 3. 1. 7; PGS. 2. 6. 24, 26; HGS. 1. 10. 6–11. 3; Āpastambīya GS. 5. 12. 8 ff.; MGS. 1. 2. 14. Finally, GGS. 3. 8. 6, directs that after the *pṛṣātaka* the sacrificer and his family should tie on amulets of lac together with all sorts of herbs; and Āp. GS. 3. 9. 5–7, has a ceremony of a highly magic flavour, in which a wife binds to her hands the root of a *pāṭā*-plant (*Clypea hernandifolia*) in such a way that her husband cannot see it and then embraces him, her purpose being to make him subject to her. The unpublished Bāudhāyana GS. is said to make frequent mention of amulets.

Among later texts the Adbhuta Brāhmaṇa, 2. 6, includes in its list of portents the breaking of an amulet. The Sāmavidhāna Brāhmaṇa also prescribes a number of amulets, and the method of their application is a complicated series of ceremonies, practically identical in all cases, which constitute a technique as characteristic of this school as the ceremonies previously described are of the Atharvan. The performer fasts for three days, selected in such a way that the beginning of the ceremony itself shall fall on an auspicious day. He then gathers the material required, and on the same day makes of it a triple amulet, brings it to the fire, and makes an offering without a *mantra*; he then lays the amulet down near the fire and makes a thousand, or at least one hundred, oblations accompanied by the singing of a specified *sāman*. He then wears the amulet on his neck or head, and regularly sings a specified *sāman*.

The materials thus employed and the purposes accomplished are: *bilva*-wood to drive away demons (Svidh. 2. 2. 2); the fuel must be from a tree that was struck by lightning, and the butter for the oblations from a white cow with a calf of the same colour; *Andropogon aciculatus* and *Sarpasugandhā* ('snake-perfume') to guard against snakes (2. 3. 3); white blooming *Solanum* to guard against danger from weapons (2. 3. 4); white blooming *Calatropis gigantea*; according to the *sāman* employed its wearer will be rich in food, will have food everywhere, will not die of thirst, will not die in water, will not have leprosy, or will not die of poison (2. 3. 5–10); violet-roots for success in debate (2. 7. 12); the first *udaṅga*-branch to get a hundred slaves (2. 8. 5); a ring of copper, silver, gold, or iron, to repel sorcery; in this case the ring must be worn on the right hand, and there is no prescription of a silent offering or the singing of the *sāman* afterwards (3. 5. 7). In one case the proceeding is somewhat elaborated. If the children of one's wife die young, the amulet is made from the sheaths of the buds of the *Ficus indica*. The amulet is treated as before, but the wife wears it in her girdle until she (shortly) bears a son, when it is put on his neck. The leavings of the butter of the oblations have been saved, are given to the child to eat, and are rubbed each day on all the openings of his body, the supply being renewed when necessary. The consequence is that the boy lives to be a hundred years old without suffering from the infirmities of old age (2. 2. 1).

ii. History of the amulet in India.—The material collected is sufficient to show that the wearing of amulets, a pre-historic custom, was practised familiarly and without disapproval among the adherents of all Vedic schools. How far their use is brought to the front, how far it is passed over in silence, depend chiefly upon the character and purpose of a text. Works dealing with the ritual of the great *Śrauta*-sacrifices naturally make but rare and incidental mention of them; hence to infer from the silence of the Rig-Veda that amulets were unknown at the time of the composition of its hymns would be to shut one's eyes to the one-sided nature of that collection. In the humbler *Gṛhya*-sacrifices amulets come more to the front, in spite of the fact that these, too, have lost much of their popular nature in coming under priestly control. Finally, as was to be expected, it is in the Atharva, that great document of the popular side of religion, whose aim is to secure the immediate fulfilment of each and every want, that we find the most abundant employment of amulets. Already in the hymns of the Atharvan we find the fundamental ideas connected with the amulet fully developed. Whether the ritual familiar to the authors of the hymns was identical with that known to us from the Kauśika we cannot fully determine (cf. Magic). But at the most we have between the Atharvan Saṁhitā and the Kauśika only new applications of old ideas, and perhaps an increasing complexity of ritual technique. It is a noteworthy fact that, in spite of the centuries between them, the Śāntikalpa in its manipulation of amulets is upon essentially the same basis as the Kauśika, thus showing the steadfastness of the tradition of the ritual when once established.

Literature.—There is no connected treatment of the subject, but incidental mention of it is made in the works on Vedic religion (wh. see), and especially in the works on the Atharva-Veda. Cf. also Magic [Vedic].

G. M. Bolling.

CHARTISM.—1. **Demands of the Chartists.**—The Chartist movement played the most important part in working-class annals between 1837 and 1842, and it did not finally leave the stage until 1848. Political reform was the direct object of the movement, but it was social in its origin and in its ultimate aims. The National Charter, drafted by Francis Place from materials supplied by William Lovett, embodied in the form of a bill the demand of its supporters. The six main points, none of them novel, were: (1) adult male suffrage, (2) vote by ballot, (3) annual parliaments, (4) abolition of the property qualification for members of the House of Commons, (5) payment of members, and (6) equal electoral districts.

2. **Origin in economic conditions of the time.**—Driving power for agitation was found in the economic conditions of the time, which occasioned among the working classes a sullen discontent with their lot. Wide-spread commercial and industrial depression marked the period 1837–42, in which are recorded two of the leanest harvests of the century, and a severe financial crisis. A vast amount of speculation in railways, mines, canals, and joint-stock banks, together with an unchecked expansion of credit, had characterized the prosperous years 1833–36. The bad harvest of 1837, causing a large export of gold in payment for imported wheat, combined with calls for gold from America and the Continent, shook the unwieldy credit superstructure, and precipitated a crisis which almost ruined the Bank of England, and forced seventy-three joint-stock banks to stop payment. Paralysis of enterprise naturally followed the crash, and the stagnation of business resulted in a large amount of unemployment. In those days anticipation of demand in the ever-widening market for which Great Britain produced was almost impossible. Convulsive fluctuations in commerce were common, and, while this ebb and flow of trade made the lot of the worker unstable, 'The huge demon of Mechanism smokes and thunders . . .

at every change of shape oversetting whole multitudes of workmen . . . hurling them asunder, this way and that . . . so that the wisest no longer knows his whereabout' (Carlyle, 'Chartism,' in vol. iv. of *Miscellaneous Essays*, 1872 ed. p. 130). Adam Smith's statement, that man is of all kinds of baggage the most difficult to transport, and that labour is of all commodities the most immobile, was eminently true of this period. Lack of power to change not only geographical position but also occupation, was a root-cause of much of the suffering of the time. The quality of adaptability, upon which modern thinkers lay emphasis, was rare. Custom bound men in fetters, and hindered their re-absorption into new callings. Moreover, there was a supreme lack of organization in the labour market. The Poor Law of 1834 was an added grievance. Underlying this Act was the principle of deterrence, that the position of those relieved should be less eligible than that of the lowest class of independent labourers, and that the reality of the distress of each applicant for relief should be proved by the workhouse test. 'Heretical and damnable as a whole truth,' says Carlyle of the principle of the new Poor Law, 'it is orthodox and laudable as a *half*-truth' (*ib.* p. 121). It was too much to expect that the operative classes should realize how necessary a drastic reform had been. Irish agricultural distress accentuated the evils of the time, by flooding the English casual labour market with men accustomed to a low standard of life; and a heavy corn duty, founded upon the obsolete maxim that 'England should live of her own,' made even bread scarce. Chartism was in part the expression of working-class dissatisfaction with these conditions.

3. Connexion between Chartism and Owenite Communism.—The wide-spread belief in political reform as a remedy for all social ills secured a large number of adherents for the Charter, but Robert Owen's gospel of social regeneration was perhaps equally responsible for the Chartist movement. Owen had preached the 'New Moral World,' and had enlisted the Trade Unions and other labour forces of the country to bring it about. It was to have been a kind of Communism. When practical steps were taken, however, failure succeeded failure. The general strike could not be carried out. It was then generally believed that the only possible engine wherewith to introduce the new moral world was the Government. But the working classes had little control over the Government; hence the demand for the reforms tabulated in the six points of the Charter to give them this control. Their thoughts naturally turned to political agitation after the Reform movement of the early 'Thirties.' Intermixed with the idealism of Owen's system were certain economic beliefs, such as the right of the manual worker to the whole produce of labour, which was popularly expressed in the following lines:

> 'Wages should form the price of goods,
> Yes, wages should be all;
> Then we who work to make the goods
> Should justly have them all.
> But if the price be made of rent,
> Tithes, taxes, profits all,
> Then we who work to make the goods
> Shall have—just none at all.'

Generally speaking, however, the Chartist leaders had no clear conception of what they wanted ultimately. Most were feeling their way to some new industrial organization; they were 'humanitarians, educationalists, moralists, socialists, dreamers after a new heaven and earth.'

4. Organization and tactics of the Chartists. The years 1836-39 saw the formation of the Working Men's Association of London (in 1836), the Birmingham Political Union, and the Unions of the North. The first was moderate and educational in its aims; the others spent much of their energies in denouncing machinery and the Poor Law. In 1838, O'Connell, the Radical member, moved an amendment to the Address, expressing a desire for further political reform—a desire echoed by all classes who had been disappointed in 1832. Lord John Russell's declaration against any further political change, supported by Sir Robert Peel on behalf of the Opposition, brought into line the organizations mentioned above. A National Convention was then formed to secure the adoption of the measures embodied in the Charter. Charter Unions sprang up, especially in the North, with amazing rapidity. Such masses of men had never rallied round any cause since the days of the 'Grand National' Trade Union. Among the leaders of the movement were Lovett, Feargus O'Connor, Bronterre O'Brien, Hetherington, Cobbett, and Vincent. Numerous papers came into existence for propaganda work: Hetherington's *London Dispatch*, the moral force organ, representative of the London Working Men's Association; O'Connor's *Northern Star*, the physical force organ, representative of the spirit of the Northern Unions; Bronterre O'Brien's *Operative*; Cobbett's *Champion*; and others. The method of monster demonstrations was used with effect in the great industrial centres, notably in Glasgow, Newcastle, and Manchester. Dissension among the leaders—eventually a continual source of weakness to the movement—soon broke out. The chief subject in dispute was the nature of the means to be employed for the attainment of the common object. Lovett, supported by the Working Men's Association, was in favour of moral suasion only; O'Connor, with the Northern Unions, was in favour of menaces and, if necessary, physical force. The Convention decided to submit the following five methods to the Branch Unions for consideration: (1) a run on the banks for gold, (2) abstinence from all excisable liquors, (3) exclusive dealing, (4) arming, and (5) universal cessation of labour (the general strike). No agreement was reached; but the repressive Government policy of 1839-42, seen in the long list of prosecutions for sedition, tended to throw the movement into the hands of O'Connor and the extremists. Violent strikes and rioting fill the records of those three years, beginning with the Welsh rising in 1839, and culminating in the Lancashire and Midland strikes of 1842, which almost became political rebellions.

5. Later course of the movement and its decline.—From 1842 Chartism steadily lost its importance. The improvement in economic conditions turned the working classes to objects more directly fruitful. The Co-operative movement sprang up anew, and Trade Unions with limited trade programmes won back the allegiance of the operatives. Industrial diplomacy and associated effort, aimed at immediate practical ends, gradually took the place of a class movement inspired by vague social aspirations. In 1848, events in Paris seemed to revive for a brief period the waning power of Chartism; but the failure of the monster meeting of 10th April, and the exposure of exaggeration as regards the numbers of the Chartists and their earnestness, combined with lack of political talent among its leaders, soon brought the agitation to an end. Two points only need to be noted in the years 1842-48. The one is O'Connor's land bubble, or, under its formal title, the National Chartist Co-operative Land Society, founded in 1843. O'Connor, or the 'Pauper's Bailiff,' as he called himself, ran this scheme in competition with the Charter as a means of social regeneration. His plan involved, among other things, placing town-bred men upon estates almost wholly bought with borrowed capital, and

trusting to their uniform success to pay off interest and wipe out the debt. So futile a proposal deceived few, but it undermined O'Connor's influence. The other point to note is the vain struggle of the leaders in 1844–45 against the growing ascendancy of Cobden and Bright over working-class opinion.

Viewed as an episode in the history of the democracy, the Chartist movement shows an enlargement of the social aspirations of the working classes, but no progress in the methods adopted to achieve their ends. 'Made respectable by sincerity, devotion, and even heroism, in the rank and file,' it was, as it has been perhaps too severely urged, 'disgraced by the fustian of its orators and the political and economic quackery of its pretentious and incompetent leaders' (Webb, *History of Trade Unionism*, 1894, p. 158).

CHĀSĀ (Bengali *chāsh*, Hindī *chās*, 'tillage').—The chief cultivating caste of Orissa in the province of Bengal, to which, with a few emigrants into the Central Provinces, they are practically all confined. At the Census of 1901 they numbered 870,527. They are by religion orthodox Hindus, but they betray their non-Aryan origin by occasionally resorting to the old rite of burying instead of cremating the dead; and, to mark this lapse from the observances of Hinduism, their Brāhmans are not received on equal terms by castes which follow the same occupation, like the Khaṇḍait and Karaṇ. Most of them belong to the Vaiṣṇava sect.

CHASTITY (Introductory).—It is only within recent years—practically the last forty—that scientific attention has been brought to bear upon the subject of the nature and evolution of the sexual impulse in man. McLennan's study of *Primitive Marriage* (1865) marked an epoch in anthropological research, and the step then taken was the first indirect move towards a psychology of sex. Darwin's study of sexual selection directed attention to the biological aspects of the subject. Many converging lines of anthropological study have since made contribution; in particular, the close inquiry into the origin and evolution of the institution of marriage. Direct attacks upon the problem soon began. Psychologists and clinical students have made careful investigations into the phenomena of normal and abnormal sexual life among the civilized populations of the present day. Investigations have also been carried on among some of the uncivilized races still available for study. The result, considering the natural difficulties of the subject and the short space of time since investigation began, is remarkable. Though we are still far from definite knowledge on many points of importance, and though practical application of what is known is as yet impossible, we have reached a fairly clear understanding of some main aspects, and are able to formulate some probable principles.

The close connexion of the subject of sex with religion, both in social evolution and in individual psychology, renders the study of chastity an extremely important chapter in the past and future sociology of the race. Such an investigation brings us down to the biological foundations of individual and social life and morality. Roughly speaking, the sexual impulse is a psychical overgrowth from the nutritive, corresponding to it as physiological reproduction corresponds to physiological nutrition. Chastity, both as practice and as principle, is a biological and psychological moment, in phylogeny and ontogeny, of profound significance. In order to appreciate that significance in connexion with the evolution of religion, it is necessary (1) to investigate the various causes and conditions—biological, economic, and psychological—which have produced, generally, what is known as sexual morality, and, in particular, have elevated the regulation or control of the more or less reflex action of the reproductive centres into a religious virtue, a social ideal, and an individual duty; and (2) to trace the distribution of the habit of chastity, and the historical curve of its development, of course without prejudice to the question whether this or that opinion which has been held is physiologically sound.

The roots of civilized popular opinion, of theological, ethical, and ecclesiastical enactment, upon the questions of sexual life and habit are deep in primitive soil. But the popular and theological ideas which spring from this have been moulded by external conditions, continually, but slowly, changing with the evolution of society. At the same time there has been a decided evolution of the sexual impulse itself.

We merely note, without discussing, the connexion between the religious and the sexual impulse. This does not appear till puberty. Both impulses may be regarded as psychic 'irradiations,' which in adolescence tend to merge into one another, and to be confused. But there seems to be no reason for regarding the religious impulse of adolescence as a specialization of the sexual.[1] We know little about the religious impulse of primitive man; probably it was as slightly developed as the other.

That the sexual impulse is relatively weak among savages, as compared with civilized peoples, is proved by the difficulty often shown in attaining sexual excitement—a difficulty which frequently has to be overcome by the indirect erethism of saturnalian proceedings; it is proved also by the savage's relative lack of jealousy, which is correlated with the excessive system of checks upon intercourse, which generally prevails; and, lastly, by the undeveloped condition of the organs themselves.[2]

Havelock Ellis, who has brought out the point, notes that, while 'among the higher races in India the sexual instinct is very developed, and sexual intercourse has been cultivated as an art, perhaps more elaborately than anywhere else—here, however, we are far removed from primitive conditions—

farther to the east, as among the Cambodians, strict chastity seems to prevail; and if we cross the Himalayas to the north, we find ourselves among wild people to whom sexual licence is unknown.'

Even the negress is by no means very amorous. 'She is rather cold, and indifferent to the refinements of love.'[1] The notion that the negro race is peculiarly prone to sexual indulgence seems to be due partly to the expansive temperament of the race, and to the sexual character of many festivals—a fact which indicates the need of artificial excitement. Of the Malaysian races careful investigation has shown that the sexual impulse is 'only developed to a slight extent; they are not sensual. . . . The women also are not ardent.'[2] Sexual desire is said to be very moderate among the Andamanese. A high authority states that the North American race 'is less salacious than either the negro or white race.' 'Several of the virtues, and among them chastity, were more faithfully practised by the Indian race before the invasion from the East than these same virtues are practised by the white race of the present day.'[3] Another high authority, L. H. Morgan, had previously come to the same conclusion.

Such facts point to a relatively low development of nervous energy in the sexual centres—a condition correlated with the hardships of existence and the difficulty of obtaining food of good quality and regularly supplied. It may be conjectured that the establishment of cereal agriculture marked an upward step. In the struggle for existence a strong and well-developed sexual instinct has obviously an important survival value, and the higher races are undoubtedly to be credited with its possession.

The history of chastity is concerned with the various changes that occur between these two stages: of savage life where the sexual impulse is but slightly developed, and of high culture where it is relatively strong. The savage may be said to possess a 'natural chastity,' but this is not to be denied to the normal civilized man. In both cases there is the same physiological law of rhythm. The facts of this rhythm are parallel with that of nutrition; satisfaction is followed by a reaction during which the impulse and its organs, as it were, enjoy rest and recuperation; gradually the secretions are built up again, until at the top of the curve detumescence follows like an explosion of gathered forces. Moll and Havelock Ellis have worked out the mechanism of the sexual impulse into a process of tumescence and detumescence. Natural chastity is the psychical concomitant of the detumescent period; its first moment is the strong reaction which follows the explosion. This is the basis of proverbs such as *omne animal post coitum triste*, and should be the starting-point of all investigations into the psychology of sexual asceticism. In its various shades of meaning the virtue of chastity, whether it be that of the faithful wife, or the virginity of the immature or of the unmarried, or the temporary continence of warrior or medicine-man, or the more permanent attempts (sometimes becoming perversions) of priestly subjects—in all these applications its origin is the same, though cloaked and shrouded by varying conditions of life and culture, and by the shadows of superstition and mythological ethics.

Thus, when applied to the normal uncontaminated savage, such statements as that this tribe is licentious, and that is chaste, are meaningless unless we know the details, and, in particular, the external conditions. The old travellers' tales of savage lust and licentiousness are as far from the truth as philosophical encomiums of savage morality and paradisaical innocence. Other things being equal, the savage regards the satisfaction of the sexual instinct exactly as he regards the satisfaction of hunger and thirst.[4] The only control, apart from artificial laws and customs, is physiological, and this he unconsciously obeys. Consequently, there is nothing 'vicious' about his sexual habits. If he has no ideal of chastity, neither has he any perversion to unchastity. The terms as yet have no application in his life.

'It is not difficult to account for the belief, widely spread during the nineteenth century, in the unbridled licentiousness of savages. In the first place, the doctrine of evolution inevitably created a prejudice in favour of such a view. It was assumed that modesty, chastity, and restraint were the fine and ultimate flowers of moral development; therefore at the beginnings of civilization we must needs expect to find the opposite of these things. Apart, however, from any mere prejudice of this kind, a superficial observation of the actual facts necessarily led to much misunderstanding. Just as the nakedness of many savage peoples led to the belief that they were lacking in modesty . . . so the absence of our European rules of sexual behaviour among savages led to the conclusion that they were abandoned to debauchery. The wide-spread custom of lending the wife under certain circumstances was especially regarded as indicating gross licentiousness. Moreover, even when intercourse was found to be free before marriage, scarcely any investigator sought to ascertain what amount of sexual intercourse this freedom involved. . . . Again, it often happened that no clear distinction was made between peoples contaminated by association with civilization, and peoples not so contaminated. For instance, when prostitution is attributed to a savage people, we must almost invariably suppose either that a mistake has been made, or that the people in question have been degraded by intercourse with white peoples, for among unspoilt savages no custom that can properly be called prostitution prevails. . . . It has been seriously maintained that the chastity of savages, so far as it exists at all, is due to European civilization. . . . There is ample evidence from various parts of the world to show that this is by no means the rule. And, indeed, it may be said—with no disregard of the energy and sincerity of missionary efforts—that it could not be so. A new system of beliefs and practices, however excellent it may be in itself, can never possess the same stringent and unquestionable force as the system in which an individual and his ancestors have always lived, and which they have never doubted the validity of. . . . This dangerously unsettling process has been applied by missionaries on a wholesale scale to races which in some respects are often little more than children. When, therefore, we are considering the chastity of savages, we must not take into account those peoples which have been brought into close contact with Europeans.'[1]

Westermarck collected evidence (on which Ellis founds in the above summary) to show that 'the wantonness of savages' is often due to contact with Europeans; for instance, among the Eskimos, Indians of California, British Columbia, Vancouver and Queen Charlotte Islands, in Patagonia, Sandwich Islands, Ponapé, Tana, Samoa, Tahiti, Australia, and Madagascar.[2] He also concludes that 'irregular connexions between the sexes have on the whole exhibited a tendency to increase along with the progress of civilization.'[3] The analogy of domestic animals bears this out.

'In our domestic animals generally, which live under what may be called civilized conditions, the sexual system and the sexual needs are more developed than in the wild species most closely related to them.'[4] 'The organs which in the feral state are continually exercised in a severe struggle for existence, do not under domestication compete so closely with one another for the less needed nutriment. Hence organs, like the reproductive glands, which are not so directly implicated in self-preservation, are able to avail themselves of more food.'[5]

Heape suggests that the great reproductive power and sexual proclivities of rats and mice are 'due to the advantages derived from their intimate relations with the luxuries of civilization. He also concludes that 'it would seem highly probable that the reproductive power of man has increased with civilization, precisely as it may be increased in the lower animals by domestication; that the effect of a regular supply of good food, together with all the other stimulating factors available and exercised in modern civilized communities, has resulted in such great activity of the generative organs, and so great an increase in the supply of the reproductive elements, that conception in the healthy human female may be said to be possible almost at any time during the reproductive period.'[6]

Sexual periodicity forms a natural foundation for the development, by emphasis, of the resting period into an absolute abstinence and of the functional into an orgiastic explosion. This emphasized rhythm is analogous to the phenomena of rut. 'We are almost compelled,' says Westermarck, 'to assume that the pairing time of our

earliest human or semi-human ancestors was restricted to a certain season of the year.'[1] The Indians of California 'have their rutting seasons as regularly as have the deer, the elk, the antelope, or any other animals.'[2] Westermarck concludes that the fact of 'the sexual instinct increasing at the end of spring, or rather at the beginning of summer,' was not due either to abundance or lack of food, or to an increase of the sun's heat, and must therefore be regarded as a survival factor, the result of natural selection.[3] Saturnalia and orgiastic festivals, which form so conspicuous a feature of savage life, are not to be considered survivals of a primitive pairing season. Survivals of this kind must involve physiological necessity. They coincide with periods of plenty, and are, in their lowest terms, expressions of the natural impulse towards merry-making and nervous ebullition generally. In the circumstances the 'primitive burst' is inevitably an occasion for a general explosion of the sexual centres. Thus we have a cultural, as well as a physiological, rhythm of periodicity. The difficulty experienced by the savage in attaining tumescence, except under specially stimulating circumstances, is overcome by these so-called orgies, which also frequently have the secondary (and, often, the primary) intention of magical processes for the promotion of the fertility of the crops. The Marquesans are instanced by Foley to show the difficulty of erethism except at special seasons[4]—a case which is typical of the savage generally. The manifestations of the impulse, when they do appear, are excessive, just as the irradiation during the rest of the function is deficient.

'It is largely the occurrence of these violent occasional outbursts of the sexual instinct—during which the organic impulse to tumescence becomes so powerful that external stimuli are no longer necessary—that has led to the belief in the peculiar strength of the impulse in savages.'[5]

Man's later development owes as much to these 'bursts' as to the periods of natural chastity; the one process was exercise of the function, with all its psychical ramifications, the other was control. The service rendered by artificial chastity to civilization is to strengthen the function by self-control; this is the biological view of the matter, the premiss being that high development of such a function is of the greatest survival value.

The way in which custom, variously originating, comes across the natural sexual life, may be illustrated by sketching the latter where it still occurs. This, with not more than two exceptions, which themselves are not absolute, is found only among the unmarried. It is not universal even in this secluded sphere—a fact which shows that marriage-law soon extends its range to the ante-nuptial period.

In British Central Africa, 'before a girl is become a woman (that is to say, before she is able to conceive) it is a matter of absolute indifference what she does, and scarcely any girl remains a virgin after about five years of age.'[6] Among the Congo tribes sexual indulgence in children is not checked.[7] No disgrace is attached by Kafirs to intercourse by the unmarried.[8] In the Marshall Islands intercourse is free until marriage.[9] Maori girls 'as a general rule had great licence in the way of lovers. I don't think the young woman knew when she *was* a virgin, for she had love-affairs with the boys from her cradle. . . . When she married it became very different; she was then *tapu* to her husband.'[10] Boys and girls among the Cheremiss have complete freedom of intercourse.[11] In Indonesia this freedom is very marked, and begins at the earliest age possible before puberty.[12] Among the Nagas 'chastity begins with marriage.'[1] Other cases are the Philippines and the Hovas.[2] The Yakuts see nothing wrong in such licence, provided that no one suffers material loss by it.[3]

This, of course, is the point of origin for customs of repression leading to chastity; three types of this are more or less universal, viz. loss of virginity in purchasable daughters, infringement of the husband's proprietary rights in a wife, and the 'injury,' more or less mysterious, in its origin and content, resulting from intercourse between members of the same family-circle—mother and son, brother and sister. Before passing to the habits of chastity imposed in these and related circumstances, it is worth remark that among people like the Indonesians, where free intercourse is allowed to children before conception is possible, masturbation, so prevalent in moralized civilization, is conspicuous by its absence.

Chastity after puberty but before marriage is, on the whole, more prevalent in the lower races than in modern civilization, for reasons which we shall shortly discuss. But chastity (if the term be applicable to immaturity) before puberty, and therefore before conception is possible, seems to be practically unknown among savage and barbarian peoples, except where infant betrothal and marriage have been introduced. Intercourse at this age, possible as it is, and biologically natural, is apparently regarded as innocent 'play' of the sexual instinct.

Thus, among the Valave of Madagascar, children have intercourse at a very early age, and their parents encourage this and take a pleasure in watching them.[4] Such precocious connexion has been noted among the Indonesians, the Maoris, and the Bahuana of the Congo.[5] It is said that among the first named it is not uncommon for brothers and sisters to have intercourse at five or six years of age.[6] In New Caledonia girls lose their virginity in playing about at a very early age.[7] In certain South Australian tribes it is said that girls are accustomed to intercourse from their eighth year.[8] On Talmit, one of the Marshall Islands, the practice begins 'with the first stirrings of nature before menstruation.'[9] Similar accounts are given of the Nubians, Masai, and Nandi,[10] and of British Central Africa generally. 'There is scarce a girl who remains a virgin after about five years of age.'[11] Much the same is the case with the Basutos and Baronga, the Bambala, the tribes of the Lower Congo, and the Mande of Bonduku.[12]

Sexual control, exerted by the society, commences with the establishment of puberty. Here a difficulty presents itself. Why was such control ever instituted? It could not have originated from any notion of the harmfulness of exercising the sexual function when near or at its complete development, for experience of this kind is inconceivable in a primitive state of society, and superstitions on the subject are necessarily results, not originally causes, of such control. It might be supposed that, the possibility of conception being now introduced, it was necessary to make rules for adolescents so as to prevent promiscuous births. But there is strong evidence to the effect that, when such rules were instituted, the knowledge that sexual intercourse is necessary for conception had not been attained. The Central Australians, who have such rules, do not connect the phenomena of intercourse and pregnancy. Nor can we eliminate from their original institution the sexual point of view. To some extent they are concerned with the 'making' of young men and their admission to the ranks of the adult, but sexual maturity is the mark and sign of this elevation. Another aspect

of these initiatory rites is education, including education in sexual matters. The fact that this is more complete and efficient in savage than in civilized societies does not necessarily involve the assumption that education was the primary object, any more than it involves degeneracy in the educational ideals of to-day. Yet we cannot doubt that the instinct, strongly developed in the savage parent, for the nurture of the young, which is the natural complement of the long childhood of the human individual, was soon extended even to this kind of instruction.

The possibility remains that the control over the sexual life of the pubescent youth of the community originated directly from the adult men, who wished to safeguard their own privileges as 'husbands.' A considerable portion of the moral law has had a similar origin in adult privilege, and not a few of the moral emotions and habits, such as unselfishness, have been learnt in the same way. The balance of evidence is against the view that the original or primitive marital state was promiscuity. The suggestion we have made coincides with such evidence. It also involves the assumption—*a priori* probable—that, at the remote period of the institution of this control, sexual capacity was coincident with the establishment of puberty. Biologically this was to be expected. Accordingly we must conclude that sexual intercourse before puberty was originally a physical impossibility. Precocious intercourse must then be ascribed to a development of the reproductive function due to improved conditions of life. In this connexion it is a significant fact that the Australian evidence as to premature coition is very doubtful, and applies only to the Southern tribes, which have been longest in contact with Europeans. Of its occurrence in the more isolated tribes there is no mention. Lastly, there is reason to suppose that the Australians represent a lower culture than the peoples, cited above, among whom it is prevalent.

'As regards savage and barbarous races of men, among whom the relations of the sexes under normal conditions take the form of marriage, nearly every individual strives to get married as soon as he or she reaches the age of puberty.'[1]

This statement of Westermarck may be received as embodying a general rule, with the proviso that the older males regulate the 'striving,' and that this 'striving' is usually confined to the male sex. Normally it is difficult for a young male to get married at once, and when he does succeed his first bride is rarely a young female. The old men exercise a monopoly in the matter of youthful brides. That puberty is originally regarded as the commencement of sexual capacity, as such, and at first without any idea of its being the commencement in the female of the child-bearing state, is shown by cases where the later development of precocious capacity is either ignored or forbidden. Observation would soon prove that child-bearing could not occur before maturity. Thus we find rules established to reinforce the original coincidence of puberty and capacity.

In the Pelew Islands sexual intercourse seems to be forbidden to girls until after the first menstruation.[2] A similar rule is found in Cambodia.[3] The Australian evidence seems to show that pre-pubertal intercourse did not exist.[4] The ceremonial perforation of the hymen common among the Central tribes is clearly a preparation for the sexual functions. Circumcision no doubt has a similar origin. Where the numerical proportions of the sexes are balanced, as among the Central Australians, such preparation of the female is coincident with allotment as a wife. It is thus both a puberty and a marriage ceremony. The general facts of puberty-customs show an artificial emphasizing of the sexual rhythm of rest and explosion. The Australian or South African boy during his initiation is, it goes without saying, chaste both by compulsion and by choice. So is it with girls. But the educative factor comes in at the end of the initiation, to coincide with the natural result of the period of rest of function. Immediately after circumcision a Ceramese boy must have intercourse with a girl.[1] In certain Central African tribes both boys and girls after initiation must as soon as possible have intercourse, the belief being that, if they do not, they will die.[2] Narrinyeri boys after the preliminary rites had complete licence.[3] After the seclusion of a Kafir girl at puberty she is allowed to cohabit with any one during the festivities which follow; Kafir boys after being circumcised may have connexion with any unmarried females they can persuade.[4] Similar practices are found on the Senegal and Congo.[5] As for theoretical education, Swahili girls at puberty are instructed in sexual knowledge; Apache girls in the duties of married life.[6] In Halmahera, boys are brought into a large shed in which are two tables, one for the men and one for the women, who must be separated while eating. An old man now rubs a piece of wood, which makes water red, into a vessel of water, imitating by his movements the act of coitus. This pantomime is gone through for each boy, whose name is called out by the officiator. The red water represents the blood which results from the perforation of the hymen. Then the faces and bodies of the boys are smeared with the red water, after which they go into the woods, and are supposed to promote their health by taking the sun.[7] In Ceram theory and practice are combined thus: the old woman who instructs the girls takes a leaf, which she solemnly perforates with her finger, by way of representing the perforation of the hymen. After the ceremony, the girl has full liberty of intercourse with men; in some villages the old men take the privilege to themselves.[8] It is important to observe that such intercourse is, as among Africans and Australians, a duty, rather than a privilege, of the newly initiated.

We now pass to a consideration of the prevalence and origin of post-pubertal and pre-nuptial chastity. Numerical and economic conditions necessarily render this interval between puberty and marriage the rule rather than the exception. Even where such conditions need not be regarded as imperative, the monopolizing instincts of the older men impose difficulties on immediate marriage. This may be regarded as the ultimate social or artificial reason both for the postponement of marriage and for the concomitant imposition of chastity during the interval.

In this connexion the theory of J. J. Atkinson may be cited. He suggests that the first step towards the regulation of the intercourse of the sexes, and therefore of marriage, was due to the jealousy of the old male, who was the autocrat of the small family group in some anthropoid genus. In order to secure his rights over all the females of the group, including his daughters, he expelled his sons when they arrived at puberty. Hence the law against incest between brothers and sisters, mothers and sons. The suggestion has the advantage of tracing to one common origin the inception of the family, of marriage-legislation, and of sexual morality generally. The prohibition of such unions, though a limitation of sexual freedom, hardly, however, comes under the category of chastity. Yet the origin of the law against incest is in some way, or at some stage, closely connected, as will be seen later, with general limitations of sexual freedom. One difficulty about this connexion, as also about Atkinson's hypothesis, is this—If the 'primal law' forbidding intercourse between brothers and sisters was inspired by proprietary or sexual jealousy on the part of the paterfamilias, why is it that in savage races, as we know them, adultery with a wife or allotted woman, when condemned, is condemned as an offence against property rather than as against morality or religion, while incest excites religious horror as a presumptuous infraction of a supernaturally moral fiat? This, for instance, is the case in Fiji, where the distinction is well marked. The mere fact of the greater antiquity

of this prohibition cannot be brought forward in explanation, as it implies the equal antiquity of a jealous protection of the original wife or wives. If we supposed that the patriarch was in the habit of casting off an old wife as soon as he had an adult daughter, the supposition goes too far; this kind of luxurious uxorial habit is not safely to be ascribed to savages, much less to a semi-human species. Nor, though there are some indications of a prolonged survival of the habit of father-daughter incest, can we ascribe the religious intensity of the law against brother-sister incest entirely to such ferocity of the instinct for a youthful bride, not to mention any instinct for filial intercourse, without further evidence of their existence, prevalence, and strength.

Atkinson's hypothesis, however, hardly overstates the control which may be exercised in early communities by the old over the young. The superimposing of various emotional reactions from such control will concern us later. Here we may illustrate the way in which pre-nuptial chastity shows itself as a social fact, or rather desideratum.

The sexual morality of youth among the Tasmanians was of a high standard. 'The young men and lads moved early from the camp in the morning so as not to interfere with female movements in rising. Unmarried men never wandered in the bush with women; if meeting a party of the other sex, native politeness required that they turned and went another way.'[1] In Australia we find that among the Lower Darling natives, 'laws were strict, especially those regarding young men and young women. It was almost death to a young lad or man who had sexual intercourse till married.'[2] The laws of New South Wales were also strict: 'no conversation is allowed between the single men and the girls or the married women. . . . Infractions of these and other laws were visited either by punishment by any aggrieved member of the tribe, or by the delinquent having to purge himself of his crime by standing up protected simply by his shield or a waddy, while five or six warriors threw from a comparatively short distance several spears at him.'[3] In Western Victoria 'illegitimacy is rare, and is looked upon with such abhorrence that the mother is always severely beaten by her relatives, and sometimes put to death and burned. . . . The father of the child is also punished with the greatest severity, and occasionally killed.'[4] In the Central tribes no man may go near the *erlukwirra* (women's camp); and no woman may approach the *ungunja* (men's camp).[5] In Nias both seducer and seduced were put to death.[6] Among certain of the Sea Dayaks an unmarried girl with child was 'offensive to the superior powers.' The guilty lovers were fined.[7] Pre-nuptial intercourse was forbidden by the Hill Dayaks.[8] In some parts of the Philippines chastity was honoured, 'not only among the women but also among the young girls, and is protected by very severe laws.'[9] New Guinea girls are chaste.[10] In Melanesia 'there was by no means that insensibility in regard to female virtue with which the natives are so commonly charged.'[11] In Fiji boys were not allowed to approach women until they were eighteen years of age.[12] In Samoa chiefs' daughters at least prided themselves on their chastity, while intercourse with men of their own people was forbidden to ordinary girls.[13] The women of the Loyalty Island Uea were 'strictly chaste before marriage, and faithful wives afterwards.'[14] Among the Leh-tas of Burma the unmarried of each sex sleep in separate dormitories, and, 'when they may have occasion to pass each other, avert their gaze, so that they may not see each other's faces.'[15] In Cambodia girls are carefully secluded; 'the stringency of custom prevents the intercourse of the young. Accordingly the rôle of village Don Juan is scarcely possible.'[16] The humble Veddas of Ceylon and the Andaman Islanders valued chastity in the unmarried woman.[17] The Bodos and Dhimals of India value chastity in married and unmarried men and women alike.[18] Both Circassians and South Slavonians sold or punished severely erring daughters. Among the latter the girl's father had the right of slaying the seducer.[1] The seducer among the Tungus was forced to purchase the girl or to submit to corporal chastisement.[2] The Turks of Central Asia have been said to be ignorant of fallen virtue in their unmarried girls.[3] The Thlinkets make the seducer pay the girl's parents a heavy compensation.[4] Among the Aleuts 'unmarried females who gave birth to illegitimate children were to be killed for shame, and hidden.'[5] Egede reported: 'During fifteen years that I lived in Greenland I did not hear of more than two or three young women who were gotten with child unmarried; because it is reckoned the greatest of infamies.'[6] The women of the Mandans, Nez Percés, and Apaches are said to have been remarkably chaste, and seduction was regarded with reprobation.[7] Similar accounts have been received of the Paraguay, Patagonian, British Columbia, Vancouver, and Queen Charlotte Indians.[8]

West African tribes punish seduction.[9] Among the Kafirs the father of a girl seduced may demand payment if she becomes pregnant; seduction alone involves a heavy fine among the Gaikas.[10] Chastity of girls and to some extent of boys was highly regarded by the Basutos and the Bakwains.[11] The Baziba are reported to punish pre-nuptial amours, if a child is born, by flinging the man and the woman into Lake Victoria.[12] The Bakoki banished the erring woman from home, and fined her seducer.[13] The Beni-Amer and Marea put him to death, together with the woman and her child.[14] The Beni-Mzab impose upon the man banishment and a fine.[15] The punishment for seduction among the Takue is the same as for murder.[16] Mother and child are put to death by the Kabyles.[17]

The large majority of savage and barbarous peoples show particular care in separating the unmarried in the matter of sleeping-quarters. A constant source of this precaution is the horror of brother-sister incest. Many peoples have developed a system of dormitories for the unmarried men; some few employ them for the unmarried women also.[18]

Westermarck, on whose collections the above list is based, rather understates the case when he says: 'Yet, however commonly chastity is disregarded in the savage world, we must not suppose that such disregard is anything like a universal characteristic of the lower races.'[19]

Ignoring those peoples who allow pre-pubertal intercourse, and eliminating those with whom pre-nuptial intercourse is a preliminary to marriage, the seducer marrying the girl if she prove with child, and those who allow, in the latter connexion, a more or less free trial of mates, the balance is in favour of the conclusion that the majority of savage and barbarous peoples emphasize pre-nuptial chastity as an ideal, and attempt, with more or less success, to impose it in practice. The first efficient cause seems to be the monopolizing and jealous attitude of the older men. Secondary reasons seem to be the economic disturbance produced by childbirth, when no bread-winner for the new family has been formally appointed. To allow preliminary intercourse, with the proviso that marriage shall follow if a child is born, was a dangerous concession. Later, when fathers and brothers found that daughters and sisters possessed exchange-value, seduction was still more emphasized as a tort against property, on the assumption, chiefly, that virginity in a bride, no less than absence of encumbrances in the form of children, was an important asset. Pre-nuptial chastity in

women thus come to coincide for its principle with the 'chastity' or fidelity of the wife.

Before discussing this latter form of chastity, we may sketch the influence of the preference for virginity. Chastity *per se*, as a jewel of price, 'is not understood. An unmarried girl is expected to be chaste because virginity possesses a marketable value, and were she to be unchaste her parents would receive little and perhaps no head-money for her.'[1] This account is typical of such cases. Westermarck traces such proprietary emotion further back to a psychical or rather biological origin.

'If marriage, as I am inclined to suppose, is based on an instinct derived from some ape-like progenitor, it would from the beginning be regarded as the natural form of sexual intercourse in the human race, whilst other more transitory connexions would appear abnormal and consequently be disapproved of. I am not certain whether some feeling of this sort, however vague, is not still very general in the race. But it has been more or less, or almost totally, suppressed by social conditions which make it in most cases impossible for men to marry at the first outbreak of the sexual passion. We have thus to seek for some other explanation of the severe censure passed on pre-nuptial connexions.' This, he concludes, is 'chiefly due to the preference which a man gives to a virgin bride.' 'Such a preference is a fact of very common occurrence.'[2]

The proprietary emotion which insists on chastity in a daughter or sister is thus a reaction to the biological preference of the bridegroom for virginity. Such preference is proved for the Ahts, Chippewas, Thlinkets, Chicchimecs, Nicaraguans, and Aztecs, Samoa,[3] parts of New Guinea and Indonesia, the Rendile of East Africa, the Sudan, Somalis, Togos, West Africa, Ondongas, Herero, Bayaka, Beni-Amer, Samoyeds, Chuwashes, Chulims, Circassia, Hebrews, and, not to mention higher cultures, Persia, and China.[4]

This preference, according to Westermarck, 'partly springs from a feeling akin to jealousy towards women who have had previous connexions with other men, partly from the warm response a man expects from a woman whose appetites he is the first to gratify, and largely from an instinctive appreciation of female coyness. Each sex is attracted by the distinctive characteristics of the opposite sex, and coyness is a female quality. In mankind, as among other mammals, the female requires to be courted, often endeavouring for a long time to escape from the male. Not only in civilized countries may courtship mean a prolonged making of love to the woman. Mariner's words with reference to the women of Tonga hold true of a great many, if not all, savage and barbarous races of men. "It must not be supposed," he says, "that these women are always easily won; the greatest attentions and most fervent solicitations are sometimes requisite, even though there be no other lover in the way." The marriage ceremonies of many peoples bear testimony to the same fact. . . . Where marriage is the customary form of sexual intercourse, pre-nuptial incontinence in a woman, as suggesting lack of coyness and modesty, is therefore apt to disgrace her. At the same time it is a disgrace to, and consequently an offence against, her family, especially where the ties of kinship are strong.' 'Marriage by purchase has thus raised the standard of female chastity, and also, to some extent, checked the incontinence of the men.'[5]

But, as showing how natural modesty may produce natural chastity, the Veddas may be cited. Among these low savages, girls are not purchased, yet they are protected 'with the keenest sense of honour.'[6] Here we may infer the presence of what may be called natural female chastity, coinciding with parental recognition of a right to immunity. We thus reach back to the ultimate biological fact, which holds good throughout the animal, and perhaps the whole organic, world, that the female period of sexual rest requires far more stimulus for its passage into tumescence than does the male. Hence the production, by means of sexual selection, of the stimulating colours and sounds possessed by the male, and exercised for the purpose of rousing and exciting the female. This difference is recognized in a crude unconscious way by the more or less universal imposition of greater penalties for unchastity upon the females. 'One law for men and another for women' is a position based on biological laws, though it has resulted in cruelty towards the female sex. Westermarck urges that 'to anybody who duly reflects upon the matter it is clear that the seducer does a wrong to the woman also; but I find no indication that this idea occurs at all to the savage mind.'[1]

Yet the idea is certainly latent, however far short of it are savage views.

'Thus,' continues Westermarck, 'the men, by demanding that the women whom they marry shall be virgins, indirectly give rise to the demand that they themselves shall abstain from certain forms of incontinence.' The seducer is no less guilty than the seduced, though 'his act is judged from a more limited point of view. It is chiefly, if not exclusively, regarded as an offence against the parents or family of the girl; chastity *per se* is hardly required of savage men.'

Not until a late stage of culture was the offspring considered.

'In judging of matters relating to sexual morality, men have generally made little use of their reason, and been guilty of much thoughtless cruelty. Although marriage has come into existence solely for the sake of the offspring, it rarely happens that in sexual relations much unselfish thought is bestowed upon unborn individuals. Legal provisions in favour of illegitimate children have made men somewhat more careful, for their own sake, but they have also nourished the idea that the responsibility of fatherhood may be bought off by the small sum the man has to pay for the support of his natural child. Custom or law may exempt him even from this duty. We are told that in Tahiti the father might kill a bastard child, but that, if he suffered it to live, he was *eo ipso* considered to be married to its mother. This custom, it would seem, is hardly more inhuman than the famous law according to which "la recherche de la paternité est interdite."'[2]

Aquinas held fornication to be a mortal sin, because it 'tends to the hurt of the life of the child who is to be born of such intercourse,' or because 'it is contrary to the good of the offspring.'[3]

'But this tender care for the welfare of illegitimate children seems strange when we consider the manner in which such children have been treated by the Roman Catholic Church herself. It is obvious that the extreme horror of fornication which is expressed in the Christian doctrine is in the main a result of the same ascetic principle which declared celibacy superior to marriage, and tolerated marriage only because it could not be suppressed.'[4]

We shall refer later to principles of asceticism. It may here be noted, in connexion with Christian ideas, that in the stories of supernatural birth, which Hartland has shown to be of world-wide distribution, the virginity of the mother is often emphasized. This is an indirect result of ignorance of the fact that pregnancy can be caused only by sexual intercourse. To this ignorance must be attributed the therapeutic practices, the puberty and marriage rites whose object is fecundation, together with

'the prohibitions at puberty and on other occasions, for the purpose of avoiding irregular fecundation; and lastly, with the positive beliefs current among various peoples as to the fecundation of certain of the lower animals and even of women by other than the natural means.'[5]

When brought into connexion with the regulation of female chastity proceeding from masculine monopoly and jealousy, and later from commercial interest, this idealization of virginity became an important lever. Thus, the biological passivity of woman, in itself a natural chastity, the evolutionary purpose of which was to ensure the acceptance of

a forceful and healthy male on the one hand,[1] and the complete production of tumescence in the female, a long-circuiting process due to the more complex sexual mechanism of that sex, on the other, was emphasized from several associated points of view. Lastly, as culture becomes more refined, the complex of ideas centring in female chastity is increased by the close association, original but enhanced by improved conditions,

'between the sexual impulse and a sentiment of affection which lasts long after the gratification of the bodily desire. We find the germ of this feeling in the abhorrence with which prostitution is regarded by savage tribes who have no objection to ordinary sexual intercourse previous to marriage, and in the distinction which among ourselves is drawn between the prostitute and the woman who yields to temptation because she loves. To indulge in mere sexual pleasure, unaccompanied by higher feelings, appears brutal and disgusting in the case of a man, and still more so in the case of a woman. After all, love is generally only an episode in a man's life, whereas for a woman it is the whole of her life.'[2]

An important factor must not be omitted here, namely, the parental impulse, which, as culture advances, binds husband and wife together in a tie, not merely parental, but mutually loyal and chaste. As the Latins put it, children are the 'pledges' of wifely chastity.

Returning to early stages, we notice that the causes to which chastity may be traced

'are frequently checked by circumstances operating in an opposite direction. Thus the preference which a man is naturally disposed to give to a virgin bride may be overcome by his desire for offspring, inducing him to marry a woman who has proved capable of gratifying this desire. It may also be ineffective for the simple reason that no virgin bride is to be found. Nothing has more generally prevented chastity from being recognized as a duty than social conditions promoting licentious habits. Even in savage society, where almost every man and every woman marry, and most of them marry early in life, there are always a great number of unmarried people of both sexes above the age of puberty; and, generally speaking, the number of the unmarried increases along with the progress of civilization. This state of things easily leads to incontinence in men and women; and, where such incontinence becomes habitual, it can hardly incur much censure. Again, where the general standard of female chastity is high, the standard of male chastity may nevertheless be the lowest possible. This is the case where there is a class of women who can no longer be dishonoured, because they have already been dishonoured, whose virtue is of no value either to themselves or their families, because they have lost their virtue, and who make incontinence their livelihood. Prostitution, being a safeguard of female chastity, has facilitated the enforcement of the rule which enjoins it as a duty, but at the same time it has increased the inequality of obligations imposed on men and women. It has begun to exercise this influence already at the lower stages of culture.'[3]

The problem presented to early races by economic conditions and by emotional prejudice, later races have been content to solve by prostitution. This is as far as solution has gone at the present day, unless we add the relative condonation of incontinence in unmarried men, and the complementary severity of condemnation of incontinence in unmarried women (a mere continuation of unnecessary injustice), and the indirect encouragement of masturbation and similar habits.

Lastly, with regard to precocious sexuality, a certain ideal seems to be unconsciously aimed at. This is the prolongation of the period of growth, the extension of the youth of the race. It has analogical confirmation in the generalization that the longer the youth of a species the higher is its organization. A statistical examination of the relation between enforced retardation of the sexual life and general growth is desirable. In this connexion there is a significant difference between the lower and the higher races: though up to puberty the savage child is as intelligent as the European, subsequently he 'runs to seed,' or rather 'to sex.'[4] The difference may be concerned with the higher opportunities enjoyed by European youth for developing the associational centres of the brain at a critical period.

Chastity in the wife is merely fidelity to the husband. Though there is no reason for supposing any absence of the strong feeling of connubial or sexual jealousy in the earliest men, such as would give countenance to an age of promiscuity in human marital history, yet, as Hartland has shown, the rise of father-right and the supersession of mother-right are to be traced to the operation, not of a recognition of paternity, but of the proprietary instinct or jealous sense of ownership in the husband—a sense often not easily separable from mere sexual jealousy, the early prevalence of which has been pointed out by Westermarck.

Examination of the lower races shows an interesting gradation in the strength of the social indignation vented upon sexual 'irregularity.' It is strongest against incest between brother and sister—a real 'horror,' which is extended by association to tribal brothers and sisters, often unrelated. It is still strong, but has lost its supernatural content, against pre-nuptial intercourse without the consent of father or brother, where it is a legal-moral emotion; it is least strong against adultery, and perhaps, though often ferocious in its expression (a re-inforcement of the Law of Battle), may be regarded as purely legal or proprietary. This gradation has maintained itself to some extent in civilization, in spite of attempts on the part of religions like Christianity to assign the strongest religious condemnation to adultery, and in spite of the gradual loss of any special emotion against incest, the loss of emotion being in proportion as the offence, though not altogether unknown, becomes less heard of. The practices, so common in early races, of lending the wife to a guest as a mark of hospitality, and of exchanging wives as a mark of confidence, neighbourliness, and social solidarity, are not survivals. They are simply expressions of the feeling of ownership. They serve to show how it is that religious indignation is rarely found against adultery, any more than against theft in general.

Jealousy, as conducing to wifely chastity, is a constant factor. Originally sexual, it is overlaid in early culture by the sense of ownership, and in the higher by the sense of honour. Its operation has been shown for the following peoples: Fuegians, Australians, Veddas, Aleuts, Thlinkets, Kutchin, Haidas, Tacullis, Crees, Californians, Moquis, Creeks, Arawaks, Peruvians, Botocudos, Coroados, Sandwich Islanders, Nukahivans, Tahitians, New Caledonians, Maoris, Pelew Islanders, Sumatrans, Indonesians, Samoyeds, Tatars, Koriaks, Beni-Mzab, Africans.[1] The laws against adultery and every analogical consideration continue to render such lists incomplete, and to assure us that such jealousy is universal in man, and has, with rare exceptions, as the Todas and Central Australians, always been so.

Fused with the sense of ownership—'the sense of ownership has been the seed-plot of jealousy'[2]—it is attested of such peoples as the Bahuana, Mayumbe, and the coast tribes of West Africa generally, the Shire Highlands, the Dinkas, Bullams, Bagoes and Timmanegs, Wayaos and Manganja, the Elema district of New Guinea, Marshall Islands, Fiji, Melanesia, Indonesia, Eskimos, Malagasy, Maoris, American Indians—to select only cases of particular interest.[3] Laws against adultery[4] are similarly found all over the world; there are, as in the other aspects of the subject, curious exceptions. Conjugal fidelity frequently depends on the wife's or the husband's will.[5] If the husband allows her to cohabit with

another man, her 'chastity' is intact. On the other hand, fidelity in the husband is far less generally found or insisted upon. There are, again, interesting exceptions. Christianity pressed the view that no distinction should be made between wife and husband. Yet in actual European practice the old prejudice, that adultery on the part of the husband is more venial than on the part of the wife, still subsists. The reasons for this one-sided view of marital chastity are simple. 'Adultery is regarded as an illegitimate appropriation of the exclusive claims which the husband has acquired by the purchase of his wife, as an offence against property.'[1] Manu puts it that 'seed must not be sown by any man on that which belongs to another.'[2] Further, the prevalence of the rule of chastity in widows shows how strong is the sense of ownership in the husband. Apart from general rules of chastity among mourners, the rule as affecting widows is obviously derived from the jealousy of proprietorship. In several races the widow has to die with her lord; more frequently she is forbidden to marry again, or until after a certain interval.

Widows remained single in Peru, and among the old Aryans. The 'bare mention of a second marriage for a Hindu woman would be considered the greatest insult'; and, if she married again, 'she would be hunted out of society, and no decent person would venture at any time to have the slightest intercourse with her.'[3] 'In Greece and Rome a widow's re-marriage was regarded as an insult to her former husband; and so it is still regarded among the Southern Slavs.'[4] Similar reports have been made of the natives of Rotumah, the Marquesans, Tatars, Iroquois, and Arabs.[5] Chickasa widows were forbidden to be unchaste for three years, on pain of incurring the penalties of adultery; Creek widows were similarly placed for four years.[6] 'As a faithful minister does not serve two lords, neither may a faithful woman marry a second husband,' is the Chinese dictum.[7] The early Christians regarded second marriages by either sex as a 'kind of fornication' or a 'specious adultery.'[8] Savages, lastly, hold that the soul of the wronged husband can return and punish the unfaithful wife.

A last mode of wifely chastity is that presented by one of the earliest of legal fictions—child-marriage (*q.v.*). It is an obvious method of obtaining a safe option, and is practised fairly generally, if we include infant-betrothal, over the world.

Hitherto we have observed two main sources of the practice and theory of chastity, the first being the physiological process following upon detumescence and preceding tumescence, the second being proprietary sexual jealousy. It is clear that in the first we have the possibilities of a natural chastity, in the second the possibilities of an artificial, conventional chastity. In the first, again, is to be found the primary and permanent source of chastity; whether the second is to be styled in any sense primary is mainly a verbal question. There is no doubt that traditional sexual morality has a two-fold foundation—proprietary jealousy, and a complex of emotions developing from the complex physiological and psychological processes which make up natural chastity.

'Our sexual morality,' says Ellis, 'is thus, in reality, a bastard born of the union of property-morality with primitive ascetic morality.' 'The economic element has given it a kind of stability.'[9]

The effects of jealousy, thus crystallizing into marriage-law and a tradition of conventional chastity, the complement of that law, supply a notable example of sexual selection. Further consideration of psycho-physical origins must be postponed till we have discussed the magical and religious uses and theories of chastity.

In the majority of these, throughout the lower culture, the end is secondary, derived, or diverted. Chastity is employed not as a natural self-control and regulation of the sexual impulse, but for a variety of ulterior objects. In the higher culture there also appears the idea of chastity as a good in itself. The theory of these secondary uses is multifarious; the same result is sometimes due to one, sometimes to another, given reason. These reasons, mythological as they are, sometimes get to the psychological root of the matter, but, as a rule, have only a fanciful connexion with the end proposed. Yet to a remarkable degree, at least in primitive sociology, these uses, whatever their popular explanations, harmonize with biological facts, and the value of the explanations consists in having assisted (secondarily, as expressive of practices otherwise originating) the plastic nervous organism of man towards self-control, intelligent living, and general individual and social efficiency. When either practice or explanation is carried on into unsuitable conditions, or is pressed too far by priestly exploitation or social inertia, the conventional chastity involved disintegrates. This process becomes continuous, leading, after many experiments, slowly but surely, to a scientific development of that primal natural chastity with which man's sexual history began.

The social psychology of uncivilized peoples regards continence, temporary chastity *ad hoc*, as a sort of universal condition and infallible nostrum for all important undertakings and critical junctures.

In Noessa Laut it is believed that invulnerability in war results from sexual abstinence.[1] The Kei Islanders practise continence before war, and those who remain at home have to remain continent during its progress.[2] The Malays follow the same rule; it is believed that the bullets of those who break it lose their power. Similarly they have a seven-days' tabu of continence during the fishing season.[3] In Sarawak it is held that incontinence on the part of wives, while the men are collecting camphor, causes the camphor to be spoilt.[4] The Halmaherese practise continence during war, believing that connexion with women is enervating.[5] Continence is imposed on those at home also by the Motumotu of New Guinea, during war, hunting, fishing, or travelling.[6] The Dakota who wishes to succeed in any enterprise purifies himself by fasting, bathing, and continence. He also tries to induce a vision. The process is particularly stringent when the enterprise is war. A young man's weapons may on no account be touched by a woman.[7] The Seminoles held that 'to sleep with women enervates and renders them unfit for warriors; men therefore hut seldom have their wives in the apartments where they lodge.'[8] In New Caledonia continence is 'meritorious'; it is strictly observed on all solemn occasions, especially during war.[9] The Fijians practised a sort of Theban comradeship-in-arms, and abstinence from women was a rule of warriors.[10] Celibacy for warriors was instituted by Tchaka among the Zulus, upon an already existing custom of continence.[11] The Maoris were 'tabued an inch thick' during war; continence was a part of the deposit.[12] Similarly the warriors of Israel were 'consecrated,' and therefore chaste.[13] The practice was used by the Arabs, and was not obsolete in the second century of Islâm.[14] The manslayer is generally isolated by tabu. After taking a head, the Dayak may have no intercourse with women.[15] Among the Pelewans, Marquesans, and Natchez, the warrior who has slain a foe must not approach his wife for three or ten days, or six months.[16] After the ceremonial eating of human flesh, this rule is observed for a year by the Kwakiutl of British Columbia.[17]

Cases have already been noted of the curious, but logical, notion that the continence of friends and relatives has merit and efficiency. Thus the Chitomé of the Congo makes his judicial circuit. During this all married people are obliged to be continent. The penalty for transgression is death. 'The belief is that by such continence they preserve the life of their common father.'[1] The women of Babar abstain from eating and intercourse while the men are at war.[2] Malagasy women must be chaste, or their men will be wounded.[3] Both the wife and sister of the Aleut are required to be chaste during the absence of the man.[4] In East Africa it is believed that the unfaithfulness of the wife, while the man is hunting elephants, gives the quarry power over him.[5]

Equally instructive as to the incidence of secondary reasons is the case of the Australian and Hebrew warrior whose continence was connected with fear 'lest the enemy should obtain the refuse of their persons, and thus be enabled to work their destruction by magic.'[6] A variety of origin must be admitted for the continence of mourning. In ancient India, China, British Columbia, North America generally, and Indonesia, the rule applies to relatives, widow or widower, and to those who have handled the corpse.[7] In such examples the biological analogy between nutrition and reproduction is reasserted, and we constantly find a close connexion in both theory and practice between abstinence from intercourse and abstinence from food. 'Fasting,' said St. Chrysostom (*2 Thess.*), 'is the beginning of chastity.' 'Through love of eating,' said Tertullian (*de Jejun.*), 'love of impurity finds passage.'

The physiological purpose of temporary control here suggested, namely, the production of functional vigour, is well illustrated by numerous practices in reference to the growth of vegetation, where the principle of sympathetic influence is, of course, involved. Yet the virtues of self-control in the subject himself are at times equally involved.

For instance, in Yucatan the manufacturers of the new idols had to fast and preserve their continence during the process.[8] During the planting of cotton the Mayas abstained from salt, pepper, and stimulants, and did not sleep with their wives; and in all their agriculture the principle was followed, in order that the night before sowing or planting they might 'indulge their passions' to the fullest extent. Officials were appointed to perform the sexual process at the moment when the seeds were placed in the ground.[9] Frazer gives many examples of this sympathetic coitus and this sympathetic chastity.[10] It is reported that the Nicaraguans, 'from the moment that they sowed the maize till the time that they reaped it, lived chastely, keeping apart from their wives. To-day it is said that the Kekchiz do the same for five days before sowing maize, the Lanquineros and Cajaboneros for thirteen days.'[11] In Melanesia and New Guinea the same practice is followed while the yams are being trained, or to produce a good crop of bananas.[12] In the Motu tribe a chief man becomes *helaga*, and lives apart from his wife, eating only certain kinds of food.[13] Also in New Guinea and in the Torres Straits, chastity is observed while the turtles are coupling; in the latter case it is believed that if unmarried persons are incontinent no turtle will be caught, as on the approach of a canoe the male turtle will separate from the female and the pair will dive in different directions.[14] Similarly illicit love is commonly supposed to spoil the fertility of Nature.[15] In Loango, Indonesia (Sumatra, Borneo, Halmahera, Ceram), and among the Karens this belief is held, with, no doubt, the obvious corollary.[16] Frazer suggests that the rule of continence, which is still imposed on strict Catholics during Lent, 'was in its origin intended, not so much to commemorate the sufferings of a dying God, as to foster the growth of the seed, which in the bleak days of early spring the husbandman commits, with anxious care and misgiving, to the bosom of the naked earth.'[17] He concludes that, 'if rude man identifies himself, in a manner, with Nature; if he fails to distinguish the impulses and processes in himself from the methods which Nature adopts to ensure the reproduction of plants and animals, he may jump to one of two conclusions. Either he may infer that by yielding to his appetite he will thereby assist in the multiplication of plants and animals; or he may imagine that the vigour which he refuses to expend in reproducing his own kind will form as it were a store of energy whereby other creatures, whether vegetable or animal, will somehow benefit in propagating their species.' If the savage 'resists on occasion the sexual instinct, it is from no high idealism, no ethereal aspiration after moral purity, but for the sake of some ulterior yet perfectly definite and concrete object, to gain which he is prepared to sacrifice the immediate gratification of his senses. . . . Perhaps the self-restraint which these and the like beliefs, vain and false as they are, have imposed on mankind, has not been without its utility in bracing and strengthening the breed.'[1]

To this account may be added the suggestion that such beliefs are the outcome of biological processes, and that, like them, they have a rhythmical opposition. The suggestion is borne out by the remarkable phenomena of saturnalian proceedings, so frequently an accompaniment of first-fruit or New Year celebrations. In these a period of continence precedes a culminating period of indulgence and debauchery.[2] The swing of impulse is here, so to say, a social concentration of the rhythm of natural chastity, which keeps the balance between control and expenditure, between retraction and detumescence.

The principle of this conservation of energy was, we said, applied all round the sphere of important procedure in early society. Thus the Redskin medicine-man prepares for his professional visits by continence, just as the warrior similarly prepares for war.[3] A variety of ends naturally induces a variety of reasons alleged, and in many cases it would be idle to question the reason given, or to trace it to any one source. For, as mythological science develops, any practice may be based on reasons which may be merely associational. Here convention has its opportunity. Thus, chastity seems in many cases to be practised for fear of infecting the partner with some particular virus. For example, those who have touched a corpse may have no intercourse with others.[4] In other cases it implies the principle that suffering or self-mortification is gratifying to supernatural beings. It may appease their anger, or excite their compassion.[5] When this point is reached, the way is clear for a complete theory of the absolute merit of chastity in and for itself. This theory has, however, as foundation, the very opposite notion to that of mortification, namely, the notion of the impurity or sinfulness of the sexual act. The origins of this notion will be considered later. Meanwhile we may observe that even in low cultures chastity *per se* at times is honoured. Thus, the people of Gilgit celebrate the ceremony of *Seelo-ai-Thali*, 'the seat of chastity,' in which extraordinary honours are paid to old women who have been chaste all their lives. It does not appear whether the chastity is marital or virginal. As at Dunmow, candidates are examined. The woman is placed on a stone, and an official addresses the judge on the case. The judge is a white she-goat. This gives the verdict; if it touches the seat of the candidate, she is declared to have been perpetually chaste. If the goat bleats and walks away, the candidate is rejected.[6] The Tahitians, again, held that, if a man refrained from all connexion with women for some months before his death, he would pass immediately into bliss without any purification.[7]

The difficulty of finding a reason for certain miscellaneous applications of chastity is not lessened by appealing to the 'danger' with which the savage invests the sexual act, or to the 'magical' powers of it. We require to know *why* it is 'magical,' and *how* the magic works. The difficulty, again, of investigating this question is increased by the vagueness of savage ideas on the subject. Yet, however vague they may be, they must have an origin which comes under the law of probability, and they must be ultimately based on

physiological phenomena. For the root of all human ideas, false or true, on the subject of sex, is, like that of the sexual impulse itself, the reproductive process.

The Masai, when making poison, isolates himself very strictly; in particular, he must sleep alone. 'The motive,' as Frazer points out, 'which induces the Masai poison-maker to keep aloof from his fellows is not any regard for them; far from it, what he fears is not that the poison would hurt them, but that they would hurt the poison.' This 'is the avowed belief of the Masai.' They also enjoin strict continence on the persons who brew honey-wine.

'A man and a woman are chosen to brew the honey-wine, and it is considered essential that both of them should be chaste for two days before they begin to brew and for the whole of the six days that the brewing lasts. A hut is set apart for them, and they occupy it till the wine is ready for drinking; but they are strictly forbidden to sleep together. . . . The Masai think that, if the couple were to break the rule of continence while the wine is brewing, not only would the wine be undrinkable, but the bees which made the honey would fly away.' Frazer adds: 'The savage attributes to the relations of the sexes with each other a certain mysterious influence, a magical virtue, which the civilized man has long ceased to associate with such processes, and which he finds it hard even in imagination to comprehend.' We must, he insists, allow for 'the element of superstition' in, for instance, marriage-customs. Some of such superstitions, 'incomprehensible though they may be to us, probably lie at the root of many customs which we still strictly observe without being able to assign any valid reason for doing so.'[1]

The case here discussed is typical. The mythology of social habit and religion is full of such notions, but the precise clue to the notion is generally lacking. The Masai can say what would happen in the event of unchastity, but cannot inform us, for he does not himself know, how or why. Yet, though such mythology is interesting, it is not the most important part of sociology, nor does it give us the actual or biological reasons for a practice. It only gives us the savage's vague mental reaction to a process which was instituted without his volition, and still more without his consciousness. It is legitimate to use the term 'instinct' of the habits which result from the correlation of structure and function, and we may therefore with more advantage speak of an *instinct* for chastity in such cases as the above, as we undoubtedly must in cases of natural chastity generally, where there is no ulterior end. The savage is not chaste, even for a special purpose, because the act of sex is 'mysterious' or 'magical'; he is chaste by an unreasoned instinct, which he explains as best he may, or not at all. That ignorance is the heart of the 'mystery.' It is only by taking into account this vagueness of mental realization that we can explain the saltation from animal-man, *homo alalus*, to superstitious man; nor can we otherwise explain the attitude of *l'homme moyen sensuel* in civilization to questions like that of chastity. For his attitude is as unreasonable as that of the Masai; the only 'mystery' about the object of his attention is his ignorance. The term 'mystery,' if applied at all, should be reserved for the unknowableness of ultimate facts.

Still less can we make the step from any primitive conception of 'magical virtue' or 'supernatural danger' to the Mazdæan or Christian theory of the 'sinfulness' of the sexual act, as a motive for chastity. Such a step is an illegitimate process. Still less again can we pass therefrom to the conception that such acts are 'impure,' as distinguished from the so-called 'uncleanness' of the tabu state.

The whole question involves the scientific aspect of chastity, no less than its religious application. The latter now falls to be considered before further discussion is held. In primitive society, chastity

[1] Frazer, *Totemism and Exogamy*, 1910, ii. 411.

forms part of the rules of isolation known as tabu; it is thus enjoined on solemn occasions and at critical junctures. Among the Dayaks 'personal tabu' is fasting and chastity. By this they think they disarm the evil spirits, who compassionate the humility and self-denial exhibited by the deprivation.[1] Whatever the origin of such practices, the transition from them to chastity as a condition of ritual and worship is obvious and direct. In Central America, candidates for the order of Tecuhtli observed, during initiation, both fasting and continence.[2] It may be taken as a universal rule that chastity is enforced upon adolescents during 'initiation' at puberty.[3] That this control is generally followed by intercourse shows not only that sexual education is one main purpose of these ceremonies, but that the rhythm of natural chastity—control as preparatory for exercise of function—is the deep-seated biological origin of pubertal ritual.[4] The young Brāhman, when he became in the ordinary course of his education a student of the Veda, took a vow of chastity.[5]

Passing to relations with the supernatural world, we find continence to be a part of the ceremonial purity necessary for such spiritual intercourse. A typical case is supplied by Mazdæism. The great business of life, according to Zarathushtra, is to avoid 'impurity,' by which is implied a physical state, the principle being that everything which goes out of the body is defiling.[6] In Islām strict continence is required on the pilgrimage to Mecca.[7] Similarly it was required of the Hebrew congregation during the theophany at Sinai,[8] and before entering the Temple.[9] Ancient India, Egypt, and Greece enforced the rule that the worshipper must abstain from women during and before worship.[10] In Christianity, continence was required as a preparation for both Baptism and the Eucharist.[11] It was further enjoined

'that no married persons should participate in any of the great festivals of the Church if the night before they had lain together; and in the 'Vision' of Alberic, dating from the twelfth century, a special place of torture, consisting of a lake of mingled lead, pitch, and resin, is represented as existing in hell for the punishment of married people who have had intercourse on Sundays, church festivals, or fast-days. They abstained from the marriage-bed at other times also, when they were disposed more freely to give themselves to prayer. Newly married couples were admonished to practise continence during the wedding day and the night following, out of reverence for the sacrament; and in some instances their abstinence lasted even for two or three days.'[12]

In support of the view that 'holiness is a delicate quality which is easily destroyed if anything polluting is brought into contact with the holy object or person,' Westermarck brings forward some important data from the life of the modern Moors. They believe that,

'if anybody who is sexually unclean enters a granary, the grain will lose its *baraka*, or holiness.' But the holiness reacts 'quite mechanically against pollution, to the destruction or discomfort of the polluted individual. All Moors are convinced that any one who in a state of sexual uncleanness would dare to visit a saint's tomb would be struck by the saint; but the Arabs of Dukkâla, in Southern Morocco, also believe that if an unclean person rides a horse some accident will happen to him on account of the *baraka* with which the horse is endowed. Again, 'an act generally regarded as sacred would, if performed by an unclean individual, lack that magic efficacy which would otherwise be ascribed to it. . . . The Moors say that a scribe is afraid of evil spirits only when he is sexually unclean, because then his reciting of passages of the Koran—the most powerful weapon against such spirits—would be of no avail.'[13]

Similarly Iamblichus states that 'the gods do not hear him who invokes them if he is impure

from venereal connexions.'[1] Tertullian recommends temporary abstinence as a means of adding efficacy to prayer.[2] Illicit love is frequently supposed to injure the growth of crops; sexual relations were supposed by the Efatese to be 'defiling,' and to destroy the 'sacredness' of 'sacred men.'[3] The Chibchas, and other peoples, held that the most acceptable sacrifice was a virgin who had had no intercourse with women.[4] Throughout folklore runs the idea that second-sight, and the vision of the supernatural, are especially, if not solely, the privilege of the virgin. Here may be noted also the practice of continence, analogous to and contemporary with that of fasting, as a means of inducing spiritual hallucination. Westermarck favours the explanation that pollution destroys holiness, but religious chastity is already more than half artificial; and, though we may trace it now to one, now to another, original source, and though in some cases its alleged reason is different from that given in others, we must regard it as a complex and self-subsisting institution, supported by inertia and by its general harmony with the social psychology of its environment. We certainly cannot pin it down to one definite pattern of origination.

The analogy between 'initiation' of youth at puberty and 'initiation' of priests is little more than verbal. Though religious prostitution has often been an institution, and priestesses, for instance, have practised physical chastity for the purpose of intercourse with the god, or abstention from secular in favour of priestly unions, and though, again, the feeling of control and power produced by continence plays its part in the production of spiritual insight, as in adolescence it is connected with ideal aspirations no less than with physical vigour,—we cannot assign generally the same reasons for chastity as a natural concomitant of puberty and for chastity as an artificial rule of the priesthood.

The ancient medicine-man more or less invariably submits to continence as a condition of his novitiate. The Marquesan candidate for the priesthood had to be chaste for some years beforehand.[5] The *skaga* of the Haidas recognizes his vocation by a tendency to dream and to see visions. He undergoes a severe training; eats little food, but many herbs, especially *moneses*; and refrains from sexual intercourse. At the end his mind is more or less deranged, but his social influence is secured.[6] Among the Tshi-peoples, candidates, whether men or women, are trained for two or three years; 'during this period of retirement and study, the novices must keep their bodies pure, and refrain from all commerce with the other sex.'[7]

Curiously enough, we often find, as if to confuse entirely all attempts at single-key explanation, cases where marital chastity only is required. The candidate for the shaman's office among the Huichols is required to be previously faithful to his wife for five years.[8] The high priest of the Hebrews was required to be 'chaste.' He married, but was forbidden to marry a harlot, a profane woman, or a divorced wife, or even a widow. 'Unchastity' in his daughter was punished by burning, for she had 'profaned' her father.[9] The 'dairy priest' of the Todas lives a celibate life, while among the neighbouring Kotas he is married, but at the great festival of *Kāmatarāya* he may have no intercourse for fear of pollution.[10] The priests of ancient Mexico, during the whole of their service, were maritally chaste; they even affected so much modesty and reserve that, when they met a woman, they fixed their eyes on the ground that they might not see her. Any incontinence amongst the priests was severely punished. The priest who, at Teohuacan, was convicted of having violated his chastity, was delivered up by the priests to the people, who at night killed him by the bastinado.[11] Burning or stoning was the penalty for incontinence by the unmarried priests of Nicaragua.[12] The same rule and penalty were observed in the case of Zapotec priests and the Mexican nuns. The Yucatecs had virgins dedicated to the service of Fire; those who violated their vow of chastity were shot to death with arrows. The priests of Tilantongo had their food prepared by women devoted to chastity. The pontiff of Yopaa, who was almost a rival of the Zapotec king, had to be 'a shining light of chastity' to the priests under him. Yet on one or two days in the year he became ceremonially drunk, and cohabited with the most beautiful of the virgins of the temple.[1] In ancient Anatolia the married priests during their 'course' separated from their wives.[2]

We have already overstepped the artificial line between temporary continence and perpetual abstinence in those dedicated to supernatural relations. That natural chastity (namely, the regulation of the sexual life by bringing both continence and expression under the will, and by emphasizing the former in proportion to the explosive nature of the latter) should be elevated into an art, however crudely and irrationally, is not surprising when once the differentiation of social functions has begun. Nor, again, can we wonder that it was most widely undertaken by, and has lasted longest among, the class which first showed a sensitive reaction to psycho-physical states—the professors of magic and religion. When once started as a habit in such a class, a variety of influences inevitably tended to convert such chastity into asexuality, and normal continence into abnormal abstinence. As Rohleder points out, strict abstinence is a physiological impossibility, and therefore has never existed except in the worst cases of anæsthesia, since it

'must involve abstinence, not merely from sexual intercourse, but from auto-erotic manifestations, from masturbation, from homosexual acts, from all sexually perverse practices. It must further involve a permanent abstention from indulgence in erotic imaginations and voluptuous reverie.'[3]

This very fact has, in a sense, made the attempt more enticing, and has produced phenomena which, as is clear from the history of chastity and celibacy in Christianity, constitute at once the tragedy and the romance of the 'spiritual life.' Ignorance of sexual physiology, and in particular of the slow and wide process of irradiation involved by tumescence, has also contributed in every age to conceal the hopelessness of the attempt to set up an asexual life. But, as was noted, the step towards making continence *ad hoc* a perpetual abstinence, an asexual institution, was inevitable. A host of sentiments combined to render abstinence, or celibacy, or other varieties of the institution, as meritorious in their sphere as female chastity was in a sphere so widely different in character and in origin. When chastity thus becomes a virtue, it has lost its meaning; it is no longer an extension, but a perversion of itself. In the one case, of women, it is not chastity, but either pre-nuptial virginity or marital fidelity that is honoured under the term; in the other case, of religious persons, it is, in the married, a combination of attempted anæsthesia and of marital fidelity; in the celibate, an attempted anæsthesia and abstinence, marked either by lapses or perversions—in particular, erotic imaginings diverted to supernatural relations.

Westermarck has reviewed the occurrence of priestly continence as an institution and a professional virtue. To sketch the history of priestly celibacy, or the phenomena of the sexual life of monks and nuns, is impossible here. Some comparative examples and a brief discussion of the Christian institution may suffice for the illustration of the idea of chastity. Professional abstinence has never been more ferociously exploited than in the ancient civilizations of Central America. Some cases have already been adduced.

The temple-women of Mexico were punished for unchastity with death.[1] The high priest of Ichcatlan, if he broke his vow, was cut in pieces, and the limbs handed to his successor as a visible warning.[2] In Bogota and Guatemala the priests were celibate.[3] The Virgins of the Sun in Peru were devoted to lifelong 'chastity' and seclusion. Lay women also at times took a vow of 'chastity'; they were held in great veneration for their chastity and purity, and, as a mark of worship and respect, they were called *Occlo*, which was a name held sacred in their 'idolatry.' Failure to preserve the vow involved the punishment of being burned at the stake or cast into 'the lake of lions.'[4] The Sun-god was regarded as the husband of the virgins in his service. They were of necessity daughters of the Inca; for, 'though they imagined that the Sun had children, they considered that they ought not to be bastards, with mixed divine and human blood. So the virgins were of necessity legitimate and of the blood royal, which was the same as being of the family of the Sun.' Thus did the Peruvians solve the problem of incarnation by birth. The violator of a Virgin of the Sun was executed in the same way as a violator of an Inca's daughter.[5] Permanent continence was necessary for the Thlinket shaman, if he was to maintain his efficiency. In Paraguay and Patagonia we hear respectively of celibate wizards and virgin witches. The guardian of the sacred pipe of the Blackfeet had to be chaste and fast periodically.[6]

Virgin priestesses were in high honour among the Guanches of the Canary Islands, and the ancient Persians, Greeks, and Romans.

The first named, the Magades, or Harimagades, were under the direction of the high priest; others, whose chief duty was the baptism of newborn children, were allowed to resign their office and marry.[7] The virgin priestesses of Persia were devoted to the service of the Sun.[8] Scattered over Greece were shrines ministered at by virgins, such as that to Hera at Ægium; the priestesses who chanted the oracles at Delphi and Argos were virgins; many priests were eunuchs; the hierophant and other ministers of Demeter were celibates, and bathed in hemlock-juice to mortify desire.[9]

Numa was said to have instituted the order of Vestal Virgins. They remained unmarried for thirty years. Burial alive was the penalty for breaking the vow of chastity. Few retired after the thirty years.[10] The Vestal Virgins were distinguished by extraordinary influence and personal dignity; they supply the classical example of womanly merit when separated artificially from her biological function. 'They were treated with marks of respect usually accorded to royalty; thus on the streets they were preceded by a lictor, and the highest magistrates made way for them; they sometimes enjoyed the exceptional privilege of riding in a carriage; at public games a place of honour was assigned to them; and after death they, like the Imperators, were allowed to be buried within the city walls "because they were above the laws." Again, they enjoyed the royal privilege of mercy; for, if they met a criminal on the way to execution, his life was spared.'[11] Yet, after Frazer's investigation, it seems that their virginity is of accidental origin. The chief's daughter among the Damaras who keeps up the 'holy fire' is a savage parallel; that she remained unmarried is not stated. 'The perpetual fire' in an early village 'would be most likely to be maintained in the chief's house, and the persons who would most naturally look after it would be the chief's wife or daughters.'[12] Lafitau speaks of 'vestal virgins' among the Iroquois.[13] In ancient Ireland and Lithuania there seem to have been holy fires tended by virgins.[14] In Yucatan virgin priestesses tended the fire in the temple.[15]

No race has shown such sexual sensibility and knowledge of the science and art of love as the Hindus. Though we hear little or nothing of female virginity, marital chastity on the part of wives has been enjoined and honoured from immemorial times; while both natural chastity and sacerdotal, whether marital or celibate, has been a regular phenomenon. Yet marriage has been continuously upheld and honoured. Social and individual differentiation explains the fact that Hindu religion has no inconsistency between practice and precept, with regard either to the status of women or to the vocation of male celibacy. The commencement of this, as we have seen, may be in the ancient rule of continence during the Brāhman's study of the Veda, and its original explanation is more clear than usual, and doubtless to be found in an extension of natural chastity to appropriate individuals.[1]

Thus Manu says: 'Let not a Brāhman who desires manly strength behold his wife setting off her eyes with collyrium, or anointing herself with oil, or when she is in *deshabille* or bringing forth a child.' And again: 'Let him not see a woman naked.'[2] In the Bower MS we read that, 'counselling with reference to acquisition of health and strength, the blessed Atrêya said: "Caution in diet is of threefold, but abstinence from sexual intercourse is of fourfold value."'[3] The Sannyāsi had and has a rule never to look at a woman.[4]

Monastic celibacy developed in Buddhism. The mother of Buddha was extremely 'pure'; she had no other son; her conception was supernatural.[5] Sensuality is inconsistent with wisdom and holiness; 'a wise man should avoid married life, as if it were a burning pit of live coals.' 'From contact comes sensation, from thirst clinging; by ceasing from that the soul is delivered from all sinful existence.' 'Buddha's Church is a Church of monks and nuns. "Very straitened," it is said, "is life in the home, a state of impurity; freedom is in leaving the home."' There is an eightfold abstinence for the laity, including avoidance of 'unchastity.'[6] The monk is forbidden carnal intercourse. 'The monk who lowers himself to touch a woman's person with corrupt thoughts, while he clasps her hand or clasps her hair or touches one part or another of her body, the Order inflicts on him degradation.'[7] The present ordination vow is to abstain from all sexual intercourse as long as life shall last.[8] The Jains enforced the rule to abstain from all sexual relations 'either with gods, or men, or animals; not to discuss topics relating to women; not to contemplate the forms of women.'[9] There is, however, a compromise in the form of an oath of conjugal fidelity instead of an oath of abstinence.[10] Some lamas may marry, but these are less holy than the celibates. Tibetan nuns are in all cases continent.[11] In Chinese Buddhism and Taoism the celibacy of priests is observed.[12] The Chinese are peculiarly free from conventional restraints upon the sexual life, yet they honour chastity in both sexes. Lust is condemned; 'of the myriad vices, lust is the worst.'[13]

In a race of a very different character, the West Africans, proverbially sensual, the virgin priestess is peculiarly influential, and the celibate priest is not unknown.

In Lower Guinea we are told of a priest-king who was not even allowed to touch a woman.[14] Among the Tshi- and Ewe-peoples there are priestesses who are forbidden to marry. Of the former it is observed that 'a priestess belongs to the god she serves, and therefore cannot become the property of a man, as would be the case if she married one.' The latter are regarded as the wives of the god, but their chief function is religious prostitution. The best-looking girls are selected; they remain novices for three years, 'learning the chants and dances peculiar to the worship of the gods, and prostituting themselves to the priests and the inmates of the male seminaries; and at the termination of their novitiate they become public prostitutes.'[15]

When we come to civilization, we generally find, at least among the Christian peoples of the West, an ambiguous attitude towards chastity. This is chiefly the result of the loss of two primitive complementary habits—a loss which is due to the increase of intelligence on the one hand, and the diffusion of the elements of society, on the other. These habits are, first, the unconscious exercise of control for definite ends. This is very pronounced among savages, and

'the special virtues of savagery—hardness, endurance, and bravery—are intimately connected with the cultivation of

chastity and asceticism. It is true that savages seldom have any ideal of chastity in the degraded modern sense, as a state of permanent abstinence from sexual relationship having a merit of its own apart from any use. They esteem chastity for its values, magical or real, as a method of self-control which contributes towards the attainment of important ends. The ability to bear pain and restraint is nearly always a main element in the initiation of youths at puberty. The custom of refraining from sexual intercourse before expeditions of war and hunting, and other serious concerns involving great muscular and mental strain, whatever the motives assigned, is a sagacious method of economizing energy. The extremely wide-spread habit of avoiding intercourse during pregnancy and suckling, again, is an admirable precaution in sexual hygiene the observance of which it is extremely difficult to obtain in civilization. Savages, also, are perfectly well aware how valuable sexual continence is in combination with fasting and solitude, to acquire the aptitude for abnormal spiritual powers.'[1]

Such loss, whether temporary or permanent, seems to be an inevitable concomitant of the passage from a more to a less 'natural' mode of existence. The complementary loss is that of the tabus and magical forms which served as a theoretical ground for natural chastity. Ellis quotes from an Auckland newspaper the remarks of an old Maori who stated that the decline of his race was entirely due to the loss of the ancient religious faith in the tabu;

'for in the olden time our *tapu* ramified the whole social system. The head, the hair, spots where apparitions appeared, places which the *tohungas* proclaimed as sacred, we have forgotten and discarded. Who nowadays thinks of the sacredness of the head? See, when the kettle boils, the young man jumps up, whips the cap off his head, and uses it for a kettle-holder. Who nowadays but looks on with indifference when the barber of the village, if he be near the fire, shakes the loose hair off his cloth into it, and the joke and the laughter goes on as if no sacred operation had just been concluded. Food is consumed on places which in bygone days it dared not even be carried over.'[2]

Sexual tabus undoubtedly were the expression of an instinctive biological sense of the sacredness of the sexual impulse. This sense is inevitably lost in the commencement of civilization, and the problem, now just beginning to be realized, is how to reinstate it. Scientific enlightenment is the new ground for this sense; the difficulty, however, is to overcome social inertia. In Christendom, two thousand years have passed in an ambiguous, unreasoned, and in the worst sense superstitious, attitude towards the sexual life. Westermarck finds that 'irregular connexions between the sexes have on the whole exhibited a tendency to increase along with the progress of civilization'; and Gibbon had already noted that, 'although the progress of civilization has undoubtedly contributed to assuage the fiercer passions of human nature, it seems to have been less favourable to the virtue of chastity.' This long process of 'marking time' seems, however, to be sociologically normal. In such periods of transition the form of society is first settled, on lines coincident with industrial and economic necessity, then the religious question comes to be considered, last of all the problem of sex. Men are in no hurry to solve the question which more than any other involves the future prosperity of the race. In the meantime the practical question of sexual life is a hand to mouth affair, when it is not given over to false ideals or degraded values. Westermarck and Havelock Ellis have discussed this transition period in the history of chastity, which commenced with Christianity, and is now showing signs of completion. The latter remarks that

'the main difference in the social function of chastity, as we pass from savagery to higher stages of culture, seems to be that it ceases to exist as a general hygienic measure or a general ceremonial observance, and for the most part becomes confined to special philosophic or religious sects, which cultivate it to an extreme degree in a more or less professional way. This state of things is well illustrated by the Roman Empire during the early centuries of the Christian era. Christianity itself was at first one of these sects enamoured of the ideal of chastity; but by its superior vitality it replaced all the others, and finally imposed its ideals, though by no means its primitive practices, on European society generally.'[3]

[1] H. Ellis, *Psychology of Sex*, vi. 145.
[2] *Ib.* 147. [3] *Ib.* 151.

Christianity was, on the one hand, heir of the Hebrew tradition, in which there is a frank recognition of sexual impulses, and a reverence for them, combined with ideas of ceremonial pollution as the result of intercourse—a typically savage attitude. But it rejected this, though accepting the Old Testament, its embodiment. Instead it chose an attitude like that of the Essenes or the Essene attitude itself. On the other hand, it was instinct with a fierce reaction against pagan indulgence. By a very curious irony, its decision to war against sexuality involved it in a perpetual relation with sex; it was, as Ellis puts it, *obsessed* by the idea of sex. This attitude cannot altogether be separated from pruriency, but at its highest moments it was much more than that, and, as Ellis was the first to point out, it forms an entirely new element of progress in the evolution of sexual ideas. Thus,

'chastity manifested itself in primitive Christianity in two different, though not necessarily opposed, ways. On the one hand, it took a stern and practical form in vigorous men and women, who, after being brought up in a society permitting a high degree of sexual indulgence, suddenly found themselves convinced of the sin of such indulgence. The battle with the society they had been born into, and with their own old impulses and habits, became so severe that they often found themselves compelled to retire from the world altogether. Thus it was that the parched solitudes of Egypt were peopled with hermits largely occupied with the problem of subduing their own flesh. Their pre-occupation, and indeed the pre-occupation of much early Christian literature, with sexual matters, may be said to be vastly greater than was the case with the pagan society they had left. . . . This is the aspect of early Christian asceticism most often emphasized. But there is another aspect which may be less familiar, but has been by no means less important. Primitive Christian chastity was on one side a strenuous discipline. On another side it was a romance, and this indeed was its most specially Christian side, for athletic asceticism has been associated with the most various religious and philosophic beliefs. If, indeed, it had not possessed the charm of a new sensation, of a delicious freedom, of an unknown adventure, it would never have conquered the European world.'[1]

This twofold attitude may now be sketched. The main idea on which Christian asceticism rests may be put thus, in Westermarck's words:

'The gratification of every worldly desire is sinful; the flesh should be the abject slave of the spirit intent upon unearthly things. Man was created for a life in spiritual communion with God, but he yielded to the seduction of evil demons, who availed themselves of the sensuous side of his nature to draw him away from the contemplation of the divine and lead him to the earthly. Moral goodness, therefore, consists in renouncing all sensuous pleasures, in separating from the world, in living solely after the spirit, in imitating the perfection and purity of God. The contrast between good and evil is the contrast between God and the world, and the conception of the world includes not only the objects of bodily appetites, but all human institutions, as well as science and art. And still more than any theoretical doctrine, the personal example of Christ led to the glorification of spiritual joy and bodily suffering.'[2]

Again, Christianity, in this perverted view of it, may be described as a religion

'which regarded every gratification of the sexual impulse with suspicion, and incontinence as the gravest sin. In its early days the Church showed little respect for women, but its horror of sensuality was immense.' 'While looking with suspicion even on the life-long union of one man with one woman, the Church pronounced all other forms of sexual intercourse to be mortal sins. In its Penitentials, sins of unchastity were the favourite topic; and its horror of them finds an echo in the secular legislation of the first Christian emperors. Panders were condemned to have molten lead poured down their throats. In the case of forcible seduction, both the man and woman, if she consented to the act, were put to death. Even the innocent offspring of illicit intercourse were punished for their parents' sins, with ignominy and loss of certain rights which belonged to other, more respectable, members of the Church and the State. Persons of different sex who were not united in wedlock were forbidden by the Church to kiss each other; nay, the sexual desire itself, though unaccompanied by any external act, was regarded as sinful in the unmarried. In this standard of purity no difference of sex was recognized, the same obligations being imposed upon man and woman.'[3]

'The theological conception of "lust" or *libido*, as sin, followed logically the early Christian conception of the "flesh," and became inevitable as soon as that conception was firmly established. Not only, indeed, had early Christian ideals a degrading influence on the estimation of sexual desire *per se*, but they tended to depreciate generally the dignity of the

[1] *Ib.* 151.

[3] *Ib.* 392, 431 f. (quoting authorities).

sexual relationship. If a man made sexual advances to a woman outside marriage, and thus brought her within the despised circle of "lust," he was injuring her because he was impairing her religious and moral value. (. . . An ambiguous improvement on the view . . . among primitive peoples, that the sexual act involves indignity to a woman or depreciation of her only in so far as she is the property of another person who is the really injured party.) The only way he could repair the damage done was by paying her money, or by entering into a forced, and therefore, probably unfortunate, marriage with her. That is to say, that sexual relationships were, by the ecclesiastical traditions, placed on a pecuniary basis, on the same level as prostitution. By its well-meant intentions to support the theological morality which had developed on an ascetic basis, the Church was thus really undermining even that form of sexual relationship which it sanctified.'[1]

Early Christianity (see CHASTITY [Christian]) censured re-marriage by either sex; it was a species of fornication, or a 'specious adultery.' 'It was looked upon as a manifest sign of incontinence, and also as inconsistent with the doctrine that marriage is an emblem of the union of Christ with the Church.'[2] Again, the severity of the earlier European laws against adultery 'was closely connected with Christianity's abhorrence of all kinds of irregular sexual intercourse.'[3] Yet it made no distinction between husband and wife.[4]

The Essenes rejected 'pleasure as an evil, but esteem continence and the conquest over our passions to be virtue. They neglect wedlock.'[5] St. Paul said: 'He that giveth his virgin in marriage doeth well; but he that giveth her not in marriage doeth better.' 'It is good for a man not to touch a woman. Nevertheless, to avoid fornication, let each man have his own wife, and let each woman have her own husband.' As for the unmarried and widows 'it is better to marry than to burn.'[6] Woman, says Tertullian, is the gate of Hell. 'Inter faeces et urinam nascimur' is Augustine's famous epigram. He had, it is true, no ascetic contempt for sex, and indeed asserts that in Paradise, if sin had not entered, 'sexual conjugation would have been under the control of the will without any sexual desire. There would not have been any words which could be called obscene, but all that might be said of these members would have been as pure as what is said of the other parts of the body.'[7] Yet he held very strongly the theory of original sin. It is the fact that sin is hereditary, and that sin has its special symbol in the organs of generation, that makes sex a shameful thing. It is sin that brings them into connexion with lust. The argument seems to be circular, but Augustine's influence carried his opinion. With more fanaticism, St. Bernard speaks of man as 'nothing else than fetid sperm, a sack of dung, the food of worms. . . . You have never seen a viler dunghill.'[8]

Whatever the influence of the Christian tradition or the Christian environment, the fact remains that not only chastity, but virginity, became the radiant ideal. Jesus, John the Baptist, St. Paul, and others, were virgins. Virginity worked miracles; by it Miriam crossed the sea, and Thecla was spared from the lions. It is a spring flower, exhaling immortality from its petals.[9] Cyprian speaks of those women whose husband is Christ. The Virgin Mary similarly had dedicated herself as a virgin to God.[10] Virgins were known to have committed suicide to prevent the loss of their virginity. Such an act admitted some to canonization. Jerome argued in favour of such suicide; Augustine concludes that these suicides are worthy of compassion, but declares that there was no necessity for the act, since 'chastity is a virtue of the mind which is not lost by the body being in captivity to the will of another.'[11] As for married life, the procreation of children is the only reason for the sexual act; no desire further than what is thereto necessary is allowed.[12]

Here the romantic aspect of Christian chastity, which Ellis has worked out, and of which he has shown the evolutionary importance, has to be considered. The possibility of this romance may even be seen in athletic asceticism. Jerome writes to the virgin Eustochium (*Ep.* xxii. §7) about his struggles for abstinence:

'Oh, how many times when in the desert, in that vast solitude which, burnt up by the heat of the sun, offers but a horrible dwelling to monks, I imagined myself among the delights of Rome! I was alone, for my soul was full of bitterness. My limbs were covered by a wretched sack, and my skin was as black as an Ethiopian's. Every day I wept and groaned, and, if I was unwillingly overcome by sleep, my lean body lay on the bare earth. I say nothing of my food and drink, for in the desert even invalids have no drink but cold water, and cooked food is regarded as a luxury. Well, I, who out of fear of hell had condemned myself to this prison, companion of scorpions and wild beasts, often seemed in imagination among bands of girls. My face was pale with fasting and my mind within my frigid body was burning with desire; the fires of lust would still flare up in a body that already seemed to be dead. Then, deprived of all help, I threw myself at the feet of Jesus, washing them with my tears and drying them with my hair, subjugating my rebellious flesh by long fasts. I remember that more than once I passed the night uttering cries and striking my breast until God sent me peace.'

He also refers in the same letter to the practice in which the main stream of the romance of chastity had its source—that, namely, of Christians who 'share the same room, often even the same bed, and call us suspicious if we draw any conclusions.'[1] Chrysostom discusses it as a normal practice, but, quite rightly, as a new departure.

'Our fathers,' he says, 'only knew two forms of sexual intimacy, marriage and fornication. Now a third form has appeared: men introduce young girls into their houses and keep them there permanently, respecting their virginity. What is the reason? It seems to me that life in common with a woman is sweet, even outside conjugal union and fleshly commerce. That is my feeling; and perhaps it is not my feeling alone; it may also be that of these men. They would not hold their honour so cheap nor give rise to such scandals if this pleasure were not violent and tyrannical. . . . That there should really be a pleasure in this which produces a love more ardent than conjugal union may surprise you at first. But when I give you the proofs you will agree that it is so.' The absence of restraint to desire in marriage, he continues, often leads to speedy disgust, and even, apart from this, sexual intercourse, pregnancy, delivery, lactation, the bringing up of children, and all the pains and anxieties that accompany these things soon destroy youth and dull the point of pleasure. The virgin is free from these burdens. She retains her vigour and youthfulness, and even at the age of forty may rival the young nubile girl. 'A double ardour thus burns in the heart of him who lives with her, and the gratification of desire never extinguishes the bright flame which ever continues to increase in strength.' Chrysostom describes minutely all the little cares and attentions which the modern girls of his time required, and which these men delighted to expend on their virginal sweethearts whether in public or in private. Thus it was that the Christians 'rejected the grosser forms of sexual indulgence, but in doing so they entered with a more delicate ardour into the more refined forms of sexual intimacy. They cultivated a relationship of brothers and sisters to each other; they kissed one another; at one time, in the spiritual orgy of baptism, they were not ashamed to adopt complete nakedness.'[2] 'This new refinement of tender chastity' may truly be said to have come 'as a delicious discovery to the early Christians, who had resolutely thrust away the licentiousness of the pagan world.'[3] No less true, however, is it that the development in itself was as anti-social as, and in its practical negation of parenthood more anti-social than, even the homosexuality of the Greeks.

Again, this new Christian chastity 'flourished exuberantly and unchecked' in one form: 'it conquered literature. The most charming, and, we may be sure, the most popular literature of the early Church lay in the innumerable romances of erotic chastity . . . which are embodied to-day in the *Acta Sanctorum.*' 'Early Christian literature abounds in the stories of lovers who had indeed preserved their chastity, and had yet discovered the most exquisite secrets of love.'[4] Ellis refers particularly to the legend of Thecla, 'The Bride and Bridegroom of Judea,' in *Judas Thomas' Acts*, 'The Virgin of Antioch' of St. Ambrose, the history of 'Achilleus and Nereus,' 'Mydonia and Karish,' and 'Two Lovers of Auvergne,' told by Gregory of Tours. See art. AGAPETAE.

The freshness of this unique form of love waned in the Middle Ages. Chivalry alone preserved something of a similar ideal. '*Aucassin et Nicolette*,' Ellis remarks, 'was the death-knell of the primitive Christian romance of chastity. It was the discovery that the chaste refinements of delicacy and devotion were possible within the strictly normal sphere of sexual love.'[5] He assigns two main causes for this decay.

'The submergence of the old pagan world, with its practice, and, to some extent, ideal of sexual indulgence, removed the

foil which had given grace and delicacy to the tender freedom of the young Christians. In the second place, the austerities which the early Christians had gladly practised for the sake of their soul's health, were robbed of their charm and spontaneity by being made a formal part of codes of punishment for sin, first in the Penitentials and afterwards at the discretion of confessors.'[1]

Here there intervenes the Teutonic element.

'The ideal of Christian chastity was no longer largely the possession of refined people who had been rendered immune to pagan licence by being brought up in its midst, and even themselves steeped in it. It was clearly from the first a serious matter for the violent North Africans to maintain the ideal of chastity; and, when Christianity spread to Northern Europe, it seemed almost a hopeless task to acclimatize its ideals among the wild Germans.'[2]

Henceforward the ideals of the Church were imposed as compulsory celibacy on priests, and 'chastity' fell into a barbarous regression, which the Renaissance and Reformation only tempered by preserving in law the proprietary rights of married men, and fostering a conventional residuum of ideas of chastity for the unmarried. It is to be noted that it is only by an error that the primitive Teutons have been credited with pre-nuptial chastity. They had no prostitution, and observed marital chastity in women, but chastity before marriage was not required.

'The institution of clerical celibacy,' says Westermarck, 'lowered the estimation of virtue by promoting vice. During the Middle Ages unchastity was regarded as an object of ridicule rather than censure, and in the comic literature of that period the clergy are universally represented as the great corrupters of domestic virtue. Whether the tenet of chastity laid down by the code of Chivalry was taken more seriously may be fairly doubted. A knight, it was said, should be abstinent and chaste; he should love only the virtues, talents, and graces of his lady; and love was defined as the "chaste union of two hearts by virtue wrought." . . . We have reason to believe that the amours in which he indulged with her were of a far less delicate kind.'[3] The lady was, as a rule, required to be a married woman.

Here, in a sense, is an attempt, like some we have noted, to divorce love from the biological accompaniments of it. Another form, more like the early Christian and the Greek, was that celebrated by Dante and his congeners—life-long devotion without any intimacy. What remained of these developments up to modern days was male gallantry, and the love interest of the novel and the play.

The attitude of the chief peoples of to-day towards chastity may be now glanced at. It is, and the fact is significant, fairly simple and extraordinarily identical.

In *Islām* 'chastity,' that is, abstinence from intercourse, is the essential duty of woman, married or unmarried. Nothing more is required as an explanation than the position of Muhammadan women. 'For unmarried men, on the other hand, "chastity" is by Muhammadans at most looked upon as an ideal, almost out of reach.'[4] Yet there is more incontinence in Christian countries than in Islām,[5] while the Muhammadan attitude is less ambiguous. As always, they assert the sanctity of sex no less than the sanctity of physical cleanliness. 'They are prepared to carry the functions of sex into the future life.'[6]

In *India*, not only is asceticism practised by certain individuals, but

'sexual love has been sanctified and divinized to a greater extent than in any other part of the world.' 'It seems never to have entered into the heads of the Hindu legislators that anything natural could be offensively obscene, a singularity which pervades all their writings, but is no proof of the depravity of their morals.' 'Love in India, both as regards theory and practice, possesses an importance which it is impossible for us even to conceive.'[7]

The details of generation have for ages found a place in Hindu religious ritual. Yet, and here again owing to the status of women, 'sexual impurity is scarcely considered a sin in the men, but in females nothing is held more execrable or abominable.'[1] Very similar is the attitude of *China* and *Japan*.

In *Modern Western civilization* there is a great variety of minor differences, but the main facts are the same. Property-morality is employed to sanction wifely 'chastity'; the English law of divorce still shows the preponderance in favour of the male sex. Among the unmarried, male incontinence is winked at by the world, but female incontinence is reprobated. Prostitution flourishes, while it is calculated that at least 50 per cent of the sexual intercourse that occurs in Western nations is outside the bonds of wedlock. Economic considerations have much to do with this, but the whole problem is an extensive one, and cannot be more than alluded to here. As for the minor differences, the European has added, whether through the influence of the Christian tradition or because of a psychical character, 'the vice of hypocrisy, which apparently was little known in sexual matters by pagan antiquity,'[2] and is also little known by the other great races of the present day. The Churches do not help to solve the problem by preaching total abstinence and encouraging scientific ignorance; their attitude is part of the conventional sexual morality of the time. They can aid in the scientific rehabilitation of a natural chastity only by joining hands with science. Western science to-day has begun this work by a thorough study of the sexual impulse, and important pioneering has been effected in the education of the intelligent upon these subjects and in the development of eugenic research.

Some consideration of biological reasons for the various phenomena of chastity which have been reviewed may finally be given in connexion with the question how far the psychic nature of the modern type of humanity is likely to be affected by the multiple tradition, or whether this exists merely as an atmosphere which is inert and unused for life-processes, the latter being only such as are adapted to the present environment.

Chastity, as it is now defined, may be said to exist only among savages in a natural state, who allow pre-nuptial intercourse. Its origin is purely biological. Tabu is merely an emotional and legal irradiation from it. The exercise of control at puberty has been noted. During menstruation, pregnancy, and suckling, the savage also observes continence.[3] During the last condition it is possible that the separation is physically beneficial to mother and child; during the first, union is attended, except towards the end of the period, with discomfort to the woman. During the time of suckling, it is a wise provision to prevent another conception too soon for the health of the child at the mother's breast, and there seems to be a connexion between premature weaning and renewal of intercourse. It is significant that certain peoples recognize this application of continence so clearly that at a suitable date after birth the man and wife are re-married.[4] Of equal biological importance is the continence observed by primitive peoples immediately prior to marriage and after engagement, and more particularly for some time after marriage itself.

Thus, among the aborigines of Victoria, the pair were sequestered for two months, sleeping on opposite sides of the fire.[5] Amongst the Narrinyeri it was 'a point of decency for the couple not to sleep close to each other for the first two or three nights; on the third or fourth night the man and his

wife sleep together under the same rug.'[1] In South Celebes all intimacy is forbidden during the wedding-night.[2] In Achin they do not come together for seven nights.[3] In Endeh and the Babar Islands the same rule is observed.[4] Similarly among the Dayaks, Madurese, and Sundanese.[5] Among the Wufurs consummation takes place on the fifth day; on the first night the couple are set back to back; and this is repeated each night. Each morning when the man departs, it is forbidden them to look at one another, 'a sign of her maiden shame.'[6] Nutkas and Thlinkets may not consummate marriage till after ten days and four weeks respectively.[7] In Egypt it is customary for husbands to deny themselves their conjugal rights during the first week after marriage with a virgin bride.[8] The bride and groom among the Aztecs were continent for four days, the Mazatecs for fifteen, the Otomis for twenty or thirty.[9]

Such customs are undoubtedly to be ultimately explained as Ellis explains them. The long process of irradiation of the complex nervous mechanism, which is necessary for tumescence and for the proper performance of the sexual act, needs delay and many preliminaries. The sexual act is not one to be executed by muscular force alone. Hence the phenomena of courtship itself.

'The need for delay and considerate skill is far greater when, as among ourselves, a woman's marriage is delayed long past the establishment of puberty to a period when it is more difficult to break down the psychic and, perhaps, even physical barriers of personality.'[10]

The need is increased also in proportion to the higher development of the sexual impulse in civilization. One great component of that impulse is female modesty.[11] In seeking for an answer to the question, Why has sexual intercourse between unmarried people, if both parties consent, come to be regarded as wrong? Westermarck refers to the growth of 'affection' and to the instinct for seclusion during the satisfaction of sexual as, in primitive times, of other needs, such as hunger and thirst. Add to these considerations, the nervous tone and control produced by a natural chastity, and there are already grounds for a scientific and religious recognition and regulation of a sexual life which is in relation to biological facts.

Two contingent sources of chastity are good examples of inertia, producing the same result from different directions. The former is biologically real, the second conventional. Continence originates, in the individual, with the instinct of physical isolation which is emphasized at the commencement of adolescence. This instinct amounts to a virginal inertia, which forms a barrier difficult to break down. Hence the first loss of chastity is equivalent to a complete psychic change in the organism. This inertia is encouraged for the sake of physical growth. When such psychic diathesis becomes morbid, it coincides with what W. James terms an 'anti-sexual instinct'—the instinct of personal isolation, the actual repulsiveness to us of the idea of intimate contact with most of the persons we meet, especially those of our own sex, and in illustration of which he instances the unpleasant sensation felt on taking a seat still warm by contact with another.[12] Adolescent inertia is also linked to the desire for self-control, in which the important factor is the feeling of power and the sense of freedom. In the male the psychic result of the sexual act, a depression proportionate to the explosive force of the detumescent process, constitutes the opposite pole to this feeling of power. *Omne animal post coitum triste* proverbializes the phenomenon, and there are clear traces of its action in producing ideals of chastity.

Some of these have been cited above. Loss of semen is universally regarded as loss of strength, and the male organs as the seat of strength.[1] These ideas again coincide with the popular notion that woman is physically weak, and that therefore intercourse with her produces weakness in the male. But, when these ideas reach as far as this, they are already becoming conventionalized. Even at an earlier stage they may pass from biological fact to conventional theory, for 'your boasted purity is only immaturity.' In this connexion is to be noted the sense of melancholy which is normally periodic in adolescence, and seems to arise from vascular congestion. It is encouraged by abstinence, and forms the foundation of the sense of sin, as is shown by the phenomena of conversion. If we add the fact that pain and austerity are a stimulant of energy, we practically complete the list of physiological factors which develop rules of chastity in the individual and in the race. On the other hand, the conventional factor which more than others has had an influence in civilization is not essentially physiological. It is rather a detail of degeneration. In their fierce reaction against pagan luxury the early Christians developed a cult of personal uncleanliness. They denounced the bath as the Puritans at a later date denounced the theatre.

Paula used to say: 'The purity of the body and its garments means the impurity of the soul.'[2] 'Since the coming of Christianity,' Ellis remarks, 'the cult of the skin, and even its hygiene, have never again attained the same general and unquestioned exaltation. The Church killed the bath.'[3] 'The tone of the Middle Ages,' says Frederic Harrison (*Meaning of Hist.*, 1906, p. 248), 'in the matter of dirt was a form of mental disease.'

But in this later and more general extension, very similar as it is to the state of things among the masses of Europe to-day, economic considerations overlaid the Christian tradition. The same result was fostered by ideals on the one hand and necessary practice on the other. However that may be, the fact remains that it is only in modern civilization that the juxtaposition of the genital and excretory zones has acted as a general influence in favour of chastity. Primitive 'uncleanness' was a very different thing, though the same term is used. Inertia of this kind is a measure both of scientific ignorance and of physical unrefinement, or rather of hygienic degeneration, as obscenity is of the same results psychically.

The question of the origin of the 'horror' of sexual facts, in so far as it is a *vera causa*, which is not certain, and not a conventional artifact, is difficult. However originating,—and it is possible that it may have nothing to do with any primitive mystic awe or sense of supernatural danger, but rather that it is a morbid psychosis analogous to jealousy on the one hand and disgust on the other,—it seems to be absent from savage psychology, and in civilization to be a mark of neurosis. As a source of chastity, its conventional exploitation is confined to priestly pædagogy.

Certain suggestions that have been made explanatory of this and similar psychic phenomena in chastity call for mention, though, in so far as they have ground in fact, this is but part of the mythology of the subject. For instance, the primitive tabu against menstrual blood cannot legitimately be elevated into a cause either of marriage prohibitions or of continent habits. It may be true that the Zulus believe that 'if a man touch a woman at menstruation his bones become soft, and in future he cannot take part in warfare or any other manly exercise';[4] but, as shown above, the deep-seated reason of such tabu is biological. The suggested instinctive feeling against intercourse between members of the same family or

[4] Macdonald, *JAI* xx. 119.

household, which Westermarck held to be a possible cause of the idea that sexual matters are 'impure,' does not, if it exists, go deeply enough into the psychology of the individual. It is proved that such phenomena are merely negative.[1]

In the past history of chastity it is evident that, as will always be the case, every factor concerned in the whole system of the sexual impulse has had its place and influence. The two chief factors, proprietary morality and adolescent inertia, have, however, now reached the parting of the ways. That is to say, the former is yielding to the scientific analysis of the sexual life of man, and can no longer be maintained as a ground of natural chastity. In the Middle Ages the knightly husband took with him on his travels the key of his wife's 'girdle of chastity'; in a scientific age 'the real problem of chastity lies not in multiplying laws, but largely in women's knowledge of the dangers of sex and the cultivation of their sense of responsibility.'[2] *Mutatis mutandis*, the statement applies to adolescent chastity. This is one of the educational problems of the future, in which science and religion may well co-operate. Economic considerations are the permanent previous condition to be reckoned with: popular sentiment will follow the lead of social refinement and scientific conclusion.

A. E. CRAWLEY.

CHASTITY (Buddhist).—Buddhist ideas as to the relation of the sexes may best be treated under two heads: according as they apply to the ordinary Buddhist layman, or to a member of the Buddhist Order. The rules for the latter will be found in art. CELIBACY (Buddhist). The rules for the layman are laid down very simply and broadly in several parts of the Canon, with the stress placed on purity in general rather than on any particular detail. For instance, in the *Sigālovāda Suttanta* (a dialogue on elementary ethical precepts to be followed by laymen), Sigāla is seen by the Buddha worshipping the various quarters of the heavens with streaming hair and uplifted hands. The teacher points out to him a better way, in which the six quarters worthy of worship are not the physical quarters of the heavens, but parents, teachers, husband (or wife), friends, dependents, and spiritual masters (Bhikṣus and Brahmans). Under the third head we have the following paragraph:

> 'In five ways should the wife, who is the west quarter, be cherished by her husband—by respect, by courtesy, by being faithful to her, by recognizing her authority, by providing for her wants. And in five ways the wife takes thought for her husband—she orders the household aright, is hospitable to kinsfolk and friends, is a chaste wife, is a thrifty housekeeper, and is diligent in all there is to do.'

The same tractate warns young men against riotous living of all kinds—drunkenness, gambling, and unchastity. There is no older document in Indian religious literature devoted to the inculcation of ethical precepts for laymen. In the *Iti-vuttaka*, Buddha is represented as declaring that 'the life of chastity is not lived for the purpose of deceiving or prating to mankind, nor for the sake of the advantage of a reputation for gain and one's own affairs; but . . . this life of chastity is lived, O monks, for the purpose of Insight and Thorough Knowledge' (§ 36); while 'by mutual reliance, O monks, a life of chastity is lived for the sake of crossing the Flood (of earthly longings), and for the sake of properly making an end of Misery' (§ 107). He who, after taking the vow of chastity, breaks it, and he who thus causes another to fall, suffers 'in the realm of punishment and in perdition' (§ 48); yet the same treatise seems to imply that (undue) craving for chastity is, like all other forms of clinging to conditions of earthly existence, essentially evil (§ 54 f.). There is very little ethics in the previous books of ritual, poetry, or exegesis, or even in the theosophy of the Upaniṣads; and the level of the mythology and ritual is as low in India as elsewhere, in matters of chastity. But it would be a great mistake to suppose that the Buddhist movement introduced any great revolution in this respect. The people, in the 6th cent. B.C., had already built up for themselves, quite independently of religion, a social code regarding sexual relations. All that Buddhism did was to adopt the highest ideal current among the clans, and to give to it additional clearness and emphasis. It was this ideal that it carried with it wherever it was introduced. It thus threw its influence on the side of a strict monogamy in marriage, in favour of chastity for both sexes before and after marriage, and against early marriages. On the whole, it has had a fair success. The percentage of illegitimate births is low in those countries where the influence of early Buddhism has been greatest, and its canonical literature is chaste throughout. Some of the later literature, from the 6th cent. A.D. onwards, especially in Bengal, Nepāl, and Tibet, is very much the reverse. See art. TANTRA.

CHASTITY (Chinese).—Chastity in females is regarded by the Chinese as a virtue of prime importance; and the national standards, both ideal and actual, would be considered admirable even in Christian countries. A woman is supposed to marry only once, the alliance of a widow with a second husband being considered inadvisable, if not indeed inadmissible. When a married woman refuses to accept a second consort after the death of her husband, or a young virgin who has been robbed of her fiancé by a similar catastrophe decides upon a life of celibacy, a petition is sometimes addressed to the Emperor, asking for permission to erect a *pai-low*, or monumental gateway, with a view to perpetuating the memory of the chaste widow or maiden, as an example to posterity. In some parts of the country veritable 'forests' of these ornamental structures may be found, some of them magnificent specimens of the mason's art. One might be led to conclude from this fact that chastity is a virtue rare among Chinese women, since so high a value is placed upon the exhibition of it in seemingly isolated cases; but it should be borne in mind that the great majority of instances are not commemorated in this special way, on account of the great expense involved. No argument can therefore be advanced on these grounds as to the comparative rarity of this virtue among Chinese women.

The extraordinary care nominally taken to maintain the segregation of the sexes might seem to indicate a low scale of morality in China, as, *e.g.*, the rules laid down in the 'Record of Rites,' which deprecate the hanging of male and female garments on the same rack, and the using of the same face-

[1] Westermarck, *Hum. Marr.*3 155.

[2] Moll, *Konträre Sexualempfindung*, 1899, p. 592.

towel or hair-comb by persons of opposite sex; or which declare it inexpedient that a man should know the personal name of a woman who is not a relation, and that a father should sit in the same room with his daughter, or brothers share a place at table with a sister above the age of 7 years. It is necessary, however, to remember that such precautions may be suggested by the peculiar conditions of the patriarchal system, which still obtains in Chinese families, under the terms of which a large number of people are often congregated together within the walls of a Chinese 'compound,' including children of different generations, different parents, children of the same father but different mothers, children of concubines, etc.—an extraordinary medley of relationships—as well as a numerous retinue of young servants and slave children. And, as the female members of the community seldom venture beyond the high walls of the enclosure, and are strictly limited in the range of their employments, with a temperament which, whatever else may be said, is distinctively Eastern, and with painful recollections of the dark days of feudalism, and its many invasions upon the sanctity of family life, it is little wonder that such methods should be considered advisable.

Chastity finds a place among the 'Four Studies proper to Women,' of which the first is to be chaste and docile; and historical cases are frequent where young girls elected to commit suicide rather than run the risk of outrage, or even the imputation of unchastity. Had Flora Macdonald been a Chinese heroine, she would have drowned herself in a well after her interview with 'Bonnie Prince Charlie,' as the young Ningpo girl did when the Prince Shaok'ang, to whom she had given asylum, made good his escape from the 'Golden Tatars.' In the city of Hangchow is a well into which hundreds of Chinese girls threw themselves when the city was threatened by the T'ai-ping rebels. Instances such as these afford more reliable evidence as to the high standard of chastity which undoubtedly exists among women in China, than any deduction from the methods which seem to reflect upon the female character, and which are intended rather as incentives to virtue than preventives against vice. The extreme modesty of the feminine attire (which, by the way, is the only survival of the Chinese costume, male garments being all based on Manchu models, by command of the present foreign rulers of China), the careful concealment of the lines of the figure, etc., afford further confirmation of the idea, which is borne out by personal knowledge of Chinese homes and family histories. In some parts of the country, the repugnance which is felt by chaste young females against consorting with an utter stranger, as the present marriage customs necessitate, finds expression in the formation of anti-matrimonial leagues, the members of which bind themselves by solemn pledges to refrain from entering the state of marriage; and frequent instances occur where suicide is resorted to rather than break the vows thus assumed.

Whilst chastity in females is rigorously demanded, no similar standard obtains in the case of males. Chastity finds no place among the 'Five Constituents of Worth,' although Propriety in Demeanour comes next in order to Benevolence and Uprightness of Mind, and is followed by Knowledge and Good Faith. It is not numbered among the 'Six Courses of Conduct incumbent upon Man,' or the 'Six Virtues'—Intelligence, Humanity, Wisdom, Uprightness, Moderation, and Benignity. Unchaste conduct does not disqualify for public employment, although 'levity' is indicated as a sufficient cause for dismissal. If the Chinese official is able to maintain the appearances of outward decorum, his private conduct, and especially his sexual relations, are not subjected to very severe inquiry.

Convention permits the Chinese gentleman not only to remarry as often as occasion serves, but also to add a 'secondary wife' to his household in the event of failure to obtain male issue by his proper wife; the maintenance of a harem is, however, regarded as unjustifiable and hardly respectable, though in the case of the Emperor a large liberty is allowed.

Houses of ill-fame exist in the majority of cities, but they are generally unobtrusive in their character, and their existence is known only to habitués. The inmates are recruited by kidnapping or purchase from destitute parents; very few of them are willing votaries. The immorality which is observable at Chinese treaty-ports would not be tolerated in inland cities, though there may be exceptions to this rule, for China is more nearly a continent than a country, and local customs vary considerably in different parts.

Infraction of the marriage bond on the part of the wife is punished with the utmost rigour, the injured husband being at liberty to put to death both the erring wife and her paramour. The legislation which is applied to breaches of chastity in the case of unmarried persons is similar to that of the OT, and that of Eastern nations generally, being compounded for by marriage or fine.

LITERATURE.—Dyer Ball, *Things Chinese*, Shanghai, 1903.

W. GILBERT WALSHE.

CHASTITY (Christian).—The Incarnation threw a new light on purity; the possibility of a higher and purer life was revealed thereby, and the moral law and practice of Christianity show in consequence a great advance on those of previous ages.

1. Nomenclature.—The word 'chaste' is found in the AV of 2 Co 11^{2}, Tit 2^{5}, 1 P 3^{2}, translating ἁγνός; and 'chastity' in 2 Es 6^{32} (which is not extant in Greek). In the first case virgins are spoken of, in the next two married women, in the last Esdras himself. ἁγνός, ἁγνεία, used in this sense in 1 Ti 4^{12} $5^{2.22}$, are translated 'pure,' 'purity'; but ἁγνός, ἁγνῶς, ἁγνότης, ἁγνίζω, are used in a more general sense of 'holy,' 'blameless,' or 'sincere' (and derivatives), though often including the idea of 'chaste,' in 2 Co 6^{6} 7^{11} 11^{3} (some MSS), Ph 1^{17} (or 1^{16}) 4^{8}, Ja 3^{17} 4^{8}, 1 P 1^{22}, 1 Jn 3^{3}. The Peshitta translates in these passages by *dakhyā* or *nakhpā* (or their cognates), but the latter Syriac word is the rendering of σεμνός in 1 Ti 3^{11}, Tit 2^{2}, etc. The Gr. καθαρός with its cognates, frequently used in a physical or ceremonial sense, also conveys the idea of moral purity, and in Mt 5^{8} appears to have the special idea of 'chastity.' It will thus be seen that the Greek words used all merge into more general senses than that treated in this article, and it is not always easy to detect the exact shade of meaning that was in the mind of the writer.

In the NT the opposite to 'chastity' is expressed in general terms by ἀκαθαρσία and ἀσέλγεια, which are joined together in Gal 5^{19} (see Lightfoot's note there and at Col 3^{5}) and in Eph 4^{19}. But ἀκαθαρσία is a very comprehensive word, including more than πορνεία, μοιχεία, etc. (see Eph 5^{3} ἀκαθ. πᾶσα); while ἀσέλγεια denotes open and shameless immorality defying public decency. It had originally meant any outrageous conduct.

2. Teaching of NT.—We have now to ask what 'chastity' meant in the teaching of our Lord and His Apostles. To ascertain this we must examine not only the records of their teaching, but also its background. (*a*) The Jews' moral standard was much higher than that of the heathen. The great majority of Israelites took marriage almost as a

matter of course, as, indeed, do most Easterns now, except in the case of persons specially devoted to celibacy. Childlessness was deemed a reproach (Gn 30^{23} etc.), and marriage was essentially holy. A Nazirite's vow did not include abstinence from the marriage bond, but had to do with the use of wine and the growth of the hair (Nu 6^{3-5}). The Talmud says that 'any Jew who has not a wife is no man' (*Yebamoth*, 63*a*, quoted by Lightfoot, *Col.*, ed. 1900, p. 377); it teaches that marriage is an imperative duty. On the other hand, even as late as the 2nd cent., the Jews indulged in polygamy; they allowed a man to have four or five wives at a time, alleging the example of the patriarchs (Justin Martyr, *Dial.* 134). And the permission given by the less strict Jewish teachers to a man to divorce his wife 'for any cause,' though it does not seem to have worked as much evil as amongst the heathen, was subversive of true ideas of married chastity. It must be added that the view of marriage here presented, though the general one, was not shared by the Essenes (on whom see below, § 3). But it is clear that, in the case of almost all Jews, chastity and marriage were considered to go hand in hand.

(*b*) Unlike the Jews, the heathen in Apostolic times seem scarcely to have had any idea of chastity at all. They punished adultery severely; yet, by allowing divorce at will both to men and to women, they opened the door to flagrant immorality, practised though it was under the name of marriage. Women used to change their husbands every year, or oftener (Juvenal, *Sat.* vi. 224 ff., 'eight husbands in five autumns'). Fornication (especially for men) and abominable sins were a matter of indifference, at any rate unless made a habitual practice. Horace even advises the former, so that intrigues with married women may be minimized (*Sat.* i. 2. 31 ff.). The want of a high public opinion on these questions was one of the greatest difficulties that the Apostles met with in building up Gentile Churches, as we see from the constant warnings in St. Paul's Epistles. And it affected social customs such as eating in idol temples (1 Co $10^{20f.}$). Idol-worship was interwoven with immorality, and this explains why (if the ordinary interpretation be correct) the Apostles joined together 'pollutions of idols' and 'fornication' in Ac $15^{20.29}$, 21^{25}.

Our Lord taught a much higher law of chastity than had yet been known. Yet it is clear that He makes it to be consistent with the use of marriage. He teaches, as the Pharisees did, the sacredness of wedlock, and graces with His presence the marriage feast at Cana (Jn $2^{1ff.}$). He traces its institution to the beginnings of man's existence, and declares that man and wife are no more twain, but one flesh (Mt $19^{4f.}$). He forbids divorce, with, at most, the one exception of πορνεία (v.^{9} and $5^{31f.}$). It is not to our purpose here to consider the difficulties connected with the exceptional case (see Plummer, *Com. on St. Matthew*, 1909, pp. 81, 259), but it is clear that the Christian law has made marriage a far more sacred and binding ordinance than it was even to the Jews. Our Lord did not in so many words forbid polygamy, but the prohibition follows necessarily from the teaching just quoted. The holiness of marriage is also insisted on by St. Paul, who compares it with the union between Christ and His Church (Eph $5^{22ff.}$), and denounces as heretics those who forbid to marry (1 Ti 4^{3}). The author of the Epistle to the Hebrews exhorts his readers that marriage be had in honour among all (He 13^{4} RV). In teaching the holiness of marriage and treating it as the normal condition, our Lord and the NT writers appear to show that for the great majority of men chastity consists in the temperate use of the marriage bond. This comes out clearly if with most moderns we take τὸ ἑαυτοῦ σκεῦος in 1 Th 4^{4} to refer to a man's wife.[1]

Yet there is another form of Christian chastity. Our Lord gives a distinct blessing to those who for good motives give up marriage. This is probably the way, at least in most cases, by which the blessing of Lk 18^{29} to those who have 'left house, . . . or wife, or children for the kingdom of God's sake' may be received (the best MSS of ‖ Mt 19^{29} Mk 10^{29} omit 'wife'); for our Lord could not have taught the duty of deserting a wife, though later on it was held by many that it was lawful to do so in order to enter the monastic state. This must also certainly be the real meaning of Mt 19^{12} ('which made themselves eunuchs for the kingdom of heaven's sake'), a text quoted by Justin Martyr apparently in this sense (*Apol.* i. 15; see below).

It is strange that Conybeare (*Monuments of Early Christianity* ^{2}, 1896, p. 24) should take our Lord's saying literally, as Origen did. To most of the Christians of the first age self-mutilation was as abhorrent as it would be to us; thus Clement of Alexandria, who quotes Dt $23^{1f.}$, calls it an 'impious custom' (*Exhort. to the Heathen*, § 2). From the story in Justin Martyr's first Apology (§ 29) of the young man who desired leave of the Roman governor to carry out the precept literally, so as to refute charges of immorality made by the heathen against the Christians, but was refused permission, it appears that the better sort of Romans had an equally great abhorrence of the custom. Justin relates the story without expressing approval or disapproval; but the impression derived from the passage is that the contemporary Christians approved at least the zeal of the young man, and were unwilling to censure it. That the custom sometimes prevailed among the Christians, at any rate among the heretics, appears from the denunciations of it in the 4th and 5th centuries (Nicæa, can. 1; Second Syn. of Arles, in 5th cent., can. 7; *Apostolic Canons*, 22 f.; Athanasius, *Apol. de fuga sua*, xxvi., *Hist. Arian. ad mon.* xxviii.; Socrates, *HE* ii. 26). Tertullian (*de Monogam.* iii.) appears to explain the saying of our Lord in Mt 19^{12} as applying to the continent as well as to those made eunuchs by men or born so ('ipso Domino spadonibus aperiente regnum coelorum'); 'our Lord was a virgin (*spado*), the Apostle [Paul] himself continent (*et ipse castratus*).' This last expression shows that Tertullian does not mean 'qui semetipsos castraverunt propter regna coelorum' literally; he is referring indirectly to the saying of our Lord and directly to Rev 3^{4} (*de Res. Carn.* 27).

The strongest commendation of unmarried chastity in NT is that given by St. Paul, who, while advising those who have not the gift of continency (οὐκ ἐγκρατεύονται) to marry, prefers the unmarried state 'for the present (ἐνεστῶσαν) distress' (1 Co $7^{1.7\text{-}9.26ff.}$). He was fully persuaded of the nearness of the Parousia (1 Th 4^{17} etc.), and this would make it in his eyes unnecessary to continue the human race. The interpretation of Rev. 14^{4} is more doubtful. The passage may be taken literally, as praising virginity; or, as Swete remarks (*Com.* [1907] *in loc.*), in accordance with the symbolical character of the book it may be interpreted metaphorically, of any kind of chastity. We know that in the Apostolic Age some did abstain from marriage for the sake of religion, such as St. Paul himself and Philip's daughters (Ac 21^{9}). Temporary abstinence by consent is commended by St. Paul in 1 Co 7^{5}. But it is to be noticed, as in contrast with later ages, that the NT writers nowhere speak of marriage as an inferior state, incompatible with the highest chastity.

Our Lord insists on purity in thought as well as in deed: 'beati mundo corde' (Mt 5^{8}). And just as the other commandments are to be kept in the spirit as well as in the letter ($5^{21.32}$ etc.), so the prohibition of adultery includes that of evil thoughts. 'Every one that looketh on a woman to lust after her hath committed adultery with her already in his heart' (5^{28}). There is, indeed, more in this verse than the prohibition of evil thoughts. Lyttelton, who has a good chapter on the passage (*Serm. on the Mount*, 1905, p. 157 ff.), explains it of inflaming or exciting desire by looking. It must be noticed that our Lord's warning can hardly

[1] G. Milligan, who adheres to the other view, that σκεῦος means 'body,' successfully shows from the papyri that κτᾶσθαι may mean 'possess' (*Com.* [1908] *in loc.*); but the context seems to point to the usual interpretation.

include the ordinary and natural case of a man 'looking at' a woman with a desire to marry her. It rather speaks of *unlawful* desire, as for a married woman. In his later days, Tertullian maintained that the text includes also the looking at an unmarried woman by one desiring to marry her, and that even first marriages (much more second marriages) are *akin* to adultery (*de Exh. Cast.* ix.).

3. The post-Apostolic Age.—A change of thought appears soon after the death of the Apostles. Marriage was still held to be holy, but gradually it came to be believed that the unmarried state was the only true, or at any rate the better, form of chastity (see art. CELIBACY).

Christian thought seems to have been largely influenced in this matter by the *Essenes*, of whom we read in Philo and Josephus. This sect of the Jews, which is not mentioned by name in the NT, consisted of self-denying men whose motives our Lord seems by His silence to have commended, though their teaching differed diametrically from His own. They were fatalists (Jos. *Ant.* XIII. v. 9), and did not join in the sacrifices of the other Jews (*ib.* XVIII. i. 5); they were communistic in their property, and were scattered over many cities (*ib.*, and *BJ* II. viii. 3); they neglected wedlock without absolutely forbidding it, and adopted other men's children (*BJ*, *loc. cit.*). One sect of them, while otherwise agreeing with the rest, yet did not avoid marriage; but the great majority of them, in strong opposition to the Pharisees, taught that the only true chastity was to be found in the unmarried state. They would not admit converts to their society except after a probation of three years, to see if they could observe continence (*BJ* II. viii. 7).

This teaching greatly influenced both orthodox and heretical Christianity. Even Clement of Rome uses ἁγνός as equivalent to 'celibate,' and Ignatius ἁγνεία as meaning 'celibacy' (Clem. Rom. *Ep.* i. *ad Cor.* 38: 'He who is ἁγνός in the flesh, let him be so and not boast, knowing that it is Another who has bestowed his continence [ἐγκράτειαν] upon him'; Ign. *Polyc.* 5: 'If any one can abide ἐν ἁγνείᾳ for the honour of the Lord's flesh, let him abide without boasting . . . if it be known beyond the bishop, he is polluted'). And, while these two writers do not press the celibate state as being superior, yet the appropriation of ἁγνός and ἁγνεία to it is very significant. In view of the heathen accusations of promiscuous immorality against the Christians, the Apologists deal much with Christian chastity. Justin Martyr (*Apol.* i. 15), after quoting our Lord's teaching on purity (σωφροσύνη) as given above (§ 2), says that many Christians, men and women, who had been disciples from childhood, remained virgins at the age of 60 or 70 years, while a countless number had been reformed from their licentiousness (ἀκολασία). In i. 29 he says that Christians either married or lived continently.

The 2nd cent. saw the rise of various Christian *Encratite* sects, who taught that chastity could be had only by refraining from marriage. Of these Encratites (ἐγκρατεῖς, -τηταί, -ῖται), Tatian, who had been Justin's pupil, became a leader (Irenæus, *Hær.* i. 28). The Marcionites were also Encratite, and condemned marriage altogether (Iren. *loc. cit.*; Tert. *adv. Marc.* i. 29: see, further, art. 'Encratites' in *DCB* ii. 118). From this time forward the orthodox, though not embracing Encratite teaching, and always holding the sacredness of marriage, were imbued, to an increasing and extravagant extent, with the idea that the truest chastity was compatible only with the unmarried state, though there were some exceptions (see below, § 5).

4. Relation of repeated marriage and chastity.—There is no shadow of taint on the re-marriage of a widow in St. Paul's teaching, provided that she marry 'in the Lord,' *i.e.* take a Christian as her second husband (1 Co 7[39]), though the Apostle thinks that a widow who does not marry again will be happier. Hermas (*Mand.* iv. 4) uses similar language with regard to a widower. He says: 'If he marry, he does not sin. Keep therefore purity (τὴν ἁγνείαν) and holiness (τὴν σεμνότητα).' Thus he uses ἁγνεία of married as well as unmarried chastity. But from a very early date 'digamy' was intensely disliked by all the stricter Christians. Tertullian was its great opponent. In his earlier work, *ad Uxorem* (i. 7), he had urged that it was undesirable; in his Montanistic writings he held that it was a violation of strict chastity, and was no other than a species of fornication ('non aliud . . . quam species stupri,' *de Exh. Cast.* ix.; see also *de Monog. passim*). Peter was the only married Apostle, and he was a monogamist (*de Monog.* viii.). Tertullian, indeed, allows marriage, but only once; he says that 'we do not reject marriage, we only refrain from it,' and that marriage is honourable (*adv. Marc.* i. 29; see also *de Monog.* i.). But he regards adultery and fornication as unpardonable sins (*de Pudic., passim*). The supposed incompatibility of re-marriage and chastity is found in the Church Orders of the 4th and 5th centuries; even the less austere of these manuals show a great dislike of digamy, while they hold third or fourth marriages to be abominable. The *Ethiopic Didascalia* (early 5th cent. [?]) grudgingly allows a second marriage, but says: 'A first marriage is pure before the Lord, but they who marry a second time are transgressors of the Law, . . . and they who marry a third time are not to be numbered with the flock of Christ. But as to those who marry a fourth time, their lasciviousness is yet more evident, and they shall find reproach and dishonour,' § xii.). The *Apostolic Constitutions* (iii. 2, *c.* A.D. 375) say much the same thing. St. Basil says that trigamy was no longer described as marriage at all, and that digamists were subject to penance (*Ep. canon. prim.* clxxxviii. 4). The common interpretation in the 4th cent. of the injunction in the Pastoral Epistles that a 'bishop' and 'deacon' were to be 'husbands of one wife' was that the clergy must not have married a second time, after the death of their first wives, as we see from the Church Orders (see, further, Maclean, *Ancient Church Orders*, 1910, p. 90 ff.).

5. Reaction against over-strictness.—In the 4th cent. there were among the orthodox two tendencies with regard to chastity. That of the majority was in favour of the strict view; yet there was a certain reaction, and the well-balanced argument of the celebrated Paphnutius at the Council of Nicæa (Socrates, *HE* i. 11; Sozomen, *HE* i. 23), defending the intercourse of a man with his lawful wife as *chastity*, and deprecating the proposed canon enforcing separation from their wives of the clergy who had married before ordination, had very great influence. The Council refused to pass the law. The *Canons of Hippolytus* (xxvii. 242) and the *Egyptian Church Order* ('Sahidic Eccles. Canons,' lxii.) protest against the idea that marriage hinders from prayer. Christians who are married, whether to a believing or to a heathen partner, are not to refrain from prayer, for 'marriage does not defile.' The Council held at Gangra, the chief city of Paphlagonia, towards the end of the 4th cent., has several canons directed against the Eustathians, who condemned marriage. It anathematizes those who despise wedlock as unholy (can. 1), or who refuse to attend the public ministrations of a married priest (can. 4), or who live 'unmarried or in continence, avoiding marriage

from contempt, and not because of the beauty and holiness of virginity' (can. 9), or who, themselves unmarried for the Lord's sake, boast themselves over those who are married (can. 10), or women who leave their husbands from an abhorrence of the married state (can. 14), or men who forsake their children for asceticism, and conversely children who forsake their parents (can. 15 f.). The Church Orders are more or less divided in the matter of chastity and marriage in the case of the clergy; the *Apostolic Church Order* and the *Testament of Our Lord*, for example, take the stricter line, while the *Older Didascalia*, the *Apostolic Constitutions* and *Canons*, and the *Ethiopic Didascalia* more or less strongly favour married bishops. It may be noticed that the heretical *Clementine Homilies*, now usually ascribed to the 4th cent., though formerly thought to be earlier, do the same thing.

6. 'Castitas' in later Latin.—It is significant that this word acquired the exclusive sense of 'celibacy.' It was not so in St. Ambrose's day. He says (*de Viduis*, iv. 23) that there is a threefold virtue of *castitas*—of marriage, of widowhood, and of virginity. But before the Middle Ages the word was ordinarily narrowed in its meaning. And by the time of the Council of Trent it is explicitly opposed to 'marriage.' The Council speaks of people contracting matrimony who feel that they have not the gift of 'castitas,' having just before mentioned this as one of the vows of the 'regulares' (Sess. xxiv. can. 9). The three monastic vows are 'obedientia, paupertas, castitas' (Sess. xxv. cap. 1).

7. In conclusion, it may be remarked that it is quite unprofitable to discuss whether married or unmarried chastity is in the abstract the greater virtue, and whether celibacy is a higher life than matrimony. There is no absolute standard in the matter. One who has given up marriage for the kingdom of heaven's sake may be leading a higher life than one who marries; or, especially if he be lifted up with pride, he may be leading, as Ignatius suggests, a lower life. All that we have to determine is whether for a given individual the one state or the other tends to godliness.

LITERATURE.—The literature has been given in the course of the article.

A. J. MACLEAN.

CHASTITY (Greek).—That the Greeks held lax ideas about chastity may be inferred from the fact that sins against it were imputed even to their gods. It is true that the conscience of a more enlightened age was shocked at the grosser features in their mythology, but there is little or no evidence to show that, unless in the ascetic teachings of Orphism, moral purity was ever regarded as an essential element either of morality or of religion. 'It is hard,' says W. H. S. Jones (*Greek Morality in relation to Institutions*, 1906, p. 118), 'to find passages in pre-Christian Greek literature where loose intercourse is looked upon as in itself a moral offence.' The marriage bond was, indeed, to some extent protected by religion, which forbade adultery, so that the family stock might be kept pure, and honours duly paid to the spirits of dead ancestors. But beyond this point religion made no effort to safeguard the purity of married life. And lastly, as an influence adverse to chastity, may be noted the conviction which prevailed among the Greeks in historic times, though there were many exceptions to it, of the essential inferiority of women (Jones, *op. cit.* ch. iii.)—a conviction which G. L. Dickinson (*The Greek View of Life*[6], 1907, p. 164) describes as 'a cardinal point in the Greek view of life.' It left no room for the romance, the idealism, the chivalrous devotion which ennoble and protect the marriage bond.

1. Loose sexual relations.—It is difficult to say whether the Homeric age was better or worse as regards sexual morality than those which followed. That great laxity prevailed outside the family circle is clear from the pages of Homer. Indeed, concubinage was also frequent, at least among the chiefs (Grote, *Hist. of Greece*, London, 190[illegible], ii. 201). On the other hand, it is generally agreed that private morals suffered a great and progressive decline in the age following the Persian war. It may have begun in the century before the war. Philemon (comic poet, *c.* 330 B.C.) asserts that Solon made regular provision for vice owing to the difficulty of restraining youth. But this has been seriously doubted (cf. Campbell, *Relig. in Gr. Liter.*, 1898, p. 236). In any case there is good reason to accept the statement of Isocrates (*c.* 380 B.C.), that a corruption of manners unknown in the time of Solon and Cleisthenes prevailed at Athens in his own day (*Areopag.* 48). It is to be ascribed largely to the closer contact with Eastern nations brought about by the Persian war, and to a new speculative tendency to set φύσις over-against νόμος. Not long after the war the worship of the Phœnician Astarte, which directly sanctioned sexual licence, found a home in the Piræus. In the same century some philosophers advocated a community of wives—a theory parodied by Aristophanes in the *Ecclesiazusæ*.

Manners seem to have grown still more corrupt after the Peloponnesian war. In the later period the commerce of married men with *hetæræ*, formerly disapproved, was both common and lightly regarded, as is clear from more than one passage in the *in Neæram* of Demosthenes (or another writer of the same age) (cf. esp. 1352, 1386). The cities abounded in facilities for vice (Xen. *Memor.* II. ii. 4). Socrates and Plato, in spite of their high ideals, exhibit a facile tolerance of the vices of their age. The former does not scruple to visit, along with some of his friends, the celebrated courtesan Theodote, and to discourse with her about her profession (Xen. *Memor.* III. xi.); the latter permits, though reluctantly and with certain qualifications, promiscuous intercourse to men and women of ripe age (*Rep.* 461 B and C). How far the Stoics encouraged impurity is a matter of some doubt. The reader will find it discussed and the original authorities cited by Zeller (*The Stoics, Epicureans, and Sceptics*, Eng. tr., London, 1892, p. 308 ff.). Even if he rejects the worst imputations against their teaching, he will probably be compelled to admit that the early Stoics, at least, did not regard lax sexual indulgence as in itself immoral. As for the younger Stoics, they condemned 'most explicitly any and every form of unchastity' (*ib.* p. 309).

2. Παιδεραστία.—We have seen that the Greek view of woman did not lend itself to romance. But this did not mean, as G. L. Dickinson has pointed out, that romance was absent from the Greek view of life. Rather it found vent in passionate friendship between men, which in Greece was so common as to amount to an institution. Its ideal was the education of a younger by an older man, the cultivation of virtue and heroism, its ardour, when at the best, 'that white heat of the spirit before which and by which the flesh shrivels into silence' (J. Harrison, *Proleg. to Study of Gr. Rel.*, Cambridge, 1903, p. 638). But there is evidence that from the earliest times the connexion was often one of unnatural vice. In Homer παιδεραστία is hinted at in the legend of Ganymedes (cf. G. Murray, *Rise of the Greek Epic*, 1907, p. 116), and is perhaps referred to by Mimnermus (*c.* 630 B.C.). 'There can be no doubt,' says W. H. S. Jones (*op. cit.* p. 120), 'that the vice was continuously present, and that, as far as our evidence goes, it

aroused little, if any, moral disapprobation.' The Spartans and Thebans even encouraged it on the ground that it led to emulation in deeds of valour. In the Xenophontic *Symposium*, Socrates ridicules this idea, and enlarges on the evils of the practice; but the very discussion shows the low standard of purity among the Greeks. On the other hand, he would use such friendships, purged of all base elements, as aids in the acquisition of virtue. Plato's view is very similar. Such passionate friendships, he taught, give wings to the soul in its pursuit of ideal beauty. Like Socrates, he condemns the vice, especially in the *Laws*, but without a due sense of its enormity (*Phædrus*, 256 B, *Rep.* 403 B, *Laws*, 636 C). The subject is less prominent in Aristotle, but he nowhere expressly condemns the vice. The same is true of the early Stoics and the Minor Socrates. Epicurus objects to all sensual indulgence, not, however, because it is evil in itself, but because it hinders *ἀταραξία* (Diog. Laert. x. 118, 131, 142).

3. We have been concerned with some of the darker features of Greek life. But we must beware of taking a one-sided view. We cannot doubt that unnatural vice was at the least comparatively rare. And, as regards personal purity generally, there were probably many, outside as well as within the ranks of the Orphic ascetics, who lived far above the demands of a low national standard. Self-control, moreover, was a typical Greek ideal. Hence the Greek acknowledged as evil, if not impure, at least immoderate indulgence. His view is reflected in the words of the aged Sophocles, who, on being asked if he was still susceptible of love, replied: 'Most gladly have I escaped the thing of which you speak; I feel as if I had escaped from a mad and furious master' (Plato, *Rep.* 329 B).

Lastly, home life, with its protective influence, was dear to the Greeks, never more than when, in the 4th cent., city-life was falling into decay. Mutual affection might not be the usual cause of marriage, but it must have been a very frequent result. *ἀνδρὶ δὲ καὶ γυναικί*, says Aristotle, *φιλία δοκεῖ κατὰ φύσιν ὑπάρχειν* (*Eth.* 1162*a*).

I. F. BURNS.

CHASTITY (Muslim).—In several verses of the Qur'an, chastity is recommended to followers of Islām as one of the greatest virtues of a Muslim. Happy will be the pure soul. 'Gardens of Eden beneath which rivers flow . . . that is the reward of him who keeps pure' (xx. 78). A Muslim must avoid all that might excite his evil desires; he must therefore cast down his looks (xxiv. 30). 'The eyes, too, fornicate' is a saying attributed to the Prophet in Muslim tradition (cf. Mt 5[28]). Women must behave decorously in presence of men (see Qur. xxiv. 31: 'that they display not their [natural] ornaments except what [usually or necessarily] appeareth thereof, and let them throw their veils over their bosoms and not show their ornaments unless to their husbands or their fathers' . . . and other near relatives).

The Prophet was often annoyed by the indiscretion of his visitors, who also behaved unbecomingly to his wives. 'When ye ask them [viz. the Prophet's wives] for an article, ask them from behind a curtain; that is purer for your hearts and for theirs. It is not right for you to annoy the Prophet of God.' The meaning of this verse of the Qur'ān (xxxiii. 53) is not that Muslim women must veil their faces, as is sometimes supposed (cf. A. Sprenger, *Das Leben und die Lehre des Muhammad*, 1861-5, iii. 77); for the Prophet never prescribed that a woman should conceal her face. Even in the later Muslim law-books, in the chapter on prayer, the *'awra* of a woman (that is, her nakedness which may not be uncovered) is defined only as her body, her face and hands being expressly excepted (the *'awra* of a slave-girl and of a man is explained as that part of the body which is between the navel and the knees). But in course of time the veiling of the face became a general custom for women in most Muslim countries,[1] and the majority of Muslim lawyers judge that it is positively forbidden for a man to look at the face or the hands of a woman who is not his wife or one of his nearest relatives (except when it may be absolutely necessary, or when he wishes to marry her). Women must therefore, according to their opinion, conceal these parts of their body. Other lawyers, however, reject this view, and assert that the face and the hands of a woman are those parts of 'her [natural] ornaments' which 'necessarily *appear*,' as said in the verse of the Qur'ān cited above (xxxiii. 53). There has never been complete agreement on this subject amongst Muslim lawyers, and in many countries Muslim women do not veil their faces.

In the Qur'ān the purity of chaste persons is often called *zakāt*, a word which is evidently derived from Aram. *zekōth* ('righteousness'). Similarly *zakī* in the Qur'ān means 'pure,' in the well-known sense in which this word is often used in Aramaic Christian literature (see Qur. xviii. 73: 'a pure soul without [evil] desire'; and xix. 19: 'Mary will have a pure son' [cf. also ii. 232, ix. 104, xxiv. 28, 30]). A chaste person is also called *muḥṣan* in the Qur'ān. This word means properly 'well-guarded' (originally a married woman or a married person in general).

According to Qur. xxiv. 4, those who cast imputations on chaste women (*muḥṣanāt*) are to be scourged with eighty stripes, and in the law-books this punishment is declared applicable also to him who casts imputations on chaste men.

If an unmarried man, who cannot pay the dowry for a free woman, fears that he will not remain chaste, he must, with the permission of her master, marry a slave-girl and give her a dowry; but it is better for him to be patient (see Qur. iv. 29 30, xxiv. 33[a]; cf. 33[b]: 'compel not your slave-girls to prostitution, if they desire to keep continent'). A Muslim may not *marry* his own female slaves, but the law permits him to take them as concubines, if they are Muslims. In this case the children are freeborn, and they are even considered as the legitimate offspring of the master. On the other hand, sexual intercourse between persons who do not stand to one another in the relation of husband and wife, or master and slave, is to be severely punished, with scourging or stoning (see ADULTERY [Muslim]).

TH. W. JUYNBOLL.

[1] The veil was used already in early times (see Gn 24[65] 38[14], Is 3[23])

CHASTITY (Roman).—In treating of chastity among the Romans, we must distinguish between the broader use of the word in its general ethical bearings, and its narrower use in specific religious connexions. There may have been a period when these two uses had not been distinguished, but such a period, if it ever existed, lies before the beginning of our literary tradition.

1. **General ethical use.**—In the earliest period the concept of chastity seems to have been the avoidance of improper sexual relations, and implicitly, therefore, the absolute avoidance of all sexual relations if none of them was proper, *e.g.* in the case of a virgin. It is only in the later and artificial period that such a dispute could arise as is mentioned in Seneca's *Controversiæ* (i. 2, 13), 'whether chastity is to be referred only to virginity or to abstinence from all foul and obscene things.' But the most striking characteristic of the general ethical concept of chastity, throughout the whole of Roman history until the influence of Oriental religions made itself felt, is the application of the idea almost exclusively to women. Pliny (*HN* xxiv. 59) expresses a general idea when he speaks of 'matrons, the guardians of chastity'; and he is only echoing the words of Cicero, who says (*de Leg.* ii. 29), in speaking of Vesta: 'and virgins are her priestesses, so that womankind might feel that woman's nature supports all forms of chastity.' With customary consistency the relations existing on earth are transferred to Olympus, and the phrase 'chaste' is applied in the Roman poets to a series of goddesses and heroines—Amphitrite, Antiope, Ceres, Cybele, Diana, Fides, Juno, Minerva, Proserpina, Pudicitia, Sibylla, Venus, Vesta,—and to only three heroes—Æneas, Bellerophontes, and (indirectly) Hippolytus (cf. Roscher's *Lexikon*, Supplement: 'Epitheta Deorum apud poetas Latinos').

The cults of Egypt and of the Orient—Isis and Mithra—and the Christian religion introduced a broader and more imperative ideal; but even here the majority of passages refer exclusively to women. Even Ambrose's famous threefold chastity (*de Viduis*, iv. 23)—that of virginity, marriage, and widowhood—has practical application to women only.

During the classical period the only exceptions to these statements are in connexion with young boys (*e.g.* Hor. *Ep.* ii. 1, 132; with the classic example of Hippolytus [*e.g.* Seneca, *Phædra*, 923]); and, curiously enough, with eunuchs (*e.g.* Attis [Ovid, *Fasti*, iv. 224]). The exceptions, therefore, merely enforce the rule, for they include those who had not yet arrived at man's estate, or one who was endowed with a female modesty, or those who had ceased to be men. All other cases which seem to be exceptions to the general rule are to be explained merely as special religious uses (see below), or else as due to the use of the word in the colourless general sense of 'pure,' generally applied to pure hands in connexion with financial matters. Thus Cicero (*Verr.* II. i. 100) ironically calls Verres 'homo castissimus,' and again in another place (*Flacc.* 68) speaks of a man as 'castissimum' and 'integerrimum.' Thus arose the phrase 'chaste poverty' (*e.g.* Sil. Ital. i. 609), with its implied contrast of 'wanton wealth'; and Vitruvius tells us (i. 1, 7) that an architect should be trustworthy and without avarice, 'for no work can be accomplished truly *sine fide et castitate*.'

2. **Special religious connexion.**—It is in the realm of religion, however, that chastity comes into prominence in ancient Roman life. It is all the more interesting, therefore, that *castitas*, unlike *pudicitia*, was never deified. Possibly this may be explained by the fact that it was thought of as a pre-condition of all participation in worship. One of the old sacral laws, preserved to us in Cicero's *de Legibus* (ii. 19), reads as follows: 'ad divos adeunto caste,' *i.e.* 'approach the gods chastely'; and we scarcely need Nonius's definition *castus=religiosus*. Cicero himself (*de Leg.* ii. 24) expounds the matter as follows:

'The law bids us approach the gods in chastity: that is to say, with a chaste mind, for on the mind depend all things. This does not, of course, preclude the chastity of the body; but we must understand the whole matter thus, that, since the mind is much more important than the body, and yet we take care that the body should be pure, so much the more must we keep our minds pure. For the defilement of the body can be removed by the sprinkling with water or by the passage of time, but the stain of the mind never ceases, and cannot be washed out by any rivers of water.'

Similarly Gellius (iv. 9. 9) tells us that temples and shrines ought not to be approached rashly, but with chastity and formality; and in another passage (ii. 28. 2) he says of Roman religion in general that 'the ancient Romans in establishing religions and worshipping the immortal gods were most chaste and most circumspect.' The exact bearings of this requirement, that the worshipper should be chaste, are not known to us, except for certain Oriental and Egyptian cults (see next col.), unless we are willing to accept at their full value the words of the poet Tibullus (II. i. 11 ff.) in describing the Ambarvalia:

'Let him be far from the altar, him to whom last night Venus brought her joys. For the gods are pleased with chaste things. Come with clean garments, and touch with clean hands the running water.'

It is true that all the elegiac poets are under strong Greek influence, but Tibullus seems almost purely Roman in matters of religion.

As we might expect, however, it is in the priesthood of Vesta that the ideas of chastity are most drastically emphasized; in fact, to the moralists of a later age the chief *raison d'être* of the Vestal Virgins was that they stood as visible ensamples of the chastity of woman. In a certain sense these moralists were correct, for the element of chastity was a characteristic feature of the cult of Vesta from the earliest times. In its primitive phases, however, this idea was instinctive, and belongs to the realm of tabu, out of which it eventually rose into the region of ethics. During the whole history of Roman religion, popular interest in the Vestals was centred in their occasional lapses from the vow of chastity; and, with that morbid injustice which characterizes humanity in all periods, we hear almost nothing of the hundreds of lives lived in faithful devotion to the Virgin Goddess, but only of those who failed, and of the penalties attaching to their misdeeds. The theory upon which these unfaithful virgins were supposed to be discovered was that Vesta, angered, showed signs of her displeasure either by sending some plague among the women of the community, or by abandoning her temple, this latter act being equivalent to the extinction of her fire. Thereupon the investigation began, and, when the guilty priestess was discovered, summary punishment followed. She was first beaten with rods, and then, as though she were dead, carried on a bier, accompanied by her weeping friends and relatives, to the Porta Collina, to a place called the 'Campus Sceleratus,' where she was led into a subterranean vault and buried alive. Our authors are full of these stories (Dionys. ii. 67, viii. 89, ix. 40; Liv. viii. 15, xxii. 57; Plin. *Ep.* iv. 11; Serv. *Æn.* xi. 206; for a list of the known cases of unchastity, cf. R. Brohm, *De iure virginum Vestalium*, Thorn, 1835), varied occasionally by the more cheerful recital of the few cases where the priestess was accused falsely, and Vesta herself rescued her by the performance of a miracle.

Such, for example, is the story of the virgin Æmilia, who was saved from death by the miraculous re-kindling of the sacred

fire on the hem of her linen garment (Val. Max. I. i. 7); of the virgin Claudia Quinta, who proved her chastity by drawing the ship of the Magna Mater up the Tiber, when all human power had failed to move it (Ovid, *Fasti*, iv. 291-348; Suet. *Tib.* 2; Plin. *HN* vii. 35, 120; Aurel. Victor, *Vir. Ill.* 46; Lactant. ii. 7, 12; and cf., in general, Rapp in Roscher, *s.v.* 'Kybele,' vol. ii. p. 1667); or of the virgin Tuccia, who established her innocence by drawing water from the Tiber in a sieve and carrying it to the temple of Vesta (Val. Max. VIII. i. 5).

In the case of Vesta, the tabu of chastity soon turned into an ethical concept, but in that of Juno Sospita at Lanuvium the primitive idea seems to have been retained into historical times. Once a year a girl was chosen who offered a cake to the temple snake. If the cake was accepted, it proved the virginity of the girl, and augured well for the year; whereas, if the snake refused the cake, the reverse was thought to be true (Prop. IV. viii. 3; Ælian, *An. Nat.* xi. 16).

With the coming into Rome of Egyptian and Oriental worships, chastity, either as a temporary condition or as a permanent state, became an essential pre-requisite of religion. There is a touch of the Orient in the worship of Bacchus (Dionysos) as early as the 2nd cent. B.C., when the worshippers were required to observe chastity for ten days in advance of the three great festivals of the year (Liv. XXXIX. ix. 4). The same sort of abstinence was probably required in the cult of the Magna Mater, and certainly in that of Isis (cf. Apul. *Met.* xi. 19; and the oft-repeated plaints of the lover in elegiac poetry, when a Cynthia or a Delia carried religious devotion to inconvenient lengths). But it was in the religion of Mithra that the requirement of chastity became more than a mere ceremonial prescription, and entered into the spiritual ideal of life. The details are meagre, as in all things that concern Mithra, but of the fact there can be no doubt, and no really more cogent proof can be desired than the almost jealous cry of Tertullian (*de Præscrip. Hær.* 40), speaking of the religion of Mithra: 'habet et virgines, habet et continentes.'

LITERATURE.—There is no authoritative general treatment, but a quantity of raw material may be found in the *Thesaurus Linguæ Latinæ* under the words 'Caste,' 'Castimonia,' 'Castitas,' 'Castus'; and certain special phases of the subject are treated by R. Brohm, *De iure virginum Vestalium*, Thorn, 1835; by C. Paschal, *Hermes*, xxx. 548 ff. = *Studi di antichità e mitologia* (Milan, 1896), p. 209 ff.; and by Wissowa in Pauly-Wissowa, *s.v.* 'Castus,' iii. 1780.

JESSE BENEDICT CARTER.

CHASTITY (Semit.-Egyptian).—**1.** That with the Egyptians this virtue was more considered than in other countries of the ancient East is testified by Herodotus, who states (ii. 64) that they were the first who made it a point of religion not to lie with women in temples, or to enter temples after being with women, without first bathing. The same writer, speaking of the rape of Helen (ii. 112 ff.), refers to the opinion of the Egyptians that it was 'an unholy deed' on the part of Alexander to deceive the wife of his own host, and to carry off not only the woman, but a large quantity of stolen property. Both the woman and the property were therefore detained until Menelaus should come to Egypt to seek them. Another side of their character, however, is revealed in the story of the robbery of Rhampsinitos' treasury. In order to catch the thief who had escaped, and who had afterwards carried off, by stratagem, his brother's headless body, the Egyptian ruler is stated to have caused his own daughter to sit in a brothel, and, before having intercourse with a man, to compel him to tell her the most cunning and the most unholy thing which he had ever done (Maspero, *Contes pop. de l'Egypte anc.*³, Paris, 1906, pp. 180-185). Whatever may be the opinion concerning the truth of this story, it is clear that the people of Egypt could not have had a very high reputation for chastity, especially when it is taken into consideration that the woman in this case was a king's daughter. The free relations between the sexes must, from time to time, have led to many undesirable and even scandalous events, as is brought home to us by the story of Joseph and Potiphar's wife (Gn $39^{7ff.}$), with its remarkable parallel in the Egyptian story of the Two Brothers (Petrie, *Egyptian Tales*, London, 1895, 2nd ser., pp. 36-86).[1]

According to Erman (*Life in Ancient Egypt*, p. 154), the social principles of the Egyptians were almost as low as those of the nations of classical antiquity. No reasonable being, he says, would take offence at the naive characters and emblematic objects found on their monuments (though more than one opinion is possible even as to this), but there are certain obscene pictures drawn and annotated by a caricaturist of the XXth dynasty (Turin Pap. 145) which, it is shocking to think, were found in a tomb. Moreover, an ancient sacred book (Papyrus of Unas, 629) describes the life of the deceased Pharaoh in bliss, and tells him that in heaven he will 'at his pleasure take the wives away from their husbands.' There were plenty of women, moreover, who did not belong to the 'good women' (Turin, 47, 5)—women whose husbands had left them, and who travelled about the country. 'Beware of a woman from strange parts, whose city is not known,' says one of the sages of Egypt (Papyrus of Bulaq, i. 16. 13 ff.). 'When she comes, do not look at her, nor know her. . . . The woman whose husband is far off writes to thee every day. If no witness is near, she stands up and spreads out her net—O! fearful crime to listen to her!' Therefore he who is wise avoids her, and takes to himself a wife in his youth—first, because a man's own house is 'the best thing'; second, 'because she will present thee with a son like thyself.' The moral condition of the labouring classes ('the company of workmen') was, as might well be expected, very low, and it was a common crime to 'assault strange women.' But, amid all this, there must have been at all times some exceedingly worthy people in Egypt—people as chaste as the best of other lands; for to this the life led by the better classes would naturally tend.

2. Though the history of Judah, son of Jacob, is now regarded as being largely or wholly eponymous, the account of his relations with Tamar (Gn $38^{14ff.}$) probably reflects sufficiently well the manners and customs of that early period, not only among the Hebrews, but also among their Palestinian fellow-citizens. By assuming the character of a *ḳĕdēshāh* ('temple-prostitute'), and sitting in the gate of Enaim, Tamar got Judah to approach her. This story makes it clear that chastity in Palestine, at least among the men, was the exception rather than the rule.[2] Looseness in this respect was greatly fostered by the worship of Astarte, whose lascivious rites were performed even within the precincts of her temple. In connexion with the worship of this goddess among the Canaanites (which was a parallel to the worship of Ištar among the Babylonians), ritual prostitutes of both sexes (*ḳĕdēshīm* and *ḳĕdēshōth*) existed. Male prostitutes (the 'dogs' of Dt 23^{18}) were to be found in Israel, but they seem to have been looked upon with extreme disfavour. From Mic 1^7 it would seem that, though the hire of a harlot could not be accepted by the sanctuary, the money gained by ritual prostitutes was intended for the service of Jahweh (*HDB* v. 662ᵃ). It may be supposed, however, that this religiously exercised

[1] D'Orbiney Papyrus. The translation is by Griffith (cf. also Maspero, *op. cit.* pp. 3-20).

[2] The story of Joseph, in the next chapter, is in marked contrast to this narrative.

form of unchastity existed, and was looked upon with favour, by a small section of the population only. Among the Hebrews, bestiality (whether male with male, or man or woman with animals) was regarded not only as an abomination, but also as a mortal offence (Ex 22[19], Lv 18[23] 20[15f.]), and the man or the woman, as well as the beast, was killed, that all memory of the disgrace might be obliterated. It was a crime of the Canaanites, and was probably exceedingly rare or non-existent among the Israelites (see, further, BESTIALITY, vol. ii. p. 535).

The very fact, however, that there were prostitutes among the Jews shows that the people were not so virtuous as they might have been. In later days harlots seem to have been so numerous that they had a market-place all to themselves (*Pesachim*, fol. 113, col. 2). Certain shoemaker Rabbis used to sit there and make shoes for them; but it is said of these worthy men that they would not even raise their eyes to look at them. It is recorded, however, that the education of women, and especially their instruction in the Law, was interdicted by the Rabbis, the result being that the Jewish women of their time were exceedingly ignorant. The absence of restraint which education and religious instruction would have brought about could not fail to react on the male population; hence the shortcomings, in certain cases, with regard to that chastity which one naturally expects in a religious man. The shoemaker Rabbis were worthy of all praise; but, unfortunately, they were not all continent, for it is said that Abba Arika (Rab), whenever he visited Dardeshir, used to ask by proclamation whether any woman was willing to be his wife during his stay there, as did also Rab Nachman whenever he visited Shechanẓib. These temporary marriages doubtless satisfied their conscience, but cannot be regarded as testifying to their desire for chastity; on the contrary, they enabled them to indulge their unchaste tendencies in a manner which they considered legal. At the time of the destruction of Jerusalem, adulterers abounded to such an extent that Rabbi Johanan discontinued the administration of the 'bitter waters.' Regarding the rule of chastity as a hard one to keep, he is stated to have said that a bachelor residing in a city and abstaining from sin was one of the three objects of proclamation by the Holy One,[1] the others being a poor man who restores lost property, and a rich man who tithes his produce unostentatiously.
